The houses of the agricultural labourers were either individual *Maizon kaka vas* (Eng. trans. Houses made with cow dung) or were *langard* (Eng. trans. Sheds) divided into several rooms.

While some respondents testified that the camp houses were not numbered, others like Mardemootoo stated the contrary. He lived in a *Maizon kaka vas* number one and consisting of three rooms. Regarding the sheds, the names of the families were written on the doors of the rooms that they occupied.

The traditional *lakaz kaka vas* were thatched houses made with cow dung and bamboo or aloe sticks. The floor and walls were glazed with cow dung that was mixed with white and red soil. White soil acted as cement and solidified the cow dung. The houses consisted of two rooms, one room for the parents and another for the children and in-laws.

These constructions were not resistant to rain and cyclonic weather. Satianand recollected how Cyclone *Carol* destroyed his family house. The houses' remains were used to rebuild the houses in iron-sheet. The sheets of fuel tanks were sold one rupee each sheet and used to construct the houses.

According to Bawol, when the houses were destroyed, it was the estate's responsibility to rebuild them. A guardian checked which houses were in ruins and in a good state and informed the estate management. The latter, then, made a check and gave instructions to the building contractors to repair the shattered houses.

However, it seems that on some estates, the houses were constructed in cement like in Camp Softerre that, as per Mardemootoo's statement, consisted of *block* houses. The residents were built with the blocks after the Cyclone *Gervaise*.

Taking on Bhudyea's statement, Friday was the appropriate day for glazing for the reason that it was a praying day. The association between prayer and cleaning might be because of the religious conviction that the house has to be clean for prayer as a sign of respect. Cleanliness is commonly conceived as visible sign of purity. For prayer you should be clean inside and outside.

The sheds were made up of 15 to 20 rooms that were separated by gunny bags and each family occupied two rooms. For example, when Dananan was a child, he used to live in Helvetia camp that consisted of a *hangar* and his family lived in two or three rooms. There was no toilet; thus, they used the estate toilet and no bathroom, so they fetched water from the public tap.

*...lakaz dan kan ti ena bann separasion arr goni...ena goni bare la lot fami la rest la bas pa ti ena toilet pa ti ena naryein kaka brit partu lor bord sime mem dan kann kot gagne...Pa ti ena pa ti ena igien ditou...<sup>125</sup>*

*(Eng. trans: the houses in the camps there were separations with gunny (bags)...there were gunny separating there...another family there living over there was no toilet there was nothing defecating everywhere along the road side in the sugarcane [field] where they could...there was no hygiene)*

Regarding furnishings, the testimonies diverge on which furniture were provided. Some mentioned there was a wardrobe only, others, that there were twin beds as well, but without mattresses, and some that there was no furniture. As mattress, they used gunny bad filled with grass.

In the camps, there was no sewage, nor waste water system. The toilet system was rudimentary. Toilets were, in fact, common pit latrines that consisted of a deep hole in the soil, and sometimes a cover was placed on the hole. Hence, for hygiene reasons and because of the bad smell, the pit latrines were built at a certain distance from the houses.

Some respondents, like Dananan, mentioned that in some camps, there were no toilets and thus people practised open defecation.

The bathroom, as well, was a separate and independent unit built in the yard and consisted of a drum filled with water. Each family in the camp built his own bathroom with iron-sheets. Some had a roof, while others were not covered. Some respondents also mentioned that they bathed at the river or the public tap, such as Mardemootoo who went to the river to bathe and fetch water and for laundering. After Cyclone *Carol*, the Government installed a public tap at the upper end of the camp. Bawol stated that an inspector checked whether the water was drinkable.

Since there was no electricity, most people used petrol lamps, gas lamps and candles to light up their homes. For cooking, there was no kitchen and the camp residents built a fireplace with three stones and wood either inside the house or under the veranda.

According to Dananan, after the Voluntary Retirement Scheme, some of the camps were destroyed and the land divided into plots of 6 perches.

### **Academic Education and Mobility**

It is a commonly-held belief that the descendants of the Indian immigrants benefited from opportunities of academic education. In fact, many respondents revealed that their parents did not send them to school and they acquired only basic literacy and numeracy skills.

However, their children went to school and are more academically educated than they are. They did not want their children to experience the same harsh and deprived life. They wanted a better life and more prestigious work for the latter.

While some respondents went to school, others either did not attend school, or abandoned schooling at an early stage. Those who abandoned schooling before the end of the primary cycle are illiterate, whereas those who continued until the end of the primary cycle have acquired basic literacy and numeracy skills.

The children started school at 6 years of age. Some of them abandoned schooling at approximately 8 years of age (after Standard 3 that is equivalent to the third year of primary educational cycle) or went to school until 12 years of age (Standard 6 that corresponds to the end of the primary educational cycle). Based on Satinanand's testimony, it seems that, after Standard 6, some children continued to take literacy and numeracy courses until 18 years of age, and the latter became primary school teachers.

For those who attended school, before and after school hours, the children worked in the fields and did household work. For example, before going to school, Satianand fetched water and from sunrise until nine in the morning, he was *gardyen zwazo* (Eng. trans. Chasing away birds). He went to the field to chase the birds that ate the rice cob. After school hours, he helped his father in the field to collect and transport *pommes d'amour* and to fetch food for the cows. He left school at 12 years of age, after finishing his primary educational cycle and, one year later, started working as field labourer on FUEL Estate.

Academic education was not compulsory and for the Colonial Government, the formal education of the children of Indian immigrants was a priority. Even if legal provisions were made for the setting up of half-time schools for the formal education of Indian children, in the obligatory subjects of ordinary schools up to Standard 4, it seems that this initiative failed.

The obligatory academic subjects were French, English, Arithmetic and Hindi and as from Standard 7 (that corresponds to the first year of the secondary education cycle) they learnt Algebra. In the past, there were no private tuition and as Mardemootoo affirmed, teachers were severe and hit children as punishment, when the latter misbehaved and did not work.

School started at 8 hrs 30 and finished at three in the afternoon. They had one hour for lunch at noon. The teachers did not care for their academic education only, but for the holistic development of children like hygiene habits, such as when the children reached school the teachers checked if they were clean and neat.

The Law stipulated that in the half-day schools, an Indian dialect might be substituted for either French or English and the teachers should demonstrate the ability to speak and write at least one Indian language.<sup>126</sup> Yet, the Royal Commissioners reported that, in practice, advantage was not taken of this provision on the grounds that there was no public demand for the establishment of such schools. However, based on testimonies gathered, other reasons might be brought forward to explain the failure of such initiative.

Firstly, while some parents were conscious of the importance of academic instruction as a means of upward mobility, for others, their daily survival was their main preoccupation. Indeed, we should not forget that, in the past (pre-and post-Independence Mauritians) *la vi ti dir* (Eng. trans. Life was harsh) and families were living *dan la miser* (Eng. trans. in poverty). Children, and especially boys, were primarily perceived as additional man-power that supplemented the family's financial budget.

For example, Mardemootoo stopped schooling when his father remarried, and to be able to stay with his stepfamily, he had to start work to contribute to the family budget. Dananan abandoned schooling at 7 years of age to start working. His grandfather on his mother's side did not consider academic education as a priority. The latter found that going to school was a waste of time and that instead, he should work to earn a living.

*...Li dir tu pagli hawe abhi bez ba bida karathawe lekol parheke...Wi li dir avoy li mo donn li 20 sous zurne mo pu fer li ramass sini parski mo mem mo sidar ounn kompren. Aster mama ki pu fer telmen sa lepok la kuma mo pe dir ou kuyon...<sup>127</sup>*

*(Eng. trans: he said you are mad it's a problem you send him to school...yes he send him [to work] I will give him 20 cents per day he will pick up caterpillars because I am Sirdar you understand. Now what mother will do at that time people were stupid)*

Secondly, often schools were remote from the respondent's residential place and thus, they had to walk to and from school. For example, there was no school in Mapou, the nearest school was in Pamplemousses and there was a school in Poudre d'Or. Hence, to go to school, Bawol caught the train at eight in the morning and when there was no train, he walked either to Pamplemousses or to Poudre d'Or. He went to school until Standard 2 and learnt French and English and once a week, there were Hindi classes.

Thirdly, even if respondents stated that both boys and girls went to school, some families did not send girls to school because of conservative traditional value systems that were prejudicial to girls. The female respondents who went to school abandoned schooling at a much earlier age than the male respondents. In addition, they got married at an earlier age than men.

Most female respondents were 5 to 10 years younger than their husbands and got married when they were adolescents. For example, Pentiah was 25 years of age when he got married and his wife was 12 years old. Bhudyea got married when she was 13.

*...Be eski ou ti kone kifer bann fami pa avoy zenfan lekol? Zot dir kan tifi al lekol zot pu vinn move zot pu zuenn garson zot pu kontan garson sipa pu ekrir lett garson akoz sa pann avoy lekol.Be mo krwar zist mo papa kin fer sa...<sup>128</sup>*

*(Eng. trans: you know why families did not send their children to school? They said when girls go to school they will turn bad [girls] they would meet boys fall in love would write letters to boys that is why did not send to school. I think only my father did that).*

Indrawatee's father did not send her to school because he believed that when girls go to school, they became 'bad girls' because they would fall in love in a boy and would write love letters. She should not forget that long ago arranged marriage was the prevailing marriage system. Girls were expected to obey their parents and to accept their parents' spouse choice as a socially-and culturally-accepted behaviour. They had to abide by the cultural agreements.

She started working at 9 years of age, she looked after her siblings and did domestic work. She got married at 17 years of age and her husband was ten years older. However, her half-sisters went to school because her stepmother and stepparents sent them to school.

In keeping with the testimonies, some of the respondents that did not have formal education went to the *Baithkas*<sup>129</sup> or to the *Madrassas*<sup>130</sup> in the early evening. These teaching institutions played an important role in the enculturation, socialisation and education of the Indian Diaspora. The *Baithkas* played a central role in the transmission of Indian languages, religious beliefs and cultural value systems to adults and children.

In fact, even though some of the respondents were not literate in English and French languages; yet, those who went to the *Baithka* might be literate in an Indian language (whether Hindi or Bhojpuri). This informal school delivered, primarily, religious education and literacy and numeracy courses in Indian languages. However, it seems that some delivered literacy and numeracy courses in other languages (in French and English).

As per the respondents' declarations, in each region and even in each estate camp, there were two *Baithkas*, one Puranic and another Vedic. The *Baithka* was a structured association (the *Baithka* society) with a President and a Treasurer. It was not just a teaching place but a gathering and socialising place as well, where the local population of Hindu faith met for religious ceremonies and for celebrating.

For example, in the evening Satianand's father went to the local *Baithka* that was a building of approximately 10 ft long and 10 ft. large that could contain 20 to 25 people. Women did not go except to teach the children and to learn Hindi. He went to the *Baithka* as well where he learnt Hindi.

*...Baithka la ti ena enfin dan sak lendrwa la ti ena baithka asosiasyon alor laba bann dimunn reuni zot koze parfwa ena ramayan , zot fer ramayana sak fett ki vini...ena bann zom bann zom mem pu ena bann madam rarr li all baithka li sa zist kumadir bann zenfan lirr...<sup>131</sup>*

*(Eng. trans: Baithka there was one in each region there was Baithka association so people gathered there they talk sometime there a Ramayana<sup>132</sup>; they do Ramayana at each festival...there were men the men only there were women rarely went to the Baithka just for children to read)*

Bawol (who was the Treasurer and the President of the society for seven years), went to the *Baithka* at five in the evening to learn Hindi. The *Baithka* Society with the contribution of its members paid for a teacher to teach them Hindi and later they learned more subjects.

Furthermore, it should be noted that, long ago, education was not free and accessible to everyone. Education was, and is still, elitist. The Free Primary Schooling Law was passed in 1944, and in 1976 and 1988, free Secondary Schooling and free Tertiary Education were introduced respectively. The Basic Compulsory Education Law was proclaimed in 1993 and only in 2005, was compulsory education extended up to 16 years of age.

### Community life and inter-ethnic relationships

While some estate camps were ethnically homogenous, others were ethnically heterogeneous. In ethnically diverse camps, the camp residents testified that there was social and ethnic cohesion. The residents lived in good neighbourhoods and there were no inter-ethnic clashes or divisions.

Yet, these testimonies should be considered with caution as it transpired from interviews that there were ethnic antagonism and religious segregation and that there were signs of inter-ethnic divisions. Inter-ethnic contacts were thus restricted.

For example, a respondent mentioned that long ago, Creoles were thieves and the Indo-Mauritians were afraid of them. Such statements uncover negative ethnic/racial stereotypical representations of people categorised as Creoles persist that are prejudicial to the latter. They are still perceived as bad people.

Another interviewee mentioned that for weddings, other religious groups were not invited and endogamy prevailed as a marriage pattern. People were not allowed to marry outside their religio-linguistic groups; for example, as a Tamil could marry neither a Marathi nor a Roman Catholic. Children had to obey their parents and accept the spouse their parents chose for them (an arranged marriage was the norm).

Intra-ethnic relationships were also harmonious and the *Baithka* (association) promoted ethnic unity. It seems that all the Hindu residents were members of the local *Baithka* and for special occasions, such as weddings and religious festivities and other ceremonies, all members voluntarily participated in the organisation of these festivities.

For example, Goinsamy was member of the *Baithka*. In the Helvetia camp, there were approximately 500 to 600 houses. There were 25 to 30 people living in the camp who were members of the society.

Testimonies revealed that this sense of group membership helped maintain group cohesion and the *Baithka* was inherent to the camp internal organisation. Wedding preparations were overt signs of this social organisation.

### Family life, roles and duties

The respondents' life was conditioned by their work. They had limited free time, since they spent their time working for survival. They woke up in the early morning, but women woke up before their husbands (usually at three or four in the morning) and came back from work in the early afternoon (between two and four in the afternoon) depending on the work load and the distance between their places of work and residence.

During their free time, those who were small planters, especially men, worked in their fields. Women and children did household chores and *masone* (Eng. trans. Glazed) the walls and floor of their houses with cow dung mixed with white and red soil.

At night, they were so tired after a day's work that they did not have much time for family discussions. Usually, storytelling time was after dinner and during bad weather, when people could not go to work. The elders, most of the time, narrated stories *lor la miser* (about their harsh living conditions), on their childhood memories and on religio-cultural traditions and practices. None of the respondents stated that their elders narrated stories on indentured-ship or slavery.

For example, when Goinsamy was 8-9 years of age, his grandmother on his mother's side did not tell him how she came to Mauritius. They were poor and at that time, people spent most of their time working and, when at home, they did housework. Hence, they did not have much time for storytelling.

Storytelling time was not only a relaxing and nostalgic moment of reminiscences that ensured generational transmission of past memories. It had a social function as well.

On the one hand, it was a bonding moment that strengthened family ties. It contributed to generational bonding and, hence, kept family members close. In addition, it furthered good

*entente* between neighbours and, therefore, maintained community cohesion and social order in estate camps.

On the other hand, it was a means of educating and socialising for future generations. Often it was an opportunity for parents to transmit to their children moral values and principles and guide the latter to achieve greater success in life.

For example, Tyaciitee's parents gave him much cautionary advices such as that, firstly, he should learn at school to be *enn gran dimunn* (Eng. trans. To be a great person), in other words, to be an achiever in life. Secondly, he should never hang around with thieves; otherwise, he might become a thief. They warned him of dangers of bad peer influences that could lead him astray. Thirdly, he should always look forward and never backward in life, which implies that he should be longsighted and not be rooted in the past to achieve in life. All these admonitions served to teach him to be safe and seize opportunities of social mobility and of better living conditions.

Before the introduction of radio and television after Independence, the wealthy families possessed a gramophone to which they listened at night. Bhudyea's family was too poor to buy a gramophone; so she went to her neighbour's house to listen. Record players and later electronic appliances were luxury goods that were accessible to wealthy families solely. They were thus signs of wealth and social status.

The family patterns showed that, in the past, large families were favoured, with families composed of 6 to 12 members. Parents had 5 to 11 children. A number of children meant additional manpower that was an extra source of income for the family and, subsequently, greater opportunities of upward socio-economic mobility for the whole family. For example, Satianand has two sisters and four brothers and for him, children have a financial and social duty towards their family, and especially their elders.

Furthermore, according to Satianand's statement, long ago, the number of children was a social status indicator. It was a symbol of prestige and respect in the community. The more children a person had, the higher his social status was, and, subsequently, he acquired higher prestige in his community. It seems that for people social representation was an important life aspect; a person's social worth was founded on the number of offsprings.

While in some families, children enjoyed their childhood, in other families, they were robbed of their childhood either because of child labour, or because from a young age, they endorsed family responsibilities. Some respondents, like Pentiah, did not have time to play because he worked and helped his mother.

Those who had time to play attested that, in the past, boys and girls played together and there were no problems. Schools, as well, were mixed. Gender segregation is a late 20<sup>th</sup> century construction that was introduced by the feminists who were exposed to European values (many went to study in Europe and came back to Mauritians). Even if gender struggle is inherent in the history of society, in Mauritius gender issues, and especially women/girls issues took on a greater visibility in the 21<sup>st</sup> century.

In some instances, respondents, when they were children, did household chores to help their parents and gave a hand to their parents in the fields. But, earning a living and household chores were the primary responsibilities of parents, and children gave a hand only. For example, as from 11 years of age, Satianand helped his father in the fields.

In other instances, it was the children primary responsibilities, and especially the girls' responsibilities, to do household work, while their parents were at work. The children worked to contribute to the family budget as well.

For example, Bhudyea did not go to school because it was her responsibility to do household chores and to look after her handicapped sister who died at 6 years of age. She wanted to go to school but she could not, and they were poor.

Housekeeping has always been the primary responsibility of women whose primary roles have, for years, been limited to the private sphere of the family. Women were seen as housewives and mothers first.

Living in relative poverty, and because of the resulting feeling of deprivation, women were forced to work to help their family make ends meet. Women worked either as labourers or as domestic workers. Before and after going to work, they had to fulfil their as wives and mothers duties.

Women carried a disproportionate share of everyday-life burdens. They had to juggle household chores, child-rearing, social life and their work life. Hence, they faced, and continue to face, the triple burden of job, childcare, and housework with little and even no support, either from their partners or the Government especially since, long ago, the Colonial Government did not offer social welfare to ease their load.

For instance, Bhudyea started work as a field labourer on Mon Désert Mon Trésor at 27 or 28 years of age after her marriage. She woke up at three or four in the morning and before leaving for work, she cooked a meal and had to reach the field at six o'clock. Her husband woke up after her at 5.30 after she had finished cooking.

Pentiah's wife woke up at four in the morning, prayed, fetched water (2 to 3 buckets), cooked a meal, got her children ready to drop them at a neighbour's place who looked after them when she was at work (there was no nursery and pre-school system at that time). When she came back at three in the afternoon, she fetched her children, gave them a snack and then did housework. Her husband woke up later.

Women endured domestic violence in silence as they were trapped in the cycle of violence and were not empowered to leave abusive relationships for various reasons. such as religious, economic and cultural oppression. One female respondent testified that she was abused by her husband who was an alcoholic. She left him twice but returned eventually. The first time she abandoned the matrimonial roof, she went to live at her mother's with her baby daughter. He asked her to return home and she did so. She gave birth to two daughters, and when she was pregnant of her son, he was once more abusive with her. She let home again and went to live at her sister's. When she gave birth to her son, he again asked her to return.

She did not mention whether she was abused between these two episodes of violence reported. Given that, firstly, alcohol abuse was an aggravating factor (two respondents mentioned that their husband were alcoholics) and, secondly, that domestic violence was recurrent, and not an isolated incident nor a one-time occurrence nor a one-off incident, she might have continuously been abused.

The interviews revealed that, long ago, father's abandonment of the matrimonial roof was common practice that was encouraged by the fact that people, especially people of Indian immigrants, did not engage in civil marriages but in religious marriages. Hence, they had no legal obligations towards their spouses. Serial monogamy, it was also customary; since some respondents and their parents got married twice or trice. For example, Dananan had two wives. The father of Gionsamy and Bhudyea married twice.

Furthermore, life expectancy was short, since many informants lost either one of their parents when they were young or their siblings, when the latter were underage. Unfortunately, because of lack of probing we do not know the causes of deaths. Yet, the following reasons might be suggested for the short life-expectancy of adults and infant mortality: firstly, poor health services and follow-up, secondly, poor nutritional input to sustain hard living and working conditions.

For instance, Dananan grew up with his mother and grandparents. Mardemooroo was declared by his mother who died when he was approximately 9 years of age. Pentiah's parents did when he was a child.

### Dressing

Nowadays, almost all people have a wardrobe with a wide choice of clothes, shoes and other accessories and even those living in relative poverty can secure adequate dressing. In the past,

people did not have a wardrobe and did not have such a wide option. They did not have the financial means to buy clothes, jewelry and shoes. Hence, they wore the same garment and pair of slippers for a week that they washed at the week-end and during their bath.

They had a shower once a week and, on the same day changed their clothes. Often they did their laundry, while having a shower.

Clothing was a sign of wealth as only wealthy people could afford a wardrobe. Satianand declared that a pair of shoes cost between 3.50 to 4 rupees; that was expensive for poor families. Those who could not afford to buy slippers walked bare-foot.

It should be noted that because of their financial situation, in keeping with the testimonies, weddings lasted one or two days only and women did not wear jewels. They did not receive jewels as dowry. Given that culture is not part of the scope of this research, we shall not concentrate on cultural dimension of camp life.

### Displacement

The estate workers' lifestyle can be conceived as a semi-sedentary life style, in that they often moved from one estate to the other, following forced or voluntary dismissal. When dismissed, they had to find a new job on another estate, and sometimes they resigned from their previous work for a better-paid job with better conditions on another estate.

When dismissed, they could no longer stay on the estate camp and, as Dananan testified, they were given one week to move out. Thus, within one week, they had to find a new work and living places. Most of the time, they lived on the same estate where they lived. There was no Law to protect the estate workers' rights, such as in instances of forced dismissal and to regulate notices of eviction and compensation.

For example, in 1960, after Cyclone *Carol*, Mardemootoo's father got a promotion and they moved from Camp Softerre on Mon Désert Mon Trésor Estate to live on Beau-Vallon Estate. In 1951, he enrolled in the army, and when he came back in 1954, he started working as Office Clerk and then as *Sirdar* for Rose-Belle Estate. In 1959, he took employment as *marker* on Mon Désert Mon Trésor Estate until 1989. In the meantime, he built his house in Rose-Belle where he lives now.

Bawol was working on Labourdonnais Estate and lived in the estate-camp. After the destructive aftermath of the cyclone in 1960 (either Cyclone *Alix* or Cyclone *Carol*), the mill closed and the estate-workforce was divided. A group of workers, including him, went to work and live on Belle-Vue Harel Estate for approximately 60 years. They enjoyed the same benefits on the estate; they earned the same salary and were provided with clothing. In the meantime, he purchased a plot of land.

Those who purchased plots of land like Pentiah and Bawol, transmitted them to their son and descendants. Some, like Pentiah, inherited land from their parents. Hence, all the respondents interviewed were not living in estate-camp but were living in their own houses.

## CONCLUSION

The aim of this Report was to uncover the working and living conditions of the former estate workers. After this brief analysis, we can conclude that the estate-workers whether they were living or not in the estate-camps, were 'poor' and led a deprived life. They faced discriminatory practices at work that were by the Colonial Government. They were exploited and oppressed.

When compared to those presently living in relative poverty, the estate-labourers did not lead a comfortable life. They did not receive adequate academic education and health care. They had to struggle to make ends meet and to afford the basic necessities.

Even if the *Sirdar* earned more than the labourers, still they shared the same rudimentary living conditions. However, given than in the sample analysed, none was an *artisan*, there is no information to compare the conditions of the labourers with those of the *artisans*. Hence, to construct a comprehensive picture of the life of the estate workers, this research should be extended to the *artisans* and to the *Kolom* to hear their voices on their life experiences.

<sup>49</sup> See the Truth and Justice Commission Act, 2009.

<sup>50</sup> According to the Royal Commissioners, it actually worked out that labourers were fined two days' wages and one-fifth of a third day for every day they were marked as being illegally absent or sick.

<sup>51</sup> See pages 323-324 of the Report for an attempt by the Royal Commissioners to estimate for the year 1871 the amount of money planters allowed themselves to save through the illegal use of the 'double-cut' .

<sup>52</sup> According to the said Ordinance, planters were required to provide "sufficient and wholesome lodging according to the usage of the colony" which, as the Commissioners pointed out, could have been interpreted any number of ways.

<sup>53</sup> These recommendations were legally enshrined in the Labour Ordinance of 1878.

<sup>54</sup> See interview 09/122/01 for example.

<sup>55</sup> See the amendment to the Regulation of Wages and Conditions of Employment Ordinance 1961, as enshrined in Government Notice No. 134 of 1973. This is despite the fact that the Annual Reports of the Labour Department and Ministry of Labour, prior to 1973, indicate that women should be paid "equal wages for doing equal work" in their various Labour Ordinances.

<sup>56</sup> In her later work, Carter (1994, 1995) states that a number of female indentured labourers were employed on a temporary basis or verbal contracts that did not appear in the official figures. She also points out that those women who were not officially employed often helped their male partners to complete set tasks or spent their time sewing vacoas bags or rearing livestock for their families.

<sup>57</sup> See amendments made to the Industrial Relations Act of 1973 and the Sugar Industry Regulations 1983. Certain categories of field-labourers were in fact provided with protective clothing prior to 1973, but it was only after the ratification of the aforementioned laws that protective clothing was made available to all monthly and casual workers.

<sup>58</sup> Interview 09/234/01.

<sup>59</sup> The benefits of being provided with uniforms made of thicker material, such as "khaki", which appears to have become more common after Independence, rather than wearing lighter everyday clothing made of cotton, should be obvious enough in an industry that subjects its workforce to various sorts of hazards, such as burning cane, shortly before it is cut for instance. Similarly, providing workers with boots would not only have ensured they did not damage their own footwear, it would have protected them from the kind of abrasions that are bound to follow as a result of working barefoot in cane fields that are often strewn with rocks and stones and other types of projectiles. And of course, sugar cane leaves are highly abrasive and can irritate the skin and lead to rashes, if gloves are not provided, which is one of the reasons why the elderly female sugar estate workers quoted above complained of getting rashes when they "tire divet". It

is also important to bear in mind that the Sugar Industry eventually started spraying cane fields with harmful pesticides and would not have provided their workers with protective masks until forced to do so by Law.

<sup>60</sup> Interview 09/123/01.

<sup>61</sup> This is a Creole expression for a jute or gunny bag.

<sup>62</sup> A review of the subsequent Annual Reports of the Labour Department shows that the number of work-related injuries recorded continued to steadily increase over the coming years, with the Sugar Industry consistently accounting for most of these work-related injuries, and as per usual, the majority of injuries were of the sort described above. After 1975, however, when employers were finally required by law to provide all monthly workers with protective clothing, one begins to discern a noticeable decrease in the number of work-related injuries of field-labourers recorded in the Annual Reports of the Ministry of Labour and Industrial Relations as it had then become known by.

<sup>63</sup> The etymology of this term warrants further research. According to *Diksjoner Morisien*, in Mauritian Kreol, the term has two meanings. On the one hand, it can refer to a runaway slave or a maroon. On the other hand, it can refer to someone who is marked as being absent without notice. Consequently, there may be an etymological link between the two meanings, and indeed, it is quite possible that the latter meaning derives from the term's prior association with runaway slaves in Mauritius.

<sup>64</sup> Interview 09/340/01.

<sup>65</sup> Interview 09/409/01.

<sup>66</sup> In the interviews we have consulted, the informants do not appear to make a distinction between *sirdars* and job-contractors, most probably because they refer to both of them as *sirdars* or overseers. This may explain why I have not been able to find a specific example of a job-contractor committing these abuses.

<sup>67</sup> Interview 09/449/01.

<sup>68</sup> Interview 09/104/01.

<sup>69</sup> In Kreol, this means they might be put absent.

<sup>70</sup> In Kreol, this means they would not receive their salary.

<sup>71</sup> Interview 09/77/01.

<sup>72</sup> The complaints listed above only constitute a small fraction of what is in fact a much larger number of complaints made by sugar estate workers pertaining to the non-payment or under-payment of wages in the interviews collected by the AGTF's research assistants. I have deliberately omitted names of specific sugar estates, out of tactfulness, but it would appear that these abuses were being committed on sugar estates right across the island.

<sup>73</sup> The informants' claims are lent further support by the other contraventions listed in the Annual Reports of the Labour Department and Ministry of Labour which include not only "[i]rregular keeping of account books", "[f]alse entries in books of accounts", "[j]ob contractors failing to provide weekly pay sheets", "[j]ob contractors failing to make entries in book", but also "[a]sking [workers] to do work over again after many days", "[u]sing false gaulette [or method of measurement]", "[d]educting fine from wages due for work", "[f]ailing to credit labourers with full amount of work done", and "[f]ailing to credit labourers with full amount of wages due".

<sup>74</sup> After 1981, the Ministry of Labour stopped compiling and releasing Annual Reports, so that it is not possible to determine if these abuses continued.

<sup>75</sup> It is supposed to be a measurement of 10 feet, but *sirdars* and job-contractors often employed longer sticks to get more work out of their workers at a lower cost.

<sup>76</sup> In the ARLD of 1961 that was released before the Balogh Commission was convened in October 1962, 1,226 complaints for non-payment of wages and 218 complaints for under-payment of wages had been brought to the notice of Labour Inspectors. The amounts claimed in rupees were respectively 67,255.34 and 7,430.48, of which workers were paid out Rs. 47,942.68 for non-payment of wages, and Rs. 4,219.00 for under-payment of wages. It is not possible to determine what percentage of those complaints applied to sugar estate workers, because the Labour Department fails to make this distinction in their reports. But in view of the fact the Sugar Industry was the largest employer of labour in Mauritius until quite recently, it is more than likely that sugar estate workers brought a majority of these complaints forward.

<sup>77</sup> There are probably at best only one or two estate camps left in Mauritius.

<sup>78</sup> See S.J. Reddi (1984) and Richard Allen (1999) for their accounts of the high rates of absenteeism and desertion from estates by indentured labourers during the nineteenth century.

<sup>79</sup> The informants often describe them as "lakaz lapaille" in their interviews.

<sup>80</sup> See interview 09/383/01 for example.

<sup>81</sup> See interview 09/112/0 for example.

<sup>82</sup> See interview 09/449/01 for example.

<sup>83</sup> See interview 09/52/01 for example.

<sup>84</sup> See interview 09/149/01 for example.

<sup>85</sup> Interview 09/160/01.

<sup>86</sup> I am referring to the "ad hoc" committees convened in 1978 and 1982 to investigate the conditions of housing and amenities in estate camps (cited in Manrakhan 1983:121-123).

<sup>87</sup> Interview 09/278/01.

<sup>88</sup> According to this report, the dwellings of casual labourers were “either built by the management at some time in the past or built by the estate habitants, often with estate help. In many cases the management declined responsibility for the upkeep of such dwellings, on the grounds that the inhabitants were non-entitled and could leave if they wished”.

<sup>89</sup> The interviews also indicate that not all skilled artisans were Creoles, as a good many were also Hindus and Muslims. The aforementioned categories are the informants’, not the author’s.

<sup>90</sup> Interview 09/86/01.

<sup>91</sup> This means house made of corrugated iron sheets with windows.

<sup>92</sup> This is no doubt partly related to the fact that Mauritian families were much larger in the earlier part of the twentieth century, which is another interesting feature that comes out of the AGTF’s oral history project.

<sup>93</sup> We should add that girls seemed to have shouldered a greater burden in the performance of household chores than boys did. A number of the female informants indicated they were required to sacrifice their education to look after their younger siblings, while their parents went to work. And some fathers forbade their daughters to go to school because they considered home to be a woman’s place. This disparity in rates of school attendance between boys and girls is reflected in the ARLD of 1938, showing that out of 20,078 “Indian” children that went to primary school, only 5,908 were girls.

<sup>94</sup> We do not address the working and living conditions of small cane growers in this study, or “petits planteurs” as they are better known as in Mauritius, since it seems that very few were interviewed by the AGTF’s Research Assistants. Benedict describes the family life of some wealthier small planters living in villages who derived a substantial proportion of their income from growing cane and were not required to sell their labour to make ends meet. According to Daniel North-Coombes (1987.9), however, a majority of small planters were not able to solely rely on this type of livelihood as their main source of income and worked as labourers on sugar estates at different times of the year.

<sup>95</sup> While one might agree with the general tenor of Benedict’s observation of their being little evidence of subsistence farming in Mauritius at the time he was conducting fieldwork, I must confess I find it somewhat hard to believe that small-holders or rentiers who grew vegetables or reared livestock did not consume any of the natural products they produced. This much is confirmed by referring to the ARLD of 1948, which shows that based on a household survey of sugar estate workers living in estate camps and villages, 11% of estate-camp households produced food for their own consumption as compared to 25% of village households (ARLD 1948:28-31).

<sup>96</sup> According to the Balogh Commission’s estimates of the Sugar Industry Labour Welfare Fund’s accounts to the end of 1961, although it had amassed Rs. 43 million from the annual levy on sugar exports to the United Kingdom and investments and rental fees, it only spent Rs. 17 million of that amount on housing and community welfare programmes. Most of the difference, amounting to some Rs. 25 million, had been invested in fixed-term deposits for 10 years.

<sup>97</sup> Evidence of the presence of *ankylostomiasis* was recorded in Mauritius prior to Kendrick’s Report. But according to Balfour, it was only after the advent of the use of microscopes to examine stool samples that it was possible to determine the true extent of infection rates. This raises an important question: was *ankylostomiasis* brought to Mauritius by slaves or indentured labourers? It could not have existed in Mauritius prior to human settlement, as it has evolved in symbiosis with human populations and cannot survive without a host to reproduce itself. And evidence indicates that of the two types of *ankylostomiasis* that exist, that is, *Necator americanus* and *Ancylostoma duodenale*, neither are found in Europe or colder regions of the world, as these parasites can only survive in tropical climates. It is most likely then that African or Indian slaves brought it to Mauritius or that it was brought by indentured labourers from India, Africa or China.

<sup>98</sup> I was not able to get my hands on Kendrick’s Report, as it is not available in the National Library or National Archives of Mauritius. I have had to rely on Balfour’s account of it instead.

<sup>99</sup> In one passage of his Report, Balfour (1921:88) describes barefooted “Indian” children stranding on top of a manure heap on a sugar estate and watering it, making it very likely they would have contracted hookworm disease, if they did not already have it.

<sup>100</sup> Despite spending several pages describing the history of the use of manure as a fertilizing agent on Mauritian sugar estates over the past one hundred years, North-Coombes (1993:76-82) only writes one line on the *Engrais* system and the use of human manure to cultivate cane plants. “[H]uman excreta”, he says, “has ceased to be employed owing to the dissemination of Hook Worm”. Andrew Balfour’s (1921:87-88) report indicates that the practice was very widespread at the time he visited Mauritius, which is why he singled out its discontinuation as one of the most important ways to combat the spread of hookworm disease, also pointing out that these conditions “probably have not their parallel in any other part of the world. The main industry in Mauritius is sugar cane cultivation. The cane requires fertiliser and, as Victor Hugo said, possibly with some truth, “the most fertilising and effective of manures is human manure.” Unfortunately, in the Tropics it is also the most dangerous. This fact was not recognised.”

<sup>101</sup> The ARLD of 1950 provides a comprehensive summary of living conditions in estate camps in Mauritius confirming many of the assertions made in this report (ARLD 1950:83-85).

<sup>102</sup> It is possible that one of the reasons why red clay was highly sought after by Mauritians living in dwellings made with earthen floors is because clay is less likely to support the reproductive cycle of hookworm larvae. Studies show that infection rates are much lower in areas where clay is present, whereas sandy or loamy soil appears to be more conducive to the successful reproduction of hookworm larvae (cf. Desowitz *et al.* 1961; Hotez 2008). Thus sugar estate workers in Mauritius might have specifically sought out red clay to combat the spread of diseases like hookworm, and was possibly common knowledge, or a form of folk-knowledge as it were. It is well-known, for example, that one of the reasons Indian peasants plaster their floors with cow dung is to deter vermin infestations. On the other hand, it may have been purely for aesthetic reasons.

<sup>103</sup> I am not certain why, but towards the end of the 1950s, the Labour Department ceases to provide detailed information about inspections of estate camps, a trend which becomes even more pronounced in the 1960s, when no further details are provided. It cannot be a reflection of the declining population of estate camps, and, hence, their declining importance

in the eyes of labour inspectors, who increasingly focus on factory inspections at the beginning of the 1960s, because at the end of 1982 there were still 143 estate camps with a population of 31,000 people (Manrakhani 1983:122). Much the same as it had been throughout the twentieth century. Perhaps it is a reflection of the diversification of the Mauritian economy and the corresponding importance Labour Inspectors began to accord to the inspection of other industries and the increasing numbers of factories.

<sup>104</sup> My knowledge is limited by the incomplete series of the Annual Reports of the Medical and Health Department available at the National Archives in Mauritius. However, what I have been able to determine with some degree of certainty is that it was at the end of the 1930s that the Medical and Health Department first started to scale back the work of the so-called "Hookworm Branch".

<sup>105</sup> The Manrakhani Commission indicates that adequate provision of drinking water and toilet facilities for sugar estate workers was still an outstanding source of concern in their 1983 Report.

## INTRODUCTION

The aim of this report is to document the lives of people in 20<sup>th</sup> century Mauritius through the use of oral history. It does so through the following 10 life histories which provide an overview of the lives of several informants who were interviewed for the Aapravasi Ghat Trust Fund's Oral History Project. These subjects, seven men and three women, were chosen because they have either led extraordinary or unusual lives that set their experiences apart from most other Mauritians who come from a similar socio-cultural background. Or, alternatively, because their experiences shed light on the kind of experiences other Mauritians are just as likely to have experienced and which provides further insights into what life must have been like for a majority of Mauritians in the not so distant past.

Each of the life-histories are structured similarly and cover, firstly, the childhood memories and experiences of the informant, followed by their working life, then marriage and home life, and, where possible, some information about the present condition of the informants. Each life-history also has an introductory paragraph briefly summarising some of the most salient features that came out of the interviews with the informants.

## 1. THE LIFE HISTORY OF BHEEM MOONEEAN

### 1.1 Introduction

Mrs. Bheem Mooneean's life provides an insight into the life of a female Sugar Estate worker and the double-burden of being a mother and a labourer. She describes the harsh treatment meted out to labourers by *sirdars* in her 40 years as a Sugar Estate worker, and the domestic chores that kept her busy until the late hours of the evening after returning home from work. She also describes the enjoyment she derived from singing songs at weddings as she was growing up as a child and the traditional medicine she used to cure injuries and illnesses.

### 1.2 Childhood

Mrs. Bheem Mooneean was born at Fond du Sac to Veedwantee and Ghootur. Both of her parents were Mauritians. They used to rear cows. She had 11 siblings. Her grandparents came from *Desh* (India). She remembers only her paternal grandfather. His grandfather's name was Varann and he used to wear a "dhoti".

Mrs. Bheem Mooneean said that her parents were poor and thus, during her childhood she lived in a house made of straw and partitioning was done with "fatak". The walls were dressed with soil of white colour and the floor with cow dung and soil of red colour. Her mother and elder sister used to dress the walls and floor. The house consisted of a room which was quite large and two small rooms. The kitchen was made of straw and its roof of corrugated iron sheets. The latrine was made of straw too. Once their latrine caught fire. Her father beat all the children and asked them who set the fire. Her parents used to buy "Chataye phâtal phâtal" and put bed-sheets on them for her and her siblings to sleep. Given that they did not have water facilities and electricity at home, they had to use kerosene lamps and younger children had to collect water in "piti piti tol" while elder children and parents had to carry water in "gamal". Since her parents had many cows, they had to fill four barrels of water a day.

As a child, Mrs. Bheem Mooneean used to play "goulidanta", hide and seek and marbles. She learnt how to play "Goulidanta" by observing other children. She used to buy the marbles from the shop which she could obtain for. She could have 2 to 3 marbles with 1 cent. She used to make like a triangle and play with the marbles. Moreover, her elders used to tell her stories.

Mrs. Bheem Mooneean's parents did not send her to the government school found in the village of Plaines des Papayes, because of "Lakar Sunga"-an old man who used to tie a "pagri" and stroll with a stick. They believed that the "Lakar Sunga" would kidnap her. Instead, they sent her to the *Baithka* where she studied up to "vartame". At the *Baithka*, there were no classes during the

weekend. Sometimes she used to run away from the *Baithka* to go to play. When she saw her parents going to collect water and coming back with their "gamel" of water she used to hide behind someone's house.

When she had 7/8 years old she used to accompany her elder sister when she went to sing songs on the eve of wedding ceremonies because their house was in a corner near sugarcane fields and her sister was afraid to go alone. Consequently she learnt wedding songs and "dholok". She said that it was a tradition to sing these songs. As she grew older, she and her four friends used to sing free of charge at wedding ceremonies. On Friday they used to sing "sandya", "mahadev", "sadi" and "Devta" songs. But she no longer does so because all of her friends have passed away.

### 1.3 Working Life and her Daily Routine

After her marriage Mrs. Bheem Mooneean used to rear cows. She used to wake up at 2 a.m., steal straw, fill about two barrels of water, cook food, milk her cows and boil water for them. She said that she started to work after having her first child. She worked as labourer on Beau Champ Sugar Estate for about 40 years. Her work consisted of removing dry leaves, planting, applying manure by carrying the basket of manure on her head, dropping cane sets in furrows and harvesting sugarcane. She worked from 4 a.m. to 12/1 p.m. But before leaving for work, she used to follow her usual morning routine. She used to work under the supervision of a *sirdar* who used to note her presence, assign to Mrs. Bheem Mooneean her work and paid her at the end of the week before the lorry came to take her home. In case she had already left the *sirdar* used to go to her place to pay her. She earned Rs. 1.50 per day. Her wage increased gradually. During the 40 years that she worked on Beau Champ Sugar Estate she worked under the supervision of many *sirdars*. Some were cruel. They used to treat some workers unfairly, which resulted in fighting on the Sugar Estate. When she failed to do her work properly, the *kolam* talked rudely to the *sirdar*-who then talked rudely to her and returned her work back to her. She even worked when she was pregnant. But during her pregnancies she said that she did not feel at ease when she had to remove dry leaves. She further added that if the *sirdar* asked the "sahib" to give her another task instead of having to remove dry leaves because she was pregnant, the "saheb" used to ask her to remove grass on the edge of the road. She also told the interviewer that when she was pregnant, she was told not to come to work if she was not able to carry out her tasks. She did not have boots and gloves. She said that when "mariposa" was introduced, she bought a pair.

When her work was over, Mrs. Bheem Mooneean used to cut four packets of grass. Since she returned home in a lorry, it was an advantage to her, as she could load the grass on the lorry. It was not easy though, she said. After the lorry dropped her off, she had to carry the packets of grass on her head. On reaching home, she had to clean the stable and feed the cows. But she said that she preferred to look after the cows herself because she felt that it was not safe for her children to do so following what had happened to her. Her friend's cow lifted her and held her up by bending its head. As a result she was afraid that her cows might do the same with her children and they might get hurt. Then she used to wash her hands and face, make tea, wash clothes, take her bath and cook food until nine in the evening. After her children went to sleep, she used to dress the floor with cow dung. She used to sleep at 10/11 p.m.

A prayer was performed before harvest. The owner and *sirdars* used to bring canes at the mill and a priest used to do a prayer and bless the mill. Only when she worked close to the mill could she attend the prayer.

She did not live in camps. But she knows about Camp Dubreuil, Camp Beau Champ and Camp "Trwa Dilo" because she used to visit her friends who lived on the latter camps.

### 1.4 Marriage and Home Life

Mrs. Bheem Mooneean got married at the age of 16. Her marriage was an arranged "Puranica" marriage. Her parents invited people verbally. Only family members were present. On Friday songs were sung and *Hardi* was applied on her. On Saturday night the actual wedding ceremony took place. Her "bharat" came by cars- there were two of them she said. "Kachu" was served. But she did not apply "Mehendi". She wore a "sifonn ké saree"-which was of pink colour. Her saree cost Rs. 50. She had a simple hair style. It was her sisters-in-law who combed her hair. She applied just a little face powder. She said that nowadays a person is paid around Rs. 1,500/Rs. 1,000 to get the

bride ready. But this was not the case for her wedding. Her husband wore a "dhoti". No "katha" and "Tilak" were performed.

Following Mrs. Bheem Mooneean's wedding, she went to live at Ernest Florent. She gave birth to 8 children at home with the help of a midwife. She cannot understand why nowadays women have problems during their delivery and why they need to have a caesarean. She never went to the hospital when she was ill despite the fact that civil hospital did exist. She used homemade remedies instead. Once she accompanied her mother and elder sister to the sugarcane fields. She was still a child. Her mother and sister were removing "fatak" trees with a hoe. She pulled a "fatak" tree with her hands and got hurt. To cure her, they applied crushed "lalyan"- "latik-wa" and then tied the wound. And when she had a cough, Mrs. Bheem Mooneean used to drink "karha"- turmeric and cloves in milk.

Mrs. Bheem Mooneean also reflected on the food she used to eat as a child and the festivals she used to celebrate with her parents. She said that her father used to receive half a pound of rice and she used to receive a quarter pound of rice. She said that she could not understand how her father shared such a little amount of rice equally among his twelve children. He used to place twelve small plates and put half a "kalchul" of rice in each of them. And when eggplant was cooked, her father used to give each of them a spoon of eggplant so that all his children would have an equal amount of food to eat. Her father also used to give them a little milk to drink in food cans. Her different meals had the following components: "mar-wâ mé bhaat dal ké" 2 chilly dal ké mis ké"; boiled tapioca; boiled sweet potatoes with tea; tomato chutney (tomatoes were obtained on the fields) and "bred ke Bouyon"; or dholl and "bred ke bhaji". The festivals they celebrated included "Fagwa" and New Year. On "Fagwa", there was no "dhamâr", as is the custom nowadays. Her father used to go to the "baithka" where he used to apply a "tika". When he came back, he used to bring "tika" for the children. Her mother used to cook "tekwa". "Batat" was not cooked. On Fagwa she did not play with colours because her parents did not buy colours for her. On New Year, her mother used to purchase two new outfits for her and her eleven siblings: one for 1<sup>st</sup> January and one to wear when they went to visit their maternal grandmother. Her outfits were made of a cloth known as "zenn zenn". Mrs. Bheem Mooneean said that nowadays festivals are celebrated with great pomp and that she always wears new clothes on such occasions. But in the past, she used to wear old and mended clothes on festivals, with the exception of New Year. On New Year she used to eat chevon.

### 1.5 Later Life

Mrs. Bheem Mooneean is still a resident of Ernest Florent. Out of her 11 siblings, only two sisters are still alive.

## 2. THE LIFE HISTORY OF MRS. CHENDRADOO LACHAMAMAH ('ELO')

### 2.1 Introduction

A female *sirdar*, Mrs. Chendradoo Lachamamah led an extraordinary life that very few other Mauritian women experienced. She was actively involved in the trade union movement during the 1970s and 1980s, and has always been particularly concerned with fighting for the rights of female Sugar Estate workers. Upon retiring she became a social worker, offering her services to the handicapped, the sick and the elderly. Now 80 years of age, Mrs. Chendradoo Lachamamah offers words of advice for today's generation of Mauritian women.

### 2.2 Childhood

Mrs. Chendradoo Lachamamah who is also known as Elo was born at Bonne Veine to Mr. Mwsliah Yerriah and Mrs. Sitama Yerriah. Both of her parents were labourers on Bonne Veine Sugar Estate-which was later known as Mon Désert Alma Sugar Estate. Her mother also used to rear cows and poultry, selling the milk at 2 cents a quarter litre and eggs at 2-3 cents each. Her parents had a plot of land on which they used to cultivate sweet potatoes, tapioca, "arouy", cornflour, "larout" and banana for the family's own consumption. Mrs. Chendradoo Lachamamah had 2 sisters and 1 brother.

The house of the Yerriah family was made of straw and rocks. The floor and walls were dressed with a mixture of white soil and cow dung. Their house consisted of 2 rooms and a small room known as "godon". They used 1 of the rooms as a living-room. They had a separate kitchen and a separate latrine. They used kerosene lamps and "lalanp kinke". They used to fill water from common taps. But when water did not run through the taps Mrs. Chendradoo Lachamamah used to fetch it from the well-which was far away. Other people used to fill the water for her out of fear that she might fall in the well. She also used to fetch water from the river.

Mrs. Chendradoo Lachamamah went to Reverend Walter School until 1946 and studied up to standard VI. She had no shoes and uniform. She used to wear whatever clothes she had. Classes started at 9 a.m. and were over at 3 p.m. In the morning a teacher taught her "Catechism". She also learnt arithmetic, English, French and Hindi-the only oriental language taught at the time, songs and stories. She said that there were a long table known as "pipit" (desk) and a long bench on which she used to sit, and she used to write on a slate. Lunch time was between 12 and 1 P.M. She had no money to buy cakes. Once she took 1 cent from her mother's "kapsen" box she was beaten. Her father used to help her with her studies.

When Mrs. Chendradoo Lachamamah left school her school Headteacher, Mr. Edward Reverend Walter, did his best to make her mother understand that she is intelligent and to convince her to allow her to pursue her studies. He told her mother that he would appoint Mrs. Chendradoo Lachamamah as a lower primary school teacher. She could teach students of either standard 1 or 2. He would finance her studies with the money that she would earn. But in vain. Her mother said that given that they were poor she could not accept. If she allowed Mrs. Chendradoo Lachamamah to continue her studies her child/children would be neglected. She would not be able to rear her cows. According to Mrs. Chendradoo Lachamamah this was important for her mother: to rear cows and sell the milk she obtained, manure and the calves her cows gave birth to, to earn money in the latter ways. Despite that she had to abandon her studies in 1946 Mrs. Chendradoo Lachamamah continued to enrich her knowledge by reading whatever reading materials she could have at hand.

When Mrs. Chendradoo Lachamamah was still under seven years of age, her father got badly hurt on his workplace and he was transported to hospital. He stayed in hospital for 5 days. He vomited blood. Given that her mother's wage and the money that her mother obtained by rearing cows were not enough to feed the family, her father went to see "misie-la" to get a light job like watchman or cleaning as he started to recover. The staircase leading to the office consisted of 32 steps. The "misie blan-la" kicked his father and his father "roul tou sa peron-la" and fell down. She had gone to give tea to her father and witnessed the incident. She found that very shocking. When she asked "misie-la" why he had beaten her father, he replied that her father was looking for work. If her

father was hurt, what could he do? She brought her father home and gave him his tea. After witnessing that incident she felt like leaving school and to look for work to help her mother. This made her "dir" (tough). From that day she had a grudge against "misie-la". As a result after a few years, that is, when she was 13/14 years old, when "misie-la" was passing with his car while she was carrying grass on the road she did not move on the other side to let him go. "misie-la" complained about her behaviour to her father and when the latter questioned her she replied that there was sugarcane on the other side. If she would have moved on the other side her packet of grass would have knocked against the cane and would have fallen down. There was no one to pick her packet of grass for her. She was alone. Her father did not tell her anything.

When she was 7/8 years old her mother fell ill. The doctor prevented her from moving and said that she was going to die. Mrs. Chendradoo Lachamamah therefore, had to prepare their meals with the help of her father. She had to look after her younger sister. A Muslim woman milked their cows and Mrs. Chendradoo Lachamamah delivered the milk to clients. She used to go on foot. But her mother recovered and resumed her normal routine.

Despite her mother's recovery, Mrs. Chendradoo Lachamamah used to wake up at 3.30/4 a.m., that is, at the same time that her mother used to wake up. She used to help her mother by doing the small household jobs that she could do. After that even if it was still dark she used to cut grass and feed the cows before going to school. On returning home she had to cut grass again. She used to dress the floor and walls on the days on which she did not go to school early. On the latter days she did not cut grass in the morning. She also used to accompany her mother to wash clothes at the river. Hence, given that she was busy during the day, she used to play at night. She used to play with both girls and boys since no prejudices existed at that time. They used to play "Sapsiwaye", "lamarel", hide and seek, "goulidanta" and marbles. Moreover, her parents and neighbours used to tell her very interesting stories at night. She used to sit on jute bags since mats were not available at that time. She liked to listen to stories in which there were songs. But she does not remember them. She still remembers one of the stories which her parents and neighbours used to tell her. It is a very simple story. She related that stories in the social centre and even received a prize. The story is as follows.

There was a king and his servant. The king had a son and the servant a daughter. Both children used to go to school together. When they grew up they fell in love. The king was against their love. The king started to pester his servant's life. The king told his servant: "I can no longer bear you. You should leave the country. But the servant replied: "since I was young I have worked with you, I have got married, my wife died, I have a daughter, now you are asking me to leave". The servant said: "no. Given the course that things were taking I cannot leave". One day the king told his servant: I wish to drink ox milk. See where you can get it. You bring it and give me to drink". The servant was shocked. He became anxious. Where will he get that? He knew that ox do not have milk. The servant returned home and told his daughter: "you know, the king has put me in a dilemma. He has asked me to look for ox milk". She went at the king's place and started to wash some dirty jute bags by beating them in the yard. The king said that the noise was preventing him from sleeping. Then the king came out and asked his guards and "Sepoy" to ask her to stop making noise because he wanted to sleep. What was she doing? Then the servant's daughter told the king: You want to drink ox milk. But the cow is expecting. I will bring milk I will give you". The king asked her: The cow is expecting! Where have you heard that?" The servant's daughter replied but it was because the cow is expecting that I can bring milk for you". Then the king said: "no, no, no. This is false the ox cannot expect. Go, tell your father that I have forgiven him. Tell him not to worry". The king himself left the country. The king's son still loved the servant's daughter. He came back and married her. The informant said that it is something that would never happen.

### 2.3 Working Life

After leaving school Mrs. Chendradoo Lachamamah started to work as labourer on Bonne Veine Sugar Estate. She was recruited by an entrepreneur. The entrepreneur also used to note down her presence and calculate her wage. She was paid as per the workload she could complete. She worked from 7 a.m. to 3 p.m. She used to apply soil in maize and plant sweet potatoes. She worked under the supervision of a *sirdar*. At first she earned 20 cents per day. But her wage increased gradually. When she started to receive Rs. 1.25 she had to work very hard. She could have a rest only on the pretext of going to the toilet. She had 1 hour for lunch: 11 a.m. to 12 p.m. But she said

that her job on Bonne Veine Sugar Estate was not secure. The white people did not compel her to work. She could go to work only one or two days. But she was compelled to work out of poverty. Moreover, the other labourers and her were not assigned an equal workload. She had no gloves, masks and boots. Given that since the age of 14 Mrs. Chendradoo could not tolerate the fact that people were being mistreated, that someone react violently with another person and someone saying things difficult to hear, once she talked rudely to a *kolom* and threatened him to "pik sa fousi-la dan ou figir" because he was about to knock against her when she was picking canes in grass and putting them on the road. On another instance she hit a *sirdar* with a hoe because he mistreated a worker. Even if the worker had completed his/her load of work the *sirdar* told him/her that he/she still has 5 "golet" (from gaulette, about 12 feet) to complete.

Owing to some problems which she was facing on Bonne Veine Sugar Estate, Mrs. Chendradoo Lachamamah went to work at Trianon where she worked as a *sirdarine*, an uncommon occurrence in the Mauritian sugar industry. She did this work for four years (1955-1958) and was required to supervise the work of both women and children. She said that she always treated the labourers under her supervision well. Working as a *sirdarine* gave her experience in measuring the workload labourers had to perform, and it was also during this time that she first started to become involved with the trade union movement. After Trianon Sugar Estate was sold to Mr. Hardy, the latter renamed the latter Sugar Estate as Highlands Sugar Estate and appointed a new manager: Mr. Coombes. On noticing her intelligence the new manager gave her a job in the office and provided her with accommodation in the camp of Bagatelle given that since Mrs. Chendradoo Lachamamah joined Trianon Sugar Estate, she had to rent a house. As part of her responsibilities, she used to arrange the shop, check books and *ramas bann let ki vini*. She worked on Highlands Sugar Estate for 14 years. She used to go to work at 5 a.m. and return home at 4 p.m. She said that it was difficult for her to perform such a hard work for such long hours given that she had to take care of her small children and husband. By 11 a.m./12 p.m. she no longer felt like working. Despite these difficulties, she was still able to seize the opportunity of being a camp resident to cultivate some vegetables and sell them at the market of Rose-Hill to generate an additional income.

While she was working on Highlands Sugar Estate, that is, in 1968, Plantation Workers Union sent her a letter asking her to become a member of trade unions. Despite resistance from her husband because of fears concerning problems it would create with her employers, she accepted. Her main motivation behind joining Plantation Workers Union was the various injustices that women were subject to on the Sugar Estate. She said that she learnt about some of these injustices during her childhood itself by overhearing the conversations of her parents. But by working on different Sugar Estates she could witness all of them and she herself suffered from some of these discriminations. It was very painful for her. She revealed that *sirdars* used to beat women with sticks. She mentioned a case whereby a female worker of Bonne Veine Sugar Estate was beaten by a *sirdar*. The woman was hurt and Mrs. Chendradoo Lachamamah had to accompany her to hospital. Men and women were assigned their load of work on an unequal basis. For example if men were assigned 125 "golet", women received 115 "golet". In their wage rate too there was disparity, that is, if a woman was paid 5 cent per "golet", a man earned 15 cents per "golet". When a woman work more than her work load she was not paid for that surplus work. Instead, the entrepreneur used to give the extra money that the women should have earned to other people with whom he was well acquainted. Women were not given proper treatment and proper medicine at the hospital. When they got hurt only a small medicine was applied to their wounds and they were asked to go to work on the next day. Mrs. Chendradoo Lachamamah had witnessed male nurses sexually harassing female patients. Women were also exploited sexually by Sugar Estate workers, namely the administrator and *sirdars*. But women could not protest against all these injustices.

Hardy was an Anglo-Ceylon. Whatever happened on his Sugar Estate had to remain within the Sugar Estate and only "bann sef" could solve the problem. But on noticing Mrs. Chendradoo Lachamamah's way of talking and acting the white people understood that they could not ask her to leave trade unions. So the *kolom* told her that when she wanted to go to trade unions he would allow her to go because women were being mistreated too much. As a member of trade union she attended many seminars. She used to meet with representatives of different places in Port Louis to discuss.

In 1970, Sir Sewoosagur Ramgoolam introduced the system of card whereby her job on the Sugar Estate was secure. All male labourers were assigned the same workload, she as all the other women

were assigned the same workload, work started and finished at a specific time. She started to earn Rs. 2.50 per day. She claimed that Sir Seewoosagur Ramgoolam undertook several measures in favour of the poor. She and the other members of trade unions asked for gloves and masks since when mosquitoes bit workers, some had difficulty in opening their eyes and others got high fever. In 1970 they started to receive gloves and masks.

Following her husband's retirement and since none of her sons had reached the age that they could work on the Sugar Estate she was asked to leave the camp. She thus, returned to Bonne Veine in about 1972/1973 and worked there till her retirement. Even if not like on Highlands Sugar Estate, but at Bonne Veine too she had to work a lot. On her return at Quartier Militaire in 1972 she and the other members of trade unions asked for boots because they used to hurt themselves with their hoe while working and had to tie their wounds and go to work despite that they were suffering. She also affirmed that when the Labour Inspector came on the Sugar Estate she could not talk with them. The Labour Inspectors were bribed.

During the Prime Ministership of Jugnauth she and the other members of the Plantation Workers Union organised a press conference on Louis Lechelle Street at Port Louis. During the conference she raised the issue of the inequality in the wage rate of men and women.

On 19 August 1984 she talked on trade unions and on 4 September they talked about that on television. After her speech: Mrs. Bappoo sent her a letter on 7 Jan 1985 for an interview following which she appointed Mrs. Chendradoo Lachamamah as a member of the Sugar Industry Labour Welfare Fund to represent female labourers. She was determined more than ever since now she had someone to back her in her endeavour. After less than 2-3 months she brought a team of "inspector travay" on Bonne Veine Sugar Estate. Misie Jacques Carey was furious. She used to note down all the injustices inflicted to women and submit the paper to Mrs. Dubois when she went to committees. Mrs. Dubois raised these issues in parliament. When labourers retired without receiving their lump-sum she brought the matter to the office and helped them to get their lump-sum. When labourers were mistreated and that they absented themselves without leaving any paper, she went to Mon Desert Alma to discuss their case and help them to get their work back. As a member of trade unions she also asked for a female nurse who could attend female patients, that men and women be given the same load of work and that there should be no disparity as far as their wage rate was concerned. But she said that the disparity between the wage rate of men and women still persist. She and the other members of trade unions also asked that women should retire at the age of 58 and men 60. Their demand was approved. After 2-3 years they asked that women should retire at the age of 55 and men 58. But she retired at the age of 58 instead of 55 because the manager told her that she should continue to work since there was no one to represent labourers and give her a favour by making her work somewhat less. On retiring in 1988 she also left Plantation Workers Union. When Navin Ramgoolam became Prime Minister in 1995 the Sugar Industry Labour Welfare Fund was dissolved.

#### 2.4 Marriage and Home Life

Mrs. Chendradoo Lachamamah married Errayah Chendradoo at the age of 18. It was an arranged marriage. Her wedding tent was made of bamboo and "lingouz" which needed to be cut. "prela" was rented by the Sugar Estate. During her wedding her neighbours helped her. Her marriage ceremony lasted 3 days. On Friday a paste of turmeric was applied on her. Saturday had gone by. On Sunday the wedding ceremony took place in her yard. She wore a cream *saree* and her husband wore a "langouti", "palto" and a white shirt. Although Mrs. Chendradoo Lachamamah could not afford to celebrate her wedding with great pomp, many people attended it and vegetarian food was served to the guests. She also confessed to being a victim of domestic violence for quite some time. She stated that her husband used to get drunk and hit her when she returned late from work or prepared dinner too late.

Mrs. Chendradoo Lachamamah gave birth to ten children at home with the help of a midwife and described the rituals that were performed afterwards. For instance, she said that after bathing on the ninth day after the birth of one of her children, she had to light camphor and apply "sindour" near water, and that it was only after performing the latter ritual that she could touch water. Her mother-in-law told her not to touch the cooking pot for 40 days because according to her mother-in-law she was still impure. But one of her mother-in-law's relatives objected by asking her mother-

in-law the following question: if Mrs. Chendradoo Lachamamah did not have anyone to cook food for her and her family members, would they remain hungry? The relative told Mrs. Chendradoo Lachamamah to cook but to ask the fire for forgiveness.

Mrs. Chendradoo Lachamamah also described the home remedies and traditional medicine that her mother used to cure injuries and illnesses. For instance, when Mrs. Chendradoo Lachamamah had an upset stomach her mother used to boil mint or "ayapana" for her to drink. And when Mrs. Chendradoo Lachamamah hurt her hands or feet, her mother used to crush and heat curry powder or buy "jawagn" and crush the "jawagn" together with onion and apply it to her wounds. Following in her mother's tradition, Mrs. Chendradoo Lachamamah said that rather than taking her children to hospital, normally she preferred to use natural remedies such as "lordanet", "delwil bwar", "delwill kamomi" or honey which she purchased from the pharmacy.

Mrs. Chendradoo Lachamamah is a Telugu and learnt both the Telugu language and prayers from other children's parents. She said that nowadays many kinds of festivals are celebrated, but that in the past she used to assist only the religious festival of Ram Bhajan that was performed by her mother and neighbours. In order to be able to assist Ram Bhajan, she had to fast for a period of forty days. But in order to conserve her strength for work, she used to eat sweet dishes during the day and vegetarian food in the evenings. If she wished, she could continue to fast for a fortnight after Ram Bhajan was over.

Mrs. Chendradoo Lachamamah also described how she celebrated New Year as a child. She said that a few days before the New Year, her mother used to sew new clothes for her and her siblings. On the eve of New Year her mother used to dress the floor and walls and place all their clothes outside the house. On 1<sup>st</sup> January they used to wash all the clothes at the river; her mother used to bath her siblings and her and put on their new clothes. After that her mother used to prepare cakes and rice milk, pray, and then give them the rice milk and cakes which were left, to eat. On the second day of the New Year, however, Mrs. Chendradoo Lachamamah's mother used to take a cock from the poultry she used to rear and light a camphor. After spreading perfume near her cows for prosperity, she used to kill and eat the cock. She also used to cook *farata* with tapioca flour since during the period of "rasionman" (rationing) flour was not available.

## 2.5 Later Life

Mrs. Chendradoo Lachamamah is 80 years old and resides at Bonne Veine, Quartier Militaire. Since 1995 she started doing social work. As part of her duties, she cares for handicapped children, the sick, elderly people in homes, and goes to church. Reflecting upon the past, she said that she has done many extraordinary things in her life and has always been happy and never worries when she has problems.

Mrs. Chendradoo Lachamamah also expressed her views on the condition of women nowadays. She said that although the situation of women has improved, they are still discriminated against in the workplace and are exposed to sexual exploitation. For instance, she reiterated the fact that in the Mauritian sugar industry, men still earn a higher wage than women.

Mrs. Chendradoo Lachamamah also discussed what she believes women in Mauritius must do to further improve their conditions. She said women have to stand on their own feet and must fight for their rights. She also advised them to seek advice from their predecessors, be sincere as far as their married life is concerned, to be honest in their life, and to always be courageous.

Mrs. Chendradoo Lachamamah still believes in and follows her elders' sayings. She always keeps only one broom in her house. She never keeps her broom in a standing position because according to her elders, the broom too has to rest. She always switches off her lights at 9 a.m. since her elders used to say that lamps should be extinguished at 9 p.m. According to her elders the lamps had a meeting place near the river. If they did not extinguish their lamp at 9 p.m. and that it would not reach the meeting place in time, the other lamps would question it about its lateness.

### 3. THE LIFE HISTORY OF MR. BALDEO CHUMMUN

#### 3.1 Introduction

Mr. Chummun Baldeo life provides an insight into the life of a male Sugar Estate worker. Mr. Chummun Baldeo describes the different tasks that he performed on Beau-Plan Sugar Estate and recounts the accident he had on his workplace. He also reveals the harsh treatment meted out to him by *sirdars* and what is more shocking is that he says that he had to resign. He even states that the "blan" used to play tricks on him. He provides very little and most of the time ambiguous information on his personal life.

#### 3.2 Childhood

Mr. Chummun Baldeo was born at "Medine Camp de Masque". He had 2 brothers and 1 sister. He was the second child of his parents. His father owned an ox cart. He used to carry manure, sugarcane and so on. Given that Beau-Plan Sugar Estate did not have their own transport facilities while carrying out works near the mill, building canals and irrigating canes, his father also worked for the latter Sugar Estate. His mother was a housewife. Mr. Chummun Baldeo said that his family moved to Plaines des Papayes afterwards. But he did not mention exactly when his family shifted to Plaines des Papayes. His house was of straw and the floor was dressed with soil and cow dung. Mr. Chummun Baldeo still remembers the cyclone of 1945 and Carol and so on very well. During the latter cyclones it was horrifying. He could not go out at all and his parents used to put him beneath the "khatya" out of fear that their house might crumble.

At first he said that as a child he had to play with his brothers in the yard. They used to play with balls, some "Goulidanta". But while ambiguously explaining how he used to play "Goulidanta" he said that he used to play it with friends. He and a few other boys also used to throw and hit small balls. He learnt the latter games by observing children elder than him. Apart from playing he did not have any other leisure activities. During his free time he used to cut grass for his mother.

Regarding school, initially he said that he did not go to school because he had to look after children. Immediately after he said that he did go to school a little but he did not set foot. What he said here is quite confusing.

During his childhood there were trains in Mauritius. He did travel by train with his grandmother, for example.

#### 3.3 Working Life

At first he told the interviewers that he joined Beau-Plan Sugar Estate at the age of 12/13. But at another instance of the interview, however, he stated that he did work before that without mentioning exactly at what age and for how long. He just said that he did so when he was small. To be more precise, when his father worked for Beau-Plan Sugar Estate there were two "misie"- "misie" Guy and "misie" Zack. They liked his father very much and told him to ask his sons to come to work. Mr. Chummun Baldeo therefore, started to look after the oxen of the Sugar Estate. There were about 200-300 oxen. He had to make sure that the oxen remained on the pasture. He earned about 45-55 cents per day. He revealed that while performing the latter task he had an accident once. He said that on the day of his accident, At 11.30 a.m. he had to bring the oxen to the park for grazing. While the oxen were eating on the "laplenn" near the office of Beau-Plan, he and his friends were swinging on the flowers of "banann bookie" which were hanging on the road. The oxen were going around them. There was a *Kolom* who was cruel. On hearing the sound of a motorcycle and on noticing that it was the cruel *kolom* who was coming, He and his friend came down quickly. There was a cow who had just given birth. She was very "moved". When Baldeo Chummun came down she started to run after him believing that he was going to take her calves away. He fell down. The cow started to hit him. As Mr. Chummun Baldeo pointed out, when a cattle in a herd starts to hit someone all the cattle in the herd would follow. So all the other cattle followed the cow. The white persons who worked in the office hit the oxen with big sticks. Meanwhile Mr. Chummun Baldeo managed to escape. His face and hands got hurt. The Muslim taxi

driver who used to bring all Sugar Estate workers who were hurt to hospital, brought Mr. Chummun Baldeo to Montagne Longue hospital before bringing him to Pamplémousses Police Station. At the Police Station, he could not talk since he spoke mainly Hindi. He just said "yes yes" and was crying. A *sirdar* who was somewhat related to Mr. Baldeo Chummun' family informed his father about what had happened and his father went to visit him in the afternoon. He was crying. He stayed at the hospital for a few days. He still has scars on his hands.

At the age of 12-13 he used to collect the manure produced by the mill at Beau-Plan while crushing sugarcane, in a basket and throw it in a "mel". He earned 55 cents per day. He worked from 7 a.m. to 4 p.m. He worked under the supervision of a *sirdar*. The *sirdar* used to beat him with a wood or "sagay" when he played with friends instead of working, failed to do his work properly. It used to hurt. But he said that he had to accept.

While performing the latter task he had to wake up at 5 a.m. He used to get ready quickly; take his big basket of food-bread and a "gadmanze" in which there were maize rice with any curry or tapioca flour, for instance, which were prepared by his mother and grandmother; take his "big palto" and leave for work. He went to work on foot. Beau-Plan Sugar Estate was about 3 or 4 kilometres from where he lived. He had to be dead on time. If he reached his workplace at 7.05 a.m., that is, 5 minutes late, the "markriye" used to ask him to return home. While returning home he used to play on the way and reached home at 1 p.m. He lied to his elders by telling them that he reached work late because they woke him up late. So he returned home.

After that he started to apply salt in furrows (he did not say exactly when). It was he who decided to perform the latter task. He had to apply 2-4 sacks of salt daily. He was given half of a tin of oil. He had to put the salt in it and to apply handfuls of salt. He followed his "lali". Both the *kolom* and the *sirdar* used to give him orders. If he missed a furrow the *sirdar* used to call him and asked him why he missed that furrow. The *sirdar* also used to beat him with a "sagay" or a *kolom* used to tell the *sirdar* to ask him to go back home since he was not following orders. He earned Rs. 1.25 per day. On rainy days when he worked from 7 to 9-10 a.m. he was not paid. He had to stop working on rainy days because the salt dissolved in his hands.

When applying salt he used to leave home before 6 a.m. It took him 1 hour to reach his workplace. He had to rush when he was late. Even if for the latter task he was given a workload, by the time he completed his work and reached home it was already 4 p.m.

As part of the "ti bann" he also used to pick up and burn the "siendan" weeded by workers of the "gran bann". At the age of 15-16 he integrated the "gran bann" and used to weed "siendan", remove dry leaves and plant canes. The "blan", *sirdar* and *kolom* used to come on the sugarcane fields at 15.45 p.m. to countercheck his work. On the days on which he weeded "siendan" the "blan" used to play tricks on him. He used to bring some bits of "siendan" with him. They dig the soil to see if Mr. Chummun Baldeo had properly weeded the "siendan". While digging the "blan" used to put a bit of "siendan" which he brought with him and said that Mr. Chummun Baldeo did not do his work properly and he was not paid for that day. He returned home by crying. Mr. Chummun Baldeo said that he had to undergo through all these hardships. The *sirdar* used to tell him when he had to have lunch. During lunch time he used to rest or play a little-he used to "galoup galoupe".

When he had a problem he could talk only to the *sirdar*.

The Sugar Estate did not provide him with any tools. When he weeded "siendan", for instance, he had to bring his own hoe. He had no boots, gloves and uniform. He used to wear the clothes that he used to wear at home while going to work. He had no holidays and thus, then he was ill for 2-3 days and did not go to work he was not paid. It was during the prime ministership of Ramgoolam that he was provided with the latter facilities.

A prayer was performed before harvest. He used to see a priest coming at the mill. The priest used to perform a prayer. The *sirdar* did not allow him to assist the prayer. He believes that the prayer was performed so that no accident would occur, the mill would not break down, no worker would get hurt.

He did not live on the Sugar Estate camp. But he did know about the Sugar Estate camp because he had a friend who lived there and on the request of his friend's mother, Mr. Chummun Baldeo used to go at their place during lunch time. He and his friend used to sit outside and have their lunch.

### 3.4 Marriage and Home Life

He does not remember very well about his wedding. He married at the age of about 25-26 and his wife was 15-17. His wedding ceremony lasted for 3 days from Saturday to Monday.

During his childhood's food was sold on rations, that is, his parents could buy only a specific amount of food. They used to buy maize rice, for instance. In difficult times his parents used to cultivate tapioca and sweet potatoes for the family's own consumption. When he grew up, however, food was abundant. His parents could buy rice-"gro diri", flour and "fonde" where they were sold at the cheapest price. He used to grow vegetables for his own consumption.

### 3.5 Later Life

Mr. Chummun Baldeo is 76 years old and still resides at Plaines Des Papayes.

## 4. THE LIFE HISTORY OF MR. CYRIL

### 4.1 Introduction

From early in his life Mr. Cyril quickly rose through the ranks of the Mauritian sugar industry. Starting as a *sirdar* when he was 19, he briefly worked at the docks in Port Louis before deciding to return to Sugar Estate work as a "ti kolom". Eventually he was promoted to the post of field manager, and describes some of the benefits he enjoyed from his employment. He also describes his wedding ceremony and his views on young people and family life in Mauritius today.

### 4.2 Childhood

Mr. Cyril was born in 1936 at St Hubert. He was the youngest of nine children. His father was the manager of St Hubert Sugar Estate and his mother was a housewife. His parents always spoke to him in French. When he was between five to six years of age, his family moved to Eau Bleu near Rose-Belle.

As a child, Mr. Cyril used to play "lamarel", rope skipping, and hide and seek. He also used to take an old bicycle tyre, turn it and run after it. He was also fond of playing with kites and used to make them with bamboo, newspaper since "Muslin" paper was not available during the war, and "lakord lafisel". There was no radio, but gramophones were popular in those days. After dinner, his mother used to tell him stories like "Ti Pouse".

Mr. Cyril attended the pre-primary school of Mr. S. Toste at Curepipe. For primary school, he attended Loreto Convent and pursued his secondary studies at St Joseph College. Mr. Cyril studied up to Form III. His teachers used to teach him mostly in French.

Mr. Cyril said that in his school days teachers were very strict. He had to be well behaved; otherwise, he could be expelled from school. He was never beaten. But at times his teachers used to pull his ears a little or he had to stay back 30 minutes after school hours. When he turned 15, his parents retired and the whole family moved to Rose-Hill.

### 4.3 Working Life

Mr. Cyril started to work at the age of 19 on Le Val Sugar Estate. He worked as a *sirdar* and had to supervise the work of about seven or eight women who used to apply salt and plant canes. Initially, another *sirdar* taught him his work. He said it was not difficult for him to learn since he was the son of a Sugar Estate worker and was often on sugarcane fields. If he had to complain about the workers under his supervision, he made the complaint to the "assistant". But he said he did not have to complain about the workers very often because in his opinion people in the past were more respectful. He said the workers under his supervision were very good. When they failed to do their work properly, he used to ask them to redo it until they did it properly.

After working as a *sirdar* for one and a half year, Mr. Cyril worked at the docks in Port Louis. There was a long "tapi roulan". Bags used to pass on it. There was a counter. He had to watch if the counter was functioning properly and to give a report on how many bags had passed on the "tapi roulan". He said he found this task boring and resigned after less than one year and went to work on Rivière Noire Sugar Estate at Cité La Mivoie. He obtained a job as an assistant on the sugarcane fields of the latter Sugar Estate. He had to assign to *sirdars* their work and tell them how much workers should be paid as per their work load. He said that the post of assistant was somewhat better than that of *sirdar*, because as an assistant he had more responsibilities and was rewarded accordingly: he earned a higher wage, that is, Rs. 250 per month while as a *sirdar* he was paid Rs. 5 per day; he had a small office; he was given a bicycle and a house made of corrugated iron sheet.

In 1959 when he was 23 years of age Mr. Cyril went to work on Mon Trésor Mon Désert Sugar Estate, as he believed that he would have a brighter future there. Mon Trésor Mon Désert Sugar Estate comprised of two big sections namely Union Vale and Sauveterre and three small sections which are: Mon Trésor, Mon Désert and Deux Bras. At first, he joined the section of Union Vale as a "ti

*kolom*". His tasks were almost the same as the ones he performed at Rivière Noire Sugar Estate. But he said working at Union Vale was better, because the Sugar Estate was bigger than that at Rivière Noire. He received the same wage. But if he did his work properly, he could have an increment of Rs. 15-25. He was also given a house and a motorcycle to go on his rounds. The house was made of corrugated iron sheets, and the partitioning was done with "ravinal" leaves. It consisted of two rooms, a kitchen, dining room, small living room, toilet and bathroom. When the first assistant in section Mon Trésor was ill he went to replace him just for one harvest.

After that he worked as "assistant employe an shef" in the sections of Mon Trésor, Deux Bras, Union Vale and Sauveterre respectively. As "assistant employe an shef", he had to replace the "employe an shef" when he was ill or on holidays. He was responsible for the section where he was working. He had to make a work plan, arrange the wage book, and pay the workers. He said he earned a meagre wage of Rs350 per month and enjoyed the following benefits: a small house made of concrete and a motorcycle to do his rounds. He then worked as "employe an shef" in the sections of Mon Trésor for about one and a half years and in the section of Deux Bras for about two to three years.

Mr. Cyril was promoted to the post of field manager in 1979. At that time, there were two field managers. He was in charge of the three smaller sections: Mon Désert, Mon Trésor and Deux Bras. He had to supervise the "assistan an shef's" work. He had to ensure that all the work was completed within the set timeframe. He said that the Sugar Estate used to make a work plan that all the workers had to respect. The harvest season, for instance, used to start in July and had to be over between 10 and 15 December. He earned a meagre wage of Rs11. He made his rounds in a car and had a driver. He had a gardener. He also received a large house made of concrete. His house was on the section of Mon Désert close to the factory manager's house.

When he joined Mon Trésor Mon Désert Sugar Estates, Mr. Cyril used to wake up at 5 a.m. and reached work around 6 a.m. He always prayed before going to work and asked God to help him with the day ahead. At around 9 a.m., he used to go home, eat a piece of bread, and return to his workplace. Most days his work was over at 4 p.m. Normally, he had to work for 8 hours. When problems like sugarcane fields caught fire or a wagon had derailed, he had to go to work even at night time. He said that Sugar Estates no longer face these problems. He also revealed that when he was working, there were many prejudices. As a worker of the Sugar Estate, he could not go abroad for holidays. In fact, he did not have any holidays. According to Mr. Cyril, workers were subject to a form of slavery.

#### 4.4 Marriage and Home Life

Mr. Cyril got married at the age of 29 and his wife was 17. He said his marriage was a love marriage. He got married in a church at the parish of Rose-Hill. The priest performed the prayers and songs were sung. After performing the prayers, the priest asked him if he and his wife wanted to get married because he was required to obtain their consent, and then blessed them. They exchanged rings. The wedding ceremony lasted about three quarters of an hour, he said.

Mr. Cyril wore an ordinary "konflo" of dark colour for his wedding and his wife wore a long white dress with a little veil on her head. He did not invite many relatives because he could not afford to do so. He invited his relatives by sending them cards through the post. Mr. Cyril said that it was important that people marry people that follow the same culture as theirs. Otherwise, it may lead to social discord. For example, if a Catholic person marries a person who is a Protestant, the Protestant will not go to the church. Following his marriage he has two children: a son and a daughter.

#### 4.5 Later Life

Mr. Cyril is presently a resident of Rue des Corbigneaux, Morcellement Blue Bay. Mr. Cyril said that through his grandchildren, he notices that there has been a change in schools as far as discipline and the ways that teachers should disciplined pupils are concerned. Nowadays, teachers cannot talk rudely with pupils, teachers cannot do this and they cannot do that. He said that every day he hears the same story: pupils striking in schools. If he and his friends had done the same during his school days, they would have been expelled he said.

Mr. Cyril explained why nowadays some children tend to deviate from the right path. He said that in the past, women did not go to work. They looked after their children. Consequently, children benefited from a close family life. But nowadays, while some children's parents are at home when they return from school, for others none of their parents are there when they reach home. Or at night only one of their parents is at home. He believes this is enough for some children to lose self-control and to become drug addicts. He thinks people should be giving this issue more consideration.

## 5. THE LIFE HISTORY OF MR. DOOKHIT DEEWAN

### 5.1 Introduction

Mr. Dookhit Deewan describes his childhood as well as the experiences of his grandfather, an indentured labourer who came to Mauritius from Bihar after promises of making him rich. He also describes his responsibilities as a *sirdar* working on a Sugar Estate, aspects of his wedding ceremony, and some of the criteria his stepmother used to choose his wife. Just like for his grandfather, the Ramayana is very important to him and he still reads it to this day.

### 5.2 Childhood

Mr. Dookhit Deewan was born in the village of Plaines des Papayes. Mr. Dookhit Deewan knew his grandfather. He still remembers how his grandfather narrated to him his life in Bihar and how he came to Mauritius at the age of 15 as an indentured labourer. Given that life was very harsh in Bihar at that time they fooled his grandfather and managed to persuade him to come to Mauritius by telling him that in Mauritius “vir ros gagn larzan”. The only possessions that his grandfather took with him on the voyage were his bag and a copy of the Ramayana. According to Mr. Dookhit Deewan’s recollection of what his grandfather told him, on board the ship his grandfather was not treated like a human being but rather like an animal.

Upon landing in Mauritius, Mr. Dookhit Deewan said that his grandfather continued to be mistreated. “enn bann blan” brought his grandfather to a Sugar Estate-the name of which he does not know. The owner of the Sugar Estate made his grandfather work. His grandfather lived in camps for many years. Eventually his grandfather was able to save some money with which he bought a small plot of land in the village of Plaines des Papayes once “slavery” (that is, indentured labour) had been abolished.

Mr. Dookhit Deewan’s father worked as a *sirdar*. He does not remember his mother, not even her name, since she died when he was very young. He has four sisters and had two brothers.

The house of the Dookhit family was made of straw. It consisted of two rooms separated by a jute bag. There were no kitchen, toilet and bathroom. Food was cooked in a corner of the house on fire wood and they took some straw and “enn-de goni finn bare” to make a bathroom. They had to fetch water from a well found half a kilometer away. They carried the water in a container made of tin and washed their clothes near the well itself.

As a child, Mr. Dookhit Deewan used to play *boul kadak* also known as *boul kaskot*, *goulidanta*. He also used to play with marbles and small seashells. In the evenings, his grandmother and grandfather used to tell him stories like “Salanga and Sadablich” in Bhojpuri. His grandfather and grandmother also used to sing Ramayana songs and other songs related to the stories they narrated. He said that he still remembers these songs.

Mr. Dookhit Deewan went to Plaines des Papayes School and studied up to standard VI. Classes started at 8 a.m. and ended at 3 p.m. During Mr. Dookhit Deewan’s first two years at school, classes were conducted outside and benches and a small blackboard were placed beneath a tree. Hence, when it rained classes were interrupted. From standard III to standard VI, however, he used to study in a proper class-room with corrugated iron roofing. In the class-rooms too there were benches and blackboards. His teachers addressed him in Kreol but taught him in English and French. As a Hindu, Mr. Dookhit Deewan also studied Hindi at school and performed Hindu prayers like “Jai Jagadi Swaheré, shanty shanty shanty”. But when it was the turn of Christian pupils to pray, he used to do other things, such as gardening and planting.

He did not bring food to school. At times his grandmother used to bring food for him. The school was quite far. But when he grew up he could go home on his own for lunch. For lunch he used to have a little rice, dholl and chutney.

### 5.3 Working Life

Mr. Dookhit Deewan joined Beau-Plan Sugar Estate at the age of 14 years old. His work consisted of removing grass, weeding "siendan" and carrying out works meant for children. He earned 35 cents per day. Work started at 7 a.m. and ended at 4 p.m. During working hours he had to work non-stop, because even if he had been working very hard but had just taken a pause of 15 minutes and that his "sef" caught him, he would be marked as absent. But since the *kolom* saw that he used to do his work properly, Mr. Dookhit Deewan was made *sirdar* at the age of 17. As a *sirdar*, in the morning Mr. Dookhit Deewan had to note the presence of the 25 labourers who worked under his supervision. He used to carry a pole in his hand. He used to measure a pole of 10 "pie" and assign to each labourer his/her workload. He worked from Monday to Saturday. But in case the sugar factory did not have enough sugarcane to crush, he had to work on Sundays too. He used to receive sugar twice in a year: when harvest started before June and In December on the eve of New Year. When he was ill or had a minor injury he could go to the Sugar Estate's hospital. The hospital offered its services free of charge and there was a nurse to take care of him. If however, he had a serious health problem or was badly hurt he had to go to Montagne Longue Hospital.

After waking up in the morning he used to brush his teeth, drink tea and leave for work at 5-6 a.m. He used to go to work on foot. From Plaines des Papayes he used to go to work at Kalbas, Beau-Plan, Pamplemousses, for example.

### 5.4 Marriage and Home Life

During Second World War, Mr. Dookhit Deewan received a ration card from the government. The amount of food that he should receive was indicated on it.

Mr. Dookhit Deewan Married at the age of 18 and his wife was 16. It was his step-mother who chose his wife. According to him, his step-mother chose his wife because for her she was a nice girl or belonged to a good family. However, he does not know what criteria his step-mother used to determine that his wife was a nice person. He met his wife on the day of his marriage itself.

In the past there was no need to go to invite people personally for a wedding and to give them a wedding card. In Hindu religion there was a "Thakur"-which according to Mr. Dookhit Deewan was a professional. His family members just decided who they wish to invite and the "thakur" took a "betel" and a clove and invited these people on their behalf. The people accepted the invitation. The "thakur" also "dres tou zafer mariaz". They paid him Rs. 2/Rs. 2.50 for his services.

His marriage ceremony lasted six days. Tilak and safran were performed on Monday and Wednesday respectively. On "safran" Mr. Dookhit Deewan was bathed with a paste of turmeric. He said that "safran" was important because there was no make-up in the past. During the latter ritual he wore an ordinary shirt and a "ti" pair of trousers/"enn ti langouti". Since there was no radio and television women sang from Monday to Friday.

The wedding ceremony took place on Friday night. Mr. Dookhit Deewan left Plaines des Papayes for Highlands-where his wife lived, at 4 p.m. It was the first time that he was going to the latter place. He was not even aware of its existence before. He went by car-there were about 5 to 6 cars, as "bann Ioto Ford Canada" had just been introduced. Yet, the speed of these cars was not as good as those of today's and the roads were not well-built. He therefore, reached Highlands, at 6 p.m. He had to bring gifts for his wife. They included: her *saree* and gold jewelry namely "chan, kanpur, jumka and sikri". Once at the bride's place the two families and Hindu priests came together to marry them. The Hindu Priests did prayers. In the past people abided strictly to rites and rituals. Hence, He got married, his marriage was over and he and his wife left his wife's place at the time specified by the Hindu Priests. They returned to Plaines des Papayes by 2 in the morning. On Saturday his wife and him with some relative went back to his wife's home to perform a ritual.

There was no honeymoon however. Mr. Dookhit Deewan married on Sunday and had to go back to work on Monday. He said that he was not paid for the six days he was absent for his wedding. Nor did "misie-la", the estate owner or manager, offer him any wedding present or attend his wedding. However, Mr. Dookhit Deewan said that the guests who attended his wedding gave him 2/5 pounds of rice, 1/2 pounds of dholi and 5 pounds of flour as wedding gift.

He managed to go to Bihar twice and to meet the family to which his grandfather belonged.

### 5.5 Later Life

Mr. Dookhit Deewan still lives in the village of Plaines des Papayes. But he can no longer walk. He does not have any souvenir of his grandfather not even the Ramayana that his grandfather brought with him to Mauritius. He does, however, still read the Ramayana.

## 6. THE LIFE HISTORY OF MRS GOOLAMUN BEEBEE MARIAM

### 6.1 Introduction

Mrs. Goolamun Beebee Mariam has never been officially employed but that has not stopped her from living an active life and finding ways to contribute to her family's income. She describes the activity of making "vakwa" bags, a trade she learned from her mother and that she was very successful at before plastic bags replaced "vakwa" baskets. She also describes aspects of her home life and the importance of the Muslim festival of Eid to her and reading the Namaz several times a day.

### 6.2 Childhood

Mrs. Goolamun Beebee Mariam was born at Camp de Masque Pavé to Yusuf Modabaccus - a jeweler, and Beebee Abeda Caunaye - a housewife. She had two sisters and two step-brothers. Her parents did not send her and her sisters to school because the school was too far from where they lived. Only her step-brothers were allowed to go to school. But she and her sisters went to the "maktab" where the Imam taught them the Muslim religion and Muslim alphabets. She completed all her classes at the "Maktab". Her studies at the "Maktab" enables her to do "Namaz", read the *Quran* and the "Karma". She reads the "Karma" at night. It is a form of protection for her.

Hence, during her childhood Mrs. Goolamun Beebee Mariam's routine was as follows. She used to wake up before six a.m. to do her prayer. After that she used to have her breakfast. She used to have biscuits and tea for breakfast. After breakfast she used to learn her lessons, Help her mother by looking after her younger sister and then leave for the Maktab at 7 a.m. As a child she also used to play with her friends, sisters and step-brothers. They used to play with dolls which their parents bought for them. Moreover, she used to play hide and seek with other girls. At night her maternal grandmother and mother used to relate stories to her.

### 6.3 Working Life

Mrs. Goolamun Beebee Mariam did not work before marriage. After her marriage too, her husband did not allow her to go to work. She, however, used to make baskets from "vakwa" at home, as plastic bags were not available at the time, and the baskets made from "vakwa" used to sell well she said. She used to sell a basket for 20-25 cents. Originally, she learned to make the "vakwa" baskets from her mother. She had to make the "vakwa" into two pieces, let the two pieces dry, straighten them and then she could start to make the baskets. But Mrs. Goolamun Beebee Mariam does not make them anymore, as "vakwa" is no longer cultivated in Mauritius.

### 6.4 Marriage and Home Life

At the age of 18, Mrs. Goolamun Beebee Mariam married Ayup Goolamun who was a *sirdar* in the civil service. She had an arranged marriage. She got married six months after her parents chose her husband. Her relatives came to her wedding by car and bus. The wedding took place at her place. Her wedding tent was made of bamboo and "parayla". Her Nikka was short and celebrated over just one day. Her husband's relatives sent her a dress, "horni" and "tous" of red colour. She applied Mehendi to make herself look pretty. Her husband wore trousers, an "aba" and "pagri". Her mother gave her earrings and "Tori" for her wedding.

A prayer known as "Fateya" was performed before food was served. When she got married rice was not available. Bread and beef were prepared. It was the relatives who slaughtered the ox.

After her marriage Mrs. Goolamun Beebee Mariam went to live at Montida. Her house was made of straw and rocks. The living-room was of corrugated iron sheets. The floor was dressed with soil. Her house consisted of 3 rooms and two small rooms known as "godon". She shared the house with her husband's three brothers and their wife. Each of them had their own small kitchen outside. Her neighbours were from different religious backgrounds but they lived in harmony and unity. She spent most of her time at home because her husband did not allow her to go to work.

Apart from making baskets from "vakwa", Mrs. Goolamun Beebee Mariam used to do household chores, chat with her sisters-in-laws and sew clothes. There were no water facilities. She and her sisters-in-laws had to collect water from their neighbours' house. They did not go to the river to wash clothes. They used to wash their clothes with the water they got from their neighbour. Her sisters-in-law taught her how to cook curries and "roti". She used to make "roti" with crushed maize and wheat.

Mrs. Goolamun Beebee Mariam gave birth to eleven children: seven daughters and four sons, at home with the help of a midwife. She had to pay the midwife. After giving birth to her babies, she was given "kasar" to eat. The "kasar" was made of crushed rice, ginger, "methi", "chamsur", water and sugar. "The kasar" was meant to give her strength and to purify her stomach. Mrs. Goolamun Beebee Mariam said it was her mother who taught her how to prepare the "kasar". She, in turn, taught her daughters how to prepare it. Although Mrs. Goolamun Beebee Mariam and her children used to consult a private doctor when they were ill, she also used medicinal plants and herbs. She used to plant mint and ayapana. She used to give her children ayapana to drink when they were vomiting. The ayapana used to purify their stomach.

The most important Muslim festival for Mrs. Goolamun Beebee Mariam is Eid. After seeing the moon in the month of Ramadan, she begins her "roza"-a fast, which lasts for one month. She cannot eat and drink between 5 a.m. and 6 p.m. After fasting for one month she celebrates Eid. She cooks nice food- "briyani" and "vermisel", wears beautiful clothes and goes out. She said it is a happy moment for her. As a Muslim, "Namaz" is also important for Mrs. Goolamun Beebee Mariam. She must read "Namaz" five times a day at specific times, but added that when one has difficulties, one can read it at other times. She also mentioned in her interview that "Moharam" is the first month in the Muslim calendar. For Muslims, each New Year starts with "Moharam".

#### 6.5 Later Life

Mrs. Goolamun Beebee Mariam is residing at Mosque Road Camp de Masque Pavé. Two of her daughters and one of her sons have passed away.

She expressed her views on the youngsters of today. Mrs. Goolamun Beebee Mariam firmly states that nowadays youngsters do not respect elders. It was of no use to give advice to them because they will do things only if they want to do them.

## 7. THE LIFE HISTORY OF MR. GROOCHURN BEEANDEWO

### 7.1 Introduction

Mr. Groochurn Beeandewo discusses improvements that trade unions made to his working conditions as a Sugar Estate worker and the difficulties he has experienced in life. At an early age, his father was bed-ridden, and Mr. Groochurn Beeandewo had to give up his studies at school to look after his two younger sisters while his mother went out to work to support the family. He also describes the difficulties his wife had giving birth to their children when health care in Mauritius was still rudimentary and the type of food he ate and how rare it was to eat meat in the past.

### 7.2 Childhood

Mr. Groochurn Beeandewo was born in the village of Jouvance d'Épinay on December 29, 1934, to Bala - a *sirdar* on Grande Rosali Sugar Estate - and Sushil. The members of the Groochurn family had their own house, which was made of straw. The walls and floor were dressed with cow dung. The living room was partitioned with corrugated iron sheets so that Mr. Groochurn Beeandewo's mother could have a place to cook. He said that his family was poor and used the corrugated iron sheets as a precaution against fire. In their house, there were a bed made up of four wooden boxes, and a table of inferior quality made of wooden planks. Mr. Groochurn Beeandewo's sleeping mattress was made of "petiver" and at night he used to cover himself with jute bags. They did not have water and electricity. For lighting, they used kerosene lamps, and they had to fetch water from a spring found at Jouvance. They carried the water in a container made of tin and stored it in a barrel at home. His mother used to go to the river three or four times a week to wash clothes. He used to go with her and bath in the river.

Where he lived the houses were far from each other. As a result, he said he did not have many friends. Among his few friends there were both boys and girls-even grown up girls of 12/13 years old. He and his friends used to take a little cart, build a "laryaz" on the road-which was rocky at that time. They also used to make a small whole and play marbles; play "kanet triang" and "Goulidanta".

He went to Kongoma School. Given that his school was close to his house he went on foot. He used to bring a piece of bread in a bag or his mother used to give him a *roti* to bring to school. His parents used to give him 20 cents-which he had to use for the whole week. It was up to him to decide whether he was going to spend the 20 cents on one day or during the whole week. He said he does not remember much about his teachers, since the difficult moments he has experienced in his lifetime has made it difficult for him to remember such information. He just said that they taught him in Creole and Hindi. During the break at school he and his friends used to play hide and seek to kill the time. They used to converse in Creole because the majority of the pupils were Christians. But he had to abandon his studies in his first months in standard III to look after his two younger sisters after his father fell ill and his mother started to work. His father was bed ridden. He was forced to sell their house, but since his father was a *sirdar*, he managed to get a house on the Sugar Estate camp. His mother had to prepare the food and milk the cows before going to work. Mr. Groochurn Beeandewo had to make his sisters ate on time and drank the cow milk by putting it in their bottles. After his father died and his sisters grew up and were able to take care of themselves, Mr. Groochurn Beeandewo started to work.

### 7.3 Working Life

Mr. Groochurn Beeandewo started to work at the age of 14 on The Mount and Beau Plan Sugar Estate, more precisely, in the section of Grande Rosalie. He joined a group of child labourers and was paid 50 cents per day to apply salt. He worked from 7 am to 6 pm in the evening. He said that applying salt was a very hard task because the sugarcane fields were far from each other. It was his mother who got him the job with the Sugar Estate.

Afterwards he had to fetch the food of five "manev masinn" from their house and bring the food to the mill. One of them might live at d'Épinay, another at lakrwaze La Nicolière. He did that on foot

and barefoot. He carried the basket of food on his shoulder. He worked up to 6 p.m. He said that as a camp resident he had no choice but to perform whatever task(s) "misie-la" assigned to him. Indeed if he refused he said that "misie-la" could throw him out of where he was living or remove his door.

Owing to the lack of "manev masinn", "misie-la" compelled him to work as "manev masinn". He worked as "manev masinn" for 15 years. His work consisted of "amar vagon" and "trap lam". He started to work on Monday at 5 a.m. and went back home on Sunday at 7 a.m. He worked night and day. But he said that when he reached the mill and that there were many machines weighing canes he could rest for about 1-3 hours. If on the next day he stayed at home "misie-la" used to come at his door. He had no specific time to eat. He earned Rs2.25 per day and a fixed surplus of Rs9. He said that his wage was not enough. His chief was the "masinn" driver.

When the Sugar Estate changed its technique of carrying sugarcane to the mill, Mr. Groochurn Beeandewo and the other five "manev masinn" were told that there was no work for them. But after trade unionists had a discussion with "misie-la", a deal was struck and he and the other five workers were sent to cut and load sugarcane. He was integrated in a group of labourers and was placed under the supervision of a *sirdar*. Apart from supervising his work, the *sirdar* used to take down his presence and calculate his wage as well. But it was misie-la who was in charge of everything. He performed the latter task for 30 years. Before harvest he used to perform a prayer at home. He invoked his saints and "gran dimounn". During the harvest season he used to wake up at 1 A.M, go to work on bicycle and start to work at 3 a.m. Harvesting and loading sugarcane were very hard since there was not an exact time at which his work was over. Nonetheless, Mr. Groochurn Beeandewo was happy when it was harvest season because it was an opportunity for him to earn more money. He even claimed that during the harvest season, his wage was higher than a *sirdar's*. During intercrop season, however, he earned a fixed wage. He used to weed "siendan", remove rocks and plant, for instance. Initially when he used to go to work during rainy days he was asked to go home at 9 a.m. and was not paid at all. But when trade unionists-Ramnarrain and Jugdambi, fought against this injustice he started to receive half of his wage when he was sent back home at 9 a.m. on rainy days. Moreover, when doing the following tasks: removing dry leaves, "grataz" and cleaning, he was assigned a load of work which he could complete by 11 A.M while before trade unions began to fight for workers he had to work up to 3 p.m.

At first he had to buy his own tools. But when the government enforced regulations<sup>1</sup> and trade unions started to work in the interest of labourers the Sugar Estate gave him a "laserp" every 2 years. Afterwards (he did not mention exactly when) he even received money to buy his hoe. Thanks to trade unions he also started to receive holidays, sick leave and "local" and a bonus at the end of the year.

With the enforcement of regulations<sup>2</sup> he started to receive boots, gloves and uniform as well. The Sugar Estate did not organize any party. He and the group of labourers with whom he worked used to celebrate together. But the *sirdar* used to make them complete their load of work beforehand. When he and his wife had their children the Sugar Estate gave them about Rs200/Rs300 to buy milk for their new-born babies. During his final years on the Sugar Estate he started to receive 5 pounds of sugar as gift for New Year.

When he was about to retire he paid the trade unions Rs. 22 per month. He retired in 1994 at the age of 60 years old. He said that on retiring he was somewhat sad but was also happy to retire and receive his lump sum and that he benefited from his "local" and sick leave. What he liked about his work is that when working conditions improved thanks to trade unions, his job on the Sugar Estate was secure.

#### 7.4 Marriage and Home Life

Mr. Groochurn Beeandewo married at the age of 25. His marriage was an arranged one. His mother asked his neighbours to look for a partner for him. His wife lived at Belle-Rose. He married one year after meeting her for the first time.

He confessed that caste system did exist in the past. For Mr. Groochurn Beeandewo, however, caste system means inequality between rich and poor, that is, social class, since he said that he was a poor man and thus had to marry a poor woman. If a family was somewhat richer than him they

would not have accepted to marry their daughter with him because he would not have the means to feed her. He had to marry a woman belonging to the same social rank as his.

His engagement took place in a "baitka". A small "hawan" was performed. He then offered two olive cakes to his wife. He and his wife did not receive any gifts because people were poor: "tou dimounn dan bez mem" at the time Mr. Groochurn Beeandewo said. Following his engagement he went to meet his wife once in a month because he had to work.

For his wedding, Mr. Groochurn Beeandewo invited his relatives and some people in the locality verbally because he could not afford to give them cards. He was a member of the society and also of that of a youth club. Consequently both members of the society and youth club helped him during his wedding. His wedding tent was made up of bamboo. Since he was a worker of the Sugar Estate, the Sugar Estate allowed members of the society to cut bamboo on the riverside for his wedding. His wedding ceremony lasted for six days. Given that he worked as "manev masinn" he had 6 Holidays for his wedding. But if he worked as canecutter at that time he would have had no holidays. His wedding was a simple wedding as he puts it: "marye ki ou pe marye enn mar-enn marye mizer". He said that his total wedding expenses came to Rs700 and that nowadays one cannot get a sack of flour for that amount. He bought a sack of rice or flour for his wedding from the Chinese shop on credit. He did not have the means to buy coke for his guests.

Mr. Groochurn Beeandewo's wife gave birth to their children at home with the help of a nurse from the Sugar Estate's hospital. The nurse came to see his wife only for the first two days following her deliveries. After that, he had to take care of her himself to the best of his ability, and if she was not well he brought her to civil hospital or consulted a private doctor. After his wife had their second child, Mr. Groochurn Beeandewo's wage was no longer sufficient to feed his family and his wife started to work as labourer. She left their children with an old woman and paid her one rupee per week. He said that one rupee was a considerable sum of money in those days.

Mr. Groochurn Beeandewo also said that he used to eat various types of food. He mentioned eggplant and "bann bred". Fish was abundant because merchants came to people's homes to sell fish. But he used to eat meat very rarely, maybe once a year when his parents managed to save some money and buy a pound of meat, or a neighbour slaughtered a goat or a hen was to be sold. He used to buy a pound of "gro diri", or rice, for 30 cents. He said that life was hard in the past and he had to work very hard to earn 30 cents: "Ou bizin trime terib. Ou bizin travay lanwit lizour parey kouma mo bann gran dimounn travay. Ladan pena ler. Kan ounn ale seter o kontrer, katrer-sinker ou vini".

### 7.5 Later Life

Mr. Groochurn Beeandewo is now 76 years old and is a resident of Shivala lane, Jouvance D'Épinay. Groochurn Beeandewo claimed that there is a world of difference between today's youngsters and those of the past and he accounted for this change. He said many youngsters do not want to work and do not respect their elders. He said that in the past parents used to threaten their children by telling them that a thief would pass by to deter them from going out, but that children no longer believed their parents and instead will go out and look for the thief! For him development and education are responsible for this change in attitude. In the past only the children of the rich were educated. Poor people used to believe what the educated people used to tell them. But since education is free all children: both poor and rich are educated and poor people can no longer be fooled. Out of 100 only 5 parents may refuse to make an effort to send their children to school. He said that they should make sacrifices for their children.

He also provided some reflections on how youngsters can lead a more successful and meaningful life and should behave. According to him, youngsters must learn to make sacrifices, must work, and must not incur unnecessary expenses. Working for the country means a bright future, he said. They should respect people.

## 8. THE LIFE HISTORY OF MR. PANDOO SAYAJEE ROW

### 8.1 Introduction

Although Mr. Pandoo Sayajee Row lost both of his parents at early age, he went on to live an exciting and varied life that saw him join the army at 18 and was stationed in Egypt for a number of years after the Second World War. Apart from a brief stint as a Sugar Estate worker when he returned to Mauritius for the first time, he has worked in the agricultural section of the civil service for most of his life on returning to Mauritius for good. He also describes the significance of worshipping Ganesha and the Ganesh Chaturthi festival to him as a Marathi.

### 8.2 Childhood

Mr. Pandoo Sayajee Row was born in the village of Melrose. He lived in an extended family consisting of himself, his parents, two elder siblings, uncle, aunt and cousin. The Pandoo family lived in a long house made of straw and the floor was dressed with cow dung. The floor was dressed every Saturday. There were small benches in the house. There might also have had one or two Chair(s) made of wood. He used to sleep either on jute bags, a "nat" or "Khatya"-a bed made of coconut rope and wood. At bed time his elders used to tell him how they worked, how they collected food that they had to fetch wood from the mountains to cook food.

Both of Mr. Pandoo Sayajee Row's parents were labourers on a Sugar Estate. He still remembers how his mother used to wait for her friends and then they used to go to work together. He used to accompany her to the road. His mother used to hold him. He had big cheeks. She used to touch his cheeks. Then he went back. He lost his mother when he was about 4 to 5 years old and his father at the age of 7. Both died due to ill health. After the death of his father it was his uncle and aunt who looked after his brother, sister and him.

Mr. Pandoo Sayajee Row had to attend Church of England school-a Protestant school in the village of Montagne Blanche. He refused to go to school because he had no one to motivate him to do so. His uncle could not pay much attention to him given that he worked in his ox cart and got tired. He claimed that if his parents were still alive it would have been different. His uncle used to force him to go to school. His uncle used to beat him and bring him to school. He said that if his uncle had not forced him to go to school he would not have studied up to standard VI.

Creole was the medium of communication at Mr. Pandoo Sayajee Row's school. Given that it was a Protestant school, he was required to perform catechesis. He also learned the history of France and England, arithmetic and geography. Hindi was the only oriental language that was taught at Mr. Pandoo Sayajee Row's school. He did not mention whether he attended these Hindi classes. But he did state that he learnt some Marathi from his paternal grandparents who came from Kolhapur Maharashtra. He also had to sing "God Save the King" at school because Mauritius had not yet become independent.

At the beginning his uncle did not give him money when he went to school. But afterwards he received 1 cent at times since his uncle did not always have money to give him. He used to buy "gram". He used to bring rice with curry to school.

As a child he used to play "goulidanta" with a wood sharpened on both edges, "disel" and with marbles and kites-which were made up of lakord lafisil", wood and muslin paper. At times he used to make the kites by himself and at times his brother used to make them for him.

### 8.3 Working Life

After completing standard VI in 1942, Mr. Pandoo Sayajee Row worked as messenger. However, upon turning 18, he enrolled in the army. He embarked on a ship with many other people bound for Egypt in December 1946, that is, during peacetime. On December 24, 1946, he reached a place called Quassassin where there was a military base and received three months of training. At Quassassin there was sandstorm and he had to cover his bread with *messtin*. He also had to be careful otherwise crows could take his piece of bread away. After that he was posted to other places where he was required to watch over an ammunitions warehouse. He said that at times army education officers used to come at the warehouse and teach them English. He even got a small

certificate. Mr. Pandoo Sayajee Row said he was treated very well. He was given a bed and was issued clothes. There was a recreational centre where he could listen to music. There was a piano. There was "nafi" where he could sit and drink something.

Mr. Pandoo Sayajee Row came back to Mauritius in October 1950 and received a small sum of money that was destined for him as a returning soldier. Given that there was no progress in Mauritius initially he worked on Sans Souci Sugar Estate for about 1 year. But when La Nicolière was being built He started to repair a canal meant for La Nicolière and carried rocks here and there. He earned Rs.1.75 per day. But his wage was not enough. In 1952 He therefore, enrolled in the army for another 3 years. For him working in the army was better. He was sure that on his return he would receive a small sum of money. And on rejoining the army, he got the opportunity to work as an assistant pay clerk. His work consisted of calculating the money that workers should receive every week.

After his stint in the army was over Mr. Pandoo Sayajee Row worked as a relief worker in the civil service in "Bois des Forêts". He used to plant eucalyptus and pine trees. After about two years he had to look for other work because the relief work was over, and he managed to get a job in the civil service in the agricultural sector in the tea division. He was then shifted to work at Réduit in Central Experimental Station (CES) which dealt with vegetables. Overall he worked for 25 years in the agricultural sector and retired. During that time he was also the secretary of a cooperatives Society which gave loans to planters who cultivated sugarcane.

#### 8.4 Marriage and Home Life

Mr. Pandoo Sayajee Row got married when he was 23. His wife was 15. He invited only close relatives and people in his locality. He invited them personally and did not give them cards. He said that nowadays many people including friends are invited to weddings. But he could not afford to do so for his wedding. On Friday, he got engaged. He had to offer his wife a chain. On Saturday, "safran" took place. He got married on Sunday. On Monday, he said that he went at the bride's place again. On Tuesday, another service was performed. He wore trousers and a shirt and might have worn a costume. His wife wore a *saree*. He also gave his wife jewels to wear in her hands. He bought the jewellery on credit from a jeweller who used to come from Port Louis at the end of every month. Vegetarian food such as "sonz, pouri", potatoes and "dal tipwa" were served from Friday to Monday. It was only on Tuesday that non-veg food was prepared. He performed these services because he had to follow tradition and had he not done so his uncles would have felt that his prayer was incomplete. After his marriage He and his wife have 5 children.

All the food that Mr. Pandoo Sayajee Row used to eat in the past is available even today. During the Second World War many ships did not reach Mauritius on time. Consequently there was a scarcity of food and the inhabitants received food on rations. During the war he used to eat potato chips, maize rice with curry since rice was not abundant, farata, biscuits, Lentils, red beans which people used to cultivate and dry, Bomli, and "pwason blan".

Ganesh Chaturthi is the most important festival for Mr. Pandoo Sayajee Row. He said that A month before the Ganesh Chaturthi festival, a prayer is performed. At the society a group of people sing songs three or four times in a week in praise of Ganesha. An idol of Ganesha is built and placed at the society. Every day he prays and offers coconut and flowers to Ganesha. On the last day many people congregate at the society. They dance and beat "dholok" and play the "jal". On the next day the idol is immersed in the river on the road of Sans Souci. On their way to the river, people dance and sing.

Mr. Pandoo Sayajee Row said that he should worship Ganesha first because Ganesha removes all evil forces. Worshipping Ganesha should also ensure that he will be bestowed with intelligence. He said that according to legend, Shiva told Ganesha that they should go round the world and the first to come back would be declared the winner. There were several vehicles. Some had lions. Some had birds, for instance. Ganesha had a mouse. Everyone went. But Ganesha made a circle, wrote Rama in it and go around it. Shiva said that Ganesha was intelligent and declared him the winner. Shiva further said that people would worship him first. Mr. Pandoo Sayajee Row feels good when he prays. He also celebrates Maha Shiva Ratri.

### 8.5 Later Life

Mr. Pandoo Sayajee Row is still a resident of Melrose. He stressed the importance of independence for him as a Mauritian. He claimed that due to the independence of Mauritius, he is free and thus can travel to any country he wants. Before independence, he could be prevented from entering certain countries. He could go only to England and other Commonwealth countries. The enthusiasm with which Mr. Pandoo Sayajee Row told the interviewer about the significance of independence undoubtedly leads one to conclude that he likes to travel to other countries.

Mr. Pandoo Sayajee Row also discussed Sir Seewoosagur Ramgoolam, the first prime minister of Mauritius, and his contribution to the nation's progress. He said that Sir Seewoosagur Ramgoolam had a special kind of intelligence. He never hurt or criticised people. Even during elections, he only said good things. He used to relate his sufferings and recognized the need for change. Mr. Pandoo Sayajee Row said that thanks to Sir Seewoosagur Ramgoolam, there has been much progress in Mauritius.

Mr. Pandoo Sayajee Row provided some advice to youngsters on how they can lead a meaningful and prosperous life fulfil their responsibilities and the country can progress. According to him youngsters should be patient. They would not obtain all that they want easily. They should continue their studies. If they are not educated they would not get a good job. The government chooses deserving people. They should work. They should love their work. If a job allows them to earn a living, whatever that job may be, they should work seriously. They need to earn money. Their wives and children should live. They should be punctual. Then the country will progress. Everyone should work.

## 9. THE LIFE HISTORY OF MR. PERSUNNOO GOKULANAND

### 9.1 Introduction

Mr. Persunnoo Gokulanand's life is somewhat out of the ordinary for Mauritians of his generation as he would go on to become the chief attendant of a Sugar Estate laboratory. This work gave him a great sense of satisfaction and upon retiring at the age of 60, his employers rewarded him by buying a plane ticket for him to visit India with his wife. Sadly, Mr. Persunnoo Gokulanand passed away in 2010 and is survived by his wife and son.

### 9.2 Childhood

Mr. Persunnoo Gokulanand was born in 1939 at Sans Souci. He was the sole child of his parents. His father's name was NunKumar. His father studied up to standard VI and worked in the laboratory of Sans Souci Sugar Estate. His job was to test samples of sugarcane and sugar. His mother's name's was Sarosatee and she was a housewife.

Mr. Persunnoo Gokulanand grew up in Sans Souci Sugar Estate camp. He said that there were approximately fifteen barracks made of corrugated iron sheets and partitioning was done by walls. Five families lived in one barrack. Mr. Persunnoo Gokulanand and his parents had two rooms and they built their own latrine because according to Mr. Persunnoo Gokulanand, the latrine built by the Sugar Estate was unhygienic. There was a common tap on every street. They used to fill water from these common taps. And for lighting, they used kerosene lamps.

Mr. Persunnoo Gokulanand had many friends in the estate camp and in the nearby villages, namely, Montagne Blanche, Melrose and Ti Pake. He used to play marbles, "goulidanta", and with kites that his father made for him. His father also bought a ball for him and he used to play with about four to five friends in a large open area between two barracks as there was no playground for children. But his mother did not allow him to play in the morning.

He went to Church of England School-a Protestant school found at Montagne Blanche. He used to go to school on foot. He had to walk about 1 kilometre. He studied up to standard 5 at the latter school. The teachers talked in Kreol but at the time he could not speak Creole properly. After school, that is, after 4 p.m., he used to go to the *Baithka* where he learnt Hindi. When his lessons were over, he used to listen to stories told by elders because he had nothing to do and that even radios did not exist at the time. He found these stories very interesting. Every month he also used to attend the simple *hawan* that a Hindu priest used to perform at the *Baithka*.

When Mr. Persunnoo Gokulanand was a child there were trains all over Mauritius. At Montagne Blanche There was only one train for passengers. It used to leave Montagne Blanche for Rose-Hill at 6 a.m. and came back in the evening. He did travel by the latter train. He liked to travel by train.

When Mr. Persunnoo Gokulanand was 10 years old the Sans Souci sugar factory was destroyed. His father lost his job and they lost their house in the estate camp. Mr. Persunnoo Gokulanand moved with his parents to his maternal grandmother's home in the town of Quatre Bornes. In the town of Quatre Bornes, he learned to speak Kreol properly. He did not mention at which school he did his standard VI. He pursued his secondary studies at Central College in Rose-hill. He studied up to form 4. Everyday he used to walk to school from Remy Ollier Avenue Quatre Bornes, which he said was about one and a half or two kilometres from his school.

### 9.3 Working Life

After leaving college Mr. Persunnoo Gokulanand stayed at home for two years. In the meantime, his father had been appointed as chief attendant in the laboratory of Beau Champ Sugar Estate by Mr. Auguste Harel. Given that his father was in charge of the laboratory of Beau Champ, he was able to appoint him as an attendant in 1956. About 10 to 15 people worked with Mr. Persunnoo Gokulanand. They used to carry out tests and he used to work on the results they obtained and submit his calculations to the chemist. For example, he said that if the mill had to crush 3000 tons of canes he had to calculate how many hours the mill took to crush the 3000 tons of canes, for how long had it been broken and if the mill had not been able to crush all the canes how many were left on the platform. The administrator could call him before the chemist asked him about his

calculations. If the mill had been able to crush only 2800 tons of canes 200 tons should be on the platform. He and the chemist had to give the same figures. What he liked about the chemist was the fact that he used to ask him if the administrator had already asked him for the figures. When he said yes the chemist did not make his own calculations and gave the figures which Mr. Persunnoo Gokulanand had given to him. Mr. Persunnoo Gokulanand earned Rs55 every month for the work that he did. He said it was a considerable sum of money at the time. He used to work from Monday to Sunday and even on holidays. His work started at 4 a.m. and was over by 6/7 p.m. He thus, used to wake up at 3 a.m. He used to bring food that was prepared on the eve to work. There was an oven at the laboratory and he used to heat his food. He used to do prayer and did not eat before going to work. When he reached his workplace he said they used to make tea which he used to drink.

Following the retirement of his father in 1970, Mr. Persunnoo Gokulanand was made chief attendant. He said he always received good treatment and was held in high esteem by all "misie blan". The Sugar Estate reimbursed him all the expenses that he incurred. Mr. Persunnoo Gokulanand retired in 2000. On his retirement, the manager gave him a plane ticket to go to India. He felt that this acknowledged his skills and the high esteem his manager held him in and took his wife with him when he went to India. On his return from India, he was called back to work, and worked for another six months. But since he had already reached 60 years of age by that time, his son asked him to stop working and he agreed.

#### 9.4 Marriage and Home Life

On moving to Beau-Champ with his family, Mr. Persunnoo Gokulanand did not live on the Sugar Estate. Rather, Mr. Harel built a house of corrugated iron sheets near the mill for them. On striking Mauritius, cyclone Carol destroyed their house. But the Sugar Estate rebuilt their house and this time the house consisted of 3 rooms and two "godon".

Mr. Persunnoo Gokulanand married at the age of 21. His wife was 17. Like many other people of his generation, his family chose his wife. They invited guests by handing out cards. His marriage ceremony lasted for three days. It was a "Puranika" wedding. He said that many people attended his wedding. He wore a dhoti and claimed that at the time, Hindu priests officiating at weddings forced the bridegroom to wear a dhoti for their wedding. His wife wore a *saree*. The Hindu priest performed a ritual before his wedding and vegetarian food was served on all three days. He and his wife have a son from their marriage.

Mr. Persunnoo Gokulanand said that he fasted for all Hindu festivals. The Hindu festivals he celebrated included *Shivrat*, *Divali* and *Fagwa*. During *Shivarat*, he used to make the pilgrimage to Grand-Bassin. For *Divali*, at first he used to light "Ponga", (flowers of the banana tree). Later on, earthen lamps were introduced, and finally people started to put electric bulbs. On *Fagwa*, his parents used to prepare several cakes that Hindus used to eat, such as "lados", and shared them with other people. He said that he kept this tradition alive. When Mr. Persunnoo Gokulanand lived in the estate camp at Sans Souci, on *fagwa* elders used to go to Montagne Blanche. They used to beat the "dholok" and play the "jal" while walking there. He used to join them. Residents of Melrose and Ti Pake also used to go to Montagne Blanche, where all of them used to dance and sing. They used to celebrate the whole day. He said he no longer remembers the songs they used to sing. But after leaving Sans Souci, he and his family started to play with colours on *Fagwa*. He said that he also used to celebrate the arrival of the New Year. For New Year, he used to buy two to three pounds of goat to eat.

#### 9.5 Later Life

Mr. Persunnoo Gokulanand passed away on August 17, 2010. However, in the interview, he was able to share some of his views on the present direction of Mauritian society. In his opinion, the customs of Mauritians have changed. For example, he said that in the past, women were "pli en respectable". He believed that when a woman goes to do prayer she must wear a *saree*.

Mr. Persunnoo Gokulanand also pointed to the negative effects of the education system on today's pupils. He claimed that nowadays pupils must work very hard. If they do not take private tuition, it is not certain that they will pass their examinations, and as a result, they are often left exhausted

by their workload. Whereas in the past, this was not the case, as pupils only went to school and did not have to take private tuition.

Based on his own working experiences, Mr. Persunoo Gokulanand also offered advice to younger Mauritians on how they should behave in the workplace if they wish to get ahead in life. According to Mr. Persunoo Gokulanand, if youngsters do their work properly and cooperate with their employers, they stand to benefit from the various advantages that employers can provide. But if they react irrationally, or somewhat violently, they will have very little opportunities.

## 10. THE LIFE HISTORY OF MR. RAMLALL RAMDUTH

### 10.1 Introduction

Mr. Ramlall Ramduth's life problematizes the romanticized view of the social mobility and prosperity of Mauritius's small planters. He not only describes his working routine as a small planter, but also his work on Beau Champ Sugar Estate before becoming a small planter. Despite the hardships he had to undergo, he said he has no bad memories of Sugar Estate work and was still working on the plot of land he inherited from his mother in 2009.

### 10.2 Childhood

Mr. Ramlall Ramduth was born at Quatre-Cocos to Raghubir Ramlall and Sonia Ramlall. Both of his parents were Mauritians. His father was a labourer. In 1960 he obtained a plot of land from the Ministry of Agriculture, more precisely, from Sir Satcam Boolell. He used to cultivate sugarcane and vegetables. After his father's death it was his mother who continued to cultivate the land. He had 3 brothers.

As a child Mr. Ramlall Ramduth did not play any games. When he was at home he used to do gardening, cut grass and look after animals. Regarding sports, he used to play only football. But there was not a good playground as he put it: "enn ti laplenn kraz kraze". His parents used to tell his brothers and him stories until they fell asleep. He no longer remembers these stories.

Mr. Ramlall Ramduth went to school at Quatre-Cocos. Given that his school was close to where he lived he went on foot. The school was made of shingles and when it rained, sometimes it used to pour inside. On those occasions, he had classes on a hill under a tamarind tree. He used to sit on a rock since there were no chairs like nowadays. He was taught English, French, mathematics and geography. After completing his standard VI, he went to Central College in the village of Flacq and studied up to form 2.

### 10.3 Working Life

Mr. Ramlall Ramduth joined Beau Champ Sugar Estate at the age of 23/24. His tasks consisted of harvesting sugarcane; "siyone ek pikan pios" since there were no machines at that time and removing grass, for instance. He worked under the supervision of a *sirdar*. The *sirdar* used to assign to him his workload and to pay him his wage every Saturday. He earned about Rs 3.03 per day. Sometimes the *sirdar* used to mistreat him. When he failed to do his work properly the *sirdar* sometimes used to tell him not to come to work. He had to acquiesce. He then used to go to see the *sirdar* and tell him that he was poor and had a family to support. He should give him work. The *sirdar* used to tell him that he should do his work properly.

Mr. Ramlall Ramduth said that he had to persevere because if he quit his job, he would not get a job elsewhere because at the time there were not many jobs in Mauritius. He said that nowadays, many jobs are available in Mauritius. There are factories, hotels, and a lot of development. But in the past this was not the case. Mr. Ramlall Ramduth also discussed the "*kolom*" he worked under and claimed that the *kolom* was superior because he was a white person: "Blan li pou res so blan mem". The *kolom* used to get around by motorcycle because the fields were far from each other.

When Mr. Ramlall Ramduth started to work on his parents' plot of land he used to wake up at 5 a.m., brush his teeth, have his bath, do his prayer, drink tea and leave for the fields. He used to bring food-*farata*/rice with curry, which was prepared by his mother, to work. Initially he found the work difficult. But he had a positive attitude since he said that any work is difficult at the beginning but it becomes easier as one gets used to it. His wife also worked with him. He used to plant sugarcane and vegetables, cut canes during harvest, and after two and a half months or 3 months he used to pick the vegetables. When there was a lot of work he used to recruit women to plant canes and pick vegetables. The women started to work at 6.30/7 a.m. and finished at 2 p.m. He paid them Rs. 2 per day. If a woman was absent on 1 day she had to complete her pending work on the following day.

Mr. Ramlall Ramduth said that in the past work was hard. He and his wife used to carry the vegetables they grew, on their heads, and took them home to be collected by lorries. But in 2009 he said that the lorries come to collect the vegetables from the fields, and he no longer has to bear the transport costs either. He also mentioned that he could not afford a bicycle since life was very expensive and that he could not even afford a pair of sandals at the time.

Ramlall Ramduth also had to employ people to cut canes. He, his wife and his workers did not have gloves and boots. As a planter Mr. Ramlall Ramduth used to just pray God before harvest. A cart used to bring the canes which his workers harvested "lor balans". After the canes were weighed, they were loaded on wagons. Wagons brought them to a mill known as Alvi. He had stopped to cultivate the plot of land which his mother gave him a few months ago due to ill health.

#### 10.4 Marriage and Home Life

Mr. Ramlall Ramduth married on 15 February 1977 at the age of 27. It was his mother who chose his wife. He did not meet her to see his wife very often before they were married. He said he could only meet her 1-2 days or once in 2-3 months. He had a religious marriage because according to him civil marriages did not exist in the past. The caste system did not exist. He could not remember how long his wedding ceremony lasted. He thought it only lasted one day; but his wife said it lasted for 3 days-Saturday-Monday. He then added that on Saturday elderly people danced and sang "santé letan mangoz".

He used to buy rations. He had a ration card. It was red. For example, nowadays he can buy 1-2 sacks of rice or the quantity of rice he needs. But in the past he could buy only the amount specified on the ration card, that is, just 5-10 pounds of rice, for instance, since rice was not abundant. If there were 4 persons in a house they could buy 20 pounds of rice in a week, that is, 5 pounds of rice for each of them. He used to eat the vegetables he grew. But he said that there were not all kinds of vegetables like nowadays. Despite that his family reared poultry, she-goats and goats he rarely ate a cock curry or *chevon*. He used to eat *chevon* on New Year. Now there are big big shops and there are many types of food. Chicken, fish and "tomat", for instance, are abundant and he can eat them every week. Yet, this was not the case in the past.

Mr. Ramlall Ramduth also pointed out that there was no television in the past. As a result, when he was at home on Sundays, he used to go to watch a film during the morning session. But he could go only when he had enough money. In fact He revealed that the money he earned was not always sufficient to feed his family. Nowadays, however, he has a television at home and can watch all kinds of programmes.

Nowadays there are many festivals like independence and Christmas. But in the past he used to celebrate festivals rarely because he did not have enough time to do so.

#### 10.5 Later Life

Mr. Ramlall Ramduth is still a resident of Mahatma Gandhi Road, Quatre-Cocos. He stays at home.

#### Conclusion

Even if these ten life histories portray the lives of Mauritians in the 20<sup>th</sup> century yet, they do not provide a full picture of Mauritian lives during the latter period. There are many other interesting aspects of Mauritian life in 20<sup>th</sup> century Mauritius which could not be explored due to time constraint and thus, which need to be explored by future researcher who should continue to work out the life history of the other informants who were interviewed for the Aapravasi Ghat Trust Fund's Oral History Project. For example, one can learn some new aspects of Mauritian life in 20<sup>th</sup> century Mauritius through the interviews of the following informants. M. Bisnauthsing Kewalparsad was 100 years old in 2009. He said that he used to go at his relatives' place by ox cart. Another informant, Mrs. Khaitoo Taramonee, aged 67 in 2009, worked on a Tobacco field for 1 year during her childhood. Mrs. Harradan Premnath who was 57 years old in 2009 worked as Pond-keeper and gardener for Fuel Sugar Estate before starting to work as a labourer on the latter Sugar Estate and being promoted to the position of *sirdar*. The last but not the least, Mr. Eustasie Joseph Ben who was 80 years old in 2009, studied up to standard VI and after five to six years of training, he worked as a tailor for several years at Grand-Gaube. At the age of 29 he went to live on the camp of Fuel

and he used to sew and there, stitch the clothes of camp residents who were Sugar Estate workers. Mr. Eustasie Joseph Ben did not allow his wife and daughters to go to work because he believes that a woman's place is at home and that man should be the breadwinner. As a result he did not even send his daughters to secondary school. His sons, however, did attend secondary school and three of his sons are occupying white-collar jobs.

# Free Immigrants on an Estate Camp - The case of Camp Aneerood/Camp des Routes

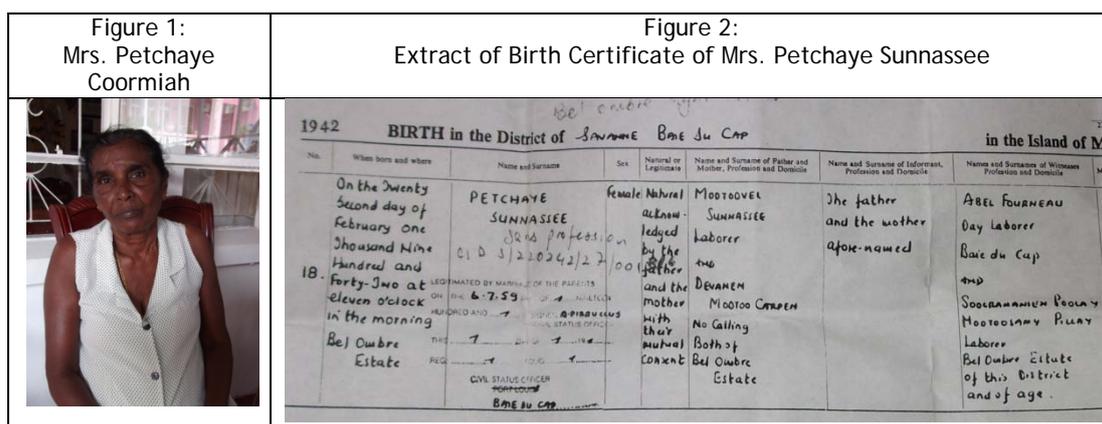

## INTRODUCTION

Camp Aneerood has been chosen as it contained some descendants of immigrants who had come on the same ship from India in the 19<sup>th</sup> century. Some of these were also not indentured but who faced similar conditions to the indentured.

Camp Aneerood, a former sugar estate camp, lies in the vicinity of Bel Ombre Sugar Estate, in Savanne District. Camp Aneerood later came to be known as Camp des Routes. It is believed that Camp Aneerood owes its name to a *Sirdar* known as Aneerood, who used to recruit Indians as indentured labourers for Bel Ombre Sugar Estate in the 19<sup>th</sup> century.<sup>1</sup> This camp is representative of many such camps established in the 19<sup>th</sup> century and which have survived to this day. The memories of the former inhabitants of this Camp are also very vivid.

The history of the inhabitants has been reconstructed mainly through oral interviews of former estate camp residents, supplemented by some archival research in immigration archives. All photos shown here were lent by the families mentioned in this chapter.

### Mrs. Petchaye Coormiah and Mrs. Devanen Sunnasee Family

Mrs. Petchaye Coormiah, maiden name Sunnasee, 69 years old, was born on 22<sup>nd</sup> February, 1942 in Camp des Routes and spoke about her childhood on the estate camp.

### Estate Life

#### The Banyan Tree

Mrs. Coormiah remembers how she used to play under the Banyan tree, which dominated the entrance of the camp. The banyan tree had a social and religious importance in the life of the inhabitants of the camp. In the evenings, labourers who returned from their work, used to gather under the banyan tree to talk, share their views and opinions and play social games like domino. Special festivals, like the *Holi* (*Phagwa*) and *Sankranti*, and Tamil festival of “Camon” was also celebrated under that tree, where children used to have fun by playing hide and seek with their friends. Mrs. Sunnasee, her mother, also remembers how the festival of *Holi*, in Tamil known as “Camon” was celebrated with fervour under the Banyan tree. Mrs. Coormiah recalls how she used to sit under the banyan tree with her close friends in the evenings and sing old Hindi movies’ songs in round. Near the banyan tree there existed also a *baithka* which was made of straw.

## Estate Houses

The estate houses were made of straw and the walls and floors were coated with cow dung and mud paste. Each estate house, generally known as “langar”, comprised of four rooms and one outdoor kitchen. One estate house was shared between two families; each family had two rooms respectively. The outdoor kitchen was found in a corner of the verandah, where each family used to cook food in its respective kitchen. There was a common outdoor toilet made up of three compartments which was shared by the inhabitants of 5 to 6 estate houses.

The estate houses were found near a canal. The canal water was used by the inhabitants to wash clothes and for other household purposes. There was no tap water and the inhabitants used to carry water from another canal known as “Pani bwarwa” for cooking purposes. A *kovil* (Tamil temple) was found near that canal in which the deities Ganesha and Mariamen were worshipped. According to Mrs. Coormiah, her great grandparents constructed this Tamil temple and cow dung was used to line the floor and walls of the temple.

## Estate Hospital

On Bel Ombre Sugar Estate, there was a hospital which was found near the sugar factory. The estate hospital provided free healthcare facilities to the inhabitants of Camp des Routes. However, major surgical operations were not practised in the estate hospital. For instance, Mrs. Coormiah’s grandmother once suffered from appendicitis and she had to go to Victoria Hospital at Candos, Quatre Bornes, for her surgery.

## The Estate Shop

Near Bel Ombre Sugar Estate; there was a Chinese shop which was run by a Chinese family. They were commonly known as “Chinois Macao” by the inhabitants. The shop was named “Ah Soy”. There was another Chinese shop at St. Martin, a nearby village, which was named “la boutique Lompai”. These shops stocked a range of everyday items like rice, dried lentils (*dholi*), fish, more specifically the *snoek* fish, which was commonly consumed by the inhabitants. Labourers used to obtain rations in the form of rice, flour, oil and *dholi* on a fortnightly basis from Bel Ombre Sugar Estate. The rations were given on the estate camp itself. Mrs. Coormiah’s father used to give 2 lbs of flour, which he received as part of the ration, to a bakery at Chemin Grenier, which was ran by a person of Chinese origin named “Atouna”, and in return he would get 4 loaves of bread which he shared among his children.

During times of hardship, wild tomatoes, cassava and sweet potatoes were consumed. The diet of the inhabitants was quite varied. Jackfruit, lentils, lima beans, taro formed part of the diet of the inhabitants. For special occasions, for instance when relatives came to visit the inhabitants, ‘pilchard’ in tomato sauce was cooked accompanied by the Indian bread known as “farata”.

## The Inhabitants

There existed a spirit of brotherhood among the inhabitants of Camp des Routes. Everyone formed part of the same family; the family of Camp des Routes. There lived people of different ethnic groups; Tamil, Telugu and Indians, excluding Muslims. According to Mrs. Coormiah, there were no ethnic barriers and caste issues which existed among the inhabitants of the camp. A watchman guarded the entrance of Camp des Routes for the security of the inhabitants.

During wedding times, all the neighbours, irrespective of their ethnic background, gave a helping hand to make the event a success. Weddings used to be celebrated at night. There was no electricity facility provided in Camp des Routes and the inhabitants used to light burning torches at night. The “Nagara” was sung when the bridegroom came in the camp.

Night life in Camp des Routes was quite animated. Children used to play hide and seek behind the estate houses. Story telling by the elders was a common practice and children used to gather under the verandas and listen to their grandmothers’ stories before going to bed.

Next to Mrs. Coormiah’s house lived an old couple, known as *dada and dadi* Muttur. Dada Muttur used to sell roasted peanuts and chickpeas (Bengal gram) to the estate camp’s children in order to

earn his living. Dada Muttur also taught the camp's children Hindi in the *baithka*, which was found near the banyan tree. Mrs. Coormiah's grandmother also used to sell roasted chickpeas, peanuts and popcorn. She used to walk to and from Camp des Routes to St. Martin, Bel Ombre Primary School, Baie du Cap and as far as Choisy in order to sell her homemade snacks. She was commonly known as "nani gram" by the children of Bel Ombre Primary School.

Mrs. Coormiah's grandmother used to live in another estate house in the same camp. She was born and got married in Camp des Routes itself. She used to speak fluent Tamil, which she also taught to her grandchildren. Mrs. Coormiah refers to her grandmother as being a "Coolie" as the latter's parent came from India. Mrs. Coormiah's grandfather used to work as a labourer at Bel Ombre Sugar Estate and also as a huntsman (*piqueur de chasse*). He passed away at the age of 40. Consequently, her grandmother had to work as a labourer for Bel Ombre Sugar Estate in order to be able to keep the estate house at Camp des Routes.

In the mornings, a man, employed by Bel Ombre Sugar Estate, used to wake up the inhabitants of the camp by shouting "Bhaat Pakao! Outho Outho!" This was a common practice in order to wake up the labourers. Mrs. Coormiah's grandmother used to go to work at 5 a.m. and was back at 3 p.m. She also reared cows and collected an average of 9 litres of milk per day. Cow rearing was a common activity among the inhabitants of Camp des Routes. There was a common stable made of straw comprising of several compartments at Camp des Routes which was shared by the inhabitants. The construction materials for the stable were provided by Bel Ombre Estate.

Mrs. Coormiah's father, Mr. Mootoovel Sunnasee, *alias* Tamby Sunnasee, worked as a *Sirdar* for Bel Ombre Sugar Estate. He was an active trade unionist who had fought for the rights of the labourers. He was born at Dagotière, and after his marriage he came to live at Camp des Routes. Mrs. Coormiah's mother, Mrs. Devanen Sunnasee, had seven children, among whom Mrs. Coormiah is the eldest one. Mrs. Coormiah did not go to school as she had to look after her younger brothers and sisters. She started to work as a labourer at the age of 10 along with her mother for Bel Ombre Sugar Estate, where she earned 75 cents per day and at the age of 12 her daily salary was increased to R. 1.

Mrs. Devanen Sunnasee, maiden name Mootoocarpn, presently aged 88 years, was born at Camp des Routes. Her father worked as an "entrepreneur" for Bel Ombre Sugar Estate. Her mother got married at the age of 12 years. Mrs. Sunnasee did not go to school and she got married at the age of 16 years at Camp des Routes. After her wedding, her husband, who used to reside at Rose-Hill, came to stay at Camp des Routes and worked as labourer in the "grand bande" for Bel Ombre Sugar Estate. He used to earn a fixed salary of Rs.100 per month in addition of a weekly ration of rice, salt, Bombay duck, *dhol* and coconut oil. In order to help her husband financially, Mrs. Sunnasee began to work as a labourer after her marriage. She also reared cows in Camp des Routes and each family owned a compartment in the stable of the camp. Five of her children were born at Camp des Routes and two at St. Martin village. Mr. Sunnasee was forced to leave the camp with his family. His fault was that he

dared to smoke a cigarette in front of a white overseer in the field. This was considered to be an act of disrespect toward his employer and he was ordered to leave Camp des Routes on the same day.

<p><b>Figure 4:</b> Extract of Birth Certificate of Mrs. Devanen Sunnassee</p>	<p><b>Figure 5:</b> Mr. Mootoovel Sunnassee and Mrs. Devanen Sunnassee</p>

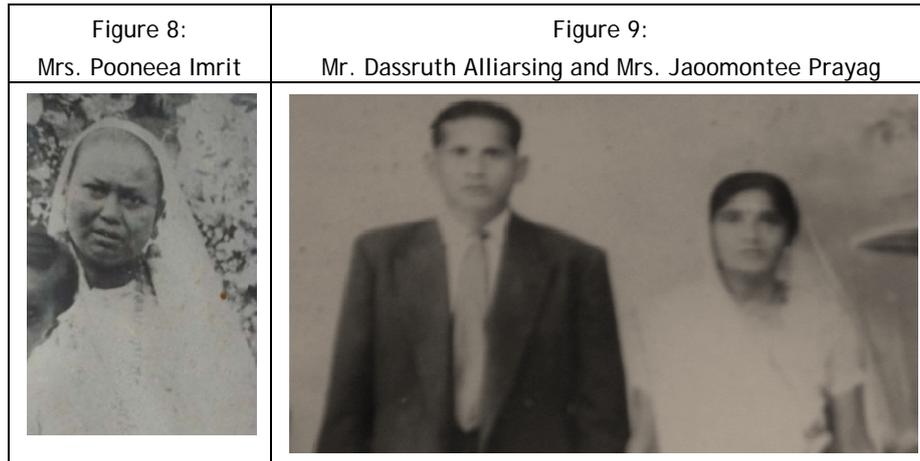

## DHUNPUTH FAMILY

<p><b>Figure 6:</b> Mrs. Mayawantee Dhunputh</p>	<p><b>Figure 7:</b> Mr. Ramlugunsing Alliarsing</p>

Mrs. Mayawantee Dhunputh, maiden name Alliarsing, 73 years old, was born at Camp des Routes. Her paternal grandfather, Mr. Ramlugunsing Alliarsing was 20 years old when he arrived with Mr. Subaghra and Mr. Deerpalsingh from India in the same ship. Mr. Ramlugunsing lived in the village of Gahmar in the district of Gazipur, India. When these three men came to Mauritius, they were allocated an estate house comprising of 6 rooms at Camp des Routes and were given three consecutive days of rest. Mr.

Ramlugunsing brought the Ramayana, a sacred epic, along with him. He used to read the Ramayana every morning before attending work.

Being impressed by his courage and determination, Mr. Frederic Robert, the then estate manager, employed Mr. Ramlugunsing as a *Sirdar* for Bel Ombre Sugar Estate. Mr. Ramlugunsing began to practice interline cropping in the fields at Bel Ombre where he planted potatoes, maize and peanuts. He married Maneea at Camp des Routes and after the birth of his first child, namely Mr. Dassruth Alliarsing (Mrs. Mayawantee Dhunputh's father), Maneea passed away. Mr. Ramlugunsing then cohabited with Pooneea Imrit at Camp des Routes itself. Mrs. Pooneea Imrit was a well-known dressmaker of her time and she used to sew clothes for nearly 500 people in Camp des Routes. She also supported her husband and at night, she went to guard the estate's potato fields along with her husband.

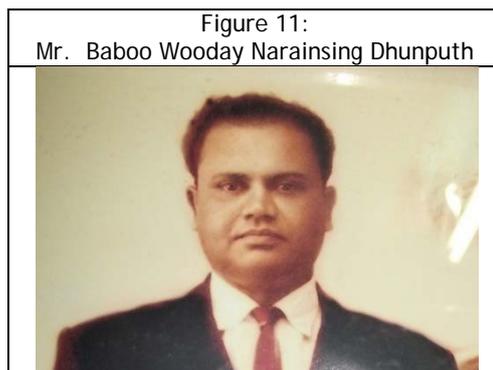

Mr. Dassruth Alliarising married Jaoomontee Prayag, who lived in Port Louis. Mr. Ramlugunsing had two brothers named Luchmunsing and Ram respectively, who both stayed in India. Luchmunsing once came to Mauritius and stayed for one year with his brother. The latter was married in India and had three sons there. Ramlugunsing gave his brother money to purchase land in Gahmar village in India. With that money, Luchmunsing bought 10 *arpents* of land and till today this plot of land is known as “Maurice hola khet” in Gahmar village.

Figure 10:  
Extract of Marriage Certificate of Mr. Dassruth Alliarising and Jaoomontee Prayag

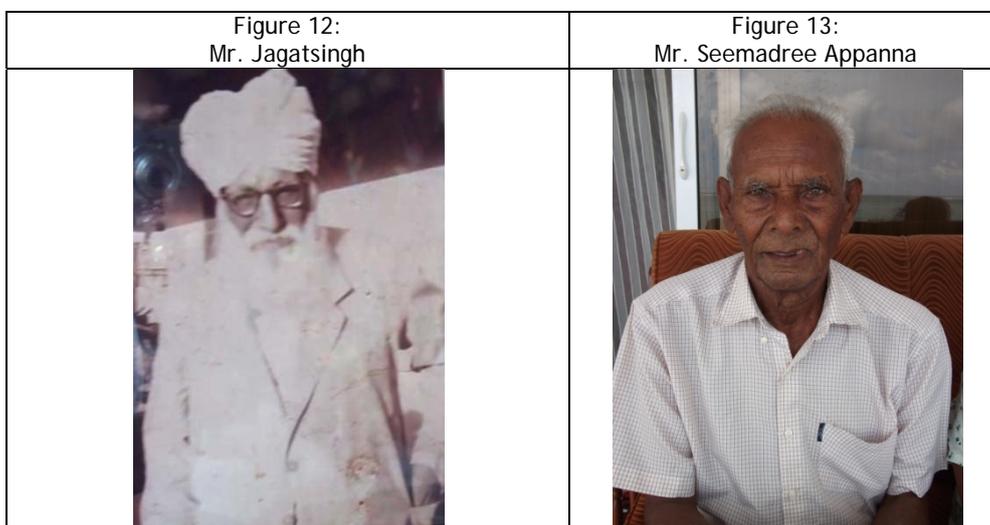

GOVERNMENT OF MAURITIUS							
Form of Marriage under Ordinance No. 28 of 1912							
No.	Date and place of Marriage	Names and Surnames of parties	Age and place of Birth	Place of Abode of parties	Condition, rank and profession	Names and Surnames of parties whose consent is required with their rank, profession and domicile	Names and Surnames of witnesses and relatives present with their rank, profession and residence
1935	In this parish January nineteenth and thirty five in the afternoon Port Louis	DASSRUTH ALIARSING and JAOMONTEE PRAYAG	Twenty six years Mauritius (el)	Port Louis	bachelor proprietor	—	Kampersad Kanaye Civil Servant and D. Luckheeram proprietor both of this town and of age

Mrs. Mayawantee married Mr. Baboo Wooday Narainsing Dhunputh at the age of 14 years and left Camp des Routes to settle in Surinam village. Mrs. Mayawantee’s grandfather, Mr. Ramlugunsing, managed to purchase 60 *arpents* of land between the village of Chemin Grenier and Surinam. Mr. Ramlugunsing passed away at the age of 90 years.

At Camp des Routes there was a stream named “Mootlama Ruisseau” from which the inhabitants used to collect water for household purposes. Two other rivers were known as “grand la riviere” and “reso” respectively. The river water was used for drinking and cooking purposes.

Mr. Kylashsingh Dhunputh, a relative of Mrs. Mayawantee Dhunputh, aged 62 years, was born at Camp des Routes in 1949. His father's maternal grandfather was Mr. Ramlugunsing Alliarsing. His father's name was Satnarainsing Dhunputh, a well-known huntsman of his time, and mother's name was Partabkore Jagatsingh. Mr. Jagatsingh, his maternal grandfather came from the Punjab region in India. Mr. Jagatsingh came to Mauritius as an Indian sepoy and worked as a prison warden at the prison of Beau-Bassin.

#### Interview with Mr. Seemadree Appanna

Mr. Seemadree Appanna, 85 years old, was born on the 25<sup>th</sup> January 1926 at Camp des Routes. His father, S. Appanna, Immigrant No. 402 054, came to Mauritius on 2<sup>nd</sup> October 1888 at the age of 7 years from Kommadi village, located in the regional subdivided state of Vizagapatam in India, on the steam ship *S.S Taiif*. He was first 'distributed' to Riche Bois Estate and later was employed as a labourer at Bel Ombre Sugar Estate. Mr. S. Appanna passed away on 11<sup>th</sup> March 1935. Mr. Seemadree Appanna's mother, Camamah Pothyah, was a Mauritian and also worked as labourer. The couple had 8 children, four daughters and four sons respectively. Mr. Appanna was four years old when his father passed away. His father used to wear a shirt, a *dhoti* of knee length and a turban. Mr. Appanna also remembers that his father used to draw a monthly salary of Rs. 8. The weekly provisions were purchased at the estate camp shop, named "Ah Soy", which was found at Bel Ombre Sugar Estate. In addition, ration was received on a weekly basis; every Friday his father went to the "magasin" (storehouse) of Bel Ombre Sugar Estate to get only rice as ration. Vegetables and pulses had to be purchased in the Chinese shop.

Mr. Appanna's mother used to rear cows in Camp des Routes and the milk was sold in order to obtain an extra income for the family. Only the surplus milk was consumed by the children. At the age of 5 years, Mr. Appanna had already started helping in the household and also looked for cow fodder. He did not go to school due to financial difficulties. From the age of 7, he went to work in

the field along with his parents and earned 15 cents a day. The working hours were from 7 a.m. to 4 p.m. The labourers obtained their break times between 10.30 a.m. to 11.30 a.m. During harvest time he earned 20 cents per day as salary. When Mr. Appanna was 10 years old, he earned 30 cents a day while his mother earned 35 cents daily. At 18, he was employed by Bel Ombre Sugar Estate and obtained a flat monthly salary of Rs.12. By that time no rations were given to the labourers. At 20, he began to work as a carter for the estate and earned Rs.42 per month. He performed this job for five consecutive years and transported 4 tons of sugarcane per day. Mr. Appanna left Camp des Routes when he was 26 years old. He could no longer stay in the estate camp as he gave up the job as a carter for working for a private planter, as the latter paid him a better salary of Rs. 5 per day.

He recalls that the estate houses were made of 6 rooms; two rooms respectively per family. The kitchen was found in the veranda and there was an outdoor toilet for each three estate houses. No tap water and electricity facilities were provided in the camp. The inhabitants used to light up petrol lamp at night and after dinner time, storytelling by elders common from 8 p.m. to around 9 p.m. Children used to play until 11 p.m. in the camp. The inhabitants used to have dinner before dusk and fish and chicken were consumed only once a month.

Mr. Appanna remembers that the *Phagwa* festival was celebrated under the Banyan tree of the camp. Moreover, there existed 3 *baithkas* near that tree, namely, for the Telugus, Tamils and Hindus. There were two “kalimayas” in the camp, for the Tamil and Telugu ethnic group respectively.

## BISSOONDEOO SUBAGHRA

Mr. Bissoondeoo Subaghra, aged 92 years, was born in 1919 at Camp des Routes. His paternal grandfather came as a labourer from India. His grandfather also worked as a recruiting agent. Along with him came four other persons, Mr. Deerpalsingh, Mr. Sooknanandsing, Mr. Ramlugunsing, his uncle Mr. Benimado Subaghra and his father respectively. Mr. Subaghra’s father was 18 years old when he came to Mauritius and later he worked as chief *Sirdar* for Bel Ombre Sugar Estate.

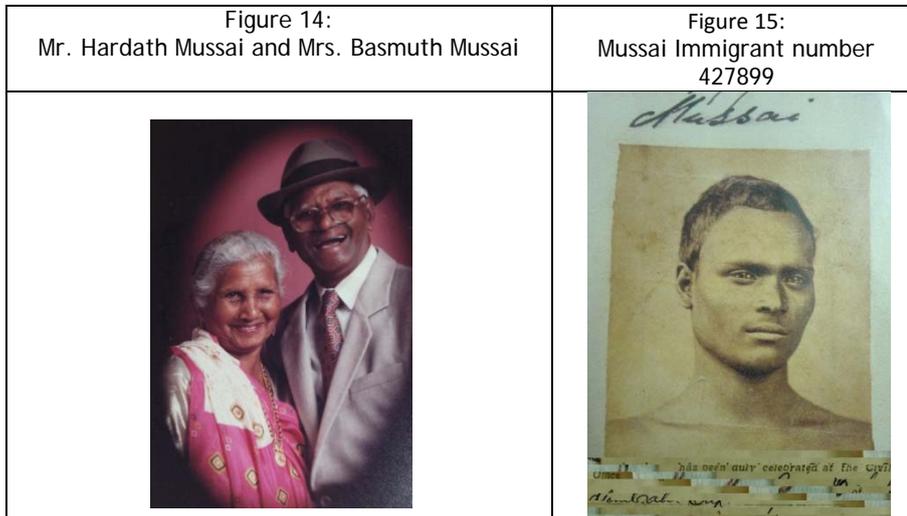

Mr. Subaghra states that when he was born, there was a severe drought in India. His grandfather requested his uncle to return to India in order to help his family financially there but the latter never returned back to Mauritius. His grandfather’s family lived in Gahmar village, presently located in Ghazipur District in India. His grandfather decided to come when he heard that Mauritius needed labourers to work the land.

Mr. Bissoondeoo Subaghra went to Baie du Cap RCA School at the age of 6 and studied until Standard 6. At that time children of Camp des Routes either went to the Primary School of Chemin Grenier or of that of Baie du Cap. Children used to leave Camp des Routes at 6 a.m., walked for 3 long hours, bare feet, and reached school at 9 a.m. School used to end at 3 30 p.m. Back to Camp des Routes Mr. Subaghra had to wait for his father to come back home in order to prepare dinner. His mother passed away when he was 6 years old. Sometimes he and his father used to have dinner at 8 p.m. His father passed away in 1964 at the age of 92 years. Mr. Subaghra got married at 19 years old in the year 1938 at Camp des Routes. He had three children, among whom one passed away at the age of 7 years.

Mr. Subaghra joined the Army on 13<sup>th</sup> September 1948 and he was shifted to Egypt for 5 months and returned to Mauritius on 10<sup>th</sup> January 1949. During his stay in Egypt he was imprisoned for 3 months. Mr. Subaghra had a rich work experience. When he returned to Mauritius, he worked as a labourer and earned 20 cents per day. Afterwards he worked as *Sirdar* for Bel Ombre sugar estate. At the age of 22 he bought a cart and one ox and worked as carter. He also worked as *métayer* along with his brother on a plot slightly less than a hectare (one *arpent*). In 1990 he owned 35 *arpents* of land under the *métayage* system. He was elected at the village council election of Chemin Grenier in 1950 and held the post of secretary of village council. He was president of the Poor Law Office from 1960 to 1965 and that of Social Welfare Centre of Chemin Grenier from 1965 to 1966 respectively. Mr. Subaghra also was the owner of a cinema named “Lotus” at Chemin Grenier.

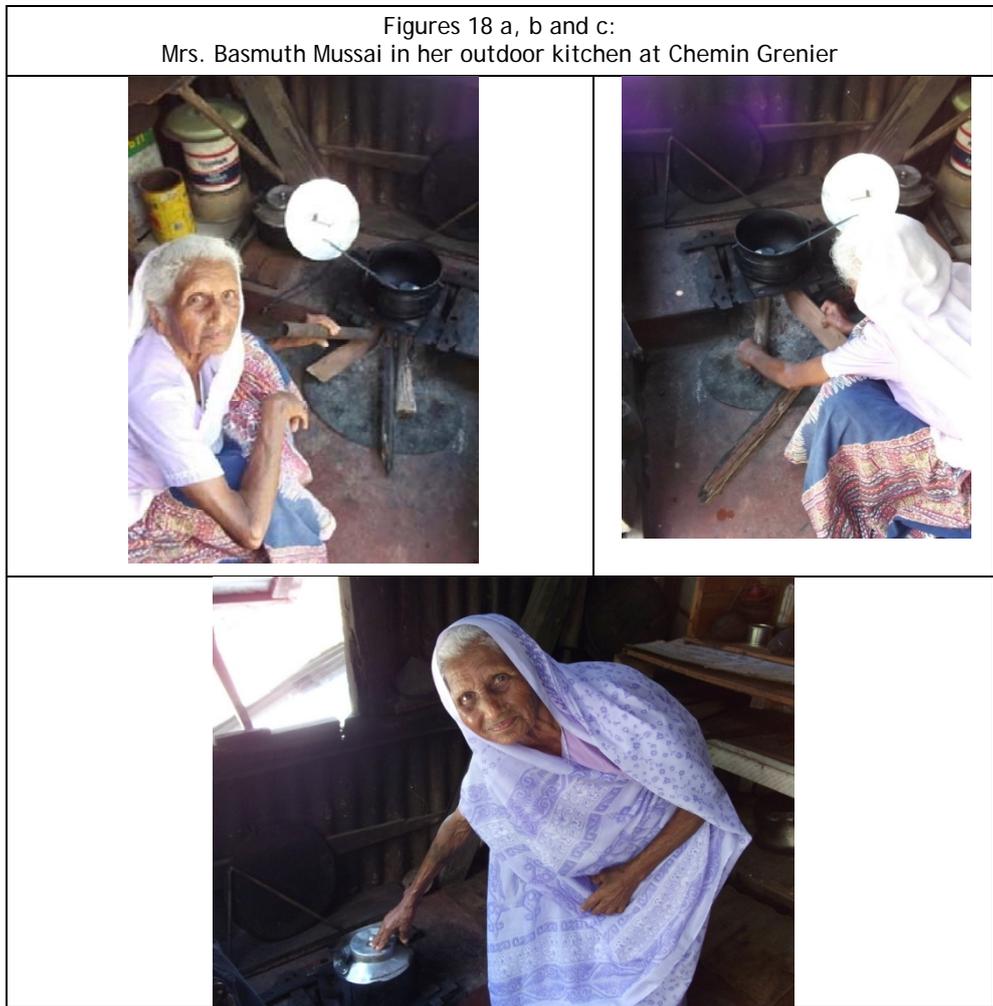

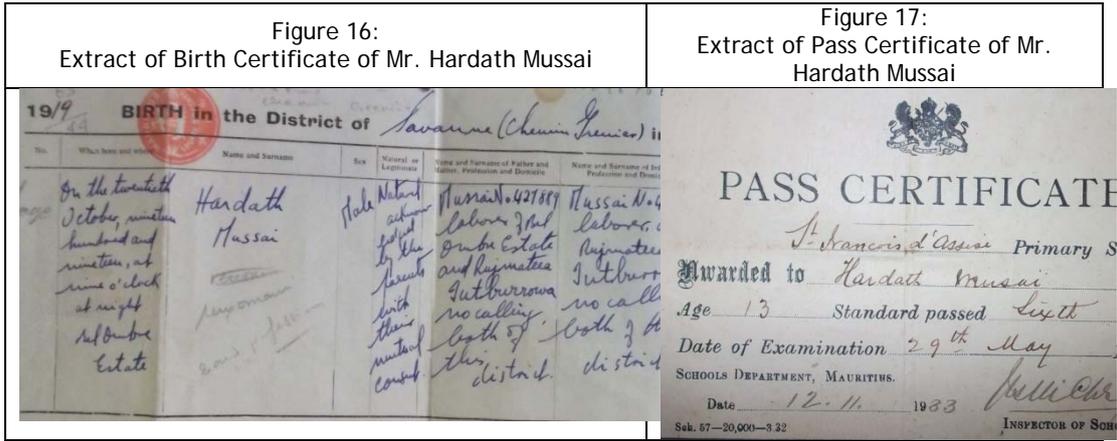

## MUSSAI FAMILY

Mr. Hardath Mussai, presently lives at Chemin Grenier. He is 91 years old and was born at Camp des Routes. His mother died when he was 3 months old. His father, popularly known as Gulam Mussai, bearing immigrant number 427899, came at the age of 22 as an indentured labourer from India on 4<sup>th</sup> October 1905 with the hope to earn a better living in Mauritius. He used to wear a *dhoti*, a turban and was always bare feet. He embarked at the port of Calcutta on the Steam ship *S.S Surada*, bearing ship number 1407.

In India he lived in Thakuradan village, found in the state of Basti, found in the administrative District of Danpata. His father's and mother's name was Gulam and Mangari respectively. Immigrant Mussai 427899 was employed at Combo estate, at Terracine, located in the Savanne district. Later he shifted to Surinam and got married at Camp des Routes and he managed to purchase 25 *perches* of land which he later bequeathed to his son. Mr. Mussai passed away at the age of 55 years in 1944.

Mr. Mussai went to Baie du Cap RCA School and studied until standard 6. Kreol and French was the medium of teaching in his school and he learned the Hindi language in the *baithka* located at Camp des Routes. His maternal uncle, used to teach Hindi in the *baithka*. When he left school at the age of 13, he used to give a helping hand to her maternal grandmother in the field. He worked as a labourer and afterwards learned hairdressing from his uncle until he got married at the age of 20 in 1939 and his wife was aged 15 years. After his wedding he was employed as a grade 1 labourer at Bel Ombre Sugar Estate and earned Rs. 8 per month. Work started at 5am and he returned home at 6 p.m. At the age of 35 he worked as driver at Bel Ombre Estate and at the same time he was a *métayer*. His wife used to rear cows, goats and poultry at Camp des Routes. Mrs. Mussai also worked as an apprentice mason at Bel Ombre Sugar Estate. She also helped her husband on the land they owned under the system of *métayage*.

Mr. and Mrs. Mussai have 6 children, who are all boys. According to Mr. Mussai, there were around 300 persons who lived at Camp des Routes. The estate houses, "langar", comprised of 4 to 6 rooms, made of straw. There was no bathroom facility in the camp and the inhabitants used to bathe in the nearby river. When he began to work as a driver he left Camp des Routes and in 1960 he bought a plot of land at Chemin Grenier where he constructed his house and shifted there in 1962.

Mr. Rohit Mussai, their eldest son, was born at Camp des Routes on 22<sup>nd</sup> February 1941. He too went to Baie du Cap RCS School, like his father, and studied until the 6<sup>th</sup> Standard. His father did not

want him to work as a labourer; therefore he learned the profession of tailor. He still works at a tailor at Chemin Grenier.

## MARIAYE VAYAVORY

Figure 19:  
Extract of Birth Certificate of Mrs. Mariaye Vayavory

197	in the district of Bel Ombre Camp des Routes Bel Ombre in the evening Bel Ombre	MARIAYE Chellen	female	legitimate	VENHADION Chellen Labourer and Aparaye POTRECEAN Group both of this district	

Mrs. Mariaye Vayavory, maiden name Chellen, presently aged 83 years, was born at Camp des Routes. Her mother passed away when she was one years old. Her father, Mr. Chellen, was in charge of Camp des Routes. He was employed by Bel Ombre sugar estate to look after the camp. Any problems that the inhabitants faced in the camp had to be reported to him first. He was also in charge of the cleanliness of the common stable found in the camp. About 12 men worked under his instructions and they used to clean the stables.

Mrs. Vayavory did not attend school. She has 2 children; one son and one daughter, and 7 grandchildren. She worked as a labourer at Bel Ombre Sugar Estate and work started at 7 a.m. and lasted till 4 p.m. She started to work at the age of 10, where she earned 20 cents per day. Her work consisted of manually de-rocking and weeding of the field. At that time, it was a common practice for children to work. She got married at the age of 17 and went to stay at her husband's place at Camp Diable village. After one year, she and her husband settled at Bel Ombre in another estate camp.

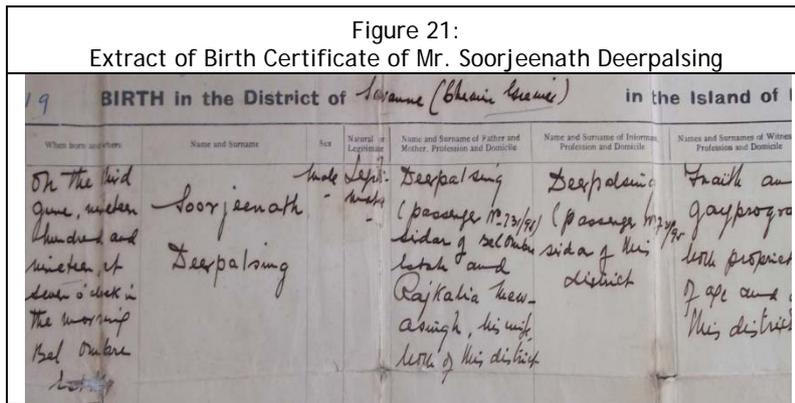

There were two estate camps in Bel Ombre; one known as Camp Bel Ombre and the other as Camp des Routes. Mrs. Vayavory recalls how one night fire broke out in the stables found at Camp Bel Ombre, during which the animals could not be saved and all perished in the fire. She also remembers that the estate houses were made of straw and comprised of 6 rooms respectively. Her wedding took place at night and all the neighbours in Camp des Routes gave a helping hand in the wedding preparation, irrespective of their ethnic background. Her wedding tent was made of bamboo poles covered with palm and coconut leaves. Mrs. Vayavory keeps good memories of her stay at Camp des Routes.

## SOORJEENATH DEERPALSING

Mr. Soorjeenath Deerpalsing, presently aged 92 years and residing at Chemin Grenier, was born on 3<sup>rd</sup> June 1919 at Camp des Routes. Her mother’s maiden name was Mewasingh and prior to her wedding she used to reside at Solferino, Vacoas. Mr. Deerpalsing’s father named Deelasing Deerpalsing came as a free passenger, bearing passenger number 731/95, from India on 9<sup>th</sup> August 1895 on the Steam Ship *S.S Wardha*. The latter passed away in 1942 at the age of 75. His father worked as a labourer for Bel Ombre Sugar Estate. At that time, recruiting agents were getting 1 pound of rice and Rs. 1 per month per head of labourers whom they brought from India. The labourers were under 5 years of contractual labour.

According to Mr. Deerpalsing, Camp Aneerood bears its name from a recruiting agent known as Aneerood. Aneerood was employed by Bel Ombre estate to recruit labourers from India. Transport cost for the labourers was provided by the estate to the recruiting agents. It cost around Rs. 60 per head to bring labourers to Mauritius. However this money was repaid back to the estate by the labourers themselves once they were employed. Rs1 was deducted on a monthly basis from their salary and at the end of their 5 years contracts; they would have totally repaid the sum of Rs. 60 to their employers. Once the labourers reached Mauritius, they had to take the oath in front of a magistrate that they would respect the conditions found in their contract. For Bel Ombre, the labourers went to the Souillac Court for oath-taking.

Mr. Deerpalsing’s father lived in Gahmar village, located in Gazipur District in India. According to him, when his father came to Mauritius, there were also 60 other persons who came along in the same boat. His father married in Mauritius and 9 months after his arrival, his cousin, named Sooknanand, also came to Mauritius. In India, his father had two brothers who lived with his mother. Mr. Deerpalsing’s parents had 4 children. Mr. Deerpalsing was the only son. One of his sisters passed away in 1935 at the age of 14 of fever, only three days after being married.

Mr. Deerpalsing’s father first worked as a labourer before occupying the post of a *Sirdar* at Bel Ombre Sugar Estate. After his retirement, he worked as the Sugar Estate Warden and he then

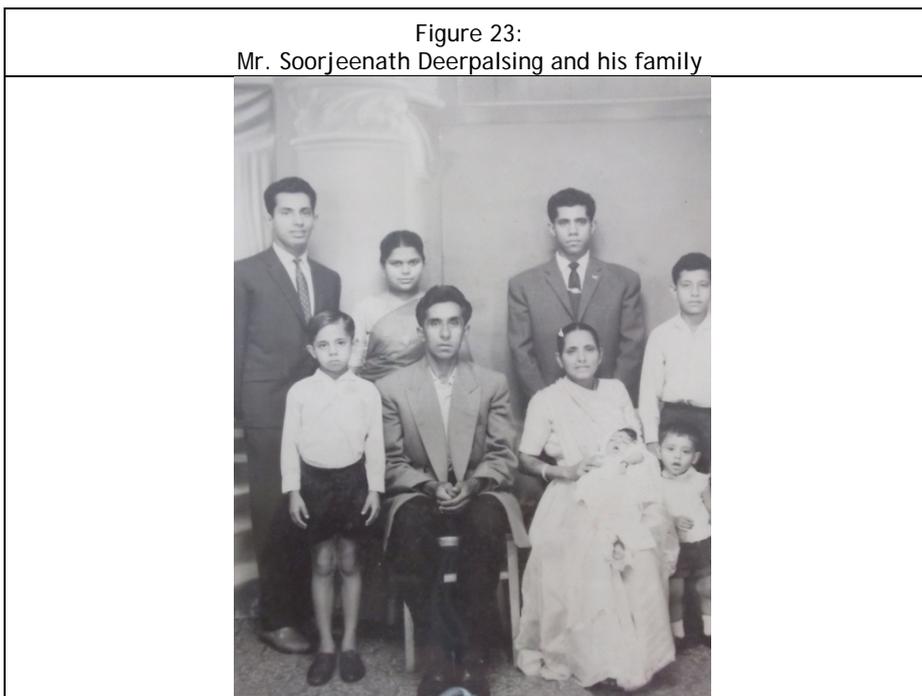

earned Rs.8 per month. His ration comprised of rice, *dholl*, salt and oil. His father used to send money to his brothers in India, with which they purchased 200 *arpents* of land in Gahmar village. In 1934, Mr. Deerpalsing's father fell ill and Mr. Deerpalsing had to look after his family. When Mr. Deerpalsing was 15 years old, his father suffered from dysentery and passed away on the 13<sup>th</sup> February 1941. The latter was incinerated at the Cemetery of St. Martin. After some years, his mother passed away at the age of 84 years.

Mr. Deerpalsing attended the Primary School of Chemin Grenier and obtained a pass mark of 97.5 when he was in standard 6. Unfortunately, he could neither continue school nor did he work as a school teacher or in the police force as these jobs were reserved for people of Christian faith. At the age of 13 years he had to work as a labourer and earned 35 cents per day. He also helped his mother who owned land under the *métayage* system. Mr. Deerpalsing got married when he was 19 years old, when his wife was aged only 15 years. On 9<sup>th</sup> February 1953, he left Camp des Routes with his family to settle at Chemin Grenier.

## ACKNOWLEDGEMENTS

The research team would like to express its gratitude to all families and individuals who have contributed to this in-depth study of the 'Coloured Population', both in Mauritius and in Rodrigues. Without their invaluable assistance, our work would not have been completed.

A special thank you to Roselyne Ithier who typed this Report so meticulously.

To the following Libraries and Archives, our warmest thanks: The M.N.A., the Alfred North-Coombes Documentation Centre, Rodrigues and the Nelson Mandela Centre's Database; the National Library of Mauritius; the Carnegie Library; the Municipal libraries of Port Louis, Quatre-Bornes and Rose-Hill, and the M.G.I. Library. A special thank you to the Librarian of the Port Mathurin Library for making us feel welcome.

Finally, we are most grateful to the Truth and Justice Commission for entrusting such an important project to us; to Professor Boraine and Dr. V. Teelock, we wish to extend our most sincere thanks. To all the authors, past and present, whose works are quoted, or referred to, in this study, we owe an enormous debt of gratitude.

## EXECUTIVE SUMMARY

This project is geared to an in-depth analysis of the *Gens de couleur* (Coloured population) in Mauritius, during the colonial period, under the French and British authorities, and since Independence, up to the present day. It seeks to establish that the 'Coloured Population', as 'Libres de couleur', was as much the victims of repressive measures and injustice during the French occupation (1715-1810) as descendants of slaves and, later in the nineteenth century, indentured labourers. After the capture of Isle de France by the British (1810), there ensued a long, hard fight by the 'Coloured people' for their Human Rights, as regards educational rights, the right to political representation and the right to land ownership, faced with increasing pressure to sell properties.

The origins of the 'Coloured Population' as products of cohabitation or marriages between individuals of European, Asian, African, and other, origins, are discussed in Chapter I. Evidence that the *Gens de couleur* were victims of real social, religious and political prejudices from the Whites under the French and the British, is provided from archival and published material in Chapter II. One of the chief priorities of the 'Coloured Population', after the British take-over, was the right to equal education and political representation. The various stages of the long fight for access to education in primary and secondary schools, notably the Royal College, are explored in Chapter 3.

Through the constant endeavours of Coloured Tribunes, such as Rémy Ollier, Léoville L'Homme, Sir Virgil Naz, Sir William Newton and Dr. O. Beugeard, among others, a relative victory was achieved, when Coloured boys were admitted to the Royal College and returned to Mauritius as lawyers, doctors, notaries, and eventually, politicians, elected in the Port Louis Municipal Elections (1850), and the first Legislative Elections of 1886 under Sir John Pope-Hennessy. This being the turning-point in the history of the 'Coloured Population', political, social and cultural progress was rapid in the first half of the 20<sup>th</sup> century, through the labours of Eugène and Edgar Laurent, Raoul Rivet, and Dr. Maurice Curé, culminating in the arrival on the political scene of Gaëtan Duval (the Creole King) in the 1960s. Yet, when all is said and done, the *Gens de couleur* were granted political rights much more rapidly than descendants of Indian settlers and indentured labourers, at the end of the nineteenth century.

The impact of Independence (1968) on the 'Coloured Population' and the waves of emigration (in the 1960s, 1970s, 1980s, in particular) towards Australia, the U.K., Canada, and South Africa, among other countries, are analysed in Chapter 4. This exodus left a cultural, social and political void in the lives of the *Gens de couleur* who were left behind, from which the community has found it hard to recover. The weak representation in Parliament nowadays is evidence of this, and the lack of opportunities for 'Coloured people' in the Ministries and Civil Service continues to be indicative of this loss of a power-base within the nation.

The issue of landownership, and the 'perceived' constant threats from the 'Whites' (Franco-Mauritians), and eventually from the Indo-Mauritians, to properties which belonged to a small number of Coloured families in the nineteenth and twentieth centuries, are examined in Chapter 5. It is shown that, whilst that community was at one time in possession of one-fifth of the lands available, it gradually lost its economic position and was forced to sell to either 'Franco-Mauritians' or Indo-Mauritians in the twentieth century. The result is that the 'Coloured people' became employees on sugar estates, rather than owners; to day, only one or two Coloured families are holding on to relatively large areas of land.

Rodrigues is a case on its own, being essentially a 'Creole' island, where colonization, slavery and indentured labour appear to have left a relatively small imprint on the people's psyche. Instead of striving for group identity, or strong individual identity, the Rodriguans seek some kind of 'island' regional identity. There is less concern with such appellations as 'descendants of slaves' or *Gens de couleur* today among the islanders, and a faire degree of intermarrying between communities (the *Rouges* - descendants of White Creoles or *Libres de couleur* - and the *Montagnards* - true descendants of manumitted slaves) indicates that the political and cultural, albeit not the social, divisions are blurred. This is confirmed by interviews with individuals from long-standing families on the island and other research.

Due to time-constraint (this research was launched in February 2011, 18 months or so after other projects), a small number of in-depth and quality interviews were conducted with 'Coloured' families - 17 in Mauritius and 7 in Rodrigues. An analysis of those interviews and significant extracts are presented in Chapter 7. Semi-structured interviews were carried out to seek out present 'Coloured' individuals' views on: group identity; political representation of the community; prejudice, if any, in personal and professional lives; the economic, social and cultural contribution of the group to Mauritius; the impact of waves of emigration from the 1960s to the 1980s; access to employment; women and inter-communal marriages; how 'Coloured' youths envision the future. It is found that such appellations as *mulâtres*, *Gens de couleur*, mean little to the young, and less young, individuals who wish to develop their own 'Mauritian' identity. The past may well be behind them.

From archival research, consultation of printed material, oral interviews, a number of recommendations emerge that would impinge directly on the 'Coloured Population' in the future. Notably, they need to be reassured that they will never have to fight once more for their political, educational, employment and cultural rights. The study opens out on the concept that *métissage* is, not only inevitable in the global village, but something to be aimed at, since it is the true mark of an intercultural nation. Overcoming the social and cultural barriers between communities will result in an increasing *brassage* through intermarrying and socializing between communities. But for this to happen, the leaders of our 'Rainbow Nation' must give an example and stop fostering communalism for the sake of personal and party advancement. Numbers of votes matter less, in the end, than people, and duty to oneself even less than the national good. The history and development of the 'Coloured population' may be a microcosm of the Mauritian people, and many lessons may be drawn from it. Indeed, as Lord Bolingbroke once stated, "History is philosophy teaching by examples."

## INTRODUCTION

This project is geared to undertaking an in-depth study of the 'Coloured Population' (*Gens de couleur* or *population de couleur*) in order to assess whether they suffered, in any way, from the consequences of slavery during the French and British periods and in post-Independence Mauritius. The period under study is, accordingly, wide-ranging (1715-2011), and the subject extraordinarily complex. Since the project was set in motion very late in the proceedings of the Truth and Justice Commission, as late as February 2011, and because the researchers had a little over four months, to complete a challenging task, to say the least, some restrictions have had to be put into place. For example, the number of semi-structured interviews has necessarily been limited, to 17 for Mauritius, and 7 for Rodrigues. However, this was a conscious choice, namely to focus on in-depth interviews with knowledgeable and interesting representatives of 'Coloured' families on both islands. Rather than go for quantity, we opted for quality, as the analysis of the interviews will demonstrate in Chapter 7, the sample being most representative of age, gender and experience in life.

*Gens de Couleur* or the 'Coloured Population' find their origins, as explained in Chapter 1, from a *brassage* of several groups of immigrants into Mauritius/Isle de France from the earliest times (1721), when French colonists and *engagés* (contractual workers) started trickling into the country, first under Governor Denis Denyon (1722-1725), and then under his French successors, notably under Mahé de Labourdonnais (1735-1746). The individuals, commonly known as *Gens de couleur libres* in archival records, included freeborn persons in Isle de France who were the resulting off-springs from intermarrying between individuals of African, Asian, Chinese, French, and later British, origins. Skilled craftsmen from France (mainly Brittany and Normandy), India (Pondichéry, the Coromandel and Malabar coasts), China and other Asian countries, cohabited with, and/or were married to, descendants of slaves and manumitted slaves during the French period (1715-1810). The slaves or freed persons had various ethnic backgrounds; they were for example, Guineans, Lascars, Malabars, Malagasies, Malays, Mozambicans or various others of African origins. Chapter 1 explores the origins of the 'Coloured Population' under the French and British authorities through published and archival material, to arrive at a better understanding of: (a) the complex phenomenon of racial *métissage*; (b) the links between *Gens de couleur* and slaves, freeborns, indentured labourers, free settlers and 'Creoles' born in Mauritius and its dependencies. Detailed data on the ethno-cultural backgrounds of Coloured families shed considerable light on the position of the *Gens de couleur* as an intermediate, and downtrodden, class and community in the colonial period.

The fight for political representation and Human Rights was as hard for the 'Coloureds' as it was for descendants of slaves and manumitted slaves. Indeed, the lines of demarcation are so blurred during the eighteenth and nineteenth centuries, that it is hard to say that 'Libres de couleur' were better off, at least not until the 1830s. Although they were able to acquire land, officially and ostensibly under the *Lettres patentes* (*Code Noir*) of 1723, Chapter 5 shows that it was not until the 1740s that grants of land were made available to them, and that the Coloured landowners began to make their mark on the economy of Isle de France only in the late eighteenth century. Any decrees of the *Assemblée Coloniale* in the 1790s, for political representation for 'Coloureds' on parish or other councils, were soon forgotten under Napoleon I, and more especially during the administration of General Charles M.I. Decaen (1803-1810). The *Code Delaleu* (1767)<sup>1</sup> and *Code Decaen* (1805) gave little chance to such an underprivileged and politically 'ignored' community as the *Gens de couleur*.

With the British take-over (1810), the long-cherished hopes of the 'Coloured Population' rose again, only to be constantly crushed by the British occupiers who saw an advantage in siding with their natural allies, the 'White' plantocracy. Chapter 4 follows the long, hard struggle for political rights, and the numerous indignities suffered, along the way, as a result of prejudices and racial bias. The shocking obvious 'apartheid' policy of the Church authorities, as regards interment and funerals, as well as tolerated divisions during religious rites, such as confession and communion, demonstrate the sufferings endured by a defenceless 'Coloured Population'. Testimonies and petitions, handed in to successive British Governors, provide ample evidence of active discrimination against the 'Libres de couleur' and their descendants. Their few tribunes had to fight vigorously in the 1820s and 1830s for the most basic Human Rights which were denied to an

ever increasing community. It was not until Rémy Ollier, in the *Sentinelles* (1843-1845), and a few of his dedicated successors, who belonged to the 'Coloured Population', took up the fight, that political representation became a reality in the Port Louis Municipal Elections of 1850, when the first *Gens de couleur* became councillors.

The problems and issues relating to their religious, social, economic and cultural identities, are addressed throughout this project. Access to education remained a clear priority from 1800 onwards, through the 1820s and 1830s, when petitions were repeatedly presented to British Governors such as Sir Lowry Cole (1823-1828), Sir Charles Colville (1828-1833) and Sir William Nicolay (1833-1840), for the creation of primary schools and colleges for disadvantaged coloured boys and girls, in specific deprived areas such as Plaines Wilhems. Archival evidence is provided to back up the claim that the 'Coloured Population' was, as Evenor Hitié has claimed, "subject to a form of moral slavery", downtrodden and denied the basic right to free education.<sup>2</sup> Reverend Jean Lebrun, the London Missionary Society, and later, in the 1840s, Bishop Collier and the eight Loreto Sisters, who arrived in Mauritius on Monday 8 September, 1845, as well as the Christian Brothers, were to restore a semblance of balance in favour of a 'Coloured community' that lagged far behind the 'Whites', although, they enjoyed far more privileges than the indentured families.

With the 'Coloured' intelligentsia knocking constantly on the doors of the Royal College, these were finally opened to *Gens de couleur*, and mulatto boys began to shine and win scholarships.<sup>3</sup> Lawyers and doctors, notaries and politicians, returned to reinforce this community in the 1860s, 1870s and 1880s, before their leaders, such as Sir Virgil Naz, Sir William Newton, Dr. O. Beaugeard, the last two being laureates of the Royal College, stamped their indelible mark on the colony's politics. Despite a high franchise, the Elections of 1886, under Sir John Pope Hennessy, were a turning-point in the history of hard-fought political representation for the *Gens de couleur*. The new wave of 'Coloured' politicians could look forward, as well as back to the steep ascent achieved by their forbears. They subsequently fought to preserve their hard-earned social, political and economic, as well as educational and cultural, rights. The Laurent brothers, Raoul Rivet, Dr. Maurice Curé, the founder of the Labour Party, and other successors of Rémy Ollier, never forgot the high price which their community had paid, in terms of indignities and sufferings, in the eighteenth and nineteenth centuries. In effect, the 'Coloured Population' appears to have maintained its close affinities throughout with French culture, as they sought to forge an identity through being Francophone and Francophile, this despite the failure of the Retrocessionist Movement in the 1921 elections.

Landownership, access to economic benefits and the perceived constant threats from 'Whites' to property owned by the *Gens de couleur* in the late nineteenth century, and throughout the first half of the twentieth century, are at the core of Chapter 5. The Coloureds' erroneously paranoid fear of Indo-Mauritians to their social and economic position, as well as to their newly-acquired political influence from the 1920s onwards, were to unify the 'Coloured' community under the leadership of Gaëtan Duval 'The Creole King', at the height of his campaigns against Independence in the 1960s. Clearly, the 'Coloured Population' has always been, and continues to be, divided in its allegiances; some were pro-British, others pro-French; some pro-d'Épinay and others anti-'esclavagistes'; some sided with the Whites, others were anti-White. Herein lies their main weakness in social, cultural and political terms; not without justification, the community was said to bear the mark of Cain and Abel. Some of the *Gens de couleur*, especially in the first half of the twentieth century, despised the *Ti-Créoles* and would not stoop to certain types of work. Moreover, they would not contemplate marriage outside their community - hence, some sort of 'caste system' prevailed. But all this has changed recently; interviews with young 'Creoles' reveal that history matters less to them than to their elders, and that intermarrying is no longer a taboo for the 'Coloured Population'. Being Mauritian matters more than 'group belonging'.

Above all, labels, as Chapter 7 indicates, no longer hold water; the appellation of *Gens de couleur* appeals less and less to descendants of the 'Libres de couleur'; the notion of *métissage* is seen in a positive light. With the massive exodus of *Gens de couleur* in the 1960s, 1970s and 1980s, towards Australia, the U.K., Canada and South Africa, among other countries, a cultural and social void may have been created, but the 'Coloured people' left behind have abandoned their former spirit of ghettos, or 'cloisonnement' (erecting barriers), against an imagined invasion by other communities, especially *Ti-Créoles*. The young envision the future with optimism and an openness that augur well for a multicultural and unified nation. Professions are open to all, and our

interviewees are not in dread of 'cultural nepotism' that their ancestors deplored. Women, as Chapter 7 underlines, appear more open and more enlightened in respect of inter-communal marriages and socialising with other communities.

But, as our recommendations indicate, Mauritius should not return to such communalism and apprehensions as blighted the 'Coloured Community' from the 1810 to 1880. A community must not be made to fight inch by inch for equal rights, equal education, and equal political representation. The waves of emigration of the 1960s and 1970s were, partly at least, caused by the leaders of the Creoles insisting on their 'malaise' and instilling fear into a community. Once the *Gens de couleur* had left to ensure "a better life for their children", Mauritian cultural life suffered a serious blow. Yet, others grew stronger to take the place of our artists, singers, writers, teachers and intellectuals who had emigrated, as Chapter 4 makes us aware. In a spirit of reconciliation, the nation must ensure that those Mauritians who have emigrated, and continue to do so for family and professional reasons, are not branded as 'traitors' - a sad term used during a Diaspora convention a few years ago. They should be welcomed back with open arms and, indeed, be given incentives - tax or otherwise - to return to their homeland. The Mauritian *émigrés* (expatriates) can only enrich the 'Rainbow Nation' through their experiences abroad; the 'brain drain' will thus eventually produce positive results for the country, but only if we behave as mature adults and cease to point the finger at those who have left. Older Mauritians should be given an opportunity to come home and give back to Mauritius what Mauritius has bestowed on them in their school days. Access to employment should be made easier for older generations of 'Coloured people' or of any other community now living abroad. The nation also lives through its 'Creole' Diasporas in Australia, Canada, France or UK. *Métissage* must be viewed a positive factor, a sign of enrichment in such a nation as ours - such is the message sent out by our greatest *Métis* poet, Edouard Maunick, and such is the conclusion of this 'Study of the Coloured Population'. In this respect, the 'mulatto' or 'métis' communities, in the global village, constitute the very ideal of reconciliation which we should be aiming at, for only through it will the 'cloisons' [social barriers] come down and a unified 'people' emerge.

This Study, however, is neither entirely philosophical nor purely idealistic, but it opens out on practical 'Recommendations' and suggestions. Rodrigues is a case apart, as being chiefly a 'Creole island'. A research trip, undertaken by the team, has resulted in a better understanding of the complexities of Rodriguan society, with its apparent uniformity (see Chapter 6). Perhaps, there is a lesson to be learnt from Rodrigues: 'Group belonging' ostensibly matters to Rodriguans less than individual identity and national identity. The consequences of slavery and a 'demeaning past' seem to have impacted less on the island, precisely because the people's first priority is to cope with the harsh realities and problems of survival on a daily basis. But, on the other hand, Rodrigues is disadvantaged because its people are largely 'Creole' - hence descendants of slaves. Would a predominantly Indo-Mauritian island be allowed to lack such basic educational resources and infrastructures? Some kind of reverse discrimination, or affirmative action, is therefore called for, if we are to give Rodriguan youths the same opportunities - educational, cultural, social and political - as Mauritian youths. Perhaps, therein lies a microcosmic image of a 'Coloured' and 'Creole' community through the ages; in Rodrigues, one finds the tangible impact of a society that can become neglected, because of its isolation, because of its origins and because it does not clamour loudly enough. Hence, one of our recommendations, which should *also* be one of the most urgent pleas of the Truth and Justice Commission, is that Rodrigues should be made a special case for positive discrimination, in terms of funding for education (at primary, secondary and tertiary levels). In connection with Rodrigues, too, interviewees suggested that the island's history be re-evaluated and re-written so that young people might be given a more authentic picture of their past, and that this be put in a truly culturally Creole context.

Education appears to many people to be the most effective means of reconciliation in the long term, that is education in its broadest sense. Not only must future generations be empowered through knowledge of the past, but they must, at the same time, be taught citizenship, moral and civic values that will set right many injustices of the past. A 'quality education' for our young people would foster respect for other communities. An utter condemnation of divisive hate-language and words such as 'Mozambique', 'Mulâtres', 'Malabars', would be an essential first step towards this goal. But, of course, at national level, our politicians and statesmen must behave accordingly, and not foster the kind of communalism that has been observed on a number of occasions recently. Numbers, especially numbers of votes, should matter less, if we are to evolve

as a nation; smaller communities, such as the 'General Population', and the 'Coloured people' within it, and Sino-Mauritians, may not have the numbers. However, the Mauritian people must recognise the fact that all communities have made a vital contribution to our history, irrespective of their origins. "History is philosophy teaching by examples," declared Lord Bolingbroke. Perhaps, educating the young through the teaching of a balanced history of Mauritius, rather than a revisionist history, is the way forward. Only then, can cultural memory take on its true significance for young Mauritians - seeing the present through the past and envisioning the future through the present. Otherwise, old *clichés* will persist, and the dawning of the Justice and Truth era will be a forlorn hope. Finally, the Government should not look upon this Commission as an exercise in whitewashing the past indignities and sufferings of such communities as that of 'Libres de couleur', and descendants of slaves.

## CHAPTER 1 - Origins of the 'Coloured People'

### 1.1. Definitions

*Créole*: In the first issue of *Revi Kiltir Kreol*,<sup>4</sup> Arnaud Carpooran drew attention to the complexities associated with the word *Créole* and to its etymology. He argued that, if there was a degree of uniformity in defining a Creole language, such was not the case with regard to the 'Creole Man'; this will depend on his 'realities' and his 'cultural specificities' (p. 1). Moreover, Robert Chaudenson has underlined the importance of the local connotations attached to the word *Créole* in Mauritius: "*Kreol* (just like *créole* in the local regional French Language) is used to qualify any individual who is neither Franco-Mauritian (White), nor Indo-Mauritian, nor Sino-Mauritian. This appellation is therefore reserved either to *métis* or to individuals of the Malagasy or of the African type, with relatively clear physical features."<sup>5</sup> Carpooran, however, warns us against taking this definition for granted: "It is worth noting that this definition, however widespread, is not, for all that, unanimously accepted."<sup>6</sup> Consequently, because of the complexities and ambiguities that surround the term 'Creole', in this report we prefer to utilize the term 'Coloured'.<sup>7</sup>

In the seventeenth century, the terms 'Créole' and 'criolle' were used, as they were later in the *Dictionnaire de Trévoux* (1732), to signify a "European born in the islands."<sup>8</sup> According to Chaudenson, even in the early decades of the eighteenth century, complexities began to arise as the term 'Créoles' designated "individuals who were manifestly *métis* (1703) and even Black people (1704, 1722, 1725)."<sup>9</sup> The term *métis*, itself, is used to signify individuals with parents or grandparents of two different races, or 'biracial'; *mestizo* or *mestee* are used in North America and Canada, in particular, to refer to 'half-breeds', an old-fashioned term that is often pejorative. In South Africa and much of English-speaking Southern Africa, the term 'Coloured' is relied upon to describe people of mixed races, though not of Asian and/or African descent.<sup>10</sup>

What of Mauritius, then? European visitors in the early nineteenth century had no difficulty in making a distinction between 'Creoles' (Europeans born on the island, or individuals of European descent) and *métis* or individuals of mixed blood or 'mulattoes'. The latter term was used for the first time in popular English Literature before 1597. From the Spanish and Portuguese expression, *mulato*, *mulata*, the word meant "of mixed breed, from mulo (mule) or 'mongrel'". Hence, the word came to mean "a child of two races". *Webster's Online Dictionary* gives the following definitions of the noun 'mulatto':

- "1. An offspring of a black and white parent.
2. The offspring of a negress by a white man, or of a white woman by a negro, usually of a brownish yellow complexion."<sup>11</sup>

Likewise, a 'tragic mulatto' is a phrase that describes "an archetypical biracial person, or fictional character, usually of African and European descent, who is assumed to be sad, mentally ill, destructive, or suicidal."<sup>12</sup> Though not self-destructive nor suicidal, Alexandre Dumas' *Georges* (1843) in a novel set in Mauritius, is the mid-twenty year old son of a wealthy mulatto, who has a large plantation and is the owner of several hundred slaves. The 'mulatto', Dumas himself being one, bears considerable scars and is regarded, in Mauritius, as being clearly inferior to the Whites. Dumas' maternal great-grandfather was a descendant of African slaves, and the author may have wished to raise awareness of racial issues in former French colonies in the first half of the nineteenth century. Although it bears the name of Dumas, it is reported by many that *Georges Le Mulâtre* was the work of Mauritian-born author, Félicien Mallefille.<sup>13</sup>

The different shades of *métis* or mulattoes in Mauritius had been commented upon by Auguste Billard, during his visit to the island in 1817; in a letter of 27 February of that same year, an over-confident Billard noted:

*"It is easy, up to a point, to distinguish the pure-blooded Europeans from the blood that is mixed with African blood; a brown or olive complexion, especially under the eyes always betrays doubtful origins [...]"*

As for mulatto women, he draws an even clearer racial distinction, by indirectly criticizing them for wishing to cross the social frontiers and for their lack of morality:

*"There is between White and mulatto women a demarcation line which the latter try to cross. However, those dangerous mulattoes avenge the contempt with which they are treated, by stealing the White mother's sons, as soon as they are susceptible to their charms."*<sup>14</sup>

On 24 May, 1803, a contemporary of Milbert, P. Brunet, who belonged to the Academy of the Loire-Inférieure, reached Isle de France in the *Célestine*. In his *Voyage à l'Île-de-France, dans l'Inde et en Angleterre* (1825), Brunet gives the following accurate profile of social classes on the island:

*"I would divide them into three classes: firstly the Whites; secondly, the mulattoes and the freed slaves; thirdly, the mulattoes and the Black slaves [...] The Coloured people may be divided into mulattoes, born of Black people and free Whites; freed slaves; and mulattoes or Coloured people from India [...] The third class, or that of slaves, is very large and more varied than perhaps in any other colony."*<sup>15</sup>

## 1.2. *Libertinage and concubinage*

We are very close to the real profile of the population of Mauritius in the 1800s. During their two-month sojourn on the island, when the *Uranie* called here on 5 May, 1818, on her voyage round the world (1817-1820), Louis and Rose de Freycinet had the leisure to observe a multicultural society. Louis de Freycinet, in his official account,<sup>16</sup> criticized, in no uncertain terms, the *libertinage* of mulatto women; they are described by him as 'Vénus noires', beautiful, with the most enticing eyes, long and rather curly hair. They reportedly reached the age of puberty early and were passionate and seductive in their love-making.<sup>17</sup> Moreover, abortions were frequent among black and coloured women, as was syphilis, yet further proof, in his eyes, of their immorality. (p. 386).

The European bias, which is noticeable in *Commandant* Louis de Freycinet's writings, is even more striking in his wife's. Rose de Saulces de Freycinet kept a diary consisting of a series of long letters to her cousin, Caroline, after she had stowed away illegally in the *Uranie* in 1817. Those letters were published in 1927, as the *Journal de Madame Rose de Saulces de Freycinet*.<sup>18</sup> In her diary, Rose is even less sympathetic to the complex nature of Mauritian society; she uses the strongest language to condemn the 'concubinage' that is rife on the island largely because of the loose morals of mulatto women; at the Champ-de-mars, she remarks:

*"All those pretty and well-shaped girls are kept by the rich men, young and old, of Mauritius. I shall add, to the great shame of men, even fathers lavish on those wretches, luxuries which their own children often go without. Can you believe, dear friend, that one would not find two men here who do not keep one of those girls in fine quarters, fine clothes and served by five or six black servants [...]?"*

*Some men even set up home with these women, have a dozen children by them and have no other house but theirs; these men are not married. By their actions, they are forced to withdraw from society, for these women are never received publicly. They provide a good education for their children, who are almost white; several even send them to England and France [...]*

*What is to become of this population? Will they always be completely segregated from the Whites? Creole women generally abhor those women who cause the ruin of their families and the breakdown of so many marriages. Several wealthy men, wishing to ensure their children's or their mistresses' future, in the event of their own deaths, buy land in their names. A few women already own substantial properties in their own right."*<sup>19</sup>

This *tableau* of the role of mulatto women sheds light on many aspects of the origins of the 'Coloured Population' born during the French colonial period, and after the British occupation of 1810. However, it would be erroneous to claim that *libertinage* and 'concubinage' were the only sources of the emergence of the 'Coloured Population', which also arose from mixed marriages between Whites and men or women of Asian and African origins. Yet, *libertinage* was a fact of life in the 1830s and 1840s, when Mrs. Alfred Bantrum gave a colourful picture of 'Creole' ladies - in

the sense of mulattoes - at the Champ-de-mars; the seductive 'Coloured' women once again became the target of a European lady's ire and high moral principles.<sup>20</sup> Nor did some local intellectuals lag behind visitors in their condemnation of the culture of pleasure promoted, seemingly, by the 'Coloured women'; in his *Statistiques de l'Île Maurice* (1838), Baron d'Unienville reflected on the White and 'Coloured' Creoles, given "avec abandon, avec passion, aux plaisirs de la société, aux jouissances de luxe."<sup>21</sup>

### 1.3. Mulattoes and 'métis' during the French colonial period (1721-1810)<sup>22</sup>

In a series of articles that appeared in *5-Plus* (9 October-4 December, 1994), Jocelyn Chan Low plotted the development of 'Le peuplement français de l'Île de France', when the nation became a true melting-pot. Bernardin de St. Pierre, in his *Voyage à l'Île-de-France* (1769), had been highly critical of the White settlers' *mores*, in particular those of soldiers, veterans of the Indian Campaign and of the Seven Years' War (1756-1763):

*"Finally, the last war in India brought here, like waves of scum, bankrupt individuals, ruined libertines, rascals, rogues, hunted out of Europe for their crimes and from Asia by our misfortunes, who tried to build their fortunes on the public ruin [...] There was no longer any chaste woman, nor any honest man; all trust disappeared, all was destroyed."*<sup>23</sup>

St. Pierre's charge is backed up by evidence brought forward by Chan Low (1994), of gender imbalance and of a lack of police control. Chan Low thus stressed the presence of quarrelsome soldiers, bad citizens and rascals, under the influence of Bacchus, who harassed female slaves (23 October 1994, p. 15).

Nor were early French settlers free from blame, driven, as they were, by self-interest, or escaping Justice in France; many of them deserved the charge brought by St. Pierre. 'Concubinage' was rife among young Creoles and French officers lured by easy access to female slaves. In a letter of 20 August, 1783, Governor Souillac deplored this practice: "Almost all officers cohabit publicly [with slaves]" (Chan Low, 13 November 1994, p. 15). Likewise, many French merchants, settling in the Isle de France, cohabited with female slaves or Coloured women. Some married freed slaves - such later on was the case of Benoît Ollier from the Lyon region, who arrived in 1789 and later married Julie, a freed slave born in Mauritius; they gave birth to Rémy Ollier, who was to become one of our greatest journalists, in 1816.<sup>24</sup> *Mésalliances* and *de facto* relationships were the direct result of an imbalance between settler men and women. Between 1717 and 1770, as noted by J.-M. André, a total of 1,718 contractual workers from France arrived; they were carpenters, bricklayers, masons, blacksmiths and other artisans.<sup>25</sup> Yet, those men generally came alone; families, as a rule, only arrived in Isle de France from French ports from 1743 onwards. There was, thus, a serious disequilibrium between genders at the peaks of La Bourdonnais' efforts to import a workforce (1743: 161; 1744: 128 workers).

Chan Low provides the following statistics: in 1778, there were 1,727 white women out of a total white population of 4,417; in 1809, white women numbered 2,671 out of a white population of 6,227 (27 November, 1994, p. 15). Rampant promiscuity and *mésalliances* led to the emergence of a mulatto and *métis* class. De l'Estrac also highlights the arrival from Pondicherry of free Indian contractual workers; others came from Karikal, at La Bourdonnais' instigation, as well as Indian slaves from the Coromandel Coast.<sup>26</sup> At the peak of Dupleix's glory in Pondicherry, there was a population of 70,000, of whom 2,000 were Europeans and 2,000 *métis*.<sup>27</sup> Not only did a considerable number of those *métis* reach Mauritius, but Indian free settlers, or later freed Indian slaves, contracted liaisons or marriages with *petits blancs* or Coloured individuals. The *Conseil de Pondichéry* sent 300 workers on three-year contracts to Isles de France and Bourbon in 1729; 100 approximately had left from Chandernagor in December 1728 and the rest came from other Indian districts.<sup>28</sup> Indian contractual workers trickled in well until the end of the French period (1810), and many married into other classes and groups, since, for the most part, the men travelled alone.

While in 1735, the population of Isle de France consisted of 648 slaves and 190 Whites (de l'Estrac, I, p. 118), by 1766, the total population had risen to 20,098, of whom Nagapen notes the following:

Colonists and families : 825

Women and "filles" : 337

Children : 668

Workers and Surgeons : 168

a) Total of Whites and Freed slaves: 1,998

b) Slaves : 14,100.<sup>29</sup>

De l'Estrac, for his part, refers to the presence of many *petits blancs* who subsisted in poverty and married freed slaves; thus, in 1776, the Census showed that among a White resident population of 3,431, 1,738 were artisans (902 men and 337 women; 305 boys and 194 girls). Half of this White population was made up of what was commonly known as *petits blancs* who worked as carpenters, ship-builders, masons, stone-cutters, and others as servants on large estates. They married freed slaves, when they could not find White partners. As a result of 'concubinage' [cohabitation] or mixed marriages, there were born "those enfants de mille races" [multiracial children], who would later be called "Gens de Couleur". The gap between the so-called pure Whites and the *petits blancs* and coloured off-springs grew wider.<sup>30</sup> The material conditions in which lived the *petits blancs* and the shortage of white women in their group, as well as their lack of access to 'Whites', made them succumb easily to the charms of freed slaves or Coloured women. It is to be noted that La Bourdonnais, himself, had a liaison with a black laundry woman, after the death of his first wife, in 1738; by this *blanchisseuse*, he begat a daughter, Marie-Madeleine Mahé, in 1739, who later died without issue.<sup>31</sup> The Governor also had an illegitimate son, Jean-Jacques Santerre, born in Paris on 14 July 1741. He left his two natural children a pension of 800 and 12,000 *livres* in his will.<sup>32</sup>

#### 1.4. *Métis* of White and Asian origins

By the end of the eighteenth century, an intermediate category, the 'Gens de Couleur', born of Whites and negresses, or Whites and Asiatic women, or White and freed slaves, had emerged. Nagapen, however, points out justifiably that the society of Isle de France/Ile Maurice was "imbued with pigmentocracy".<sup>33</sup> De l'Estrac is right to underline that the *Blancs* made "a clear distinction between 'mulattoes' and *métis*. According to this classification, mulattoes were of mixed blood but the products of Whites' relationships with African slaves, while the word *métis* designated the mixture of White and Indian bloods."<sup>34</sup> So, it is fair to say that, going back to the French colonial period, the very foundation of society in Isle de France, was racist.<sup>35</sup> There existed all nuances of colour, and a very heterogeneous group was born of illicit or unwanted unions. Perhaps, this is why many 'Coloured individuals' in the 1950s and 1960s referred to their group as the 'Race de Cain et d'Abel'. Let us not forget that the *Lettres Patentes du mois de novembre 1723*, commonly known as *Code Noir*, prohibited marriage between white subjects of Louis XV, of either sex, with Blacks "sous peine de punition et d'amende arbitraire". Priests were forbidden to marry such couples, and cohabitation was strictly barred:

##### *Art. 5.<sup>1</sup>*

*"Deffendons à nos sujets blancs, de l'un et de l'autre sexe, de contracter mariage avec les noirs, à peine de punition et d'amende arbitraire, et à tous curés, prêtres ou missionnaires, séculiers ou réguliers, et même aux aumôniers des vaisseaux, de les marier ; deffendons aussi à nos d. sujets Blancs, même aux noirs affranchis ou nés libres, de vivre en concubinage avec des esclaves ; voulons que ceux qui auront eu un ou plusieurs enfants d'une pareille conjonction, ensemble les maitres qui les auront soufferts, soient condamnés chacun à une amende de trois cents livres ; et s'ils sont maitres de l'esclave, de laquelle ils auront eu les dits enfants, voulons qu'outre l'amende, ils soient privés tant de l'esclave que des enfants, et qu'ils soient adjudés à l'hospital des lieux, sans pouvoir jamais être affranchis ; n'entendons, toutefois, le présent article, avoir lieu lorsque l'homme noir affranchi ou libre, qui n'etoit pas marié, durant son concubinage avec son esclave, épousera dans les formes prescrites par leglise, la dite esclave, qui sera affranchie par ce moyen, et les enfants rendus libres et légitimes."<sup>36</sup>*

This harsh prohibition did not, seemingly, deter many white settlers or French officers from infringing the express wish of the monarch. Nor was the punishment enforced; rather, the French authorities turned a blind eye both to the debauchery prevalent at that time, and to the cohabitation between slaves, freed or otherwise, and masters, or freed slaves and slaves still in chains.

The arrival of Indian workers, settlers and slaves during the French period has been referred to above. It added another shade of colour to the mosaic population. Among Indian stone-masons imported, were the Tamils, free settlers who arrived at Isle de France. An early settler, during the governorship of Dumas, bore the name of Chabrimoutou and married Antoinette Moutaly. *Métis*, born of white fathers and Indian mothers, came from Pondichéry. Portuguese *métis* bore the names of: Antoinette de Monty, Philippe du Rosaire and François Xavier Termillion and were among the free Indians to settle here. The first known work contract was signed by Apen Candury and is dated 9 April, 1734.<sup>37</sup> So many Indian workers were present that the French authorities resolved to appoint a 'Chef des Malabars', or a 'liaison officer'; the first, according to de l'Estrac, to occupy this post was Denis Pitchen, a slave owner and the son of an Indian couple, freed and baptized as Catholics.<sup>38</sup> Pitchen is derived from Pitcha, an early Tamil settler and a stone-mason, whose grave, inscribed in Tamil, is to be found at the Cimetière de l'Ouest. The family grew fast, married both into the 'Coloured Population', and in the Tamil community. An appendix to this chapter is provided on the marriages of the Pitcha/Pitchen family in the 1880s and 1890s.

### 1.5. Chinese and other communities

During the French colonization period (1721-1810), accordingly, there occurred what de l'Estrac calls a "brassage de toutes les races" which gave rise to the 'Gens de Couleur', "an expression which is also used to designate the totality of the 'Libres'." <sup>39</sup> That the white masters were particularly attracted to Indian slave women in the eighteenth century is known; often, the latter became concubines and wives of their masters, according to statistics provided in Musleem Jumeer's thesis.<sup>40</sup> The concubines were generally freed Indian slaves; thus, between 1768 and 1789, out of 347 freed slaves, 188 gained their freedom from their white masters; of those 188 women, 138 had given birth to 244 children. They are known also to have acquired land and properties, and *métis* Indian concubines seem to have played a significant role in the emergence of the 'Coloured community' in the eighteenth century. This was the direct result, according to Jumeer, once more of the imbalance between genders; in 1776, for each woman, there were three men on the island.<sup>41</sup>

One should, albeit to a lesser extent, include the Chinese at the source of this mosaic of the 'Coloured Population'. In their study of Chinese emigration, H. Ly Tio Fane-Pineo and Edouard Lim Fat have pointed out that, in the seventeenth and eighteenth centuries, there was a reluctance, on the part of Chinese women, to accompany their emigrating partners.<sup>42</sup> De l'Estrac, for his part, drew attention to the fact that there were a number of Chinese artisans, marine carpenters and sailors, who had settled in Isle de France before, and during, La Bourdonnais' governorship.<sup>43</sup> Very early on, only "a few Chinese had married local women, hence the majority of the immigrants had to evolve a mode of life devoid of the soothing presence of womenfolk," concluded Ly Tio Fane and Lim Fat.<sup>44</sup> It is reported by Joseph Tsang Man King (*viva voce*) that the very first Chinese settler in the 1720s married a Monty, probably of Tamil origins, giving rise to a mixed family. No doubt, despite the absence of archival evidence, there were mixed marriages or various degrees of cohabitation between early Chinese workers or settlers and individual women belonging to the freed slave or Coloured community, but a detailed study is required on this.

### 1.6. *Métis* and the 'Coloured Population' after the British occupation (1810-1968)

Pigmentocracy was already prevalent when the British captured Isle de France in 1810. The *Code Noir* had been integrated into the *Code Delaleu* first (1767) and then into the *Code Decaen* (1804). The Coloured Population was, by 1810, a very heterogeneous and underprivileged community / class, in social and political terms, frowned upon by the French Whites and, after the 1810 take-over, also by the British Whites. The gap between the *grands blancs* and *petits blancs* had widened, and that between the former and the mulattoes and *métis*, was wider still. In 1809, the population consisted of:

6,227 Blancs

7,133 Libres (including former Indian slaves)

55, 422 Slaves. <sup>45</sup>

Freed Coloured slaves were beginning to gain advancement through concessions of 156 *arpents* of land.<sup>46</sup> 'Libres' gradually became known as 'Gens de couleur', but were not recognized as deserving of political or educational, or basic human rights. At the end of the eighteenth century, Mauritius was already a multiethnic and multiracial society, but the privileges belonged to a minority of Whites who declared themselves to be of pure French blood. 'Creoles', including mulattoes, in the modern sense of the word, as Danielle Palmyre defines them, <sup>47</sup> were seen as outside good White French society, since it was the "groupe le plus métissé, ouvert à tous les brassages," in the words of Jean-Claude Véder. <sup>48</sup> The 'Coloured people' displayed clear physical traits that linked them with their African or Asian ancestors, while the White ascendancy made the 'Coloured people' at times objects of mockery among their own African or Asian counterparts. The appellation *mulâtre* [mulatto] or *métis* was, and is still today, hurled as pejorative terms and abuses - at least, it was commonly the case from the 1950s and 1960s up to recently. Véder also rightly argues that, rejected by other cultures and ignored in the nineteenth century for long spells, Creoles, including the 'Coloured people', rallied around the Church.<sup>49</sup> Palmyre underlines the fact that, with few exceptions, "historically, the professionals of the middle class from towns in colonial Mauritius, were often the descendants of black female slaves and white masters, had pale skin, were free and educated, but did not possess land. Even if social mobility has spread, the colonial classification persists."<sup>50</sup> Indeed, the removal of whatever little land the Coloured descendants of white masters possessed during the nineteenth century, was to become a feature of the power play between Whites, Coloureds and wealthy Indians in the twentieth century (see later 'Land ownership among the Coloured people').

## CHAPTER 2 - The 'Coloured Population' and its growth

### 2.1. The Coloured, victims of racial prejudices

The *métis* and 'hybrid', 'Libres', whom the official nineteenth-century documents referred to as 'Coloured population', did not attempt to acquire more land and often failed to hold on to the few (156) *arpents* they were given as concessions. Prejudices survived from the French colonial days during the British period; for example, an Ordinance of 1779 prohibited entry by the Whites into the 'Quartier des Libres' and punished any infringement by fines.<sup>51</sup> Yet, Indian women, not deterred by the coloured status of their children, had them baptized, without naming their fathers, according to Jumeer.<sup>52</sup> But, this did not secure access into 'good society'; in fact, these children were ostracized both by the Whites and the Indians. A similar story unfolded, when it came to Coloured children with freed slave mothers. Even though their numbers increased, hostility between the White and 'Coloured Population', as Rose de Freycinet noted,<sup>53</sup> increased in the early nineteenth century. By 1833, there were:

66,000 Slaves

8,000 Whites

18,000 'Hommes de couleur'<sup>54</sup>

The causes of this white antagonism was, partly, rivalry between the two groups of women, White and Coloured, but, above all, it can be explained by the abolition of the status description in the Ordinance of 1829, as discussed below. Various actions by the 'Coloured Population' to convince the British authorities of their Human Rights will be explored below, under 'Political representations'.

The most shocking example of racial prejudice and an 'apartheid' policy, was the funeral rites and practices for the White and Coloured or Slave Populations. In *l'Esclavage à l'Isle de France (Ile Maurice, de 1715 à 1810)*, Karl Noël waxes indignant, and rightly so, at the Church's discriminatory practice of underlining, through funerals, the inferiority of the Black and 'Coloured Populations' right up to the 1830s. Coffins of slaves and free Coloured individuals were placed on two stones, at some distance from the Church and exposed to the gazes of passers-by and to the mercy of the elements. Moreover, the case of M. Betuel, in 1823, who wished to be buried alongside his Coloured son in the 'Coloured' cemetery, is recalled by Noël as having shocked the 'Coloured Population'. The trustee, Mr. Chrétien, followed his instructions but was helpless, when white relatives appealed and had the body exhumed. The *Procureur Général* gave in to their pleas that this burial had brought shame on the family. Thus, even the great leveler, Death, became a pretext for clear 'apartheid' practices, manifestly supported by the Catholic Church.<sup>55</sup> A few days later, the Appeal Court Judges upheld the decision of the *Procureur Général*.

Other cases in the 1820s and 1830s demonstrated the wide gap between the Whites and the 'Coloured Population'. Archival documents support this, and Evenor Hitié refers to those practices of interment at length.<sup>56</sup> He recalls that, according to an Ordinance of 1783, ratified by the Vicomte de Souillac (6 February, 1783, Article 6), bodies of slaves, and presumably 'Coloured people', had to be carried to the Cross or the Church's entrance, where the funeral rites would be administered. Then, they would be left on two stones at some distance from the Church, until such time as the priest would collect them for burial.<sup>57</sup> Hitié too expressed indignation: "One can understand that men, imbued with prejudices could contribute to this Ordinance, but how could members of the Mauritian Clergy sanction it, since it went against the very fundamental principles of a religion which they professed?"<sup>58</sup>

Among papers relating to the 'Coloured Population' at the Mauritius Archives is to be found a moving and strong condemnation of the funeral rites described above, by a delegation of 'Coloured' men on 30 July, 1830. A petition was presented to Governor Sir Lowry Cole on this occasion, and it deals with the need for a Central College for Coloured children, but it also touches upon a number of recent cases of interment; for instance, in February 1826, Mlle. Bussac having died, her father had given instructions that she be buried in the Cemetery for Whites. When the *cortège* arrived at the gate, the watchman refused it entry on the grounds that he had orders from

the Commissioner of Police *not* to allow the remains of 'Coloured people' to be buried in the 'Cimetière des Blancs', without his authorization. Told of this, the father, a white man, appealed, but to no avail.<sup>59</sup> A second instance of such blatant violation of Human Rights occurred on 4 June, 1826, when Mlle. Boucherat, a Coloured person, passed away. Once more, her father wanted her to be buried in the 'Cimetière des Blancs', but the watchman resisted and declared that he had no official permission from the Police Commissioner: "The parents of the young dead person resisted; the watchman resisted in turn; finally, the parents gave in, out of respect for the sacred grounds where they were."<sup>60</sup> The petition concluded in 1830: "If we have objected to the existence of a separating wall forcefully, it is because we wished to underline the odious nature of this demarcation line that still exists [...] Thus, a thick wall separates our mortal remains from those of our fathers, while perhaps a ditch separates a respectable Coloured man from a white criminal whose head fell under the executioner's axe [...]"<sup>61</sup>

Significantly, the Police Commissioner, Mr. Furniss, did not intervene, nor did he try to resolve the problem. In a letter to the Private Secretary of the Governor, T.E.S Viret, of 20 July, 1830, he claimed that he had only heard of the two incidents afterwards: "In regard to the two cases of the burials of Miss Bussac in February and Mlle. Boucherat on 4 June, I have only to observe that I now hear of them for the first time and, if it was desired to inter their bodies in any particular part of the ground, I can only regret that they did not refer this to the Police, as the *Gardien* requested them to do [...]"<sup>62</sup> In fact, both sets of parents had done just that.

Other prejudices and unfair practices in the Church are objected to in Petitions of 1826 and 1830; a revolting distinction was made between Whites and Black/Coloured people at the time of Communion, when they received the host at different tables. Moreover, the Church persisted in having two separate registers for baptisms, marriages and deaths, despite the Ordinance of 16 December, 1829. A petition was signed on 30 July, 1830 by the following Coloured individuals:<sup>63</sup> H. J. Bruils, *alias* Dorestan; C. Shelesfort (a carpenter); A. Ricard, *alias* Ferxier (a carpenter); Lalandelle (a carpenter); E. Baillaud (the son of a baker, "legitimated since 11 years"; E. Joronc [?] (a shopkeeper); P. Berger (a sailor); F. Bussière (a horse doctor); A. Margéot (a clerk at a baker's); J. Dantoine (a bad subject); La Poujade (a sailor); A. Blaize (17 or 18 years of age, now a clerk in the Internal Revenue Office); Max Vilbro ("very impertinent; is a clerk in the Internal Revenue Office"); J. A. Raoul ("clerk to Messrs. Georges Brothers, shopkeepers"); Dubord (a working jeweller); P. Quéland ("employed at a bakery, nothing against him!"); J. B. Cloridor ("was formerly a Finman, is now a fiddler playing at balls"); Raoul; L<sup>s</sup>. Siccard (a carpenter, "nothing against him"); L<sup>s</sup>. Morin, *alias* Mandone (a shoe-maker); Bazire (a carpenter); Frellanges (a cabinet-maker); J. Bernard (a carpenter); Théo. Routier (a carpenter, "worked at the late Simonet's"); A. Collet ("had property; is a natural son of Cécile S<sup>t</sup>. Aubin"); J. B. Benoît (a "teacher to Government Blacks at the Matricules"); J. B. Houet ("a promoter of cabals, carpenter by trade"). This list is signed by Chief Commissioner of Police, Furniss, and dated 7 August, 1830, after an enquiry had been carried out into the background of the petitioners, all Coloured men. One last example of general racial prejudices against 'Coloured people' occurred at the Theatre in Port Louis in 1830. Henri Bruils, who worked as a clerk at the 'Grefe au Tribunal de première instance', worked on the case of several 'Coloured people' who had been refused entry to the Theatre's *Café*, owned by M. Coignet. Resigning his job at the *Grefe*, Bruils took up the challenge in court, but it is unlikely that he won at this stage of the history of 'Coloured people'. Only with the arrival on the scene of Rémy Ollier, and other Coloured champions in the 1840s, were the rights of 'Coloured people' more fully vindicated, as explained in the section 'Political Representations' below. In his sometimes excessively passionate and polemical history of this community, Evenor Hitié is quick to point the finger at the Colonial Authorities - perhaps too quick; after the British take-over, Hitié noted: "The 'Coloured Population', alone, remained downcast, sad, as if this population were treated as idiots, crushed under the yoke of prejudices that did not allow it to move upwards."<sup>64</sup> And between 1790 and 1803, although officially they had rights, they received little respect,<sup>65</sup> as discussed in 'Political Representations'.

## 2.2. The Growth of the 'Coloured Population' within the 'Population Générale'

So it is that the term 'malaise créole', coined by Roger Cerveaux, a Roman Catholic priest, on 1<sup>st</sup> February, 1993, and elaborated upon in an interview in the *Week-End* a week later, existed among the Coloured, even during the French colonial period and during the first half of the nineteenth century. And as if to further emphasize the loss of an identity that had been so hard to

forge, the term 'General Population' was coined, from the outset, as a generic term to incorporate the 'Coloured people', but also anybody who did not belong to the Hindu and Muslim or Chinese communities.<sup>66</sup> Chan Low and Reddi explain: "First used in the 19<sup>th</sup> century, it is a colonial category which has little to do with social reality. However, it subsumes different ethnic categories, one of which is the Creole community."<sup>67</sup> If one goes by a broader definition of 'Creoles', as it applies to people of mixed descent, excluding the Whites,<sup>68</sup> according to Chaudenson, then this term 'General population' was used by Colonial Authorities to create a new melting-pot that would deprive minorities, such as the Coloured, of their true identities. And, of course, the *Ti-créoles* were to remain throughout even more invisible. Chan Low and Reddi argued that "the overall impact of a century of racism, racialisation and cultural oppression was to further deprive the Creoles of a petty [petite] bourgeoisie capable of forging their emancipation [...] In 1920, in a population of 75,000, 5,000 constituted a coloured élite, 20,000 a petty [petite] bourgeoisie of dark colour, possibly light skinned, and the rest were dockers and manual workers."<sup>69</sup>

Though to a lesser extent, the identity of the 'Coloured Population' suffered equally during the nineteenth century, "a century of racism". Rémy Ollier, who carried the flag with the *Sentinelle de Maurice* during a brief period in the 1840s, referred to the large and growing numbers (60,000) of Coloured; yet he made it clear that there were 30,000 mulattoes and 30,000 Black people - an indication of the prejudices of the Coloureds themselves towards the *Ti-créoles*.<sup>70</sup> The following tables (1 and 2) show the growth of the 'General Population', although the census exercises of the nineteenth century do not reveal the actual numbers of 'Coloured people' within this broad category.

Year	General Population	Total Population	Slaves
1771 <sup>a</sup>	Whites and Mulattoes: 10,000	65,000	55,000
1817 <sup>b</sup>	Whites: 7,376 Free Coloured: 11,000	98,325	79,943
1825	Whites: 8,009 Free Coloured: 14,831	96,272	63,432
1830	Whites: 8,592 Free Coloured: 18,877	96,779	69,476
Notes			
<sup>a</sup> Charles Grant, <i>The History of Mauritius</i> , London: W. Bulmer: 1862 (1801).			
<sup>b</sup> Baron d'Unienville, <i>op. cit.</i> , (1838) - statistics for 1825 and 1830 also come from this source.			

Year	General Population	Total Resident Population (excluding military and sea passengers)	General Population as a % of total population
1846	52,852	158,462	29.98%
1851	54,497 (Increase of 3%)	180,823 (Increase of 14.11%)	30.2%
1861 <sup>a</sup>	117,416 (Increase of 62.9%)	310,050 (Increase of 72.01%)	26.4%
1871	99,784 (Decrease of 15% on 1861)	316,042	31.6%

1881	110,881	359,874	32.4%
1891 <sup>b</sup>	114,668	370,588	32.3%
1901	111,937	371,023	33.1%
1911	107,432	368,791	34.3%
1921	104,216	376,485	36.1%
1931	124,589	393,238	31.5%
1944	143,056	419,185	29.3%
1952	148,026	501,200	33.8%
1962	203,652	681,619	33.4%
Notes			
<sup>a</sup> "The population was to be divided into two classes: the General Population and the Indian Population" (Proceedings of the Census Board of 9 February, 1861, quoted by M. Dinan, <i>Mauritius in the making</i> , Baie du Tombeau: Caractère Ltée, no date, p. 12.			
<sup>b</sup> These statistics for 1891 to 1962 (without our fourth column) were obtained from Dinan, <i>Ibid.</i>			

Within the broad category of 'General Population', it is more difficult to establish the growth of the 'Coloured Population', but a few local historians have left us statistics that are significant. According to de l'Estrac, quoting Pitot's tableau for 1833, the population consisted of: 66,000 slaves; 8,000 Whites and 18,000 'Coloured people'.<sup>71</sup> In Evenor Hitié's estimation, out of a population of roughly 400,000 [in fact, 316,042], 20,000 were white and 35 to 40,000 Coloured.<sup>72</sup> This figure, in Hitié's thinking, would also include descendants of the white English population married to Coloured women. During the 1886 elections, the Reformers wanted only 4,000 individuals to vote, out of a population of 360,000, remarks Vijaya Teelock.<sup>73</sup> Of these, only a 'handful' of Coloured individuals would have voted, because of the high property qualifications - probably no more than 500. No doubt, they also felt threatened by the Indian *élite*, since there were, by comparison, 300 registered Indian electors.<sup>74</sup> But Benjamin Moutou puts the figure of Coloured voters at 6,637 out of 11,786 voters who qualified despite the high franchise.<sup>75</sup> The 'Coloured Population' had continued to grow from 1810 onwards; its intellectual *élite*, according to Henri Leclézio in *Mauritius Illustrated* (1914), "may be reckoned at about 5,000 persons" in the 1910s, "well-educated persons for the most part, of an intellectual equal to that of the generality of the members of the white population."<sup>76</sup> From here onwards, the Coloured intelligentsia mustered all the available troops during the 1920s and 1930s, under the leadership of Eugène and Edgar Laurent, Emmanuel Anquetil, and later Dr. Maurice Curé, the founder of the Labour Party (as analysed below in 'Political Representations').

### 2.3. Religious Affiliations of 'Coloured people'

The *Lettres Patentes* of 1723 or *Code Noir des Isles de Bourbon et de France* had imposed the Catholic religion on the slaves; Article 1 stipulated: "Tous les esclaves qui seront dans les Isles de Bourbon, de France, et autres Établissements voisins seront instruits dans la religion catholique apostolique et romaine, et baptisés [...]"<sup>77</sup> In fact, this was a concession to the role of religious instruction, since in the *Code des Antilles* (1685), slaves were meant to be baptized first, before receiving instruction. Yet, it is clear that religion meant very little to the slaves or freed slaves.<sup>78</sup> The work, done by Lazaristes, in the early French colonial period, among slaves and freed slaves, was to have a long-lasting impact:<sup>79</sup> "Above all, they took care not to baptize, without due consideration, the slaves who, then known into general 'concubinage', would not be able to receive the sacrament of marriage." It was only on 11 March, 1725, three years after colonisation, that the first slave couple was baptized: Pierre *alias* Laverdure and Marie Madeleine. On the same day, the Vice-Préfet Apostolique, M. Borthon, blessed their marriage.<sup>80</sup> From that point on, Catholicism became generally the religion of slaves and of their descendants, including Coloured children born either of cohabitation with white masters, or from other social communities.

It is not necessary to dwell on this aspect of the 'Coloured Population'. In his book, *Les Chrétiens à l'île Maurice*, Benjamin Moutou has analysed the religious beliefs of the 'Coloured

Population' in a chapter,<sup>81</sup> and in particular, in the section 'Les Chrétiens dits population de couleur' (pp. 141-142). Moutou divides the Christians in Mauritius into five groups: (a) Mauritians of French origins, 'Blancs'; (b) Mauritians of African, Malagasy or any other related origins; (c) Indo-Christians; (d) 'Hommes de couleur'; (e) Christians of Chinese origins.<sup>82</sup> In the 1840s, 1850s and 1860s, the vital role played by the 'Bienheureux Père Laval' (1841-1864), in his apostolate and dealings with freed slaves and 'Coloured people', cannot be over-emphasized. He manifestly deserves to be our first saint and is rightly known as the 'Apostle of Mauritius'.<sup>83</sup> On this apostolate was built the future faith of Coloured individuals in the nineteenth century. It was also kindled by the educational missions of the Loretos and Christian Brothers, who through their schools from 1845 onwards, gave Coloured children the opportunity to acquire knowledge, as examined below in the chapter on 'Education'. The Clergy, under a number of Bishops, starting with the religious renewal that occurred with the arrival of Mgr. Collier (Bishop, 1841-1847), was dedicated to their task of baptizing children and adults, and spreading the good news among the Coloured or *métis* population:<sup>84</sup> "The Church, for its part, was emerging from half a century of religious stagnation, to renew itself and shine again with a Pentecostal light."<sup>85</sup> It was no coincidence that Mgr. Collier's arrival coincided with that of Father Laval who "regenerated Catholicism in depth and in a lasting manner."<sup>86</sup>

Jean-Claude Véder stresses the link between the heterogeneous Creole community and Christian Churches: "Longtemps rejetés par les autres cultures et ignorés par les hommes politiques, les créoles mauriciens se sont ralliés autour de l'Eglise." The majority, he adds, belonged to the Catholic Church.<sup>87</sup> While for a long time in the nineteenth and twentieth centuries, the hierarchy of the Catholic Church was White or European, things are changing fast, and this pressure for change is generated by the Coloured and Creole Clergy. Chan Low and Reddi regarded the active role of the Catholic Church in the 19<sup>th</sup> century as a mixed blessing:

*"The intervention of the Catholic Church, while ushering a new view of life, was to prove detrimental on several fronts [...] contrary to the Caribbean, where the blacks appropriated Christianity and created a black Church, the Creoles in Mauritius were subject to the racial practices which pervaded the Catholic Church. The use of two crucifixes, one in bronze for the blacks, one of silver for the Whites, the administration of communion in order of races, remained the practice even after the legal abolition of racial discrimination in 1829."*<sup>88</sup>

The Catholic religion, however, has provided a solid and constant anchor for the 'Coloured Population' for three centuries. Faith and Catholicism became an integral part of Coloured people's identity. Early mixed marriages<sup>89</sup> were celebrated by the Catholic clergy, and Indian mothers did not hesitate, as pointed out above, to have their Coloured children baptized. Although it is impossible to determine the exact number of Coloured Christians in the various censuses, the 'General Population', which included the Coloured, provided the largest number of Christian believers from the 1846 Census onwards:

Year (Census or other sources)	Total Population	Catholics	Other Christians	Total Christians
1788 <sup>a</sup>	40,000 - 45,000 appr.	43,473	-	-
1851	180,823	93,561	8,105	101,666
1861	310,050	47,758	4,560 <sup>b</sup>	52,318
1871	316,042	81,789	7,310	89,099
1881 <sup>c</sup>	359,874	107,441	8,890	116,331
1891	370,588	105,448	5,491	110,919
1901	371,023	103,256	4,975	108,231
1911	368,791	103,176	3,728	106,904
1921	376,485	100,077	3,595	103,672
1931	393,238	110,717	3,939	114,656
1944	419,185	136,049	3,377	141,185
1952	501,200	142,460	5,356	147,816
1962	681,619	218,572(32.1%)	10,683	229,255
Notes				
<sup>a</sup> See Nagapen, <i>Histoire de l'Eglise</i> , p. 52.				
<sup>b</sup> <i>Ibid.</i> , p. 76. This figure of 4,560 includes 2,821 Protestants (unspecified) and 692 Church of England followers.				
<sup>c</sup> Dinan, <i>op. cit.</i> , p. 24. Also for 1891-1962.				

For the sake of economy of space, we have stopped at 1962, but it is obvious from this table that Christians were, and are, a major component of Mauritian Society, even after the arrival of Indentured Labour, and that among Christians, the Catholic Church had the largest majority of disciples. Besides Catholics, among Christians, one can note: The Church of England; the Church of Scotland and a broad category of 'other Christians'. Today, a considerable number of Christian sects and Churches have sprung up, making the picture even more complex. The Census of 2000 indicates that out of a grand total of 1,178,848 people, there were 278,251 Roman Catholics; 101,050 'Other Christians', which adds up to 379,301 Christians, as against 799,547 non-Christians. Monique Dinan notes that between 1871 and 2000, there was a growth of 1.13% among Christians per year; of these, the number of Catholics grew by 0.95%, as against a growth of 1.16% for Hindus and 1.21% for Muslims. She also adds that, between 1952 and 2000, when all Christians are taken together, there was a growth of 1.65%, due to "the increase registered by the sects".<sup>90</sup> There is little doubt that there was a parallel increase among the 'Coloured Population' which, by tradition, belonged to the Christian faith.

Very early on, in the nineteenth century, we know that Reverend Le Brun, who arrived in Mauritius in 1814, preached extensively to the 'Coloured Population'. He also had renewed success in gradually setting up primary schools (see 'Education' below). As a result of his mission and charisma, a number of Coloured families converted to Protestantism. Hitié names the following individuals and their families: "Vilbro; Auguste Icery; Hégésipe Gérand; Henry, Bruils; Boudard; J.B. Courtois; Etienne Roussel; Abrard; I.F. Noël, and "a hundred other families" who changed their religion". Hitié concludes: "It was, from that moment on, that the independent Church of Reverend Le Brun received in its folds thousands of disciples."<sup>91</sup>

In a recent article in *Week-End*,<sup>92</sup> B. Burrin has retraced the early days of the Adventist Church under the leadership of Pastor Paul Badaut, a French missionary, who arrived in the *Oxus* on 2 April, 1914 and stayed until 1920. His six years' mission in Mauritius sufficed to set up a solid congregation, hailed by Léoville L'Homme, as the product of strong faith and vigorous missionary work. But our famous poet added: "It was Mlle. Rosalinde (Rosie) Le Même who declared herself to be the first Adventist in Mauritius in 1912; she also lent considerable assistance to Pastor Badaut in his mission." On 24 November, 1914, the Pastor baptized, by immersion, near St. Jean, 24 disciples, and when he left in 1920, the Adventist Church was kept going by such zealous laymen as O'Brien, Moïse Johnson and Mozart Noël, all *métis* Mauritians. No doubt, all Christian sects deserve a fuller treatment in an attempt to trace the emergence and identity of the 'Coloured Population', but shortage of space does not allow for it.

## CHAPTER 3 - The Struggle for Education for the Coloured

### 3.1. The 'Coloured people' with few educational opportunities

The team drafting the 'Education Project' has dealt at length with the history of Education in Mauritius during the British period, in particular. The focus, in this section of the 'Coloured Population Project', must, accordingly, be on the commitment of Coloured intellectuals to broadening the educational horizons of Coloured children. In a very real sense, the fight for Education became the chief priority and main objective of their political representations to the British authorities, as demonstrated below.

During the French colonial occupation (1721-1810), Education for white children was provided by private and fee-paying schools. Girls were generally educated at home by governesses or tutors. Yet, in his *Memoirs* of 1740, Governor La Bourdonnais had expressed to Contrôleur Général Orry the need to open up education to as many local children as possible: "It is high time, I think, for you to consider a College in the Isles where our youths would be educated and taught to read, write, and even Latin and Mathematics. A school for orphaned girls would also be desirable."<sup>93</sup> Research, however, indicates that, with a few exceptions, freed slaves, their descendants and Coloured children, did not benefit greatly from this innovative idea under the French. It is reported that Joseph Dupré, the son of a settler who arrived in the *Bourbon* on 1<sup>st</sup> August, 1759, ran a primary school in Port Louis exclusively for wealthy children. Aware of the need for education, François Julien du Dresday, Chevalier Desroches (Governor from 1769 to 1772) acquired two sites near the *Jardin de la Compagnie* on 20 September, 1770. On one of these, were erected the buildings that were to house a parish school, set up by Abbé Claude Bernard Challan. It became known as the *École de l'Abbé Challan* (1772-1776); it is thought that the administrators opened up the school to poorer children.<sup>94</sup>

Abbé Challan was succeeded by Abbé Charles Quinlan, a lay priest and chaplain, who gave the school the name *Collège de l'Isle de France*, where classes were held from 5 October, 1778 on. In recognition of this innovation, the French administrators applauded "a project formed to establish in this town [Port Louis] a College for the Creoles of the colony."<sup>95</sup> This school or college, however, appears to have been restricted to white children. A boarding school for girls was, likewise, founded in 1781 by Veuve Dufour and Marguerite Poupelain, who applied for permission on 16 February, 1781. Since the fees for boarding were 100 *Francs* per month, and half of this for external students, it is unlikely that Coloured or freed slave children, would have attended the school.<sup>96</sup>

Without going over the same ground as the 'Education Project Team', it is obvious, in our view, that the first real attempts to open up Education (primary especially) to the 'Coloured Population' occurred after Reverend Jean Le Brun had arrived in 1814. He was to found the first free primary school in Port Louis and, subsequently, other primary schools for boys and girls across the island. These establishments were initially founded by the London Missionary Society, and later by the Society for the Propagation of the Gospel. But the financial difficulties encountered by Reverend Le Brun were enormous; several of his schools failed, notably in Port Louis, Piton and Camp Yoloff.<sup>97</sup> One finds, in the Mauritian Archives, a Prospectus for a free school at Rivière du Rempart, sent to Governor Sir Lowry Cole by Rev. Le Brun, on 26 September, 1826. In this document, the latter refers to an existing building capable of housing 60-80 children. The Reverend, however, asks the Government to send twelve sponsored students at the cost of £50 per annum each, from "among the most distressed and meritorious people", that is descendants of slaves and Coloured children. The less than generous Sir Lowry Cole, who never entirely espoused the Coloured cause, does not appear to have acceded to this request,<sup>98</sup> even though the Prospectus spelt out the urgent need for Education in the Rivière du Rempart District: "Il existe au quartier de la Rivière du Rempart un nombre assez considérable d'enfants auxquels les pères noirs ne peuvent donner une éducation [...]"<sup>99</sup>

Strictly because of Reverend Le Brun's efforts, a number of primary schools were founded and blossomed by 1851 (see Appendix I to this section). Le Brun was, at the time, in Hitié's opinion, looked upon by the freed slaves and the 'Coloured Population', as "the architect of their intellectual emancipation."<sup>100</sup> However, the political struggle for access to Education for the

disadvantaged Coloured went on alongside Le Brun's endeavours. In the 1820's, their representatives demanded their 'common rights', since they felt despised and side-lined by the British Government, at least up to 1826. For a total population of 100,000, there were few free schools. On 16 January, 1826, Augustin Icery presented a petition to Sir Lowry Cole that stated strongly the case for greater access to Education: "The limited education, received by Coloured young people, will not enable them to better themselves in the future and acquire an in-depth knowledge of the abstract sciences." This was put down to the isolation of Coloured children and their inability to compete with their White counterparts: "The number of children in the 'Coloured Population' is increasing annually, and they require a more complete education so as not to stagnate in a state of ignorance that may be detrimental to the country at large."<sup>101</sup> Hence, a Central College for Coloured youths was required, and as soon as the Governor approved this, a Prospectus was to be issued. This petition was signed by a number of Coloured representatives, including Duclos; Z. Arlanda; J.-B. Nayna; G. André; Renaud; Dumolard; Doucher; Morelle; Icery; Cantin *et al.* It was then sent to the Secretary of the Committee of Public Instruction, Baron d'Unienville, by Secretary Barry. He referred, in so doing, to the "Prospectus and estimate for the establishment of a Public School for the instruction of children of the 'Coloured Population' of this colony [...]", and asked that the Petition be submitted to the Commission of Public Instruction.<sup>102</sup>

The said 'Prospectus' of 1826 took as its objective the creation of "an establishment which was to be devoted specifically to education and be named the 'Central College for the youths of the Coloured Population'."<sup>103</sup> The cost of this College was then put at 25,000 *piastres*, with subscriptions of 200,100 and 50 *piastres* to be called for among prospective parents. There would also be voluntary subscribers, and the Government was required to lend its support. All shareholders/subscribers would be represented by a Board empowered to administer and organize the College, where teachers would be asked to teach the following: Reading in French and English; Writing; Geography and Geometry; Drawing; French and English Grammar; Mathematics in French and English, and all useful Sciences.<sup>104</sup> This document was signed by Jean-Baptiste Nayna.

Other leaders of the 'Coloured Population' in the 1820's were 'real mulattoes', according to Evenor Hitié, namely: Jean-Baptiste La Bonté, the son of a Frenchman from Auvergne and a freed slave woman, Ova; Félix Jacmin and Jean-Baptiste Tabardin.<sup>105</sup> La Bonté, in particular, was a forceful and eloquent leader, who went to see Governor Farquhar to plead the Coloured cause and their need for more extensive rights, notably in Education. Farquhar, being sympathetic in 1820, had a quiet word with Telfair, the same Charles Telfair, who set up a school for slaves at his Bel Ombre Estate from 1823 onwards.<sup>106</sup> Hitié points out that Telfair assisted with the drafting of the 'Prospectus' of 1826, referred to above.<sup>107</sup> For all that, at the time, there was little movement forward towards a College for Coloured adolescents under Sir Lowry Cole's administration (1823-1829). A little too emotionally perhaps, Hitié bemoans their fate: "This population remained without support and endured a harsh form of moral 'slavery' from 1803 to 1810 under the administration of General Decaen and from 1810 to 1830, over 20 years, under the British administration."<sup>108</sup>

Deprived of any opportunity of educational advancement, Coloured leaders came back to the charge in 1830, when the governorship had passed to Sir Charles Colville. In that year (20 March, 1830), a delegation from the 'Coloured Population', led by Joseph Maingard, Jean Cantin, J.C. Dioré, H. Dupuy, Augustin Icery, A. Gourges, J.-B. Nayna *et al.*, met the Governor and presented yet another petition which recalled Icery's earlier endeavours (1826). They stressed once more the vital need for a "Central College destined exclusively for the Coloured youths, a project submitted to your predecessor [...] We long, indeed, for the realization of this project [...] but since we had only obtained a personal subscription of 100 *piastres* from the Governor of the colony, it became impossible to envisage the completion of this project."<sup>109</sup> From 1830 on, Coloured leaders continued to plead for access to Education, while deploring the conditions in which their community laboured and the civil and political prejudices which confronted them. Despite the Ordinance of 1829 stipulating that in future, there would be only two categories of people, Free and Slaves, the Human Rights of the 'Coloured Population' continued to be ignored. The two petitions of 1826 and 1830 had been largely ignored by two unsympathetic Governors, Lowry Cole and Colville, who rejected the 1830 address, while showing his personal antipathy to the Coloured leaders.<sup>110</sup>

### 3.2. The Royal College

As early as 23 April, 1811, the *Lycée Colonial* had become the *Collège Colonial*. It was Governor Robert Farquhar who had named it the 'Royal College' on 27 January, 1811. The 'Education Project' has drawn attention to the necessary admission of Coloured boys for the first time in 1832. While a few private schools existed for Coloured children at primary level, it was only in 1835 that Michel Severimoutou opened a Colonial Academy for boys and girls in Plaine-Verte.<sup>111</sup> From 1818, the 'so-called' English scholarships were opened to white boys only and allowed them to become lawyers and doctors at U.K. Universities. Meanwhile, the enlightened Lord Glenelg, as Colonial Secretary, expressly ordered Governor Nicolay in 1836 to liberalize education. For in 1836, he had received, in London, a Coloured delegation led by Volcy Hitié, a disciple of Reverend Le Brun, and Lisis Letord; they had brought a voluminous 'Cahier de doléances' on behalf of the Coloured Community. A motion in the House of Commons for a Commission was unfortunately defeated.<sup>112</sup> However, the breakthrough had arrived; from 1832 onwards, the Coloured boys shone like the Southern Star at the Royal College. One only has to look at the Laureate Boards at the present Royal College, Curepipe, for the period 1818 to 1914 - when the new building was erected in Curepipe - to see the huge intellectual strides made by the 'Coloured Population'. According to Albert Pitot, the English supported the 'Coloured people' against the Franco-Mauritians in the 1830s,<sup>113</sup> which led to the admission of Coloured boys to the Royal College, this, in spite of Governor Colville who did not approve of this liberation policy.

### 3.3. Rémy Ollier

Vijaya Teelock has observed that as a result of the vibrant leadership of Rémy Ollier, in the *Sentinelle de Maurice* (first issue: 8 April 1843), published three times per week, constituting a presse de combat, "the Coloured Population played a preponderant role in politics [...]" She adds: "Rémy Ollier and Reverend Le Brun had left a trail of educated, socially conscious and practically motivated men and women who were to take up battle for liberal reforms. The influence of Rémy Ollier continued long after he had passed away."<sup>114</sup> The first Coloured lawyer, significantly, emerged in 1842, Athanase Volcy Hitié, and the first Coloured notary, G. Lalandelle, qualified in the same year. Ollier's contribution, in political terms, will be assessed briefly in the next chapter. From 1823 to 1839, no English Scholarship was given, but from 1839, Ordinance no. 6 prescribed that such scholarships were intended "to enforce the use of the English language as a medium of instruction." With the arrival of an English Rector in 1841, Mr. Joseph Deas B.A., Coloured boys stood a better chance. By 1852, the College was open to all sections of the population,<sup>115</sup> although very few Indian boys attended.

Although in the *Sentinelle* of April 1843, Rémy Ollier pledged to redress injustices borne by whatever class and by people of whatever colour, he was committed to fighting prejudices that prevailed against the 'Coloured Population', in the first instance. *La Sentinelle*, a new 'political newspaper', was to 'signal abuses' and "call all Mauritians to an intelligent unity."<sup>116</sup> Promoting liberation, the newspaper, edited in English by Baker, was known as *The Mauritius Watchman*, set out to "watch over the rising spirit of liberty," and "promote the happiness of the majority of people."<sup>117</sup> The fight for greater political representation will be analyzed in Chapter Four that follows. Ollier's contribution to fostering greater access to education for 'Hommes de couleur' in *La Sentinelle* was of great significance for the political and social development of his community. In a petition sent by Ollier to Queen Victoria in 1843, and signed by many Coloured leaders, he stressed that the 'Creole Population' represented 70,000 people, or two-thirds of the total population. Yet, they enjoyed but few of the privileges of British subjects, and deserved to be equal to the White population in terms of rights.

Education remained at the forefront of the political debate, thanks to Rémy Ollier's preoccupation with it. He himself had opened a school at d'Entrecasteaux St., Port Louis, and another at Plaine-Verte in the 1830s.<sup>118</sup> On 3 June, 1843, Ollier published a major article, 'La Population de couleur' in *La Sentinelle*, in which he proclaimed: "We are the equals of white men in our hearts and intelligence." But what should we make of people's origins and the colour of their skin? He replied: "What stupidity! Odious differences, however!"<sup>119</sup> The integration of classes he deemed indispensable for children of one country; a 'société de couleur' has been formed, in which

members share a common friendship and which has been polished up by Education! In *L'Express* of 22 January, 1995, on the 150<sup>th</sup> anniversary of Ollier's death (1845), Yvan Martial wrote: "Rémy Ollier, un libérateur pour les Mauriciens d'aujourd'hui!" Amédée Nagapen remarked on the fact that Father Laval and Ollier were contemporaries.<sup>120</sup> Like Voltaire, Ollier became the defender of the oppressed, and like the *philosophe*, he believed in the liberalization of Education to give a louder voice to the oppressed, for Ollier the 'Coloured Population'. Ollier should never be forgotten by Mauritians!

## CHAPTER 4 - Political Representation: A long, hard fight. Social, Economic and Cultural Contribution of the 'Coloured Population' to Mauritius.

### 4.1 Prejudices and repression

The *Lettres patentes (Code Noir)* of 1723 were to remain in force until the abolition of slavery in Mauritius, consecrated first in the *Code Delaleu* (1767), and then in the *Code Decaen* (1804). Articles 5-9 of the *Code Noir* prohibited sexual relations between Whites and slaves; Articles 11-16 imposed strict restrictions on their movements; Articles 21 and 22 stipulated that the fruit of their labour belonged, not to slaves but to their masters, and the notorious Articles 39-47 proclaimed that slaves had no status (civil or political) and were reduced to the conditions of 'chattels' [*meubles*], which masters could sell, as they wished.<sup>121</sup> On 4 February, 1794, a Decree of the Convention abolished slavery in the French colonies, except for Martinique, but on 17 July, 1802, Napoleon Bonaparte was to restore it in all French colonies, in agreement with the legislation that preceded the Revolution of 1789.<sup>122</sup>

During the French period, the 'Coloured Population' had suffered from the same repression and the Whites' prejudicial conduct towards them as free slaves. An Ordinance of King Louis XV, ratified at Compiègne on 20 August, 1766, reiterated the contents of the *Lettres patentes* of 1723 and forbade all priests in Isles de France and Bourbon to baptize any children of 'Coloured people' as free, unless the mothers could provide irrefutable evidence that they were born free.<sup>123</sup> Ordinance 224 in the *Code Delaleu* repeats *verbatim* the *Lettres patentes* of 1723, for example forbidding marriages between Whites and slaves, as well as cohabitation (Article 5).

Yet, during a short period following the Convention's abolition of slavery in 1793, the Colonial Assembly of Isles de France and Bourbon debated, and endeavoured to legalise, the human rights of slaves and 'Coloured people'. In 1791, even before the first Abolition, the *Assemblée Coloniale* of 8 September, decreed the necessity to uphold Justice and declared: "Coloured people, born of free fathers and mothers, will be admitted to all future parish and colonial assemblies, if they have the required qualifications."<sup>124</sup> The same Assembly affirmed that Municipalities would register as electors "Coloured citizens born of free fathers and mothers, who meet all the criteria stipulated by the Constitution." It proclaimed: "All Citizens are equal in the eyes of the Law."<sup>125</sup>

However, at its sitting of 18 January, 1793, the Assembly, while stressing the rights of Coloured citizens, stated that foreigners and free Coloured individuals would only be declared French citizens after a period of five years as residents in the colony. The strongest support for Coloured citizens came in Article 15: "All Frenchmen, having rights as citizens, are eligible throughout the colony."<sup>126</sup> This clearly signifies that all 'free' citizens were equal and that "all posts, employment and other public functions" would be filled through a system of meritocracy, a belief reinforced by the Assembly on 3 December, 1793.<sup>127</sup>

With the advent of the restoration of slavery by Napoleon I, those nice sentiments were lost sight of. The divisions among the Coloured leaders did not help their cause; Hitié argues rightly that in the 1820s and 1830s, many supported Adrien d'Épinay because they were themselves landowners and possessed slaves.<sup>128</sup> But the decisions of the Colonial Assembly, summarized above, rankled in the light of prejudices aimed at their community. Napoleon's decision arrested the progress of Human Rights for 'Coloured people' for thirty years; Hitié argued: "It is such a great monstrosity that it had the effect of a retrograde step of 30 years in terms of the rights of Coloured Population."<sup>129</sup> Throughout the 1820s, 1830s and 1840s, in their political representations to a succession of Governors, Coloured leaders were to come back again and again to the decrees of the Colonial Assembly (1791-1793).

Having received many written representations from Coloured leaders in 1832, Lord Gooderich, Secretary of State for the Colonies wrote an open letter to Sir William Nicolay, in defence of the rights of free slaves and 'Coloured people'.<sup>130</sup> Adrien d'Épinay, while publishing the letter in the *Cernéen*, which referred to the decisions of the Colonial Assembly discussed above, rebutted the Colonial Secretary's arguments. The response, signed also by H. Koenig and E. Dupont, made the point that the Act of 1794 no longer applied, that circumstances had changed

since the 1790s, and that the fiery language, used by Lord Gooderich, was potentially divisive and was likely to cause trouble in the colony. In any event, why had the British Government not granted the 'Coloured Population' its rights between 1810 and 1833? This is good point, perhaps.<sup>131</sup> Fuelled by the representations of 'Coloured people', supported by some high-profile Ministers in London, the controversy raged on and the campaign for the rights of the Coloured and Freed slaves intensified.

On 19 February, 1833, the Catholic Church's 'apartheid' policy had come under attack; Mgr. Slater (the Catholic *Vicaire Apostolique*) would hear the confessions of Coloured and White people at different times! The *Cernéen*, for once, vented its indignation: "Mgr. is, no doubt, ignorant of the fact that no such distinction exists in our society, and that nothing could, accordingly, be worst received than such an announcement that is likely to divide Mauritian Society."<sup>132</sup> The reference here is to the Ordinance of 1829 that recognized only two classes: Slaves and Free people. In another article in *Le Cernéen*, reference was made to the French decrees of May 1791, April 1792 and February 1794: "Coloured men, residing in French colonies, born of free parents, are entitled to enjoy the rights and privileges of French citizens; among others, the right to vote in the elections for their representatives and be eligible for parish and colonial assemblies [...] The Act of 4 April, 1792 proclaims that free blacks in the colonies must enjoy the same benefits political rights as Whites." The signatories are unknown, but the published letter was addressed to Sir William Nicolay, Downing St., and dated the 28 October, 1832.<sup>133</sup> One sad, albeit, realistic footnote to this letter is an acknowledgement that *not all* 'Coloured people' were intent on vindicating their rights, and that many had even lost sight of them.

#### 4.2. A Sustained fight for the 'Coloured' rights

The fight was a long and bitter one, and the opponents, the White oligarchy, tenacious and embattled. Around Thomi Pitot and Adrien d'Épinay, stood the white conservatives, such as M. Mallac, *Procureur Général* in 1824, who wrote to Colonel Barry, Secretary-in-Chief, against the enfranchisement of slaves through marriage, on 30 December, 1824: "People benefit then from the ease with which slaves can be enfranchised through marriage - this is an abuse [of the Law of 1814]".<sup>134</sup> The only way to remedy this is to ask for evidence that: the free white man has owned the slave woman he wishes to marry for three years; that she has been legally transferred to him and registered, and enforce that enfranchisement by marriage costs of 100 *piastres*, to be paid into the *Caisse de Bienfaisance*.

Ordinance No. 57 of 1829, meanwhile, had stipulated that there would be only two different statuses: free persons, whether by birth or enfranchisement, and the other, the slave population. By Order of Council of 30 January, 1826, published in September, 1826, all owners of slaves were forced to provide to the Registrar "an account" of their slaves, their births, enfranchisement or deaths; there would be a bi-annual return of slaves, to take effect from 1 January, 1830. Signed by G. A. Barry, Chief-Secretary to the Government Council, this Ordinance was published on 19 December, 1829 in the *Government Gazette*.<sup>135</sup> This was to create the very first official Registry of slaves and of freed slaves, including their Coloured descendants. The first article was vital: "Les Registres de l'état civil, destinés à inscrire les déclarations de naissances, mariages et décès, ne seront, à l'avenir, que sous deux titres, l'un pour la population libre, soit par naissance, soit par affranchissement, l'autre pour la population esclave."

For all that, the pressing demands of the 'Coloured Population', as regards their rights to education and political representation, continued mostly to fall on deaf ears.<sup>136</sup> True to say, the 'Coloured Population' remained divided and recalled their affinities with France, Britain or Asian countries; 'Libres' slowly became synonymous with the 'General Population', and there were many alliances made with Franco-Mauritians. Nagapen, in his *Histoire de l'Église*, justifiably remarks about the 1830s: "Splits and divisions broke out in the colony, with a French party, an English party, a White party and a Coloured party."<sup>137</sup> And the 'Coloured Population' moved freely between all those interest groups. Pierre de Sornay spells out the frustration of this community: "[After 1810] the free slaves and the free Coloured expected, from the new Government, a more liberal recognition of their rights. It is certain that self-interest was the first motivation of those who offered their services. The reactions were based on individual needs."<sup>138</sup> Though betraying some anti-Coloured bias, this assessment is not far from the truth.

The Council of Government, established in 1825 and amended in 1826, included no nominated Coloured individuals in the 1820s, but only people of European descent - chief landowners and merchants. We have to wait until the Municipal Elections of 1850, following the new status of the Municipality of Port Louis, for Coloured candidates to stand, and for Coloured electors to make a small impact. Their grievances and hopes had been expressed by Rémy Ollier to the British Monarch in a petition of 21 March, 1843, and could be summarised as follows: 1<sup>0</sup> They wished to be represented on the Council of Government; 2<sup>0</sup> They wanted to have access to the Civil Service; 3<sup>0</sup> They asked for a Municipality to administer Port Louis; 4<sup>0</sup> They wished that the Royal College would take in more Coloured boys.<sup>139</sup> The small number of Coloured electors at the Municipal Elections aroused the indignation of this community. On 4 February, 1859, *La Sentinelle* rallied the Coloured people to register and vote.<sup>140</sup> The inherent capacities of Coloured voters were stressed mainly to boost the community's morale; the list of candidates was published by the same newspaper (No. 1005; 13 February, 1850), and the results duly published following the elections. There was a decided *rapprochement* between the White and Coloured communities. Considering the high franchise - only 250 residents voted -, the elections marked a turning point. Louis Léchelle<sup>141</sup> was elected as first Mayor; in those days, the Municipality was based at the corner of Edith Cavell Street and Mère-Barthélemy Street.<sup>142</sup>

This break-through, in the election of a few Coloured individuals on a Council of 28, was in no small measure due to Rémy Ollier's militancy in *La Sentinelle* from 1843 until his death in 1845; such calls to arms as in the issue on 3 June, 1843, indicate his personal commitment: "Our aim is to defend the ignored rights of part of the Mauritian population."<sup>143</sup> Though passionate about the 'Coloured Population', Ollier was also fighting for what he called "the fusion of all classes", which he deemed to be vital for the children of a united country. Even the exclusion of 'Coloured people' from balls, as at Lady Gomm's ball, where 250 White colonists and 100 'aliens' were present, was reason enough for Ollier's outspoken public reprimand: "We want to be adequately represented in national festivities."<sup>144</sup> Of 35,000 mulattoes and 35,000 black Creoles, only 10 were invited! A scandal, according to *La Sentinelle* of 1843, as Ollier lashed out!

Following Ollier's death on 26 January, 1845, Charles Henry Leal took over the newspaper and campaigned for an 'enlarged franchise' and the right to vote for 'Coloured people'.<sup>145</sup> As a result of Ollier's previous campaigns, Hippolyte Lemièrre had become the first Coloured man to be nominated to the Council, followed by Léchelle. Ollier's successors, as leaders of this community, were: Émile Vaudagne, Lisis Letord, Fanchin Foulquirot, Arus Fourieux, Dorcy Letord, Pierre L'Homme, Evariste Vanmeerbeck and Léoville L'Homme.<sup>146</sup> With improved education, the Coloured intellectuals were more numerous and ready to lend a hand in the rights campaign.

#### 4.3 The 1886 National Elections under Pope-Hennessy

A list of 'Government pupils at the Royal College from 1828-1844' reveals an increasing number of Coloured students; for June 1840, one notes: Aimé Raynal; Prospère Brouard; Kiumphally; Letourneur; d'Emmery; Jules Mamarot; Peter Collard *et al.* Names do not tell the whole story, as we know, and the degree of *métissage* in others is difficult to determine. The fact is that many laureates from this prestigious college came back as lawyers, doctors and politicians, as well as high-powered civil servants. It was not, therefore, without cause that Governor John Pope-Hennessy (1883-1889), an Irish 'enfant terrible' of the British Government, chose the Royal College to make his famous speech 'Mauritius for Mauritians'.<sup>147</sup> The Governor declared at a prize-giving ceremony in 1883 that his policy was to appoint as many Mauritians as possible to administrative or civil service posts. In a second speech at the same College (1884), he announced the appointment of M. Pellereau, a laureate of the school, to the post of Chief Justice, even though he changed his mind thereafter and appointed Eugène Leclézió.

The changes in the Constitution, allowing for 27 members of the Council, and the role played by the Reformists and Liberals are sufficiently well known for us not to dwell on this here.<sup>148</sup> Suffice it to remind ourselves of the vital part played by Coloured men in the political campaigns, such as Sir William Newton (1842-1915), whom Pope-Hennessy described as the 'greatest Coloured man in Mauritius'.<sup>149</sup> A brilliant student at the Royal College, the son of William Newton and Maria Louisa Perrot, he became a personal friend of the Governor and as a Reformist, he was seen as an inspirational leader. Though a member of the Council in 1885, he was defeated in the 1886 elections. Elected as a representative for Port Louis in April 1889, he replaced de

Coriolis on the Council, and was later a member of the Executive Council from 1906 to 1911. A statue at the Place d'Armes, inaugurated in 1992, commemorates this Coloured man's contribution to the political history of Mauritius, at a time when only 12,000 men voted out of 220,000 adults. Only ten members were elected, while 8 were to be *ex-officio* members, and 9 nominated. The truth is that mainly the Whites and a few Coloured individuals were eligible to vote because of the high franchise, high literacy criteria and property qualifications.<sup>150</sup> The Coloured *élite* also clearly feared the rise of the Indo-Mauritian community.<sup>151</sup> In the first Legislative Elections in Mauritius (1886), the Democrats, de Coriolis, Cécilcourt Antelme and Dr. O. Beugeard, another Coloured man,<sup>152</sup> a laureate of the Royal College in 1850, were carried in triumph through the streets. They had advocated a high franchise and had criticized openly the Governor, which led to his recall. After Pope-Hennessy's return in 1889, Beugeard resigned from the Council, although he became a nominated member in 1893. The Democrats won an emphatic victory over Newton's party which lost every seat. For the first time, among the nominated members on Council, sat an Indo-Mauritian, General Louis Gnanalicarayen (1830-1891). Thanks to Pope-Hennessy and a considerable input from Coloured leaders, such as Sir Virgile Naz (1825-1901) born in Seychelles, Mauritius had a constitution that was to last more than sixty years. Even though the *ex-officio* and nominated members outnumbered the elected members, the principle of Legislative Assembly elections had been established.<sup>153</sup>

#### 4.4. Occupations of the 'General Population' in 1885

*In Mauritius in the making*, Monique Dinan has shown that, under Pope-Hennessy, the Civil Service grew considerably: "In 1881, the British administration held the first examinations for the admission of young Mauritians to the Civil Service. This was the start of the process of democratization and meritocracy in the public sector."<sup>154</sup> In order to assess the progress that had been achieved by the 'Coloured Population', in terms of professions, one must turn to the Census of 1881 and other data of 1885. The Census indicates that the number of children receiving instruction in 1881 was as follows, out of a population of 359,874:<sup>155</sup>

Schools	General Population	Indians	Total
(1) Royal College	314	4	318
(2) Government Schools	4,851	1,423	6,274
(3) Private Schools	4,807	1,072	5,879
(4) At home	888	341	1,229
<b>Totals</b>	<b>10,860</b>	<b>2,840</b>	<b>13,700</b>

Appendix No. 17 of the Census of 1881 thus brought home the fact that, while the General Population had blossomed forth, the Indian population was severely disadvantaged. Another indicator of the educational progress achieved by the 'General Population', which included the 'Coloured people', is provided by the *Blue Book* for 1885; a considerable number of Civil Servants deemed to be Coloured, by their names, occupied clerical posts in the Civil Service. A few examples will suffice: (a) Station Masters: Aliphon, E. (since 1885); Bedos, E. (since 1881); Bernard, E. (since 1884); Fayolle (since 1882); Mahon, J. (since 1881). (b) Clerks and Senior Clerks: Adirouben, L.A. (Saving's Bank); Armand, J. (Secretary, Royal College); Furlong, M. (Chief Stipendiary Clerk, Grand Port, since 1883); Pasquet, A.S. (Chief Clerk, Receiver's Office, since 1885); Rivière, Napoléon (Joint District Clerk, Savanne, since 1882); Rivière, J.C. (Acting Financial Clerk, Medical Department, since 1885); Sénèque, Aristide (Railways, Plaine Lauzun, since 1885). (c) Inspectors of Distilleries: Bigaignon, A. (since 1873); Bruneau, H. (since 1877); Pinguet, Raoul (since 1880); Romanet, A. (since 1880); Rose, G. (since 1885). (d) Poor Law Guardians: Bouchet, Georges (Flacq, since 1878); Cordonan, Dr. A. (Rivière Sèche, since 1878); Dubois, Dr. L. V. (Pamplemousses, since 1885); (e) Miscellaneous: Government Printer, Seychelles, Forget, H. (since 1883); Deputy Postmaster, Philippe L. (since 1886).

Countless other references<sup>156</sup> indicate that Coloured men were well positioned to develop even further, in terms of education and culture. Returns under 'Education' in the *Blue Book* (1885) showed that the following Coloured students had won the English Scholarships from 1882 to 1885,

alongside their white counterparts.<sup>157</sup> Bonnin, Louis (1882); Rouget, François Auguste (1883); Serret, Eugène (1884); Cochemé, Ernest Alfred (1885); Coméra, Ezéhias had replaced James Croft who had won a scholarship in 1882, but had died in the U.K. Thus, the intellectual strength of this population is apparent from the fact that *five* out of eight potential scholars came from it.<sup>158</sup> The years 1885 and 1886, and the 1880s in general, appear to have been a culmination of years of endeavour to put the Coloured community on the political and educational map, and they indeed marked a turning point in its national status as an *élite*, both intellectual and political. The 'General Population', as a whole, continued to grow in numbers; it was made up, in 1885, of 63,337 Males and 56,182 Females, forming a total of 119,519, out of a population of 370,404, with 4,150 births and 857 marriages in this community.

As regards professions, if one excludes agricultural and manual labour, the following statistics indicate the strides that had been made by the 'General Population', including the 'Coloured people'. The professional class had included, in 1861 and 1871, the following numbers which grew further still in 1881, although figures for 1881 are not available in the Census (1881):

Professions (General Population)	1861	1871
Barristers-at-Law	35	43
Catechists	12	43
Chemists and Druggists	34	54
Clerks (non commercial)	740	1031
Midwives	14	61
Ministers of Religion	51	80
Musicians	30	41
Professors and Teachers	398	468
Sisters of Mercy	166	280
Source: 'Census of Mauritius [...] taken on the 4 <sup>th</sup> April, 1881.' <sup>159</sup>		

It may be assumed that numbers for 1881 continued to be as high as, or were higher still than in 1871. Political emancipation for the 'Coloured Population' appears to have gone hand-in-hand with professional development and academic growth.

#### 4.5. Continuing political leadership and commitment in the early twentieth century

Jocelyn Chan Low and Sada Reddi justifiably draw our attention to the fact that, in the first decades of the 20<sup>th</sup> century, "the Coloured class had not yet come to terms with its own identity. It sought to forge its identity within French culture, a process which Robert Furlong dubs as an 'aliénation volontaire'." <sup>160</sup> There is not sufficient scope in this Report to analyse the Retrocession Movement, and the part played in it by Coloured individuals, notably Dr. Maurice Curé, Edgar and Edouard Laurent, and Raoul Rivet. Teelock explains: "There were many underlying reasons for part of the population to want Mauritius to return to France. Some felt an affinity with French culture, while others were fearful that the British would institute discrimination against the 'Coloured Population', as was the practice in South Africa." <sup>161</sup> The Franco-Mauritians refused to lend support to the Movement, despite having strong cultural ties with France, because they had a strong interest in the economy and sugar industry. With the campaign coming to a head in 1919 and 1920, Dr. Curé called for General Elections; when they did come in January 1921, 72% of voters went against the Retrocessionists, <sup>162</sup> who all lost, and the Movement came to an abrupt end. Benjamin Moutou comments: "Après la défaite des rétrocessionnistes aux élections de 1921, le combat des hommes de couleur entra en veilleuse." <sup>163</sup> Nagapen, for his part, remarks: "La thèse de la réannexion de l'île de France fut reléguée aux vieilles lunes." [The thesis of the re-annexation of Mauritius to France was relegated to distant dreams]. <sup>164</sup>

A key figure in the launch of the Retrocessionist campaign was Edouard Laurent, surveyor and journalist (1864-1928). He was one of the most militant members of the *Action Libérale* movement and founded the newspaper *La Patrie*, in which he published a series of articles entitled 'Mauritius between France and England', where he proclaimed the advantages of Retrocession.<sup>165</sup> Laurent went too far in his attack on Governor Sir John Chancellor who obtained the suppression of the newspaper through General Simpson, Commander of the British troops.<sup>166</sup> Edouard Laurent continued the fight by amalgamating his newspaper with the weekly *La Croix du dimanche*, to found *Croix et Patrie*, a daily, in which he published an open letter to Governor Chancellor on 23 November, 1918, calling on him to espouse the cause of Retrocession. He ended his days in Réunion, where he died in January 1928. Though a 'Réunionnais' by birth, he was, for all intents and purposes, looked upon as a *métis* and a strong supporter of the Coloured cause.

Yet, this Retrocession Movement was the start of the glorious involvement of Coloured individuals in Mauritian politics on a grand scale. *Le Mauricien*, under a young, Raoul Rivet, who had replaced Eugène Henri, became, in Teelock's words, "the organ of a political movement," supporting, as it did the Revision Movement, led by Alfred Gellé, Gaston Gébert and Dr. Reynolds Laurent. They proposed a House of Representatives of 21 members, of whom 17 would come from the 'General Population' and 4 from Asian communities. The subsequent events are described in detail by Vijaya Teelock and need not detain us.<sup>167</sup> The contribution to Mauritian politics of Coloured individuals is well-known: Emmanuel Anquetil (1885-1946), Unionist and Politician;<sup>168</sup> Eugène Laurent, Lawyer and Politician (1823-1901; *D.M.B.*, pp. 921-922);<sup>169</sup> Dr. Maurice Curé (1886-1977, *D.M.B.*, pp. 1969-1973; Doctor and politician and founder of the Labour Party); Guy Rozemont (1915-1956; *D.M.B.*, p. 931; Secretary-General of the Labour Party in 1941; third President in 1947, an eloquent and charismatic orator, who was the first elected member for Port Louis at the General Elections of 1948 and was re-elected in 1953); Raoul Rivet (1896-1957), Journalist of international renown and Politician, who helped to set up the *Union Mauricienne* in 1924: "His ideal was to shake off the apathy of the thinking *élite* towards the Colonial Authorities" (*D.M.B.*, p. 899). So many other notable members of the Coloured community come to mind, as regards their active role in politics. Perhaps a Ph.d thesis will one day be written on the subject. The culmination of waves of political action of this community was the arrival upon the scene of the 'King of Creoles', Gaëtan Duval, a lawyer with a silver tongue and a brilliant mind, totally devoted to the cause of his community, the greatest 'Coloured tribune of them all', Leader extraordinaire of the 'Parti Mauricien'. The traditions of political activism have been taken over and upheld by his son, Xavier Luc Duval, now at the helm of the P.M.S.D. It is left to past and future biographers of Gaëtan Duval (e.g. Alain Gordon-Gentil) to describe at length, and in meticulous details, the achievements of the Champion of *Creolité* from the 1950s onwards.

From Sir William Newton in 1885-1886, and before him, Rémy Ollier (1843-1845) (who died so young at 28) to Eugène Laurent (1910s), another 'Roi créole', in Moutou's estimation,<sup>170</sup> to Emmanuel Anquetil, and on to Sir Gaëtan Duval, the Coloured men and women of Mauritius have reasons enough to feel proud of their 'sons' and 'Tribunes'. From repression and a harsh beginning under the French, a slow and painful struggle for Human and Educational Rights under the British (1810-1885), to Anquetil's political rallies of 30,000 workers at the Champ-de-mars in 1938,<sup>171</sup> at which spoke Fritz Moutia, Edgar Millien and Mme Barthélemy Ohsan, the Coloured political caravan had come a long way. But the crowning glory and the peaks were yet to come, in terms of popular support, from 1960 onwards under Sir Gaëtan Duval. After Independence in 1968, the caravan could only slow down or go downwards, as a result of the exodus of Coloured families, gripped by apprehension of an Indian take-over, the possible loss of employment, and the loss of the educational and social climate that had previously prevailed.

#### 4.6. Exodus towards distant lands: A loss of political 'critical mass' for the 'Coloured Population'.

At a rally of the Mauritian Diaspora a few years ago in the Octave Wiehe Theatre of UoM, some of our compatriots accused returning Mauritians of having betrayed their country by leaving around 1968. Such animosity is not acceptable in a civilized and 'global village'. Members of a nation should be free to come and go as they please and remain 'good patriots', while becoming 'citizens of the world'. Reconciliation begins when we can respect the rights of others to follow the dictates of their professional careers, and the demands of their family ties. The present Government had repeatedly expressed its wish, through the P. M. and Ministers, to see Mauritian

ex-patriots return to these shores to retire or rejoin the workforce. One of our recommendations suggests that this be actively promoted and that emigration to other lands be not held against Mauritian *ex-pats* abroad. Tax incentives should be offered to facilitate this return journey to one's native land; one does not just have one identity, but several identities, according to the thinker and writer Amin Maalouf, depending on where, and when, one leads one's life.

The statistics speak for themselves over the period of time (1961-1982) marked by the emigration of the 'Coloured Population', and to a lesser extent, the Whites, to Australia, Britain, France, Canada and South Africa, among other destinations. Gaëtan Duval is said to have instilled fear, wrongly, in this Coloured community, to such an extent that they could not envisage a stable and peaceful existence in their homeland. In her study, *Une île éclatée*,<sup>172</sup> Monique Dinan reflects: "From the year 1965 on, emigration became a reality of Mauritian life." *L'Express* of 23 November, 1965 expressed a national mood of apprehension: "Mauritius is afraid, but the people are, above all, depressed."<sup>173</sup> On 10 February, 1967, the same newspaper proclaimed ironically, taking the high moral ground: "Emigration has become a poisonous subject. Should it ever "succeed", M. Gaëtan Duval, Leader of the P.M.S.D., should draw from it a political aura, since it is he who as, Minister of the Government Coalition, created anew the possibility [...]"<sup>174</sup> In the years that followed, suffice it to say that wave after wave of emigration reduced considerably the Coloured community. Dinan has given many telling statistics; the following Table 6 (Dinan's Tableau XVI, p. 139) underlines the growth of official emigration towards Australia:<sup>175</sup>

1968: 2,037	1973: 545	1978: 30
1969: 1,645	1974: 301	1979: 31
1970: 1082	1975: 84	1980: 54
1971: 1004	1976: 50	1981: 41
1972: 877	1977: 25	1982: 18
Total (1968-1972): 6,645 <sup>176</sup>	Total (1973 - 1982): 1,179	

Dinan concludes that emigration slowed down towards Australia after 1972, but calculates that between 1961 and 1982, some 11,792 individuals left. However, she also notes that "the new generation," born in Australia, "feels at home."<sup>177</sup> Of course, not all emigrants were 'Coloured', but the vast majority belonged to the 'General population'. When one adds to the above figures of 'New Australians', those who made their new homes in the U.K. (7,221 from 1961 to 1972, and 2,031 from 1973 to 1982 - the figure for official and non-official migrants may be as high as 21,941),<sup>178</sup> France (14,203 official and non-official migrants between 1961 and 1982), and Canada, among other countries (1,268 official and non-official migrants, 1960-1982),<sup>179</sup> one begins to understand the title of Dinan's work and the scale of Coloured emigration.

What was the impact of this large exodus on the 'General Population', its political viability, its social, cultural and economic life, and its political representation? Between 1973 and 1982 alone, after the main waves of emigration, 36,178 are deemed to have left these shores to emigrate (Dinan, p. 232.) And, *in-toto*, over 25 years, some 66,000 migrated (p. 231). This may demonstrate the inherent 'débrouillardise' ('self-reliance') of Mauritians, but there was a huge void left in terms of the country's intellectual and cultural life that those who remained behind took some time to fill. Fear of the future was one of the reasons for emigration, but economic uncertainty was the other main cause of departure. The general conclusion reached by Dinan reinforces our recommendation to facilitate the return of Mauritian ex-patriates: "The Mauritians [who left] will return, if one knows how to welcome them back." (p. 236) Above all, "let us all endeavour not to impede the social and economic development of Mauritius [...] Communalism and ideologies have too often obscured the paths to the future," for Mauritius is "a country oversaturated with political partisanship." (p. 239)

#### 4.7. Cultural richness and loss: The 'Coloured Population's' contribution to cultural life.

Perhaps, the real impact of a relatively large-scale Coloured emigration has been felt in high culture; that is not to say that other communities, in particular, the Indo-Mauritians, Sino-

Mauritians, Franco-Mauritians, and Moslems, have not made a huge contribution to it before and since 1968! What the 'Coloured Population' has always been good at, has been Literature, the Theatre, Music, Ballet, Opera, the Visual Arts and all forms of oral communication. One may think in high Literature of: Léoville L'Homme,<sup>180</sup> our finest poet alongside Malcolm de Chazal; Arthur Martial (1899-1951), born at Alma (Moka) who published *Au pays de Paul et Virginie* (1928-1929) and the novel for which he is best known, *Poupée de chair* (1933), as well as a historical novel, *Grand Port* (1935) set against the background of 1810. He also wrote for the Theatre, *La Pénitente* (1928), *Mirages* (1939) and *En un acte* (1946).<sup>181</sup>

It is clear, of course, that not all our *métis* writers, who live overseas, do so because of some kind of 'enforced' emigration. Some chose to study and reside abroad, such as Marie-Thérèse Humbert, the author of the internationally acclaimed novel, *À l'autre bout de moi* (1979), or the illustrious Jean Fanchette, a member of a highly-respected family (his brothers Régis, Serge, Rex and Claude are equally esteemed in Mauritius). Jean Fanchette, born on 6 May 1932 and a laureate of the Royal College, Curepipe, in 1950, specialized in Psychiatry in Paris, before discovering his immense literary talent with the bilingual journal, *Two Cities* (1959). He won the Paul Valéry Prize in 1956 for *Les Midis du Sang*, and the Fénelon Prize for *Archipels* (1958), as well as the Mascareignes Prize for *Psychodrame et Théâtre Moderne* (1972).<sup>182</sup> A literary prize is awarded each year in his name (Jean Fanchette Prize) and requires the presence here of Nobel Laureate J. M. G. Leclézio.

Our greatest living poet is a mulatto or *métis*, Edouard Maunick; he has sung the joys of his life as a mixed-blood Mauritian, but has also reflected on the complexities that this entails. Perhaps, he, above anyone else, embodies the combined highs and lows, manifest through three centuries, of what it has meant to be a *Georges, le mulâtre* (1843), as described by Alexandre Dumas (see above). Not without cause, our most intuitive writer, Malcolm de Chazal, wrote in the preface to *Petrusmok*: "This country cultivates sugar cane and prejudices. Here is a League of Nations where the war of prejudices is endemic and painful, especially as regards racial prejudices."<sup>183</sup> Marcel Cabon (1912-1972), another *métis* writer,<sup>184</sup> revered for his *Namasté* (1969), his masterpiece, and *Kélibé-Kéliba* (1951), would have agreed with Maunick and Chazal, as would have many other Coloured writers such as G. André Decotter, novelist, dramatist, literary critic, journalist and painter, as well as editor of *L'Essor*.

Those few examples, as well as the achievements of Yves Forget in the world of the Theatre in the 1950s, 1960s, and beyond, and those of Henry Wilden, the operatic tenor, who emigrated and performed at the Sydney Opera House in Australia, the poetry of Jean Uruty, who also made his way to the Antipodes, the fine multifarious talent of other actors, writers and artists (Serge Constantin, for example) and critics of art and literature (such as Jean-Georges Prosper, himself a talented poet), all this points to a massive presence of Coloured families in the artistic and cultural life of Mauritius, and a major loss through emigration. Historians, such as Rivaltz Quenette, and numerous educators have, likewise, made an immense contribution to our scholarship and culture in Mauritius.

#### 4.8. Conclusions

Our country, having experienced the quite considerable loss of its Coloured intelligentsia, must be on its guard not to allow a similar haemorrhaging of its most talented and intelligent young people in future. Should they decide to pursue their careers abroad, for whatever reasons, let us not point the finger at our Diasporas, but *in a spirit of reconciliation*, let us welcome them back with open arms, whenever they choose to come back to the fold. Dinan ends her book with this most potent and insightful observation: "A quality dialogue can take place between our communities; from it, we shall emerge stronger. Let us not cut off our roots completely; they testify to our belonging and to a response to a call from the past that is a vital extension [into the present and the future]."<sup>185</sup> This Study shows that, in its remembrance of the past, lies the strength of the 'Coloured Population'. Perhaps, *métissage* could well serve as an example of the enrichment and growth that would ensure from mixed-blood communities in a 'rainbow nation'.<sup>186</sup>

It would not be amiss to quote Edouard Maunick, before closing this part of our analysis of the trials, tribulations and joys of *métissage*; in his preface to *Anthologie personnelle*,<sup>187</sup> 'Dire avant d'écrire', our greatest living Coloured poet writes:

*"Our identity, of necessity multiple, is heard more clearly in our Creole language, than in our writings, even with its fascinating alphabets. More a people than races, we add up our loyalties to the Orient, the West and to Africa, to create a symbiosis, most certainly a difficult one to achieve, but which alone is capable of feeding our daily lives, more assuredly than a plate of rice, the 'rougaille' of salted fish or the 'fricassée' of red lentils. Our ancestors all come from somewhere; we have the mission to perpetuate their exile in a land that has become our native land [...] We find nothing strange in our mixtures, however unusual they may be. On the contrary, as 'métis' in varying degrees, and at different levels, we instinctively cultivate a model garden."*<sup>188</sup>

As Voltaire said in *Candide* (1759), "Let us cultivate our garden!" Perhaps, in a 'global village', *métissage* is inevitable and is the surest way towards international peace.

## CHAPTER 5 - Landownership, political rights and identity (1723-1968)

### 5.1. Origins of the group under the *Code Noir*

The situation of the 'Coloured Population' in Mauritius throughout history has to be considered within the context of the Mauritian plural society and its successive transformations. The group is framed under the French period by the legislation introduced by the *Code Noir*. The *Code Noir* of 1723 (enforced in 1766 on the Isle de France) resulted in a social hierarchy which distinguished the 'Whites', the 'Libres de couleur' and the 'Slaves'.

As Arno and Orian state, the group of 'Libres de couleur' appeared in the census for the first time in 1767 (one year after the enforcement of the *Code Noir*). It was mainly composed of freed slaves and indentured labourers from India.<sup>189</sup>

While blood-mixing (*métissage*) prevailed in the colony before 1766, the *Code Noir* institutionalised a rigid colour bar between the Whites and the 'Libres de couleur', which had consequences for the social and economic life. As Barnwell and Toussaint explained, the 'Coloured' people could not be received in Whites' houses; they could not attend the Royal College; they were registered separately at the 'Etat Civil'; they were buried in a different section of the cemeteries and their corpses had to remain outside the Church for the funerals.<sup>190</sup>

The structural domination of the White group was also reinforced by the fact that the 'Coloured' group represented at that time only 15 % of the free population, and was very diversified in terms of blood-mixing and origins.

But at the same time, the social barrier was not totally closed between the two groups. Economic alliances took place, mostly by way of inter-group mixing and wedlock. Some white merchants married 'Coloured' women, which allowed the 'Coloured' to enter into the profession of merchant, while they were at that time excluded from the professions of 'négociant' and planter, which remained monopolized by the Whites. For instance, Benoît Ollier, a white merchant arrived on the island in 1789, married a freed slave born on the island, called Julie. They gave birth to the first 'Coloured' political activist, Rémy Ollier (1816-1845).<sup>191</sup>

The 'Libres de couleur' started to have access to land possession in the 1770s. Most of the 'Coloured' landowners were then persons with a privileged position within the Colonial Administration. Under the 'concession' system, the 'Libres de couleur' were allowed to buy their plots of land (while the Whites were granted land for free). Freed slaves could also be granted a plot of land by their former owners. According to Richard Allen, the percentage of concessions granted to 'Libres de couleur' between 1770 and 1789 varied from 9 to 23%.<sup>192</sup>

The limited access of 'Libres de couleur' to the land and the privileged position of buyers contributed to the integration of these 'Coloured' landowners into the land elite during the French period.<sup>193</sup> This integration in the elite was to be embodied in the political sphere during the French Revolution, on the ground of a common interest for the fight against maroonage (as both groups were slave-owners). (See below 5.2).

As a result of their combined acquisition of land and demographic expansion, the 'Libres de couleur' group became a serious protagonist in the economy of the island between 1806 and 1830.<sup>194</sup> In 1822, the 'Libres de couleur' represented 38 to 48% of landowners, while they composed 69% of the free population, according to the *Statistiques du Baron d'Unienville* (1826).

### 5.2. The sugar mono-culture and the strategies of alliance/ competition with the Whites

The sugar mono-culture was boosted after 1825 when Mauritian sugar was granted access to the British market at the same duty as sugar from the Caribbean. This gave rise to a fierce competition for land between the two groups, the Whites and the 'Libres de couleur'.

As the Whites possessed more capital (thanks to their economic and matrimonial alliances with the British), and capital was compulsory to make the huge investments required by sugar processing, they managed to monopolize the sugar economy. In 1831, the Whites owned 92.5% of sugar mills and 82.4% of sugar land, while they represented only 31% of the free population. The 'Libres de couleur', therefore, had no choice but to give up the sugar industry and concentrate on 'cultures vivrières' (manioc, grains, coffee, cotton).

The share of 'Libres de couleur' in the total free population increased from 51.3% in 1806 to 68.9% in 1830. Though they were more than half of the free population, they possessed less than 15% of land. However, they managed to double this share (from 7% in 1806 to 13.4% in 1830). Despite the fact that the Whites monopolized the sugar industry, the 'Libres de couleur' also managed to increase their share of cane land from 0.4% in 1806 to 7.5% in 1830, and their share of sugar mills from 3.2% in 1806 to 17.6 % of the sugar mills in 1830.

With the 1839 sugar crisis, many white planters went bankrupt. As a consequence of this, they were obliged to sell their plots of land. The massive cession of lands was called 'Petit Morcellement' (1839-1846). Thanks to the 'Petit Morcellement', the 'Coloured' landowners were augmented with freed slaves who thus gained access to land. However, the number of freed slaves (apprentices) who obtained lands remained limited. Allen says that only one-third of the buyers were freed slaves and that their plots were very small (46 % were less than 2 *arpents*).<sup>195</sup>

One major consequence of the 'Petit Morcellement' was to widen the gap between the sugar plantation economy, dominated by the Whites and some wealthy 'Coloured' landowners on the one hand, and the 'secteur vivrier hors plantation', which became mainly the property of the poor 'Coloured population' and Creoles (descendants of slaves and apprentices).

Within the 'Coloured population', the owners who derived their wealth from the privileges acquired during the French period (1721-1810), sought to dissociate themselves from the emerging group of apprentices. Valuing their racial and cultural proximity with the Whites, they tended to identify themselves more with the cultural and social norms of the White dominant minority. Thanks to their access to secondary education, they could eventually pretend to a upward socio-economic mobility.

In 1829, indeed, the British Administration suppressed the 'colour bar' between the White group and the 'Libres de couleur'. In 1846, the two groups were mingled into one single category called 'Population Générale' in the census (while the freed slaves were then still categorized separately). The 'Coloured population', therefore, gained access to secondary education, which meant that they could aspire to socio-economic mobility and started challenging the Whites in the professional sector, mostly in the Civil Service and in professions such as lawyers and doctors.

But they would never be treated as equals by the Whites. Precisely because of their eagerness for upward social mobility, the 'Coloured population' was considered by the Whites as the 'vertical invader'.<sup>196</sup> Although the colour bar was formally suppressed, discrimination remained strong in social and professional practices, including in the British Administration, which continued to favour the Whites in terms of access to the Civil Service.<sup>197</sup>

The practice of endogamy replaced the former institutional colour bar in the relationships between the Whites and the 'Coloured population'. The Whites, who became bankrupt and entered into financial and/or matrimonial partnerships with wealthy 'Coloured' families, were excluded from the group and 'fell' into the 'Coloured' group, being discriminated against by their own group.

Therefore, the racial bar between the White group and the 'Coloured' group was not totally hermetic. It was characterized by a 'hemi-permeability', i.e. permeability or crossing from only one side to the other,<sup>198</sup> i.e. the genetic flux existed, but it was practised only by the White group towards the 'Coloured' group. As a consequence of this, the 'Coloured' group was constantly increased by the numbers of White people who 'fell' into it. Of course, this has to be understood within the context of a plural society, inherited from the system of slavery, in which the society is considered to be structured vertically, according to a hierarchy combining the two criteria of colour and wealth.

Exceptionally, those from the 'Coloured' group who could satisfy the combined criteria of wealth and 'acceptable' pigmentation could pretend to cross the floor and form part of the White elite. Political alliances also played an important role in this ability to cross the colour bar upward.<sup>199</sup> For example, Octave Guibert, the nephew of Georges Guibert, a lawyer and a member of the Legislative Council, married the daughter of Sir Virgil Naz, who, in spite of being a 'Coloured', was a wealthy planter and a member of the Chamber of Agriculture and of the Legislative Council.<sup>200</sup> Both Georges Guibert and Sir Virgil Naz, thus united by family bonds, were members of the Reformist Party created in 1884. However, this ethno-social upward mobility remained an individual phenomenon.

The relationship between the 'Coloured' group and the White group changed as the Mauritian sugar plantation system evolved and was further complicated by the integration of a new component, the indentured labourers who emigrated from India.

### 5.3. Indentured labour and the ethnicization of the Mauritian society

With the modernization of the sugar technologies, the sugar plantation system in Mauritius underwent structural changes. The evolution of sugar technologies gave rise to a centralization of sugar processing in bigger plants. This centralization also induced a second 'morcellement' of sugar lands.

The 'Grand Morcellement', which started in 1867, resulted in the integration of the former indentured labourers into the plantation system, as small planters. With the settlement of former indentured labourers within the small plantation, the whole plantation world became ethnicized, i.e. the labour and economic activities became specialized on an ethnic basis.<sup>201</sup>

The 'Grand Morcellement' and the system of small Indian plantations resulted in a further marginalization of the 'Coloured' and Creole population from the sugar plantation system. Allen shows that, during the 'Grand Morcellement', many 'Coloured people' had to sell their lands to the Indo-Mauritians, because of insufficient resources to sustain sugar cane plantation and processing.<sup>202</sup>

Every group invested in 'economic niches' within the division of labour. The Whites retained the dominant position, i.e. in the economic activities which required most capital. The 'Coloured' and Creole population became predominant in the factories and the building industry. In 1952, 49.5% of the 'Coloured' and Creole workforce were employed in these two sectors.<sup>203</sup>

The 'Coloured' group constituted an intermediate elite within the 'General Population'. Their position was the result of the following main factors: race (the closest position to the Whites within the racial hierarchy) and wealth (which conditioned economic partnerships with the Whites).<sup>204</sup>

### 5.4. Political representation

The beginnings of political representation in Mauritius dated back to the French Revolution. When the French Revolution reached Mauritius and the first Colonial Assemblies were set up in 1791, they were monopolized by the Whites, mostly planters and 'négociants'. As a result of this, the 'Coloured population' sought political citizenship and was initially opposed by the Colonial Assemblies. The reason was that the Whites feared that granting political citizenship to the 'Libres de couleur' would lead to the emancipation of the slaves.<sup>205</sup>

But eventually, the 5<sup>th</sup> Colonial Assembly of 1794 granted the 'Libres de couleur' the right to participate in the political life of the colony, in accordance with the Decree of the 1789 *Constituent Assembly*.<sup>206</sup> This increased liberal attitude of the White elite to the 'Libres de couleur' was the result of a common concern of the two groups, who were both landowners and slave-owners, about a possible upheaval of the slaves, as in Haiti. The fear that the slaves (who then represented 80% of the total population of the island) could become a menace, as in the Caribbean, and opposition to the abolition of slavery, were two major factors which contributed to forging greater solidarity between the Whites and the 'Libres de couleur'.<sup>207</sup> The 5<sup>th</sup> Colonial

Assembly on the island eventually recognized only two categories of the population: the 'citizens' and the 'non-free'.

But, General Decaen, arriving on the island in 1803, suppressed the revolutionary institutions, therefore putting an end, both to the period of political autonomy and, consequently, also to the political citizenship of the 'Libres de couleur'. Decaen restored the colour bar between Whites and 'Libres de couleur'.<sup>208</sup> The colour bar, which was therefore, once again, imposed from outside, by the French metropolis, was to the advantage of the White group.

After the capitulation of the Isle de France to the British in 1810, the White elite gradually strengthened its political monopoly, thanks to lobbying strategies, and despite the fact that, in the first years of British rule, the local elite was denied any political representation.

But in 1817, the first British Governor, Sir Robert Farquhar, allowed the White landowners to set up the 'Conseils de Commune', which were local political assemblies inspired by the Colonial Assemblies of the Revolutionary period. The role of these 'Conseils de Commune' was to administer the local affairs, mainly on the issues of money, supplies and public health.<sup>209</sup> The criteria of eligibility to the 'Conseils de Commune' enabled the White elite to prevent the 'Coloured', as well as the British, from being members. The Whites thus managed to hinder the 'Coloured' population's political participation.<sup>210</sup> But the 'Conseils de Commune' were suppressed by the British Authorities in 1821.

The 1832 Constitution granted some political rights to the White elite in the Colony. The White planters obtained a political representation as non-official members (i.e. nominated by the British Governor) on the Legislative Council, while the 'Coloured' planters were denied political representation.

In 1846, the British Colonial Authorities gave the 'Coloured' planters access to the Legislative Council as non-official members. The first non-official 'Coloured' member of the Legislative Council was Hippolyte Lemière.<sup>211</sup> By 1846, the first generations of 'Coloured people' who had studied at the Royal College, following the opening of secondary education to the non-Whites in 1829, had embraced liberal professions, such as doctors or lawyers, and were emerging as a new political elite. Forming political alliances with sections of the White oligarchy, they became serious political challengers.<sup>212</sup>

This political alliance of the new 'Coloured' professional elite with a section of the White elite was embodied in the *Comité d'initiative pour la Réforme*. The *Comité* was created in 1882 to oppose the projects of land reform imposed by the British in 1874 (expropriation of lands located near the rivers). The *Comité d'initiative* also claimed the need for elections to choose members of the Legislative Council.

The *Comité d'Initiative* was composed of both Whites and 'Coloured people', on the basis of common land interests. Its chairman was Lois Raoul, a 'Coloured man' who was also a non-official member of the Council of Government, and a contributor to *Le Cernéen*, the newspaper of the White oligarchy. Other 'Coloured' members of the sugar plantocracy were part of the *Comité d'Initiative*: William Newton, Povah Ambrose (Director of *Blyth* and non-official member of the Council of Government), Virgil Naz (a wealthy sugar planter who was to become the President of the Chamber of Agriculture) and Dr. Eugène Laurent.

The 1885 Constitution finally granted the 'Coloured' population the right to vote. It, therefore, allowed the 'Coloured' landowners to be elected as non-official members at the Council. But at the same time, the restricted franchise maintained a monopoly of the landowning elite - both White and 'Coloured' - in politics. Moreover, the Whites still constituted 90% of the electorate.

A new political movement called *Action Libérale* was created in 1907 to vindicate the slackening of the franchise and the right to vote being given to the middle class i.e. to small planters, employees and other workers. *Action Libérale* was composed of professionals from three groups: White, 'Coloured' and Indo-Mauritian. It was founded by Dr. Eugène Laurent. The Franco-Mauritian lawyer, Edouard Nairac, was Vice-President. The Indo-Mauritian Goolam Mohamed Issac, was also a member of *Action Libérale*.

Although *Action Libérale* politically opposed the oligarchy, it cannot be said that it was on the basis of race or ethnicity, as *Action Libérale* was composed of various ethnic groups, including the Whites. Rather, it expressed the political emergence of the class of professionals ('professions libérales') such as doctors and lawyers, who challenged the plantocracy.<sup>213</sup>

After World War I, a Retrocessionist Movement was created to call for the retrocession of Mauritius to France. The Retrocessionist Movement was composed of former members of *Action Libérale*, both Franco-Mauritians, such as Anatole de Boucherville and Hervé de Rauville, and 'Coloured people' such as Edouard Laurent and Dr. Maurice Curé.

The ideal of a retrocession to France was not merely a political claim. It was also backed up by the quest of the 'Gens de couleur' for cultural identity, and, in particular, for the recognition of their French origins, culture and language (for which they were in competition with the Whites) as legitimate. As Boudet shows, this quest for cultural legitimacy was clearly intertwined with the issue of political competition between the various ethnic groups for citizenship.<sup>214</sup> The Retrocessionist Movement, which was formed out of an alliance between White and 'Coloured' members, called for political citizenship for the entire 'Coloured' group. Its opponent, the Anti-Retrocessionist Movement, was an alliance of the White sugar oligarchy (including Emile Sauzier) with Indo-Mauritian sugar planters.<sup>215</sup>

The defeat of the Retrocessionist Movement at the 1921 General Elections marked the end of the retrocessionist project. It also marked a new step in the integration of political elites from various ethnic origins: the designation of two Indo-Mauritian landowners, Dunputh Lallah and Rajcoomar Gujadhur, as nominated members in the Government Council, epitomized this political alliance of the White and Indo-Mauritian planter elites. A new political movement, the *Union Mauricienne*, was set up in 1926 by White and 'Coloured' professional elites, former members of *Action Libérale* and the Retrocessionist Movement, as a reaction against the monopoly of the sugar oligarchy and their Indo-Mauritian allies on the Government Council.

The progressive integration of the various ethnic elites within the political sphere (the Legislative Assembly) was disrupted after 1937 because of an upsurge of social opposition among the masses. The conflict hit the plantations first, then spread to the other sectors of the economy, mainly the docks. The social upsurge was crystallized in the first mass party, the Labour party, created in 1936 by Dr. Maurice Curé, a former member of *Action Libérale*, *Mouvement Rétrocessionniste* and *Union Mauricienne*. This reflects the emergence of a political force where the Coloured political elites derived their political power from contact with the masses (through their professional occupations which gave them a power of mobilization). They no longer formed just a group of landowners.

The British Authorities then acknowledged the necessity to move towards constitutional changes in order to open up the political arena to the masses. From 1947 onwards, the British Authorities set up a 'consociational' model of political system, as Boudet shows, i.e., a power-sharing system in which political affairs are in the hands of ethnic elites representing the various segments of the plural society.<sup>216</sup>

The 'Coloured' elite was indeed represented in the Consultative Committees which were set up in 1945 and 1946 by the British Authorities to bring the various ethnic elites together and discuss the issue of constitutional reform. Edouard Laurent, for instance, was part of the first Consultative Committee of 1945, established to introduce ethnic representation in politics.

Some non-elected individuals who belonged to the 'Coloured' elite were also part of the second committee of 1946, which discussed the issue of universal franchise: Maurice Curé, Edgard Laurent, Raoul Rivet.<sup>217</sup> Edgard Laurent and Raoul Rivet, who later were to join the *Ralliement Mauricien*, were actually opposed to the introduction of the universal franchise, while their former partner in the *Union Mauricienne*, then the leader of the Labour party, Dr. Maurice Curé, was in favour of it.

The *Ralliement Mauricien* was created in 1952. Those 'Coloured' elite, chiefly made up of professionals, joined together with other former members of the *Union Mauricienne*, which included members from other ethnic groups, such as the Indo-Mauritian Mohamed Razack and the

Franco-Mauritian Jules Koenig. The *Ralliement Mauricien* advocated the creation of a 'Mauritian nation' in order to guarantee to each ethnic community the rights to participate in national affairs. The *Ralliement Mauricien* was also founded in order to oppose the Labour Party which was progressively being 'indianized', following the 1948 elections, when Seewosagur Ramgoolam replaced Guy Rozemont as the leader of the party.

The implementation of the 'Good Loser System' (1965), which later became the 'Best Loser System' (1966), as part of the ethnic power sharing system,<sup>218</sup> gave rise to ethno-politics. While the political elites engaged in political coalitions, the masses were divided along ethnic lines. As a result of this, violent clashes broke out on various occasions; in 1965 and 1967, the nation witnessed ethnic riots ('bagarres raciales'). This was the sign of the dissociation, which characterizes consociational arrangements, of power sharing between ethnic elites on the one hand, and on the other hand, the acutely-divided political arena.

### 5.5. Identity and culture

Throughout the British period (1810-1968), the identity issue was closely linked with the issue of the political citizenship of the 'Coloured' group and the respective political 'weight' of the various ethnic groups in competition with each other to enter and/or maintain themselves within the political arena.<sup>219</sup>

In particular, the relations of competition/alliance with the Whites were also conditioned by their relationship with the other groups of the Mauritian plural society. During the slavery system (1766-1834), when the common 'enemy' of both the Whites and 'Libres de couleur' was the slave group (suspected of potential uprising and 'marronnage'), the two groups were political allies. But with the development of the sugar mono-culture (1825), leading to fierce competition over capital and resources, the Whites entered into political, matrimonial and financial alliances with the British, who were purveyors of capital.<sup>220</sup> Conversely, the 'Coloured people' were ostracized, until the British Government granted them political status, thus allowing them to enter the Legislative Assembly. Then, political alliance strategies were at play between a section of the White group, opposing the oligarchy, and members of the 'Coloured' elite.

With the emerging political competition of the Indo-Mauritian wealthy planters, in the first part of the 20<sup>th</sup> century, the White political elite split into two factions. As the oligarchy embarked on political alliances with the wealthy Indo-Mauritian landowners, another section of the White group, working as professionals, embarked on alliances with the 'Gens de couleur' having the same professional occupations as theirs.

Thus, throughout the colonization period, the issue of cultural identity for the 'Gens de couleur' was characterized by a series of paradoxes. As they shared some ethnic markers with the Whites - the French language and culture - those ethnic markers were mobilized in order to emphasize the cultural continuum between the two groups and justify their political alliances, especially against the Asiatic groups. But at the same time, in another respect, race emerged as a strong marker of ethnic difference between the two groups, especially with a view to stressing the domination of the White group at the top of the social hierarchy. During the decolonization period (1947-1968), with the enforcement of universal franchise and the subsequent introduction of ethno-politics with the 'Good Loser System', and then the 'Best Loser System', the political conditions of identity production changed. The 'Coloured' political leaders were split into two, with on the one hand, the *Parti Mauricien* and on the other hand, the Labour Party. The issue of ethnic identities then became connected with the issue of nation-building and Independence: the 'Coloured' political elite wanted to promote the idea of representation within the nation and the legitimacy of their contribution to the nation-building process.

With the rise of ethno-politics during the decolonization process, and especially with the introduction of the 'Best Loser System', the political mobilization of the masses emphasized the ethnic identity of the leaders and their ability to represent their ethnic group. The 'Coloured' leader of *Parti Mauricien*, Gaëtan Duval, called the 'King of Creoles', epitomized this new conception of ethnic identity, based on the representation of the masses: Gaëtan Duval's ethnic identity was presented as 'Creole' rather than 'Gens de couleur'.

The loss of landownership, when the 'Coloured' group was rejected from the plantation system, was vital to the loss of power. But the changes in the political system, with decolonization, especially the changes in the recruitment of political elites - no longer through landownership but through ethnic representation - helped to re-legitimize group identity.

The 'Coloured' group was further weakened by the huge emigration movement which took place in the years before Independence, mainly to Australia. This emigration movement resulted from Gaëtan Duval's electoral discourse on the 'Hindu menace' (the 'péril hindou'). The discourse about a 'Hindu menace' aimed at mobilizing the electorate against the Hindu majority, but it actually had an adverse effect, when the voters actually flew away from the country. This great loss for the 'Coloured group' further weakened their political identity.

## CHAPTER 6 - 'Coloured Population' of Rodrigues

### 6.1. Slow Colonisation

Any historical sketch of the colonisation of the island of Rodrigues sets it apart, and highlights its differences, from Isle de France/Mauritius. Clearly, there were several aborted attempts by the French to colonise the island before 1750, when a "small permanent colony" was established.<sup>221</sup> During his well-documented visit, Abbé Pingré found 100 people living on Rodrigues, including about ten Frenchmen, although from those 100 must be deducted the two crews of small French ships.<sup>222</sup> In 1803, General Decaen ordered the few colonists and their slaves to evacuate the island, for fear of a British invasion that subsequently took place in 1809, through a landing at Anse aux Anglais. Neglected under the French authorities, Rodrigues was to witness a period of 'start-stop-start' colonisation under the British, as agriculturalists and fishermen from Mauritius made their way over to the small island. In his excellent study, J.-F. Dupon declared: "After a period of military occupation, the colonization of the island, thenceforth British, was to start anew, led by colonists from Mauritius who used slaves from the coast of Mozambique and the East Coast of Madagascar."<sup>223</sup>

### 6.2. Early European 'White' settlers

Philibert Marragon, who arrived in Rodrigues on 12 May, 1794, with his wife, Marie Jeanne Elisabeth Guillon de Neuville, and his mother-in-law, settled above Oyster Bay. He soon took possession of 400 *arpents* at Les *Soupirs*, on a hill between Oyster Bay and Mont Charlot, a property and plantation which he named *L'Orangerie*.<sup>224</sup> Marragon's grave, and his wife's, can still be visited today at *L'Orangerie* where he lived till his death in 1826. His daughter, Séraphine, born there on 30 July, 1802, lived with her parents until 1826, after she had married a businessman from Port Louis, Charles Pierre François Pipon. She became the owner of *L'Orangerie* in 1826, had 66 slaves and 17 free children. When she left for Mauritius, she gave permission to her slaves to live on her land, *Jardin Mamzelle* that became a squatting area for emancipated slaves.<sup>225</sup> Séraphine Pipon died at La Chaumière, Savanne, in 1892.

When Marragon carried out his first Census in 1804, he found 82 slaves and 22 'Whites' on Rodrigues, of whom at least half - or 11 - were of mixed blood. The following Table is borrowed from Alfred North-Coombes' seminal work, *The Island of Rodrigues*:<sup>226</sup>

	Mar- ragon	Le Gros	Gorry	Roche- taing	Bré- hinier	Total
HOUSEHOLD (Individuals)	6	1	1	13	1	22
LAND (arpents) conceded	400	100	-	350	-	850
cultivated	100	25	70	70	-	265
SLAVES						
Mozambique	8	-	9	12	3	32
Malagasy	7	1	5	3	2	18
Talinga	4	1	-	-	-	5
Guinea	1	-	-	-	-	1
Malay	-	1	-	-	-	1
Bengaly	-	1	-	-	-	1
Born at Rodrigues	17	2	5	-	-	24
<b>TOTAL SLAVES</b>	<b>37</b>	<b>6</b>	<b>19</b>	<b>15</b>	<b>5</b>	<b>82</b>

From Marragon's Census (1804), we know that another early settler, who came from Bourbon, *via* Mauritius, was: E. Rochetaing, a fifty-five-year old, who took with him Marie, a *mulâtresse libre*, and her daughter. He was given a concession of 350 *arpents*, which he called 'Mon Plaisir'; it lay between Malartic, Mont-Lubin and St. Gabriel.<sup>227</sup> Germain Le Gros, who landed in 1792, with his partner, Frémont, was a master mariner and engaged in fishing. They settled on the Northern foot of 'Le Piton' on 100 *arpents*, part of 'Les Soupirs'; this was later handed down to Séraphine Marragon. In 1812, Le Gros owned the boat *La Séraphine*, a schooner and did so until

1816, when Marragon took over.<sup>228</sup> For his part, Michel Gorry made his living from the land rather than the sea; he had settled at Oyster Bay, with Roger and Boulerot, both fishermen. When they left for Isle de France, Gorry moved up country to a property called 'Les Choux'; there, he first grew indigo but, later, confined his activities to growing only what satisfied his family's needs. Early settlers, who relied on fishing for their livelihood, included D. Raffin who settled in 1803 and started a fishery, with 20 slaves, as well as Lecloud and Gautier.<sup>229</sup> Lecloud had arrived earlier than Raffin with 16 slaves.

Most of the early colonists were of European origins and regarded themselves as 'Whites', but it is known that several were *métis* themselves or cohabited with female slaves or *mulâtresses*, as was the case with Rostaing. Commenting on the relatively 'recent populating' of Rodrigues, Dupon wrote: "Some of these colonists engaged in, for some time, a direct slave trade and disregarded the British legislation."<sup>230</sup> Marragon and Rochetaing were probably the only true 'Whites' in Rodrigues' history. Statistics provided by Dupon put the population, during the early years of British colonization, as follows:

1820: 200 (Source: *Almanach of Mauritius*)

1827: 123 (*Ibid.*)

1845: 495 (*Ibid.*)

1861: 699 (Fr. François, Catholic Missionary)

1862: 756 (*Ibid.*)<sup>231</sup>

From those statistics, Dupon concludes: "This assessment allows, one can see, little room for true colonists and their descendants, at most about ten families."<sup>232</sup> North-Coombes put the population in 1809 at 41 slaves and 8 other residents,<sup>233</sup> while Baron d'Unienville declared, in 1830, that Rodrigues was capable of receiving a much larger population, and that it was essential for the Government to send a surveyor there to establish concessions.<sup>234</sup>

At the very start of the Government's policy of granting land concessions, between 1815 and 1830, those only rarely surpassed 350 acres, or 135 *hectares*. Subsequently, they were limited to about 108 acres. Because Rodrigues did not share in the sugar cane boom of Mauritius, it ceased to be of interest to the British Authorities very early in the history of colonization. The small settlement under Marragon (1794-1796), who had the title of *Agent Civil de la République* (1794), led to a semblance of colonization because of the British threat, but it really started in 1825, with the arrival of C.T. Hoart, as Government Surveyor. His Report has been discussed at length by North-Coombes, who saw it as "the first of its kind", for it proposed the division of the 'Oriental' side of the island into 78 plots of 108 *arpents* (112 acres). Hoart also recommended that those plots be granted to "deserving families from Mauritius, who had the means of bringing them into cultivation."<sup>235</sup> The population of Rodrigues in 1826 was put at 123 by Hoart, and divided as follows:<sup>236</sup>

	Men	Women	Boys	Girls	Total
Europeans	7	5	8	-	20
Freed	2	1	-	-	3
Slaves	49	28	12	11	100

In his chronology, Antoine Chelin has highlighted a most important arrival at Port Mathurin on 20 October, 1843: that of John Henderson, the first Brigadier of Police and, later on, the Police Magistrate.<sup>237</sup> Accompanied by five constables, he landed from the *Isis* (Captain John Marshall).<sup>238</sup> This was to mark the beginning of some kind of Law and Order on Rodrigues. Five years earlier, Special Justice C. Anderson was dispatched by the Governor of Mauritius to gather information on Rodrigues. He spent six days and reported the following establishments:

- (i) *Madame Pipon's, [Marragon's daughter, who was then owner of L'Orangerie] with 66 slaves and 17 free children.*
- (ii) *Messrs. Bessière and Husson's, on land formerly belonging to Gorry, with 36 slaves and 17 free children.*
- (iii) *Mr. Eudes', at Grand Baie and Sygangue, with 19 slaves and 8 free children.*

*Ninety-nine of these slaves were predial. In addition, Gabriel Bégué, who had settled on the land now forming part of the Roman Catholic Parish of St. Gabriel, had 4 predials; a certain Jean Marie had one and, likewise, Gonnet who had in addition 13 free men employed in his fishing establishment. The apprentices were working longer hours than the law allowed, their clothing were inadequate and their huts miserable, but they were well fed and extensive ground was allotted to them.*<sup>239</sup>

Another settler, Charles Lenferna de Laresle, Mrs. Pipon's bailiff, returned to Rodrigues, after a stay in Mauritius, and opened a fishery with Furcy Labour who lived at 'Les Soupirs' in the 1840s.<sup>240</sup>

Table 8 has already drawn attention to the gender imbalance that prevailed in Rodrigues, especially among slaves, from the start; Bertuchi, who visited the island much later in the 1920s, remarked that in the early days, "great immorality prevailed. Each woman had three or four husbands, in some cases as many as six. The children were brought up together, the husband in power at the time exercising the role of father to all."<sup>241</sup> Many descendants of slaves took to the hills after the Abolition of Slavery (proclaimed and diffused in Mauritius and Rodrigues in 1839) and became known both as 'Montagnards', and, according to Dupon, also as 'planteurs', 'habitants', 'laboureurs', 'piti nation', "désinane vénielle, beaucoup moins péjorative que celle franchement insultante de 'mouzambique'." <sup>242</sup> Several of the descendants of 'Whites' or *métis*, whom we interviewed, used the word *Zabitants* for descendants of slaves, but they did not mean any insult by it.

As for families of European or French descent, Dupon notes in 1967: "Though extremely spread out, they are represented by a small number of names, common in Réunion, and perhaps also in Mauritius: Roussety, Bégué, Rivière, Meunier, Legoff, Perrine, Lévêque."<sup>243</sup> We know some of the dates when the early settlers bearing European names, emigrated from Mauritius, or from elsewhere, to Rodrigues: Charles Weder (before 1827); Mathieu Roussety, a master-fisherman and trader (about 1842); his brother Auguste Roussety (1844); Jean-Marie Meunier (about 1840); Zéline Labour (about 1840); Bercy Labour, with four young children (1845); Désiré Calamel (1845); Charlotte and Marie-Louise Perrine (1846); Marie-Jeanne Geneviève, with a daughter (1846); Ferdinand Bonnelle (1846); Clodimir and Emilien Jean (1846); Louis François, his wife and five children (1848); Pierre Raffault (1848); the Legoff, Lévêque, Ithier, Castel and Allas families (later than the 1840s).<sup>244</sup> Descendants of the early *Café au lait* settlers, as they are known, or *Rouges* - because they grow red in the sun - gladly recall the adventures of their pioneer ancestors (see below for some families). Parish Registers of Births, Marriages and Deaths draw attention to the evolution of *Rouge* families. Gabriel Bégué, the ancestor of a powerful landed family, settled in 1825 on land now forming part of the Parish of St. Gabriel, which was bought or acquired, in a part-exchange deal, by the visiting priest, Father Thevaux (Parish priest from November 1850 to May 1851). He erected a "latanier hut 50 ft. long by 24 ft. wide", a primitive Church which became known as St. Gabriel from "the owner's name" - the Saint being later declared the patron saint of Rodrigues.<sup>245</sup>

There is much evidence, oral and written, to indicate that cohabitation between 'Whites' and descendants of slaves and 'mulâtresses' was common, not least because of the infrequent visits of priests to Rodrigues. Father Thevaux celebrated 50 marriages and baptized 400 individuals during his six-month stay in 1850. In December 1848, Brigadier Henderson had noted that when *H.M.S. Isis* called at Port Mathurin in 1844, its chaplain Rev. Mr. Brown offered to baptize and marry locals, but that "there were then only five married couples on the island, the inhabitants being reluctant to have their marriage ceremony performed by any civil commissary or magistrate."<sup>246</sup> A.J. Bertuchi concludes from information that he gathered at first hand: "A few white Creoles from Mauritius and Bourbon came to settle on the island and intermarried with the blacks, which accounts for a section of the population being of a 'café au lait' colour. Some of these settlers

were the descendants of the French who had been expelled from the settlement of Port-Dauphin, in Madagascar." <sup>247</sup> Descendants of 'White' families, today, also point out that many of early ancestors intermarried. Indeed, Bertuchi adds that "other Whites married Whites, which explains that they are, in appearance, like Europeans, except in their habits and customs which, through a prolonged stay, have merged into those of the blacks." <sup>248</sup>

Emigration of 'mixed-blood' or 'White' families appears to have slowed down as the nineteenth century wore on. <sup>249</sup> From his analysis of statistics available, Dupon was able to assess that "if one examined the origins of deceased people, one noticed that, from 1860 to 1865, 40% to 50% were born in Mauritius [...] However, from 1870 to 1875, this percentage dropped to 10%." <sup>250</sup> Moreover, Rodrigues seems to have missed out altogether on Indian emigration and Indentured Labour in the 19<sup>th</sup> century. In 1962, the first official Census that allowed individuals to declare their belonging to a community, indicated that of a total population of 18,333 inhabitants, 117 deemed themselves to be Hindus and 378 Chinese. <sup>251</sup> Indeed, early Indian and Chinese emigrants to Rodrigues had blended well with the Creole Mass through intermarriage (see Appendix I). Early Chinese and Indian settlers were actively engaged in Commerce and Trade, a "system of barter and credit [that was] all one-sided", according to Bertuchi. For example, Acacia seeds, collected and used for this barter, were exchanged against the necessities of life. <sup>252</sup> While the arriving Mohammedans retained their religion, North-Coombes explains that "most of the Chinese have now embraced Christianity, either as Anglicans or as Roman Catholics, and most of them now regard themselves as Rodriguans. Many of them have married native Rodriguans and live very happily with them." <sup>253</sup> (See Appendix II)

### 6.3. Education

The role of the Catholic, Anglican, or other Christian, Churches was significant in moulding the population of Rodrigues into an entity. Though not always unified at the start, the population is now showing less signs of communalism than Mauritius. Dupon warns us, though, to look for divergences and nuances:

*"The relative homogeneity of the population has not, for all that, excluded nuances. Fr. François remarked in 1862: "The population is divided into two perfectly distinct classes: the indigenous people or farmers, scattered here and there, can be numbered at 400 over the spread of the Mountain, and the fishermen who have mostly come from Mauritius and work for about twenty small bosses, small mulattoes or blacks; the latter number about 300 and live on the coast." <sup>254</sup>*

According to the first Catholic priest, Fr. F. Thevaux, 1850, some 11 years after the Abolition of Slavery had been announced in Rodrigues, there were 350 non-baptised individuals, and a hundred 'Catholic' Mauritians who had come to trade in salt fish. <sup>255</sup> In his Chapter, 'The Churches and the Schools', Alfred North-Coombes has adequately discussed the contribution of Churches (Catholic and Anglican, to begin with) to this 'brassage' of the Rodriguan population. <sup>256</sup> The role of Father Thevaux in assuaging the jealousy and animosity of the "twenty or so master fishermen, who ran the fisheries all around the coast," cannot be overstressed. Several 'Rouge' inhabitants we spoke to, stressed the vital contribution of the Catholic Church to the development of schools and colleges. In 1843, a former court usher, Mr. Christopher Mann, and Mrs. Henderson, the wife of the Brigadier of Police, were the only teachers. By 1866, a school-master and a school-mistress had been appointed. <sup>257</sup> From October 1866 to August 1867, Father Frédéric Muijhe, a Belgian priest, ran the Government school but insisted on 'Catholic prayers being said at the start and at the end of the day. Little wonder that he was recalled to Mauritius, after causing much conflict with the authorities. In September 1869, Fr. Emile Hilaire became the first 'curé' of Rodrigues and greatly developed the Parish of St. Gabriel. <sup>258</sup> From then on, schools began to flourish; the Church of England College of St. Barnabas and the Catholic College of St. Louis were the culmination of much hard work, when they were registered on 13 December, 1961 and 12 April, 1962 respectively, before merging to become the Rodrigues College. Prior to the creation of St. Barnabas and St. Louis Colleges, young Rodriguans had to do their secondary schooling in Mauritius. Above all, what the Christian Churches did was to promote education for *all* Rodriguans, irrespective of colour or creed, thereby working towards greater homogeneity and interculturalism among the people.

Over the years, a small Protestant/Anglican community had emerged. As early as August 1876, Anglicans petitioned the Mauritian Government for a clergyman to be sent to Rodrigues. Early Anglican families included such *métis* as the Waterstones, Vandorous, Bennetts and Capdors, among others.<sup>259</sup> Some had been descendants of British officers; others still were shipwrecked and decided to stay on the island, such as William Vandorous. One or two came as clergymen, as was the case with William Waterstone and C.A. Capdor, in 1881.<sup>260</sup> Bishop Peter Royston visited Rodrigues in 1881, and afterwards, a catechist, Edward Francis, was sent in March 1883, to be followed, in March 1886, by Pierre Edmé Gellé who had been a missionary in Madagascar.<sup>261</sup> What is apparent from any sojourn in Rodrigues today is that 'Montagnards' and 'Rouges', and 'Anglicans', other Christians, and Catholics cohabit in peaceful harmony; hence, religion has been more of 'cement', than a source of disunity, in Rodrigues between classes and communities. As for 'nuances' and 'hidden prejudices', these are only detectable to the sharp-eyed observer, such as Dupon who comments: "Aujourd'hui encore, les éléments asiatiques mis à part, de subtiles nuances distinguent les Rodriguais et d'une façon générale, les plus clairs d'entre eux, de fait souvent pêcheurs, qui allient parfois les yeux bleus de quelque ancêtre picard à une peau bien pigmentée, professent un amical mépris à l'endroit des plus sombres, ceux de l'intérieur [...]"<sup>262</sup> And, while nowadays habitations of both groups show a remarkable similarity, when Bertuchi visited the island in the 1920s, he noticed that some of the inhabitants' houses were made of vacoas, acacia poles and latanier palm leaves, while "the more prosperous construct[ed] their houses entirely of wood." These had wooden floors, which became the fashion, on account of the Rodriguans' passion for dancing.<sup>263</sup> For all the homogenization sought and achieved through religion, and the democratic ideals of some of the people, the scars of slavery remained in the early colonization period even if slaves, according to individuals spoken to during the research trip, were well treated by such owners as Marragon and Séraphine Pipon. In fact, Marragon was so kind to his workers that Rochetaing "complained bitterly about Marragon's attitude and the lawlessness of his run-away slaves."<sup>264</sup>

#### 6.4. Present descendants of early 'White' or *Métis* settlers on their ancestors

A number of structured interviews were conducted in Rodrigues and will be analysed separately and summarized in Chapter 7. In addition, during a research trip, a number of descendants of early settlers were spoken to in order to determine: (a) How their ancestors and they saw Rodriguan society in the past and today? (b) What information they could shed on the 'Coloured Population' in the nineteenth century and at present? (c) Whether they felt that slavery and its abolition had left an indelible mark on Rodriguan customs and lifestyles? The individuals interviewed in this context will be referred to as 'X., Y., Z.'.

##### 6.4.1. A member of the Ithier family

The Ithiers came to Rodrigues from Mauritius, and it is likely that the first Ithier to do so was Victor, who accompanied Beyts on the *Hattonbum* which arrived at Port Mathurin on 19 August, 1888, after an unusually long passage of 19 days.<sup>265</sup> The speaker [hereafter X.] stressed that his great-grandfather may have come from Brittany, and was the father of Jean-Baptiste Ithier, who married Miss Eva Hombrasing. They had thirteen children. Whilst the ancestor [Victor] is said to have been a sea captain, Jean-Baptiste Ithier had settled on a concession of 14/15 *arpents* at *La Ferme*,<sup>266</sup> where the family still owns land today. X., the interviewed person, pointed out that his own father was a pastoralist and agriculturalist who owned a farm called 'La Ferme Piments' at *La Ferme*, land which, on his father's death in 1976, was divided between his children whom he had by a Miss Meunier - another very common 'Rouge' name in Rodrigues. The Ithier family, from Jean-Baptiste onwards, grew such crops as maize, haricots, vegetables, as well as keeping cattle. They originally had, in their employ, descendants of previous slaves, all freed since the family did not settle at *La Ferme* until the 1880s.

A brother of Jean-Baptiste's, Bonnet Ithier, left for Mauritius early on and settled in the Flacq District; he is buried at St. Julien Cemetery. There is a 'Camp Ithier' in the vicinity of Flacq/Trou d'Eau Douce, that is said by X. to be connected with the Rodriguan branch of the Ithiers. Some of Jean-Baptiste's daughters were well-educated and became teachers at the local *La Ferme* primary school, but the more common practice, in olden days, was to encourage children to abandon their primary schooling to work on the farms, tending to the crops and animals. This was the case for the individual interviewed. There were no *débouchés* for students other than

work, and few could go to Mauritius to pursue their studies. The Ithiers are also reported to have rented extra Government land in the days of Jean-Baptiste Ithier, to grow additional crops which were transported to Mauritius for sale. In Mauritius, it is likely that the Ithiers owned land in the Beau-Bassin, as well as the Flacq Districts. Large 'White/Coloured' families were the order of the day; the interviewee's father also had 13 children, as had his father before him.

X. also pointed out that, at the time of his grandfather and father (born in 1912, he died in 1976), one tended to marry other 'White' individuals, i.e. intermarry; for example, of the five daughters of Jean-Baptiste's, two married Ithier cousins, one a Roussety, another married an Albert, and so on. 'Mulâtres', he regarded as pejorative, and despite X. acknowledging the existence of cohabitation with 'darker' women, he stressed that a 'mésalliance' was, at the time of Jean-Baptiste, considered taboo. Such pejorative terms as 'Mozambique' and 'Chevette grillée' were used, in the old days, for the 'Montagnards', but are no longer in common usage. At *La Ferme*, the 'White' families have always been the: Roussety, Ithier, Meunier, Bouton, Allas families, among others, all agriculturalists. Unable to travel to Mauritius for their secondary education such families had their children taught privately or publicly until the end of the primary schooling. Many members of the Ithier family, in the early twentieth century, knew how to read and write from an early age - perhaps because they were taught by their elders, notably aunts of the interviewee. The Church also fostered education among the families.

As for the descendants of freed slaves, they were treated as domestics, given the right to build their own homes on the family's land, as well as grow their own vegetables. Because 'White/Coloured' families were fond of food, domestics were hired to prepare copious meals and to work in the fields, and were remunerated per day's work. They were not looked upon as inferiors, nor were they exploited. All Ithiers owned various-sized plots and used workers who were descendants of slaves, but these were well treated. Slavery has, in the interviewee's viewpoint, left little impact on the psyche of the Rodriguan population today.

Emigration to Mauritius has already been referred to. The interviewee's parents left for Mauritius, with their youngest daughter, and died there. Other Ithiers have emigrated to Australia (mainly Melbourne), while a number remained at *La Ferme*. The lack of good positions and the attractions of Mauritius and Australia are seen by the interviewee as reasons for this; he himself spent over twenty years in France. A niece of the interviewee is living in Malvern, Victoria, Australia as is her father. So it is that the lure of distant climes was too strong for even the most reasonably comfortable pastoralist families of Rodrigues. This constitutes a change, since Bertuchi observed, in the 1920s, that Rodriguans were "quite averse to emigration [...]. Not all the tales of a thousand Eldorados will make leave their little isle."<sup>267</sup>

#### 6.4.2. A member of the Gontran[d] family [whom we shall call Y.]

Y. is a former teacher and a highly respected member of the Port Mathurin community, a writer and local historian. Interviewed at his house, he stressed the importance of Rodriguan 'séga' and accordion music as a unifying factor that was inherited from both slavery and French colonists. Explaining who the 'Gens de la Montagne' or 'Zhabitants' were, he indicated that many freed slaves were offered the opportunity to return to Mauritius, but that they refused, preferring to squat on some high lands. Mme Pipon's slaves [Séraphine Pipon, nee Marragon] were reportedly in that position, but chose to stay on *Jardin Mamzelle*, after her departure, cultivating maize and manioc, and living in huts. The terms used for descendants of slaves, 'Zhabitants' and 'Montagnards' or even 'Noirs', Y. sees as not pejorative, while the 'Whites' were described as 'Zens la Kotte', 'Café au lait' or 'Mulâtres, the latter being a more offensive appellation. 'Bène Mozambiques' was not used in a 'nasty' way, to begin with, but became pejorative. 'Zens la kotte' were originally fishermen or marine carpenters.

Some areas were exclusively 'White', such as sections of Port Mathurin, but many were mixed, for example Oyster Bay or Rivière Cocos and Anse Mourouk. The Catholic [and to a lesser extent, the Anglican] Church is perceived by Y. as having cemented the population, by creating primary schools open to all, and through other forms of education, music and French. Catholic priests are said to have banned Kreol, at one time, from the Church, and Fr. Thevaux's role is said by Y. to have been crucial in developing education and in the spread of Christianity. Some 'Gens clairs' married one another, but many men were tempted by cohabitation and by 'Sega Tambours'

in the hills, which were decried by the Church, because of ensuing rampaging immorality and the births of illegitimate children. Hence, priests kept a watchful eye, and 'White' men became more secretive. Yet, all along, families, who were of 'café au lait' complexion, thought it unacceptable for their young people to marry outside their community, an indication that prejudices did exist in the nineteenth century, according to Y.

Y.'s ancestors, the Gontrans [also spelt Gontrands] came from Brittany, *via* Mauritius. Ferdinand Gontrand, the ancestor, arrived with Father Hilaire in September 1869, when the latter took up his post as the first *curé* of Rodrigues, in what became a parish of the Diocese of Port Louis.<sup>268</sup> When he left Rodrigues for good in September 1880, Fr. Hilaire donated his properties to Ferdinand Gontrand; no title deed had been issued when the land was surveyed in 1878.<sup>269</sup> The Gontrands continued to occupy the land, known even today as 'Concession Gontrand', until an instrument of acquisition was granted on 13 September, 1894, by the Registrar General's Department of Mauritius, to Mr. Ferdinand Gontrand and his heirs.<sup>270</sup> Y.'s father saw himself as being of Breton origins, but Ferdinand Gontrand married Palmyre Colette, a *métisse* of Mozambique origins, with whom he begat 12 children, 8 boys and 4 daughters - large 'White' families being the order of the day at the end of the 19<sup>th</sup> century. One of the sons, Elysée, fought at the Battle of the Marne for the British in World War I.

The 'Zens de la Kotte' had money, being mainly owners of fisheries. Cohabitation, started by 'Ségas Tambours', led to many illegitimate children being born out of wedlock and outside the community, but Y. stressed that they were recognized and accepted by their fathers. 'Rouges', he explained, came from the fact that 'Café au lait' men would go fishing and be scorched by the sun. The Catholic priests practised discrimination in the 1890s, so the story went, when the front benches were all allocated in Church to the 'Rouges'. Illegitimate children were baptised on Fridays and given the names of their fathers to avoid future incestuous relationships, likely on a small island. Many descendants of 'White' settlers went off to fight in the First World War (1914-1918), while Y.'s father took part in World War II. Several Gontrands continued to live at St. Gabriel, on the 'Gontrand Concession', or 'sous le vent', as it was known. Yet, others had fishing posts at *Anse Baleine*, where they also bred goats.

The Gontrand children did not go to school until 1906, when a primary establishment was built at Rivière Cocos. At Port Mathurin, where some Gontrands set up fisheries, the girls were educated at home, and it is known that Ferdinand Gontrand, a 'Choir boy' to Fr. Hilaire, had been taught to read and write in the 1870s. Ferdinand died before the First World War, and his wife Palmyre in 1937 - she had been married religiously to him. Their children and descendants were listed by Y. as follows (m: married):

1. Elizène, m. Charles François (7 children)
2. Léonard, m. Yeyette François (8 children)
3. Ferdinand Achille, (born 1907), m. Louise Pierre (7 children)
4. Emile, m. Olivia Raffault of Oyster Bay (8 children)
5. Roger, m. Léonida Allas (9 children)
6. Madeline, m. a Roussety (3 children)
7. Mabelle, m. first an Elysée; then a Meunier (10 children)
8. Fernand, m. Olive Ismaël (of Persian descent) (6 children)
9. Ida, m. Noë Meunier (10 children)
10. Abel, m. Edith Roussety (11 children)
11. and, 12. Elysée and Élie died young.

Intermarriage within the 'Rouges' is illustrated by this, but marriage to *métis* is also brought out. To support such large families, 'White' men had to fish, as well as set up plantations. The son of Elizène, Fernand, acquired land on *Ile aux Chats*, where a little maize was cultivated. The 'Rouges' employed 'black workers' as domestics and labourers, but treated them well, feeding them and allowing them to grow their own crops. Rice was a special treat for all and was served only once a week on Sundays, on account of it having to be imported. Domestics were paid wages on a daily basis, and often workers were given a loan of the masters' boats to go fishing. The 'Montagnards', through the system of 'barter', traded in maize and crops to the shopkeepers (Indians or Chinese) in return for other goods. Y. pointed out that this was very much to the advantage of shopkeepers.

In his youth, Y. stated, slavery was not an issue, nor discussed much. Freed slaves, who came from Mauritius after Abolition in 1839, were fishermen. They lived or survived through work, even though their skills were limited: 'Rouges' later often referred to the work of descendants of slaves as sloppy, and the phrase 'travail Zhabitants' has survived to designate 'unsatisfactory work'. 'Rouges' were not just fishermen and pastoralists; a few were excellent carpenters, as for 'Ton. Bébert Rose', who built some excellent colonial homes at Port Mathurin. Other members of the Rose family had cattle at *Baie du Nord* or *Baie aux Huîtres*, while also repairing and building 'pirogues'.

#### 6.4.3. A Member of the Castel family (called Z.)

Several members of the Castel family have gained prominence in Rodriguan society; North-Coombes indicated that they arrived in Rodrigues from Mauritius, as *métis*, later than the early settlers. Z. indicated, during the interview, that increasingly, divisions ('cloisons') between communities were disappearing, as the young generation intermarries, so that 'Rouges' and darker-skinned individuals set up homes together. He identified social and economic factors as the chief causes of this, and since the majority of Rodriguans are *métis*, it is not surprising that social prejudices have not survived. He used another expression to describe the 'Montagnards': the 'Gens de la Campagne'. Areas, where non- 'campagnards' are numerous, include: *La Ferme*, Port Mathurin, *Anse aux Anglais*, *Baie aux Huîtres*, *Camp du Roi*.

Trade and Port Mathurin can account for the visible wealth in some areas. Yet, many descendants of freed slaves worked 'under the yoke of early colonialists', namely rich merchants. When they succeeded in freeing themselves from this yoke, they took refuge in the hills, either to become 'their own masters', or to 'lord over others'. However, today, in schools, divisions are not noticeable and a certain 'fellowship' prevails. Workers nowadays share jobs in hand without any reticence, and at a social level, there are few problems. Balls attract people from all communities. In this, the Catholic and Anglican Churches have played a prominent role, the *Centre Carrefour*, run by the Church, attracts all types of persons, although 'Montagnards', often 'pale skinned' but 'disadvantaged', attend more regularly. 'Campagnards' have the legal rights to enjoy fertile lands in the mountains, but they pay a lease - 'bail' - (about Rs 400 per year) that is renewed every so many years (20 years in most cases).

One major source of concern is illiteracy among the 'Campagnards'; many still do not send their children to school, as used to be the case in the past. Others earnestly wish their children to have a good education, but the latter have great difficulties in going to and from school, walking long distances. Since 1990, education has made huge strides, but a criticism that is frequently voiced is: "If Rodrigues were a Hindu colony, the population would be taken better care of." The amount of money spent on libraries by the Mauritian Government is ludicrous; the collections do not allow for project work or research by school children. Hence, Rodriguan adolescents struggle to reach the same standard as their Mauritian counterparts, through no fault of their dedicated teachers. The Kreol language is unanimously accepted by all communities; hence, the fight is won in this respect. It is a strong unifying element. Most children also love French and work hard at it, but they are not as proficient in English as Mauritian children.<sup>271</sup> The previous snobbishness, associated with French, as displayed by 'Rouges' families, is fast disappearing.

For all their willingness to progress, Rodriguan children manifestly lag behind their Mauritian counterparts at secondary level, because of a scarcity of resources, facilities, equipment and funds. Z. underlined the fact that 'Gens de la Campagne' often appear more conscious, nowadays, of the importance of education than 'Gens Clairs'; the reverse was true in olden days. Rodrigues forms more professionals - e.g. teachers and doctors - than it needs; returning to one's island after University studies is not a common practice. Scholarship winners (Laureates) often stay on abroad; the few doctors who return are not recognized for what they are worth by visiting Mauritian professionals and either feel neglected, or are unable to keep abreast of new techniques. After a while, Z. assumes, they are discouraged.

#### 6.4.4. Impact of slavery

Slavery, it would appear, has not left an indelible imprint on the psyche or character of descendants of slaves. X., Y. and Z. pointed out that, rarely - if ever - had he heard 'Campagnards' state: "I am a descendant of slaves." Local historians do not dwell on slavery, and no one seems to

discuss at length the implications of the 'Truth and Justice Commission'. Artists in Rodrigues even look at slavery with a pinch of salt and have published amusing tales concerning freed slaves, according to Z. As for local politicians, they do not put undue emphasis on communalism or the legacy of slavery. For all that, to a candid observer on a visit, Rodrigues *does* suffer considerably in its present infrastructures (social, physical and educational)<sup>272</sup> from the fact that it has been, and is largely, a 'Creole' island blighted by its past. Would the island lag so far behind, if it had been populated by large numbers of Hindu/Moslem labourers, or indeed 'White' colonists? It is manifest that Rodrigues has missed out on 'Indentured labour' and, hence, it is more than a little neglected. The Rodrigues Regional Assembly will take some time to set those reversals right, but the people of Rodrigues remain generally optimistic about their future and are 'grands débrouillards'. The present and the future are of greater concern to them, justifiably, than the past. One of our recommendations, however, is that in the field of Education and literacy, the Government of Mauritius, and of Rodrigues, ought to do more for the island and, by treating it as a special case, we should invest a great deal more in the dependency's educational infrastructures (see Recommendations).

#### 6.5. Rodrigues: Landownership

The Project Teams, working on Projects (a) on 'Land', and (b) on Rodrigues, will present its own separate findings on the two issues. Our concern here is to include a few details about the 'Coloured Population' borrowed from the *Recueil de documents pour servir à l'histoire de Rodrigues* (1969).<sup>273</sup> The list of land concessions on Rodrigues from 1817 to 1871 mentions herein the following individuals of 'Coloured' origins. Reference is to M.N.A. File R/R2. Obvious French 'White' and British names are excluded.

#### Land Concessions

Vol. 24 No.	Names	Dates	Descriptions/sites
68	Germain <u>Legros</u>	29.9.1820	3 sites of 108 <i>Arpents</i> , <i>Anse-aux-Anglais</i> and <i>l'Hermitage</i> .
140	<u>Delaître</u> (substituted to M. Rochetaing who abandoned the place)	14.8.1817	<i>Trois-Ilots</i> , 2 sites of 108 <i>Arpents</i> in Rodrigues.
Vol. 25 No. 100	Dame Avice, wife of <u>Chenard</u>	21.7.1830	A site of 108 <i>Arpents</i> at <i>Anse-aux-Cannes</i> ; 'pêcherie' at <i>Islet-aux-Insectes</i> .
No. 103	Gabriel <u>Bègue</u>	27.8.1829	3 sites totaling 324 <i>Arpents</i> on Rodrigues.
85	Antoine <u>Charles</u>	29.6.1866	Plot of 1882 sq. yards, Port Mathurin.
86	Albert <u>Haoust</u>	29.6.1866	Plot of 1638 sq. yards, Port Mathurin.
88	Emma <u>Félicité</u>	29.6.1866	Plot of 3333 sq. yards, Port Mathurin.
89	George <u>Edouard</u>	29.6.1866	Plot of 2935 sq. yards, Port Mathurin.
90	Pierre <u>Raffaut</u>	29.6.1866	Plot of 4836 sq. yards, Port Mathurin.
91	Ozélie <u>Carel</u>	29.6.1866	Plot of 1870 sq. yards,

			Port Mathurin.
111	Marie Rose <u>Portalis</u>	13.10.1866	Plot of 2987 sq. yards, Port Mathurin.
112	Marie Aurore Claire <u>Winters</u>	13.10.1866	Plot of 1846 sq. yards, Port Mathurin.
141	Charles <u>François</u>	31.7.1867	Plot of 8404 sq. yards, Oyster Bay.
152	Albert Haoust; Joseph <u>Berton</u> ; Fernand <u>Bonelle</u>	16.9.1867	Plot of 400 acres, Rodrigues.
165	Marie Palmyre <u>Francois</u>	20.12.1867	Plot of 3863 acres, <i>Trèfle</i> , Rodrigues.

No. Vol. 30	Names	Dates	Descriptions/sites
198	Béline <u>Médicis</u>	18.2.1869	Plot of 2472 sq. yards, Port Mathurin.
200	Ozélie <u>Clarel</u>	28.4.1869	Plot of 25 acres, <i>Trèfle</i> , Rodrigues.
201	Ozélie <u>Clarel</u>	28.4.1869	Plot of 60 7/10 acres, <i>Montagne François</i> .
208	Désiré and Ninka <u>Lalande</u>	31.12.1869	Plot of 100 acres, <i>Diamond Bay</i> .
219	Messrs. <u>Télescourt</u> and <u>Lauricourt</u> , Jean Félix	3.5.1871	Plot of 1972 sq.yards, Port Mathurin.
220	<i>ibid.</i>	3.5.1871	Plot of 3944 sq. yards, Port Mathurin.
221	Ernest <u>Allas</u>	3.5.1871	Plot of 937 sq. yards, Port Mathurin.
223	Jean Evenor <u>Meunier</u>	3.5.1871	Plot of 3289 sq. yards, Port Mathurin.

At the M.N.A., one also finds the following details under 'Rodrigues Land Concessions' (1845), *Extracted* from the books 'Domaine', Archives Office, 1845' (TB 6/4).

No. 162, F. 197	<u>Duessy</u> , Wm.	25.1.1821	216 <i>Arpents</i> in <i>Anse East North East</i> .
--------------------	---------------------	-----------	---

Of special interest are the following details concerning the Marragon family:

No. 160, F. 182	Mr. <u>Marragon</u>	29.9.1820	324 <i>Arpents</i> and the 'jouissance' of <i>Îlot aux Fous</i> and <i>Îlot aux Crabes</i> for a fishing establishment.
No. 161, F. 183	Mad <sup>e</sup> <u>Marragon</u>	29.9.1820	216 <i>Arpents</i> at <i>Baie aux Huîtres</i> .

In his short introduction to this table, J.-F. Dupon commented: "De 1817 à 1830, les concessions de terres, qui s'ajoutent aux cessions en jouissance des îlots du lagon, sont de 108 arpents (environ 43,2 hectares ou multiples de 108 arpents à l'exception d'un employé du gouvernement (250 arpents)". He adds that small concessions multiplied at Port Mathurin, measuring ½ hectare or 1/10 hectare, which shows a real development of this urban agglomeration.<sup>274</sup> Finally, it is to be noted that on 31 December, 1869, George Jenner, who had replaced Edward Stevens Messiter, as Police Magistrate on 14 May, 1862, received a land concession of 24 6/10 acres at *Bambou*, Rodrigues, while Thomas Morris [John Morris' descendant] was also granted a concession of 15 acres at *Bambou* on 31 December, 1869. In his analysis of the economy of Rodrigues, Dupon observed in 1967:

*"As for lands appropriated, they represent about 1/7<sup>th</sup> of all cultivated land, and if one were to exclude the Catholic Church which, with about 40 hectares, was by far the biggest landowner on the island, and less than 10 owners who had 5 to 10 hectares each, the average property would be well below 2 arpents. The Napoleonic Code, as applied to Mauritius, was partly responsible for this division of land [...]"*<sup>275</sup>

As for the 'squatting system', we leave it to the 'Land' and 'Rodrigues' teams to discuss this at length. One major contributor to legalizing the system was Georges Jenner, Magistrate. North-Coombes explains:

*"As regards land, Jenner, unlike his predecessors, limited the inhabitants' practice of occupying crown lands as they pleased, and succeeded in inducing the Government to take positive action. The result of this was that a number of so-called "squatters" became owners of land on easy terms of payment, though as yet no rent was exacted from those who continued to cultivate crown land on verbal leases."*<sup>276</sup>

Today, the entire system of 'leases' has been developed and legalized; less resentment prevails, and the gap between landowners and 'lease holders' has narrowed.<sup>277</sup>

## CHAPTER 7 - Interviews with members of the 'Coloured Population'

### 7.1. Introduction

A study of the 'Coloured Population' of Mauritius was done through semi-structured interviews which were conducted in Mauritius as well as in Rodrigues. The importance of this study lies in seeking the point of view of the 'Coloured Population' today, concerning important issues such as their past and present relationship with the economy, family origins, employment, youth and their recommendations to bring more Truth and Justice for the 'Coloured Population', as well as for the Mauritian society.

We analyse the identity construction of our interviewees since it can be defined through their identity, be it personal or social, as it is expressed today. As identity is often linked with culture, we will also focus on the latter in our analysis. Many authors think that the identity of individuals cannot be conceived without an interaction with other groups and communities in the society of which these individuals are members. That is why we will look at the interactions of individuals with other people, and, by extension, attempt to understand what are the relationships of the group, to which they belong, with other groups.

*Gens de Couleur* in Mauritius include descendants of manumitted slaves and of free coloured immigrants to the island. Moreover, this group is characterised by the fact that its members came to the island of their own accord or were brought to the colony under contract so as to practise a trade or craft for a specified period of time. However, it is also true that the 'Coloured Population' includes descendants of 'Freed Slaves' who married individuals from other groups. To this extent, they have a very complex history and identity as a community. Do present-day *Gens de Couleur* live with this complex identity and are they aware of it? Such are the questions we attempted to partly answer.

### 7.2. Methodology

We have been conducting semi-structured interviews, allowing the interviewees to answer rather freely without being too oriented. Each interview was conducted in about one hour and concerned questions relating to group belonging, emigration in the post-Independence period, the role of women in their families, the degree of openness towards other communities and the interviewees' recommendations for a better Mauritian society.

The identity of the 'Coloured Population' is dynamic and in the context of our research, we found that our interviewees agreed to say that the group to which they belong, is not the 'Coloured Population', but rather the 'Creole community' or the General Population. Some even said they considered themselves as being Mauritians ahead of belonging to any other group. Concerning the inhabitants of Rodrigues, they considered themselves as belonging first of all to Rodrigues Island rather than belonging to any other group.

We interviewed 24 persons, 17 in Mauritius and 7 in Rodrigues. 16 of the persons being interviewed have chosen not to remain anonymous. The following table illustrates the number of interviewees by age and gender:

	Women under 45	Over 45	Men under 45	Over 45
Rodrigues	1	0	2	4
Mauritius	2	4	2	9

The time-constraints (since the research only started on 18 February, 2011) did not allow for a larger number of interviews. The team resolved to do in-depth interviews rather than extend the number of interviewees, over a period of 3 months.

The following table outlines the profile of our interviewees through their professions:-

I1	Journalist for more than 25 years
I2	Writer
I3	Politician
I4	Social worker
I5	Journalist
I6	Teacher
I7	Priest
I8	Accountant
I9	Bishop
I10	Journalist
I11	Manager
I12	Manager
I13	Historian
I14	Teacher
I15	Manager
I16	Housewife

For the interviewees who prefer to remain anonymous, their professions are as follows:-

I17	Librarian
I18	Manager
I19	Hairdresser
I20	Journalist
I21	Apiarist
I22	Manager
I23	Accountant
I24	Engineer

### 7.3. Analysis

#### 7.3.1. Concerning the term 'Coloured Population'

Regarding the term 'Coloured Population', most of the persons who have been interviewed think that it is a term which does not make much sense nowadays; they prefer other terms like 'métis' or 'créole' or Mauritian, since according to them, the term 'Coloured Population' was given by white people to categorise people who were not white.

Some of our interviewees prefer the term 'General Population', with which they have no problem, whereas others think it is a group to which everyone can belong.

*I.13 : « Pour moi ca fait pas l'ombre d'un doute ma famille s'est toujours considérée comme faisant partie de la population de couleur donc je me suis jamais considéré comme faisant partie de ce qu'on appelle les Blancs à Maurice et voila donc ce que je peux vous dire »*

Translation: "For me it is obvious that my family has always considered itself as forming part of the Coloured population; so I have never felt I belonged to what is called Whites in Mauritius that is what I can say".

#### 7.3.2. Concerning Family Origins

The interviewees are of European, African as well as Indian origin, and this is seen as a source of enrichment by the respondents. The family origins are of great interest to the interviewees as they outline the lives of their ancestors and what they passed on them; we have even got access to a bill for a marriage reception in 1901, amounting to Rs 405.80 which can be seen in the following document.

This document illustrates the importance of commemorating family events which helps much in redefining one's own identity.

See Appendix (photos) Document 1

### 7.3.3. Concerning Emigration

Many members of the interviewees' families went abroad namely to Australia after Independence ; this period was in fact marked by the emigration of Mauritians of the 'Coloured Population' fearing the so-called Hindu hegemony, as the power was going to pass on to Hindu Mauritians, the latter forming the majority in terms of numbers.

Some said, however, that there was the same percentage of emigration among other communities, concluding, therefore, that the 'Coloured Population' was not the only group which had emigrated. However, our interviewees accept the fact that in the post-independence period, there have been a lot a Mauritians who have emigrated towards Australia.

I.13: « *ceux qui sont partis sont des traîtres pour moi non j'ai toujours considéré que c'est une erreur grossière il y a plein de pays ça peut être l'Irlande ça peut être l'Italie ça peut être la Grèce ça peut être l'Égypte où ceux qui sont partis travailler ailleurs sont une richesse pour le pays peut-être plus que dans le cas des mauriciens parce que l'argent qu'ils gagnent à l'étranger ils renvoient dans leur pays et c'est une source de revenus pour leur pays vous comprenez il y a autant d'irlandais aux États-Unis qu'en Irlande il y a autant d'Italiens aux États-Unis qu'en Italie et ça double la population italienne et la population italienne en Italie et la population italienne aux États Unis donc c'est une richesse mais le tout c'est à rétablir des communications entre ces deux-là c'est ce que nous nous faisons pas assez ».*

Translation : *"Those who left were traitors for me no I have always considered that it was a big mistake there are lots of countries it could be Ireland it could be Italy it could be Greece it could be Egypt where those who went to work in another country brought a richness to their country perhaps more for Mauritians because money they get in foreign countries they send it to their country and this is a source of revenue for their country you see there are as many Irishmen in the United States as in Ireland there are as many Italians in the United States as in Italy and this doubles the Italian population in Italy and in the United States so it is a richness but what is important is that there is communication between these two that is what we do not do enough".*

- I.7 : « *Alors enne de bann peur c'est se faire domine par la classe hindoue ah sa to pa tir dan mo la tet ensuite premiere emigration concerne middle management c'est bann dimounn ki gagn enn ti job professeur lekol primer la polis par examp zonn ale pour gagn enn role ekonomik enn asiz ekonomik parski laba to pena grand diferans ant enn dimounn ki travay manuelman ek de fwa bokou pli bien peye ki enn dimounn ke enn klerk ke ressi gagn white collar skills dan enn ti job pou mwa de rezon majeur epwi ena ki dan enn ti job enn ti job epwi sonn anvi venture enn kout nou al dekouver que l'herbe n'est pas toujours verte ailleurs ».*

Translation : « *So there are those who were afraid to be dominated by the Hindu class this is obvious for me then the first emigration concerns the middle management which concerns people having a job like a teacher or policeman they emigrated in order to have an economic role as there is no big difference between a manual worker there who may be better paid than a clerk who has a white collar skilled job these are for me the two major reasons which made them want to go for adventure to discover that the grass is not greener elsewhere".*

I.6 : « *Je dois dire que l'indépendance elle-même n'a pas provoqué chez nous une émigration pour fuir les séquelles pas des séquelles mais des effets de l'indépendance où on craignait que les Hindous les Indo-Mauriciens n'est ce pas fassent aux créoles ce que les Blancs avaient fait maltraité ça on a craint ça hein même les Indiens menaçaient les autres ils disaient to guette la après l'indépendance to guette tous banne femmes dans Maurice pou nous comme ca une dame qui était la belle-mère de ma fille a entendu quelqu'un lui dire ça comme après l'indépendance pou nous tous banne femmes pou nous c'est vrai c'est pas exagéré hein elles croyaient ça ».*

*Translation : « I must say that Independence by itself has not caused emigration to go far from the consequences not the consequences but the effect of the consequences where there was a fear that the Hindu the Mauritians of Indian origin treat creoles the way Whites had mistreated them this we have feared this even Indians threatened others saying that after Independence all women would be theirs there was a woman who was the step-mother of my daughter who has heard someone say that after Independence all women would be theirs this is true it is not exaggerated they believed this would happen”.*

#### 7.3.4. Concerning access to employment (Discrimination, Privilege)

Access to work has been rather easy for the persons interviewed and they say that a networking among the *Population de Couleur* can help in recommending someone for a job or, for some, getting one themselves. This networking is based on friendship within the *Population de Couleur*. Concerning access to work it has also been pointed out that nowadays, many young people work for not much money.

*I.6: « Il y a une fille qui a un nom bien indien et elle postule pour un poste à la MIE mais cette fille qui a un nom bien indien a épousé quelqu'un qui a un nom bien créole son nom de jeune fille était un nom indien mais son nom de femme est un nom créole et on lui a dit après (elle n'a pas eu le poste) si tu avais un autre nom t'aurais été choisie ».*

*Translation: « There is a girl with an Indian name who has made an application at the MIE but this girl who had an Indian name was married to someone who had a Creole name her maiden name was Indian but her married name was a Creole name; she was told afterwards (she was not recruited for the post) that if you had another name you would have been chosen ».*

#### 7.3.5. Concerning relationship with other communities

For most of the interviewees, the 'Coloured Population' has an open mind, when dealing with persons belonging to other communities; there has even been religious conversion in a family due to interreligious marriage.

*I.13: « Ca change allons prendre par exemple dans nos écoles moi quand j'entre au Collège du St. Esprit je fais un peu figure d'exception aujourd'hui je sais au collège du Saint-Esprit on rencontre des Mauriciens de toutes races de toutes cultures sans aucun problème ça fait 30-40 ans ça a changé de tout au tout ce n'est plus la même chose je connais l'époque où les propriétaires de campement appartenaient à une seule communauté aujourd'hui c'est loin d'être le cas j'ai connu l'époque où ceux qui roulaient dans des belles voitures venaient d'une même communauté ça n'est plus le cas donc les choses évoluent c'est j'ai aucun doute là-dessus et c'est tant mieux rien n'était réservé à une communauté et interdit aux autres ».*

*Translation : « This has changed; take for example in our schools myself when I started St.Esprit College I was among the exceptions whereas today I know that in St. Esprit College there are Mauritians of all cultures without any problems since 30-40 years this has changed totally it's not the same thing I know the period when owners of a second house were from one community only today this is far from being the case I knew the time when those who travelled in beautiful cars were from only one community this is no longer the case things have changed this I am sure and it is for the best nothing is reserved for one community and forbidden for others”.*

*I.13 : « (...) On veut faire croire mais ça n'existe pas dans la réalité les politiciens veulent nous faire croire que toutes les personnes allant à la chasse viennent d'une communauté que tous ceux qui ont un campement c'est une communauté tous ceux qui vont aux courses c'est une communauté mais il suffit d'ouvrir les yeux et de savoir que ce sont des mensonges il n'y a pas de catégorie il y a des mauriciens qui s'intéressent à la chasse il y a des mauriciens qui s'intéressent aux courses il y a des mauriciens qui veulent avoir un campement un point c'est tout (...) Il y aura de plus en*

*plus de mariages mixtes hein ça va être de plus en plus accepté il y aura des enfants avec un papa hindou et une maman musulmane une maman créole et un papa hindou et ce mauricien - là il sera encore moins communaliste que moi parce qu'il aura vécu avec deux cultures sur sa tête ».*

*Translation : « (...) They make us believe it but this does not exist in reality politicians make us think that all persons going to hunt come from one community, that all those who have a second house come from one community, that all those who watch horse-racing are from one community, but we must open our eyes to know that these are lies there are no categories; there are Mauritians who are interested in hunting, there are Mauritians who are interested in horse-racing there are Mauritians who want to have a second house that's all (...). There will be more and more mixed marriages it will be more and more accepted; there will be children with a Hindu father and a Muslim mother, a Creole mother and a Hindu father and this Mauritian will be even less communalistic than me because he would have lived with two different cultures”.*

*I.1 : « les gens qui ont les moyens payent et se retrouvent entre eux ce qui est intéressant c'est se retrouver entre eux donc à ne plus être exclusivement ethnique il devient socio- économique et c'est clair que les enfants qui sont dans ces établissements payants sont les enfants qui ont plus de chance d'avoir fait un voyage avant l'âge de 12 ans à disneyworld ne serait-ce qu'avoir été à la Réunion alors on arrive on est lauréat à 18 ans au Collège du St Esprit on n'a pas forcément voyagé on est resté à Maurice ».*

*Translation: «people who have the means pay and find themselves together what is interesting is not to be exclusively ethnic it becomes socio-economic and it is clear that children who are in paying schools are children who have more of a chance to have done a trip before 12 years old to Disneyworld just a trip to Réunion Island we can be a Laureate at 18 years old at St. Esprit College and not having travelled we have stayed in Mauritius”.*

*I.13 : « allons prendre par exemple dans nos écoles moi quand j'entre au Collège du St. Esprit je fais un peu figure d'exception aujourd'hui je sais au Collège du Saint-Esprit on rencontre des Mauriciens de toutes races de toutes cultures sans aucun problème »*

*Translation: “Let's take the example in our schools. Myself when I started school in St. Esprit I was among the exceptions; today I know at St. Esprit College we encounter Mauritians of all races of all cultures without any problem”.*

### 7.3.6 Role of women within the family

Women within the interviewees' families have been contributing a lot to giving a structure to the family, since whether they worked or not, they have contributed to the well-being of the members of their families. Their ability to cope with work as well as with domestic tasks is clearly revealed by the interviews together with their determination to head the family in case of the death of their husband, leaving a household with small children to look after and a living to gain through hard work. Far from being a story, the role of women in the families' history, as well as at present, leads us to conclude that the stability of the family depends on the way they handle current and daily situations as well as taking important decisions, such as the type of education to be given to children and grandchildren, one of our interviewees points out.

According to some, the 'Coloured Population' is composed of creative people having artistic qualities. Many Coloured people are most successful at artistic works, and this is a specificity of this group. It is also argued by our interviewees that facilities of expression in the French language resulted in many people from this group going into jobs where this would be useful; that is why in the past (as this is no longer the case, according to one interviewee) journalists were mainly from this group.

Speaking French is very important for this group; only two interviewees out of 24 choose to speak in Creole even if they spoke French as well as Creole. Concerning the French Language, then, two of our interviewees said that French, as well as English, are important in schools, more than the Creole Language. One interviewee took the example of the importance of knowing French and English which allowed a young person to work abroad in the Tourism Sector. For the said interviewee, if there were no teaching of French or English, the Creole Language could not have the same impact on the success of this person.

I.11: « *quand je suis revenu de France, à la mort de mon père un des chocs que j'ai eu une des images pas choc je vois ma mère signer un chèque du vivant de mon père elle n'a jamais signé un chèque et c'est la génération de ma mère dans la génération qui est la mienne toutes mes belles sœurs ont travaillé et ma femme travaille* ».

Translation : « *when I came back from France when my father died one of the things that choked me was when I saw my mother sign a cheque when my father was alive she never signed a cheque and this was the generation of my mother and in my generation all my sisters-in-law have worked and my wife works* ».

I.13 : « *Il y a une évolution je prends le cas de ma mère c'est très typique je l'ai connue femme au foyer et ensuite elle se retrouve veuve à 36 ans avec 6 enfants à nourrir et toujours habituée à être femme au foyer elle est obligée de travailler pour nourrir ses six enfants donc voilà un p'tit peu ce qui s'est passé donc je crois d'une génération à l'autre ma grand-mère elle n'a jamais travaillé elle s'est toujours occupée que de son foyer et de son mari ma mère a connu un peu les deux expériences une dizaine d'années où elle a été femme au foyer et ensuite elle a dû devenir le gagne-pain de la famille et mon épouse et ma fille s'imaginent pas femme au foyer et restant à la maison pendant que le mari va travailler il y a un partage des responsabilités familiales ménagères également.* »

Translation: « *There has been an evolution. I take the case of my mother; this is typical; I knew her as a housewife and then she became widow at 36 years old with 6 children to bring up and was always a housewife; she was obliged to work to feed her six children that is how this happened. So I think that from one generation to another, my grandmother never worked she always looked after her house and her husband. My mother has known the two experiences for about 10 years and afterwards she had to be the breadwinner of the family; and my wife and my daughter do not imagine themselves as housewives and staying at home, while the husband goes out to work, there is a sharing of domestic tasks also* ».

### 7.3.7 Landownership

One of our interviewees has his family owning a 'propriété sucrière' (*Mon Repos*, acquired in 1850) in the North, a region where he says considerable properties have been owned by the Coloured Population until 1900 where the owners were white people, as stated by the interviewee whose family owns this *propriété*. He said that as from 1900, the ownership of the land in the North of the country passed from the 'Coloured Population' ownership to the White Population.

As we can see in the following figure, for the ownership of *The Mount*, the change from the Antelme family to de Rosnay indicates the change from the 'Coloured Population' ownership to White ownership as from 1908.

See Appendix (photos) Document 2

The interviewee's family remains therefore one of the exceptions among the 'Coloured Population' to own a *propriété sucrière*. The following picture is that of the first owner of the land, Mrs Louise DUPONT-FELINE, in 1840. The picture taken at the interviewee's house is in the Appendix as well as other pictures of his family.

See Appendix (photos) Document 3

According to this interviewee, of the GENTIL family, the landowners in the North included the following families in 1880: Hermans, Guillot, Duhamel, Laroche, Latour, Mesnard, Chauvet, Collard, Perille, Diore...

A land plan dated 1880 by Descubes illustrates landownership by the Coloured Population in this period.

### 7.3.8 Comparison between women and men

There are no significant differences between men and women in their interviews, except that women have proved to be able to cumulate domestic tasks as well as professional ones, even if they were not fully employed. All men interviewed argued that women had played a great role in their families, in the past and at present, as already said, but what we have seen is that women interviewed all worked, and even men interviewed think it is normal for women to work. The education of children in the families of our interviewees has been influenced by decision-taking by women in order to bring them up or to choose a certain type of education. The following examples illustrate, in the first case, a woman bringing up alone her six children and, in the second case, a young woman brought up alone by her mother:-

I.13: « *elle se retrouve veuve à 36 ans avec 6 enfants à nourrir et toujours habituée à être femme au foyer elle est obligée de travailler pour nourrir ses six enfants* ».

Translation: "She finds herself a widow at 36 years old with 6 children to feed and having always been a housewife, she finds herself obliged to work in order to feed her six children".

I.14: « *Disons moi j'ai été élevée avec ma maman disons mon papa ils se sont séparés depuis que j'avais un an donc je vois comme si ma maman a joué pleinement son rôle de femme maman en même temps* »

Translation: "I can say I have been brought up by my mother, as my father and she parted when I was one year old; so I see that my mother has played wholly her role as a woman and mother at the same time".

We have seen in these two cases that the personal identities of these women are predominant in their lives more than their group belonging. This is an indication of the gap which exists between what people really live and the group identity which may be attributed to them in terms of 'Coloured Population' belonging. This is clearly outlined by the young interviewees, as we will see later.

### 7.3.9 Comparison between young people and old people

It is important to compare the interviewees' answers according to their age, as Cohen-Emerique<sup>278</sup> states that "*quelque fois nous croyons implicitement partager les mêmes codes culturels que d'autres populations de la même nationalité, alors qu'en fait ils sont très éloignés de notre manière de voir les choses du fait que ces populations appartiennent à un autre milieu social ou une autre génération, par exemple*". « *Dans le contexte mauricien, selon ce que dit Cohen Emerique (ibid.) dans tout contexte multiculturel, on pourrait avoir tendance à croire que nous sommes proches des personnes appartenant à la même communauté alors qu'en réalité, nous pouvons être très différents du fait que les classes sociales soient différentes ou qu'il y ait différentes générations en situation.* »<sup>279</sup>

The young interviewees (up to 45 years) are rather in favour personal identity where what is considered as being important are values and interests rather than belonging to a specific group. In fact, the sense of belonging to a community, as it is outlined in Mauritius, seems to be more important for older interviewees compared to young ones.

Furthermore, young people are more oriented towards the present and the future, rather than the past, which is an attitude which we expected. There is a clear demarcation from the group identity in favour of personal success and a society of *métis*, even if this attitude is shared by two of our older interviewees. This similar attitude is illustrated in the following examples:-

I.9: « *il y a un livre de ... que j'aime beaucoup et qui dit nous sommes tous des métis je crois que l'histoire de l'humanité est un grand métissage* »

Translation: « *there is a book that I like a lot and which says that we are all métis I think that the history of humankind is a great métissage* »

I.15 : « *la population créole se dessine un nouveau profil je crois qu'avec le métissage je crois qu'on fait partie d'une génération qui sont un produit même de ce véritable métissage de culture de personnes d'expérience aujourd'hui le terme créole je crois est approprié à ça mais demande aussi une réflexion pour évoluer dans une plus large panoplie pouvoir dessiner un nouveau terme je crois et des noms sont cités des gens de couleur je crois le terme métis me semble beaucoup plus approprié parce que le métissage veut dire vraiment les racines de cette communauté qui est née et très franchement à partir de deux arbres et je crois deux arbres assez distincts assez différents en terme de culture, différents en terme de couleur de peau de pigmentation et culturellement* ».

Translation: "The 'Creole Population' has a new profile. I think that with the metissage, I think that we form part of a generation which is a product of this real metissage of culture of persons of experience. Today the term Creole, I think, is appropriate for this but requires also some thinking for us to stand in a larger setting in order to have a new significance I think, and the names of coloured people, I think, the term métis is more appropriate because 'métissage' really stands for the roots of this community which was born from two distinct branches quite different in terms of culture and in terms of skin pigmentation, of pigmentation and culturally speaking".

#### 7.3.10 Reported forms of racism

There are forms of racism which have been denounced; for example in the work recruitment process, there has been a neglect of Mauritians of African origins through a certain degree of discrimination when recruitment goes on. Furthermore, white Mauritians created a segmentation, even if the 'Coloured Population' is of white and of Indian/African origins. This is represented in our research by a perception of the culture and all work being done by the 'Coloured Population', whereas white people were rather spectators of the work being done by the 'Coloured population'.

I.6 : « *les Gens de Couleur ont une liberté de pensée les Gens de Couleur ils vont à la messe les dimanches ils s'amuse et tout ce qui n'existe pas chez les blancs il y en a qui sont des libres penseurs ils sont marginalisés tout de suite ils sont marginalisés regardez Malcolm de Chazal maintenant on le vénère mais il a été marginalisé toute sa vie par sa propre communauté ses amis étaient des gens de couleur hein Malcolm de Chazal il n'est pas le seul (...) parce qu'il donnait son opinion* ».

Translation: « *the Gens de Couleur have a freedom of thought the Gens de Couleur they go to the mass on Sundays they have fun and this does not exist in the White population they have a freedom of thought they are marginalised see Malcolm de Chazal now we like him but he has been marginalised all his life by his own community his friends were Coloured People. Malcolm de Chazal, he is not the only one (...) because he gave his opinion*".

#### 7.4 A comparative point of view between Mauritius Island and Rodrigues Island

See Appendix (photos) Picture 1

Concerning persons interviewed in Rodrigues, we note that there is a high sense of belonging to the island and the sense of belonging to a community does not exist. It is true that 98% of inhabitants of Rodrigues are Christian and are of African origin, frequently named 'Creoles' in Mauritius.

That is why the term 'Coloured Population' does not make any sense for inhabitants of Rodrigues who have a sense of national identity over and above any other sense of belonging; this

difference compared to Mauritians who have been interviewed indicates the importance of conducting interviews in Rodrigues. One of our interviewees in Mauritius island says he admires the attitude of people in Rodrigues:-

*I.2 : " j'admire les Rodriguais qui sont tous Rodriguais vous n'avez pas de Sino-Rodriguais ou d'Indo-Rodriguais etc. Je trouve que c'est un exemple à suivre et ça c'est une chose que nous n'arriverons jamais à faire tant qu'il y aura la constitution que nous avons n'est-ce pas puisque c'est basé sur l'ethnicité des Mauriciens justement ».*

*Translation: "I admire Rodriguans who are all Rodriguans you do not have Sino-Rodriguans or Indo-Rodriguans etc. I think that this is an example to follow and we will never be able to do this until there is a Constitution that we have isn't it as it is based on ethnicity of Mauritians".*

The composition of the population of the two islands allows us to have a different point of view of the two societies with different ethnic and religious origins.

Therefore, we can see the importance of social identity, compared to personal identity; success in life is related to group belonging, even if the persons who have been interviewed and who are rather young give priority to personal identity through personal choices and interests.

In Rodrigues, we see that there is a big difference with Mauritius as all the interviewees in Rodrigues consider themselves first and foremost as Rodriguans, and it would not be thinkable to say 'Sino-Rodriguais' as we would say 'Sino-Mauricien' in the Mauritian context. Furthermore, the perception of skin colour is different as stated below; a white Rodriguan can be fisherman, whereas in Mauritius this is less likely to happen.

*I.17: « on ne peut pas dire à Rodrigues que disons ceux qui ont la peau claire ou sont blancs avec des yeux bleus sont de la bourgeoisie et ceux qui ont la peau noire sont les prolétaires si vous allez disons à Baie aux Huitres vous verrez des gens aux yeux bleus qui sont pêcheurs et qui parlent créole donc dans ce sens-là je pense quand on arrive à Rodrigues il faut se laisser un peu dépaysé il y a pas au départ une bourgeoisie une classe prolétaire c'est une société beaucoup plus homogène tous les enfants vont dans la même école nous allons tous dans le même hôpital».*

says one of our interviewees, who explains the difference between Mauritius island and Rodrigues island and we can see that the perception of Rodriguans of their island is quite different to the perception of Mauritians of their island.

*Translation : " one cannot say that in Rodrigues those who are of light coloured skin or who are white with blue eyes are of the bourgeoisie and those with black skin are proletarians if you go say to Oyster Bay you will see people with blue eyes who are fishermen and who speak Creole so in this sense here I think that when you arrive in Rodrigues you must let the country change your way of seeing things from the start there is not one bourgeoisie class and one proletarian class it's a society which is much more homogeneous all children go to the same school we go to the same hospital"*

#### 7.4.1 Politics in Rodrigues

*I.3 : « En 1967 il y a eu la campagne pour l'indépendance de Maurice et ... est venu ici sachant que Rodrigues a 99% de Créoles il a utilisé le mensonge à 100% si je vous dis ça c'est pour vous dire que aujourd'hui aussi on continue à le faire dire aux Rodriguais si ou pas voter bateau pas pou vini ou pou crever la faim l'église pou ferme pou nourri cochon et ainsi de suite les gens écoutent les gens ont voté le PMSD contre l'indépendance en association avec l'Angleterre à à peu près 98% et puis moi après l'indépendance je suis arrivé j'ai quitté la France je suis arrivé ici en 1966 et c'était encore dans la bataille pour l'indépendance et j'étais pour l'indépendance de Maurice parce que l'indépendance c'est une manière c'est la route c'est pourquoi en '76 nous avons dit aux Rodriguais Rodriguais deboute lors to deux lipieds '76 et la il y a eu*

*depuis 66, 78 c'est bon de connaître un peu l'histoire de Rodrigues politique et en '68 les autres sont venus pour dire aux Rodriguais refusez le drapeau mauricien le 12 mars 68 c'est pourquoi on n'a pas pu hisser le drapeau le 12 mars 68 on a hissé le drapeau le 12 mars 69 ce qui fait que Rodrigues fête l'indépendance de Maurice de la République une année en retard ».*

Summary of quote: *In 1967 there has been a campaign for independence of Mauritius and someone has come and has used lies to convince Rodriguans that they should vote against Independence in 1968 the leader of PSMD told the Rodriguans that they would become poor if they voted for independence. That is why the Mauritian flag was drawn up only in 1969.*

We can see that what our interviewee is saying is that a politician has come to Rodrigues to ask Rodriguans to vote against the independence of Mauritius and even in 1968, there are those who came to Rodrigues asking to refuse the Mauritian flag and that is why it is only in 1969, one year after the Independence day, that Rodrigues lifted the Mauritian flag.

## 7.5 General conclusions

### Under-representation of the 'General Population'

The 'Coloured Population' forms part of the general population which is officially considered as such in the Constitution of Mauritius. Mauritians from this group are under represented in several areas of the society, be it economic, social, cultural or political sectors of Mauritius.

### Group identity in Mauritius

The older persons interviewed refer to the social belonging and to the community belonging, whereas more young people consider, first and foremost, personal identity.

Concerning the social identity, as already mentioned, our interviewees who refer to this type of identity feel they belong to the *Population de Couleur* but for most of them, what matters most is the belonging to the Creole group and 'General Population'. From the point of view of Tajfel (1982), social identity is being aware of belonging to a group, and this includes all the representations and symbolic elements shared by members of the same group. All the representations and the symbolic elements contribute to the social position of the group.

If social identity concerns the attributes of the group, personal identity implies the personal traits, from the point of view of Tajfel and Turner (1986). So, we can say that the interviewees who are younger are more oriented towards the individual, by emphasizing the interests and the values, whereas the older interviewees have a strong sense of community belonging.

*I.15 : « Le problème de la communauté créole c'est je crois qu'elle ne s'est jamais intégrée si elle n'a pas sa place aujourd'hui je trouve qu'elle n'a pas abordé une réflexion sur son avenir dans la société ça veut dire toute réussite que ça soit politique économique sociale culturelle demande un investissement à long terme (...) moi je suis dans une compagnie sondage j'ai besoin d'employer des gradués c'est clair ça on n'a pas besoin de chiffre pour montrer vous recevez 100 applications moi je déduis aujourd'hui si vous voyez 4 gradués créoles c'est beaucoup les autres personnes aussi me disent dans les services financiers c'est encore plus peu ça veut dire par rapport à des postes de responsabilité aujourd'hui que ce soit professionnel le créole est sérieusement en retard sur les autres communautés ».*

Translation: *"The problem of the Creole Community I think is that it has never really been integrated if it has not its place today I think it has not done any thinking about its future in the society it means that all success be it political economic social or cultural requires a long term investment (...) myself I am in a research company I need to employ graduates it's clear you do not need figures to show if you have 100 applications, I conclude that if you see 4 Creole graduates it's a big number; in other sectors as in the financial sector it's worse concerning posts requiring a certain*

*responsibility today in the professional area the Creole is seriously lagging behind compared to other communities”.*

Qu'est ce qui a manqué au niveau de Maurice ?

I.11: « *Je crois qu'il y a un momentum qui a été brisé ok sur une démarche sur la recherche d'une identité culturelle mauricienne parce que l'identité mauricienne n'émergera qu'avec un dialogue des discussions des échanges ben disons les intellectuels et je crois que cette frange qui pouvait amener un point de vue et une contribution à l'émergence de l'identité mauricienne ben il y a une bonne partie de cette tranche là qui est partie ça aurait pu être formel ou informel vous savez en parlant vous et moi l'échange enrichit déjà nos points de vue et nos quêtes vers une identité quelconque c'est dans la fréquentation de l'autre c'est dans les interactions avec l'autre pas nécessairement s'asseoir autour d'une table et débattre formellement autour de la question moi je dis il y a un ensemble peut-être il y a plus d'informel que de formel ».*

Translation: *“I think there is a momentum which has been broken in the search for a cultural Mauritian identity because the Mauritian identity will emerge only with a dialogue, discussions, exchanges among intellectuals and I think this group which could make a good contribution to the country has left the country this could be informal or formal you know while speaking you and me this exchange enriches already our point of views and our quests towards an identity it is in interactions with others not necessarily around a table to discuss formally about this question there is perhaps more informal than formal” .*

## 8. Recommendations emerging from the interviews

Education has been mentioned several times and it implies more than one age-range; in general our interviewees would like education to cater for young people for them to have more respect for others, education should also be for parents

I.11 :« *Je pense certainement à l'éducation pas l'éducation des enfants je pense à l'éducation des parents des adultes je pense qu'il y a de l'investissement à faire pour amener une réflexion je crois qu'il y a des rôles modèles à venir inculquer le sens de la responsabilité et de la contribution du pays et je crois que les rôle modèles peuvent venir de partout je crois qui ont réussi quelle que soit leur appartenance ou groupe ethnique, il faut que eux aussi ils viennent partager comment ils ont réussi il faut pas faire une chose créole quoi il faut que ça soit une démarche nationale »*

So that they can bring up well their children, Mauritian history and citizenship should be taught at school.

- We see that education is very important in the interviewees' perception of how things can be better in Mauritius, and their expectations are clearly oriented towards a qualitative education accessible to all Mauritians and a sense of citizenship.
- Concerning Rodrigues, there are recommendations concerning the change which should be brought about in the way people of Rodrigues are seen in Mauritius:-

I.19 : « *Voilà il me semble comme si dirait par rapport à toute la question d'histoire je trouve que c'est une merveilleuse occasion de mettre en valeur l'histoire propre de Rodrigues et puis je pense que ça a été un peu corrigé parce qu'il y a des prises de conscience de cela mais souvent par exemple dans les livres d'école on représentait le Rodriguais celui qui amène une cajotte poule sur la tête on présentera rarement un Rodriguais dentiste on présentera rarement un Rodriguais pharmacien ou même s'il y a des Rodriguais dentiste médecin et professeur (...) la terre c'est des stéréotypes ça je pense qu'il faut par exemple pour que les Rodriguais travaillent la terre il faut que ça soit rentable on ne peut pas attendre que la pluie tombe disons il faudrait de l'irrigation des marches etc. pour les produits je sais par exemple récemment à Gravier il y avait des milliers de limons qui tombaient car il n'y avait pas de marché*

*pour ça et même s'il y a des effort qui sont faits ça je pense des stéréotypes mettre en valeur l'histoire de Rodrigues et oui puis je vous dis encourager les Rodriguais dans cette grande aventure ».*

Translation: « Concerning the question of history I think it is a good occasion to valorise the specific history of Rodrigues and then I think that this has been partly corrected because of sensitisation but often in school books for example Rodriguans were represented as carrying a hen cage on their head and rarely are the Rodriguans represented as a dentist, doctor or teacher (...) these are stereotypes Rodriguans need to cultivate their land and they cannot wait for rain to fall there needs to be irrigation and a market for example at Gravier there were hundreds of lemons which fell and there was no market even if there are efforts being made there are stereotypes the history of Rodrigues should be valorised and encourage Rodriguans in this great adventure”.

Furthermore, concerning the specificity of the Creole language in Rodrigues, the study of Creole in schools should be adjusted, as well as for public holidays:-

*« se enn kestion kultur ek relizion par examp bann konze public bann jour ferie isi dan rodrigues ena enn jour ferie pou maha shivaratree ok kouma la repiblik isi pa konpran nanie kip e pase enn minorite kip e viv sa alors que pour la fet de la vierge alor que se enne fet katolik la plupar pena konze li enn lane sur deux donk enn lot fet kretienn ki kapav existe fet dieu a lepok tou sa mo krwar ti bizin reget bann zourferie a rodrigue en fonction de la vie rodriguaise par examp le 12 octobre qui est le jour de l'autonomie de rodrigues dimounn travay sa zour la alor ti bizin enn konze sa zour la ena lot conges public ki nou pa konserne monn pran maha shivaratree li kapav enn lot fet religieuse isi nou na enn minority dimounn kapav dan milie profesionel ena bann kamarad de foi hindou ki bizin la me seleman le jour ferie li bizin rekalkile an fonksion de l'histoire de la culture de la religion »*

Translation : «it is a cultural and religious question for example the public holidays here in Rodrigues there is a public holiday for Maha Shivaratree but here we do not understand anything there is a minority which lives this whereas for the Assumption Day it is a Catholic celebration it is once every two years and another Christian celebration would be Fête Dieu all this should be reviewed and the public holidays should in relation with the Rodriguan life for example the 12th October which is the day of the Autonomy of Rodrigues people work on this day and it should be a public holiday on this day. I have taken the example of Maha Sivaratree it could be another religious day where a minority of persons in the professional area some Hindu friend are concerned. However, the public holidays should be recalculated following the history of culture and religion”.

We can see the specificity of Rodrigues which needs to be looked into for a better contextualised life for Rodriguans, be it for religious celebrations as to celebrate their autonomous status.

## RECOMMENDATIONS

We recommend that urgent consideration be given to the following, easily implemented, actions on the part of Government and the nation:

1. That all Mauritians living abroad, in other countries, who emigrated, either at the time of Independence or more recently, be actively encouraged to return to Mauritius and be welcomed with open arms. A system of Tax Incentives for pensioners or older people should be set up to this end; young people should better be paid in their first graduate positions.
2. That the accusation of 'betraying Mauritius', or any such divisive language or hate discourse, be severely dealt with through a *Bureau* that would investigate accusations of racial abuse against individuals. The use of terms 'mulâtres', 'mozambiques', or such appellations, should be actively punished, as must be any communalistic initiatives or behaviour. Communalistic movements should be discouraged.
3. A programme of Education in civic, humanistic and moral values, aimed at strengthening bonds between communities, should be introduced at all levels, primary, secondary and tertiary. A series of manuals, with gradual and varying contents, should be prepared to this end by teams of educators. A similar public programme of citizenship should be available to adults at large.
4. That a new history of Mauritius be written by a research team, emerging from the Truth and Justice Commission, and using some of the ideas mooted by many communities. This history should emphasise the contribution of *all communities/groups* to the development of the Mauritian nation. A good example of this approach is Jean-Claude de l'Estrac's *L'île Maurice racontée à mes petits enfants*. On the other hand, histories based on one community - e.g. Sino-Mauritians, the 'Coloured Population' - should be actively discouraged. A simplified version of the history of slavery and indentured labour, could also be envisaged for school children.
5. That a *Ministry of Intercultural Affairs* be created by the Government, with the Minister belonging, in turn, to different communities. The programme should be suggested by leaders of various communities in Mauritius.
6. That a programme of *Affirmative Action or positive discrimination*, in the educational area, be launched in Rodrigues to allow young Rodriguans better access to the latest material and resources. The lack of educational resources in Rodrigues is apparent to all, and a relevant Tertiary College, based on the current urgent needs of Rodriguans, should be set up. Education is the key to progress in Rodrigues but it must be offered on their door-step - not only in Mauritius.
7. The Government of Mauritius has a duty to be seen to, but also to genuinely, erase *nepotism* that leads, for example, to individuals being appointed, or promoted, on the basis of "whom you know". This approach and attitude are especially divisive and prevalent in the Civil Service and Ministries. Until it is eradicated, no *Justice* or *Truth* will prevail, and no *Trust* will exist in those in power. Nepotism is, in effect, a form of corruption, and a system of appeal procedures, against either a lack of promotion, or not being appointed, should exist in the country's Civil Service. Australia is a good model of such an appeal system.
8. Political representation of the 'General Population', and the Creoles in particular, and leadership at the top of Government, are essential for the community to retain its confidence in Government. Reference to the community through political parties is insufficient. The community (Coloured and Creole) does not feel that its politicians are eager to look after the 'Creole' interests; rather, they look after their own. A 'malaise créole' still persists because of this among the disadvantaged.

9. The reactions and actions of Government against some daily newspapers, with a 'Creole' leadership - as opposed to other newspapers with Indian financial support - indicate a clear bias against 'Creoles' and any form of critical thinking in the press. Freedom of the Press needs to be restored absolutely, and fairness must prevail. All media must receive the same treatment.

10. A public and in-depth debate on the findings of the Truth and Justice Commission must be held nationwide, lest the communities and those who have worked hard on the Report, should feel that their efforts have been in vain, and that much Truth and sought-after Justice have been brushed under the carpet. This debate should be at grassroots level, on national television and on radio. Truth and Justice Commissioners could be asked to take part. A synopsis of key issues should be produced with the *approval of the Prime Minister and President of the Republic*.

11. Financial compensation or reparation by the 'Coloured Population' for any ancestors who may have been slave-owners, is unthinkable, since the *Gens de couleur* are themselves partly descendants of slaves, and the distribution of 'White' and 'slave' blood is impossible to evaluate. Any such attempt at labelling the *Gens de couleur* as descendants of *esclavagistes* should be discarded altogether and will have a thoroughly divisive and psychologically negative impact.

*'..If prejudice is a monster, it is a protean, ubiquitous, treacherous one; in order to destroy it, one has to scrutinize and attack the socio-economic infrastructures which generate it, the cultural foundations which feed it; reforming them is the only way to extirpate the monster.'*<sup>1</sup>

## ACKNOWLEDGMENTS

Several authors have contributed to this report and need to be acknowledged and thanked for their important work. The research team on *Race Discourse, Policy, Practice and Experience* has, in general, submitted data or provided research assistance, which has been useful in analysing the consequences of racism in Mauritius, in order to fulfil the mandate of the Mauritius Truth and Justice Commission. The data collected is synthesized, analysed and presented in this report. The collection and collation of data, however, would not be entirely possible without the additional assistance of administrators at the TJC. Thus, we would also like to thank the administrators and commissioners of the TJC, who facilitated the logistical aspects of running the project and also assisted in sourcing valuable contacts for the research.

Readers of this report will note that it includes substantive extracts from interviews and observations. The reason for including these extracts is so that the actual words and experiences of Mauritians are expressed. The extracts are also included to support or advance arguments made by the team. These extracts were supplied by three key researchers on the team: Nosipho Mngomezulu who has researched the experiences of the youths in Mauritius; Sophie Le Chartier who has researched the general experiences of racism as well as the role of institutions in promoting racist practices; Ingrid van der Heijden who researched the construction of identity and race among the Franco-Mauritians and Tsidi Tshabalala (the team's clinical psychologist) who investigated the psychological burdens of racism. Research assistants: Yogita Kunvar, Dreesha Teelwah and Nitisha Chacoory conducted general observations and interviews on gender and racial discrimination. Thus, I would also like to thank all members of the team who contributed to the project, including research assistants who helped us at the last moment. As the final editor of this reports, however, I (Rosabelle Boswell [nee Laville]) take full responsibility for the collating and analysis of the data. Finally but by no means least, we would like to extend our heartfelt gratitude and thanks to the Mauritians who contributed to this research project. Without your input, we would not have the deep understanding (which we now have), of the legacies of racism and its impact on the population.

## EXECUTIVE SUMMARY

This report documents the discourses, practices and experiences of race in Mauritius. This is no small task, given the complexity of identities and the complexities of social structure in Mauritius. The society is affected by racial prejudice, is cut across by class and caste and is still largely patriarchal. Furthermore, as a modernising State, Mauritius is experiencing new waves of immigration, the increased use of internet technology, an increased participation in global business as well as increasing numbers of international tourists. These changes are impacting on social relations transforming Mauritius into a globalised society and its people, global citizens. In view of the transformative capacity of globalisation one might ask why one would 'need' the investigation of racial discourses and practices, especially at a time when Mauritius is experiencing positive economic growth and has relative social stability. Is there not a risk that a report of this nature will bring about instability or further distrust? We, the team members, argue that this is not the case. As we found out, Mauritians long for an honest reflection on the past as well as an honest account of the present.

Secondly, elsewhere (and as one of the team members for this research project noted), in the South Africa, where there was a Truth and Reconciliation Commission (TRC), 'a context where pluralism is seen as a fragile matrix, discussion of inter-racial discord is seen as a negative, destabilising peace (Kayser 2005:18)' (Mngomezulu 2011). Thus this report also argues (apart from the fact that the Government of Mauritius has approved the creation of a Truth and Justice Commission), that developing societies need to achieve both social and economic advancement. No society can claim to have 'progressed', if it has a significant percentage of its population either living in poverty and/or experiencing racial marginalisation on a daily basis (Das, Kleinman, Ramphele, Reynolds 2001). It is the finding of this team that the negative legacies of slavery and indenture are still evident in Mauritius and continue to impede social justice and economic progress.

The data collected for, and presented in, this report specifically focuses on the descendants of slaves and the descendants of indentured labourers. As is noted in the report, it is not easy to clearly and definitively distinguish between these two categories mainly because slavery has been abolished for nearly two centuries in Mauritius and also because the population of Mauritius has experienced significant interethnic mixing since the abolition of slavery. However, in the course of this research, there were individuals who identified themselves as descendants of slaves or descendants of indentured labourers, referring to either phenotype or immigration records to assert a particular identity. In compiling this report, we have remained sensitive to issues of identity construction and assertion but have not lost sight of the fact that a significant percentage of slave descendants and indentured labour descendants exist in Mauritius and that these identities, as well as the fact that the experiences that flow from these are real.

The data collected for the report was collected intermittently over a period of two years. However, the report does not claim to offer an exhaustive account of racial experiences in Mauritius, and it is proposed that this report be read in conjunction with the more detailed, individual and mostly anthropological accounts produced by the researchers on this project.

The report begins with an analysis of the origins of race discourse, tracing this back to the mid 1450s, when Pope Nicholas V endorsed a Papal Bull which enabled the Portuguese to enslave black Africans in the Congo. While slavery itself predates the 15<sup>th</sup> century, it was from this time onwards that Europeans became 'involved' more systematically in the enslavement of black Africans. With regard to Mauritius, it is noted that from the beginning of the Enlightenment era in Europe, Science was used to assert the existence of races and their unequal treatment. Prominent scientists of the day, such as George Cuvier, Johannes Blumenbach and Carl Linnaeus, set the foundation for racist thinking. Literary giants, such as Voltaire, also promoted racist thinking, ranking black Africans lower than all other identified racial groups. The works of these scholars promoted a trait-based concept of race in which members of a particular race group are believed to be geographically located. Thus, racial groups are the way they are because they evolved separately in different geographical locations. In doing so, they also developed particular physical and intellectual capacities.

The work of these scientists and scholars emerged into the public sphere, influencing public opinion, social discourse and ultimately the Law. In 1804, Napoleon Bonaparte's reassertion of the *Code Noir* in France's territories (a set of laws designed to regulate the slave system and categorise black slaves as property), led to the consolidation of racist practices in society. The *Code Noir* was implemented in Mauritius and attempted to fully control the lives of slaves and their descendants.

Who were these slaves? Although this report does not offer a substantive account of that history, it is important to note that there were also slaves of Indian origins in Mauritius. From what we gather from secondary sources on the treatment of slaves in general, these individuals must have also experienced the same hardships as those coming from Africa. Furthermore, the abolition of slavery in 1835 and the arrival of indentured labourers from the subcontinent of India in Mauritius continued the legacy of slave practices. As historians on Mauritius, such as Megan Vaughan, Vijaya Teelock and Marina Carter, remind us - the system of apprenticeship ensured the oppression of slave descendants and then indentured labourers after abolition.

A key argument made in this report (as well as most of the evidence supplied in this report) suggests that Mauritians with a visually discernable African ancestry have experienced, and continue to experience racism more directly and regularly than others in Mauritian society. These individuals, today discussed as slave descendants, find it difficult to experience belonging to a Mauritian society and also experience discrimination in various social and economic spaces across the island. Secondly, it is argued that there is a similar experience among those who may be identified as indentured labour descendants. For the latter, however, there is also discrimination on the basis of caste, such that (and the Social Stratification project should provide further information on this), caste becomes an essential category with biological overtones. A further argument made in this report is that race relations in Mauritius are cut across by age and gender. Therefore, to address the issue of racial inequality and discrimination in Mauritius, the Government and/or other responsible bodies will need to factor in these cross-cutting issues. Lastly, the report discusses the long-term psychological and social consequences of racism in Mauritius, specifically the entrenchment of racist thinking and practice and the normalisation of these.

Finally, the above noted quotation is taken from a literary analysis of Alexandre Dumas, novel entitled *Georges* which was published in 1843 and which concerns the racial fortunes of a mulatto man in Mauritius. This story illustrates the difficulties involved in overcoming racism and racist thought in Mauritius. The fortunes of Georges also indicate the complexity of race in Mauritian society during the time of slavery. This report documents a continuation of this social complexity and of the embedding of racism in Mauritian society. Unlike Dumas' novel, however, this report offers recommendations for the Mauritius Truth and Justice Commission.

## INTRODUCTION

The achievement of a democratic society depends not just on the good will of its citizens; it also requires both insight and political will among its leaders to achieve equality and justice. By approving the creation of a Truth and Justice Commission (TJC), the Mauritius Government is pledging to commit itself to the achievement of equality and social justice in the society.

Mauritius is a young democracy which forms part of a global society that prides itself on the protection and advancement of Human Rights. Mauritius also aspires to be a model society and economy among the developing countries of the global South. To achieve these important objectives, it is important for the current and democratically elected government, to pursue not only economic partnerships with emerging and established economies, but also social justice. To this end, the Government of Mauritius has, following the example of the South African Truth and Reconciliation Commission (TRC), mandated a Truth and Justice Commission to investigate the legacies of slavery and indentured labour.

This report should be read in conjunction with the nine other reports commissioned by the Mauritius Government on the subject of the legacies of slavery and indentured labour in Mauritius. The report does not pretend to offer an exhaustive account of the myriad ways in which the much maligned concept of race has been abused and utilised to entrench power and privilege in Mauritius. Nor does it claim to offer data that is unknown in Mauritius regarding the issue of race in the country. This is because the purpose of this research is not completely academic but rather applied, in which there is an effort to discover and reveal to the Mauritian public the various facets and implications of racism in Mauritius and to suggest ways in which to eradicate racism.

Thus, many of the stories, experiences and reflections on racism, racist experience and the discourse of racism, discussed in the findings of this report, will be familiar to Mauritians and those tasked with 'putting things right' but this does not mean that the findings are invalid. On the contrary, what the researchers in this project have done and are expected to do by the Truth and Justice Commission is to reveal to the Mauritian public in as much detail as possible: the nature, form, experience and discourse of racism in Mauritius. In other words, to bring to light, that which has been hidden from public view or not publicly discussed. This means that while some of the content may be familiar to the Mauritian public, what this report hopes to do is to offer a substantive account of the taboo and rarely publicly articulated subject of race in Mauritius.

Thus far, while a number of scholars both national and international have debated the issue of identity in Mauritius, - none have offered a substantive analysis and recommendations for change. This fact is elaborated upon in the brief literature review on the subject of race offered further on in this report.

The report itself is structured as follows: first, a brief rationale for the study is offered and the research team is introduced. This is followed by a review of recent and historical literature on race and includes a contemporary definition of the concept. The literature review reveals possible methods and methodologies (theory of method) to assist in the study of race in Mauritius. It also indicates 'gaps' in the analyses of identity in literature on Mauritian society. These gaps also indicate the relative concern of not discussing the issue of race, not just among the population but also among those tasked with investigating issues of identity more broadly.

The substantive parts of the report, which contain the findings of the research team, are divided into several parts. Part 1 considers the role of discourse in the construction of race; Part 2 discusses socialisation and experiences of racism; Part 3 discusses cross-cutting identities and racism, in other words, how does class and gender influence racial experiences; Part 4 reflects mostly on the psychological burdens of racism, discussing the impact of racist events and aversive racism. Part 5 of the report contains the recommendations and conclusions. As the evidence is based on narrative (interviews, conversations and observations), these are indented throughout the text for ease of reference. The analyses of the data by the Team Leader are distinguished from the data collected by the researchers and research assistants.

## The Rationale for the Study

Reflecting on transatlantic slavery and its impact on slaves and their descendants, the author, James Dawkins<sup>2</sup> notes that in the 1800s: [...] the British Government and Crown [...] sanctioned the use of racism in order to rationalise the existence of the slave trade, justify the forced subjugation of Africans, and to mitigate rising public dissent towards the profitable enterprise, (BBC 2007, cited in Dawkins 2010:8). Another source clearly indicates the profit made by slave owners in the British Empire. In 1838 some 800,000 people were freed throughout the Empire. The slave owners were paid some 20 million pounds Sterling for the loss of their labour. This amounted to approximately 40 percent of Britain's national budget at the time or some 1.34 billion pounds Sterling in today's money. The slaves received nothing (BBC online 2007). It would be 'easy' to argue that all that slave descendants (and those who suffered under slavery and indenture) need is monetary compensation. However, this report documents the long term non-fiscal damage which racism has wrought in Mauritius. Thus (and as the research team argues) there is a real need for more substantive work and research on the range of reparations needed to heal Mauritian society.

Referring to a range of sources, Dawkins argues that racism dramatically impoverished African slaves and their descendants. Citing the work of Crawford (2003), Dawkins (2010: 18) argues that, 'the oppressive and forcefully inhumane conditions that were imposed on Africans, generated cultures of fear, mistrust, uncertainty, racial resentment, sexual objectification and self-hate upon slave plantations. They also created conditions of abject poverty, profound mortality via the gross overworking of slaves, ignorance through the strict prohibition of reading and writing, and mental, spiritual and material dependence on the slave master'. These pathologies, Dawkin argues, continue into the present day. In the United States, the descendants of African slaves are still among the poorest of Americans; they experience high rates of incarceration and single parenthood, as well as drug addictions. While members of this research team do not believe that slave descendants and those categorised as the descendants of indentured labourers did not possess any resilience in the face of such horrors. We do agree that similar patterns of disadvantage and suffering are evident in Mauritius. We feel, like James Dawkins, that reparations are necessary and very long overdue.

This project, identified as Project 4, forms a part of the *Culture and Ethnicity* project of the Truth and Justice Commission (TJC). Following the inscription of Le Morne mountain (a symbol of liberation from slavery and oppression in Mauritius) as a World Heritage, the Mauritius Government mandated the creation of a Truth and Justice Commission to investigate the legacies of slavery and indentured labour in Mauritius and to produce recommendations regarding the nature of reparations to these disaffected populations.

The purpose of Project 4 is to investigate the contemporary discourse, policy, practice and experience of race in Mauritius. The investigation of racial experiences via the above-noted 'frames' is necessary, as it hopes to determine, in a holistic manner, the particular legacies of slavery and indenture in Mauritius.

We chose to examine 'discourse' because we feel that in Mauritian society, one can identify the normalisation and internalisation of pernicious ideas about 'race'; ideas that emphasise the inequality of people and encourage assumptions about their personality and potential as human beings.

In our research, we found that racial 'discourse' is based on, and fed by, assumptions and ideas about those perceived to be racially different from the Self. We also found that the system of slavery in Mauritius and the continued oppression of slave descendants are largely justified by racist discourse. As the slave system became less palatable to enslaving nations, it became necessary to promote racist discourse. If those enslaved were fundamentally different from, and inferior to, the enslavers, then slavery could be justified.

After the abolition of slavery and the achievement of independence from colonial rule, racist discourse was perpetuated to continue the social and economic oppression of slave descendants. The economic system of capitalism in these states (including Mauritius) needed an oppressed working class so that profits could be maximised. In the period of slavery, justification for the system came from crude interpretations of evolution and natural selection (Social Darwinism) and

the subsequent development of scientific racism in Europe and America. Black Africans were socially constructed as an inferior race in need of civilisation and Christianisation. In the post-abolition phase and after independence, racist discourse includes the promotion of more subtle, but still pernicious, ideas about the intellectual capacity and rationality of slave descendants. We also note that in this period, there are increasingly complex assumptions about the purported inferiority of the African phenotype and involves the construction of racial difference as real. Thus people would argue that they find it difficult to 'understand' slave descendants because they are so 'different' from 'us'.

We also chose to examine racial practices in Mauritius because discourse does not stand alone. Racist practices flow from racist discourse. Thus we found that although not publicly sanctioned, racial practices flourish in Mauritius and affect every sphere of social existence - socialisation, schooling, sports, work, marriage and religious belief. In short, we have attempted to provide a glimpse of what the South African historian, Paul Maylam, says was missing from the South African Truth and Reconciliation Commission (TRC), which is the 'broader destructive impact of the whole system' (Maylam 2005:138).

Policies and experiences of racism emerge from the racial discourses and practices mentioned previously. For this reason, we also chose to examine these two things. However, given the fact that Mauritius did not institutionalise segregation, it has been notoriously difficult to ascertain how social policies might encourage racial discrimination. We feel that these issues might be better addressed by a policy analyst and also a legal expert, i.e. individuals who might be in a better position to decipher the *precise* ways in which existing policies, as well as laws, continue to discriminate against certain sectors of the society. At the time of our research, we came across a report commissioned by the Mauritius Government regarding discrimination in Mauritian law. However, our efforts to obtain a copy of this report in order to follow up on claims made, was not successful. Our suspicion (given the data we have already collected) is that it is not so much the policies and laws themselves that are problematic but rather their *interpretation* by Mauritians.

Those who have conducted research for this report are fully cognizant of the fact that the achievement of reparations involves a complex process. Part of the rationale for this project is that we wanted to investigate some of the social complexities that the TJC would have to confront. From the perspective of this project for instance, we are aware that it is near impossible to assess what the legal experts call the *quantum of damage* caused by slavery and indentured labour or one could say that it is impossible to calculate the depth and breadth of damage caused by the institutions of slavery and indentured labour. The trauma, mistrust, poor levels of community cooperation, self-doubt and other pathologies of oppression are difficult to quantify and may be passed on (as we note in Part 4 of this report), from one generation to the next. What our research hopefully does is to shed light on this complexity so that a multilevel and multipronged approach can be taken in addressing the legacies of slavery and indentured labour.

This report, however difficult this is, also makes an attempt to distinguish between the experiences of slavery and indentured labour. While the TJC Bill suggests that these two experiences may have been familiar and that both experiences are important to our understanding of the legacies of slavery and indentured labour; it is our contention that there is a qualitative difference between the racial experiences of slave descendants and the experiences of indentured labour descendants. Put very succinctly, those identified as slave descendants or more accurately as Creoles, experience racism more directly if not more profoundly in Mauritius. Those identified as descendants of indentured labourers experience a cross-cutting range of discriminations based on their class, caste and gender. Because racial discourses, practices and experiences overlap with discriminations experienced on the basis of class, caste and gender, it was sometimes difficult for us to tease out the varying strands of discrimination and to carefully and critically explain what we were observing and hearing.

This 'discovery' presents a challenge (as we argue at the end of this report) to fully and properly conclude a discussion regarding reparations. Furthermore (and this is also discussed), the issue of who is a slave descendant and who is an indentured labour descendant also needs clarification. The research revealed that only a few have internalised these categories of identification. Creoles were more likely to appropriate and speak about slave descendants. Others often referred to them as just 'Creoles.' Creoles rarely referred to themselves as Afro-Mauritians (Benoit 1985).

Another reason for doing this research is to show that, in contrast to what some Mauritians may believe, ethnic and racial categories are not easily delineated. For example, indentured labourer descendents may have slave descendent and slave owner ancestry and those who are considered as Franco-Mauritians or as the visibly identifiable descendants of Europeans on the island also have mixed ethnic and racial ancestry. In our research among Franco-Mauritians we found that this topic was assiduously avoided or that white ancestry was rigorously asserted.

In short, it is not easy to identify 'racially' pure groups or those whose ancestry has not included more than one racial group in Mauritius. However, that is not to say that racial identity is not imposed on or assumed by Mauritians. Our research revealed that an African or black identity was/is regularly imposed on Creoles regardless of their mixed heritage and that Creoles themselves readily accepted this racial label as a way of attaining a meaningful space and identity in Mauritian society. Similarly, we found that Franco-Mauritians were keen to assert a pure 'white' racial identity as a way of securing a fixed identity and the prestige that comes with it. Ultimately, the view of this research group is that the TJC and the Government of Mauritius needs to focus on the political question of reparations and to perceive reparations as a moral duty to the past of suffering primarily endured by those of slave and indentured descent, rather than attempt to identify people on the basis of their purported race.

A careful and critical response to reparations also involves a critical review of a superiority complex, which involves a sense of entitlement and propensity to oppress in social milieu where power and privilege have been held, for a very long time. The critical response, as we explore at the end of this report, will involve a concerted effort on the part of Government to work with civil society groups in bringing about a society in which there are higher levels of mutual respect and recognition.

Thus, this report is critical of compensation, not in the sense (as we shall reveal in more detail later), that it should not happen at all but that those involved in the provision of reparations remain aware that financial compensation may not achieve 'full' reparations or that it might reduce the potential for full and deep reconciliation in our society. Deep reconciliation is also important because the present generation of slave descendants and indentured labourer descendants also have to manage their existence in a social setting that this cut across by other forms of boundary making and discrimination. There is also a deeply entrenched patriarchy (rule of society by men) in Mauritius and there is also the achievement of social stratification via caste classification.

The research is also motivated by the broader (but no less important issue) of the protection of Human Rights in Mauritius. As is noted in this report, discrimination in general (i.e. on the grounds of ethnicity, culture, gender and age), diminishes the protection of Human Rights both nationally and internationally. In its Millennium Development Goals (MDGs), the United Nations is concerned to eradicate discrimination and to decrease the possibilities for acts of extreme prejudice (i.e. genocide, xenophobia and ethnocide). As a signatory to various conventions of the UN regarding the protection and advancement of Human Rights, the onus is on the Mauritius Government to critically review the legacies of slavery and indentured labour and to determine the extent to which these legacies affect the implementation of a Human Rights culture in Mauritius. Furthermore, what we have documented here clearly indicates that a good number of Mauritians are violating the Mauritian Constitution,<sup>3</sup> particularly the right to freedom from discrimination:

#### Protection from discrimination

(1) Subject to subsections (4), (5) and (7), no law shall make any provision that is discriminatory either of itself or in its effect.

(2) Subject to subsections (6), (7) and (8), no person shall be treated in a discriminatory manner by any person acting in the performance of any public function conferred by any law or otherwise in the performance of the functions of any public office or any public authority.

(3) In this section, 'discriminatory' means affording different treatment to different persons attributable wholly or mainly to their respective descriptions by race, caste, place of origin, political opinions, colour, creed or sex whereby persons of one such description are subjected to

disabilities or restrictions to which persons of another such description are not made subject or are accorded privileges or advantages that are not accorded to persons of another such description.

The right to freedom of movement:

#### 15. Protection of freedom of movement

(1) No person shall be deprived of his freedom of movement, and for the purposes of this section, that freedom means the right to move freely throughout Mauritius, the right to reside in any part of Mauritius, the right to enter Mauritius, the right to leave Mauritius and immunity from expulsion from Mauritius.

Such restriction is punishable by Law:

(4) Where any person whose freedom of movement has been restricted in pursuance of subsection

(3) (a) or (b) so requests -

(a) He shall, as soon as is reasonably practicable and in any case not more than 7 days after the making of the request, be furnished with a statement in writing in a language that he understands, specifying the grounds for the imposition of the restriction;

(b) Not more than 14 days after the making of the request, and thereafter during the continuance of the restriction at intervals of not more than 6 months, his case shall be reviewed by an independent and impartial tribunal consisting of a chairman and 2 other members appointed by the Judicial and Legal Service Commission, the chairman being appointed from among persons who are entitled to practise as a barrister or as an attorney in Mauritius;

(c) He or a legal representative of his own choice shall be permitted to make representations to the tribunal appointed for the review of his case;

The above, then, constitutes our motivations for doing this research project.

## Literature Review

The literature on racism is vast. This literature review offers an overview of the varied conceptualisations of race and a discussion of the articulation of race in Mauritian society. To assist the reader in understanding the relevance of the literature to ideas about race, a summary of the literature is offered before delving into the literature itself. It is hoped that this will serve as an early and easier means of orientation for the reader of this report.

## Summary

In summary, the literature strongly suggests that race is diversely defined and is diversely experienced and perpetrated. Scholars of Psychology, Anthropology, History and Sociology report that there are different words used to describe race, that there are different levels of racism; that racism can be explicit and implicit; that racism can be compounded by gender discrimination; that racism can and does influence long term health and opportunity and that it is context specific. What this means is that race is not a concept that is defined by those deemed to be in power. It is also a term whose meaning changes over time and individual and community experiences of race and racism will also therefore change. Race, according to the literature as well as the findings of the researchers on this project, can also be identified in phenotype and in behaviour. Thus an individual may outwardly appear to be 'white', but his behaviour and social associations will lead him to be classified as Creole or Black. Furthermore, even supposed absolute racial categories (i.e. white or black) are not necessarily so.

Thus while a Creole individual may be perceived as 'black' by certain members of the society and perhaps treated in a very negative way, this is not necessarily going to be his experience among

other white members or black members of the community. Furthermore, racial experience, as the literature and our findings show, is also situational. In other words, a particular social context can produce specific experiences of racism. This might, for example, encourage the victim to avoid such a context on the basis that this will protect him or her from racial victimisation. But other spaces of socialisation such as school, church, social and sports club and the workplace may place the individual in a racialised environment reasserting the experience of racism. Furthermore, elements of one's socialisation (i.e. language ability, class, place of residence) may emerge in other contexts and leave the individual vulnerable to marginalisation and racism. What the findings of this report also, therefore, reveal is that those routinely discriminated against on racial or gender grounds risk becoming isolated from social and economic interaction. However, they are rarely completely immune from racial experiences, especially in societies that are deeply racialised such as Mauritius.

The following discussion on race, as diversely conceptualised and experienced, has been instrumental or important in our theorising and framing of 'race' as discursive. As noted previously, this means that race is not a fixed concept only deployed by those believed to be in power. It is also a term that is also used and deployed by those who outwardly do not appear to have power or resources. The use of the term among those oppressed means that racism can also be perpetuated by the victims of racism. This is part of the vicious cycle of racism, as it does not always require the presence and actions of the powerful in order for racism to survive and persist from one generation to the next.

Furthermore, it is our view that race discourse (which involves the use of symbols, literature, images, artwork, music and a range of means of communication in society), can and has been effectively used in Mauritius to promote particular racial stereotypes, empowering some and disempowering others. The point about race discourse is that it is not always overtly visible or noticeable. Statements, utterances, documentation (i.e. in the form of stories in school books for example), can become a part of daily existence and appear to be perfectly normal and acceptable. However, and as is shown in this report, a closer look at these statements or utterances coming from respectable citizens or a closer look at school text-books or newspaper articles, can reveal the persistence of racism in Mauritius.

Having summarised a few key findings regarding race, it is now possible to provide direct references to literature on race as a means of further orientation.

## Scientific Racism

Scientific racism, although not apparently prominent in Mauritius in the 18<sup>th</sup> century, served to justify the system of slavery and the oppression of Africans. Scientific racism is a form of racial discrimination which uses science to rationalise the placing of people on a hierarchy according to skin colour. In most cases, this process involves the down-trodding of blacks and the elevation of whites. The basis of scientific racism has been thoroughly and continuously challenged by social scientists, who point to both bias and flaws in the arguments put forward by scientific racists (see for example Alland 2002, Gould 1984 and Montagu 1999).

By the time that Carl Linnaeus, a botanist and trained taxonomist, began his work in the mid 1700s, there was an increasing interest in the classification of things, including human beings. Initially interested in botany and the classification of plants, Linnaeus eventually published a book *Systema Naturae* in which he identified five race groups, including a group called *Monstrosus* which included a range of mythological half-human creatures. In 1775, Johann Friedrich Blumenbach attempted to refine this categorisation. He created a typology of the races and published a book entitled, *On the Natural Variety of Mankind*, in which he focused on physical morphology. This shifted the identification of peoples from the geographical to the physical. Thus, according to Blumenbach, Asians were Mongoloid people, Europeans: Caucasoid and Africans: Negroid. Blumenbach was not alone. Other 'scientists' such as Georges Cuvier argued in favour a polygenism theory which supported the view that human groups had evolved in geographical isolation after the Biblical expulsion from Eden.

In Gould (1984) it is argued that 'scientists' in the Americas (in this case, Stanley Cartwright) went as far as to define psychological conditions particular to black and at that time, the slave population. One of the conditions identified, was *Drapetomania* - which Cartwright defined as the insane desire to run away! There were also climatologists, religious individuals, politicians, immigration officials and medics who helped to categorise racial groups and to associate them with specific behavioural tendencies and capacities. In Cartwright's view for example, it was imperative to make slaves work hard for long hours because this would assist in developing the lung capacity of blacks, who in his view were an indolent people affected by the humid and tropical climate of Africa.

Craniometry, the measuring of brain volume, for example, was yet another important means of establishing racial hierarchy. This 'science' was used to determine the intellectual capabilities of the identified races. For, it was believed that brain volume (which is what craniometry measures) was indicative of intelligence (Montagu 1999). Thus, if it could be proved that blacks had a smaller brain volume than whites, such a finding could be used to further justify white control of resources and the management of the emerging economy.

The results were, according to the 'scientists', conclusive: Caucasians (whites) had larger brain volume and Negroids (blacks) had the smallest brain volume. As Montagu (*Ibid*) and others remind us however, such tests were skewed to produce the desired results. Caucasian skulls were filled with much smaller beads so that a greater final volume could be attained. Secondly, no distinction was made between differences in physiognomy. The smaller framed (and therefore smaller brain) Negroids and Mongoloids (Asians) would proportionally have smaller heads and brains versus the larger framed Caucasians. Moreover, it has been found (see Montagu 1999) that there is no direct correlation between brain volume and intelligence, because the latter is a result of the integration of biology, nutrition and socialisation. These particular facts were not included by the 'scientists'. Ultimately, scientific racism encouraged the horrors of the Holocaust. Eugenics, the practice of racial purification, commenced not in Germany during World War II, but in America, when immigrants and the poor were sterilised to prevent the proliferation of inferior progeny. Decades later, during World War II, the Nazis attempted their own purification, by exterminating the Jews and initiating the impregnation of white European women to increase the Aryan race.

Many of the arguments put forward by scientific racists were used, not only to justify slavery, but also to justify the continued oppression of people of colour. In America, race was medicalized. Sterilization of the poor was instituted to improve white racial stock (Alland 2002). In brief, the discourse of race in science was purveyed as a source of Truth about human beings and the world and was used to promote systems of oppression such as slavery. Science was construed as rational reflection on the world, and scientific research went largely unquestioned, perceived as an objective and politically neutral endeavour.

What the literature also reveals is that race discourse is forged, not only by the use of science, but also art, fiction, traveller accounts and philosophy. During the Enlightenment period in Europe, there was deep focus on what it means to be human, to be moral, educated and civilized. This period of reflection produced great works of art, music, literature and philosophy. Such reflection is clearly and deeply evident today in the many artistic and cultural exhibitions which tourists visit in Europe. However, and as the historians remind us, the time and space to reflect was 'sponsored' by the slave system, which generated substantial profits that enriched merchants and the landed gentry in Europe. The merchants and other wealthy patrons, paid artists to produce the works of art we see today. The artistic production of this time can still be viewed in many parts of Europe and some of these (such as representations of identity and of Africans at the Africa Museum in Tervuren, Brussels) are not politically neutral pieces. They too serve to confirm a discourse on Europe and Caucasians as superior.

In Mauritius the traveller accounts of Bernardin de St. Pierre (in the 1700s in Mauritius), while producing a very rich account of Mauritius society in those early years, reinforced literary stereotypes of blacks as labourers and slaves and whites as owners and managers. However, de St-Pierre did pay attention to detail and in doing so, he disrupted certain racial stereotypes, particularly stereotypes of Franco-Mauritians as a culturally and economically homogeneous group characterised by their civilized behaviour. What de St-Pierre revealed is that there were high levels of decadence and *laissez-faire* among the propertied classes in Mauritius in the 1700s and that the

Franco-Mauritians were not a homogeneous group. Their distance from the metropole of France, isolation on the islands, the youth of those sent to the island as well as the unequal nature of the society produced an internally differentiated group in which there were continuous efforts to maintain or achieve privilege. Although there appear to be no detailed studies of the gender profile of the early settlers, studies done in Brazil, another place in which slavery thrived, shows that the high ratio of settler men to women resulted in a more brutal system of slavery in that country and also how life chances are linked to skin colour in that society (Lovell & Wood 1998).

The spread of social as well as a racial discourse gained ground in the 1700s. This was supported by the fact that (and as the historian Megan Vaughan reminds us), a number of prominent scientists such as the astronomer and geographer Abbé de la Caille, the explorer Philibert Commerson and the botanist Pierre Poivre, visited Mauritius in the 18<sup>th</sup> century. These individuals brought with them the discourse of Enlightenment which promoted not only the pursuit of science and discovery but also the supposed 'protection' of lesser races from themselves. Thus at this early stage already (and with the reinstatement of the Code Noir in 1804, initially decreed by Louis XIV in 1685), there was a potent discourse of race that was being formed in the European colonies.

However, the story and discourse of racism predates this period. Briefly, while the first slaves arrived in Mauritius under Dutch colonial rule in 1638, slavery was already thriving or at least, gathering momentum among European powers. In 1452, Pope Nicholas V Papal Bull *Dum Diversas* empowered the King to enslave non-Christians. Although slavery was not legal in the Netherlands but it was justified outside of it. Thus between 1596 and 1829 hundreds of thousands of black Africans were sold in the Dutch territories of Guiana, the Caribbean and Brazil. From 1700 Britain joined France, Portugal and the Netherlands as major slave traders. However, while there is a better sense of the experience of slavery (and ultimately of racism) under French rule in Mauritius, it is not exactly clear how the first Dutch settlement was managed. One does not obtain a sense of the specifics of social relations between those enslaved and their masters at that time. This is not helped much by the fact that the accounts of slaves themselves are scarce. As Sidney Mintz argues, we do not know enough about what the slaves thought of their experience and how they actually related to their masters (1992). It is therefore clear that more in-depth research is needed on social relations in the period of slavery. There were substantive responses to slavery and scientific racism from the mid 19<sup>th</sup> to the early 20<sup>th</sup> Centuries. A discussion of these however, is beyond the scope of this report. However, it is important to keep in mind that the race discourses generated during the years of slavery are still apparent in Mauritius today.

## Class and Race

Karl Marx argued that slavery involved the 'primitive accumulation of capital' (Marx 1906:738)<sup>4</sup> and that 'the veiled slavery of the wage earners in Europe needed for its pedestal, slavery pure and simple in the New World' (Marx 1906:833).<sup>5</sup> Thus and as argued previously, slavery was necessary to the establishment of the industrial revolution in Europe and for the enrichment of those countries and of Europeans in the colonies. The investments made at the time continue to benefit those countries. It is our hope that the project on the Economics of Slavery initiated in the TJC, will reveal the exact or approximate fiscal benefits gained from the slave system. It is also our hope that in considering the process of reparations, that the government will turn to this time in history to enter into a dialogue with 'developed' nations such as Britain, France and the Netherlands in order to discuss and seek ways to achieve reparations for slave and indentured labour descendants.

Our interest lies in the social and political legacy of these inequalities. One finds that in Mauritius in which there was the experience of slavery, those at the bottom of the socioeconomic ladder today are also those who do not possess the means of production. They rarely have access to land, equipment and other vital material resources. Instead they are inserted into the economy as labourers and workers. Their 'race' is used to justify and perpetuate their oppression. The maintenance of this group at the margins of the society serves a double purpose. It reaffirms discourses of superiority and inferiority and it maintains the capitalist system, which relies on an oppressed working class to generate profits. 'Beneath' this group is yet another layer, a set of people considered the underclass. As one woman at a famous IRS in Mauritius told me very casually,

these are 'the unemployed and the unemployable'. In other words, they are of no use to society at all. 'Above' the marginalised, are those who obtain, to varying degrees, benefits in society. As we show in this report, these benefits in Mauritius depend on the right mix of social and phenotype attributes. A lighter skin colour can present opportunities for social and economic mobility, but only up to a certain level, at which the mechanism of racial discrimination kicks in.

In the 1990s, as Mauritius entered its second phase of industrialisation and the economy was managing very well on its income from tourism, it was common to hear that race and racism are no longer issues of concern in Mauritius and that class is rapidly replacing ethnicity as a form of categorisation and source of social exclusion. In this report it is found that while Mauritius is becoming a more class-oriented society this is not necessarily leading to the displacement of race and racism. Those who have experienced upward class mobility still experience varying degrees of racial exclusion and/or racism.

Furthermore there is evidence of the combination of racism and class differentiation. As Mauritius becomes a more prosperous society, those who are the poorest in our society and have least control over the country's resources are increasingly those who are of darker complexion and report experiences of racial discrimination.

In Maylam's discussion on racism in post-apartheid South Africa, he notes that although class division still marks the landscape, there, 'Racial assumptions continue to pervade public discourse... racism is rigorously proscribed - instances of racism draw wide media attention. At the same time popular understandings of South African society remain heavily racialised, even if more implicitly than explicitly' (Maylam 2004:139). Mauritius is different to South Africa. There was no institutionalisation of apartheid in Mauritius, except in the period of slavery and indenture and in the period leading up to 1928. After that, we note a more complex picture of class in Mauritian society. As in South Africa, the end of segregation did not mean that racism disappears. As we show in this report, racism continues to flourish both explicitly and implicitly.

While decades of integration in Mauritius have produced a phenol-typically mixed society in which it is increasingly difficult to visually identify clear-cut 'population' groups, the categorisation of a race group in Mauritius (as elsewhere in the world) depends on ever increasing means of identification. Physical, social and visual markers of difference, such as hair texture, skin colour, language spoken are used to distinguish between individuals and to add to the plethora of markers used to identify race. The overall purpose of this is to allocate or remove power and privilege. Such gross simplifications of phenotype variation are usually accompanied by cultural and social stereotypes of the groups concerned.

In the 20<sup>th</sup> century, the scholarly literature on Mauritius society has focused on ethnicity. In part this focus reflects changes in the social sciences in the 1960s, when for political and 'aesthetic' reasons the word 'race' came to be replaced by 'ethnicity'. In Mauritius however, it seems to be that the term ethnicity was a useful way of avoiding the more contentious term of race. Moreover and as the study presented here shows, the word race is not part of public discussion in the way that ethnicity often is. Nevertheless, the biological undertones of race remain even in the use of the term ethnicity in public space.

## **Post-structural Analyses of Race**

In the 1980s, post-structural analyses of society and culture gained momentum. In Europe and America, it was at that time that ethnicity was fully interrogated as a social construct and ethnic identity was perceived as part of a political process. Post-structural understandings of identity encourage a relational understanding of identity, unravelling how groups define themselves and categorise others. Some categorisations may be explicit and rely on overt stereotyping as a way of creating an out-group. Whereas others may be more implicit, relying on aversive racism to create in-groups and out-groups. While these take into account categorisations or externally defined identities, it is important for the purposes of this research to establish how personal racial identity is also established.

A quick outline of the development of ethnicity studies in Mauritius will have to suffice. Ethnic conflict in the Balkan states and elsewhere in the world emphasised the instrumental nature of ethnicity and its role in promoting primordialism (a definition of identity as essential and fixed) and discrimination. A good twenty years earlier, the work of the anthropologist Frederik Barth (1969) had sparked a discussion critically reflecting on the construction of ethnic identity. In Europe and Mauritius the anthropologist Thomas Hylland Eriksen (see Eriksen 1994, 1998, 1999, 2000) was at the forefront of this discussion. The interest then, was how do socially constructed nation-states retain their integrity and cohesiveness in a time of: globalisation; calls for the realisation of minority rights and ethnic war? Eriksen (and his predecessor in Mauritius), Burton Benedict (1965), explored the dynamics of plural existence in Mauritius. Both he and Benedict examined interethnic relations and the broader issue of the relationship of ethnic groups to the nation. However and as we argue in this report, it is race rather than ethnicity which demands our attention in Mauritius. For ethnicity is a euphemism used to disguise race.

An interrogation of race and racism in Mauritius needs to offer definitions of the concept. For Mauritius it is possible to argue that definitions of race derived from the country of origin gained precedence on the island. In the period of slavery the works of famous French scientists such as Georges Cuvier and (racist) philosophers such as Voltaire were not always available or accessible to all. However the fascination with racial difference was. This is evidenced in the parading of the South African born Saartjie Baartman, renamed the Venus Hottentot in Paris and London in the early 1800s. Baartman became part of the kind of freak shows popular across Europe at the time and was perceived by the scientists to be an example of her racial stock. There was prurient interest in the genitalia of Baartman and when she died, Cuvier and his colleagues surgically extracted her genitalia and preserved it in the *Musée de l'Homme* in Paris. In the accounts of Cuvier and Voltaire, races evolved separately in different regions of the world and black races were perceived as less talented and less intelligent than the Europeans.

This view of separate evolution (or polygenism) was very popular among pseudo-scientists and persisted into the Twentieth century. According to the American scholars, Garn & Coon (1955) for example, race is the 'taxonomic unit below the species level'. In short, Garn proposes that races indicated subspecies of humans that fundamentally had differing capabilities. In the 1980s and under the apartheid system in South Africa, it became increasingly clear that race was more of a 'political construct rather than social fact' (Boonzaier & Sharp 1988, see also Taylor 2004, Wade 2002, Wellman 1993, Hartigan 1997). However, saying that something is socially constructed does not do away with its experience as something that is real.

Investigating possibilities for the elimination of race as a useful concept in society, Glasgow (2009) says that it is difficult to avoid the ontological question concerning race, which is: is race real? If so, it would be difficult and inadvisable to call for the eradication of race in society because race will be a fundamental part of people's experience. Thus, in the US, African American comedians at the Apollo theatre use racial epithets to build an atmosphere of common experience and to tap into what they feel are racially specific humour. Outsiders (or specifically those who are not part of the designated racial group) are not 'permitted' to use these epithets as these are considered to be offensive.

In this research it is argued that race itself is not real but that people experience it and speak about it as though it is real. Racial humour for example, seemingly harmless, serves to reinforce the reality of race. This is expressed through a shared sense of suffering - particularly among the Creoles interviewed. A number of phrases which Creole speakers use further assist in this reification and concretisation of race. These assist in the remembrance of past experiences of economic or racial suffering and have made it into public space. These include '*les temps margoze*' (a time of bitterness, because the *margoze* vegetable is very bitter), a time of individualism '*bef dans disab sakenn guette so lizié*' (each one must take care of him or herself).

Glasgow argues that academics (like most 'ordinary' people) rely on three things to assert the reality of race. The first is *Superficial theory*, which relies on phenotypes, and classifying people by the way they look (hence the 'superficial' language). In our research we found that this was certainly the case, that Mauritians rely heavily on superficial language to assert a racial identity or categorise people in racial terms. However, the *effects* of the language are not at all superficial. The words cut deep.

The second entity used by scholars to assert the reality of race is *Genetic racial realism*. Glasgow argues that in this people are classified by their genetic make-up (specifically the “genetic material that significantly determines what we look like) rather than the way they superficially look. The third is *Populationism* which looks at ‘genetic ancestry’.

About ten years ago (1999) the Nelson Mandela Centre for African Culture (NMCAC) initiated a genealogical project on the ‘origins’ of Afro-Mauritians. The latter were encouraged to come forth and to supply information regarding their ancestry. Genealogical research was conducted to ascertain as far as possible, who the various peoples’ ancestors had been. However, we have not yet implemented a genetic analysis of African or Indian descendants’ ancestry.

Most recently, there was significant debate on the forensic use of DNA in Mauritius. As far as we know, members of parliament overwhelmingly rejected the use of this science for purposes other than the tracing and arresting of criminals (Law Reform Commission Discussion paper April 2009).<sup>6</sup> There was also opposition to the retention of a database in which the DNA of those convicted would be kept for a specified period. The argument is that doing so would promote the criminalisation of Mauritians. In the research we found that there are many people who could be interested in using this science to learn more about their ancestry. This is especially significant when it is considered that the historical data we have on slave (and perhaps to a lesser extent) indentured descendants is insufficient.

Although there were no such definitive definitions of race in Mauritius, it is clear from the research findings that essentialist views of race are prominent in Mauritius today. More pointed critique of race in Mauritius emerges in late 1990s in the work of local and international scholars including: Carpooran (2002), Chan Low (1999), Carroll and Carroll (2000), Carter (2000), Alpers (2000), Diene (2001), Laville (2000), Hookoomsing (1993, 1995, 1998), Miles (1999), Michel (1998), Nave (1998, 2000), Romaine (2006). There is unfortunately no space in this report to fully discuss the particular contributions of these authors on the subject of race. However, one can and must note that all of them have pointed to the continuation of racial discrimination in Mauritius, particularly against Creoles.

This work has not been easy. A common argument is that such a discussion may adversely affect the image of the tourist destination, as Mauritius trades on its identity as a culturally diverse and harmonious society in which equality prevails. However, the opposite seems to be the case. In July 1999 there was an article in the newspaper *La Voix Kreol* which stated that there are only five Creole directors out of the then 52 directors on parastatal and private boards. It would be interesting to see whether this number has increased and what are the reasons given for changes and non-changes to these executive boards. It will be also important to assess to what extent various ethnically-oriented media produce particular racial discourses and how people respond to these discourses.

To a certain degree the racial identity is dependent on external definition. However and as the work of Simmons (2006) shows, racial identities can be influenced by various local factors and historical impacts. This is relevant for the study on race and racism in Mauritius because it suggests that the local version and understanding and experience of racism may in several ways be locally specific. Simmons (2006) assessed the experiences of black immigrant students versus the experiences of white citizens in the United States, she found that:

‘There were tense moments as both black and white students reflected on their lives, identities and lived experience. Black students were looking for more than a ‘race is a social construction’ response—being black was central to their identity, and to them race was very real.’ (2006:2).

In other words, the black students did not wholly accept the discussion of race as socially constructed because for them, race was experienced as ‘real’.

Simmons conducted the same experiment in the Dominican Republic, situated on the island of Hispaniola off the coast of the US. She found that there, blacks ‘were surrounded by people who phenol-typically looked like them—ranging from light to dark—but did not, in most cases, define themselves as black.’ (2006:3). This result initially baffled the researcher but she later concluded

that the answer as to why the Dominicans she encountered did not identify themselves as black resided in the particular history of the Dominican Republic.

Simmons argues that we come to understand who we are in racial terms by a process of racial enculturation. Without that, we may not develop a racial identity. She also argues that racial categorization and processes of racial enculturation are contextually specific. The Dominican Republic, as she found out, has a long history of indigenous and immigrant population. This is in contrast to the United States where racial enculturation is informed by the historical experience of slavery as well as past law. The Jim Crow laws and the 'One Drop' rule in the US for instance, forced the categorization of all those with African ancestry as black, regardless of variation in skin colour in this population. In the Dominican Republic on the other hand, those who would otherwise be considered as black in the US, perceived themselves as 'mixed' in the Dominican Republic. This is because racial enculturation in the Dominican Republic includes references to indigenous or Carib identity (*Indio*). Those in the Dominican Republic however, Haitians (their poorer neighbours across the island of Hispaniola) are perceived (by the Dominicans) as black. What also interesting in the latter is the conflation of blackness, geography and poverty.

In conducting this research it is evident that there are multiple processes of racial enculturation in Mauritius. In the first instance, this happens with reference to the historical process of slavery. At that point in time, a clear distinction was made between white and black. This distinction was not necessarily hierarchical, for, as we understand it, in the time of slavery there were also very wealthy black Malagasy people who owned slaves and occupied the upper echelons of Mauritian society. Racial identity is also constructed at the level of the community. In some churches for example, the 'white' members of the congregation still sit at the front or separate from the 'black' members of the congregation, creating the impression of fundamental racial difference.

## **Aversive Racism**

However, most recently race scholars have focused on the less overt, apparently less intentional and not easily perceived racism that persists in multicultural societies. This is described as aversive racism. Aversive racism consists of various micro-aggressions, the latter are according to Sue, Capodilupo, Bucceri, Holder, Nadal and Esquilin (2007:271) 'brief and commonplace daily verbal, behavioural, or environmental indignities, whether intentional or unintentional, that communicate hostile, derogatory, or negative racial slights and insults toward people of colour. Perpetrators of micro-aggressions are often unaware that they engage in such communications when they interact with racial/ethnic minorities.' Writing about North America, the authors say, 'White Americans have difficulty acknowledging race-related issues because they elicit feelings of guilt about their privileged status, threaten their self-images as fair, moral and decent human beings, and more important suggest that their 'unawareness' allows for the perpetuation of inequities and harm to people of colour (2008:227). Aversive racism consists of various micro-aggressions, which are not easily identified by the victims and are cumulative. Sue et al say that micro-aggression 'themes' include criminality and incompetence for African Americans and foreignness and invisibility for Asian Americans. Micro-aggressions can include: micro-insults, micro-invalidation and micro-assaults.

Post-structural approaches to identity also encourage a more holistic view of the self as an entity 'constructed' socially, historically, politically and economically. Politically we find that identity is not only 'constructed' by the state, it is also forged by local and daily experience perhaps, by interethnic interaction, religious experience, technology, music and healing values. Increasingly, our identities are oriented by exposure to new media. This seems to be the case for younger generations of Mauritians, who may be politically conscious but are more profoundly technologically oriented. The latter is significant because it can shape our openness to difference/diversity and it can create new solidarities both locally and trans-nationally. In the work of Floya Anthias (1998) for instance, she notes the increasing size of global working-class diaspora and its possibilities for creating a transnational working-class solidarities.

In recent times we see the persistence of racism, as territorial borders dissolve and international migration increases. In Europe this has resulted in the reification of a mythical European identity

via the creation of the European Union. Such reifications are continuously challenged by an increasingly diverse population (Evens Foundation 2002). Bill Clinton's Advisory board on Racism had the following to say in 1998, (a) racism is one of the most divisive forces in our society, (b) racial legacies of the past continue to haunt current policies and practices that create unfair disparities between minority and majority groups, (c) racial inequities are so deeply ingrained in American society that they are nearly invisible, and (d) most White Americans are unaware of the advantages they enjoy in this society and of how their attitudes and actions unintentionally discriminate against persons of colour (Advisory Board to the President's Initiative on Race, 1998).

In Africa, scholars on racism note the integral role of the state in the creation of ethnicity and race (see for example the work of Abebe Zegeye 2001) and the difficulty of addressing the legacy of racism (Hamber and Kibble 1998). According to Valji (1998) a telephone survey conducted among White South Africans in 1997 to determine their view on the South African Truth and Reconciliation Commission (TRC), 44 percent stated that the former (apartheid) system was not unjust and 46 percent of whites surveyed believed the TRC was a ruling party 'witch hunt' to discredit the former government. In the case of this research this is not the case because it is the present government which has implemented the process of a TJC and whatever its motives, it and the Mauritian public will have to come to terms with or address the results of the research produced on the legacy of slavery and indenture.

One of the questions asked by historians involved in the process included whether the TRC in South Africa had not created a 'homogenized internal identity of victimhood' (see Valji 1998, note 6). Quoting Colin Bundy (2000), Nahla Valji says that South Africans 'intended to build one unified nation... [but may have risked legitimising] the formation of an "increasingly deracialised insiders and persistently black outsiders"'. The proposed research examines a range of contributions made by the slave descendant and indentured labourer population, as well as the injustices experienced. By doing this, it is hoped that the researchers will avert the potential pitfall noted by Valji.

Another significant finding of the South African TRC was the long-term psychological effect of apartheid on people's sense of self and the sense of their capabilities. The work of clinical psychologists indicates the increasing salience of sensitivity to racism in the therapy offered to people of colour. One finds for example, that a number of clinical psychologists are now employing the narrative therapy technique. Narrative therapy was developed during the 1970s and 1980s, by the Australian Michael White and David Epston of New Zealand. In their book, *Narrative Means to Therapeutic Ends*, they discussed the use of narrative as a means to achieving more focused and effective therapy. In short, we produce stories of ourselves and these stories do not only 'narrate' our life but also produce our sense of self. Narrative therapy offers a non-pathological approach to therapy and therapists are able to identify less developed stories of ourselves and 'thicken' these with the help of our friends, colleagues and family members in order to help 'victims' deal with insufficiencies or overemphasised areas of their lives. In research done we found that poverty and racism constrict individual identity, binding people to dominant stories and fixed identities as either the 'poor' or as 'poor blacks'.

An important element of this research was to investigate the contributions of slave descendants and indentured labourer descendants to Mauritian society. Given the generally divisive nature of slavery and indentured labour, it is interesting to see to how these institutions have brought a diversity of people together and how people have made important contributions to society despite the hardships faced by them and their ancestors. Investigating contributions will allow the TJC to avoid homogenising the population as victims. Teelock (1998) and Nwulia's (1981) account of maroon communities and slavery strongly suggests that the population endured many hardships and surmounted them in creative and lasting ways.

In the following section we introduce the various communities in Mauritius. In each of these we note the social as well as the racial construction of identity, almost as if the latter is a normal and an acceptable aspect of social construction in general. It is our contention that these constructions mislead the Mauritian public about their identity, which in many instances, is diverse and mixed. It is our view that socio-cultural organisations and social clubs should be regularly scrutinised by civil society, to ascertain whether these do not promote communalist tendencies and practices.

## Research Methods and Methodology

The following offers a brief overview of the research methods employed in the research for this project. With regard to these, there are: an outline of the use of qualitative method; a discussion on the relevance of obtaining of consent for the research; a summary of the locations in which research was done, as well as a list of the range of people interviewed. If there is a tentative mention of the locations in which research is done, this is because there is a need to protect the identities of those who have offered potentially controversial discussions on racism in the country.

The research methods employed in conducting the research for this project were qualitative. This means that the research team put much emphasis on the collection of narratives (stories), the establishment of focus groups (for group interviews) and conducting of individual interviews. Interviews were conducted across the ethnic, class and religious spectrum, although the bulk of the research focused on Creoles and Franco-Mauritians. In studying the experiences and views of Franco-Mauritians, the researchers effectively employed the strategies of those 'studying up' (Avery 2004). This involves substantive networking in a rather closed community, a different presentation of the Self, overt projection of a professional identity and continuous affirmations of neutrality, as well as demonstration of focus (on the part of the researcher) on the interview process. Research among the poorer members of our sample also involved networking and the building of rapport, but this appeared to be much easier for most of our researchers because these informants were also agreeable to the work of the TJC. The interviewees also appeared to be more trusting of the researchers and more willing to share their experiences.

The fact that research team contains a majority of anthropologists also reveals another emerging fact. Anthropologists are able and willing to confront and engage with the issues of political and social concern in our present society (Smith 1999) and Government should make use of their important intercultural skills in addressing contemporary challenges.

As can be gleaned from the extracts cited in this report, the racial identity and allegiance of the researchers were also regularly interrogated by Mauritians. People wanted to know whether a white researcher for example, was on their 'side' in the discussion. In our work, we have thoroughly discussed these issues and resolved to maintain neutrality and objectivity in the research process.

The interviews contained some of the key research questions noted below. However, those interviewed were encouraged to provide a full narrative of their experiences. This resulted in what social scientists call 'semi'-structured interviews. In these, the informant or interviewee is asked only a few key questions which serve to convey the main objective of the research and thereafter, with little additional control of the interview, the interviewee is encouraged and expected to discuss their personal experiences.

It is acknowledged by those employing the qualitative method of interviewing that interviewees may not be unbiased sources of information. Therefore, in this research, the team has attempted to cross-check data collected and verify information obtained from the interview processes. In Social Sciences, this is known as the triangulation of data.

Most important for the purposes of this research project is the issue of informed consent. In conducting this research, great care has been taken to ensure the anonymity of informants in order to protect them from possible reprisals or further discrimination. In this regard, the TJC method for achieving anonymity and the protection of informants was followed. With regard to informed consent itself, each potential participant was carefully informed of the purposes of the project and were asked if they understood the task in which they were about to participate and were subsequently offered a full consent form to sign. Further details regarding the exact requirements of the TJC, regarding consent forms and informed consent, is available from the Commission itself.

Unlike a quantitative study, no quota was set for the total number of interviews conducted. The objective was to obtain detailed accounts of individual and group experiences of racism so as to establish the nature or form of racism experienced rather than its extent in numerical terms. However, in total, approximately 200 people were interviewed for this project. This includes a cross-section of Mauritians, ranging from those who identify themselves as Franco-Mauritian to those who self identify as Creoles.

In an effort to understand the more intricate aspects of discrimination and to make allowance for alternative forms of social categorisation, the researchers on this team also investigated the impact of age and gender on the experiences of racism. The team members also investigated the role of particular locales on experiences and discourses of race. Thus, research was conducted in schools, marketplaces, factory settings, offices and in public spaces. It was hoped that this would help to ascertain the extent to which racism occurs in such spaces and/or the extent to which race remains valid in such places.

The research also involved a critical review of concepts used for social organisation in Mauritius. Thus, the team did not take for granted that there was a universal understanding and potential experience of race in Mauritius. Our findings (which we elaborate on in the body of this report), are that while the word ‘race’ was not continuously or overtly used to describe population groups in Mauritius, other terms such as *kominote* (community), *nasyon* (caste) were often used as substitutes or synonyms for race. Thus, to the outsider, it would appear that race is of no concern or of no importance to Mauritians, whereas closer attention to idiomatic expressions reveal a deep and enduring concern about, and interest in, race.

However, all the interviews conducted were transcribed, archived (in physical and digital format) and should (with permission from the TJC and thereafter the manager of the archives), be available for consultation.

The research team consisted of: four social Anthropologists (Rosabelle Boswell, Sophie Le Chartier, Nosipho Mngomezulu and Yogita Kunvar), a Clinical Psychologist (Tshedi Tshabalala), a Senior Social Scientist (Ingrid van der Heijden), and three research assistants: Dreesha Teelwah and Nitisha Chacoory.

## Research Questions

The key research question for the overall project was:

**What are the legacies of racism and experiences of racism by slave descendants and indentured labour descendants in Mauritius?**

Related questions which were asked in the course of research included:

1. What social policies existed or currently promote racism in Mauritius since the abolition of slavery?
2. What are the rights safeguarded by the Mauritian Constitution and what are ordinary Mauritians’ experiences of these constitutional rights?
3. How does the policy of ethnic representation influence race relations leading to charges of communalism?
4. How are particular groups in Mauritius (i.e. Creoles, Franco-Mauritians, Hindus) represented and how do they represent themselves? Does race feature in these representations?
5. How does the history of race relations in Mauritius influence the present experiences of inhabitants?
6. What are Mauritians’ experiences of aversive racism and how does it impact on their social identity?

With regard to the issue of the practice and experience of racisms, the following questions were asked:

7. How does class influence race relations in Mauritius and how does class impact on economic behaviour and experience?
8. How does geographical location and dispersal influence individual/group experience?

9. What are Mauritian's experiences of racism in the workplace?
10. What are youth experiences of race and racism in contemporary Mauritius?
11. What is the experience of mixed race slave descendants/indentured labour descendants in contemporary Mauritius?
12. What does the prevalence of racism stress in Mauritius?
13. What are the particular racial experiences of slave descendant and indentured labourer descendant women in Mauritian society?

These questions were allocated to the researchers on the team and they were tasked with developing further research questions to assist in 'answering' the key questions noted above. In the following, an overview of the research locales is offered, as well as the motivations for these research locales and the challenges experienced in conducting research there. It must be noted that this is not merely an academic exercise. In discussing the research locations and offering insight into the challenges of research in specific locales or among certain groups, the research team hopes to shed light on the dynamics of race relations in Mauritius.

## Research Sites

The research sites for this project were carefully chosen. The objective of the team was to obtain a representative sample of slave descendants and indentured labourer descendants, in order to fully document the experiences of these segments of the Mauritian population. However, this was not the only concern. In investigating the discourses and experiences of racism in Mauritius, it was important to interview also Mauritians beyond the above-noted categories. How do those who do not identify with slave or indentured labour descent view and construct identity in Mauritius? How do these constructions influence self-perception and interaction between those designated as marginal and the rest of society? What social networks exist which enable, as one blogger put it, 'cultural navigation'? What scope exists for social and ultimately economic mobility? Do specific sites impact on the construction of identity and the experience of race?

To address these complex questions, the research team conducted interviews and observations in interviewees' homes and workplaces, as well as in public spaces such as churches, schools and marketplaces. In other words, multi-sited research was done (Marcus 1995). The exact places of research are documented in the individual reports.

With regard to the study on the psychological burdens of racism, the clinical psychologist worked in several places. She notes the following:

In addition to my preliminary meetings held with Dr Kowlessur (Medical Superintendent) and Dr Naga (who is a Consultant in charge and Head of Clinical Department), at the Brown Sequared Mental Health Care Centre, as well as Mr Lutchmun, the Executive Director of National Agency for Treatment and Rehabilitation of Substance Abusers (NATReSA), in Port-Louis, the following summary can be provided pertaining to Mental Health services:

The centres visited are as follows:

- **Chrysalide** situated in Bambous, on the main road close to the stadium in a well-secured building. It caters for women substance abusers who are addicted to a range of drugs from alcohol to other drugs such as heroine. It is a residential centre providing treatment and rehabilitation. Although it initially catered for women from diverse groups, ages and socio-economic backgrounds, it has extended its services to include transvestite men. According to its Director, their clients are mostly Creoles, then Muslims and Indians.
- **HELP De Addiction Centre** situated in Hindu House in Port Louis, the premises are big, and well-secured. The centre is easily accessible as it is on the highway. It is a mixed residential rehabilitation centre which provides services to both females and males. Before admission to

the centre, the clients attend pre-admission educational programme with his or her family. Most of the clients are said to come from poor socio-economic background.

- **Centre D' Accueil de Terre Rouge** located in Terre Rouge. The premises are secure and accessible. It is close to the main road. It is a male residential centre which offers a 9-week programme. Most of the staff is ex-drug addicts who have been free from drugs for many years. The centre does not provide Codeine/Methadone substitution therapy as do the above two. The Director, in an interview, reported that the problem of substance addiction has no skin colour and no money, implying that the centre has served people who are doctors, accountants and well as relatives of politicians.
- **Etoile D'Espérance** in Moka, caters only for women alcoholics. The centre is housed in a well-maintained house, which provides a therapeutic environment with its garden and trees that complement each other to provide a private home and homely environment. According to the Director, the centre has served mostly Hindus and Creoles ..."we have had Muslim, no Chinese. We have had Whites and foreigners".
- **Mahatma Gandhi Ayurveda Centre** found in Calebasses is an outpatient centre and has four branches in Paillote, Goodlands and Rose-Belle Sugar Estate. It offers counselling for smoking, alcohol and drug abuse. According to the Director, services are offered by Physicians who provide consultation and dispensation of Ayurvedic Medicine- natural medicine and Massage therapist.
- **Kinouete** situated in Port Louis, and works mostly with detainees, while they are in prison and follows them up until discharge. Both **Kinouete** and **Mahatma Gandhi Ayurveda** do not house residential clients. Of all centers visited, **Kinouete** has most counsellors (Social Workers and Psychologists/Psychotherapists and volunteers). They work a lot with the prison-system and have recently been stopped by the Government. A lot of volunteers working for **Kinouete** highlighted that Government's decision is unjust to the detainees.

## Research Issues

### *Research on Mauritians in General*

One of the reports, which involved two intensive months of anthropological fieldwork in the region of Black River on the West Coast of the island, documents the experiences of Mauritians in general. The region of Black River was initially chosen for the fieldwork because of its association with the history of slavery and the development of ethnic relations with indentured labourers from about 1835.

It is documented that, historically (as recently as 6 years ago), Black River Village was a simple fishing village composed essentially of Creoles assumed to be of slave descent and commonly referred to as Afro-Creoles or Black Creoles and of Marathi that have migrated from the Black River Gorges, Cascavell (located before Flic-en-Flac), Henrietta and other regions to Black River and of a small community of 'Franco-Mauritians'<sup>7</sup> that were the big estate owners in the region such as the Maingard Family, Maurel Family, Pilot Family and De Ravel Family.

The demographic profile of this region is currently undergoing a rapid transformation, with foreigners settling in the region and Coloured Creoles<sup>8</sup> migrating from urban regions to Black River. This new population profile is impacting on the employment structure, social and ethnic interaction and on social stratification that was traditionally based on ethnicity and occupation.

A research assistant accompanied the researcher during these two months of fieldwork to assist her on the field with note-taking and conducting interviews, when the researcher was not free.

Approximately one month's additional fieldwork has also been carried out in other localities such as in Goodlands and in 'urban' areas, for example, Rose-Hill. Hence, even though the initial focus was on the Black River region, the sample size was expanded to people living in other regions of the island so as to obtain a more representative view of the extent of racism/communalism in Mauritius and to uncover possible geographical differences in experiences and practices of racial/ethnic discrimination.

A combination of qualitative research methods has been used for primary data collection: in-depth face-to-face semi-structured interviews and observations. Most of the interviews were conducted in 'Kreol' to make informants feel more comfortable, but some were conducted in French or in English with those who felt more at ease in these mediums.

With regard to sampling and since this research is a qualitative study, no quota was set for the number of informants to be interviewed as emphasis was on the quality of information rather than on the quantity. In line with the objectives of the research, the informants were, as much as possible, representative of gender, social class status, occupational groups and religious/ethnic composition of Mauritius.

At the end of three months fieldwork, 80 interviews had been conducted, including 10 informal interviews, of both men and women aged 18 years old and above. The interview sample included also some main socio-economic actors who consented to participate in the research. Namely, the Human Resource Managers of the British American Investment Group and the Food and Allied Group, the President of La Sentinelle Ltd. and of the Mauritius Employment Federation and the Chief Executive Officer of the Corporate Social Responsibility Programme.

Informal interviews were also conducted with the Human Resource Manager of the Beachcomber Group and ABC Motors Group and also with the Attorney General.

However, the policy-makers that is to say, the Minister of Finance and Economic Development, Minister of Social Integration and Economic Empowerment, the Prime Minister and the Leader of the Opposition all declined to be interviewed. The Minister of Justice conceded an informal interview and thus we are unable to use the data gleaned from that conversation in this report. The testimonies of these important individuals in our Government would have helped to obtain a better sense of the policy-making process in Mauritius from its conception to its implementation such as policy formulation, adoption, implementation and evaluation. Unfortunately, these lacunae have not been filled, in due to the unwillingness of the above to participate.

Given time constraints for data collection and to ease the informant identification process during fieldwork in Black River, the researcher was assisted by a facilitator, who lives in the region. The facilitator's duties were to ease the researcher's access to the research setting and identify and introduce the interviewer to the interviewee. Hence, informants were selected through judgment sampling.

To thwart possible biases resulting from sampling errors such as the facilitator selecting informants that share the same perceptions and expectations and of the same gender, ethnic and age groups, informants were also identified through a snowball effect and random sampling. Hence, the sample was extended to residents outside the facilitator's personal network to give opportunities to each ethnic group to participate in the research and, hence, ensure the representativeness of the ethnic and social class composition of Mauritius.

A facilitator was also used to identify Sino-Mauritian<sup>9</sup> interviewees because the researcher experienced difficulties in gaining access to this group. The Sino-Mauritians tends to be a 'closed' community, which does not easily offer 'access' to those racially different from them. This fact was also confirmed by the Sino-Mauritian facilitator. The researcher (a non-Sino-Mauritian) experienced numerous rejections for interviews from members of this community. Consequently, a Sino-Mauritian facilitator had to be used to identify potential informants who agreed to participate in the research.

The research team was fully conscious of the potential biases generated in using facilitators and of using the snowball sampling technique. With regard to the latter, it was a concern that informants might have identified research subjects of the same age, class and networking as themselves, who might in turn have reproduced similar accounts of racial discrimination. There were also concerns that biases may occur in the identification of Sino-Mauritian interviewees who were selected among the members of the Hua Lien Club that is known to be a club for the Sino-Mauritian elite. However, because of time constraints (hastened by the numerous refusals for interview), the researcher allocated to this task did not have the opportunity to interview Sino-Mauritians who are not members of this club.

The 'Franco-Mauritian' participation is also noticeably absent from the work of this researcher but was fortunately 'taken up' by another researcher. The latter (a South African of European descent) experienced 'better luck' in interviewing Franco-Mauritians. However, even she found that like the Sino-Mauritians, the Franco-Mauritians constitute a minority and closed community with rigid and deeply-rooted racial barriers which make it difficult for *non* Franco-Mauritians to gain access to the latter and gain insights into their stereotypes and personal experiences. However, through informal social encounters and observations, it was possible to get fragmented information on social behaviour and attitudes that may or may not be useful displays of their idiosyncratic beliefs of their own racial superiority.

## Research on Youth

The research on the youth offered better prospects for the allocated researcher. This was a segment of the Mauritian population which was relatively open and candid about their experiences of racism in Mauritius. Again, we noted the salience of skin colour to the research process. As a black woman from South Africa, the researcher was better able to access the Creole youth and women of Mauritius. Most of this work, yielded rich data on racial experiences among the youth.

The first interviews were conducted in the rural community of Rivière Noire at St. Esprit College, a confessional school where the researcher spent his/her first two weeks interviewing 18 students, conducting four life histories there. St Esprit College has a majority Creole student population due to the fact that it is a Catholic school and that the community in the area is largely Creole. At the school, access to the classrooms was provided and one was able to interact meaningfully with students inside and outside of interviews.

Two weeks were also spent conducting interviews with students and teachers at St. Mary's West College in Petite Rivière. St. Mary's West, is also a new secondary school in the area catering to a large Creole students population, mainly from urban areas. The first racially mixed school was College Ste Marie in Palma, where a further two weeks were spent interviewing 18 youths of different 'racial' backgrounds. The latter school is a private fee-paying Catholic school, which is rather different from the other confessional schools at which research had already been done. The school is clearly racially diverse, with teaching staff and students representing the whole spectrum of Mauritius' rainbow nation. At this particular location, there was lively engagement in the focus group discussions which enabled students of various 'racial' backgrounds, to participate in the discussion. This offered a unique experience to witness how students talk about race with persons outside their racial groups.

Interviews were also conducted in SSS Souillac with five teachers and twelve students from predominantly Indian backgrounds. SSS Souillac is an all-female Government College, where interviews were mainly conducted with Form VI pupils. The field research time at SSS Souillac provided access to a majority Indian student population group. These were also informative and helped to explain the varied experiences of teachers in Mauritian Education System. At Keats College, there was the opportunity to speak to eight young women from Creole, Indian, Chinese and Muslim backgrounds. There the researcher was able to engage students of different religious and racial backgrounds in focus groups which proved to be informative on race discourse amongst youth. At the same school, she was also afforded the opportunity to speak extensively to the Headmaster and gained an understanding into his views on contemporary Mauritius, the school curriculum and issues of equality in the Education System.

The researcher also conducted fieldwork at Régis Chaperon School, in Rose Hill, where she interviewed the Headmaster and seven students. The all-boys school has gained a notorious reputation in the past decade and when the school was visited, it was in a terrible condition, with broken windows and a faulty sewerage system that left a pungent smell in the air. At the school, issues of discipline, parent-teacher cooperation, equality of Education in Mauritius, as well as the challenges of schooling in Mauritius's competitive school-ranking system, were discussed. Two days were spent at Port-Louis SSS, an all-girl College, which was newly-built. There, the researcher was able to conduct three life history interviews with girls from different socio-economic and racial backgrounds.

In an attempt to gain a greater understanding of life outside of secondary schools, focus groups were also constituted with students who had finished schooling. Focus group interviews were also implemented with youths from Vallijee Church. Approximately thirty youths attended, but about only about 10 of these were really vocal during the interview process. It was apparent that of those who did not speak, there was a great deal of shyness and reluctance to participate in the proceedings, even though there was a competent interpreter present.

Finally, a focus group of seven participants was also conducted, mainly with older youths from Bois Marchand *Cité*, a low-cost housing development area. The participants were mostly concerned about the economic instability in the area. In Roche Bois, another focus group was conducted with 6 young people from the *Mouvement pour le Progrès de Roche Bois*. These young people receive assistance from the centre which treats alcohol and drug abuse amongst youths and their parents. The area has a notorious reputation for violence and drug abuse and whilst some participants attended school, many did not.

## Research on the Franco-Mauritians

This part of the research project focused on the contemporary realities of the Franco-Mauritian community in Mauritius. As already noted, it was conducted by a South African of European descent. This is noted because it made a 'world of difference' to the informants, as the researcher experienced some initial difficulties but was able to obtain a deep understanding of racial and community dynamics among the Franco-Mauritians. As also noted in the executive summary of this report, the research conducted makes use of, and cross-references with, research already done on these communities in Mauritius and as such, the team is building on knowledge that has been generated by scholars preceding the time of the Commission. Nevertheless, this research specifically unravels the conflated elite position of Franco-Mauritians in contemporary Mauritius. The following questions were asked:

1. What are the normative interpretations on what it means to be Franco-Mauritian?
2. How does the history of colonisation in Mauritius influence the present experience of the Franco-Mauritians?
3. What experiences of racism do they encounter on a daily basis and how does it impact on the Franco-Mauritian individual experiences of self-worth and their collective sense of national and social identity?
4. What kind of class positions do Franco-Mauritians hold in Mauritius? What has changed from their historic elite positions?
5. Describe some of the ambiguous acts of ethnicity. (Not all white ethnicities are dominant and not all whites are privileged).
6. What are the exclusionary practices of Franco-Mauritian discourse?

Over a period of 4 months, the researcher was able to contact and interview 24 participants who were identified as Franco-Mauritians. The age range of the sample spanned 23 years - 82 years old. She felt that the perspective of Franco-Mauritian youths could better reflect the contemporary situation. However, she relied on older Franco-Mauritians to present their views on Franco-Mauritian life, past and present. Unfortunately, she was unable to conduct any focus groups with Franco-Mauritian youths. All together she was able to interview an equally gender representative group and participants spanned a range of occupations. Every Franco-Mauritian interviewed defined themselves as having European ancestry and as practising Roman Catholics. Most Franco-Mauritians, also interviewed, lived in The North, West and Central Mauritius. Residential areas of interviewees included Curepipe, Rose-Hill, Floréal, Black River, Tamarin and Grand-Baie. Some were interviewed at home, others in their workplace. It was not only interviews that informed the research but also participant observation in shopping malls, social clubs and bars, in church, at the beaches and in other public spaces.

Because there are various Franco Mauritian landscapes, the research needed to be multi-sited. Multi-sited research purports that ethnographic subjects cannot be culturally understood from one specific terrain under one specific set of conditions, and reinforces the fact that subjects in different sites under various conditions need inform an ethnography.

## Research on Gender

The research on gender and racism was not well-executed. We had a number of good observations initiated by two research assistants. However, these did not yield data of sufficient substance for us to discuss the issue of gender and race in a separate section of this report. We hope, however, that this topic will be further investigated in the near future and that this report is able to provide sufficient insight into the specific experiences of women in particular, in a racialised space. We offer a brief discussion on gender and race in Section 3 of this report and use data from other archives (*Aapravasi Ghat* interviews on gender and identity) to supplement our discussion on this important issue.

## Psychological consequences of Racism

The Clinical Psychologist, who was part of this project, used mostly interviews and observations to gather her data for this report. She indicates that:

A total of 17 interviews (thus formal and informal) were conducted in July and August 2011- which includes 9 preliminary meetings with Directors of the NGOs mentioned earlier, and those in Public Service. At these meetings, research objectives were outlined and introductions to the institutions offered. Follow-up visits to these institutions and other meetings have produced eight life histories and one focus group. All life histories have been archived and are stored to CDs.

### Observation of Health Care professionals in Government institutions:

The researcher is not trained in the assessment of physical features, that is a description of skin tone and colour, hair texture, body shape and other physical/biological make-up often used in categorizing people into racial groups. Through informal interactions with the staff in public facilities, the researcher came to learn that the protocols that govern public institutions and its hierarchical structure means the researcher cannot interview a junior staff member without his or her senior being aware especially during working hours. This, together with the participants' reluctance, means that when conducting interviews at the office and during office hours, the researcher needed to be cautious of organizational issues.

With regard to Psychologists and Social Workers, the nature of their work which is characterized by working according to appointments, long hours for those on calls, overload and their alternative daily movement between institutions or centres. This seems to suggest that the researcher should look into scheduling their interviews on weekends or after hours, whenever possible.

Although Public Servants specifically Psychologists agreed to be interviewed, they do not only wish to remain anonymous, but requested not to be audio taped. This could possibly mean that by virtue of working for the state, they belong to an organization with governing rules. Perhaps, they feel their personal and professional opinions may be misread as representation of their institutions. One wonders if their responses are embedded in the ethics of their profession, which places such emphasis on confidentiality and boundaries.

In comparison to public serve personnel, there has been a generally positive response from NGOs. The researcher was able to visit and conduct interviews with qualified and unqualified Counsellors (which include Psychologists, Social Workers, Therapists and people with long standing experience in the counselling field ) working for these NGOs. The researcher still plans to contact the rest of the NGOs list under NATReSA and diversify the population to include Medical Doctors in these set ups. In contrast to public service, it is in the NGOs where the researcher have seen and interacted with people from different ethnicities that exist in Mauritian society.

## PART ONE

### THE CONSTRUCTION OF RACIAL IDENTITY

*Researcher: What race would you say you are?*

*Participant: Catholic*

*Researcher: I mean the colour of your skin, what race do you identify as in forms etc?*

*Participant: Creole*

*Researcher: What makes you Creole?*

*Participant: \*pauses\* Speaking Kreol.*

*(Interview001\_01062010)*

*Researcher: What does a Creole person look like?*

*Participant: Creoles are black people*

*Participant: A Creole is someone like me, nasyon.*

*Researcher: What does nasyon mean?*

*Participant: Same as 'Mazambik', we are distinct from others, we came from Africa.*

*(Interview022\_27062010)*

*Focus group meeting 27 June at Bois Marchand, Christopher (20) and Maygane (28).*

*Researcher: How do you define your race?*

*Participant: Normally I would say I'm Christian and Chinese.*

*Researcher: have you ever felt you were treated differently because of your race?*

*Participant: I have \*pauses and taps feet\* I think so, yes, maybe it's because I'm white, they think I'm more intelligent than them.*

*Researcher: do you identify yourself as white?*

*Participant: they think I'm white. I think they think that, I don't know.*

*Researcher: what do you mean when you say white?*

*Participant: I'm not saying I'm white like a tourist. Like in school, we see Creole, Chinese, Muslim and Indians. But when you see like a Chinese like me they call them blanc, white, that happens to me. You see it in the colour of the skin, they see my light skin and they will say white. Normally I will say I am Chinese, they say blanc.*

*Researcher: do you identify Chinese as white*

*Participant: like my friend, D, he is Chinese and he is white. There is also this girl, she has light skin and is mix, I would say she is white*

*(Interview011\_09062010)*

*'....paski bon si nou vin lo term relizyon se la plipar kreol ki tit el katolik e kreol e a moris zot don identite kreol pli boku ban ki in desandan esklav c ta dir ban*

afro morisyen e li vin inpe komen nou dir li vin lor kuler so lapo e seve en promyer baz...kalite seve...se kan nou dir lapo brin pa dir nwar me brin e seve nwar nu dir seve krep ti seve seve mozanbik...'<sup>10</sup>

(Eng. Trans.:...Because if we consider the term religion mostly Creoles were Catholic and Creoles in Mauritius they give the Creole identity mainly to the slave descendants that is the Afro-Mauritians and it comes a little how would say that on skin colour and hair type primarily...hair type...it is when we say brown skin not black skin we say brown skin and black hair we say frizzy hair short hair Mozambican hair...)

*'...Par les cheveux surtout pour les créoles, vous pouvez distinguer leur leur cheveux...A moins qu'ils ont le cran rase, des cheveux crépu...bon, un indien on va, on va surtout savoir que c'est pas un créole ou un chinois, mais il sera peut-être musulmans ou tamoules c'est pas vraiment différent...'<sup>11</sup>*

(Eng. Trans.:...By the hair especially for the Creoles, you can distinguish their hair...except if they are shaved, frizzy hair...but, an Indian we will above all know it is not a Creole or a Chinese, but he might be Muslim or Tamil it is not really different...)

Anthropologists both national and international have conducted substantive research on the nature of identity in Mauritius. Most of these researchers and authors concur that the public articulation of Mauritius as a *multicultural society*, as well as the national slogan of 'unity in diversity' encourages the public to focus on differences and ethnic diversity. In what follows, we offer evidence of the construction of specific 'communities' in Mauritius and the ways in which these constructions serve to reinforce ethnic (cultural) and racial boundaries. We attempt to outline some of the key discourses of the time and to explain how these encouraged or attempted to dissuade Mauritians from engaging in racist classifications.

## Official and Public Discourses

As the Social Stratification project of the TJC (2011) confirms, when the Indian indentured labourers arrived in Mauritius, they did come to the island with unchanged ideas about and experiences of caste. Relationships struck on the journey from India to Mauritius, dock marriages, the practice of hypergamy and the mimicking of higher caste behaviours and practices were all experiences which the indentured labourers might have had on their travel to Mauritius. Thus, while they might have been versed in the ideal ways to maintain religion and identity (i.e. *via* the official religious discourses), they were also humans who altered and attempted to change practices and beliefs in order to meet their particular needs. Once in Mauritius and among a myriad of concerns (including survival), there remained a deep concern in maintaining caste-specific identity and hierarchy, especially regarding the issue of crossing waters which could defile the individual. In Mauritius, it is possible (and this needs further investigation) that the idea was that one could reverse or attenuate the spiritual pollution caused by the travel over the sea to Mauritius by reasserting and strengthening caste specific rituals and practices. As the Indian descendants were far from home and were in a space in which there were competing beliefs and practices, it became imperative to reassert caste identity, not only to maintain privileges but to maintain the illusion of purity, which is vitally important to the maintenance of one's identity. To acknowledge a common identity as Mauritians could have jeopardised existing system, privileges and the illusion of control. However, and as many scholars have noted (see the writings of Oddvar Hollup on caste in Mauritius for example), the concern with the maintenance of caste identity is not one which has evolved 'organically' since the arrival of indentured labourers. What the literature tells us is that there were concerted efforts on the part of scholar-politicians (the Bissondoyal brothers for instance) who promoted the reification of caste in almost essentialist terms. This practice has led, as we discuss further on in Section 5 of this report, to the institution of socio-cultural organisations which can promote racial and ethnic segregation in Mauritius.

A quick overview of the development of the franchise and of democracy in Mauritius since abolition suggests that these were very slow and tortuous processes. The abolition of the Colour Bar in

Mauritius in 1928 appeared to pave the way for a more racially-integrated society. However, and despite this important change, racism remained institutionalised or at least a very salient feature in Mauritius. Politicians remained largely male, white and wealthy. Businesses in the 1930s remained mostly white-owned and male-run. It was only in 1947 that the vote was extended to the literate in Mauritius and this saw the gradual transformation of a racially-oriented political system. But even so, the underlying discourse then was that only literate people could understand the meaning of equality and of democracy. Women were largely excluded from this newly-enfranchised population and the many illiterate slave descendants and descendants of indentured labourers were excluded.

In the 1980s, there was a concerted effort in Mauritius to promote a national identity, one based on 'Mauricianisme'. This ideal was not readily embraced by everyone, partly (we argue), because the movement and ideal were associated with the working class and the politics of Creoles via the MMM political party. The following extract from one of the individual reports generated by a researcher, part of this project, offers more detail on this particular period in history and the identity issues at stake:

In line with the interviews of Firoz Ghanty and Jean Claude de L'Estrac, 1969 to around 1982 was a period of national identity construction and building of national culture, but about 1970 to 1972, racism was rife and there was the revival of Hinduism and an Indianisation of Mauritius which led in 1983 to the division of the Hindu community into subgroups.

...82, de manière un peu mythologique et mythique, est présenté comme un grand moment d'unité nationale. Au contraire, puisque le MMM gagne les élections, le MMM n'est perçu comme un parti communal, raciste ou ethniquement centré. Il est perçu comme un parti national qui se bat pour la lutte des classes, qui refuse le communalisme, qui prône le Mauricianisme...Mais en vérité c'est un peu faux parce que quand on regarde de près...on constate que même en 83, une majorité de Mauriciens d'origine indienne, de foi hindoue, n'avaient pas voté parce que le Parti Travailleiste fait à lui tout seul près de 30% des sièges au plan national et pour faire ce résultat là, il est clair que le Parti Travailleiste a dû faire près de 60-70% des voix d'électeurs hindous, c'est-à-dire que même là où il y a eu un élan, mouvement qu'ils avaient retrouvé d'ailleurs les hindous n'ont pas été à ce rendez-vous là. Ils sont restés fidèles au Parti Travailleiste pour des raisons que l'on peut expliquer amplement...<sup>12</sup>

(Eng. Trans.:...82, is presented in mythological and mythical ways as a great moment of national unity. On the contrary, since the MMM wins the elections, the MMM is not perceived as a communal, racist or an ethnically centred party. It is perceived as a national party fighting for the class struggle, that refuses communalism, that promotes Mauritianism ... but in fact it is somewhat false because when we have a close look...we note that even in 83 a majority of Mauritians of Indian origins, of Hindu faith did not vote because the Labour Party on its own counts 30% of the seats at national level and to reach this result it is obvious that the Labour Party has had to cast about 60-70% of the Hindus electoral vote, that is even where there was a gathering of forces, a move that excluded the Hindus. They were not there but had remained faithful to the Labour Party for reasons that we can thoroughly explain...)

'...C'est-à-dire dans cette première période qui a vécu le MMM entre 1969 la naissance du MMM et on va dire 1982 ; il y a eu une très grosse prise de conscience de tout ça, où la honte a commencé à disparaître, où les descendants d'esclaves assumaient, ils disaient oui je suis descendant d'esclaves, les descendants d'engagés l'assumaient aussi donc ça était une période extraordinaire de construction réelle de l'identité et de la culture nationale et c'est-à-dire il y avait plus de honte à ça. Donc voilà cela a été une grande période. Et puis il y eut une recomposition à partir de 1983 où effectivement on a voulu garder les divisions et à ce moment là il y a eu une autre prise de conscience qui s'est faite en parallèle dans la communauté indoue. Ramgoolam père avait pu faire une espèce d'unité de la communauté

indoue qui était une grande masse un peu uniforme. Mais à partir de 1983 ; les subdivisions ont commencé à paraître...à réapparaître. On a commencé à parler du télugu, du marathi, tamoule, etc. etc. rajpoute, il y a des sociétés qui vont naître. Où ça veut dire qu'il y aura plus cette espèce de grosse cohésion. Chaque composant de la communauté indoue va se retrouver. Mais chez le créole ça ne peut pas se faire parce qu'il n'y a pas d'élément pour savoir précisément de quel pays ils sont originaires...<sup>13</sup>

(Eng. Trans.:...That is during the first period of the MMM between 1969 and we shall say 1982, there was mass awareness of all this, when shame started to disappear, where the slave descendants accepted (their descent), they said "yes I am a slave descendant, the descendants of indentured labourers also accepted it", hence it was a great period which saw the real construction of identity and of a national culture and there was no shame in it. Hence it was a great period. And then there was a reconstruction as from 1983 when in fact they wanted to preserve divisions and as from then there was another awareness building in parallel in the Hindu community that was a large mass somewhat homogeneous. But as from 1983 subdivision started to appear...to reappear. We started to talk of Telegu, of Marathi, Tamil etc etc. Rajput, groups will be set up. Where it means this kind of mass cohesion won't exist anymore. Each component of the Hindu community will find his bearings. But among the Creole it won't be possible as there are no elements to know their exact country of origin...)

## Discourses in the construction of Communities

The following extract from one of our individual reports reveals the various ways in which Creole identity and community are constructed, as well as the construction of race in the Creole community.

The conceptualisation of who is a Creole and of *Creolité* (English Translation: Creolity) differs from one informant to another but two perspectives can be identified from the information gathered. The first reveals a biological definition of *Creolité*, emphasising the 'Pure-bred Creole'. From this perspective for someone to be identified as a Creole, they have to possess specific phenotypical features. In other words, that person needs to have 'black' skin and other characteristics associated with the African phenotype, this is because: '*...kreol ces desendan esklav, kan nou pe koz kreol ces afrikain...*'<sup>14</sup> (English Translation:...Creole is a descendant of slave, when we talk of Creole we are talking about an African person...)

The second perspective emphasises biological hybridity and cultural heterogeneity among Creoles. From this perspective, all those who either speak the dialect of Kreol and live on the island or are Creoles, regardless of their religious/ethnic background. Thus:

'...Créole c'est nous, tout le monde, tout le monde qui parle le Créole. Du moment que tu parles le Créole, c'est notre langue natale ; la langue officielle à Maurice c'est l'anglais mais le Créole, c'est notre langue natale, donc on est tous des Créoles...Créole c'est une nationalité, il n'y a pas de races qui parlent le Créole, même le blanc aussi parle le Créole...Donc, comme tu dis, le blanc est un Créole, l'Indien est un Créole? Oui et c'est la seule langue qu'on parle tous à Maurice...'<sup>15</sup>

(Eng. Trans.: ...We are Creoles, everyone, all people who speak Kreol. As long as you speak Kreol, it is our mother tongue; English is the official language in Mauritius but kreol is our mother tongue, hence we are all Creoles...Creole is a nationality, there is no race speaking Kreol, even the whites also speak Kreol...Hence, as you say the white is a Creole, the Indian is a Creole? Yes and it is the only language that we all speak in Mauritius...)

Another argument in the construction of identity and community is that for some (as we see below), there are no 'pure' Creoles exhibiting the exact phenotypes of black Africans left on the island because of intermarriage and sexual relations.

'...Parski nepli en pir Kreol. Pir Kreol pena sa. Aster ki pena pir Kreol, sekinn ne isi, nou tou nou ansam. Me pir, depan nou lorizinn mem nou pa pir. Parski inn amenn nou isi o fer sekinn amene, noun melanze, nou pa pir nou....Sekinn ne dan enn lil...be nou tou Kreol...parski nou tou nou ne lor enn lil....pou mwa ki savedir Kreol. Tou kreol! Me selman li, li enn Kreol-Indien, li li enn Kreol-Mizilman, senn-la li enn Kreol-Sinwa...kan ti amen Kreol la li ti ankor, malgas, kan ti amenn Afrikin la, li ti ankor Kreol me Afrikin. Me nou tou Kreol. Se ki fe ki nou nou pena idantite, alor, nou nou Kreol-Kreol...'<sup>16</sup>

(Eng. Trans.:...Because it is no more a pure Creole. There are no pure Creoles. Now that there is no pure Creole, those who are born here, we are all together. But pure depends since our origins we are not pure. Because we were brought here that brought mixture, we are not pure...those who are born on an island...we are all Creoles...because we are all born on an island...For me who is a Creole. We all Creoles! But he, he is a Creole-Indian, he is a Creole-Muslim, this one is a Creole-Chinese...when the Creole was brought he was still Malagasy, when the African was brought he was still African but Creole. But we are all Creoles. But we do not have an identity hence we are *Creole*-Creoles...)

However, even among those clearly defined as 'black' Creoles, there is further racial distinction, which condemns those at the very bottom of the racial hierarchy to extreme marginalisation:

...speaking of the Creole context, one scholar stated that 'there is division within Creole community of who is a Creole. Those who cannot help but *look* Creole, that is you can see they have African ancestry, are most affected by marginalisation. There is different grading of Creoles depending on mix, the blackest of Creoles marginalised by other Creoles' (Interview023\_08072010).

In the final analysis, we find that it is very difficult to identify where the Creole community begins and where it ends. The previous quote is especially interesting because it highlights the fact of heterogeneity in Mauritius and how people have adopted hyphenated identities (i.e. Creole-Muslim) in order to publicly indicate the various strands of their ancestry and identity. The interviewee quoted above also indicates the ambivalent situation in which Creoles find themselves because: (1) Creoles do not have these alternative strands of identity (they are Creole-Creoles) and (2) the low value placed on Creole identity itself because not to have another strand of identity (i.e. Indian, Chinese, Muslim) via which one can forge an identity, is believed to deprive a person of identity altogether.

In the following extracts we note the reconstruction of Creole identity via the discourse of victimhood in the story of slavery. It is our view that this is happening because there is a 'need' to reassert boundaries around the Creole community and to give it value (by establishing a definitive source of identity and history of Creoles) in the culture-conscious space of Mauritius.

It is possible, however, to also cynically argue that some Creoles have appropriated and transformed the discourse of victimisation and suffering apparent in the story of slavery and that they are now reinterpreting the story to argue that their ancestors were resilient and that this resilience is now helping them to confront the legacy of slavery. The discourse of resilience and freedom have now replaced the historical discourse on slavery as an experienced marked by humiliation and suffering. Those intent on using the transformed discourse for political purposes are now doing so, as a way of gaining leverage and support from the slave descendant population. It is also our view that the transformation of the discourse of slavery is not the sole project of selected Creole politicians but rather the work of politicians and scholars who actively search for, and promote, narratives of resilience in the history of slavery.

Here we run into some difficulties. For, a closer look at the historical literature on the story of slavery in Mauritius strongly suggests to us that the story of slavery and the involvement of Creoles in it were something that has long been suppressed. Thus, it is our counterargument that, the 'new' discourse on slavery as a time of resilience and search for freedom, is an important part of

the process of providing counter-narratives about race in Mauritius. Such narratives seek to displace the negative stereotyping of slave and indentured labour descendants. They are positive discourses in the sense that they seek to restore dignity and hope to those who have experienced marginalisation. The latter is very important because in Mauritius, there is rarely a discussion on how scholarly work might contribute to the reconstruction of racial discourses. If we consider how (in the past), scholarly and scientific outputs were important to the consolidation of scientific and social racism, we should not be so quick to dispense with scholarly work on identity issues in Mauritius. We shall return to the issue of discourse and identity construction at the end of this report in the section on recommendations. For the moment, we are focused on that the fact that the transformation of the discourse of victimisation is a potent means of rejecting popular, negative (and racist) discourse about Creoles:

In line with the above testimony and further substantiated by Claudine's statement, the descendants of slaves have embraced the Creole identity, whereas others have not. Some Creoles have also transformed this identity into one of racism and suffering. This is why the term Creole is now commonly associated with the Mauritians of African descendants.

'...tou dimunn ki res lor lil se bann kreol me selman nu ena enn tandans pu dir ki nu bann desandan esklav nunn pran li depi o komansman mem. Kuma dir kan enn dimunn pu get mwa la, pa bizin dir ki kiete sa kreol sa, kuma nu dir dan langaz ki nu abitie koze, kreol sa, malbar sa, sinwa sa, blan sa, non. Kuma truv mwa, nu figir mem dir nu enn kreol, parski nu desandan esklav depi in pran nesans nu dir nu nu kreol, kuma dir ni in fini ankre dan sa idantite kreol la...'<sup>17</sup>

(Eng. Trans.:...All people who live on an island are Creoles but we have the tendency to say that we slave descendants we took it since the start. That is when a person looks at me, there is no need to say who (I) am (I) am a Creole, as we use to say in our language, it's a Creole, it's an Indian, it's a Chinese, it's a white. When they see me, my face tells them that I am Creole, because we are descendant of slaves since our birth, we say we are Creoles, that is we are rooted in this Creole identity...)

This tendency to Africanise the Creole identity is based on racial characteristics and also on linguistic factors. A Creole is not only a person of African phenotype but also someone who has to speak the *Kreol* language to be considered as a Creole. Hence, based on this construction of the Creole identity, the Coloureds (commonly designated by the pejorative term Mulattoes or bastards) are not considered as Creoles but as a distinct category because not only of their racial characteristics but also because they may refuse to speak *Kreol*.

However, it is not enough to identify people in terms of their perceived ethnic group. A few of the informants did not identify themselves as Creoles but as members of a particular class. Georges, for example, identified himself in terms of social class. For him there are two worlds, that is two social classes, the *monde ouvrier* (English Translation: Working Class) and the *monde cadre* (English Translation: Management Class). He is proud of being of the working class. This is, as we argue, an important way in which to diversify the Creole identity and perhaps to remove it from the ambit of suffering and victimisation to one of perseverance and triumph.

'...Alor pou mwa mo rasin kouma dir se se sa se sa lorizin ouvrye mond ouvrye, kouma dir kan mo get mo papa ki pe travay, mo mama ki pe travay, pou mwa se sa mo lorizin, se sa mo rasin. Kouma dir de sa mond ouvrye la ek ki kouma dir malgre, ki zordi mo pe travay enn ti, enn ti travay korek , me selma kouma dir mo pa blie sa lorizin ki mo sorti, se enn enn milie ouvrye...'<sup>18</sup>

(Eng. Trans.:...So for me my origins are this working class origin, that is when I looked at my father working, my mother working, this is my origin, this is my roots. How to say that, from this working class and how to say that, even though now I am working, I have a fairly nice work, but I do not forget my origins where I am from, it is a working class...)

According to him, there are two ways of considering the proletariat class, on the one hand, there are those who are not motivated and have developed a fatalistic approach to life, and on the other

hand there are those who are conscious of the importance of education and want to revalorise the working class. But there are people who, when they climb the social ladder and have achieved success, tend to forget their origin that they find is a shame.

'...mond ouvrye sa veu dir bann dimoun ki travay manuelman. Li kapav kouma dir bann mason, li kapav kouma dir bann menuizie...zafer ki monn konstate seki ena ena de mentalite du mond ouvryer. Ena enn mentalite ouvryer seki ena zenes ki malerezman kouma dir...papa peser, mason ainsi de suit ek finaleman kouma dir zot zot dan enn espes moule kot zot rest ladan mem ek ki kouma dir zot dir be se enn sentimen fatalist ki ki pran zot, zot dir koumsa ki wai be ki zistwar la li koumsa ek nou pa pou kapav sanz narien... Me deziem mentalite ki monn touve ek ki sa mentalite la osi ki li diviz en de, se enn premie mentalite dir koumsa be vwala mo dan sa monde ouvryer la...me selma kouma dir souvan ena bann paran du mond ouvryer ki consien ki sel fason pou sorti, se ledyasyon. Alor zot inkilke sa dan zot bann dan zot bann zenfan. Ek zenfan la kouma dir li resi monte sosialman, o nivo bann letid. Fale resi monte ek kan li resi ariv la ba...fer tou mo posibil pou ki kouma dir mo valoriz sa mond ouvryer la ek konsientiz kouma dir bann zenfan ki dan enn le monde ouvryer consientiz zot ki kouma dir mem si nou sorti dans enn mond ouvryer, nou kapav arive dan la vie...E deziem, malerezman deziem fason...seki souvan bann paran du mond ouvryer enkor enn fwa zot motiv zot bann zenfan pou al de lavan dans letid. Don zot tou seki zot bizin, ek ki zenfan la resi ariv enn moman, li resi ariv enn bon bon nivo, ek malerezman seki monn konstate, seki li blie sa plas kot linn sorti la, li envi blie sa sa monde ouvryer kot linn sorti...'<sup>19</sup>

(Eng. Trans.:...The working class means manual workers. It can be how to say that a mason, it can be, how would you say this... a craftsman...something I have observed that the working class has two mindsets. There is one mindset of the working class that unfortunately the young people how say that...father is a fisherman, mason etc and finally let say that they are in a matrix in which they remain and they say that they are impregnated of a fatalist feeling, they say that their story is as such and that they won't be able to change it...but the second mindset that I observed and it is also subdivided in two parts, it is a first mind frame that states that here is I am in this working class...but how say that often there are working class parents that are conscious that education is the only means of get out. Hence they inculcate it in their children. And the child succeeds in moving up socially, at educational levels. And when he succeeds...he does everything to valorise the working class and sensitise the working class children that even though we come from the working class they can succeed in life...and second (mind frame) unfortunately...is that often working class parents again motivate their children to succeed in education. (They) give them all that they need and the children succeeds, he succeeds in reaching a good level but unfortunately what I observed is that he forgets where he comes from, he wants to forget the working class from which he comes...)

The above extracts suggest that socioeconomic mobility can encourage dissociation from one's economic and cultural roots. Among Creoles, this dissociation is perceived as a betrayal of the group in favour of a lifestyle and the social world in which the 'real' Creoles are excluded. Dissociation is also contrived as a form of aversive racism because dissociation implies disdain for, and a rejection of, a former lifestyle and of former associates. However, those leaving their 'old' world behind do not consciously leave but are doing so unconsciously and under pressure from the demands of the new social and economic situation. It is also noted by one of our researchers however that '...people's knowledge of their origins is limited to their grandparents and most of those interviewed did not have exact information about their origins but guessed their family ancestry based on their phenotype and on what they have learned or read on Mauritian history.' This means that informants may argue that their ancestors came from Africa or Madagascar because of their perceived physical traits but also because the story of slavery has become an integral part of the nationalist discourse:

'...Tou dimounn pou apel mwa enn desandan esklav, parski mo apel Georges Cangy, mo seve demi krepri dan mo latet, mo bat ravann, mo sant sega. Be zot pa pou dir mwa mo enn desandan esklav?...'<sup>20</sup>

(Eng. Trans.: ... everyone will call me a descendant of slaves because my name is Georges Cangy, my hair is half frizzy, I play ravanne, I sing sega. Won't they say that I am a descendant of slaves?...)

Interestingly, the association with slave descent is not only one that is reinforced and maintained in nationalist discourse, but also via certain experiences. As the following interviewee suggests, that it is not only external definition but experience of contemporary hardship (possibly because of 'race') that qualifies an individual as a slave descendant person:

'...Li ti bann Baho non Mascareignes, de kote maternel li bann Baho. Aster, kan ou vinn par isi ou get la fami Cangy, nou zot dir nou sort sipa Pondicherry, ena dir sipa dan ki parti rezion de l'Inde nou sorti. Be kan mo get tousala de dan...Ou kone kan monn al resanti ki mo bann desandan bann desandan esklav ? Kan ou fer enn zafer, ou fer li par amour ou pou resi...Mo listwar mo panse ki mo bann granparan inn form parti dan lesklav. E la so disan, sa lavenn, disan dan lavenn esklav la, li ekziste...'<sup>21</sup>

(Eng. Trans.:...They are Baho, no Mascareignes, on my mother's side they are Baho. Then when you look on the side of the Cangy family, they say we come from Pondicherry others say that we come from whatever part region of India. But when we look at all this...You know when we felt we are of slave descent? When you try to do something with love but you do not succeed...my history I think my elders were among the slaves. And the blood, this vein, the slave blood in the veins is present...)

What of the other groups? Sino-Mauritians are (according to one of our researchers) the second or third generation of Chinese immigrants who migrated to Mauritius in the 19<sup>th</sup> and early 20<sup>th</sup> centuries. For example, Philip's parents and James' father and grandparents are of Chinese origins and arrived in the country at the beginning of the 20<sup>th</sup> century fleeing the Chinese civil war.

'...Non mes parents sont venus...Oui, nous sommes de la deuxième génération des immigrants...Pour fuir la misère et puis en Chine il y a une turbulence politique, la prise du pouvoir c'est-à-dire une guerre fratricide entre les nationalistes et les communistes donc et puis la prise du pouvoir des communistes. Donc il y a un avenir incertain, ils se sont sauvés pour venir...'<sup>22</sup>

(Eng. Trans.: ... No my parents came...Yes we are the second generation of migrants...to flee misery and in China there was political unrest, political takeover, that is a fratricidal war between the nationalists and the communists and the political takeover by the communists. Hence the future was uncertain, they fled to come here...)

The first wave of immigrants came as indentured labourers and many of them returned back to their homeland because they could not adapt in Mauritius. The second wave of migrants can be considered as political refugees since they left their homeland because of civil war but with the intention to return after the war when the political situation would be stable, and also after having saved money in Mauritius. But finally, many stayed in their host country; hence, according to the informants, they identify themselves as Sino-Mauritians, as Mauritians of Chinese origins because, firstly, the Chinese Diaspora in Mauritius still has close ties with their country of origin, with families living in China, secondly, they continue to perpetuate, to some degree, their ancestral traditions and practices and finally because the local Sino-Mauritian community is a recent migrant community compared to the other groups.

However, according to Andy and Roger, even though the Indo-Mauritians and the Sino-Mauritians have maintained their cultural specificities, the latter have integrated into the Mauritian society faster, in two generations, for economic and pragmatic reasons. For them, their community is less

ethno-centric compared to the others and their ethnic barriers less rigid as they easily accept others.

'...Je crois parce que nous autres les chinois, c'était beaucoup plus facile hein. Que ce soit dans la gastronomie ou dans la vie de tous les jours. Nous intégrons facilement avec n'importe quelles communautés ; hindoue, créole. Peut être, peut être pour vous dire franchement avec les musulmans un peu moins, on dit ça la, avec une certaine méfiance vu leur façon de vivre, leur religion et tout. Sinon O.K...au contraire, il y a de plus en plus d'ouverture, il y a le coté pratique de la chose. A l'époque comme vous le disiez le chinois ; les premiers chinois qui sont arrivés étaient à la recherche non seulement d'une compagne, d'une assistante même... et puis à l'époque, je te fais remarqué, il y a plus de males : d'hommes que de femmes qui venaient...De nos jours ça se répète. Dans le faite que, il y a moins de garçons pour trouver des filles. Il y a plus de filles que de garçons. Les garçons la plupart partent donc là ou ils vont, ils vont prendre anglaise, française...'<sup>23</sup>

(Eng. Trans.: ... I think for us the Chinese it was easier. Whether (it is) in gastronomy or in every-day life. We integrate in another community easily; Hindu, Creole, honestly maybe with Muslims a little less, we say it now with a little suspicion given their lifestyle, religion etc. Otherwise ok...on the contrary there is more opening, there is the practical side. At that time as you said, the first Chinese that came were not only in search of a partner but of an assistant too...and at that time I remind you there were more men than women that came...it is replicating itself now. In that there are fewer boys for girls. There are more girls than boys. The boys leave and they take an English, French...)

However, as we indicate further on, in our discussion on the youths and socialisation, the integration of the Chinese descendants is not as easy as is claimed by the previous informant. The identification of them as 'different' and in some cases, sub-human (see for example the racial epithet regarding people of Chinese descent), sets them apart from other communities in Mauritius and encourages racial exclusivity within the group. This presents an interesting issue for the TJC. The Bill requires an investigation into the legacy of slavery and indentured labour and our task is to investigate the historical and contemporary experience of racism. What do we do about those who fall into neither of these categories but experience either direct or aversive racism because they live in a pigmentocracy and culturally conservative society in which whiteness is privileged?

In our research, it was difficult to find members of the Indo-Mauritian community willing to discuss the issue of race and the experience of race. We had better luck in discussing the intersection of gender and racism in the personal experiences of Indo-Mauritians. We feel that the Social Stratification project will be best placed to discuss the quasi-primordial or essentialised discussions and experiences of caste and how caste discrimination can mimic racial discrimination.

## Unofficial Discourses and Policies

However, this report can offer some insight into how Creoles perceive Hindus and Franco-Mauritians and how they experience interactions with them. Overall, we found that there is a perception of homogeneity and cohesiveness among Indo-Mauritians. There is also the argument that Indo-Mauritians receive preferential treatment and have better experiences in the job market and in a variety of social spaces:

'...Parski ou al get enn travay, li get ou nom. Mo frer ti ena tou sertifika ki bizin pou al rod enn travay li dir li isi nou pa get sertifika, nou get zis ou non; si ou ti ena enn Singh dan ou non nounn donn ou travay-la. Li inpe lontan ha mo pe dir ou, me le fe ki zot kontign gard sa. Si ou non enn non Kreol, ou dosie al par anba be li pa zis ki se pou sa ki nou dir ki nou pena okenn drwa nou, parski nou pena personn pou defann nou...Ou kone kisisasa ou dan enn lopital, ou pe asize servant la pe koz langaz ou ou tousel zot inn fer enn lekip, ou pa pe konpran narnie ki zot pe dir...Letan ou trouv bann ners la vini, zot tou parey, zot tou koz

dan langaz ; servant la pe koz ar ners la sa osi li koz an langaz, koze pani amenn delo. Be nou ar ki nou pou koze ler-la nou ? Eski kouman mo pe dir ou la, koman pe dir personn pa resi, eski dan Kreol pena personn intelizan, pa fer mwa pans sa. Eski dan Kreol pena personn kapav al travay dan lopital, al fer servant ? Tou seki fer pa kapav zot dir ki nou pale; nou pa gagne! Pou anvoye mem soz-la me nou pa resi rantre, parski kifer, bann dirizan lopital lamem Indien, so ban dokter Indien, mo pa kont sa zafer ki dir ki mo ladan mwa, mo fer mo fami rantre li vre sa ; tou dimounn rod lavantaz, me si zot tou ladan zot tou fer zis zot fami rantre, be nou kan nou pou ladan, kan nou pou fer nou fami rantre ? Savedir ki nou pou fer nou ; toultan nou pou res par deryer mem ? se sa ki noule nousi...<sup>24</sup>

(Eng. Trans.: ... Because (when) you look for a job, they look at your name. My brother had all the necessary certificates to look for a job, they told him here we do not look at certificates just names, if you had a Singh in your name we would have given you the job. It's been a while what I'm telling you, but the fact that they continue that. If you have a Creole name your file will go underneath it is not fair that is why we say we do not have any rights, because we have no one to defend us...do you know what it is you are in an hospital, you are sitting the servants (are) talking (in their) language you are alone and they regroup, you do not understand anything they are saying...when you see the nurse coming, they are same, they speak (in their) language, the servants speak (in their) language to the nurse...But we to whom we'll talk? As I am telling you, as I am saying no one succeeds, are there no intelligent people among Creoles? do not make me think so. Are there no one among Creoles capable of working in hospital, as servant? All that we try, they can't say we do not want, no we do not get! Would send the think but we are not able to get in, why? because the hospital director is Indian, his doctors are Indians, I have nothing against saying I am in it, I make my family get in, it is true, everyone looks for advantages, if they all in it and they all make their family get in, but we when we'll get in, when we'll make our family get in? Which means what we will do, each time we will stay at the back? It is what we want also..)

The last community which we wish to discuss is that of the Franco-Mauritians. The following is extracted from one of the individual reports:

The category Franco Mauritian was coined in written texts in 1908 (Boudet, 2005:36). A central motif to their name as Franco-Mauritian is their French ancestry and their use of the French language. Franco-Mauritians are described as "educated and elegant" (Personal communication, Anon., Flic-en-Flac, 5 June, 2010). Many characterisations of Franco-Mauritians have caught my attention in history books and through discussions with the islanders. Franco-Mauritians are generally perceived as aristocratic, upper-class, high society, highly cultured, privileged, the white plantocracy, the sugar oligarchy, as top of social hierarchy, as the historic bourgeoisie, and by and by, the economic elite.

Having colonised the island in the 18<sup>th</sup> century, the Franco-Mauritians were the pioneers of Mauritius, owning vast land and inscribing the French culture, language and traditions into the socioeconomic landscape. By 1870, 270 sugar factories were owned by white Franco-Mauritian families. The fact that Franco-Mauritians have traditionally been active in the economic and agricultural sectors was cause to call them the dominant or 'elite' minority.

Elites are socially and discursively constructed as elites, either by themselves or others. In Salverda (2010:96), Shore and Nugent state: "In order to constitute itself as an elite in the first place, the elite group must develop its own particularistic set of interests, norms and practices to differentiate itself from the masses". There needs to be a sense of belonging for members - they need to share common interests and goals.

For Franco-Mauritians, a sense of belonging is reinforced by tracing back their genealogies, and "consequently the boundaries of Franco-Mauritian community are set by family names, which lack traces of non-white blood" (Salverda, 2010:103). There seems to be a correlation between elite status, ethnicity and skin-colour.

Belonging to a community also correlates with a certain standard of living for elites. Franco-Mauritian families were considered the wealthiest in Mauritius, in that they owned big houses or *bungalows* with electric gates, security guards and alarm system, complete with an expensive car, a big dog, a pool and large tended-to garden. They were the population group who owned a second [holiday] home on the coast. Franco-Mauritians have servants - a cook, a cleaner, a childminder and a gardener - who are often not paid well or treated with respect (Personal communication, FV, Black River, 5 June 2010). Franco-Mauritian families send their children to private schools and most Franco-Mauritian children have opportunities to study abroad once they have completed school. They indulge in leisure activities - such as going to the beach, hunting, horse-riding, water-sports and overseas vacations. They only travel by car, never by bus, and shop in expensive shops and boutiques (Observation, Tamarin). Such depictions suggest a flamboyant lifestyle, reminiscent of colonial living. These descriptions, used to name and explain the position of Franco-Mauritians say something about the creation and upkeep of a colonial discourse of Franco-Mauritian that no longer applies within independent and modern-day Mauritian society. We need to remember that Franco-Mauritians cannot be characterized; their identity is not set in colonial stone.

Belonging is further maintained through family support and inheritance. The literature explains that elite are linked by a network of professional and social relations. Both formal, and thus visible, and informal networks exist (Salverda, 2010, p95). Elites rely on strong intra- and inter-group relations and social cohesion. The researcher heard of cousins or nephews taking over the family business, and still there are large Franco-Mauritian families that own big businesses in Mauritius e.g. Mauritian Commercial Bank. The stronghold of family in business serves to foster ethnic loyalty to the minority group (like endogamous marriage) and further efforts at self-preservation of the minority.

“They also seek to perpetuate their elite status and privileges by socializing and training their children to succeed them” (Cohen in Salverda, 2010:97).

They maintain their position by staying low-profile and avoiding to draw too much attention. The minority group is attempting self-preservation, self protection in the face of trouncing privilege.

Referring to the research findings, it appears therefore that Mauritians do racially categorise one another but that they do so with reference to a range of characteristics. They also use a range of discourses including race, class, caste and beliefs. References to diverse forms of categorisation can be attributed to the many social spaces in which people are able to define themselves. Furthermore and as the earlier discussion of identity construction suggests, identity in Mauritius, as anywhere else in the world, is situational (dependent on context): one’s age, class and gender can and does affect racial experiences. This is not say, that there is no class or group of people who routinely experience discrimination principally on the basis of race or their phenotype.

On the contrary, and what the following extracts from the individual research reports suggest, is that it is for a particular group of slave descendants in which all the elements of a stigmatised identity converge (poverty, stigmatised phenotype and place of residence) the experience of racism is most intense. For these individuals, racism is part of daily experience and is experienced in direct ways - encounters on the street, in the municipal offices, schools and hospitals. With regard to the above- noted quotations it is evident that just as there are different categories of black in Mauritius (i.e. we have those associated with the highest levels of poverty and are considered in public discourse as the *ti Creole*), also have categories of white in the country. Thus, a person of Chinese descent may be, by virtue of their middle-class status, considered white in Mauritian society. This is certainly apparent in the discussion presented in the following extract:

Whilst some Sino Mauritians are referred to as *jaune* (yellow), *blanc* (white) is also used to describe the lightness of Sino Mauritian skin. This white is also used to imply a class status, one female student from Port Louis SSS remarked that “people think that we are white because we are more rich. I am not proud to be Chinese, it is just my destiny that I was born Chinese. I have friends of different religions.” (Interview053\_02092010). Another student at Ste Marie, Palma, stated that he had little trouble gaining entrance into night clubs despite his minor status because as a Sino Mauritian he is perceived to be wealthy and will be allowed access to a night club. The association of lightness and high class status was a matter that few students commented much upon, but speaking of the Creole context, Arnaud Carpooran states that ‘there is division within Creole

community of who is a Creole. Those who cannot *help* but look Creole, that is you can see they have African ancestry, are most affected by marginalisation. There is different grading of Creoles depending on mix, the blackest of Creoles marginalised by other Creoles' (Interview023\_08072010). This pigmentocracy is not limited to within the Creole community alone, it seems that there is a public discourse of lightness, where lighter skin is seen to infer a superior status to persons who possess it.

Similarly a person of mixed race heritage or what is popularly referred to as a *Gens de couleur*, can be perceived as white because of his or her association with people deemed 'white'. Raced identities do not always take precedence because, in certain circumstances, other identities, such as place of origin, may become more important.

The findings also present the particular racial experiences of those identified as being of mixed race. These individuals are said to adopt the strategy of either associating with the Franco-Mauritians or European descendants in Mauritius or feeling caught in between the category of black Creoles and European descendants. As is evident from the following extract, racial identity is not fixed. Rather, it is something to be achieved and is continuously negotiated, depending on the reception of one's display of identity.

As stated by informants, people born from cross-breeding pejoratively referred to as Mulattoes are not considered as Creoles but are rather perceived as 'bastards'.

'...Se koumsa, enan Kreol resing...Kifer resing parski ou ena enn ti kouler, seve drwat ; enn Kreol milat ; ou pann tande milat, Kreol milat. Resing la milat form bann mem parti sa...ena so tibout ki azout lada : enn milat batar ; dimounn kav dir li enn milat batar. Parski li batar ; li ena ti seve, me li kler...'<sup>25</sup>

(Eng. Trans.:...it's like that there are Racing<sup>26</sup> Creole...why Racing because you have some colour, straight hair, a Mulatto Creole; you have not heard Mulatto? Mulatto Creole? The Racing and Mulatto they are same...there is this small adding; a bastard Mulatto; people can say he is a bastard Mulatto because he is a bastard; he has small hair but he is fair...)

The 'half-breeds' form a distinct category, referred to as the 'Coloured people', because they do not have the adequate phenotype to be accepted by the Creoles and do not fit in to either of the other categories because they are 'hybrids' and also as put forward by Marie Michèle because the Coloureds consider themselves as Whites.

'...Comme si ils ont honte de dire qu'ils sont créoles. La plupart du temps quand ils sont un peu clair, et un statut social, comme si là finalement tu n'arrives pas à saisir qu'est-ce qu'ils sont là par rapport à eux tu te sens ti-créole. Moi je me sens ti-créole tu vois...Peut être ils se considèrent blancs. Certains oui peut être...Ils veulent se passer comme ça mais malheureusement aux yeux d'un blanc il est aussi noir...J'ai une collègue elle est créole, elle est assez clair. Une fois à l'école c'était la journée de l'enfant Africain et on s'est dit il faut faire une prière spéciale parce que vu qu'on est dans une école catholique. Elle me dit ayo moi je ne suis pas africaine moi...Et sa maman est aussi noire que moi hein. Et j'ai dit tu sais aux yeux d'un blanc tu es aussi noir que moi même si tu es un peu plus clair disons mais tu es aussi noir que moi...Le même jour elle...dit moi ayo moi je suis une vraie créole moi, je dois manger mon riz, mon cari tous les jours. Ce matin tu n'étais pas africain, la tu es créole. Ce qui est navrant ces gens là, ils ne savent pas où ils sont...'<sup>27</sup>

(Eng. Trans.: ... As if they are ashamed to say they are Creoles. Most of the time when they are a little fair (skinned) and (have) a social status, then finally you cannot know who they are and in relation to them you feel an inferior Creole. Me I feel an inferior Creole you understand...Maybe they consider themselves as White. Some maybe yes...They pretend to be white but unfortunately for the whites they are black...I have a Creole colleague, she is fair skinned. Once at school it was the Day of the African Child and we said we had to say a special prayer as we are a Catholic school. She told me that she is not African...And her mother is as black as

me. And I told her you know for a white you are as black as me even though slightly fair but you are as black as me...the same day she...said me I am a real Creole, every day I need to eat my rice (and) curry. This morning you were not African now you are Creole. What is heart-rending is that these people do not know where they are from...)

'...kuma in gagn milat? se ki bann patron blan in abiz bann fam desandan esklav afrikin ou indyen lerala in melanze. Me aster la zot pa pe kapav abize, zot marye aster, se sa ki kuma dir sa popilasyon milat la in pran nesans. Si kuma dir sakenn ti respekte so kalite, ti pu truv zis 2 kalite ou 3 kalite, pa ti pu truv sa bann melanz la...'<sup>28</sup>

(Eng. Trans.:...How got Mulattos? The white 'masters' abused women slave African descendants or Indians and then they mixed. But now they cannot abuse, they get married, it is how this Mulatto population was born. If each one respected its type, there would be only 2 or 3 types, there would have been no Mulattos...)

But they are not accepted by the Whites who consider them as Blacks based on the notion of purity and on the concept of the 'one-drop' rule that stipulates that any person who has as genetic heritage a single drop of black blood is considered as Black, as illustrated by Marie-Michèle's testimony above.

'...Kreol...ou apel bann kreol bann Oskar? We...Kifer ou apel zot bann Oskar? Zot nwar, be inn gagn bate lasenn dan lipie...'<sup>29</sup>

(Eng. Trans.:...Creole...You name Creoles Oscar? Yes...Why you name them Oscar? They are black, they were beaten and had their feet enchained...)

In fact, the question of 'pure blood' is a salient factor in social identity construction even if the notion of purity is erroneous. The Coloured people are not officially recognised because for the civil society and authorities they are considered as Creoles even if the latter exclude them. Hence, the Coloured people are often illegally discriminated against and ostracised as they have no legal or even social recognition.

The data is not clear as to whether there is also a group similarly affected among the descendants of indentured labourers. It is possible that such a category may be identified in the research of the Social Stratification Research Group.

Thus, what one finds in Mauritius is the careful overlapping of identities to achieve maximum benefit either on (for both) material and social grounds. One also finds the careful deployment of the term 'race', such that interviewees argue that they are not being racist when they use the term 'race' but that they are only 'referring' to race that is, they are participating in a *normal* practice. What is evident is that racist thinking and practice have become so ingrained in Mauritian society that such perceptions are no longer perceived as problematic or abnormal. Race has become real, not only for those who suffer from racial discrimination, but also among those who perpetuate it. As in South Africa, it becomes impossible to refer to an individual without mentioning his or her race, as if mentioning this then explains everything - i.e. why she does not have a job, why he has been promoted or why she is a victim of crime.

However, it is also important to note that the overlapping identities serve other purposes. These identities are also useful in creating a sense of Self in a society that is multilingual, multicultural and diverse. The diversely-situated and negotiated sense of Self allows and encourages communication and interaction in the diverse society of Mauritius. For example, knowledge of, and respect for, local religious events allows non-adherents to live in relative harmony with their neighbours. But it goes further than this, publicly acknowledging and accepting one's multiple identities *softens* the perceived ethnic or racial edge of one's identity, allowing for others to communicate with and interact with a person. This practice is apparent among slave descendants, as the 'fact' of slavery is sometimes too hard to 'deal' with and to publicly articulate. Thus, we note that in social circumstances, race can disappear, as familiarity between, and knowledge of, one another grows and as individuals suppress or enhance other aspects of their identity in order to 'escape' the burden of race.

In the following extract from an individual research report, one forms a sense of the multiplicity of identities among Mauritians.

Although in the academic and political fields the terms ethnic group or community are used rather than the term race, based on the premise that for the policymakers and academics there is only one race which is the human race, the AVERAGE Mauritian on the contrary talks in terms of race or community.

Most of the informants interviewed mentioned that they do not understand what the concepts of ethnic group and ethnicity mean and few have heard of it. Those who answered knowing the meaning of ethnic group mentioned that the local ethnic groups are Tamil, Telegu, Muslim, White, Creole, Indian, Chinese and Madras. Their conceptualisation of ethnicity uncovers the correlation between ethnicity and religious affiliation with one's religion determining ethnic membership. Hence, as stated by Cheddy, a Tamil who converts to Roman Catholicism is longer considered a Tamil but a Creole: '*...parce que si si quelqu'un, est baptisé, il a changé de religion...appartiendra au au groupe catholique, ou créole...*'<sup>30</sup> (English Translation:...because if someone is baptised, he has changed his religion...(he) will belong to the catholic group, or Creole...)

For almost all the informants, community, race and religion are the same and these terms are used interchangeably. For example, for Marie Annique, a Creole and a Catholic is same: '*...nou papa ti enn Katolik, mo mama li enn katolik. Sa mem dir ou lontan dir Kreol...Kreol, se Kreol...*'<sup>31</sup> (English Translation:... Our father was a Catholic, my mother was a Catholic. That's what gives you a clue. In the olden days when we said Creole, we meant Creole...). This correlation is sustained by Mike who further explained that the term *Nasyon* (English Trans. Nation or Black Creole) refers to a person's religion, that is, to a Christian: '*...Zot pou dir twa non to enn nasyon twa...voila kreol...Enn nasyon veut dir kretien...*'<sup>32</sup> (English Translation:...They will say you, you are a *Nasyon* (Black Creole)...Creole...A *Nasyon* (Black Creole) means a Christian...)

*'...Li enn kominote kom si saken so relizion. komen nu dir relizion, nu pa pu dir so relizion, pu dir sa so ras malbar, sa so ras creole. kom si c zis enn fason de parler...'*<sup>33</sup>

(Eng. Trans.: ... It is a community as if each one (has its) religion. As we say religion, we won't say his religion, would say *Malabar* (Indian) race, this (one) his Creole race. It is like a way of talking...)

In local conceptualisation, the term race refers to people's roots, origins and descent. A person's race might hence be determined by his/her ancestry and religion as well. All the informants talked of *Ras Creole* (English Translation: Creole (Race), *Ras Malabar* (English Translation: Indian Race), *Ras Sinwa* (English Translation: Chinese Race) and *Ras Indyen* (English Translation: Indian Race).

*'...ekout, pou mwa pena oken deferens...Petet enn bann lezot dimunn zot truv sa ena diferens ent kretien ek kreol pou mwa ena oken deferens mo consider mwa kreol... ah kreol, kretien mem sa mwa mo truve enn sel mwa. Mo enn sel mwa...'*<sup>34</sup>

(Eng. Trans.:...Listen for me there is no difference...Maybe there are others who find there are differences between a Catholic and a Creole for me there is no difference I consider myself Creole...Creole and Catholic same, me I find it same. I am one...)

Yet for some like Kathy even though they believe there is only one race, the human race, they still talked in terms of *Ras Indyen* when referring to the people who came from India.

*'... le ras c pa nou p koz racist hein...nou p koz lor kote so kouler, lor so style ki li ete mem, ou truve vremen si li enn sinwa ou pou truve vremen li enn sinwa. Si li enn afrikain ou truve li enn afrikain...si li enn blan ou pou truve li enn blan...saken ena so prop limportans sa...wi par kont mo truve...ki ena enn...avek letem ou truve ki ena plisir chanzmen ki pou deroule...'*<sup>35</sup>

(Eng. Trans.:...race does not mean that we are talking of racism...we are talking of colour, on his way of being, if he is a Chinese you will see that he is really a Chinese, if he is an African you will see that he is an African...if he is White you will see he is White...each has its own importance...Yes but I found that...over time there are lots changes that are occurring...)

For others like Andy and James, people use the term race such as *race jaune* (English Translation Yellow race) that can be seen as a pejorative designation of the Chinese, *race blanche* (English Translation white race) and *race Africaine* (English Translation African race) *race noire* (English Translation Black race) as a differentiating term used to differentiate people from various cultural backgrounds.

'...Mais à Maurice on ne peut parler de race...Je crois que qu'on ne peut pas utiliser cette expression par rapport à nos races, c'est une définition enfin dans un sens c'est-à-dire on utilise très souvent peut-être par rapport à nos habitudes, par rapport peut-être à notre façon de faire, de nos cultures mais pas nécessairement il n'y a pas cette notion de racisme qui veut dire que nécessairement la race auquel on se réfère est nécessairement inférieure, je vais dire par rapport aux autres races qui n'ont pas l'habitude de faire des choses comme ça, on fait les choses autrement sans pourtant dénigrer l'autre race...C'est pour ça qu'on parle de la race jaune, la race blanche et la race africaine, la race noire...'<sup>36</sup>

(Eng. Trans.:But in Mauritius we cannot talk of race...but it think we cannot use this expression in relation to our races, it is a definition that is in a sense we often use in relation to our habits, in relation maybe to our way of behaving, our cultures, but there is not necessarily this notion of racism which necessarily implies that the race to which we are referring is superior, I mean in relation to the other races that do not do things the similar way, we do things differently without necessarily denigrating the other race...that is why we talk of yellow race, white race and African race, black race...)

When asked about the membership criteria to be of the Creole race, many informants, such as Sylviana, Kathy and Claudine to name some, explained that Creoles are those who speak the *Kreol* language and that even though Indo-Mauritians (commonly referred to as Indians) and Sino-Mauritians (generally referred to as Chinese) speak *Kreol*, they do not belong to the Creole race. For them, Creole membership is not only based on racial characteristic, but religion is also a criterion, and you need to be a Catholic. Hence, a baptised Indo-Mauritian or Sino-Mauritian is not a Creole but simply a Catholic.

'...Creole kan ras petet nu kouler, nu langaz ki nu cozer kreol ek petet tou le temp in dir creole dan povrete. Mwa, seki ou pe dir mwa ben seki mo resenti c sa, pu mwa enn ti pe sa. Mo ras mwa ve dir mo rasin, mo rasin... Enn creole parski, mwa ve dir enn creole kot mo ete, ki mo langaz, ki mo stricktir koumen mwa mem ek mo langaz li corespon...mo enn creole, c mo langaz c mo premie langaz mo...in apran coze sa kreol. C pou sa ki mo dir ki mo enn creole...Koumen mo in dir ou c zis relizion ek kominote c la meme chose. Pu moi li mem zafer...'<sup>37</sup>

(Eng. Trans.:...Creole when (a) race maybe it's our colour, our language that we talk Kreol and maybe each time we said Creole are in poverty. Me, what you telling me this is what I feel, for me it is a bit that. My race (for) me would mean my roots, my roots...A Creole because, for me means where I am, what is my language, how I am like me and my language are linked...I am a Creole, it is my language, it is my first language...I learnt (to) speak Kreol. That is why I say I am a Creole...As I told you religion and community they are same. For me it is the same thing...)

Besides all these differences, they mentioned that there are similarities between all these groups. As put forward by Jean Yves, they are all humans, and hence have the same blood but they are not of the same race.

'...pou mwa.... Nou tou nou disan rouz. E nou tou bann humin, sof ki petet ena enn bann sartin dimunn ki met zot a lekar. E pou mwa tou dimunn c dimunn, tou parski mwa mo enn dimunn ki respekte tou la religion, ki c swa to indien, ki to sinoi, ki to blan, ki to muzulmen e mo respekte tou...'<sup>38</sup>

(Eng. Trans.:...For me...We all have red blood. And we all humans, but there are maybe some people that segregate. And for me all humans are humans, all because I am a human that respects all religions whether you Indian, whether you are Chinese, whether you White, you Muslim and I respect all...)

The final quotation noted above suggests a more liberal view of Mauritian society. However, this view is not always articulated in the society. It is a view which we have noticed is put forward by politicians and scholars, as well as relatively well-known and possibly affluent members of the society. It is argued that for these individuals who have access to other sources of prestige, power and identity, it is possible to present such liberal views of the society and of identity.

The research conducted also suggests that one's class status influences the view and experience of race. Those deemed to be of the middle class have a less negative view and experience of racism or at least, they have a less direct experience of racism. This encourages such individuals to perceive a more positive or equitable situation in Mauritius. However, as we note further on in the discussion on aversive racism, such individuals may also be concealing their personal experiences of racism, to foster the public perception that they are not victims. Indeed, we found that a discourse of success was imperative to those wishing to distance themselves from the stigma of victimhood.

Aline Wong, for example, believes in a mosaic and idyllic vision of Mauritius and sees in the Republic a model of pluralism: '*...je crois que Maurice est un modèle de pluri-culturel, multi-racial et je crois qu'on a la chance de vivre en paix...*'<sup>39</sup> (English Translation:...I think that Mauritius is a model of pluri-culturalism, multi-racial and I think we are lucky to live in peace...). But on the other hand, for others like Raymond, this representation of Mauritius does not reflect the social reality in which racial tensions permeate social interactions.

'...Je pense que quelque part c'est vrai parce que, disons à Maurice, on n'est pas arrivé à un niveau où on se bagarre entre communautés, il n'y a pas de bagarre entre communautés...on vit relativement bien entre communautés, en bon voisinage je veux dire mais dans d'autres pays ce n'est pas le cas...A Maurice, c'est vrai quand on regarde de haut comme ça c'est un mélange, un mélange de cultures, de couleurs, de religions, etc. Mais ca c'est vu d'en haut mais quand on rentre au plus profond de chaque personne, de chaque communauté qu'on voit qu'effectivement il y a des tensions, il y a encore des tabous à casser. Mais c'est surtout que beaucoup de personnes voient ça de haut...'<sup>40</sup>

(Eng. Trans.:...I think that somewhat it is true, let say that in Mauritius we have not reached this point where communities fight between them, there is no fighting between communities...we live relatively well between communities, I mean in good neighbourliness but in other countries it is not so...In Mauritius it is true that when we look from above it is a blending, a blending of cultures, colours, religions etc. But this is a look from above but when we have deep insights of each individual, of each community we see there are in fact tensions, there are still taboos to break. But it's especially that many people have a look from above...)

The above extract also tells us that there is a concerted desire to portray one's group as homogeneous and members in solidarity with one another. In the following extract, it is evident that even seemingly fixed categories, such as the Franco-Mauritians, are a malleable and porous group. However, and as noted in the discussion on youth identity and race in Mauritius, we find that this category (and other ethnic categories) is deliberately hardened or becomes more essentialised as young people become adults.

Pheno-typical factors influence 'race' and lighter skinned Creoles often identify themselves with the Franco-Mauritians, while darker skinned Creoles identify with descendants of slaves.

Becoming a Franco-Mauritian involves being born into a Franco-Mauritian family, being brought up in a certain way. However, others who were not born to 'white' parents can also *become* a Franco-Mauritian. In this manner, class differentiation definitions and economic mobility add to the complexity of defining Franco-Mauritian.

The 'making' of a Franco-Mauritian is tied to historical constructions of whiteness, black, and Creole, embossed with occupying an elevated social political and economic standing and embellished by other symbols of ethnicity, which in the Mauritian context is ones behaviour, etiquette and discernable 'culture'. Religious practices, marriage patterns and traditions and discourses of family origins including ancestry and blood purity are also characteristics of the status of a Franco-Mauritian. The small size of the minority community also further emphasizes their sense of belonging and cohesiveness. But most importantly, while wealth is still a feature of many Franco-Mauritian families, it no longer is a defining one. Those Franco-Mauritians who don't posit an economic advantage are called the *petit-blanc* - the small whites.

"Culture and education are transmitted from generation to generation and we need to conserve this" (DL, TJC, 16 August 2010). This informant described the 'culture' of Franco-Mauritian to include hobbies and exclusive leisure activities such as water-sports, golf, tennis, hunting, and going to the races and theatre and cinema. These were perceived as cultured leisure habits. Travelling abroad was also said to give Franco-Mauritians a broader perspective and global knowledge which other (non-travelling) Mauritians do not have. The private school context is also believed to foster a different 'culture' (DL, TJC, 16 August 2010). Since the private school system is believed to be mostly occupied by whites and wealthier Indians, this perpetuates a particular (middle) class structure and ethos in these schools. The schools are also believed (by the informants) to isolate the scholars from the 'real' Mauritian context. Lastly, Franco-Mauritian etiquette prescribes whether you were a member of an exclusive club or associations. Franco-Mauritians describe themselves as 'Culturally European' (PG, Tamarin, 13 August 2010). ID (Grand Baie, 26 August 2010) mentioned that she finds it extremely difficult to establish social interaction with people in the *cit * because they had a different way of behaving.

Yet, defining the Franco-Mauritian as an elite is too sweeping. Even during colonial settlement, the European whites were not all considered racially privileged, e.g. the poor whites were not afforded the highest status. The colonialists were a diverse group of Frenchmen, some escaping the economic depression in rural Brittany, looking for greener pastures and a new beginning. Their racial superiority and power, under the colonial system, was defined by their possession of slaves after 1780s. This was an important marker of wealth and status (Salverda, 2010:72). They maintained their superiority and racial solidarity through the whiteness of their skin, the land and slaves they owned, and the French culture and way of life. The consolidation of a Franco-Mauritian elite took place through family ties, and business networks and marriage alliances.

In 1928, the Colour Bar was suspended and the organisation of the Franco-Mauritian group became disrupted... Their domination was no longer protected by institutionalised economic and social structures. They found that social distance from other populace replaced the functioning of the colour bar and Franco-Mauritian went about ordering their life along communal lines. They kept family ties and kinship networks tight and tended to their needs on their own (Personal communication, CB, TJC, 10 June 2010).

The long-established narrative of the Franco Mauritian community is that they hold a superior position in Mauritian society, owed to their historical privilege and heritage, better education, and strong family ties and networks. By and large, observations and perceptions from the outside are that Franco-Mauritians represent an isolated group of a few privileged people and form a closed community. "In Mauritius, the Franco Mauritian community is the least open" (Personal communication, RLM, 25 June 2010). This assumption was difficult to deflate as I initially struggled to get into contact with a diverse range of Franco-Mauritians to be interviewed.

Through discussion with Franco-Mauritians and non-Franco-Mauritians, the symbols of prestige attached to the construction of them as elite included normalised characterisations of their lifestyle that were not necessarily reflective of the reality for some Franco-Mauritians that were interviewed. The assumptions of a prosperous existence incorporated land ownership and people who hold management or directorship positions in major firms, businesses and corporations.

Franco-Mauritians tended to have high positions in the tourism industry and relied heavily on political affiliation and nepotism with government structures to prosper.

*Gens des Couleur* are historically referred to as 'freed men'. Nowadays, *Gens de couleur* are known for assimilating to a 'white' identity, conforming to white social values and sharing French language and Catholic faith. Although they had equal rights to Franco-Mauritian whites, when the Colour Bar was removed, they are still not afforded the privileges of Franco-Mauritians as they have 'black' ancestry and thus are still discriminated against because of their colour. This conundrum resonates with the situation of Coloured in South Africa with explanations of themselves as being 'in-between'. My neighbour said exactly this about herself and her identity as a *Gens de couleur*: "I am not 'white' enough to enjoy societal privileges and not 'black' enough to feel completely marginalised" (Pers. Comm. Madame Rena, 27 June 2010). It is similar to what LB (Rose Hill, 15 June 2010) said about being a *Mauricien Moyen*, an 'average Mauritian' - "not black, not white, not rich and not poor". They are considered not 'pure' white because of their mixed ancestry. In an interview with EN (St Jean, 15 June 2010, I was told that Franco-Mauritian spend a lot of their time tracing their genealogies and ancestry to prove they are purely Franco-Mauritian by tracking down whether marriages between mixed blood had occurred or not. Family names were also considered indicative of the purity of their blood and gene pool.

The concern with race among the Franco-Mauritians indicates to us, the research team, that they are also not exempt from potential victimisation on the basis of race. Furthermore, it also indicates that the discourse of whiteness, which is that whiteness be privileged in Mauritius, is deeply ingrained in the society and affects even those who might outwardly appear to be 'white'. The onus is on them, not to simply assume that they are white, but that they must PROVE that they are so.

Prestige and privilege are also attached to ancestry (in terms of origins) and clannish or family ties are significant markers of Franco-Mauritian identity. One Franco-Mauritian interviewed argued that family/ clannish ties are not solely responsible for success and prestige - some are self-made men. Others have never owned land, "We have never had one knot in a sugar cane plant" (PG, Grand Baie, 7 June 2010). There is also ascension to hierarchy of *Gens des Couleur* through education and marriage - by participating in a form of strategic endogamy (marrying within the group) they are able to form a new class of 'white', one that does not necessarily have historical ties to land ownership or slavery. However, it seems to the research team that the *Gens des couleur* are trying to belong to a community (i.e. the white community) in which they are not accepted. The 'white non-whites' have the economic status but cannot assimilate to this group (of white people) because they are not considered pure white. In the extreme, it is not physical characteristics which matter, but name that does.

Perceptions of Franco-Mauritians range from negative to complacent. Indian descendants and Creole domestic workers who work for Franco-Mauritians make references to a kind of master-slave relationship. They moan that they are not fed by their employers and that they are not treated well. In an interview with a Franco-Mauritian, however, it was also said that by far the most named group in society to be labelled as 'racist' have been the Franco-Mauritians<sup>41</sup>. However, we cannot take it for granted that all Franco-Mauritians are racist. From what the research team gathers, even within the Franco-Mauritian community, there are in-group fighting and competitive partnerships with others.

## CONCLUSION TO SECTION 1

It is evident from the above extracts and discussions that identity construction and especially the construction of racial identity is very complex in Mauritius. In its assessment, we propose that the TJC takes this into account. Race is not fixed among Mauritians although there is agreement that certain phenotype or physical markers clearly indicate an individual's racial identity. Secondly, while not all Franco-Mauritians perpetuate racism, it is interesting to note the extent to which racist ideas have permeated the community. Differences between groups are believed to be so substantive that it is difficult, or not possible, to socialise with, or engage with, those of a different race. This was especially noted in the discussion of one Franco-Mauritian who felt that they could really engage someone from the *cité* because their 'worlds' were so different.

The data also shows the difficulties experienced by those individuals identified as *Gens de couleur*. In their case, we found that being in a society in which whiteness is privileged and treated as the identity to aspire to, the *Gens de couleur* were caught in a double-bind. They wanted to be with the 'whites' but they could not because they have been identified as black. They cannot be with the 'blacks' because they are judged there to be *too* white. Moreover, their own rejection of blackness or to put it more mildly, their ambivalence about blackness makes it difficult for them to associate with darker skinned Creoles. The language of class (i.e. references to class and social differences), is used to explain why it is that communication and interaction with blacks are not possible.

It is also revealing that the seeds of racial discourse are sown early. It is at school, in the textbooks, classrooms and break-time banter that we saw the reinforcement of racial hierarchy and racist talk. In the following section, we document the processes of socialisation (especially among the youths) and how this influences both the practice and experience of race.

## PART TWO

### SOCIALISATION AND EXPERIENCES OF RACISM

In the following section of the report, the focus is placed on the youths of Mauritian society. A major research question of this team is: Does race experience and practice vary within generations and if so, why? The issue of youth experiences is of further significance when one considers that the Mauritian population is overwhelmingly youthful. Of the 1.3 million people living in Mauritius in 2011, twenty-one percent is less than 15 years old (CIA World Fact book 2011) and two-thirds of the Mauritian population or about 66 percent in 2011 was less than 34 years old. This section of the population also consists of a major segment of the economically active population. It is also this population that is forging new families, entering the workforce, socialising in the public sphere and actively engaging with new technologies. Thus, it is our contention that this large segment of the Mauritian population can offer a deep understanding of race dynamics in Mauritius. The global and scholarly discussion on youth suggests that the youth category is socially constructed. In this literature, the youths are often perceived and treated as a group in-between childhood and adulthood and as such, the youths are not autonomous, rational beings - instead, they are dependent, emotionally immature subordinates, prone to the creation of subcultures and deviant identities. In our findings, we note the opposite of this view. The Mauritian youths are creative, reflexive thinkers who do understand the dynamics of racial identity in their country. Moreover, they are actively engaging with transnational (i.e. across national borders) identities, commodities and social networks, in order to create a more vibrant identity and a better future for Mauritius. In what follows, we state where research was done, what was asked and what we found.

The research for this section of the project was conducted in various schools and social spaces where young people are to be found (see Appendix 1). This is documented in the section on research sites. The main finding is that racism and the experience of race are especially important to youths in Mauritius and that experiences and practices of racism vary across identifiable ethnic groups. From online blogs (conversations), formal interviews, informal conversations and observations, the team found that the youths are frustrated by the continuation of a pigmentocracy (social hierarchy based on the privileging of whiteness) in Mauritius. They are also frustrated by the lack of civil society engagement in challenging the continued construction of Mauritius as a racialised space. Some feel that the only way to retain one's sanity is by leaving the country, despite the fact that Mauritius needs well-trained professionals in all spheres of the economy to sustain development and modernisation. Among Creoles and those who openly accepted the designation of slave descendants, an important view was that the situation of Creoles (and ultimately of slave descendants) was negatively affected by the majority/minority politics in the country. The view articulated was that, as a significant minority, Creoles could never obtain advantages or even basic rights in Mauritian society. To clarify this, it continues to be difficult for Creoles to obtain employment in various spheres of the economy because those who are already established in those sectors, tend to employ members of their own ethnic group or they offer employment to those individuals who have the support of prominent business people or politicians. The youths referred to this support as 'backing'.

To sum up, the research on the youths revealed that race consciousness begins at a very early age. There are some schools in Mauritius which remain largely ethnically and/or race-specific. The ethnic and racial specificity of schools is an important issue, as we find institutional powers (either religious or civil), promoting the creation of such homogeneous schools in Mauritius. As we found out, these schools present a problem for pupils, who then experience racial stereotyping by outsiders (especially employers) because they are associated with such schools. In some instances, this may present advantages because the ex-pupils (especially ex-pupils of Star Schools for example) are positively stereotyped. In the research findings on rural and mostly Creole populated schools, it was found that those pupils experience negative stereotyping. It is assumed that pupils from these schools will not achieve much and will therefore not be of good use to the prospective employer.

## Multiple Sources of Stereotyping

In the following extract from the project on youth and race, we provide further evidence of the complex rules of race relations which youths in Mauritius are expected to learn and maintain. It involves the creation of racial stereotypes from a young age. The participant in the interview below is a young man of 19 years of age:

*Researcher: what is Creole?*

*Participant: A bus-beater*

*Researcher: what is a bus-beater?*

*Participant: A drum beater, someone who never has money, knocking on the bus for everything...but it is not his fault, it is because of circumstances that they are forced to beat buses.*

*Participant: Even if they have the money they have developed the habit.*

(Interview021\_25062010)

The above extract part of a discussion which took place in a focus group meeting in Valegie Church, a fraternity group aimed at 14-20 year olds. The above extract was the first assertion that was made, when asked what it meant to be Creole. The self-deprecating stereotype of Creoles as bus-beaters was very interesting to witness amongst urban youths. It appears as though years of negative stereotyping have infiltrated Creole self-image to the extent that young Creoles automatically respond with negative views of Creole identity. Whilst some students focused on religion, an open culture, and friendly disposition as characterising Creole identity, at the schools it was also found that when asked the same question, the overwhelming responses were of alcoholism, drug use, aggressive, being a spendthrift, and that Creoles love partying to their detriment. It is common knowledge that the years of negative stereotyping have influenced the negative view of African descent in Mauritius. Inferiority of slave descent still circulates in self-definitions by Creoles, where the terms *Nasyon* and *Mazambik* are used as a pejorative terms to refer to African ancestry (Project 4: Individual TJC Report on Youth and Racisms).

This view of perpetual inferiority due to slave descent is not helped by the lack of historical instruction on the agency and resistance by Creoles on the island. We found for example that some school text-books promoted the negative stereotyping of slave descendants:

Reading through the current Form 4 History book, it was astounding to note the invisibility of Creole history in the text books and the negative presentation of African slaves. In the history book one of the first passages recounting African presence on the island is rather telling of the racial discourse around slavery in secondary education. The passage is of an account of a slave rebellion where slaves burnt down a field. Using the passage as a reference, two questions are posed to the students asking “what were the problems created by slaves” and “what were the activities carried out by the Dutch”. Consistently I found that actions carried by slaves were cast as delinquency whilst European activities were cast as productive in Island development. There exists an overwhelming negative bias, and when it was enquired as to how teachers at the school felt about this material, one Creole teacher expressed that this was normal representation of Creole ancestry in text books. Thus it is not surprising that a negative self image of African ancestry is perpetuated amongst young Creoles today (Project 4: Individual TJC Report on Youth and Racisms).

There were also few or no positive role models for Creoles:

Further questions were asked about whether students learned about Creole leaders at school, and apart from Martin Luther King and Nelson Mandela, the students couldn't name any influential black or African icons either from Mauritius or abroad. Even contemporary Creole movements such as the Organisation of Creoles, Africans and Malagasy (OCAM), the Association Socio-cultural African and Malagasy (ASM) and the *Fédération Créole Mauricien* (FCM) were not known by the students nor were they mentioned in history or sociology text books. Comparatively European history is valorised and all example images in the text book were only of Indian people. In the entire history book, the only images of Creoles/Black people were in the instance of slavery and there was only one picture of a Creole represented as a professional. The invisibility of Creole representation in school

curriculums may also shed light on the self deprecating view Creole youth hold of themselves (Project 4: Individual TJC Report on Youth and Racisms).

This extract from the sub-project on youth identity and race reveals that racial stereotypes are well-entrenched in Mauritius and that this is feeding self-deprecating comments and perceptions. In responding to these perceptions of Self, it will be important for Government and civil society to create and support programmes that assist in the critical evaluation of schools and the ways in which these might become spaces for the promotion of equality and mutual respect. This is especially important when one considers that the experience of racism does not have to be direct for the individual to feel that his or her potential is limited or restricted.

What the researchers also found is that it is not only negative discourses which are transmitted from one generation to the next one, it is also racially negative perceptions and behaviours:

In an informal discussion with one participant who is out of school argued that non-racialism is common at school going age, he too felt race not to be important at school, yet when he left school he saw how race can affect his life. For some youngsters there does seem to be a fear that backing will become an issue as they get older and that job seeking in Mauritius is based on who one knows and being a certain race (Project 4: Individual TJC Report on Youth and Racisms).

It is not only this that is transferred but also the fears, concerns and self-limitations. This is clearly illustrated in the next extract, which reveals how slave descended Mauritiens, as well as those who do not consider themselves part of the Hindu majority, perceive their situation in Mauritius.

*Researcher: Do you think that dark skinned Creoles experience more discrimination than light skinned Creoles*

*Participant: It depends where you are, at University it doesn't matter whether you are dark or light like me, we are all marginalised because we are not Hindu.  
(Interview036\_09082010)*

*Participant 1: if you date a white girl you must take a different approach, you must buy her flowers.*

*Researcher: and you don't have to do this for a Creole girl?*

*Participant 2: it is easier with a Creole girl, you are not as shy because you are of the same race.  
(Interview016\_14062010)*

The research team also found that socialisation to accept ethnic and racial differences happens in sports but that this is not common because for a very long time, sports (i.e. football) was racially segregated in Mauritius. The following extracts confirm this and explain how people attempt to overcome these 'prescriptions':

BLC (Black River, 27 July 2010), whose grandfather owned land on a sugar estate in St Pierre, intimated that racism depends on the perspective of the person regarding the other. In his story, he spoke about how, many years ago, when he played soccer for the National division team, all the teams were separate.

I played soccer or football for First Division team and for the National team here. I started at 17 in First Division and stopped at thirty four. So I've been a soccer player for 18 years at the First Division level and National team. So, I think sport for me at a certain level is the best school of life because, at that time, I was playing soccer, you had in Mauritius different teams. You had Franco-Mauritian teams, the Indian teams, the Muslim teams and the Creole teams.

**Researcher:** Separately?

**BLC:** Separately and then after a few years I've started I was still in junior school and Government decided to change everything and to mix all the teams. So I didn't stop. Then I played for several different teams. So I played for who was supposed Indian team, I played for Creole team, I played for Muslim team. So it learned me to know all the communities very well,

their behave, their thinking, their religion and it help me to understand them a lot more and also to understand their way of living and thinking which is one to the other quite different on certain things, you know. So, for me it helped me a lot in life the sport because you know at that time when you were playing at that level in Mauritius, you were accepted everywhere. Once I walked in somewhere, even to talk about business or whatever, you will always have someone who says: 'you are the one playing soccer, no?' I said: 'yes'.

And...

JCH: Falcon. Ok, it's a club, which still exist but which is now a-, has been a plot of land which is still a club but bought by the MCB, which is-, its their-, its their well, social club, for the employees there. For instance, at the time, I'm talking let's say 1980's, you have football clubs Ok, each community would have its football club. You would have the Dodo: the Whites, Racing Club: for the general population—

Researcher: Fire Brigade.

JCH: Fire Brigade would be basically people from the fire brigade, but they would also selected people from all avenues outside, you have the Hindu Cadets: for Hindus, Muslim Scouts: only Muslims, then you had the Fire Brigade, some-, then later you had the Sunrise. Fire Brigade and Sunrise opened up the way because it was very open. And you started having Whites playing in either of these teams, or general population in these teams and then in some time, I don't remember when, cause I'm not a football fan, the government scrap all this. They say: "Ok, we're going on a regional basis." And this, more or less contributed to killing football in Mauritius.

Association with particular schools and also the situation of slave descendant families in impoverished areas also foster racial stigma. Residence in these areas also means that the Creoles and members of the working class are *confined* to, and expected to participate in, class and 'race' specific leisure activities. Unfortunately, these are also activities which reinforce negative stereotyping. For example, drinking alcohol in taverns or setting up parties and entertainment which involves the consumption of alcohol. In contrast, we found that for the middle classes and some Franco-Mauritians, the construction of the racial stereotype involved leisure activities which reinforce positive stereotyping. For example, sporting and leisure activities for the Franco-Mauritian and middle-class youths involves golf, windsurfing, sailing and for the very wealthy: hunting, tennis, etc. To refine this even further, even the consumption of particular types of alcohol is stereotyped. Thus, most of what is consumed by the lower classes is deemed to be of inferior quality and reinforces the inferiority of the lower classes, whereas the setting (exclusive clubs such as the Suffren for example), as well as what is consumed by the middle classes, reinforces their superior sense of taste as well as their inherent superiority in terms of class and race.

## The pressure to conform

The findings also show that while some young people are rejecting the prevalent discourses on race, there is enormous pressure to conform to the dominant ethos, to accept racial prejudice and to follow the social path established by the previous generation in order to achieve similar levels of privilege and power:

Race for many of youths seems to be inconsequential, largely because for many of them so far, they have never lived in a society where race is an ever pervasive force limiting ones opportunities so far in life. Indeed, in an informal discussion with one of the participants who is out of school, he informed me that non-racialism is common at school going age, he too felt race not to be important at school, yet when he left school he saw how race can affect his life. For some youngsters there does seem to be a fear that backing will become an issue as they get older and that job seeking in Mauritius is based on who one knows and being a certain race (Project 4: Individual TJC Report on Youth and Racisms, pg 29).

There are others being highly pressured to promote segregation and racial and ethnic exclusivity. Where are they receiving these pearls of 'wisdoms' from? It is evident from the findings that

parents play a particularly role; this is proved in the following extract, which documents the pressures experienced by Mauritian youth:

However at this stage of their lives (secondary school level), it seems that race is something that concerns their parents, this was exemplified to me in one interview with a Sino-Mauritian student from Port Louis SSS.

“My best friend is Muslim. My mother gives us pressure to find Chinese friends. She told me to make more Chinese friends because I have many friends who are not Chinese. I have other Chinese friends who only have Chinese friends. My mother always thinks Chinese, Chinese, Chinese. (Interview053\_02082010)”

Her account is similar to other students who state that personally they choose friends regardless of race, but for their parents, race does matter in decision regarding who their children should interact with. For young people, specific community belonging is not at the fore of how they identify themselves and each other. While they may be aware of differences in skin colour or religious practices, these factors did not seem to be of importance when it came to making friends at school or activities they engaged in. Outside of school however, it was found that students interacted mostly amongst persons of their own race. Amongst school leavers, it was also found that there was a greater emphasis on race than at school going level, with participants gravitating towards their own racial group the older they got. It seems that the school environment create spaces where multiculturalism is really fulfilled. Outside of these spaces it seems that there is a great emphasis on preserving families and cultures, at home multiracialism seems to become more of a matter of tolerance of diversity than unity in diversity (Project 4: Individual TJC Report on Youth and Racisms, pg. 30).

Religion and religious entities also play a role in determining interethnic and ‘racial’ interaction. Religion seemed to be a strong motivator in the selection of a potential spouse from within the youth’s religious community:

Researcher: would you date someone of a different race?

Participant: No. My family is very strict and I will only marry a Roman Catholic guy.

Researcher: would it matter if he was Indian or White?

Participant: I wouldn’t marry a white or Indian Catholic, Creole only.

(Betsy 17, St Esprit)

Our view on the above is twofold: First, there is the pressure from religious authorities to marry within the belief group. The other is that religion forms an integral part of a *publicly valued* Creole identity. In the absence of a publicly valued and validated identity, Creoles seem to have gravitated to, sought solace in and a sense of self from, the Catholic religion. One could also argue that as Mauritius is a very religious society, religion also permeates the diverse social settings of the island society. Religion influences schooling, social life, choosing a marriage partner, yearly rituals, friendships and identity. To provide an example that is not exemplified in the research findings of the individual reports: In Mauritius, there are a number of religious youth associations which encourage a rededication to Christianity through abstinence and non-alcoholism (i.e. the Young Pioneers in Central Flacq). These groups not only pray for the strength to abstain from premarital sex and alcohol consumption but also engage in religiously exclusive social activity which reinforces group solidarity and, to a certain extent, isolation.

Furthermore, the right to religion is also a fundamental right, supported by the Mauritian Constitution. However, we asked whether this was not problematic because such schools have a big impact on identity and some have argued (see Boswell 2006) that these institutions carry particular discourses of suffering - which encourage slave descendants to accept their lot (via a theology of suffering which includes statements such as ‘blessed are the poor’ for instance), as a marginal people. The churches also elevated the French language above *Kreol*, as most Catholic services are still conducted in French. This indirectly implies that the latter (i.e. *Kreol*) is not good enough for the business of worship:

It was found that Catholicism was a major part of defining Creole identity, and indeed use of the term Catholic is seen to be synonymous with Creole. One participant informed me that "Catholic refers to Creole which is also used to mean Christian, I was a member of the *Mouvement International des Etudiants Catholiques*, the organisation was meant only for Creole students." (Interview36\_09082010).

Furthermore and as the following extract suggests, allowing the proliferation of religious organisations risk promoting racial and social exclusion:

This sentiment was interesting since the participant attended the University of Mauritius which doesn't allow for persons to form organisations that exclude people based on community, yet because of the conflation of race and religion, a race based organisation was allowed to form. It was also found that even *non-pratiquant* (non-practising) Catholics saw Catholicism as an important part of defining oneself as Creole. Three of the colleges at which research was conducted were confessional schools: St Esprit, Ste Marie Palma and St Mary's West. Confessional means that these are schools funded by the Catholic Church and both Creole youth focus groups were conducted with church groups in Vallijee and Bois Marchand. The Catholic Church seems to play a big role in the Creole community. One of the organisations I visited at the forefront of introduction of Kreol at schools is the *Institut Cardinal Jean Margeot* in Rose-Hill.

Moral domination of religion and hierarchy served to keep religion 'pure' without appropriation for a long time but now Kreol is present in some Catholic churches. Anti-Creole sentiments exist in institutional practices in Mauritius, there should be a revolution, a change of this in all institutions including the church (Interview020\_20062010).

There is also pressure to conform so that freedom of movement can be achieved. The 'right' marriage (which implies the right kind of social mobility), can help the individual to achieve this and we found that great emphasis is placed therefore on getting married to the right name:

"With the right name I could attain anything, get into clubs" (DL 16.08.10)

'The Rogers don't marry other names.'

The above strongly suggests that one's name and associated pedigree are significant in determining identity, which in turn determines access to differently privileged kinds of spaces. Persons, with the wrong names, were deemed not to have the 'right' identity and therefore were denied membership to the Dodo Club. And even among those individuals who appear to be 'white' Franco-Mauritians, not all possess the right social and economic connections (another way to create identity), which helps to further validate their whiteness. Thus, 'looking white does not make you white' (anonymous).

Thus for Franco-Mauritians, marrying outside the community has never been well-perceived and has often led to disinheritance and virtual banishment. Skin colour was once the predominant marker of group identity and corresponded largely with class boundaries; thus marrying outside the community was considered marrying down.

Pressure to conform is relatively unavoidable for Hindus, as caste is also very significant in determining identity in a quasi-biological kind of way. Caste practice evident in a number of spheres is particularly evident in endogamy (marrying within the group) among Indians in Mauritius, further evidence of this can be found in the TJC report (Project 4) on Social Stratification:

It is essential to differentiate between a hypergamy (marriage between a man and a woman of inferior status) which is more or less acceptable and a hypogamy (marriage between a woman and a man of inferior status) which is always blameworthy. The word for a mixed marriage is *samkara*. It always has a pejorative connotation: it implies disorder leading to a-dharma, the negation of the dharma (Claveyrolas 2011:15).

And

Long ago, love marriage was not accepted and inter caste marriages was strictly forbidden. If it happened that a daughter in law came from a lower caste, then the mother in law would never eat the food cooked by her daughter in law. (Gya and Teelwah in Claveyrolas 2011:45).

With regard to parents, it was found that parents are keen for youths to maintain racial and ethnic boundaries, thereby promoting the idea of fundamental differences existing between clearly established groups. In the Social Stratification Report, there are many examples of arranged marriages to prevent the religious and social problems of pollution which may arise from the mixing of *jati*. In some cases, the socialisation begins very early because grooms are chosen for young girls as soon as these girls become pubescent. There is the very tragic story in the report of a young pregnant woman who was killed by her relatives for choosing a mate from a caste lower than her father's caste. Thus, a young person may not necessarily be denied a friendship with a person of different religion or 'race', but the moment when marriage is being considered, the young person is pressurised to find someone of his or her own kind.

## CONCLUSION TO SECTION 2

It is our conclusion that socialisation from a very young age, plays a major role in determining the experiences of slave descendants and descendants of indentured labourers. While the latter may not be expected to consume alcohol, it is found that their social lives are also constrained by the expectations of the older generation, the religious authorities, the school context and the places in which they reside. Thus, all these factors conspire to foster a relatively restricted existence for the youths of Mauritius. Indeed, in the school context itself, we found that the youths are able to experience a measure of freedom from these constraints. But once outside the school context, they are expected to conform and perform their assigned 'racial' or ethnic identity. Conflict arises when the individual does not conform as expected by family, friends and religious community. This is exemplified by the young person interviewed, who was at loggerheads with his mother for wanting to have Muslim friends despite his identity as a member of the Chinese community. It is our view that substantial work has to be done by the Government to valorise the contribution of the youths in Mauritius to the creation of a unified and mutually respectful society. At present, the social organisations and structures of our society, while seeking to preserve diversity, are in fact emphasising and encouraging differentiation. It would be our recommendation that the Government and civil society carefully investigate how these various social organisations operate and to initiate an awareness campaign to help Mauritians see their society in a more democratic light. We will elaborate on how this might happen in our recommendations.

## PART THREE

### CROSS-CUTTING IDENTITIES AND EXPERIENCES OF RACISM

In this section of our report, we attempt to discuss the cross-cutting identities and experiences of racism. It is our view that it is difficult to disentangle discourse from experience, as discourse informs experience and experience helps to produce discourse. In the following, we consider the effect of class and gender on racial experiences. We found that class mobility can temporarily elevate the status of an individual otherwise treated as a member of an inferior racial group or caste. However, economic mobility is no guarantee of ‘progress.’ In our first example, we discuss the situation of Franco-Mauritians who, in general, are perceived (erroneously) as belonging to same class and are therefore believed to share in the same experiences. We argue that for greater equality to exist in Mauritius, there is a need to explode myths of racial homogeneity and boundedness. We discuss how this might be achieved in our recommendations. In what follows, we attempt to unravel racial myths and show how these reinforce segregation and the discourse of racial superiority.

#### The Myth of Racial Homogeneity

One of our individual reports on racial experiences documented the cultivation of an elite discourse and ‘mystique’ in the Franco-Mauritian community so as to perpetuate a myth of control and unassailable superiority. How is this myth of control achieved and/or perpetuated? The observations and interviews of one of researchers, found that there is significant heterogeneity within the Franco-Mauritian ‘racial’ group and yet it is the *historical* perception of the Franco-Mauritians which prevails. In this, they are all seen as wealthy, spendthrift members of the class elite of Mauritian society. However and as our researcher noted:

The Franco-Mauritian interviewed so far do not all consider themselves privileged of ‘elite’. While their historical privileges construct Franco-Mauritians as a privileged and dominant minority, a look at contemporary Mauritius aids in conceptualising the Franco-Mauritians as not so privileged any longer. Such normalised depictions of the Franco-Mauritian lifestyle were sometimes evident in interviewees’ discussions and by observing their homes and where they lived. But mostly, their spendthrift nature was not apparent. Franco-Mauritians nowadays no longer enjoy the wealth and prestige that their colonial ancestors once did and the modern realities of Franco-Mauritian identity show that their identities are in flux.

BLC speaks to many different factors detailing the rise and fall of the Franco-Mauritian,

**BLC:** It is mainly the White who came to develop the country and then imported the slaves to work and so on. So they had the privilege at that time of getting land from the previous Government, French Government or English Government. So they had this privilege to get the land from that time and then let’s say, when they imported the Indian to work here, they were not imported as slaves. They were imported as coolies, as workers in the many sugar cane fields and so on and also then when they abolished the slavery, they benefited from some land as well.

**Researcher:** The Indians?

**BLC:** The Indians right not the Creoles. The thing is that the White people (Franco-Mauritians) know better how to make use of their assets, how to multiply their assets and make it work and they invest mainly in sugar cane. At one time, sugar had a good price on the international market. They made some money out of it and they reinvested this in their own business or in a different business, something like that. Some of them succeed, some of them didn’t succeed.

So let's say, the percentage of white inhabitants in Mauritius as you know is very few compared to Indians.

**Researcher:** Very few.

**BLC:** So it is for that reason the person globally perceived the White Mauritian as the richest. It's not true. Probably percentagewise comparatively on the number of White people living in Mauritius, possibly yes, you have a better percentage who are rich because we are very few. But now let's say you have more; let's say Indians who have majority of population, you have more Indians than White people rich. The thing is that White people we are ten thousand or twelve thousand; Indians they are four hundred thousand or five hundred thousand. So, you can't compare really. So, you have a lot more Indians who are richer than the Whites, but they see the Whites as richer because most of the Whites, they know how to sow money, but not the new generation let's say me like our family all my father/brothers and so on they were working and had a job to have a living. They didn't possess any assets or big pieces of land and so on. No. they work. They invest their money in some land or in a house or something like that. That's it.

The above extracts also suggest that it is not only historical perception of white privileges, but that members of the 'community' also see themselves as possessing inherent qualities that enable them to achieve prosperity. This myth of intellectual and ultimately racial superiority pervades the discussion on Franco-Mauritian achievements. There is the stereotyped and racist belief that whites are better at investing and safeguarding their assets. Moreover, they achieved their wealth with very 'little' support since it is argued that whites did not receive much in the time of slavery and colonisation, especially with regard to 'pieces' of land obtained. In the latter part of the conversation, we note the issue of visibility. Franco-Mauritians or Whites in Mauritian society (and the differentiations within the category) are deemed to be more visible by virtue of their small number. The interviewee suggests that it is difficult to ascertain how many people of Indian descent are in fact as wealthy as Whites (even though s/he argues there are more wealthy Indians than Whites), because there are simply more of them in our society. The mentioning of the number of Indians also smacks of racism, particularly the not so subtle inferences of overbreeding and 'lack of control' which is not apparent among the small number of Whites, who (by positive inference) not only know how to 'sow their money' but also their 'seed'! Perceived differently, the visibility issue is also racist, suggesting that differentiation between blacks or 'Gens de couleur' are invisible or generally disregarded by Mauritians because 'we' do not generally perceive differences within categories of black people - they are all the same. Whites, however, are visible and therefore, valuable.

Further on, the interviewee confirms that poor whites exist in Mauritius.

**Researcher:** I mean are they any poorer Whites?

**BLC:** There is. For sure, there is.

**Researcher:** Yes.

**BLC:** Yes, for sure there is. I know some people who don't have money probably to buy their cigarettes every day or to put gasoline in their car or who don't possess a car, a bicycle or a motorcycle.

**Researcher:** Yes.

**BLC:** So there is. Yes, there is, but in their family you always have brothers or uncles who have money who help them, give them some bucks every month. It's like that.

The above confirms that there are different classes of Whites, that they are those who cannot even afford the basic necessities of life. However, these individuals are 'looked after' by wealthier members of the family. As to what has happened to the inherent superior qualities of investment and intellectual capacity etcetera among this segment of the population, one is left wondering.

Our observations confirm that they are far many more people of African descent living in slum like conditions in Mauritius. There appeared to us to be none or very few Whites living in deep poverty. The above interviewee did not even mention those people, as if they did not even exist in considerations of wealth and contributions to the making of Mauritian society. More attention is given to what are perceived as direct competitors to this community 'voiced fears of being overshadowed by the more populous Hindu population and finally in 1968 the consolidation of the Hindu political elite... However, independence did not significantly change the economic power of the Franco-Mauritians - they still own sugar plantations, and are the backbone of the economy.'

## How Poverty degrades Racial Cohesion

The discussion on class and race also needs to consider the possibilities of socioeconomic decline among the Franco-Mauritians (the historical socioeconomic elite) and the rise of elites in other ethnic groups. Among the Franco-Mauritians, this is a reality. Increasing poverty is tarnishing the racial myth of superiority as well as what one of our researchers, calls the 'elite mystique'. The extract from one of the individual reports indicated the following:

Most of them spoke about the fear that preceded the elections in 1968; of ethnic or political rebellion and a subsequent re-possession of their land. So before and after 1968, many Franco-Mauritians left the country - similar to events in South Africa before and after the 1994 presidential elections. This Franco-Mauritian Diaspora is a new form of the classic Diaspora (i.e. the black Atlantic Diaspora) as they immigrated to South Africa, Toronto, Canada, and Australia. However, those who stayed behind were able to buy the land of those who left and maintain their dominant authority as a minority as they fund economic ventures and are active role players in the Tourism Industry.

Tourism in fact remains largely in the hands of the Franco-Mauritians. It has remained a private industry and the Government's Ministry of Tourism has been termed merely a facade. Their power as economic rulers and capitalists changed in 1968. Their ethnic dominant core in plural Mauritian society began to wane. Furthermore, their political power has declined now that other Mauritians are striving for power and privilege. Interviewees spoke of emerging elites from other groups of Indians, Creoles, and *Gens des Couleur*.

Whites drove BMW back then, if you saw a BMW you knew it was a white, but now there are Indians too.<sup>42</sup>

The symbols of the once elite Franco-Mauritian are changing - and interviewees spoke about some Franco-Mauritian shifting from their inherited white bourgeoisie mansions to simple bungalows. They are no longer exclusively the economic elites. There are poor Whites in Tamarin. Foundations of authority are corroding, and they no longer have political power. Franco-Mauritians are no longer a dominant minority due to their loss of cultural and political dominance.

CEN (Curepipe, 12 August 2010) said that although Franco-Mauritians still own the majority of sugarcane land, there are other emerging sugar barons:

CEN : No, the Franco-Mauritians are still, I would say, the majority the owners of sugarcane lands. But now that we don't talk, there are a lot of Indian families or Chinese families or Muslim families that own a lot of land.

Researcher: Hmm.

CEN: I would not mention any families but in one of the sugar industry there is an Indian family who is the majority.

CEN: They own the land but they let the people who know the business run it.

Researcher: Ya.

CEN: They say we have the majority understanding of the sugar industry so we run it. Because they don't know how to run it. You know if you don't know how to drive a car, you have a nice car, you get somebody to drive the car and you take advantage of the car hmm. Instead of colliding it against a tree.

What the above extract shows is that even in the face of decline, racial stereotypes are maintained, almost as a way of maintaining the last shred of power, the ability to stereotype, denigrate and belittle the other. Uihmann, Brescoll and Machery (2010) describe this as Bayesian racism, which they say involves a strong belief that it is rational to discriminate against people based on their racial stereotype. They confirm that Bayesian racism is also a means at keeping low status groups in their 'place'. Such rationalisations, they also argue, may be due to threats to the ego or the self.

In the above, the Franco-Mauritian interviewee argues that Indians now have money but still no aptitude to use it skilfully. They still 'need' white people to do that for them. In short, without Whites, the country (including Indian descendants and Creoles) would experience a major decline. This quote suggests that Franco-Mauritians are 'threatened' by the presence of a growing Indian elite and feel the need to belittle or racially marginalise Indians by stereotyping them.

The above extract also tells us that dominated groups now produce emerging elites and that this group is economically diversifying the population. Thus, it is a possible to argue that increasing wealth also challenges racial cohesion and stereotyping. As the numbers of middle class Indian descendants and Creoles increase, so will the level of racial cohesion and stereotyping drop. In our recommendations, we point out that the increasing wealth of Mauritius will play a vital role in erasing stereotyping and racial cohesion, as more people will become educated and will begin to reflect critically on the negative consequences of segregation and racial denigration.

However, CB (TJC, 10 June 2010) argues that the economic core of society is still the Franco-Mauritians, largely due to their social responsibility and tourism activity. She argues that their economic visibility and power have enabled them to occupy positions of power in the society. Racial myths of superiority, as well as actual economic power, have encouraged others, especially the Creole population, to still consider the Franco-Mauritians as the privileged class - the elite. The elite status is maintained, not only by access to jobs and money, but also to social practices (leisure activities for example) and the use of symbols of power (the bungalow, the car, the shopping district/mall, clothing and type of alcoholic drink consumed etcetera).

## How Money is used to Secure Racial Privilege

If we assume that this privilege is maintained, how is it being maintained? We get a clue from the following extract which explains that the establishment of social networks at a very early age and the role which such networks play in establishing privilege for individuals:

JCH Oh yes! Oh yes! How do you call it, "deli-de-faciesse" we call it in French-, "deli-de-faciesse". "Faciesse" is your face in French, "deli"-, "deli" is an offence, I'm translating it literally, "deli-de-faciesse", "Déli-de-faciesse". It's looking on how you look and they don't give you a job or don't allow you in, they also call "deli-de-faciesse" it's also because of your name. You can see someone very, very, not (?) with examples, but someone with a different name, let's say-, when you have-, for instance a name like mine, Ok, it's easier to get in some place than for others.

Researcher: Why?

JCH: Why? Because let's look at myself, here we deal with insurers, insures "pardon!" insurance Ok, the insurers are in the private sector Ok. Most of these people, most of our clients, I would say huge-, a large part of our clients, let's say White owned companies Ok, you have managers who are Whites, who-, who I happened either to know socially or from school days Ok, and its incredible that Mauritius is very small, for instance it would be easier for me to get access to the CEO of IBL, who's a school friend of mine or the CEO of-, what is this, not KPMG, it's (?), it's PriceWaterHouse, school friends. These are ties which go long way back Ok. Let's say somebody without these

connections, professionally let's say we have same qualifications, you would get access but it would-, maybe more difficult. Like, I mean in South Africa you do businesses (?) courses, in Mauritius too but it helps whether you've been school friends or not, it tends you to scale down but I think it would take few generations to disappear but it would replace by golf, by school, by-, but this is-, at that time it's still the relationship you build up in the time which-, and it's (cough) it's easier to deal with these people because we know each other, you have something I think-, we share the same culture maybe. So, somebody you don't, let's say an Indian, I would be perfectly at ease with him but it's not the same relationship, of course with time I'll built up the same relationship, I'll built up a relationship but it won't be the same because "bon", you got memories with the people, it's different, it's different.

The same point is made by Creoles, which is that Creoles are unable to progress in the society because they lack the networks that Indians and Franco-Mauritians have:

The is also among the Creole informants a shared perception that the Indo-Mauritians have more chances of socio-economic mobility because they enjoy more privileges in the form of racist type 'patronage' in employment such, as in education and they can easily find a job in the public sector, for example with the District Council and Government. For example, Jacques stated that Mauritian society functions by 'patronage' but since there are few Creoles at decision-making and policy-making levels, the Creoles are at a disadvantage since they have no representative to back them. For example, Jerry believes that his application for an NHDC house has been rejected because of his race and because he had no 'political patronage'. Also, for the Elections of 2005 a Private Permanent Secretary promised him to give him a job if he won the elections. But after the Elections he did not respect his promise and instead gave jobs to five Indo-Mauritians.

*'...beaucoup de gens qui vont dire que les hindous sont privilégiés, parce qu'ils ont ça, ils ont ça. Quelque part oui. Parce que s'ils ont de la famille qui travaille dans tel...hisser...Tu comprends ce que je veux dire là?... Que c'est vrai quelque part, pour avoir un emploi, pas tout hein, il y a des exceptions aussi, pour avoir un emploi des fois peut être c'est un peu plus facile pour eux mais déjà ils ont l'avantage d'avoir un certificat que eux ils n'ont pas. Donc de toute façon à ce moment là ils sont inégaux tu vois...surtout dans le gouvernement ça existe beaucoup, ça existe beaucoup. J'ai une amie qui elle, elle est tamoule et elle est dans le gouvernement pendant je ne sais pas combien d'années, Vanessa, au moins enn 12 ans, 13 ans et elle a beaucoup d'expérience et elle a « apply » pour un travail mais elle n'a pas eu, parce qu'elle dit parce qu'elle est tamoule, parce que l'autre personne qui devrait rentrer est le beau-frère ou soit le cousin de quelqu'un qui est plus haut et ça c'était flagrant...mais dans le secteur privé je crois pas que c'est aussi flagrant mais dans le secteur public c'est très très flagrant...'<sup>A3</sup>*

(Eng. Trans.:...many people will say that the Hindus are privileged because they have this, they have this. Somehow yes. Because if they have a family working here...pull...You understand what I mean?...that somehow it's true, to get a job, not all, there are exceptions also, to get a job sometimes maybe it is easier for them already they have the advantage of having a certificate that they (Creoles) they don't have. Hence anyway by then they are unequal you see...especially in government there are many, there are many. I have a Tamil friend who has been in the government I do not know for many years, Vanessa for at least 12-13 years and she is experienced and she applied for a job but she did not get it because she says because she is Tamil, because the other person that was to get the job is the brother in law or cousin of a high ranked person and it was obvious...but in the private sector I don't think it is that obvious but in the public sector it is very obvious...)

The informants, as testified by Kathy and Claudine, pointed out that even though slavery has been abolished, the Blacks are still being treated as slaves because they are exploited by their employers, and their working conditions are harsh as they are underpaid and work long hours to earn a meagre salary for subsistence only. The Blacks refer to both the Indo-Mauritians and the Creoles who constitute the servile labour force.

## How Racial Segregation is maintained in Leisure

However, it often happens that social mobility is insufficient and it is the race of the individual which counts for more. This racial exclusion happens on a daily basis and serves to exclude members of certain racial groups from spaces of power:

JCH: Actually I got married in 2006 and I stopped going out because I've got kids now, so I'm not, I'm a bit out of this now. But I've a friend who always-, well he always, he jokes about it, there was one little story, he works in the public sector and he's a magistrate and you know as lawyers and magistrate are very, I don't know how to say that in English, very "collet monté", very proud of their job and 'I'm a magistrate and in Mauritius we speak English, we've been to UK to study.' And stuff like that, so, and, when I got to his building, which his father owned- he works in the building and I went to see to him there-, he was there, I went to see him and we met there in the afternoon, actually the guy in the entrance said: 'Sorry sir, you can't park there.' And he had a beautiful BMW, 'Sorry you can't park there.' Ok. Ok, fair enough he parked outside, I arrived about ten minutes later, I got in.

Researcher: And you were not driving a beautiful BMW.

JCH (Laugh): I had a Peugeot, Ok. And the guy said 'Hi' and just got in, parked and so: 'Where did you park?' I said but: 'Into the parking.' He told me: 'How did you get in?' 'But I got in by (?) that's it.' He told me: 'The guy threw me out.' And he was: 'Ah you see, this is because you're White.' Could be true, could be true. Could be the way you speak to the people, if you're rude people just: 'I got the power, you just stay out.' I don't know but he often speaks about this, it was a big discretion about our group of friends, and they said: 'Ok-' well, this is because he's very rich, (44:43 - 44:45) but for him, it's still a-, it used to be an issue, I don't know now but it used to be very much an issue for him.

Researcher: So interesting.

JCH: So this funny incident we remember but there were many examples like this.

Researcher: Can you think of any other—

JCH: Examples?

Researcher: Yeah.

JCH: Something like that?

Researcher: Even that you read in the newspaper or, it doesn't have to be—

JCH: There is one incident which is more recent, we're talking about this (fouf!), I'd say at least fifteen years ago, ten years ago, one more recent incident was the son of a former finance minister, this was in the newspaper, I don't know whether it's true and he was refused access to The Zanzi Bar or one of the night clubs in Grand-Baie because people didn't know who he was and he was denied access to the club, and for him it was a big thing because he was the son of a finance minister and it was-, and he said it was because of racism, because the guy came alone and they saw him as an Indian boy coming to have fun and they didn't want him to get in, they didn't want him in, and he said it was racism. Well, some-, a friend told me, Ah! It was one of my colleague here who told me about this, they went to a private club with-, it was French or British friends and they will not-, they were just ten metres apart, (laugh) the foreign woman and her husband (who was a black guy) arrived in front of the door, he wasn't allowed in.

Researcher: Was he a Mauritian?

JCH: He is Mauritian yeah, but he is black. And his friends went in, as he is a lawyer I think, he made a big thing about it, but he wasn't let in, allowed in, you see. These are small incidences but this is racism, clearly, clearly.

The following extract offers further vivid examples of the ways in which class can be used to exclude certain 'racial' groups from accessing spaces of power. This is especially the case with regard to leisure activities associated with particular race groups. As the above and the following conversations show, allowing these individuals access would allow them to transgress established racial barriers and would bring into question the value of the white and black race. Specifically, the white race would be perceived as having less value (tainted by the presence of the black) and the black race (if permitted to access the site) would be perceived as having more value than what is normally accorded to it in other contexts. In the following, we see extreme examples of this control of space and identity.

Researcher: And can we talk about racism on a social level?

JCH: Like?

Researcher: Where would you-, if you had a period of space, where would you--?

JCH: Ok. There are private jobs, I'm not talking about what you have in Flic-en-Flaq, shots or things like that, Ok. I'm talking about this, you have Dodo Club, exclusively for what? You have Racing Club, Ok, for general population and degeneration split on whether you're, how would I explain that? The type of (?), the type of money you have, the (?), the Racing Club would be about this, because then you have the Cercle de Rose-Hill, Ok, and Cercle de Beau-Bassin, then you would have the Triveni, this is a gymnasium (laugh). Gymnasium, no, no, no. Racing Club is just behind the-, you're just mixing up, Racing Club just behind the (?). (?) is there and you go straight up it's Racing Club, Ok. Triveni would be for-, no, no, no, no (--), the Tamils. What would you have? Triveni, Lua Yen, Lua-, Lua Yen in Eau-Coulee. What else do you have?- This for Chinese, you also have one in Port-Louis which is (?), this is in Port-Louis. What else do you have? There must be some smaller clubs, but these are the major ones, Ok. None-Whites wouldn't be admitted in this club, the Dodo Club.

Researcher: Dodo Club, yeah.

JCH: People-, even the Cercle de Rose-Hill wouldn't admit people-, would admit a White for instance from upper class, so to speak. But wouldn't admit an Indi-, and Indian or a Muslim in the Cercle de Rose-Hill, that would be unthinkable.

Researcher: An Indian or Muslim.

JCH: No chance. No chance whatsoever. No chance whatsoever, even now. Even now. So, is there exclusivity based on the minimal coloured skin, they are considered racially negative.

What the research team also found is that racism is so profoundly entrenched in Mauritius that whiteness is strongly correlated with social mobility. There are different kinds of Whites and for each, different levels of social mobility and different levels of access to the ultimately Whites only spheres of social interaction:

Whilst some Sino-Mauritians are referred to as *jaune* (yellow), *blanc* (white) is also used to describe the lightness of Sino Mauritian skin. This white is also used to imply a class status. One female student from Port Louis SSS remarked that "people think that we are white we are more rich. I am not proud to be Chinese. It is just my destiny that I was born Chinese. I have friends of different religions." (Interview053\_02092010). A student at Ste Marie, Palma, stated that he had little trouble gaining entrance into night clubs despite his minor status because as a Sino Mauritian he is perceived as wealthy and will be allowed access to a night club. The association of lightness with high class status was a matter that few students commented much upon, but ...this pigmentocracy is not limited to within the Creole community alone, it seems that there is a public discourse of lightness, where lighter skin is seen to infer a superior status to persons who possess it.

There are many examples of the manner in which discrimination among classes overlap with racism in Mauritius. There are also a number of examples to prove discrimination on the grounds of ethnicity. But in Mauritius, communalism or discrimination on the basis of ethnicity is a 'useful' euphemism:

As pointed out by Firoz Ghanty, communalism is another local taxonomy for racism which is the base of primary capitalism. Initially, the local economy was in the hands of about eleven Franco-Mauritian families that used to constitute the local economic power but now the profile of the capitalist class has changed. In around 1997, Mr. Ghanty set up an observatory of racism and a National Vigilance Group but it did not work because of the boycott not only from the politicians but also the civil society, which found that the observatory was a threat to their racist beliefs and lifestyle.

*'...A Maurice le communalisme est un joli mot pour ne pas dire raciste. En faite je ne parle plus moi de communalisme, je parle de racisme. Maurice pour moi est un pays raciste majoritairement...Qu'est ce que veux dire dans la politique le communalisme. Ça veut dire tel parti va favoriser tel communauté, c'est évident et je cite le Parti Travailleiste, continue de dire que le pays appartient au hindous et donc il favorise les hindous, le PMSD dise qu'il favorise le créole au MMM ça n'a jamais été une pratique...C'est ce que certains journalistes appellent, le communalisme scientifique et je déteste ce mot parce que quand on dit communalisme scientifique ça peut rappeler des théories Nazis, ça peut rappeler les ethnies, ça peut rappeler des choses détestables. En faite, il y a ce qu'on pourrait appeler une vraie volonté, une vraie real politique ce qu'on pourrait appeler du « quota ». C'est-à-dire chaque communauté doit obtenir en proportion numérique une part des biens des richesses de tout ce qui est produit dans le pays...'<sup>44</sup>*

(Eng. Trans.:...In Mauritius communalism is a nice word for not saying racist. In fact I speak rather of racism than communalism. For me Mauritius is mostly racist...what communalism means in politics? It means that this party will favour this community, it is obvious and I refer to the Labour Party, (it) continues to say that the country belongs to the Hindu and hence it favours the Hindu, the PMSD says it favours the Creoles in the MMM it has never been the practised...it is what some journalists named scientific communalism and I do not like this term because when we say scientific communalism it might remind Nazi theories, it might remind ethnic groups, it might recall appalling things. In fact there is what we might name a real will, a real politics of what we might call 'quota' that is each community has to get in numeric proportion a share of the wealth and resources of what is produced in the country (Gross National Product...).

The research also revealed some glimmer of hope for the racial situation in Mauritius. In her interview<sup>45</sup> with a woman involved in NGO work, the Clinical Psychologist on the team found that, while the 'norm' is that races are segregated in many areas of social life, there are attempts to bridge the racial divide. This is spurred on by growing awareness of poverty in Mauritius and also the role of the Catholic Church in raising awareness of poverty. However, and as the following extract suggests, it is still difficult to interact on a personal and familial level across the race groups. There is also insistence on racial purity of one's ancestors. As this particular interviewee confided (earlier on in the conversation, thus the reader should refer to the actual transcript), she comes from a poor white family, but she had a 'good name', one that indicated that there had been no racial mixing:

**Interviewer 2:** In my discussion with Franco-Mauritians now, they tell me that lot of Franco-Mauritian women, they are doing a lot of social work, charity work, community work a lot. They are volunteer (...) prostitution work, NGOs (...) why you think so?

**MR:** Because we are in touch more with poverty now. And our group too, the same category group; we made with women what we call micro credit for houses. And it works

**MT:** You were giving credit to?

**MR:** To women and they were paying back. That was wonderful. So let's say they have no electricity, it was through the (...) we knew that there were genuine cases. So we go and visit the houses, talk to these women and all that. And it was good. Maybe (...) you will see (...), but there were an interaction, they were happy to see white ladies. We could take time to come and visit them (...) they would ask me, "Are you nun?" I said no. "Are you paid for that?" I said no and so.

Interviewer2: (inaudible voice to the second interviewer)

MR: Let's say at school they are good friends, different communities, but very few receive different community in their house.

MT: Ok this something that I have also been told about, I know some of the questions I would ask is very personal. Do you yourself have friends across communities?

MR: I have lots of friends. When I was at the prison at Riche Lieu, there is a teacher, he is coloured man what we call, a *métisse*, and Mr. Tulsy, a wonderful friend; but my husband likes him very much. I've got a young (...) that makes ceramics with me. My husband (...) (laughing)

Interviewer2: So do they come to your home?

MR: Oui

Interviewer2: (inaudible voice of the second interviewer)

MR: We are not uhh we are not, we don't have a big social life. We don't receive a lot, except our family. We have big families and we receive them. I've got very good friends in Australia. We still visit her when we got there. They are coloured people.

MT: And your own children, do they have friends under other ethnic groups?

MR: Yes the same thing, at school yes. My elder granddaughter when she had anniversary she invite two of us but the second one no.

Interviewer2: You think that younger generations are more opened?

MR: Yes and no. yes on provisional side.

MT: Tell us more about that.

MR: That is they don't like to invite for dinner to people if it is for work, for business but I don't think they would like to invite for anniversaries. It takes time. I'm not excusing ein but my son, one of my son; two days ago he told me about a school friend, call Obeegadoo, (laughing) (...)uhh they speak Creole, they say "Mark, that's my anniversary I invite you, come there is a ceremony in church and you must come to have lunch with me" Mark went lunch with Obeegadoo, very far from business work; and there were Xavier Duval (laughing) Xavier Luc Duval, Richard Duval. There was champagne. But he is a funny boy. He came to Mark, Mark has (...) it's business. They sell also sport goods And he said last time you gave me a pair of sport shoes and this time (laughing) (...) They are not racist but we do not have to opportunity to mix.

Interviewer2: But how would you open at those opportunities?

MR: We must work on that

### How Gender Relations and Racism Interact

It was our intention to fully investigate the cross-cutting implications of gender relations and racism. Our research encompassed both women and men. However, given the scale of this project and the fact that we did not have sufficiently qualified personnel to initiate the research on gender, we were not able to obtain significant observations or interviews on the subject. However, we have noted the following issues, especially as they pertain to young Creole or slave descendant women. First, black skinned women in Mauritius experience the worst of racism. They are often the ones to be harassed and harangued. They receive the poorest levels of service. They are most discriminated against in public and government spaces. They experience racism from family members and in their marriage (from their in-laws). They find it difficult to obtain decently-paid work and are encouraged by a positive discourse on whiteness (the privileging of whiteness) to alter their appearance so as to appear more white. Extracting and summarising from the interim monthly reports of our replacement researchers (Ms. Teelwah and Ms. Chacoory), it was found that at hair salons in Mauritius, black skinned Creoles are likely to receive very poor treatment and inferior

levels of service, being relegated to 'rookie' or new hairdressers with little experience or being told that their 'type' of hair is not dealt with in a particular hair salon.

The ability to speak French, or if one has a profession or career that is considered middle class, helps the individual to obtain better levels of service in supermarkets, hair salons and places of business. The issue of how one's career is ascertained is that in hair salons, each individual is expected to fill in a form detailing her personal details. However, in other places, one's skin colour (as well as dress) will ultimately determine what kind of service one receives.

It was also found, interestingly not in the actual data on gender and race but on the data dealing with psychological consequences of racism, that white Franco-Mauritian women also perpetuated a form of racism - one involving association and dissociation. Specifically (and this was gleaned from the interview data of an NGO Manager), the women participate actively in charity and volunteer work with the poor but often do so as a way of attaining a particular identity, one which valorises charitable acts among women as a sign of morality. Charity, as we have noted in the research, is also a way of dissociating from the poor (and ultimately the blacks) because it structures the relationship with them without allowing them to fully engage with the self (i.e. whites).

Furthermore, it also stereotypes the poor because it publicly constructs them as people in need, as dependents who are unable to help themselves. That is not to say that all charity work falls within these parameters or that all women involved in charity rationally pursue charitable acts in order to appear moral. What we can argue, however, is that there is a powerful religious-racial discourse at play in Mauritius, one which socially constructs the white woman as the epitome of physical and moral purity.

By participating in such acts of moral purification (charity) and by doing this in defined social spaces, the white woman manages to support and perpetuate this discourse of purity and also control the purity of home space - as she does not 'recevoir' or receive blacks as equals into this home space. It would seem to us (as a general trend), that on the part of the white Franco-Mauritian men, it was important for them to maintain the purity of spaces in the public sphere. Thus, they tend to control access to leisure spaces and to control access to jobs and opportunities, doing so in various ways, conscious (deliberate barring of access) and unconscious (through micro-aggressions or in references to lack of 'fit' of the prospective black employee in the company).

Ethnic solidarity also perpetuates racist practice. This was also found among women of Indian descent. It was found in one textile factory that the majority of employees were Hindus because the Manager believed that this was good for cohesion and productivity in the factory. Hindus tended to 'stick together' to defend the interests of their co-ethnics, if there was a quarrel or dispute regarding a work matter. Creoles, on the other hand, were mostly part-time workers who supplied the factory with semi-finished goods produced from home. The impact of this on the individual development or career/income prospects of the Creole woman may need to be assessed. It would seem to us that this arrangement disadvantages Creole women because they are not really protected by Labour Laws of our country and may not fully understand the implications of the work contracts to which they agree. As noted previously, not only are Creoles stereotyped, but they are also compelled to become invisible and are isolated, so as to avoid potential ethnic or racial conflict in the workplace. In the following, we document the experience of a young Creole woman with racism in Mauritius:

Marie Michèle testified how at secondary school she experienced racial discrimination because she is a Black Creole and people tend to make Creoles feel that they are different and lazy. She was given racist nicknames such as 'Macumba' and 'Bongo' because she is tall and Black. For her, racism is when you consider and also make another person feel inferior.

*'...Il y a tout le temps des gens qui m'ont fait remarquer que j'étais pas la bonne couleur, que j'étais pas ceci, que j'étais pas cela. Comme les sœurs de grand-mère, je t'avais dit qu'elles étaient plus ou moins teint clair, quand j'étais petite et moi je vivais beaucoup avec ma grand-mère et tout, quand j'étais petite on me disais tu sais il faut te mettre de la poudre parce que déjà tu as un désavantage d'être comme ça, maintenant il faut essayer d'améliorer ça un petit peu, il faut ceci, il faut cela, il ne faut pas marcher au soleil pour que tu ne sois pas plus grillée que ça. Quand j'ai rencontré mon mari, pareil ma belle mère ne m'acceptait pas du tout parce que*

*j'étais trop noire pour son fils. Comme si tout le temps comme si on m'a fait, que j'étais vilaine, que j'étais ceci, que j'étais cela. On m'a tout le temps fait voir que j'étais pas, pas nécessairement dans la bonne communauté...tu vois ce que je veux dire, donc tu vois pour moi c'est pas nécessairement raciste en tant que communauté mais c'est raciste de la personne qui se sent mieux supérieure parce que untel a cheveux un peu plus droit, un teint un peu plus clair, pour moi ce type de raciste là, j'ai subi beaucoup plus que d'autres...*<sup>46</sup>

(Eng. Trans.: ... there has always been people that reminded me that I was not of the right colour, that I was not this, that I was not that. Like my grandmother's sisters, I told you that they were somewhat light skinned, when I was young and I lived with my grandmother, when I was young they told me that I had to put powder as I was already disadvantaged by my look, now I have to try to improve it a little, there is need for this, there is need for that, I should not walk in the sun so as not to be more roasted. When I met my husband, same my mother in law did not accept me because I was too black for her son. As is all the time as if they made me (feel) that I was ugly that I was this that I was that. They always made me observe that I was not, necessarily in the right community...you understand what I mean, hence you see for me it is necessarily racism as a community but racism of the person that feel better superior because this person has straight hair, fair skin, for me I experience this type of racism more than others...)

Many informants such as Marie Michèle, Jean Yves and Jason stated that the Creoles are racist among themselves because of the differences in wealth and social class, with the wealthy Creoles seen as being 'snobbish' and having feelings of superiority.

*'...dan largen ena blan nwar tou sa ki fer mo pou al dir ou kouler lapo ? ki fer mo pa dir ou zis blan la ki kumsa ? ena nwar si kumsa. Ki fer mo pou dir ou zis blan la ki pa bon ? dan tou komunote ena bon ena pa bon ki ou pense nwar ki ena largen la li li pa racis ?...Ena nwar ki ena largen li nwar li racis...Pou li li dir ou ki ou pli inferyer ki li ki fer aköz li ena largen. Pou li, li p pense kan li ena largen li blan, ounn kompre la largen ki blan. Pa kouler lapo ki blan. Kouler lapo la sa enn lot zafer sa. Me dan moris largen ki blan. Ou ena largen ou kav ki ou ete ou kav muzulmen ou kav blan ou kav sinwa, madras kreol kan ou ena ou largen ou met la, pouvwar la vini...*<sup>47</sup>

(Eng. Trans.:...in money there is white black all this why I would tell you skin colour? why I would tell you only white who are like that? there are blacks like that. Why I would tell you only the white that is not good? in all communities there are who are good there are good there are not good what you think the black who has money is not racist...for him he tells you that you inferior than him because he has money. For him he thinks that because he has money he is white, you understand money which is white. Not skin colour that is white. Skin colour is something else. In Mauritius money that is white. You have money, you can be a Muslim, you can be a white you can be a Chinese, Madras, Kreol when you have money you put it there power comes...)

For a long time, Marie Michèle has felt inferior because of her skin colour, her social status – she is from a 'poor' family background – and geographical location – she lives in Black River. Her light-skinned family members, parents-in-law, school friends and strangers made her feel inferior because she is Black and of African phenotype. There are still people who adopt racist attitudes and behaviour towards her such and there are people who are taken aback that she is a qualified teacher and has official tertiary qualifications as it goes against peoples' mind-set (they assume that she is a menial labourer).

In line with Marie Michèle's testimony, their reaction is rooted in a long held stereotypical perception that all Blacks are lazy under-achievers and perform only menial and low paid jobs: *'...disons que créole ine faire pou bat simen...*<sup>48</sup> (Eng. Trans.:...let say that Creoles are meant to be masons...)

She feels that people are astounded by her personal achievements because they are not used to see Black Creoles succeed in life. People still hold to negative clichés that Creoles are not ambitious and lazy; hence those who achieve in life are victimised by others, stereotypical attitudes.

Even if the informants denied being racist or communal, they all showed to some degree pre-conceived racial/communal prejudices and perceptions when talking of people from other ethnic groups. These racial/communal tensions especially between the Indo-Mauritians and Creoles might stem from, firstly, the fact that they are the two main ethnic groups in the country with the former and especially the Hindu Mauritians openly claiming their majority and superiority; and secondly from Mauritius' historical path with the Indo-Mauritians and Creoles having different past history and life experiences. This racial/communal antagonism seems to date back to colonial times and is rooted in the country's past development strategies, policies and political history.

In an interview<sup>49</sup> conducted by the Clinical Psychologist on this research team, her interviewee said that there were many women approaching the drug rehabilitation NGO (Natresa). Many of these were very poor women who had turned to dealing in drugs as a way to survive and also as part of their work as sex workers. Since sex work is illegal in Mauritius (and therefore unregulated), these women were often at the mercy of unscrupulous 'pimps' (controllers) and also clients who abused them. A large number of the women coming to the centre and also those found in the jails were Creoles - a good number of which (exactly what number was not established), are from Rodrigues Island. The argument is that these women easily fall prey to the promises of the drug dealers on the island because they are desperate for a better life and feel that they can dramatically improve their circumstances, if they participate in the trade. It is also our view that because these women occupy the lowest rung of the socioeconomic hierarchy, it is easier for them to be drawn into sex work and drug dealing. This is because they have fewer options open to them, especially as they seek to achieve their goals:

MT: Now coming back to your work. When you look at your work, the service that you are offering and the people what you have been assisting, what did the distribution in terms of the population.

ML: Most of them are Creole. And secondly, Muslim and afterward Indian. And you will see because here we have prisoners, the ex-prisoners who have come here. And also in the Women prison you will see the same thing. Most of the women in the prison are Creole, secondly Muslim and then Indian. Because here in Mauritius, most of the prisoner they have been linked to drug, they are in prison because of drug trafficking or for the women sex work. Because they are on a soliciting ground. And most of them are Creole. Now they are Creole and most of the women they came from Rodrigues. They came directly from Rodrigues or the mother, father or grandmother they came from Rodrigues. And here we have made a survey analysis to know why most of them are from Rodrigues and here there are drugs and at Rodrigues we don't have drugs, hard drugs we don't have. In Mauritius we have drugs, we think here it is poverty and the dealers have a good population for exploitation to sell drug and a good field for exploitation. We think that it is for this reason but I don't...

MT: So you haven't made in sort of formal research into it?

ML: No am not a specialist in survey but I think it must be with someone who is a specialist in this work.

MT: Talking about origins, like you say lot of them come from Rodrigues. Are there some whose parents maybe come from Mauritius itself? As if they were brought here in Mauritius.

ML: I do not understand your question.

MT: Ok am asking whether, besides, who else came from Rodrigues, are there other Creoles with the same problems?

ML: The creoles from Mauritius, it is because they are in prostitution or the partner was a dealer. Because here in Mauritius the partner, the dealer and the pimp is the same person. And it's why most of the women here are still in drug. The men, they put the women in drugs because afterwards the women can go into prostitution to bring money for the drug.

## CONCLUSION TO PART 3

In this section of the report we have attempted to show how cross-cutting identities, that is: gender and class affect racial experiences. We found that a strong myth of racial superiority is maintained among some Franco-Mauritians. Not only are they seen as the elite by others, but they also seek to perpetuate this myth. A closer look at this myth reveals that it includes references to superior intellectual capacity and economic management and class. However, the conversations and interviews with Franco-Mauritians revealed that there is significant heterogeneity within the group and that there is also diversity in terms of intellectual capabilities and money management. Increasing poverty is degrading racial cohesion in this group. They appear to no longer 'speak to one another' and social networks, although still relevant, are falling apart. The last spaces in which racial cohesion can be maintained is in leisure spaces, where symbols of racial power persist and where an individual, regardless of his or her achievements can be routinely excluded on the basis of his or her dark skin. Nevertheless, class mobility is encouraging racial integration. Friendships develop via shared class aspirations and activities. These friendships are, however, mostly still masculine, as it is men who tend to occupy the public sphere in Mauritius.

With regard to the complex issue of gender, we found that racial myths and stereotypes permeated gendered categories. For Franco-Mauritian women, there was pressure to maintain a high level of propriety and morality, almost as if they were women still living in the Victorian times! They participated in a range of charity work, not only because they are fully aware of poverty in Mauritius, but also because this validated their position in the social hierarchy as pure, moral beings. In this sense, they are juxtaposed to the Creole or black women, who are deemed to be on the lowest rung of the society, stereotyped as drug dealers and sex workers. Assumptions about the nature of Indian descendants are legion. For instance, as we noted, women of Hindu origins were being employed and Creole women were not being employed at one factory because the idea is that there is inevitable ethnic solidarity among Hindu women. This view does not take into consideration the fact that these women might choose to differentiate between themselves on the basis of age, class, caste, interest or home location.

## PART FOUR

# UNDERSTANDING THE BURDENS OF RACISM

In this section of our report, we wish to draw attention to the following issues and questions. What are the long-term consequences of racism on the population of slave descendants and the descendants of indentured labourers? How is long-term trauma of this nature articulated among the affected populations? What services exist in Mauritius today, to assist those in need of therapy to cope with racist experiences? It is evident from our reflections on those experiencing psychological trauma from racist experiences, that this can cause debilitating symptoms and long-term damage to the psyche. The following section is structured as follows: First we offer a brief overview of the possible links between post-traumatic stress disorder (PTSD) and the experiences and behaviours to be found among slave descendants. Second, we offer an outline of the Mental Health Services to be found in Mauritius today, as per the overview of the clinical psychologist on the team. Third, we discuss evidence for destructive behaviours and the possible reasons for maintaining these. Finally, we discuss racist events in Mauritius and the ways in which people have responded to these.

### The Issue of PTSD among Slave Descendants

According to the Social Worker, Joy Degruy Leary, African Americans, who are descended from slaves, may continue to experience what she calls, Post-Traumatic slave disorder (PTSS) a variation of the well-known syndrome of Post-Traumatic Stress Disorder (PTSD). She says, 'On September 11, 2001, Americans became more familiar with PTSD. Lots of citizens were reported to be suffering from the disorder as a result of witnessing the destruction of the World Trade Towers and those trapped inside'.

With what is known about trauma, is it probable that significant numbers of African slaves experienced a sufficient amount of trauma to warrant a diagnosis of PTSD? The following are a list of some of the conditions that give rise to mental and/or emotional traumas which justify the diagnosis of PTSD and which are consistent with the slave experience:

- A serious threat or harm to one's life or physical integrity;
- A threat or harm to one's children, spouse, or close relative;
- Sudden destruction of one's home or community;
- Seeing another person injured or killed as a result of an accident or physical violence;
- Learning about a serious threat to a relative or a close friend kidnapped, tortured, or killed;
- Experiencing intense fear, terror, and helplessness;
- The stressor and disorder is considered to be more serious and will last longer when the stressor is of human design.<sup>50</sup>

It is her view that the experience of slavery has produced certain 'survival' behavior among African Americans, which continue to affect their quality of life today. The issue and the experience of slavery was never substantially dealt with in the US and, in fact, the situation of African Americans was exacerbated with the institution of the Jim Crow Laws, which barred African descendants from access to good schooling and medical care and severely controlled freedom of association and interracial marriage until 1954. The passing of time and the compounding of the effects of the legacy of slavery are important, not only to the story of the US, but also to the story and legacy of

slavery in Mauritius. Eyerman (2001) and Soyinka (2002) both bemoan the absence of a global discussion on the issue of slavery. In the view of Soyinka (*ibid*), slavery is perceived and treated as a mere 'incident in the course of history' (Soyinka 2002:22).<sup>51</sup>

## Mental Health Services in Mauritius

The Clinical Psychologist on the team noted the overburdened mental health institution and services in Mauritius, as well as the difficulties of addressing racism-related stress in Mauritius. This suggested to us that even if there are a number of people presenting themselves for counseling (and as we argue further on many will not), they are unlikely to experience a full and proper service because of the overburdened facilities:

Medical services are free, but private practice and non-governmental organizations play a large part in meeting the needs of the people. There is only one big institution for mentally ill patients named Brown Sequard Mental Health Care Centre. The institution was opened more than a century ago in 1879 to accommodate 260 patients and it now accommodates up to 900 patients. The Brown Sequard Mental Health Care has a Psychiatry Department which has one consultant, who is the Head of Clinical Department, and six senior specialists. The Psychology Department has five clinical Psychologists. The Social Work Department has one Senior Social Worker and two auxiliaries. The Occupational Therapy Department has one Occupational Therapist and two assistants. The nursing division is made up of more staff. The Psychologists and Social Workers as well as Psychiatrists offer services to other hospital on rotational basis as part of decentralization of Mental Health Services.

The Ministry of Women Rights: Child Development and Family Welfare have a total of eight Psychologists thus including professionals in the field of Psychology; they are posted in seven centres named Family Support Bureaus. These centres are 24-hour facilities. Their huge clientele is victims of sexual assault and domestic violence; they deal with children and families. As part of their duties the counselling staff (thus Psychologists, Social Workers) in these centres provides services to shelters as well. They are said to work long hours since they work on calls too and have a high work load<sup>1</sup>.

The National Agency for Treatment and Rehabilitation of Substance Abusers (NATReSA) has thirteen treatment and rehabilitation centres working with it. The centres are spread around the country and two of the thirteen are situated in Rodrigues. NATReSA plays an important role in providing support such as finance and educational material. Moreover, it facilitates the detoxification of substance abusers in collaboration with the hospitals. Six rehabilitation centres were visited during the month of August. Each centre is governed by the Board. Under the Board, there is a Director/Officer in charge who is responsible for day-to-day administration of the centre. The Director is assisted by administration staff (often paid) and then Therapists/Counsellors/Medical Doctors who either work on contract or as volunteers. In some other cases there are volunteers from the members of the community who provide support to the centre, offer seminars or talks.

All the centres provide individual, family and group counselling/psychotherapy. Some provide in house medical treatment or arrange transport for their clients to consult at the relevant hospitals. They offer holistic care in the form of occupational therapy (skills and vocational training), psychological care and spiritual care, as well as follow up/out-patient services. All centres are involved in outreach programmes often aimed at the youth and those at risk, they recognize that substance abuse or addiction is problem an increasing problem in the society. A lot of these centres have employed Psychologists on contractual basis; the Psychologist works part time and has half days consultations on specific days in the week. As a result, one Psychologist then turns to work for more than one institution. The centres accept clients from all walks of life, different ethnicity, religion and class. Although they could not provide on paper statistical data on the demographics of their clientele, the anecdotal information from Directors and Counsellors in these centres indicate that the majority of their clientele are Creoles of African descent with poor socio economic status, followed by Muslims.

The Clinical Psychologist also made the following observations and gathered the following data:

Interviewees ranged from 30 years-old to +60 years-old male and females although mostly female. They are from different ethnicities. They identified themselves as Creole because they had African ancestors (from one or both parents), then the Franco-Mauritians, Indo Mauritians, Muslims and Sino- Mauritians.

Most of the participants are initially hesitant to consent to interview and refused to be audio-taped. Once rapport is established, participants turn to ask about my clinical experience and that of racism in South Africa. I often felt that I am only allowed entry into their world or life experience, if they feel comfortable or somewhat I acknowledge and seem knowledgeable about the issue of racism in South Africa during, and post the apartheid era. After interrogating me, the interviews turn to follow much better. Although their interrogations might seem to stem from an obvious and healthy curiosity on my South African background, it seems to have assisted in bridging the gap during interviews on participants' outright and overwhelming initial responses of "there is no racism in Mauritius...in South Africa you had it, and it was bad" (almost meaning barbaric).

At the beginning stage of my field work, the response that there is no racism in Mauritius made me feel that by talking about racism (not so much slavery and indenture ), I am bring forth divisions within a community living in harmony. By virtue of coming from a country with a history of institutionalized racism, I felt burden to explain how South Africa dealt with it or continuously deals with these issues. I psychologically had to remind myself and monitor my own responses. I therefore found myself using words such as discrimination, unfairness, emotional response to discriminations interchangeably, in an effort to conceal the nature of my enquiry.

Thus, and as noted previously in the discussion on method and methodology in this report, it is evident that our researchers had their own racial identity interrogated in the course of the research, making it exceedingly difficult to maintain objectivity in the research process. Nevertheless, being highly trained researchers, they were sensitive to these potential challenges and adapted their responses accordingly, using opportunities to discuss their personal experiences in the research 'field' with their fellow research colleagues and the team leader. It was evident from the Clinical Psychologist's findings that there were a number of people keen to deny the existence of discrimination and racism in Mauritius. The researcher notes that in the course of research:

A female professional said "the issue of discrimination is not present is an issue of the past. The society's psychological problems are mainly due to breakdown in family structures and effects of globalization...cost of living has gone up and demands that both parents should work and leaving children unattended. "

Male professional in a hospital said "Discrimination at the work place is not there or allowed, there are laws and regulations governing that. (Later in the interview the same participant said) however there are cases at times at work that people claim they have been discriminated and they are very hard to prove for example, we handle cases/complains about privileges around more over time, placement in a better ward"

Another participant said there is "no discrimination as in the past where ethnic groups will stay alone for example there was a place exclusively for Whites or Indians thus fading out we are now a mixture of people living together and working together in public service. Discrimination is no longer visible, in that sense. But class discrimination people are now more materialistic, and they no longer interact because they are busy"

However, and as the following extract from an interview suggests, if there is no discrimination, then why is it that the number of people affected by the complex socio-pathologies increasing? The interview provides an answer. It is because racism and differentiation do exist in Mauritius and people are finding it very difficult to cope with this. The interviewee also notes that the majority of those affected come from the Creole community or, at least, the more impoverished communities on the island:

MT: I suppose in my question I was going to ask, the people that come here for treatment, today are they, if you were to describe them, would you say they are people who work, people who don't have employment, their level of education what is it like?

JA: So I can say that if someone is a drug addict today, before they were ok, they have a family life, they have their job. But when we become drug addicts, we leave it away. So we have policemen coming here. We have relatives from ministers, we have all kind of people with educational background top, we have joint accountant. Unfortunately they go for alcoholic problems. I don't know, we can't evaluate someone why you are a drug addict, why you are an alcoholic, its complex.

MT: And with division of the population, would you say you get in more of a certain ethnic group? Or getting less? When you look in at the demographic, would you say that you get in more let's say white people or Hindu people more, Muslim people more?

JA: We have many Muslim people and Creole people. So what you call it, here we call it "*banlieue*" "*cité*". They are too complex. So if someone has a drug problem it's upgrading each time. It's always like this. We have one and then we have two, we have three. It's growing up. It's very difficult. I saw it in a news papers last week, there are ten thousand drug addicts in Mauritius. But I can say that there is more and more

MT: And what do you think it's making the number to grow, like what making it worst now.

JA: You know Mauritian people are frustrated people. There are too many categories. The rich become richer and the poor become again poor. So there is not the sharing of the cake. It's very difficult because when you see at the top, the government is not playing the role as you want. To become someone who works in the government sector, private or public sectors. This is the difference. Public sector, we have only Hindus, from their region. In the town, it's very difficult for a Creole to have a good job in the government sector. I don't know why it's like that. It's a long time situation.

MT: And what do you think can be done to correct it.

JA: Since two years we have a priest, a Creole priest, whose name is Jocelyn Gregoire, who wanted to created something between the Creole. There was a good start but now he can't. This has stopped because you know, they have their rich people who come and the top of the church also its like that, we have the white people, never you see a black people becoming a bishop.

MT: So all the bishops are white.

JA: Yes

As the Clinical Psychologist notes:

Inherent in the logic of the concept of democracy is the premise that the more directly people are able to participate in political decision-making about things that affect their lives, the more those decisions will be acceptable to their needs, values, cultures and environmental situation. Thus, implementation of such decisions (having a broadly-based support in both majority and minority needs, culture and social values) receive maximum popular support.<sup>52</sup> The notion of democracy in Mauritius seems to be considered as nonexistent. Those interviewed referred to the lack of political representation in National Government as a contributing factor to Creole marginalization; Creoles do not have a political voice. The political system is said to favour Indo- Mauritians who are in the majority. They talked at length about privileges afforded to Indo- Mauritians. These advantages ranged from greater to easier access to positions of social influence and political power, to the presumption that Indians when, seeking employment and in other social situations will always get their needs met.

Job opportunities in public service were mentioned as one area which should represent the multiethnic nature of Mauritian Society. However, participants indicated that Creoles are not represented in civic positions and education is not the only issue for their unemployment, it is the skin colour and names.

In informal conversations, the Clinical Psychologist collected the following sentiments:

"...in public sector, you have only Indian employees. In the town it's difficult for Creoles to acquire a job, I don't why? But it's like this and it's been a long time"

"Whether you have an overseas qualification that is not important, you need to know someone or be a friend of some, you need to have the right name...." (Referring to Hindu Surname).

"At work place- Doctors in civil society are mostly Indian, in Hospital Pharmacy mostly Muslim-when someone has power, he wants to keep his own ethnicity, in the Hotel mostly are Creole-Education at University- less Creole, Indians are generally in large numbers"

"In Government especially, people are employed mostly because they know someone who knows someone or they are a cousin of ...however people seem to be afraid to talk about these things"

"It is easy to see that government is not an equal opportunity system. Creoles do not get same job opportunities or a corresponding pay despite education, walk in Government facility- see how many Creoles you would see? It would be all Hindu's, Muslim maybe, rarely a Creole. In 1974, out of 90 there were about 15 Creoles in Police force, in other places of work such as construction industry-never see a Creole person, even to serve tea in Ministers office, will not find them...recruitment officers come from majority population and they are keeping the status quo. Law is not reflected in reality- equality- is not present, just walk to these places of work and see..."

She went on to say that:

Although participants mention that formal laws on equality do exist and are important in ensuring how Mauritian society should run, many feel that equality is a "word on paper not in reality". They state that the economic and social ills in Creole community still thrive as a result of marginalization. In an effort to explain consequences of marginalization a lot of professionals referred less developed areas such as Roche Bois, Triolet, "villages populated by fisherman" and Sites; that they are characterized by poor infrastructure/housing and living conditions. These areas are said to have high poverty levels, low levels of education and family problems are common (parents abusing substances, children ill disciplined, teenage pregnancy, school absenteeism etc)

Frequently, participants quoted language to further demonstrate how marginalized Creole culture is stating that Kreol is not used as a medium of instruction in public schools nor taught as a subject. They elaborated that Kreol, is not only a language for Creoles but it is spoken nationally yet it is not accorded same status like French and English.

"In schools, other languages from Indian and Chinese Communities are taught as subjects...Look who the Head of Government is; everything of that culture is okay. That is why there is a problem; Creoles do not have enough representation, their language is not in school..."

In addition, those interviewed who consider themselves Franco-Mauritians commented on political marginalization of Franco-Mauritians too; however they consider Creole's social, economic and political marginalization as the worse in the sense that it continuous from slavery period to contemporary times.

When asked what their identity is, most professionals would answer that they are firstly Mauritian, and then perhaps include religion and later or rarely say their ethnicity/community. They acknowledged that Mauritian society is divided along communal lines and class. For most of them, these divisions are maintained by the constitution and politicians. Seemingly, politicians' electoral campaigns turn to lean on ethnic solidarity.

Professionals interviewed (majority are females) especially those who over and above their formal work have volunteered their services in different areas (such as NGO promoting adult education or counselling), seem to have chosen their field lifestyle. They have immersed themselves in community work thus as this a sign of racial maturity and understanding of social injustice. In their accounts, they level criticism to dominant groups and their own racial groups. They believe in the equality of races, are committed and devoted to advancing good course and justice.

For example she quotes one informal interviewee who said:

"I have made a choice that any institution working to promote discrimination, I would not join, here I work as a consultant...and this particular work I do although offered in Catholic schools, in these schools there are many religions, and more than 50 % are not catholic. If it was meant only for Catholics I would not do it- for that matter I am not fully employed, I provide consultant services here because I still want to be independent from ideologies."

As it has been highlighted earlier not all participants acknowledged with ease that ethnic discrimination or prejudices exist in Mauritian society. Those who easily agreed they generally voiced out that; it will take time for people to change their mind about others especially towards the general population thus referring to Creole community. Participants had knowledge and awareness of widely held stereotypes in Mauritian society. They explained these stereotypes from a historical perspective. When speaking of Creoles, participants typically saw the long lasting impact of slavery as an issue for this community. Popular stereotypes portray Creoles as lazy, drug addicts and lacking positional drive to succeed.

Professionals highlighted that when "you look at the history of slavery you understand impact of racism, you understand why they're that way, they got nothing to hang on to . . . The Hindus . . . could hold on to their tradition and their religion, that's why it's easier for them to go up the ladder, the cultural and social ladder and it's easy for them to have a culture of education that the Creole don't have. They don't have a base and you can't even blame them. That doesn't mean it's an excuse for what's not happening to them . . . But as a group, it's understandable that they're the ones who are poorer and ...it's been built-up from what had happened to the culture itself, their absence of culture"

The researcher interpreted this as follows. She argues that in a way, Creoles (that is slave descendants) had their identity stolen from them in the course of enslavement. It is her initial view that perhaps, as Creoles do not have 'culture', they are unable to have something of value upon which to build their identity and aspirations. One could interpret this data differently. It is possible to argue that because a fixed identity and known heritage are very important in Mauritian society and are considered significant in the kind of contribution that an ethnic group can make to the construction of the nation and, if Creoles are deemed not to have an identity, then they are generally perceived as unimportant and have nothing of value to offer in the making of the society in which they live. This can have devastating consequences for an individual or a group because what they do offer is not publicly valued and in general they are perceived as not 'useful' in the society. This disregard generates poor self-esteem and self-doubt. As the Clinical Psychologist notes in a conversation with an informal interviewee:

"There is a problem of perception among Creoles themselves, I know one woman, with whom we worked a lot together (now she is a social worker) and once looked after my children...I know her well, she would not want to talk in public forums- I remember her saying: "There are many important people here and I cannot say anything"... (We were in of our projects, where we were doing education). I asked her how can you say that?... see the internalized sense of unworthiness- does not have courage to say what she thinks, no self esteem in front of people she perceives as important".

It is important to note that almost all participants are in the social work and psychology related field, the nature of their work keeps them close to social problems. They indicated that marginalization of the Creole population has resulted in most of them being poorer and not being able to get out of the situation. They highlighted that there is a close link between poverty, lack of education, unemployment and substance abuse. Although they are not excusing individual responsibility that a person has in life towards their own development, their explanations indicate that environmental factors play an important role in maintaining the status quo of Creoles as group; over time their conditions are by-product of many factors.

The latter view is further developed in the following extracts<sup>53</sup> from formal interviews that the researcher conducted during the research process. In the following, the interviewee agrees that most of those coming for assistance are Creole but that they (the Creoles) are the source of their own problems. They ought to have been 'taught' from a young age to assume personal responsibility for their lives and to reject the impositions of the powerful:

M.T: OK, if you look at the profile of your clients, which communities do they come from?

N.T: uhh you have first Creole, uhh Muslim and Hindus

M.T: So the Creoles are in large numbers then followed by Muslims?

N.T: Yes and then Hindus.

M.T: And looking at the large numbers of Creole, why large numbers of Creole population? What are the contributing factors to that?

N.T: Uhh, the reason why they are the bigger part, I think that there is poverty issue; big poverty issues which make them go into drug dealing or drug use. Most of them have been drug dealing or have someone in their family or in their near environment with drug dealing and they go into drug use. And drug use makes them even poorer. Uhh as for the, even for the Muslim it's the same thing. It's not so much poverty for the Muslim, its more wanting to have more money.

M.T: When you say its poverty for the Creole, can you describe to me the poverty, the nature of poverty in that population.

NT: Uhh a lack of, it's not a lack; they have gone to school very little.

M.T: So no level of education.

N.T: No level of education. Sometimes it's a bit parents not taking care of the children, making that the children are on the street or have been nurtured by either foyer where they live or the neighbours or people who know them. Now being poor mean not having appropriate food to eat, not having either a house on their own or a house made of (...). Because I have been working with persons who needed housing, low-cost houses. And they prefer to stay where would not be a structure.

M.T: So there is also problem of that. And you look at this kind of problem that the community is facing, where do they actually come from these problems.

N.T: Am I wrong if I see their own making? Their personal responsibility. And then there is also before any school, it was a shared responsibility between the parents, the children and the teachers. But since it happens since some time where parents have to work for long hours, their children are penalized. They don't have their parents to look after them. They return to their home and there are no parents, they can do whatever they want. And I am talking about children who now are adults. Young adults but adults.

M.T: So you saying that the adults (...)

NT: Yea parents had to leave them on their own because they had to work. At that time they were working in textile industries. When you work in industries, it begins at six. Leaving your house at 05hr30 or 06hr00 and returning home at seven. And the parents leave everything on the back of the teacher. You know before, a teacher could scold a child or give him a slap something like this; and the parents would say maybe he has done something wrong that's why you got this from your teacher. But now it's not like this; if a child got bitten or scolded; you have the parent who will come at school and either give the worst thing to the teacher or it's a police affair. It becomes a big issue.

## **The Experience of Micro-aggressions**

In the courses of research done by this team, it was found that Creoles, who are currently defined as slave descendants, routinely experienced racist attacks. It is our view that the experience of these events is cumulative because very few of our interviewees expressed the view that they were seeking assistance or counseling for these incidents. The research on racist events (large-scale ones at least) suggest that victims tend to repress their emotional and other responses to such events. They also 'endure' day-to-day micro-aggressions - verbal insults, invalidations, stereotyping etc.

One could argue that this is because responding to racial discrimination involves the public assertion (and ‘owning’) of an identity (i.e. black identity) that is not positively valued. Any response could involve additional humiliation. Furthermore, and as the following discussion on the literature<sup>54</sup> regarding racist events shows, it may be very difficult for the public to empathise with the victims because the negative racial discourse about them and the political clout of the ‘racial’ majority encourage the favouring of perpetrators’ accounts.

The Clinical Psychologist was also particularly interested in how mental health institutions work in Mauritius and whether any counseling is offered to people who might come forward for reasons regarding racist experiences. In brief, she found that people did not come forward to discuss racial experiences *per se*, but often couched this experience in the ‘language’ or discourse of stress. The researcher felt that this was largely because it is difficult to raise the issue of race and racism in Mauritius without being stereotyped or marginalized even in an institutional setting (see the above denial of the existence of racial discrimination by the therapists) and that it is also difficult for individuals to fully acknowledge that they have been racially victimized and that they continue to be victimized.

In our research, we investigated what our interviewees termed as racist events. Vera, Hernan and Feagin (In Blumer & Solomos 2004:66-77) conceptualise a racist event as ‘... a distinguishable happening, one with some pattern or theme that sets it off from others, and one that involves changes taking place within a delimited amount of time.’<sup>55</sup> For them, the key dimensions of racist events, as involving white perpetrators, with the victims or targets being ‘people of colour’. An analysis of racist events includes an examination of:

- “The immediate context, particularly the social structure, spatial setting, and temporal frame
- The panoply of instruments used in the ritualised practices.
- The playing out of actions in a ritualised and iterative sequence.
- The psychological and motivational impulses, including the socially sanctioned and personal ideologies
- The longer-term aftermath and societal consequences.”<sup>56</sup>

These key dimensions all have nuances within them, which the authors expand upon in the chapter. Particularly relevant is the following: On the grand scale, racist events involve the use of guns and burning crosses, whilst instruments of non-violent events can include “biased bureaucratic reports, hidden inquests, empty review procedures, the touting of equality policies never enforced, denial of earned recognition, exclusionary socialising, and covert maintenance of housing segregation.”<sup>57</sup>

In the final recommendations in Section 5 of this report, we shall return to the latter form of non-violent racist events as addressing these. The recommendations are crucial to the achievement of a more equal and just society in Mauritius.

Regarding the importance of emotion in racist events, Vera, Hernan and Feagin (2004:66-77), argue against what they typify as a “social science approach that sees emotions as blinders to our ‘rational thinking’”. Whilst the reaction of shock and outrage are the norm in researchers when learning about racist events, the social science approach usually lauds objective enquiry as the way towards an understanding of social phenomena such as this. Moreover, in terms of the victims’ experience of racist events, living in a modernised society such as Mauritius, where a powerful national discourse is that Mauritius is a society where there are ‘no problems’, compels victims to repress emotional reactions to many racist events. To be ‘emotional’ in a democratic, modern State might imply the irrationality and social immaturity of the person expressing their outrage and hurt.

The authors, instead, suggest an approach that does not result in the ‘suppression of full human reactions’: they advocate a “holistic and sociological approach requir[ing] that all human faculties be used for researching and understanding.”<sup>58</sup> Thus, reflexive Sociology was part of the methodological approach, where the authors’ “research practice is subjected to the same critical gaze as the social phenomena we study.”<sup>59</sup>

With regard to pathology and 'normalcy' in racist events, the authors maintain that much of the conventional thinking around racist events pathologises the perpetrators - thus situating their actions within the wider, and "hard-to-understand 'structures of evil'".<sup>60</sup> The authors refer to an American case, that of the "Betty Osborne rape-and-murder case to show how the perpetrators were upstanding citizens in many ways - i.e. they fitted in as normal, not as predisposed to acts of 'lunacy'." By placing the acts of racists in a wider and 'difficult to understand context', the underlying rationale for perpetrating racist acts is not interrogated. Thus, the perpetrators are simply constructed as 'evil' and worthy of either pity or contempt.

As the authors say: "Crucially our methodological approach leads us to the view that, the events we observed are - in their communities and at their many recurring points in societal times, and for their actors and observers - unequivocally normal and taken for granted".<sup>61</sup> For these reasons, the authors maintain that the explanatory method of 'pathological' mental structures is ineffective as a means to understanding racist events - it leads you down what the authors' term 'a blind alley'.<sup>62</sup>

If we understand this correctly, it suggests (for the purposes of this project) that we need to investigate critically racist events. We need to ask questions about what we may generally perceive as normal and accepted behaviour in a democratic society. Why is, it for example, as noted in the countless interviews conducted amongst rural Indian descendant inhabitants via the *Aapravasi Ghat* Trust Fund Project, were cane workers so poorly treated and routinely racially discriminated against? What really happened in Goodlands in the period following the death of Kaya? Why are some Creoles there still so traumatised by the destruction of their property? With regard to the Goodlands events, we found it very difficult to unearth the full story. The rumour is that an allegedly extreme political group, known locally as Voice of Hindu (VOH), had a role to play in the racist violence which took place there. However, without firm evidence, we are unable to say exactly what happened. However, it is clear to us that the people who were on the receiving end of the violence are still traumatised by it, some ten years later.

But it is not only the exceptional racist events that we should pay attention to. We ought to also interrogate the daily experiences of racism, micro-racial events which in the long run accumulate and dramatically affect the psychological state of the individual. In the period of slavery in the US, there must have been a number of people who felt that the subjugation of black Africans and their torture on a regular basis was perfectly normal and acceptable. Similarly, as we noted in the overview of daily experiences of racism among slave descendants in Mauritius (see for example the above noted case [Section 4] of the black professional who was barred from entering company property because he is black), there are some people who feel that what some Creoles are experiencing is to be expected and perfectly normal. In the following extract from a report of the Clinical Psychologist on the team, the following was documented in respect of the experiences of domestic workers:

For those who spoke of domestic work, they indicated that in the early 1970s, domestic work was not regulated. White people as employers of domestic workers were not in favour of changes regarding remuneration and off days, for example no work on Sunday. Slowly the conditions of domestic workers changed. However, it appears that the attitudes of employers took time to change.

"When I come back to Mauritius after 20 years ....I used be mortified when... Whites talk disrespectfully about helpers as though they were objects... things which will be humiliating about poverty such as not being responsible, their way of life and the helpers would seem disengaged...."

It is not only in the domestic sphere that one finds the daily infliction of racism:

In the realms of the church, the older generation indicated that in the Catholic Church, Priests and Nuns were all White people. The church is said to have had discrimination, maybe less now.

"At the beginning when I joined the convent... back then, I heard that you [i.e. as a Creole nun] must give a 'dowry' you will have better treatment, if you do not, you will be forever in the kitchen. I have seen other Nuns being frustrated by this situation"

The Clinical Psychologist also added the following from her informal interviews:

"There are Colour issues in the society: when I was growing up, we were marginalized, not treated the same, and were too white for Creoles, for the Chinese were too black they did not like to mix with us. At School, as I was lighter, I got better treatment; more preferred-.... I was uncomfortable with it. I learned to see through that also- lightness was seen as beautiful".

"...Maybe for our children, it is different- as they are going to mixed schools and interact with others, playing football. They have not known the compartmentalization. But one day they came home so irritated and angry that they were called "blanc...white rat"- they were furious. I sat down with them, we normally talk about these things, and explain that there is a history behind that...when I was young, white people could say anything; at least now the balance is coming up though I am not saying discrimination is just... is like Creoles can revenge by calling names."

It is generally difficult to estimate the prevalence of racist incidents over a lifetime because of personal and environmental factors. Since racism related life events may happen infrequently, they may be seen as not serious enough for many people to confront and may not even be recalled, unless asked about<sup>63</sup>. For example one lady who is in her thirties, interviewed on 10<sup>th</sup> August 2010, when asked to narrate a personal race based incident, she took longer to respond and requested to express herself in Kreol. Upon completing her story, parts of it off record, she disclosed that she was speaking of this incident for the first time. She had gone to a Government Department to apply for a VISA/passport because she had received an invitation from her brother in Canada. The Secretary serving said: "The person assisting was not there yet I could see the person...I went home and was sad... it's difficult for me to explain....talking about it now, I feel angry...we have democracy but still these things happen..." and later off record she reported feeling better after talking.

Some scholars argue that racism exerts its influence, not only through direct personal experience, but also vicariously through observation and report. Experiences of prejudice and discrimination that happen to members of one's family and close friends, as well as those involving strangers can be quite distressing. They can create anxiety, sadness, and anger among many emotional reactions. Paradoxically, they can also teach valuable lessons<sup>64</sup>.

There is no universal, so-called cut and dry response to psychological distress. Individual differences in personality, resilience, coping style, unique personal experiences, strength of ethnic self-determination, family closeness may buffer or mediate response to psychologically toxic events<sup>3</sup>. Each of the participants' response to the question, how they react emotionally to race-based incidents directed at them or those they know, gave various answers such as the following:

"I feel so infuriated, I feel so discouraged and start thinking for our kids and great grandchildren, what can we do about it...My feeling is that Creole population have been so ill treated and oppressed...I keep telling my children...If I had been a Creole girl living in Mauritius myself, I would so much hate white people"

"I was shocked when I hear about dowry in the church. However, at the time when I joint, the convent was more open"

"Accept it as a fact of life, ignore it or avoid it"

"I cry"

"I know before what to expect, it does affect me, its fatality, I take it in...When we meet as ex-police officers, we talk about how it was for us; we did not get things because we are Creoles...but we laugh now and say well, they can go ahead..."

"I feel sick when people make racial statements, I find I cannot just listen, I confront them- am notorious for that ...Racial events annoy me... and the generation before us, I can understand because I would say there were not open minded. I fear for younger people. I don't understand why would today people still have their children's birth day party at the Dodo Club, I don't go there, I don't put my feet there because I don't support or cushion discrimination...in actual fact I do not belong to any club. In that way discriminative attitudes are passed on from one generation to another, thus my fear. ..It's too little people who are moving and becoming open minded, would it be 10 generations down when these things stop, it's sad."

" I have told my children not to come home quickly from abroad- its unpatriotic but I do not care, if here somebody takes a position you deserve, it would be very hard and it would hurt but when it happens in France, you understand that you are a foreigner".

Episodes of ethnicity or race-based maltreatment can occur in a number of different venues, such as work, for example lack of promotion, refused access to service. They can be perceived experiences or happen in a real form as in harassment. The effectiveness of coping responses may vary depending on the context in which the maltreatment occurs. Mostly, people do not only need to manage racism, emotional consequences such as feelings of anger, nervousness, frustration and hopelessness. They need to manage their concerns about short-term and long-term effects on those members of their group, including their friends and family.

The researchers on this project also found that there are organisational decisions which may foster the development of racist events. We noted this example earlier in our discussion on gender and race (in Section 3 of this report) but it is worth re-analysing here. In one 'mostly women only' textile factory, the Manageress said that although she did not want to employ only members of a particular ethnic group (Hindu), she felt that this was the best policy because it promoted '*plus de cohérence*' (more integration). If she did not, there would be more infighting. She also said that she noted that when it came to the 'protection' and advancement of one's own group, some of the women were willing to tell 'little lies' to protect members of their ethnic group from sanction by the boss. The same women would not do this for members of other ethnic groups or people whom they perceived to be racially different from them.

The same Manageress also relayed a story regarding reverse racism which she witnessed at Belle-Mare beach on the East coast of the Island. She suggested that even victims are capable of initiating racist events. She explained that she was taking a group of colleagues and visitors to the beach and she came upon a group of young Creole men offloading beer crates from a truck. Amongst them was a Franco-Mauritian youth also assisting with the offloading of the crates. It appeared to the Manageress that the sight of white man doing hard labour was so unusual that one of the Creole men said: "Hey, we have just commemorated the 1<sup>st</sup> February (abolition of slavery), now we have a white guy working for us, lifting things. Hey, are you gonna flog us?" The haranguing of the Franco-Mauritian and reminiscence of the role of 'his ancestors' as slave owners, carried on for a quite a while and the Manageress was astonished at the intensity of the abuse. However, as she was with tourists and people who did not understand *Kreol* however, she did not feel that it was her place to intervene and left the young men to their own devices. It is our view, however, that even if the Manageress had been on her own, it would have been near impossible (and unadvisable) for her to intervene, as she is of a different ethnic and racial group to the men and she is a woman. As we discuss further on, race and gender converge to produce a particularly volatile mix in Mauritius where women of colour (in particular) experience higher levels of discrimination.

Vera, Hernan and Feagin (2004) argue that the routine suppression of emotions and empathy is essential to carrying out the operations of racism (both in the violent, and non-violent form). In Mauritius (and through the various examples cited in this report) we found that the suppression of emotion was an important way to avoid potentially volatile situations. The following extract offers an example:

**BLC:** You know sometimes, you can have a - let's say when you are driving or something like that, you can have a cross with whatever who else. It can be another community an Indian or a Muslim. It depends how you react also.

**Researcher:** Yes.

**BLC:** If I will treat him as a Creole or an Indian or a superlative, yes, he can tell me "yes, you fucking whitey" or something like that, you know, but if you talk well, no problem. Tell him: "hey listen, what are you doing?"

**Researcher:** Yes.

**BLC:** Not if you start swearing it's normal and between them it will be the same thing, you know. If tomorrow I have something with you on the road, you are driving. You mismanaged or

whatsoever, I'll tell: 'hey what happen?' But if you swear at you, you will swear at me. So, it is the same reaction.

**Researcher:** The drivers here are terrible.

**BLC:** Yes, sure they are terrible

**BLC:** Like last time, I was going a motorcycle in front of me just turned on the left without signal, nothing. He just turned. I braked behind him, he stopped and do like that with me.

I said: 'Hey, listen what's happening?' 'You don't take your flasher out nothing and, at the last minute, you take your flasher and you just cut in front of me, what you want me to do?' So it goes like that and then I said: 'Listen, close your mouth man, I am going'. He said: 'Ya, you are swearing at me'. I said: 'No, I am not swearing at you. I tell you close your mouth. It is not a swear.' It just finished like that you know, but if you start swearing yes, he will start to tell you bloody white or something like that. It can happen. As I've told you it depends on your reaction compared to them. If you start treating him as a coolie or a black, he will do the same thing. It depends how you react.

However, for those designated as socially inferior in the society, it may be more difficult to avoid the trauma that comes with routinely experienced racism:

The woman psychologist I spoke to told me of her experience in the workplace where a Creole woman relayed her trauma to her openly, saying,

"You will understand, because you are white and my mother worked for the white sugar barons...you can know my suffering" (ID, Grand Baie, 26 August 2010)

## The Impact of Racist Events

In our research, it has been difficult to separate racist events from political events or to ascertain the degree to which racist events are highly politicised. In the following extracts, we document experiences of key 'racist' events in Mauritius and how people felt about these experiences:

The period of independence was marked by the 1968 racial riots and the aftermath of this racial unrest, according to Georges, left a feeling of distrust, instability and fear among the minorities living not only in the region of Plaine Verte and Port Louis, but also in the surrounding areas that led to mass delocalisation from Plaine Verte to neighbouring towns such as Beau Bassin and Rose Hill.

'...konsekans kouma dir ki sa finn ena pou le pey, mefians ki ti ena a enn moman done dan le pey, linstabilite osi koumadir ki ti ena dan le pey, la per osi de fami, kouma dir ki ti enn minoritye dan enn lendrwa, la per koumadir ki zot ti ena pou res dan sa lendrwa la. Kouma zot ti pe bizin demenaze a enn moman done...kot zot kapav koumadir en sekiryte ek kouma dir proteze...'<sup>65</sup>

(Eng. Trans.:...how to say that the consequences on the country, the suspicion there was in the country at a point in time, how to say that the instability there was in the country as well, the fear also of families, how that say that it was a minority in a region, how to say that the fear of living in this region. They had to move at a point in time...where they are how to say that in security and how to say that protected...)

The social unrest of 1999 following the death of the local singer Kaya at the hands of the police was also perceived and described as racial disturbance that were exacerbated by latent feelings and experiences among the Creole minority of perceived racial discrimination and practices commonly referred to as *malaise Creole* (Eng. Trans. Creole unrest)

In the following extract we note the interpretation of a seemingly random event which, when it happened, shocked a number of Mauritians regardless of their ethnicity:

JCH: ...we had two or one severe incident-. When was that? It was, (ouf!) (?) 19-, 92, -3, -4, -5 I don't remember when we had the Zaic, an Egyptian team who played in Belle-Vue Stadium, it was an Egyptian team against the Mauritius-, Mauritian team and a section of the population went in and were shouting for Egypt. After that, Egypt lost and eventually, they burnt the sugarcanes that were surrounding the sugar fields. They came in Port-Louis and started rioting in Port-Louis. So this was really tensed, police came in and was-, it wasn't more than that, but this brought a sense of insecurity in the people, said: "Well why they keep on acting like that?" And this was an issue, and I don't know if it was the same day, there was also a big, another incident, severe incident where the Muslims (27:13 - 27:18), they burned down the casino, more or less call it casino, gaming house let's say, Ok, and they just-, it was really well planned because they just blocked the entrance and set fire to the building, it was (?) (?), it was a French former military man who was a tourist passing by and he said this attack was like a commando attack. It was planned, it wasn't spontaneous, it was something planned, nine people were killed in this, they got the people and they were sentenced to forty-five years in prison, but nine people were killed, among those was a pregnant woman, nine months old-, with a child almost-, to be born in the coming weeks, she was killed in this incident, 'C'est L'Amicale de Port-Louis' which was burnt, it must be, (ouf!) when was that? 97 I would say something like that and it was really bad and (... ...), I would say there was a hundred thousand people at this funeral, because people were very very shocked that this incident—

Researcher What do you think sparked the riot, that they--?

JCH It wasn't a riot, it wasn't spontaneous, what sparked the riot is the same thing that sparked a riot in 1999, two reasons: there were a feeling-, let down, and there was a feeling-, they weren't getting their fair share of-, the 'gateau national', the national riches, they were left out, really left out and that's-, I think it reverse around this, some reasons for 1999. With the actual President being the Prime Minister at that time, he-, he was very distrustful of Muslims, he threw the (?)out, that was a good thing, all the (29:36 - 29:39) here in Mauritius, and taken out by police out of Mauritius, that's one-, because there was some-, actually what the (?) wanted to do, they wanted to invest in mosque and (?) and stuffs like that without going through the government and the guy didn't tolerate that and threw these people out and also, same time he didn't recruit Muslims in the government, that was (?), people thought-, this is why now you will see-, so they had to survive these people, either they turn to drugs or they are-, how you call this? Hawkers. This is why there's so many hawkers who are Muslims because (?) or self-employed, they set up small businesses which are now grown businesses and-, and this is why you see so many Muslims who are self-employed in Mauritius, even if it's a very small part of the population, they are self-employed because they couldn't rely on the government, they couldn't get access necessarily to the public-, to the private sector, and it's very rare that you would see people, particularly those who couldn't afford to go abroad to study, getting good jobs so they had to manage to get something to survive, Ok.

Researcher: And (31:09 - 31:12), in government, is there still that kind of (??)?

JCH: What?

Researcher: (?), discrepancy?

JCH: Oh yes definitely, the Hindus get best of-, always in the Government and they say-, and you see that the Muslims and the Creoles don't-, well it's simple because, an argument of the people is that 35% of the people is general population: Whites and Creoles. And well, when you see the public sector this doesn't reflect the same proportion, in police, in general public sector it's not the same proportion and this-, you feel this.

JCH: It's the same here, it used to be worse than that, when I was, I was talking about twenty years ago it was even worse than that. Even at school it was (?) we were even able to play together, but there was at school-, I was really shocked at that time, you had basketball teams: White team, Chinese team, others. Same school but at twelve they would play on three different

grounds with very distinct groups of players-, which wasn't the case at my school, but it existed. Racism existed, now-, it's not as bad as it used to be.

Researcher: Can we talk about racism now? When you say it exists now, in what forms?

JCH: In what form? There's a feeling of racism, let's say in the public sector against Creoles, you feel that when they come at the social security, police services, whatever-, all the services, they don't-, they are treated badly. That's one. The Hindus would say: "We don't have access to public sector, the Whites keep the jobs." Sometime (?)—

Researcher: Private or public?

JCH: Sorry?

Researcher: Public sector?

JCH: Private sector.

Researcher: Private sector.

JCH: Private sector. Ok, so now with the politicians, what I feel there's a reverse racism, that is-, Ok, the big thing was democratisation of the economy. What they were trying to do is say Ok, it's not giving the opportunity to everyone to -, to open a successful business, they were just trying to curve down the White economy for sure, those who own this-, everything and-, and give the opportunities to their friends and that's what its (?), because it's not even open, it's very selective on a particular group or groups of people.

## The Continuing Economic Disparities

The problem of racism is that it did not end with the abolition of slavery, the abolition of the Colour Bar in 1928, the achievement of Independence from colonial rule or even the various amendments to the Mauritian Constitution. Our research team found that the economic legacies of slavery (economic inequality, lack of access to the means of production and ownership), continue today. In fact, the extracts noted below indicate a worsening of the situation, as Mauritius becomes a more economically liberal society in which maximum profits are to be made. It is our view that this rather uncontrolled accommodation of capitalism will have disastrous consequences for our country because we will not have dealt with the legacy of inequality in our society and will be compounding our problems by making the society more hierarchical in class and monetary terms. The Tourism Industry, our third pillar of the economy, has brought many benefits to Mauritius. However, we still feel that this sector needs careful monitoring by Government and Civil Society because it may replicate the same structures of inequality present in the era of colonisation:

In line with the testimonies, it seems that in Mauritius there is social cohesion but at surface-level only. At deeper-level Mauritius is an openly racist and bigoted country. For example, for Jacques and Raymond it is rare that Mauritians mix. Covert racism/communalism towards Mauritians can also be observed in the recruitment process at managerial levels in some private companies such as in one of the main hotel groups in Mauritius. The hotel Directors often recruit foreigners at middle- and higher-management levels, even though there are Mauritians that have all the capacities, qualifications and experiences requested for these jobs.

'...Aujourd'hui le gros problème que moi je vois, c'est qu'il y a trop d'expatriés qui travaillent dans les hôtels. Ce n'est pas l'expatrié qui est un problème. C'est de ne pas donner la chance aux Mauriciens ; c'est ça le problème. Et ça par contre je crois que le siège est bien conscient...Il y a des gens qui ont fait beaucoup d'années, qui aspirent à avoir ce poste de management-là et qui ne pourront jamais. Moi, ça m'est arrivé à moi d'ailleurs. C'est pourquoi c'est une raison pour laquelle j'ai changé d'orientation. J'ai fait 22 ans au front office comme on l'appelle, l'accueil, etc. et logiquement aujourd'hui j'aurais dû être comme on l'appelle un room division manager...J'aurais dû

être aujourd'hui room division depuis très longtemps mais je n'ai jamais eu l'occasion d'être parce qu'il y a toujours eu quelqu'un...il y a eu un Franco-Mauricien ; après le Franco-Mauricien, il y a eu l'étranger et ça va être l'étranger après...Je ne comprends. Je ne comprends pas pourquoi on ne donne pas sa chance au Mauricien...Mais je sais la carrière que j'ai faite. Je connais, je sais la connaissance que j'ai de ce domaine là et quand je vois les expatriés ou les autres personnes qui viennent et leurs prestations, je me dis je n'ai rien à envier à ces personnes là. J'ai pour autant sinon plus qu'eux en tant que bagage pour faire le travail...<sup>66</sup>

(Eng. Trans.:...Today the big problem that I observe, is that there are too many expatriates working in hotels. It is not the expatriates the problem. It is not giving their chance to Mauritians; it is the problem. And this I think the head office is conscious of that...there are people who have many years (of service) that aspire to have this management post and who will never get it. Me, it happened to me. It is one reason why I changed my path. I worked for 22 years at what we call the front office, the reception etc and logically today I should have been, as we call it, room division manager...I should have been at that point now since I have worked a good number of years at room division but I have never had the occasion to be as there has always been someone...there has been a Franco-Mauritian; after the Franco-Mauritian there has been the foreigner and it will be the foreigner after...but I know the career I had. I know the knowledge I have of this field and when I see the expatriates and other people who come and their performance, I tell myself I have nothing to envy to these people. I have the same if not more knowledge to do the work...)

This tendency to prefer qualified foreigners especially White people to qualified Mauritians can be considered as a legacy of colonialism whereby Whites and Europeans were seen as superior. This racist practice is seen as normal and is disguised under the justification of preserving cohesion amongst the staff, preserving the organisation's culture and ensuring the integration and adaptation to the organisation culture as mentioned by the President of the Mauritius Employment Federation (MEF).

Another reason put forward by organisations for favouring expatriates is the lack of qualified personnel. For example, Mr. Ramesh, Consultant in Human Resource Management of British American Investment justified the recruitment of expatriates at management level by the lack of qualified and experienced Mauritians, especially in Human Resource Management. Hence, that is why they recruited a South African woman (who cannot speak French nor Kreol) who is not familiar with the Mauritian historical, social, cultural and historical specificities as Human Resource Manager.

*'...je dirais que nous cherchons à avoir des affinités c'est n'ai pas forcément...quelqu'un d'une religion vers une autre religion blanche la religion blanche c'est peut être quelqu'un de religion afro-créole ou de religion africaine ou alors de l'origine indienne ou chinoise...il faut se comprendre pour arriver à lancer et aujourd'hui l'affinité ou les point communs on essaie d'avancer le plus vite possible...donc c'est important qu'on se comprenne...et pour se comprendre se n'est pas simplement si vous voulez tiens il a un très beau diplôme il a fait oxford et l'autre il a fait...oxford qui est d'origine chinoise disons et l'autre il a fait une petite école à la réunion qui est un blanc et...je prends le blanc parce que il est sympathique on va le faire dans un critère comme j'ai dit toute à l'heure affinité...je connais des compagnies où les musulmans prennent les musulmans les indiens prennent les indiens et les blancs prennent les blancs ça existe mais aujourd'hui je vous ai parlé de la chance que nous avons que l'éducation a prit de l'importance et deuxième chose qu'on a tendance de dire a ne pas dire ou a oublié c'est que beaucoup des entreprises sont gérés par la communauté européenne les blancs il y a une diversité importante de main d'œuvre de toute origine et de tous niveau social de plus en plus et tant mieux...'<sup>67</sup>*

(Eng. Trans.:...I would say that we want to have affinities it is necessarily...someone of one religion towards another white religion it is maybe someone of Afro-Creole religion or African religion or of Indian or Chinese relation...we need to understand each other to launch and today affinities or common points we try to move on as fast as possible...hence it is important that we understand each other...and to understand each other it is not simply if you want he has a nice diploma he did Oxford and the

other he did...oxford who is let say of Chinese origin and the other he went to a modest school in Reunion who is white and...we take the white because he is nice he will do that based on criteria as I have said before affinity...I know companies in which Muslims take Muslims Indians take Indians and the whites take whites it exists but today I have told you about the chance that we have that education has become important and second thing that we tend to say not to say or to forget is that many of these enterprises are managed by the European community the whites there is a significant diversity of manoeuvres of all origins and of all social levels more and more and that is good...)

Mr. Ramesh statement was supported by Mrs. Jackie Demetriou, Human Resource Manager of British American Investment who declared:

*...I believe that most companies in Mauritius will bring in expats if it is a lack of experience and skills in a particular area. And the policy is that he will bring (...) for a specific period of time. There is an expectation that those expats will develop the locals those particular skills. And they were in the contract (...) they will go back (...) it has to be extended for a certain period they will go back. And if there is transferred, the skill and the knowledge to the local people. Now you just mentioned that Mauritians, the fact that there have the qualification to do the job. A qualification doesn't mean that a person can do the job; it's the start. Qualification need to have the knowledge...<sup>68</sup>*

According to her, local companies seek foreign expertise to develop local skills, and expatriates work under contract for a limited period of time. But, reality is different as, in fact, cases of unfair discrimination against Mauritians such as forced dismissal have been reported. For example, some companies were blamed for using unethical and dubious means to force Mauritians who have a long career to resign, and expatriates were recruited to hold their post. Also, promotions were denied to Mauritians and instead newly-recruited foreigners were promoted.

During his interview, Mr. Francois De Grivel, former President of the Mauritius Employment Federation, mentioned that there are cases of discrimination that have been reported to the MEF but none were experiences of discrimination based on skin colour, in other words, cases of racial discrimination, for it is apparently normal that employers recruit amongst their immediate network, in their community which as stressed by the latter and other Business Managers, is not considered as communalism. But which is in fact racism.

For them, during recruitment exercises and especially at management levels, qualifications and competence are not the sole selection criteria, inter-personal affinities such as friendship or shared socio-cultural values, are also taken into consideration to ensure synergism, good entente and performance management. However, Mr. De Grivel highlighted that good governance implies competence diversification at management levels that lead to progress and expansion.

It was also found by one of our researchers (Sophie Le Chartier) that the pretext of the 'comfort zone' was useful in promoting communalism and, ultimately, racism. Thus, employers argued that in aiming to achieve 'comfort', they were not in fact infringing the rights safeguarded by the Mauritian Constitution; they were instead seeking to achieve cohesion and integration in their businesses:

For example, James, a Sino-Mauritian business owner, testified that in recruitment practice, the principle of comfort zone is also applicable. It is not communalism to recruit a co-religionist as it is normal to want to work within, and *preserve*, ones *comfort zone*.

For him, communalism is when someone privileges his/her ethnicity whatever the person's competence and qualifications and discards a person because of his/her ethnic affiliations.

For instance, communalism is when a Sino-Mauritian employs a fellow Sino-Mauritian who is under-qualified and discards a qualified Creole only because he is Creole.

But if both are qualified and the Sino-Mauritian is recruited, it is not racism nor communalism, but the maintenance of comfort zone to ensure personnel efficiency and productivity.

*'...Si j'ai quelqu'un un chinois qui est tout aussi qualifié et prenez que ce soit un indien ou un créole qui est tout aussi qualifié...Je vais choisir le chinois...Vous allez finalement choisir le chinois? Ah ben sans aucune hésitation...Je l'embauche sans aucune hésitation pour la bonne et simple raison parcequ'on partage des affinités communes...il est communaliste parceque il ne tient pas en ligne de compte ce qui est mérite, ce qui est compétence, alors lui c'est un communal mais toutes choses étant égales s'il choisit quelqu'un de sa communauté toute chose étant égale, je me pose la question s'il est communaliste?... c'est-à-dire que on est communal quand on fait du favoritisme quelque soit les raisons derrière, c'est-à-dire du favoritisme par rapport à quelqu'un d'autre de sa communauté quelque soit sa compétence, quelque soit son efficacité, quelque soit ses qualités...'<sup>69</sup>*

(Eng. Trans.: ... If I have a Chinese who is qualified and take an Indian or a Creole who is as qualified...I will choose a Chinese ... you will finally choose a Chinese? Yes without hesitation...without any hesitation I employ him for the simple reason that we share common affinities...he is communal because he does not take into consideration merit, competence, hence he is communal but if everything is equal if he choose someone of his community if everything is equal. I ask myself if he is communal?...that is we are communal when we practice favouritism whatever the reasons behind, that is favouritism in relation to someone of his community whatever is competence, whatever his efficiency, whatever his qualifications...)

Although they assert that respecting one's comfort zone does not mean that they are racist and is rather a form of fair discrimination, it is obvious that the concept of a so-called comfort zone is in fact a disguised form of racism in that it is a disguised means of justifying racism and is a breach of the laws of Human Rights.

Indeed, in line with Mrs. Jackie testimony, it seems that fair discrimination is common practice in recruitment exercises and is not seen as a breach of the Labour Act, but rather as a loophole in the Law that allows employers to discriminate fairly against people.

*...What is fair discrimination, you can only fairly discriminate (...) of a position...So yes we do discriminate, I went for an interview in an hospital and I decided I want to become a doctor and I don't have the qualification, so I will be fairly discriminated against because I don't have the minimum qualification to do that job. Unfair discrimination basically if you are discriminating against the person because of their gender, because of their race, because of their ethnicity, because of their sexual preference. That is unfair discrimination. Let me give you another example of fair discrimination, if you are running a Chinese restaurant and you want to maintain the ethnicity of the Chinese restaurant, so you want to have Chinese waiters because it adds to the ambiance and attracts the customers. That is fair discrimination because you want to maintain ethnicity...'<sup>70</sup>*

For James and Andy, it is normal that people mix with those who are similar and hence with people they feel comfortable with and at ease with because they share similar characteristics. Their statement implies that it is normal for people to stay within their community and to have limited interactions with others with whom they do not share common characteristics, as they are different.

Moreover, still in line with their testimony, the question of comfort zone dictates people's attitudes, behaviour and interactions such as in recruitment and spouse choice. Thus, even if they assert that Sino-Mauritians are not racists, we can query to what extent the Sino-Mauritian community is opened to others?

Another reason put forward by James and Andy to justify that respecting one's comfort zone is not racism is based on their conceptualisation of racism. For them, racism is when someone or a race feels superior or inferior to another person or race.

*...C'est de se sentir supérieur dans une race, quand quelqu'un est raciste forcément il ou elle croit que sa race à laquelle il ou elle appartient forcément elle est supérieur aux autres races, c'est la définition du racisme...soit quand je dis supérieur moi ce que je voudrais ajouter pas nécessairement supérieur, ça pourrais être*

*supérieur inférieurement...A ce moment le concept de supériorité devient un concept de on se sent inférieur...<sup>71</sup>*

(Eng. Trans.:...it is feeling that his race is superior, when someone is racist he or she thinks his or her race is superior to others, it is the definition of racism...but when we say superior I would like to add not necessarily superior, it could be superior inferiorly...then the concept of superiority becomes a concept we feel inferior...)

According to the Andy, Mauritians are not racists because they do not carry this superiority/inferiority complex. Furthermore, in Mauritius we do not talk in terms of races but in terms of communities, and a community is determined by culture and cultural practices and religion: '*...zot in diviz li par, kuma mo pu dir sa, par relizion...*'<sup>72</sup> (Eng. Trans.:...they divided it, how would I say that, by religion...).

It can be said that the weight ascribed to the comfort zone during social encounters results from the absence of cultural blending in Mauritius, since the religious and ethnic barriers are rigid and unmoveable and hence, people tend to stay within their cultural group.

Cultural differences are still deeply present and maintained, with the other being perceived as an 'alien'. The fact that the principle of comfort zone is sanctioned and has been normalised leads us to question whether people want to break down racial/communal barriers or if, in fact, they prefer to maintain and perpetuate these barriers that give them a feeling of security and membership to a group.

Although the Creoles mentioned that the Indo-Mauritians and Whites are racist, whereas the Creoles are not racist but rather open to the other communities: '*...kreol pa racis li...*'<sup>73</sup> (English Translation:...Creole (are) not racist...), fieldwork revealed that racist attitudes, practices and prejudices cross ethnic groups and social classes, in that the Creoles like the other informants hold communal/racist languages and discourses, when talking of others and racist/communal attitudes towards others.

For example, for Hansley, the Whites and Indo-Mauritians are racist because they do not like Creoles but the latter are not racist. He feels that he is racially victimised and discriminated against because he is Black and of slave descent.

## CONCLUSION TO SECTION 4

The burdens of racism are many. In this report, we have noted a few of the more significant burdens which Mauritians of all skin colours continue to experience today. The impact of the emotional and psychological burden of racism cannot, in our view, be underestimated. For many people of slave descent and also those of indentured descent, racists impose a continuous feeling of inadequacy, inferiority and marginality on the least favoured in our society. Slave descendants and the least favoured among the indentured descendants need to continually respond to this victimisation in an attempt to salvage their dignity. The victimisation happens despite the guarantee of basic human rights to dignity and equality in the Mauritian Constitution. In our next section, we argue that the Mauritius Government, together with Civil Society and international institutions interested in supporting our country to achieve true democracy, need to address, not only issues of structural, but also social inequality in Mauritius.

## PART FIVE

# CONCLUSIONS AND RECOMMENDATIONS

It is difficult to offer a definitive conclusion to a report as important as this one. It is also a challenge to suggest recommendations which speak to our research findings and, at the same time, take into account the multiple realities of Mauritians. However, as stated at the start of this report, this is not an academic exercise. We have a duty to present to the Government of Mauritius practical and feasible recommendations which it can use in its efforts to achieve social and economic justice in our country. However, this work demands critical and scholarly reflection. In our work, we have found that those victimized by racial discrimination in Mauritius use a range of strategies of means to resist and subvert stereotyping. In brief, they use what James Scott (1990) calls 'hidden resistance' to subvert and oppose the impositions of the powerful. In our accounts, we have not highlighted these methods of resistance, mainly because it is thoroughly documented elsewhere (C.f. Boswell 2006 and Vaughan 2005). In music, dance, poetry, oratory, story-telling, acts of defiance and personal success, slave descendants in Mauritius, as well as the most impoverished and marginalised of the Indian Indentured labourers, continue to fight oppression and racial invectives (Reddy 2001).

In the discussion on Truth Commissions, it is noted that these can become another space of resistance. In brief, the space and time offered by an entity like the TJC can offer those racially discriminated against, the space to publicly express their rejection of racism and inequality. Critics of the South African TRC (see Bundy 2000, Maylam 2005) may argue that such entities do not really offer a politically neutral space for these personal and vivid expressions of suffering, nor do they completely extirpate the regime of violence which led to the creation of the commission.

In conducting our research in the homes and communities of Mauritians, we in a sense, took the TJC to the streets, removing it from the 'spectacle' of the TJC hearing room and allowing individuals to speak about their trauma in spaces that they feel at ease in. What we found has not been entirely captured here. The testimonies of individuals in camera were emotionally moving, and said far more than we could ever capture with words.

We also feel, as Priscilla Hayner (2001) argues in her discussions on Truth Commissions, that it is very difficult to achieve reconciliation and to obtain the whole truth in a Truth Commission. However, we hope that in presenting the information in this report, we have revealed a great deal more than what was either previously known, or more importantly, what was PUBLICLY ACKNOWLEDGED about race and racism in Mauritius.

The following points identify our recommendations to the Government. We offer a multi-pronged approach in the hope that the issues of continuing poverty, poor self-esteem and marginalisation in our society will be taken seriously. We look forward as researchers, Mauritian citizens and people of the global South, to a workable set of solutions to the problems and difficulties experienced by those interviewed for this project. We would like the Government to pay special attention to the infringement of Constitutional Rights in Mauritius and to take the necessary actions to prevent infringements of the said rights.

We recommend:

1. That financial reparation is sought by the Government from the historical slave trading nations (Netherland, England, France) for the rehabilitation and reconstruction of communities and settlements where slave descendents are in the majority.
2. That financial reparation is provided to individual families of Creole and African descent. We feel that this should take the form of investments in important shares and resources, so that this community and its descendents are better able to create a more stable social and economic existence going into the future. While we recognise that Indian indentured labour

descendants have been severely affected by the experience of indenture, this experience appears not to have been as extensive as that which has been suffered by the African descendant people in Mauritius. Furthermore, our cases conclusively show that African descendants are experiencing the worst circumstances in contemporary Mauritius, suggesting that the system of slavery has been most pernicious and its legacy more enduring.

3. That a system and policy of affirmative action be implemented in Mauritius to address the social and economic imbalances created and fostered under slavery, indenture and colonialism. This system and policy of affirmative action must take into account that slave descendants in particular have been discriminated against in employment, access to land and a range of resources (including for example, bank loans). In the first instance, women of slave and indentured descent should benefit from this system of affirmative action. While it is acknowledged that it is presently difficult to define who is a slave/indentured labour descendant, policy-makers (and Government) should ensure that positive discrimination occurs. This might also require a moratorium on the employment of White and Males for a specified period of years.
4. There should be a thorough revision and amendment of employment policy in Mauritius. Employers contravening Constitutional Rights (i.e. right to employment?) should be fined or prosecuted. In our research, we came across several companies refusing to employ slave descendants or members of lower castes in positions of authority on the basis that these individuals would compromise the 'comfort' presently enjoyed by employees. The use of the word 'comfort' masks efforts to maintain a racially exclusive workplace. It also bars access to those individuals who would make our society more democratic and racially inclusive.
5. The membership policy (written or verbal) of social clubs should be scrutinised for any infringement of Constitutional Rights. At present, the rules of these clubs vary and discriminate on the basis of race and class. Because our society is cut across by race and class (i.e. non-Whites are also the poorer members of our society), these clubs actively exclude such members. We also found instances where 'Blacks' with the 'right' class credentials were excluded on the basis of race. Social clubs infringing the Constitutional Rights of Mauritians should be penalised.
6. The funding of culturally-based social organisations should be abolished. While we recognise and uphold the ideal of unity in diversity, it is felt that the funding of these socio-cultural organisations fosters social division as no equality of funding allocations can be achieved. Moreover, some socio-cultural organisations are funded, whereas others are not. Beyond this, some socio-cultural organisations use their connection with Government in order to launch their own political careers.
7. There should be a thorough and critical survey of resources allocated for Education per region. At present, the areas mostly inhabited by slave descendants and members of the lower caste are receiving less investment. This is apparent in the South of the island. Government must create incentives for better qualified teachers to enrol at the schools in the South so that a better level of education can be obtained. A system of teacher re-deployment may be created to partly achieve this goal, as might an additional stipend for teachers in these areas.
8. A thorough interrogation of Education in less well-resourced areas is also required. Parents in these regions and communities must be supported in their efforts to educate their children. Where necessary, child support grants must be instituted so as offer stipends for educational purposes.
9. A thorough revision of minimum and maximum work hours must also be implemented, so as to curtail exploitative work conditions, especially for those who are poor in our society. Government should perhaps revise its minimum wage policy so as to ensure that Mauritians are not being exploited.

10. The system of private lessons offered by registered teachers must be thoroughly scrutinised, if not abolished/made illegal. This is because we have found that teachers are not giving their best in their classes, reserving the crucial information needed by scholars for the time of private lessons. Poorer members our community, also the lower-caste members of indentured descent, as well as slave descendants, are not able to pay for these additional classes. This produces poorer examination results among this cohort. Ultimately, the system of private lessons also infringes on the scholars' Constitutional Rights to education and, ultimately, their right to play as children in our society.
11. Discrimination at any level in our society must be made illegal. This includes any real or perceived discrimination in treatment at hospitals (crucial, especially at general hospitals), Government offices, education facilities, workplace interviews, shops, marketplace or places of worship etc; in other words, anywhere in our public sphere. Discrimination prevents access to the wide range of resources presently available in our society. Those perceiving/experiencing discrimination must have access, not only to the Ombudsman, but also a secondary reporting officer in their own communities.
12. Provision should also be made to outlaw 'hate speech' in our country. No one should have the right to publicly offend others by using racial epithets.
13. The exact process of reporting and recording of these offences needs to be communicated to, and confirmed by, an established anti-racism/anti-discrimination unit (ADU). We recommend three levels of reporting (local community representative, ADU, then Ombudsman). The exact operational characteristics of this unit can be thought through by a selected group of stakeholders.
14. Institutions must desist from promoting the celebration of difference in our society, especially that which confirms fundamental or primordial difference between Mauritians. To this end (while recognising diversity), it needs to pay careful attention to primordial discourse. Any reference to the fundamental qualities of indentured descendants versus slave descendants VS. Colonial descendants should be avoided. Such primordial 'talk' emphasises racial distinctions and promotes discrimination. Members of our political leadership must set the example by not using 'hate speech' involving racial epithets and/or discussions on the fundamental racial or ethnic qualities of our population. 'Hate speech' must become illegal.
15. Positive discussion on diversity as well as the commonalities that Mauritians share should be made available online, in the written and audio-visual media. While not wishing to curtail the freedom of the press, a critical and thorough assessment of the present media is necessary to ascertain which sources of media increase or promote discriminatory practices. Those promoting discriminatory practices and discourse must be heavily sanctioned, or at least challenged.
16. Positive discussion on the contribution of Creoles to the making of Mauritian society should be encouraged and supported, verbally and financially by Government via the proposed Anti-Discrimination Unit.
17. It will be the duty of the proposed Anti-Discrimination unit (ADU) to follow up on complaints from the public and from Government regarding such infringements. The ADU will also be responsible with maintaining a deeper respect for diversity as well as democracy.
18. It will be the task of the ADU to also scrutinise social and economic policies emerging from Government, advising the latter on sections or parts of policies which may in fact promote discriminatory practices. The ADU will be able to make recommendations to the Government regarding such policies and how to make these more socially inclusive.
19. The ADU will also work closely with social work organisations and entities, Corporate Social Responsibility programmes and units, teachers, recently-qualified Therapists, Counsellors, community representatives and other individuals working with the broader public, to inform and discuss matters relating to discrimination and marginalisation in our society. The

objective of this is to ensure that there is ongoing public dialogue on these matters and that people feel free to express their opinions and to talk about their experiences in our society.

20. Together with the relevant Ministries dealing with youth, gender issues and leisure (Tourism), the ADU will offer advice, implement workshops and discussion forums to effect dialogue on parenting, gender relations and equality, the image of Mauritius to the tourist world and issues of discrimination in the leisure space.

In conducting this research, we, the team members of this project, learned a great deal about Mauritian society. We also realise the responsibility that we have been given in being offered to do this work on behalf of the TJC and the Government of Mauritius. It is our hope that what we have written here will be sufficient to convince the decision-makers that this society needs to change for the better, that our work be taken seriously and that some of our recommendations will see the light of day. We firmly believe that Mauritians are deserving of a more equitable society, regardless of the colour of their skin. We also firmly believe that the youths of Mauritius deserve a better future, one in which they are not afraid to dream of a happier future or to pursue their aspirations. It is not acceptable in a democratic society that people should be afraid to pursue their dreams; that they should feel marginalised, disrespected, excluded and hopeless. It is also not acceptable that others should feel that they can disrespect, exclude or marginalise. We are hopeful, as a team of dedicated researchers, young people and citizens of Mauritius, that our dream of a truly democratic society will be realised in our lifetime.

## INTRODUCTION

This study aimed at understanding how the caste system had evolved in Mauritius since the indentured days and how far the situation today was a consequence of indenture.

Some fundamental questions were: How was the caste system lived and experienced by indentured s. What was the situation with descendants today? Is the caste system, as it is lived today in Mauritius, a consequence of indenture? Is there evidence that the colonial powers used the caste system as an instrument of social control? If so, what were the consequences? Is the Mauritian caste system discriminatory and, if so, who, among the indentured s and their descendants, suffer from it? What links can be established between the Mauritian caste system and the current identity and national construction processes?

Considering the omnipresent taboos linked with the Indian and Mauritian caste systems, and considering the complexity and specificity of the original Indian caste system, a study using a series of transversal themes, which were expected to reveal Mauritian caste realities, was attempted. These were marriage, commensality (sharing food and drink) and political and religious affiliations.

A definition of a 'Mauritian' organization of castes was attempted, as well as its relationship with other identity categories such as class, ethnic and religious affiliations. An analysis of distance and originality vis-à-vis the Indian system was undertaken as well as a diachronic dissociation i.e., caste system in India at the times of indenture, caste system during the sea voyage, caste system while settling in estate camps, and then in villages and, to a lesser extent, caste system today.

Our goal is here to evaluate the respective roles of the Indian system, of indenture and of Mauritian society in the lives of indentured individuals and in the lives of their descendants.

To our knowledge, no such study has been carried out in Mauritius. The research was almost entirely carried out through fieldwork, complemented by insights from the consultant anthropologist's prior work in India and Mauritius and the researchers' previous historical studies into, and knowledge of, Mauritian life. The first phase of the study consisted of approximately 100 interviews conducted from June to November 2010 in the South of the island in the villages of Union Vale, Trois Boutiques, L'Escalier, Plaine Magnien, Tyack/Britannia and Chemin Grenier; in the East in the villages of Laventure, Grande Retraite, Petite Retraite and Bois D'oiseau, and in Plaines Wilhems, in the region of Trianon. Most of the interviews were formal and recorded and lasted from 30 to 90 minutes. Written notes were taken for non-recorded informal interviews. These were conducted in the language used by informants, i.e., Bhojpuri or Creole, or a mixture of both. In the second phase of the project, a sample of 300 questionnaires were administered to the active population to gather their views on the subject. Relevant information from 400 interviews, gathered by the *Apravasi Ghat Trust Fund* in 2009, was also used.

It was clear that many Mauritians, even those of Indian descent, were unaware of the Indian caste system and of Indian realities. There is also a double-discourse in Mauritius concerning castes: there is both a temptation to officially deny the existence of castes in Mauritius, and also a criticism of the Mauritian caste system. It was therefore necessary to evaluate these realities before analyzing them.

Researchers faced major difficulties in studying a taboo subject.<sup>1</sup> First, because castes are politically incorrect in Mauritius, no informant stated being proud of the existence of the caste system in Mauritius, and very few spoke about the more positive, non-discriminatory dimensions of it (i.e., solidarity). Many were ashamed of the continued existence of the caste system in Mauritius, which explains the constant temptation to deny its existence.

Secondly, castes are associated with complex and conflicting perceptions of India by descendants. On the one hand, Indian Hinduism is seen as original and authentic. The tendency to have recourse to Indian priests and temple builders has reinforced this dependence on "true" Hinduism. Mauritian Hinduism is perceived negatively, as a 'second-class' religion which has lost its practices and representations, and is mixed with other (Creole/Malagasy) practices and representations. On the

other hand, the caste system is also seen as the foremost example of the 'bad', 'degenerated' Hinduism practised in India. In this perspective, Mauritian Hindus see themselves as having managed to purify Hinduism from the discriminatory social practices originally linked with it.

Our aim was, then, to understand how and why the caste system could be criticized on one hand, but still practised by the same person. No judgement is made here on whether the caste system should be maintained or not. Castes are viewed as a cultural construction, a 'choice' made by a society in order to organize itself. Here, only an examination of the realities of Mauritius and the potentially discriminatory practices are investigated.

Due to the shortage of time and lack of other research, we were not able to evaluate the understanding and practice (if any) of the caste system in Mauritian non-Hindus. Most populations, originating from India, carried the caste system with them. Indian Muslims also shared this system with Indian Hindus or, at least, were not unfamiliar with it. Tamil-speaking Hindus were interviewed, but the bulk of the information emanates from Bhojpuri and Telugu-speaking informants. The general perception among non-Indians is that the caste system has a Hindu/Indian specificity that has a discriminatory element.

The Mauritian caste system could not be fairly evaluated without an objective knowledge of its foundational Indian ideology, its Indian practical realities and its Indian ways of dealing with it, or against it.

## 1. THE CASTE SYSTEM IN INDIA

The subject has been abundantly treated by historians, sociologists and anthropologists. This will be reviewed in light of several questions related to our study. Our aim was to understand the caste system in Mauritius during indenture, and the assessment of the caste system by modern India; the attitude of the Indian authorities towards the caste system, the solutions that were foreseen and tried and with what results, to compensate the discriminatory dimensions of the system.

The Hindu-Indian population is divided in 'castes' in a hierarchical system. Globally, one was born in a caste, married in the same caste, and one transmits the caste to one's children.

The caste system is based on a logic of purity related to Hindu representations. Some castes are 'high' and 'pure' whereas others are 'low' and 'impure'. The caste system is fundamentally hierarchical and discriminatory.

But, even if most of the barriers have been maintained till now, there is a fundamental flexibility in castes that has long been under-estimated.

India is a multi-religious nation. It is the second largest country in terms of absolute number of Muslims, although Hindus form up to 80% of the population. It is crucial not to confuse 'Indian' (the nationality) and 'Hindu' (the religion). If the ideological foundations of the caste system are indeed religious, and specifically Hindu, neither Indian Muslims, nor Indian Buddhists, Christians or tribal populations have ever been able to leave the caste system or to remain apart. Non-Hindu Indians are also organized along hierarchical caste lines. One could say that the caste system permeates Indian society.

### General definitions: Caste in Sociology

'Caste' as a category needs to be precisely defined, from a comparative sociological perspective and more specifically within Indian studies.

The Larousse dictionary defines caste as:

CASTE, feminine noun, from the Portuguese *casta* (race).

- Endogamous social group, having generally a hereditary profession and precisely ranked in the hierarchy of a society.
- Pejorative. Group set apart by its privileges and its exclusiveness regarding other persons not belonging to the group: to be caste minded.
- Each of the three adult forms of social insects: female (or queen), male and neutral (laborer, soldier).

In this extensive definition, caste is a social class having a particular status and a hereditary professional function. Often cited are *Hindu* Brahmins, as well as African *griots*. Most of the time, caste corresponds to a very privileged and exclusive social class.

The use of the 'caste' terminology in 'Zoology' is all but neutral for us, as we will explain later. Zoology then means a group of animals having the same ascribed activity; most of the time one can take as an example the most socially organized species such as bees. Each 'caste' then designates a 'social' function: laborer or soldier, for instance.

## Definition in Mauritian and European History

In Mauritius, the term has been used since the 18<sup>th</sup> century to describe different groups of African slaves or whole ethnic groups, i.e., 'de la caste des Chinois'.

Inside African societies themselves, the term 'caste' has been 'mobilised', at least as a descriptive or heuristic tool. Some anthropologists have indeed tried to describe the hierarchical social organization of certain African societies, using caste structure.

In Europe, and in the West generally, the use of the term 'caste' is limited to two contexts. On the one hand, it is used for its pejorative connotations. We then speak about caste as a fixed category that standing firm on its privileges and socially reproduces itself inside the group as much as possible. On the other hand, in a more scientific perspective, the term is used in the context of the Indo-European ideology around the functional three-tiered society, as described by George Dumézil as early as 1948. The caste then corresponds to different hierarchical 'states' of European medieval societies (nobility, clergy and *Tiers-Etat*), each one being associated with pre-existing social functions.

## The *Hindu* caste: Religion, discrimination and solidarity

Despite the various usages and polysemy, the 'scientific' definition of 'caste' will be used concerning the Indian domain, and secondly because it helps us limit our project.

Caste, here, will only be defined with reference to the *Hindu* social organization. It creates a system in which all elements - castes - cannot be defined except by the relative position they hold in the whole system.

The term 'caste' thus refers to two Sanskrit terms, *Varna* and *jati*, although we refer mainly to the second term.

The term *casta* was introduced by the Portuguese in the 16<sup>th</sup> century. Until then, it was used in the Natural sciences. It is interesting that the term *jati* signifying 'birth' in Sanskrit, has also been compared to the naturalist notion of species (*Herrenschmidt*). In the Hindu perspective, men are not isolated among living beings. They are inserted in a hierarchical continuum comprising animals (at the bottom of the hierarchy, themselves 'hierarchised'), men and deities (at the top of the hierarchy).

Speaking about a 'hierarchised' continuum means that, from the Hindu point of view, there is no fundamental break between the different categories (or 'species'), whether they are animal, human or divine. In Hinduism, there exists permeability of each category. Men can be divinized, and gods often easily take human appearances or are represented under the physical or psychological appearance of men and animals. This continuum also helps us understand the logic of transmigration, each living being able to be re-born under another category.

But the absence of distinction does not mean equality. One cannot neglect the omnipresent and unambiguous hierarchy. This opens the road to complementarity but also to discrimination. If the continuum speaks about transmigration, the 'hierarchised' side of it stands for the overall judgment of the *karma*. Low castes, in this perspective, are only inferior because they were considered inferior in their past life. High castes are superior because their past *karma* made them so. Each category deserves its relative position in the system and must live with it. Criticizing the hierarchy is an insult to the logic of transmigration.

## Castes as *VARNA*

*Varna* are first defined as 'colours'; they are symbolic attributes of 'socio-professional categories'.

The *VARNA* system is composed of BRAHMINS, KSHATRIYA and VAISHYA, who are all 'twice-born'; they underwent a ritual initiation justifying their superiority on the fourth *Varna* category: SHUDRA.

The *Varna* system organizes society according with Dumézil's 3-tiered division: the first three in the hierarchy is given a social function (Priesthood for Brahmins, Governance for Kshatriyas, and Commerce for Vaishyas) whereas the last *Varna*, Shudra, is supposed to be at the service of the three higher *Varnas* (service and agriculture).

The Untouchables do not belong to this system; they are literally 'out-caste', outside of the '*Varnas*', or '*a-Varna*' ([a], privative prefix in Sanskrit). Thus, there is no fifth *Varna*. But Untouchables do have *jati*.

## The Purusha myth

The hymn X, 90 in the sacred texts of the *Rig-Veda* provides the myth of origin of the *Varna*.

Each *Varna* was born from the sacrificed body of the original man (Purusha). As a result of the sacrifice, horses and cows, among others, were born. For our purpose, we will remember that Brahmins were born from the Purusha's mouth (hence their function of priesthood linked with knowledge and sacred speech); Kshatriyas were born from his arms (hence their function as warriors and kings); Vaishyas were born from 'highlights' and Shudras from his feet.

The language of sacrifice, crucial to the understanding of *Hinduism* and of the *Hindu* socio-religious system in general, expresses, in a same myth, hierarchy and complementarity.

Complementarity, first, because the *Varna* language is 'organicist'. This is a logics founded on the assimilation of the society to a body. Such a language supposes that each part, even the most insignificant, is necessary to the whole system. This whole, body or society, cannot function if only one of its part is ill. The head is nothing without the thighs, for instance.

In the same way, the language of sacrifice needs, beside the SACRIFIED, a PATRON whose role it is to organize and finance the sacrifice (a KSHATRIYA, ideally) and also a SACRIFICER, the priest, the one who knows the ritual (a BRAHMIN, ideally). The role of the patron of the ritual (the Kshatriya) is to keep social and cosmic order, which includes the necessity to resort to the Brahmin's ritual services and, more simply, to support financially the Brahmins who are supposed to have no personal fortune. As far as the Brahmin is concerned, his role consists in performing the rituals in the name of the Kshatriya patron. Here again complementarity exists.

Hierarchy remains, however, given the fact that in India, as everywhere else, the different parts of the body are not equivalent, in terms of purity and prestige. The head is the noblest part and it is the Brahmins who are born of it. The feet, touching the ground that is potentially impure, are the least noble parts of the body and the Shudra are born of them. Today, in India, turning one's feet towards someone or touching his head is still considered rude and even dangerous for the other one's integrity. In the same way, rivers are believed to have a 'head' (upstream) and 'feet' (downstream). Upstream is always purer. Contrary to women, men bathe upstream, so that they are not contaminated by women's impurities. Similarly, upper castes bathe upstream and lower castes downstream.

## Status and dominance

Furthermore, it is important to note that the hierarchy between castes implies a separation between status and dominance. The economic and political power falls to the Kshatriya, but the pre-eminence, in terms of status, falls to the Brahmin. He is purer than the Kshatriya but he is financially dependent on the Kshatriya and he performs the rituals in his name. The pre-eminence of the Brahmin's status depends on his having the monopoly of the sacrificial act that is necessary to keep order in the world.

Even though there exists a hierarchy and professional specialization, the *Varna* are not tightly-closed groups: those born from mixed marriages may find the status of their original male ancestor again, under certain conditions. It is essential to differentiate between a hypergamy (marriage between a man and a woman of inferior status) which is more or less acceptable and a hypogamy (marriage between a woman and a man of inferior status) which is always blameworthy. The word for a mixed marriage is *samkara*. It always has pejorative connotations: it implies disorder leading to a-dharma, the negation of the dharma. Mixed marriages have helped the Brahmins to explain the existence of multiple *jati*, genetically speaking, coming from the four *Varna* (Tambiah). We may also think, along with *Lingat*, that the projection of castes within the *Varna* helped them to give the huge diversity of societies in the Indian sub-continent a powerfully unifying 'code of indianity'.

It is the deep relation with the ritual that establishes the hierarchy in the society of *Varna*. Only the Brahmins can teach, learn and recite the sacred texts (Veda). As far as the Kshatriya and the Vaishya are concerned, they are allowed to hear the Brahmins reciting. The Shudra have no right to recite or to hear the sacred texts. This so because Brahmins, Kshatriya and Vaishya are 'twice-born' (*dvija*): they have undergone the initiation 'upanayana samskar' that gives access to these texts. After the 'upanayana' ceremony, they wear the sacred thread distinguishing the 'twice-born'.

## Castes as *jati*

The logic of the *Varna* system lies mainly with the teaching of the sacred texts. However, what is reality like? Today, the Untouchables represent nearly one fifth of the Indian population, and the Shudra about a half. It is fair to say that the Brahmins (5%) represent a small group only, mainly in cities, just like the Kshatriya and the Vaishya (who live in the North of India only). In all the Southern half of rural India, for example, almost only Shudra and Untouchables can be met. Needless to say, oppositions between the *Varna* rarely happen in everyday life, contrary to the 'jati' that are actual castes.

Each *jati* belongs to a *Varna*: there are several 'jati' of Brahmins as well as many *jati* of Shudra (*jati* of farmers, of shepherds, of basket-makers, of blacksmiths) and even of sacred puppet-masters. The Untouchables themselves are divided into castes of barbers, launderers or travelling beggars.

Here is the true hierarchy. The '*Varna*' belongs to the sphere of learned but it is the *jati* that the average Indian experiences.

Belonging to a *jati* is considered a natural fact. Through his birth, each one owns characteristics that are shared by the members of the same *jati*, and not by others. One is born in one's caste (*jati*) and one dies in it. As the son of a blacksmith, one is born a blacksmith and one dies a blacksmith, even if it is not the job actually practised. The caste is hereditary and endogamous: one will marry a blacksmith's daughter only. Each caste has its rituals and its values: that is why they can ignore each other, and that might be one of the factors of the relative so-called 'Hindu tolerance'. On the other hand, they all belong to the same hierarchy, experienced daily because it is forbidden to accept food from an inferior caste for fear of being 'polluted' by it. Thus, all the castes of farmers will refuse food from Untouchables, and sometimes even, from shepherds, when the same shepherds will, in turn, refuse food from farmers, saying that their own caste is in reality superior to that of farmers. Obviously, disputes are numerous and hierarchy varies according to regions. Besides, some castes try to climb up the scale of purity by copying their rituals or daily practices (food, clothes) on high castes, even if such a strategy (called 'sanskritisation' because it

copies elite, Sanskrit, Brahminic habits) has its limitations because other castes will not recognize them as such.

### THE HINDU ORDER

All these considerations must be embedded in a more global logic, that of the *Hindu* socio-cosmic order as well as that of *Hindu* Ethics.

*Hinduism* has absolutely nothing to do with the democratic idea of universal equality. Similarly it has nothing to do with the idea of a universal moral of Good and Evil, as it is described in the Judeo-Christian ideology, for example.

For *Hinduism*, what is good for one person may be evil for another one. Consequently, it is amoral for a Brahmin to eat meat or drink alcohol even though meat and alcohol may be desirable or necessary for the Kshatriya, since they give him strength to fight, which is his duty. Such is the meaning of Krishna's sermon to Arjuna in the Bhagavad Gita, taken from the *Mahabharata*. It is, indeed, an essential text of modern *Hinduism*. So each one must abide by his/her relative status in society and not by a moral that would be good for everyone.

Caste is not the only criterion. What is good for one person depends on his *Varna* as well as on his *ashrama* or stage in his life (depending on his situation as a 'student' - brahmacharin- or as a 'maître de maison' -grihastha, particularly). This is called *Varnashramadharm* ('the order according to one's caste and age).

In the Hindu set of thoughts, each one is constrained and obliged to follow their own dharma (svadharma), i.e. to conform mainly to the rules dictated by their caste.

### The Logics of Purity: Segregation and Complementarity

Even more than for the *Varna*, it is the logic of purity that gives a framework to the hierarchy of the *jati*. It is always a relative purity. The relative status of each *jati* is assessed according to the social and professional occupation that is archetypically linked with it. The caste of barbers (even if only a few people belonging to this caste actually do this job) is impure because their archetypical activity is perceived as polluting (due to the contact with facial hair considered impure).

Within the relations between the *jati*, there is a link between separation - in order to avoid risks of staining by a caste with lower status- and complementarity between economic and ritual tasks. Exchanges of food and water transmit the characteristics of the one who gives them, and they are carefully controlled. Each one refuses to accept what comes from people with lower status (but, on the other way round, they can give, without risks). In the same way, marriages, most of the time still arranged by parents today, carefully avoid all misalliance between *jati*.

The nightmare of a caste is clearly pollution. More than purity, it is the risk of being polluted that structures the system. Pollution mostly happens by contact. The normative texts prescribed, in the extreme, minimum distances to be respected between low and high castes. Even the shadow of an outcast should not reach a high-caste person. Today, contact taboos are limited to intrusive forms such as ingestion of food prepared or served by an inferior and sexual relations, for example.

In this perspective, the purest is the one who has the most to lose and who fears the most. So he is the one whose *jati* is the highest in the hierarchy and who has to abide by the most constraining rules of life. Neither commensality (sharing of food) nor re-marriages for widows are allowed in high *jati* who generally practice a more or less strict vegetarianism and who advocate marriages of very young girls (promises and engagements as soon as they are pubescent, for example).

One of the consequences of such a logic of purity is discrimination and/or spatial segregation, in many villages. High castes, 'the pure', Brahmins or farmers for example, live in the heart of the village. Around them, the service castes (craftsmen) have been set up. And away from them, there

is the Untouchable area, whose members are not allowed to get water from the pond or the local well, are not allowed to have tea in the village common places or to enter the other castes' houses.

Order exists because of the complementarity and because of the 'jajmani' system that links the castes together on a hereditary basis. A family of farmers always asks the same blacksmith to fix their plough, and the blacksmith is paid in grain each year when the harvest is over. However, the system is bound to disappear because of the modernization of agriculture. Complementarity also and mostly works through rituals. Thus, the religious territory of a village is divided into several shrines, each of them being patronized and frequented by one or several castes. Even though the Untouchables have long been forbidden to enter the high castes' shrines, their own worshipping habits were necessary to the prosperity and the protection of the whole village. Some from a very high *jati* may need the knowledge and the power of the divinities and of the priests from a low *jati* if a matter is thought to be within their remit (calming down an ancestor coming back under the shape of a possessing spirit, for example). The Untouchables are needed for many processions and ceremonies (funerals, for example) that require the presence of a drum (an impure instrument because it is made of the skin of a dead animal that only Untouchables are allowed to touch).

The caste system inevitably means describing the status of male Hindus. Women belong to the caste of their father and abide by the rules, and especially those concerning marriage. Later, women will belong to the caste of their husbands. Even when a woman marries upward in the caste hierarchy, the risk is high as in-laws may refuse the food she cooks, even in her own house.

But, more generally, women are vectors for 'pollution'. Their assigned place (included as Goddesses in the Brahminic Hindu iconography) is on the left. This is the 'polluting' side in Hindu thought: the left hand is reserved for polluting activities, and the right hand for eating; you circumambulate a shrine clockwise in order to keep your pure right hand close to the Gods. Similarly, women sit at the left of men because of the purity hierarchy not unrelated to caste ideology.

### **Castes and social classes**

Today, there are poor Brahmins (many of them are cooks to satisfy the taboos about food) whereas there are Untouchables who are ministers or high political authorities. Therefore, religious castes are not equivalent to social classes. Nevertheless, discrimination exists and led to the policy of positive discrimination (quotas).

For several decades, there has been a debate on whether class correlated with caste, reflecting the fact "the whole interpretation of the social evolution of the Indian world in the modern age was at stake" in this debate, as Pouchepadass points out. By underlining the Hindu specificity of castes, with an ideological basis lying on religious purity, Louis Dumont has been abundantly criticized by those who think that castes represent only one particular case in the theory of social stratification. According to the latter, castes would only be a local rationalization of relations in terms of universal domination or exploitation, or even the ideological mask of class differences.

The Marxist perspective, has mainly given greater importance to castes as archaic and superficial structures, that are bound to disappear in the modern context of class society.

Indeed, along with globalization and the balance of powers in modern Capitalism, Indian society has, like others, integrated class logic. As early as the end of the 19th century, an Indian elite appeared and became the core of the independence and Nationalist movements. This elite has characteristics other than the caste criteria. Education, jobs, and relationships with the colonial powers were important criteria required to belong to this elite. And so, the discourse by this elite that prevailed during Nationalist struggles against the colonial powers and then through the destiny of independent India, adopted a great part of the vision of a modern India that would leave behind the structure of castes, thought to be archaic and confined to village life. However, it is difficult to ignore the fact that most of this elite belonged to the higher castes.

Nothing indicates that the importance of the caste system is declining in the history of modern India. Rather, with Indian modernity appeared a certain number of pressure groups that focused on

caste-identity. On one hand, this was meant to reactivate solidarity between pre-existing networks. On the other, the caste system was used as a means to obtain privileges and particularly, quotas. With the same mind-set, a certain number of more or less regional parties appeared, established according to caste criteria, to maximize gains in the electoral field. Thus, they behaved more as pressure-groups than traditional social and religious associations. In this democratic logic and for electoral purposes, castes are mainly used for their competitive potential.

Castes and classes present different realities and social handicaps tend to reinforce each other. Lower castes are still the poorest and the most oppressed in Indian society.

### **Castes, Colonialism and Democracy: Governance, Census and Positive Discrimination**

Several writers stress the role of the British Colonial Powers in the hardening of the caste system in India. The British attempted census-taking of the Indian population to categorize it in order to govern more efficiently. They thus contributed (unintentionally for some) to fossilize social realities that were more flexible than they had believed. The necessity for a person at the time to declare his caste, and the stakes behind a written classification, once for all, linked to a national hierarchy (whereas castes were village-bound or regional, to start with) gave a new reality and a new meaning to a system that the British, themselves, condemned for its discriminatory nature.

For others, it is the strategy of 'divide and rule', of the British who used the caste system in order to sap the wish for an Indian National Union that might have turned against the British Empire.

Finally, in a less Manichaean but deeper way, the British relied on Brahmin informers in their quest for knowledge and efficient government of India. So it was the Brahmins' point of view that was used as the whole picture, though Brahmins were only 5% of the population, which was not shared by non-Brahmins. Similarly, the sometimes rose-colored version of an organic system where there is a place for each and where each activity is necessary to the good order of the whole, the former being as noble as the latter, is essential in Brahminic rhetoric. Gandhi largely contributed to the spread of the ideology of 'each man in his own place', in a system that would rely more on complementarity than on hierarchy. Sometimes carrying the argument to the extreme, he imposed the term 'Harijan' (God's child) instead of 'Untouchable', showing his wish, not to ban Untouchability (and not to ban the caste system), but to put forward the noble role of Untouchables in Indian society. It is significant that Untouchable campaigners have followed the opposite path for several decades. Today, they call themselves 'Dalit', i.e. 'the oppressed', and they claim acknowledgement and compensation for having being discriminated against.

The State's role is ambiguous, to say the least. The 1950 Constitution abolished Untouchability. There exists a policy of 'reservations' that has been reinforced (quotas for employment in the public sector, reserved places for Untouchables and Tribal populations in Universities so that higher castes would not keep highly-qualified jobs for themselves. Today, the caste-certificate has become a very useful document for becoming a civil servant. Non-Untouchable low castes also claim quotas, which they get, for electoral motives. Thus, instead of disappearing, the castes have crystallized and have become passports for employment in the Public Sector. Some people or some castes even declare themselves more 'impure' than they are, hoping to be included in quotas: this is a perfect example of perverse side-effects of a policy that meant to be generous (very much like 'positive discrimination' and minorities in the USA). More important, the policy of quotas reinforced the impact of birth on the allocation of jobs. It also caused riots and deaths (murders and suicides by fire) when castes were in the process of being defined as eligible for benefits. As a result, quotas give more strength to a concept (caste identity and lobbying) that is fundamentally anti-democratic. It is no wonder, then, that universal suffrage does not work well in India and that Indian people vote less for ideas than for their castes.

## Caste Mobility: Renunciation, Devotion, Conversion, Sanskritisation

Castes have been the subject of multiple prescriptions in normative texts, the most famous being undoubtedly the *Manus Mriti* ('The Laws of Manu'), at the beginning of our era. They have also drawn the attention of travellers and observers for a very long time. In each case, they have been presented as made up groups that were stable in time and with clearly defined characteristics. In the 18<sup>th</sup> century, terms such as 'people', 'tribe' and 'nation' were synonyms of 'caste'. These inspired huge ethnological collections during the British period when the customs of supposedly distinct groups had to be recorded. More recently, this work is at the origin of the collection of volumes *People of India* with K.S Singh at its head ('Anthropological Survey of India'), though written in a national perspective. However, since the 1950's, the perspective has radically changed and the ways one chooses to get out of the caste system have been examined, paralleling the evolution and the flexible dimension of a system that was thought to be rigid to the extreme (with the expected consequence that would be its explosion at the imminent entry of India in modernity).

There are some factors that cause the dissolution of castes. For example, there are some jobs that were not present in traditional hierarchy: bus-drivers, computer technicians or bicycle repairmen, to name a few. Indeed, a Brahmin caught in the dense crowd of Bombay is very well aware that he touches 'Untouchables'. As far as the Brahmin engineer is concerned, he will give up vegetarianism in the cafeteria of the firm but will go back to it at home in the evening.

However, the main misinterpretation by observers of caste system in India was, and remains, their underestimation of historical and sociological realities of their evolution. Castes, as social groups, are no more rigid and unchanging than Western social classes.

The very obvious proof of that is the permanent place of castes at the heart of the contemporary evolution of India, in spite of the occurrence of world Capitalism and of a class logic. The strength of castes lies in the fact that they do not necessarily need fundamental harmony. It is a system based essentially on relationships, where each one can find his place in relation to the other one. Each one's position is called into question and is the subject of permanent negotiations, since it is not sanctioned by any texts approved unanimously. The castes that call themselves *Kshatriya* are innumerable, even if they are considered *Shudra* by their neighbors and commonly treated as such.

**Is caste mobility possible? Several common strategies have been employed.**

On an individual basis, it is already possible for a woman to marry outside her caste and, so doing, to adopt her husband's caste, ideally higher than hers. But this remains an exception to the rule. Individuals may also join philosophical, devotional and political trends such as the Arya Samaj which advocates individual equality and denies the hierarchy of castes. Here again, though, historical and daily realities have soon caught up with those egalitarian attempts. The Arya Samaj is a movement often seen as being in the hands of higher castes.

On an individual basis again, there are essentially two historical and philosophical ways of getting out of a caste. The first is by 'renouncing'. In the *Hindu* universe, to renounce the world is to renounce the world of castes. Everything that does not belong to renouncing belongs to the caste, and so, to renounce means to leave the caste. The *Hindu* individual, who renounces, does not risk being polluted any longer. It is something that he advertises by covering himself with ashes from funeral pyres, because they are the most impure possible. He does not have to follow the social and religious logic of the world of castes any longer. Theoretically, any *Hindu*, whatever his caste, may 'renounce', once he has accomplished his duties, as a 'student' and as a 'family head'. Dumont explained very well to what extent the extreme hierarchy of castes made sense only as a counterpoint with the extreme individualism of 'renouncing'.

On an individual basis, *Hindu* devotional trends (*bhakti*) suggest 'renouncing' through devotion. It means that the divinity should be reached by way of personal and emotional contact with it. In this relationship, compared to physical passion or filial affection, for example, the identity of the caste does not matter. The bards of the *bhakti* (the mystic poets Tulsidas or Kabir, for example) promoted disregard for caste considerations and individual equality within the divine relationship. Yet, like the attempts by the Arya Samaj, such trends have broken into the realities of castes, through only in the devotional dimension, but not in everyday realities.

On an individual basis, but more often on a collective one (whole castes), conversion has been the strategy used by Untouchables especially, to leave behind the identity of a discriminatory caste. Starting off with the logic that castes are *Hindu* structures, giving up *Hinduism* was supposed to help converts escape from the infamous hierarchy that was part of castes. But that was to forget about the fact that, in India, castes are not only defined by religious affiliation, but also by the form of the organization of the whole society. Consequently, those Untouchables, recently converted to Buddhism, to Islam or to Catholicism, are still considered Untouchables. That they reject the way they are called and replace it with another appellation does not keep the high castes of the village from not accepting to share their meals, for example. Conversion of whole castes in India is evidence of a rebellion against the caste-system and its hierarchy (like Ambedkar leading his whole caste to Buddhism), but it is often unsuccessful.

Another historical strategy, most often used by whole castes was, not choosing to get out of the system, but trying to find a more enviable place within it. Thanks to the impetus often given by a now richer elite, castes resort to strategies known as 'sanskritisation'. It means changing caste practices and customs by matching them with high castes' norms and by severing them from customs with low caste connotations. The end of animal sacrifice during worship, the presence of a Brahmin priest, the passage to vegetarianism especially, are evidence, one generation later, of practices compatible with claiming a higher caste status. Once this is achieved, it becomes possible to marry daughters (preferably rich ones) to sons (less rich) from higher castes.

## CONCLUSION

Without denying the discriminatory power of the caste system, and without supporting the Brahmins' perspectives of the system as a functionally harmonious system, it would not be correct to portray the caste system as uniformly harmful and ideologically racist. To start with, a social structure, they are also social links and, to a lesser extent, they represent units of solidarity. Caste networks are indispensable to the Indian liberal economy as well as to the rising of most regional political parties.

Until recently, the caste logic also rested on a network of relationships called *jajmani*. The village barber worked for the same patron as his father. Hereditary networks, even though they were organized into their own hierarchy, represented vertical solidarities that reached beyond caste antagonism. Revolts, militancy and pressure groups (including those with vote-catching objective) have long formed such 'factions', i.e. the multi-castes vertical section of the village society that brings together the dominating and the dependent.

It can be said that political circumstances (colonialism, vote-catching in modern democracy) have partly manipulated caste hierarchies in order to support identity claims or access to privileges. Portraying castes as uniformly negative, highlighting their hierarchical function and freezing their inherent stability prove that the caste system and its logical tenets are misunderstood in the West.

We have to bear in mind that the intrinsic logic of the caste system draws its inspiration from religion. It is the relative purity of individuals and groups that remains the determining criterion. As such, the caste system probably works in the same way as discrimination.

According to the 1949 Indian Constitution, even if it is not always the case, all temples must remain open to all *Hindus* (Untouchables included, and also Sikhs, Jains and Buddhists, hence the problem of the definition of *Hinduism*). In fact, only public temples are concerned. The others do not have to be opened to Untouchables, even if there is pressure on those temples managed by private associations through incentives offered. In reality, either private institutions strictly forbid Untouchables to enter, or Untouchables simply do not dare. However, Untouchables do go to the main temples for regional pilgrimages.

In India, discrimination on grounds of castes is forbidden by the Constitution, and has been the subject of several laws (Untouchability Offences Act, in 1955; Scheduled Castes and Scheduled Tribes Prevention of Atrocities Act in 1989). Discrimination is an offence against the Law.

But it is not forbidden in the least to assert one's belonging to a caste, in itself. In fact, the *jati* identity remains strong, especially in rural areas where it is at the core of social interactions. Their dynamism belies some critics' forecast that saw, in castes, a brake upon the country's growth and social structures as bound to disappear. Although the regulation of exchanges has become more flexible in large cities, and although people in general resent bringing up the issue of castes no longer existing, the *jati* still play an essential political and economic role. The development of communications and the media, and the Indra's participation in the process of globalization have entailed the rise of an important middle-class that partly clouds caste identities. The opposite seems to be true: social and political stakes, the development of forms of organizations based on *jati* at all levels of society tend to crystallize identities. These dynamics help to keep fine distinctions of status as private matters, particularly for marriages, whereas a more general mobilization in political action calls for reifying caste identities in pseudo-ethnic terms.

## 2. CASTES IN MAURITIUS DURING INDENTURE AND TODAY

In a well known article entitled 'The Disintegration of Caste and changing concepts of Indian Ethnic Identity in Mauritius' (1994), Oldvar Hollup argued that the Indian caste system had been widely simplified in Mauritius and that this applied to all *Hindu* diasporas. Benedict (1961), Jayawardena (1968), Mishra (1979) and van der Veer & Vertovec (1991), but to mention a few, all concurred that the Indian caste system "was never successfully established overseas" (Hollup 1994). More importantly, it was argued that caste differences among overseas Indians, were understood differently in terms of content and meaning by descendants.

### Who are the indentured s? What about Indian realities?

Indentured history, and the way it is perceived in Mauritius today, are central in historical and the Mauritian contemporary construction of identity.

There is on the one hand, the overarching perspective which is the link with roots and origins. On the other, there is the 'Mauritian' perspective. 'Indenture' provided the founding narrative of Indo-Mauritian identity, even if the latter has been built through the denial of some of realities of indenture.

One must acknowledge that, through ignorance or political strategies, the public discourse on indenture has given birth to many strong myths of identity, often historically inaccurate or far-fetched. Indentured s have been presented in various forms: as kidnapped slaves (Tinker 1974) or, on the contrary, as proud conquerors coming to Mauritius to bring their India's wisdom and age-old civilization (Benoist 1989, Hazareesingh 1973) and as 'scab labour' depressing the wages of ex-slaves.

In all cases, indenture stands as a pivotal period in Mauritian history. Academic research in history and anthropology for the period 1835-1907 can begin to give us fair bases for an objective and more nuanced vision of indenture. However, research (Allen, Benoist, Hazareesingh, Tinker) often lacks the perspective of the host country, India, and the economic and social conditions there and their overall representations of candidates for indenture.

Whatever the Mauritian realities of indenture may have been, the only way to understand them requires the evaluation of the individuals' subjective real-life perceptions. It is thus necessary to put them in the light of Indian pre-indenture realities of the immigrants.

As Marina Carter (1995) explains, sordid realism (describing indenture as just another Slave Trade) or, on the contrary, revisionist temptations (s as colonists), have blurred historical visions. The first important point lies in the evolution of indenture during the whole period. Indenture in the 1830s was radically different from indenture twenty years later, not to mention the last decades, of the beginning of the 20<sup>th</sup> century. One must also remember that, as is the case for slavery, there is no such thing as a unique history and experience of indenture. Individual situations were very different from one another, between the Sepoy fleeing colonial repression, the indebted peasant and the migrant looking for a better future.

The majority of the indentured candidates were peasants. But the *proletarianization* of India (Carter & Deerpalsingh 2000) as well as the collapse of local craft and artisan industries due to aggressive British policies (Deerpalsingh 2000) probably brought others than peasants to emigrate.

From these varied and contrasting experiences, how did the caste system evolve in Mauritius? It was a blend of the realities indentured s were leaving behind in India and their local experiences in Mauritius. The local context of Mauritius, as a plantation society, urged indentured s to adapt, until they created a new sound definitely Mauritian, group at the beginning of the 20<sup>th</sup> century. This process accounts for some of the ruptures, still present nowadays, between India and Mauritius.

The taboo and inaccuracy of Mauritian conceptions of the caste system must be paralleled with the Mauritian fundamental ignorance of the Indian caste system. Thus, it is crucial to question preconceived ideas and legends concerning the conditions of indenture. What were the indentured labourers' living and working conditions already experienced in India? What was fundamentally new to them in the servile system they faced in Mauritius? We know about certain servile systems in India in the nineteenth century. What were the links of Indian candidates for indenture with the land, the migration process, the domination hierarchy, etc.?

If one focuses on indentured labourers coming from the Bhojpuri territories (which approximate to today's Bihar Jharkand and East Uttar Pradesh), amounting for approximately 60% of the indentured labourers brought to Mauritius (Benedict 1961), we do know the general pattern of caste prevalence and repartition, for instance.

The Bhojpuri territory is ambiguous in India. It is not recognized as an administrative region, and has never been (Servan-Schreiber 1999). 'Bhojpuri country' is the region where the Bhojpuri language is spoken, even though the language is not fully recognized. Though spoken by more than 50 million people all over the world (both in India and in the Diaspora), it is still considered a rude and unsophisticated language (*motiya bhasa*). It is officially considered a minority 'dialect' in India, whereas other languages such as Kashmiri, Sindhi, Punjabi or Oriya, far less massively spoken, have been officially recognized as main languages of the Indian nation. Indian Bhojpuri language has never had access to the status granted to Bhojpuri in Mauritius (on the radio and in television broadcasts, for instance).

That is the reason why, among others, Bhojpuri culture in India has long striven for its coherence above territorial frontiers. As a result, other identity criteria have been downgraded. First among them, the caste hierarchy is more flexible among Indian Bhojpuris. Bhojpuri Brahmins are not the fierce defenders of socio-religious orthodoxy which they are in other, more territorialized, regions such as Mithila, for instance (Servan-Schreiber 1999). Many institutions are open to all, and Bhojpuri leaders do not promote an elite and Brahminic culture. Bhojpuri leaders more often address the unifying power of the language in their discourses. In the Bhojpuri land, so they stress, it is as important to speak Bhojpuri as to be Muslim or Hindu, or to be Chamar (low caste leather worker) or Brahmin.

The real caste identity of indentured labourers may be different to what is listed in official registers of immigrants for reasons well studied by historians. Individuals are declared under caste names (Ahir) but also with sub-caste names, professions, or regional origins (Bengali). We cannot be sure how far the British understood the 'caste' terminologies of potential immigrants. Secondly, emigration offered an opportunity for upgrading one's caste status. Opposite strategies were also used, however, to secure the right to emigrate. These strategies were known to the British who started inspecting the hands of emigrants to check for signs of the immigrants having performed manual labour. The registers thus show a multi-caste type emigration, quite representative of the Indian caste distribution (Deerpalsingh 2000; Servan-Schreiber 2010). True enough, peasant castes were over-represented, but such is already the case in India itself (Tinker 1974).

In India, Brahmins did not represent more than 5%, while low caste Shudra and Untouchables amounted for more than half the population. In 'Bhojpuri country', *Ahir* was may be the most numerous single caste (it still represented 11% in 1979, according to Blair); Muslims were also numerous (15%).

The same gross percentage seems to have been prevalent in India, and in indenture, with a huge majority of Untouchables and Shudra, some Vaishya and Kshatriya, and a very small minority of Brahmins. This parallel between castes, percentage in India and in indenture is also true of religions: approximately 15% of Indians were Muslims (Servan-Schreiber 1999) and 15% of the Bhojpuri indentured were Muslims (Deerpalsingh 2000).

In the 1830s to 1850s, the indentured population also consisted of Tribal groups who gradually became merged with the *Hindu* population. This is evident from a sample study of Civil Status Records of this population. In their new identity papers, they did not put down any caste. A new identity thus appears to emerge in Mauritius, that of casteless Hindus, due to indenture.

One can infer that the numerous 'Vaish', identified in Mauritius today, probably belonged to other castes before indenture. This is to be regarded as another example of upward caste mobility. But such upward mobility often goes hand in hand with temptations to deny the popular origins they shared with other indentured peoples. This reluctance to acknowledge their real history may explain the MGI's insistence that caste information of indentured not be revealed to public. This attitude is reminiscent of descendants of slaves in Mauritius as well as descendants of convicts in Australia. In Mauritius, however, this is tied up with claims of political representation and caste quotas.

Upward mobility was also possible through inter-caste marriage. Numerous examples exist in family histories.

## What happens to caste during indenture

Observers, such as Hollup, have focused on the loss of caste identity during indenture. Three main arguments, linked together, are used:

- The fact of leaving India;
- Crossing the 'black waters' (*kala pani*);
- Settlement in estate camps.

More precisely, the length of the voyage, the distance from the Indian homeland have been stressed as factors leading to the impossibility of exporting the caste system. On board the ships, commensality was the main issue. Once in the Mauritius camps, the occupational neutrality, the obstacles to caste endogamy, the actual sharing of living and working conditions with non-Hindus have all been considered fatal to maintenance of the Indian-style caste system among indentured s. A rigorous assessment of such issues leads to a more nuanced conclusion.

- Leaving the Indian territory

Let us first quote a very common discourse, contemporaneous with indenture: that of the Hindu Nationalist ideology in India. This ideology arises in India the second half of the 19<sup>th</sup> century with the anti-colonial and nationalist movements. The necessity for arousing a feeling of unity led some leaders to foster the idea of a unique land linked by Hinduism. It is based on the idea that India is, consubstantially and exclusively, Hindu.<sup>2</sup> The Indian landscape is identified with a Hindu Goddess (Bharat Mata, 'Mother India'), which is restated and built by pilgrimage networks linking the various *Hindu* sacred places all over India (Claveyrolas, 2008). As a result of such an ideology, Muslims and Christians cannot claim an Indian identity: "In India, one can only be *Hindu*' (ibid). But this ideology also stresses that one can only be *Hindu* in India.

A second, and more recent, discourse, is linked to the first: that of Indianists, who came to the conclusion that the *Hindu* identity was entirely expressed through caste membership. In an earlier section ('Castes in India'), the idea that this belonging lies on the logic of purity stressed by *Hinduism* through a permanent concern to protect oneself from ritual pollution thanks to strict living conditions, mainly caste endogamy, and the taboos of contact and commensality with inferiors.

One of the symbols of this link between leaving India and the disintegration of caste is the supposed tradition of 'depot marriages', when candidates for indenture would marry just before departure in order to satisfy the needs and preferences of planters for married couples. But Marina Carter (1995) among other Researchers, stresses that such depot marriages, even when not respecting caste or religion criteria, were actually too few to disrupt endogamous traditions as a general rule.

- Crossing the Black Waters

The perception of the crossing of Black Waters - *kala pani* - has become a key narrative of indenture in the literary academic community. Indologists Louis Renou and Jean Filliozat,<sup>3</sup> explain that, 'travelling by sea is a disruptive behaviour in social and private life', resulting in a necessary expiation process. Travelling by boat means both exposing oneself to living conditions concretely

incompatible with caste purity requirements (promiscuity, commensality, etc.) and leaving the only territory where it is possible to be a *Hindu*, and to belong to a caste. These concepts were supposedly put to the test on board the ship.

Alternative concepts of the caste system have, however, emerged as a result of indenture. Friendships formed on board by individuals were described as '*jahaji bhai*' (brothers of the boat) and this equalitarian relation has been preserved up to today in many families. This, however, involved *Hindu* and non-*Hindu* families. Further research is required on *jahaji bhai* relationships and marriage restrictions between, them as has been undertaken for Guyana. The questions are: Did such relations, and marriage strategies, disrupt caste differences, or did they reaffirm them?

It is, as a consequence, necessary to re-focus on castes as both structural and flexible. One must remember the original flexibility of the Indian system, naturally enhanced in exceptional contexts. Indian *Hindus* are familiar with stories explaining and justifying why a Brahmin was led to eat dog meat, because in such or such a-dharmic conditions, it was still better for him to break this taboo than to die. Much significantly still, it was his duty! It will not come as a surprise that the boat crossing the sea from India to Mauritius was sometimes assimilated to the temple of Juggernaut (a famous pilgrimage place where castes are supposed to be erased through devotion), where caste restrictions could be temporarily suspended without breaking the overall taboo and further consequences.

Caste regulations were not totally absent from the boat. Brahmins and high castes managed to keep their purity by refusing to eat cooked meals on board or benefiting from certain occupational exemptions (Carter 1995).

The theoretical perspective of associating the departure from India with a disintegration of caste system does not hold, therefore, as detailed indentured studies and family histories have shown.

The association of losing one's caste with the sea voyage constitutes a Brahminic vision of caste and *Hinduism*. Thus, by continuing to use this perspective, we are perpetuating an ultra-minority elite perspective and applying to the experience of the majority of the population which was not of those origins. Only orthodox high castes were concerned with the strictest taboos and prescriptions. An Untouchable individual walking in the streets, bathing, eating, worshipping, was only marginally concerned with pollution preoccupations and with the consequent possible loss of his caste-*jati* identity.

Leaving India was probably never a taboo for non-Brahmins. The actual experience of immigrants needs to be fully researched by more in-depth detailed studies. Furthermore, South Indian experiences of caste were different and Tamils were not so concerned with the automatic loss of caste identity through indenture. Similarly, Tribals, Muslims and Christians did not have any reason to bother about the taboos of leaving Indian territory and crossing the sea.

The tradition of inter-province or inter-region migration was prevalent in Northern India and in 'Bhojpuri territory' (Servan-Schreiber 2001, 2010). There are also well documented traditions of river and maritime voyages which contradict the representation that individuals' caste and other identity were incompatible with their leaving their region.

If one turns to popular traditions, and not to 'elitist' textual ones, it is observed that the repertoires of Bhojpuri folksongs in India are all centered on exile. Ironically, it is only, once he was settled in Mauritius, that the Bhojpuri 'eternal immigrant' relegated as secondary the traditional themes of the exiled individual (*bideshiya*)! As a result, it seems difficult to associate the departure of Indian indentured labourers for Mauritius with to the rupture of a fundamental taboo, and to an inevitable radical loss of caste identity.

It is also important to question the perception of caste as a rigid hierarchical system. The caste system was contested, sometimes violently, throughout India in the 19<sup>th</sup> century, a far different situation from the stereotype of individuals passively submitting to caste oppression. This stereotype of the 'docile' 'submissive' victim came to be shared in Mauritius by White planters, Creoles, but also by Mauritian Bhojpuri themselves (Boodhoo 1999, Hazareesingh 1973). Rather, it is the combative and aggressive reputation of the Bhojpuri that justified their massive incorporation

in the Mughal and British armies, or their leading role in the famous Sepoy mutiny against the British.

Orthodox elites in India have managed to elaborate various strategies to cope with these taboos, and particular vigilance was exercised during sea voyages and upon the return journey. Gandhi's refusal to submit to such rites kept him apart from his caste his entire life. The British recognized these taboos as the case of the Bengal regiment, essentially composed of Brahmins, Kshatriya and high-caste Muslims, were exempted from being sent out of India.

### Settling in estate camps

The first Indians to arrive in the 1830s, 1840s, shared the same living and working spaces as the ex-slave population still on the estates. Ritual purity and occupational specialization were left behind during the sea voyage and the installation in camps. These spaces have been cited as presenting obstacles to the reproduction of the Indian caste system in Mauritius by Hazareesingh and Benoist, among others, who stated that Indian indentured labourers waited until they left the estates to settle in villages (in the 1880's) to reproduce the Indian social structure.

In the camps, the absence of spatial segregation and of occupational specialization is presented as incompatible with castes rules and regulations. But detailed reports from sugar estates show that, when requested, estate owners acceded to high caste immigrants, and Muslims, desire to be housed separately from other (lower caste) immigrants breeding pigs. Thus, the caste system did survive in spatial arrangements on estates and as important criteria in private life, especially as far as marriages were concerned. As for settling regulations when it comes to acquiring land, Allen notes that 'it was not uncommon for persons of the same or comparable caste status to purchase land near one another in a specific locality' (167), adding that other criteria were to be considered, such as religious affiliations and *jahaji bhai* relationships.

Regional origins were yet another important identity marker. The historical record shows 'a certain propensity for immigrants from the same home district in India to settle near one another' (Allen, 167). Marina Carter (1995) also explains how the strategies of 'returnees' for recruiting new labourers reinforced the process of bringing together people from the same district and villages. This strategy, based on the returnee's social network enabling him to contact and convince new candidates, was bound to help maintain caste solidarity and logic.

Castes with the largest numbers of individuals, such as the Ahir, the Chamar or the Dusadh, were probably more prone to endogamy and consequently, to a reinforcement of their caste identity, whereas castes with fewer members, incapable of maintaining endogamy, were probably led to renegotiate their status in the local hierarchy through new marriage and life-style strategies. The universe of plantation estates was not at all unknown to Bhojpuri s, as these existed in India as well. The estate camps would not necessarily represent a major rupture with the compulsory conditions of the caste system.

To conclude, indentured immigrants from Bihar were able to leave their native region and thus were not necessarily prone to caste identity loss. Neither were they individuals submitted to a fixed caste logic unable to adapt to new living and working conditions or to contact with other cultures. Indenture for this group did necessarily involve the loss of the caste system.

MAURITIAN VOICES: A SELECTION OF ARCHIVAL NOTES

INTERVIEW CD REFERENCE NO:	TJC/OH07/SG.DT/Interview JF18/A/PLAINE MAGNIEN/ 16/07/2010		
FOLDER No:	S/A18		
Interviewers:	Dreesha (Research Assistant) and Smita (Researcher)		
Name of Interviewee:		Anonymous	✓
Ethnicity:	Hindu		
Location of interview :	Plaisance, at her place		
Date of interview :	16 July 2010		
Starting time: 16 00	Finishing time: 16 40	Duration: 40 mins.	
Mode of recording:	Audio-phone		
Language used :	Creole and Bhojpuri		
Sound condition:	Good We had to make several pauses, as interviewee was regularly interrupted.		
Other people present:	Her grand children, but afterwards she left.		
Technical problem:	None		
General review	The interviewee is 70 years old. She lives at Plaisance, Plaine Magnien. Her mother reared animals (cows). Her father on the other hand did several jobs like: vegetables seller, driver. He even worked in the army. The interviewee has five children; four sons and one daughter. She had four sisters and five brothers. The interviewee married at the age of seventeen. She lived at Saint Pierre and later came to live at Plaine Magnien. The interviewee belongs to the <i>ravidas</i> caste group. She also member in a Rajput socio religious organization. One of the daughters-in -aw of the interviewee is a Halwaii.		
Summary of main points	<p>She mentioned several castes like: maraze, ahir, halwaai, dusads, chamaar. She stated that the ravidas and chamar are the same.</p> <p>High castes did not eat in home of low castes. The low castes as well were embarrassed to eat in home of high castes. The interviewee made it clear that up to now the high castes did not eat in low castes' homes. The low castes sat outside to eat and the high castes threw the utensils in which the low castes ate.</p> <p>She stated that the low castes were of dark complexion and the high castes were of fair complexion.</p> <p>High castes and low castes dressed in the same way.</p> <p>At Saint Pierre there was a well in the high castes yard.</p> <p>Concerning Baharia pooja, the high castes did the sacrifice of "bouc" and the low castes on the other hand did the sacrifice of pigs.</p> <p>The high castes did not eat pig, but the low castes ate.</p> <p>She stated that in the past low castes did not get jobs in offices.</p> <p>Now even the high castes came at her place for wedding.</p> <p>Concerning politics- party loyalty seems to be important for the interviewee. She also stated that in the past in socio religious organizations they made campaigns on caste line.</p> <p>When choosing people to cook food in weddings; caste was important.</p>		
Personal Observation	The interviewee was really embarrassed when she stated that she is from the Ravidas caste group. After that we took a pause as someone called her. After the pause, when she came back she told us that her "grand dad" was an indenture and she was a high caste, Her daughter too got married in high caste- Halwaai, Her sisters too getting married in high caste and that her daughter in law too is from a high caste more precisely the Halwaai. She seemed a bit ashamed of her caste identity that is why she started telling us about her close ones who got married in high castes.		
Remarks	The interviewee was really embarrassed when she told us that she belongs to the ravidas caste group. She looked down. Her tone also changed. She was also embarrassed when we asked her to tell us more about Rahh pooja. She lowered her tone when she mentioned the word "cochon".		

INTERVIEW CD REFERENCE NO:	TJC/OH07/SG.DT/Interview PB10/A/PLAINE MAGNIEN/ 08/07/2010		
FOLDER No:	S/A10		
Interviewers:	Dreesha (Research Assistant) and Smita Gya (Researcher)		
Name of Interviewee:		Anonymous	✓
Ethnicity:	Hindu		
Location of interview :	Plaine Magnien at her place		
Date of interview :	8 July 2010		
Starting time: 10 00	Finishing time: 10 45	Duration: 45 mins	
Mode of recording:	Audiophone		
Language used :	Creole and Bhojpuri		
Sound condition:	Good		
Other people present:	None		
Technical problem:	None		
General review	<p>The interviewee is 65 years old. She grew up at Cluny; presently she is living at Plaine Magnien. She has three children. Her grandfather and grandmother (father's side) came from India. She was a Telugu but married in a <i>Hindu</i> family. She did not go to school and did not work. She has eleven brothers and five sisters. Before marriage she was from the <i>redcolou</i> caste.</p>		
Summary of main points	<p>She mentioned several castes : dhobi, chamar, ahir  She stated that high castes did not invite low castes at their wedding. The high castes did not eat at low castes place.  She stated that in the village of Cluny, caste was important  When neighbours fought, people said that they are chamar.  She stated that there were many Babujee where she lived (in Cluny)  She was from the redcolu "gotra". Once a priest asked her about her gotra and, she had to ask her sister in law about that.  In making friends; caste was not important, the interviewee had friends from different ethnic groups.  The interviewee mother did not look at the caste issue when she married her children. Her brother and sisters married in different castes. Some of her brothers even married in low castes. It should be noted that most of her brothers and sisters had an arranged marriage.  She pointed out that in the past low caste did not have the right to enter high castes houses. The interviewee "grand mama" did not let others enter.  Low castes did not have the right to enter in temples.  Concerning Baharia pooja; the low castes did a sacrifice of a pig and the high castes on the other hand gave a "bouc" (GOAT).  She told us that someone even killed her daughter because the latter loved a low caste boy and was also pregnant of his child.  She knows that her neighbours are from the low castes. But they go to eat at each other's place.  Many people get baptized so as to get good jobs.  Politics- party loyalty shapes her voting behaviour.</p>		
Personal Observation	<p>When doing the interview, we get the impression that even though the interviewee knows quite a lot on the caste issue but caste does not seem to be very important for her. Before and after the interview she made it clear that she does not lay emphasis on caste. However, it should be noted that the interviewee knows the caste of all her neighbours. She helped us a lot for our field work. We found that she is aware of almost all the people (those who live at La Grotte Road, Plaine Magnien) castes.</p>		
Remarks	When she mentioned the word "cochon"; she seemed very embarrassed and she smiled.

Sound condition:	Not so good		
Other people present:	Grand-child and Niece		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• Mrs. Oogar, aged over 80-years, was born at Grand Bois. She does not remember her exact age and also at what age she got married.</li> <li>• Her father passed away when she was a child and her mother worked as a at Grand Bois.</li> <li>• She does not remember her grand-parents. She had one brother and two sisters, who all passed away.</li> <li>• Among her 6 children, 2 passed away.</li> <li>• She is well aware of Jaat/Paat.</li> <li>• She talks in a low tone due to health problem</li> <li>• She belongs to the <i>Kurmi</i> caste which is within the <i>Vaish</i> caste</li> <li>• She gave useful information about how previously people of higher caste were indifferent to people belonging to lower caste in Mauritius</li> </ul>		
Summary of main points	<ul style="list-style-type: none"> <li>• At first she confused caste with ethnicity and gave example of Jaat as creole and Muslim</li> <li>• She said that even among the Vaish caste there are differences. The <i>Vaish</i> caste is further divided into lower <i>Vaish</i> and higher <i>Vaish</i> caste. For instance the Halwai caste belongs to the lower <i>Vaish</i> group</li> <li>• The kurmi caste is higher than the koyri caste</li> <li>• Among the lower caste, there is the <i>Rabidas</i> caste and the <i>nonia</i> caste, and then the lowest caste is the <i>Dosad</i> caste. All these castes are subcastes of the Chamar caste.</li> <li>• Caste is still very important for her. She will never eat or drink water at a Chamar's place as the low caste people rear pigs and eat pork.</li> <li>• When she was invited at a Dosad's wedding, she went and leave a gift but did not have food or drink there.</li> <li>• Previously, people from the Dosad caste accepted that they belonged to a lower caste and accepted not to be invited to sit and eat inside a higher caste's house. But now these people of lower caste get angry and do not accept to be treated like this.</li> <li>• In the past, caste played a very important role in arranged marriages. She got married in her own caste and married all her children in the same caste.</li> <li>• Long ago, if a person belonging to the Chamar caste accidentally touched the dress of a high caste, then the high caste person immediately went to have a bath and wash his/her clothes.</li> <li>• During childhood, she was not allowed to have friends of lower castes.</li> <li>• Previously, all priests were from the Brahmin caste. She firmly believes that a priest from a Brahmin caste will be more knowledgeable than a priest from the <i>Vaish</i> caste</li> <li>• People belonging to the Chamar caste were not allowed to touch golden jewelleryes.</li> <li>• She also talks about the <i>dhobi</i> caste, which is considered to be a low caste</li> <li>• River was used by both higher and lower caste</li> <li>• She worked as a at Mon Desert Mon Trésor Sugar estate and casteism was not present on workplace</li> <li>• All caste used to have Godna of the same design</li> <li>• Long ago, love marriage was not accepted and inter caste marriages was strictly forbidden. If it happened that a daughter in law came from a lower caste, then the mother in law</li> </ul>		

	<p>would never eat the food cooked by her daughter in law</p> <ul style="list-style-type: none"><li>• There existed two types of kalimaye, one for high caste people and one for low caste people. These kalimaye are still present today at Plaine Magnien</li><li>• She is not aware if there is casteism in politics.</li></ul>
Personal Observation	<p>She was not afraid to talk about the low caste people and did narrate clearly how low caste people were treated long ago, how people considered them to be of inferior nature</p> <p>Interview was carried out in a veranda and her niece translated some of our questions from Creole to Bhojpuri to her</p>
Remarks	<p>THE INTERVIEWEE HAD HEARING PROBLEM AND TALKED IN A LOW TONE</p>

INTERVIEW CD REFERENCE NO:	TJC/OH07/SG.DT/Interview GP05/A/TROIS BOUTIQUES/ 11/06/2010		
FOLDER No:	M/B141		
Interviewers:	Dreesha (Research Assistant) and Smita (Researcher)		
Name of Interviewee:	G.P.	Not anonymous	x
Ethnicity:	Telugu		
Location of interview :	Trois Boutiques at her place		
Date of interview :	11 June 2010		
Starting time: 10 22	Finishing time: 11 33	Duration: 1hr 11 mins	
Mode of recording:	Audiophone		
Language used :	Creole		
Sound condition:	Good		
Other people present:	Her grand children		
Technical problem:	None		
General review	<p>The interviewee is 66 years old. She was born at Port Louis. She grew up at Quatre Bornes. Later when she got married she came to live at Trois Boutiques. She has 3 children. She was very at ease to talk about the caste issue. She is from the <i>naaggotu</i> caste group (HIGH CASTE).</p> <p>The interviewee sister got married in a <i>Hindu</i> family; her father did not like and fought a lot.</p> <p>The interviewee's brother married a girl from a low caste. In the Telugu community they use the word <i>gotra</i> to refer to caste. She said that in the Telugu community there are four castes: the first one The <i>telga</i>, the second one the <i>naaggotu</i> and the other two she does not remember.</p>		
Summary of main points	<p>The interviewee family were <i>telga</i> . This caste group as she pointed out used to make oil. She got married in the <i>naaggotu</i> caste group. The <i>telga</i> is a higher caste than the <i>naaggotu</i>. However there is not a big gap between these two. The <i>telga</i> is the highest caste and then comes the <i>naaggotu</i>.</p> <p>The interviewee's father did not like that she was married in the <i>naaggotu</i> caste group. He rarely came at the interviewee place but whenever he present himself he neither eat nor drink. The interviewee father in law was really angry and one day he told him that if he did not drink a glass of water he will have to take his daughter away, then the interviewee's father had a glass of water and in the evening even ate at his daughter's place.</p> <p>The interviewee got 2 wedding proposals, but his father rejected both because of the caste factor. The interviewee engagement was broken one week before it took place because his father learned that the boy was from a different caste. Her father once even told her that he will cut her throat if she marries in another caste.</p> <p>Concerning her brother's wife who was from a low caste, the interviewee's father did not eat when her daughter in law prepared food. He never took water from her hands. But when the daughter in law was pregnant he was very happy and said that a <i>telga</i> is coming- that is a new <i>telga</i> will be joining his family.</p> <p>The interviewee also talks about <i>nonia</i>- low caste in the <i>Hindu</i> community. She said that the <i>nonia</i> perform prayers with pig. She was referring here to sacrifices. The interviewee's neighbour is a low caste and once the interviewee even asked her neighbour about her caste but the latter said that she forgot about it.</p> <p>During weddings and prayers the priest still asks about the "gotra" (caste). Nowadays anybody can become a priest, in the past only high caste became priest. In the past only the high caste had the right to go in the "mandiram" (temple). She even points out that in L'escalier there are three kovils. The first one for the high castes, the second one for the low castes and the last one for the lowest castes. At la Barraque kovil the priest still asks about caste before performing prayers. She further argues that she prays <i>Mahavishnu</i> and this god is a high caste. She remembers that a low caste woman once came in the mandiram and she was slapped by a high caste man; she was even asked to go away. The Tookay kovil at Camp Diable is for the high caste.</p> <p>In making friends- caste was unimportant</p> <p>The interviewee's father in law considered the caste issue when he married his children. One brother in law of the interviewee married a low caste. He did not inform his parents, he went to marry at the girl's place because he knew that his father would make issue concerning the caste of the girl. When he returned home with his bride he was beaten by his elder brother. The low caste girl was ignored by her in laws, for instance, for new year everybody were invited except her. The father in law never talked with her daughter in</p>		

	<p>law. Once the girl's mother came and the father in law told her that she is a low caste. The low caste girl was fed up and in the end she left her home. However the interviewee, whose caste was higher than her in laws, was well treated as compared to the other daughter in law who belong to a lower caste.</p> <p>The high caste put a "godna" (tattoo) on their forehead. The chain that a bride receives from her in laws when she get marry is different, for instance, the one for the high caste is in the form of a betel leaf and the one for the low caste in the form of a bowl. The high caste put a "phooli" (piercing) in their nose.</p> <p>As far as work is concerned high caste used to beat low castes with whip. The interviewee father in law got beaten by a high caste.</p> <p>The high castes used the well n the locality, low castes did not have the right to use it. The low castes used taps. In the past only high castes became <i>sirdar</i>. Now any caste can become a <i>sirdar</i>.</p> <p>There were dhobis in the locality; they are considered to be low caste. The high castes never give them clothes to wash. Only the wealthy people took the service of the dhobis.</p> <p>When the interviewee married her children she considered the caste factor. One of her daughter in law is a <i>Hindu</i> but from the <b>Babujee</b> caste. However her daughter married in the Tamil community and not in a high caste. But the boy stays at his in law's place and even started to adopt the rituals and customs of the Telugu.</p> <p>Politics- ethnic factor important</p>
Personal Observation	The caste factor is important for the interviewee. The daughter of the interviewee also agrees that her mother still attaches importance to caste.
Remarks	At some point when the interviewee mentioned the word "cochon" (pig), her tone not only changed but her expression as well changed. She made an expression of repugnance.

General review	<p>The interviewee is 76 years old. She has four children. She has only one sister who lives at Mare D'albert. Her father worked at La Jonchée as <i>sirdar</i>. Her mother was a at Ferney. The interviewee reared cows and hen. She got married at the age of fourteen. She lived in the camp Mon Desert Mon Trésor. The interviewee is from the "<i>kanpolou</i>" caste. Her father too was from the same caste. The interviewee mother on the other hand was a "<i>salolou</i>". The interviewee has a <i>godna</i> on her forehead.</p>		
Summary of main points	<ul style="list-style-type: none"> <li>• She was already working by the age of nine and she stated that her <i>sirdar</i> was a <i>maraz</i>.</li> <li>• Her uncle looked at the caste issue before marrying her.</li> <li>• The interviewee's sister married in a low caste. The husband was a drunkard and her sister left her husband.</li> <li>• The interviewee had friends from different ethnic groups.</li> <li>• She did not go to school; she went to mandiram. There caste was unimportant.</li> <li>• She told us that once she was helping in a wedding at Mon Desert Mon Trésor; more precisely in the estate camp of Mon Desert Mon Trésor, she was helping to fill water. A lady threw all the water she filled, because that lady was unaware of the caste of the interviewee. The interviewee mother in law even went to fight over there because of that issue.</li> <li>• The high castes people perform prayers prior to the low castes people.</li> <li>• High castes and low castes used the same taps for filling water.</li> <li>• Both high and low castes used river water but the interviewee went to another place in the river to bath (in the upper course of the river as she was of high caste).</li> <li>• Low castes did not have the right to cook food in high castes weddings. The interviewee grand mother went to weddings but never ate there.</li> <li>• High castes gave the sacrifice of "bouc" (goat), the low castes on the other hand gave the sacrifice of pig.</li> <li>• Both castes dressed in the same way.</li> <li>• She considered the caste issue when she married her children. Even for her grand children, the interviewee stated that she will take the caste factor into consideration.</li> <li>• Before voting, she does not look at the castes of candidates.</li> </ul>		
Personal Observation	<p>The caste factor is important for the interviewee. She also tends to think that because of caste that the wedding of her sister and brother in law came to an end. The question of purity also seems to be important to her. This was confirmed when her neighbours stated that she still does not eat at low castes weddings.</p>		
Remarks	<p>When she mentioned the word "cochon" (pig) her tone changed. She started playing with her hands. She seemed a bit hesitated to admit that <i>telga</i> was the highest caste. She was giving us the impression that her caste is the highest. For instance during field work; she told us "mo bien grand nation moi" (I am from a high caste). Now that she had to admit that <i>telga</i> is the highest; she seemed a bit embarrassed. Please note that the consent form was explained before the interview to the interviewee. After the interview, she told us that she looks at only party and then vote.</p>		

INTERVIEW CD REFERENCE NO:	TJC/OH07/SG.DT/Interview GS19/A/TROIS BOUTIQUES/ 28/05/2010		
FOLDER No:	M/A134		
Interviewers:	Dreesha (Research Assistant) and Smita Gya (Researcher)		
Name of Interviewee:	G.S.	Anonymous	
		Not Anonymous	✓
Ethnicity:	Telugu		
Location of interview :	Trois Boutiques, at his place		
Date of interview :	28 May 2010		
Starting time: 11 00	Finishing time: 12 07	Duration: 1 hr 07 mins	
Mode of recording:	Audio-phone		
Language used :	Creole		
Sound condition:	Good		
Other people present:	None		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• The interviewee is 63 years old. He is also known as Dev. He was born at Trois Boutiques. He stated that he is from the <b>Telgavolou</b> gotra (caste).</li> <li>• He has two sons and one daughter. All of them are married. One of his sons even married a <i>Hindu</i> girl. (Before the interview he told us that he is proud to have a <i>Hindu</i> girl in his family.)</li> <li>• He has three sisters. His father worked as <i>sirdar</i> at Savannah Sugar Estate and his mother as at Mon Desert Mon Trésor Sugar Estate.</li> <li>• Many of his nephews married in the <i>Hindu</i> community. Her wife’s family belongs to the <b>salolu</b> caste. According to him, there is not a big gap between the <b>telga</b> and <b>salolu</b> caste.</li> </ul>		
Summary of main points	<ul style="list-style-type: none"> <li>• Caste was as per occupation, For instance, the <b>salolou</b> sew clothes, and those who made shoes were considered as low castes. The hairdressers were also considered as low castes. He mentioned several castes like: <b>Brahmans</b> who represent intelligence, then the <b>kshatri</b> who represent the arms, the <b>Vaish</b> who represents the stomach and the <b>shudras</b> who represent the feet. He also mentioned the caste <b>manlolou</b>.</li> <li>• Low castes were made to sit outside and the “banc” (bench) on which they sat, was kept in a garden.</li> <li>• Castes were important in the past, for instance high castes did not mingle with low castes.</li> <li>• He told us that once an engagement was broken a few hours before because they learned that the boy at a time was working as hairdresser and the hairdresser job is considered as a job performed by low castes. They blamed the family that they hide the caste of the boy. (But it should be noted that the family was a high caste only the occupation of the descendants were hairdresser).</li> <li>• Parents did not let friends from other ethnic groups to enter their house.</li> <li>• At school caste was not important.</li> <li>• His family ask about the gotra (caste) when they go to see a girl for marriage.</li> <li>• Presently, according to the interviewee, caste is disappearing in Trois Boutiques.</li> <li>• He stated that the low castes are progressing now, for instance they are more intellectuals in their house as compared to high castes. (Here the interviewee mean that low caste are sometimes more educated than high caste people)</li> <li>• He also knows about caste in the <i>Hindu</i> community, he mentioned that some castes in the <i>Hindu</i> community do sacrifice of animals, some gave the sacrifice of “coq” (cock) and “bouc” (goat) and others did the sacrifice of pig.</li> <li>• Brahman who did prayers at low castes place did not eat there.</li> <li>• He stated that the dhobi were of fair complexion and they were really beautiful people.</li> <li>• At work, caste was not important. They look rather at the personality (character) of the person.</li> <li>• Both castes (high and low) had the right to go to kalimaye and mandiram.</li> <li>• He also talks on politics. For instance the politicians refused to put two high castes candidates to contest election in the same constituency.</li> </ul>		
Personal Observation	<ul style="list-style-type: none"> <li>• The interviewee seems to know about caste from publications and documentary films. For instance, he talks about Swami Dayanand and even makes reference to the bible and the situation in India.</li> </ul>		

	<ul style="list-style-type: none"><li>• After the interview he told us to watch some documentary films on a specific channel, where we will get more information on caste.</li><li>• The interviewee, even though he is from the high caste, he is not too strict about the caste factor, because after the interview he told us that he goes to eat at low castes' places also. The fact that he does not attach too much importance to the caste issue can be explained by this fact</li></ul>
Remarks	<p>There was an expression of pride when he stated that he is a <i>telga</i> (high caste). He was much hesitated when he mentioned the word "<i>Ti cochon</i>" (pig). Whenever he mentioned the word "<i>cochon</i>" he played with his hands. At some point he did not even wanted to mention the word <i>cochon</i> and instead he said "<i>bel bel zafer la</i>" (these big things). There was a smile on his face when he mentioned that, he also looked down. At a point he stated that in the <i>Hindu</i> community there is a group who did prayer with pigs, at that time he lowered his tone and looked around him.</p>

Ethnicity:	Hindu		
Location of interview :	Union Vale, Trois Boutiques		
Date of interview :	03 June 2010		
Starting time:11 01am	Finishing time:11 19am	Duration: 18 min	
Mode of recording:	Audio-phone		
Language used :	Creole & Bhojpuri		
Sound condition:	People talking behind and background noise		
Other people present:	Her children and her neighbour		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• The lady at first was very reluctant to talk. She agrees to do the interview only when her son convinced her that the interview will last only a few minutes. Consequently the questionnaire could not be administered properly and I had to go directly on the subject. The interview was done in her garden.</li> <li>• Mrs. Boodhun is over 80 years old. Her mother was Bengali (In Mauritius often confused/considered as a caste).</li> <li>• She got married at 9 years old and she gave birth to 13 children</li> <li>• <b>She is one among the oldest people who lives in Union Vale estate camp</b></li> </ul>		
Summary of main points	<ul style="list-style-type: none"> <li>• She confirmed the fact that caste system did exist in the past. For instance she said that people from the Kurmi caste will marry only within their caste</li> <li>• Her parents used to live at Camp Diable, and then they moved to Union Vale estate camp, where she presently stays.</li> <li>• Jaat (caste) was very important when wedding took place</li> <li>• She stated that in Union Vale presently there are people of the following caste: <b>Chamar and Doosad</b></li> <li>• 'Madras' (Tamils) was defined as being a 'nation'</li> <li>• She stated that <b>Bhouya</b> is a 'ti nation' (low caste)</li> <li>• <b>Rabidas</b> caste used to sew shoes, and they are considered as being among the lowest caste</li> <li>• (The purity factor was present), for instance if a <b>Doosad</b> or a <b>Chamar</b> sat on a bench, it had to be washed</li> <li>• In the past, in High caste weddings, low castes were not invited</li> <li>• And if ever they were invited then a separate table was kept for the low caste people</li> <li>• (Purity factor) if a <b>Chamar</b> or <b>Doosad</b> went to fill water from a tap, the Brahmin caste would not touch the buckets of those low caste but will take water from the tap in a another bucket</li> <li>• If wedding took place at a <b>Chamar's</b> place, the high caste people would neither attend that wedding nor would eat there</li> <li>• (She is aware of Kaccha/Pakka); she said that if a <b>chamar</b> is a gardener, then the High caste people may buy his/her vegetables but if food is cooked by a low caste then the high caste people would not accept that food</li> <li>• Moreover when a Brahmin came to perform prayers at the houses of low caste people then he used to only take the <i>dakshina</i> as this is bought not cooked, he would not eat there</li> <li>• Long ago, people used to ask about other people's caste. If ever a low caste came at the place of a high caste for fixing matrimonial alliances, high caste people would not give water to drink of a bench to sit to that low caste person.</li> <li>• High caste people would not drink water at the house of a low caste</li> <li>• Before, each caste had to look for a bride/bridegroom in his/her own caste. Presently it is not the case, inter-caste marriage do take place</li> <li>• Previously, if a daughter-in-law came from a low caste family, she had to endure the swearing of her in laws. Some sons were obliged to leave the house of his parents because he married a girl from a low caste</li> <li>• Both low caste and high caste dressed the same way</li> <li>• She considered the caste factor when marrying her children but could not do so for all her children. Some of her children married in other caste than that of hers</li> <li>• There was one <i>kalimaye</i> in the locality and both high and low caste used to pray there</li> </ul>		

	<ul style="list-style-type: none"> <li>• The occupation of <i>sirdar</i> was based on education rather than on caste factor. There were also <i>sirdars</i> of low caste</li> <li>• The 'Whites' did not use the term 'grand nation/ti nation' at the workplace</li> <li>• At first she said that <i>Baharia pooja</i> was performed by all castes, and then afterwards she said the contrary. The animal sacrificed differ; high caste sacrificed goats and low caste sacrificed pigs</li> <li>• All caste used to have a <i>godna</i>(tattoo). The significance of the godna is that if you have a godna then "when your mother dies, you will go to meet her one day"</li> <li>• Bengali women used to have a godna on their forehead and also on their hands and arms</li> <li>• A Doosad or Chamar had to marry his/her son/daughter in the same caste not in a higher one</li> <li>• She confused ethnicity with caste</li> <li>• One of her son married a Christian girl. Another son married a girl for a lower caste, she was forced to accept as it was a love marriage</li> <li>• She was proud to reveal that her daughter and grand-daughter married in her own caste (Ahir)</li> </ul>
Personal Observation	Caste was very important in fixing wedding. Parents had to accept that their children married a lower caste only if it was a love marriage
Remarks	ALL QUESTION COULD NOT BE ADMINISTERED TO HER AS SHE HAD RESPIRATORY PROBLEMS AND WAS IN A HURRY TO FINISH THE INTERVIEW. ONLY KEY QUESTIONS ABOUT CASTE WERE ASKED.

		Not Anonymous	
Ethnicity:	<i>Hindu</i>		
Location of interview :	Plaine Magnien, at her place		
Date of interview :	07 July 2010		
Starting time:13 00	Finishing time:14 01	Duration: 1 hour 1 min	
Mode of recording:	Audiophone		
Language used :	Creole and Bhojpuri		
Sound condition:	(background noise)		
Other people present:	Her daughter in law and her grand children		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• The interviewee is 80 years old. She has seven children- 4 sons and 3 daughters. She is from the <b>Babujee</b> caste group (high Caste). When she stated that, there was an expression of pride in her face. Her tone also became louder.</li> <li>• The interviewee's father in law was an indentured . The latter came to Mauritius from Banaras. As far as her mother in law is concerned, the latter's father was bringing indentured s to work in Mauritius (He was an agent).</li> <li>• Her husband and also her father in law were very strict about the caste issue. Before the interview (when she was alone with us). She told us that all her children married in the <b>Babujee</b> caste group; only later in the presence of her daughter in law she revealed that one of her son married a Telugu girl. And the interviewee blushed and her tone changed when she revealed that.</li> <li>• Therefore it can be seen that, the interviewee tried to conceal things; especially that one other daughter in law is a Telugu. But in the presence of another daughter in law, she had to reveal it. It should be noted that, the daughter in law, who was present during the interview was also from a high caste. In fact the daughter in law caste is higher than that of her in laws. When we asked the interviewee whether she eats at low castes wedding; She said yes. But her daughter in law contested that in some way and pointed out that they do not eat at low castes wedding. She did not say that her mother in law does not eat at low caste wedding directly; but she said that at her parents' place (mother and father place), they did not eat at low caste wedding. When she was saying that, she was making a sign to us that her mother in law too does not eat at low caste place. After the interview, the daughter in law told us that her mother in law so not eat at low castes weddings.</li> <li>• When talking about the <b>chamar</b>, she seemed very embarrassed.</li> <li>• The interviewee is of fair complexion (which is attributed to high caste people) and when we asked her about the <b>chamar</b> caste, she blushed. There was a smile on her face, she began playing with her hands and look at her daughter in law. One of her daughter married in the N..... family, supposedly a high caste. When saying that, there was an expression of pride on the interviewee face. When we asked her to give more details on <i>Rahh pooja</i>, (previously performed by the low caste people), she again blushed, smiled and started playing with her hands.</li> </ul>		
Summary of main points	<ul style="list-style-type: none"> <li>• She mentioned several castes like: <b>ahir, dhobi, kurmi, Vaish, nonia, dhobi, Halwaai, chamar</b>. In the past people did not like to marry their children in the <b>dhobi</b> caste. She laid emphasis on the caste issue when she married her children. She stated that they all married in the <b>Babujee</b> caste group. Only one son married in Telugu.</li> <li>• At school- caste was unimportant</li> <li>• The interviewee stated that at home, they used to talk about caste.</li> <li>• In the past, high caste did not eat in the wedding of low castes</li> <li>• According to her in the <b>Babujee</b> names there is the suffix Varma and in the <b>maraze</b> name there is Sharma or Chowbey.</li> <li>• She mentioned the caste "gossayne" (High caste) which accordingly is both <b>maraze</b> and <b>Babujee</b>.</li> <li>• She stated that B..... who was from the <b>kshatri</b> caste, and tried to break the caste system in Mauritius but failed.</li> <li>• She stated that the low castes' way of talking were different and she used the word "grossier" (vulgar) and "batayer" (someone who like to fight), in order to define their way of talking.</li> </ul>		

	<ul style="list-style-type: none"> <li>• She told us that in Plaine Magnien, there is a particular place where all people of <b>Junglee</b> caste (a sub caste) live. She added that all <b>junglee</b> are of dark complexion and they married among themselves. She refused to marry her daughter with a boy from the <b>junglee</b> caste, even though the latter had a good job.</li> <li>• She seemed proud of her fair complexion and a bit shy about her Telugu daughter in law's complexion. After the interview she told us that all her daughter in law are of fair complexion, only the Telugu daughter in law has a dark complexion. When we tried to investigate whether there is a link between complexion and caste, the interviewee stated that high castes were of fair complexion and low castes of dark one. However this statement was not recorded.</li> <li>• High castes daughter in law who married in low castes house refused to eat the food cooked by their mother in law.</li> <li>• Concerning politics- for her party loyalty shapes voting behaviour.</li> </ul>
Personal Observation	<ul style="list-style-type: none"> <li>• Caste factor among the high caste, here referring to Babujee caste, is very important</li> <li>• People from high caste still don't eat at the wedding of low caste people. They do attend the wedding but won't eat there</li> <li>• The interviewee's father in law was a recruiting agent of s from India. May be his caste played a key role for this occupation</li> </ul>
Remarks	<p>This is a very interesting case study whereby the interviewee shows interest in talking about the caste system in Mauritius.</p> <p>In this interview we learned about a new caste, the 'junglee', perceived as a low caste in Mauritius. These people are viewed as people of dark complexion and of bad manners, especially for being impolite. The interviewee stated that they lived in a remote hilly place of Plaine Magnien and people of this caste have a tendency to group together.</p>

Name of Interviewee:	S.G.	Anonymous	
		Not Anonymous	✓
Ethnicity:	Hindu		
Location of interview :	Plaine Magnien at his place		
Date of interview :	16 July 2010		
Starting time:9:30am	Finishing time:10:30a.m.	Duration: 1hr	
Mode of recording:	Audiophone		
Language used :	Creole		
Sound condition:	Background noise		
Other people present:	His wife		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• The interviewee is 70 years old.</li> <li>• He worked as at Mon Desert Mon Trésor S.E and also as driver at Aviation Civil.</li> <li>• Presently he is not working. He has four brothers.</li> <li>• He has four children; two daughters and two sons. He has six grand children.</li> <li>• He does not remember his grandparents, more precisely from the maternal side. But he remembers his grandparents- paternal side. His grandfather was a <i>sirdar</i> at Gros Bois and his grandmother reared animals.</li> <li>• From information we obtained from field work; we learn that the interviewee is from the <i>Ravived</i> caste.</li> </ul>		
Summary of main points	<ul style="list-style-type: none"> <li>• For the interviewee one's caste is shaped by his/her occupation. He mentioned several castes: chamar, Halwaai (they make cakes), naw (hairdresser), telli (they made oil), maraze (priests), ahir and koiri.</li> <li>• The interviewee stated that, there was a suicide at Mahebourg because of the caste issue.</li> <li>• His grandmother told him that in the past, they choose people as per caste in weddings to make them eat.</li> <li>• There were more creoles in the civil service. The <i>Hindus</i> on the other hand were dominating in the agricultural sector. <i>Hindus</i> were baptized to get job. Even Mon Père (Priest) asked people to be baptized so as to get job as teacher.</li> <li>• Concerning the way of dressing, godna and in the making of friends, caste was not important.</li> <li>• Concerning politics- Part loyalty is more important.</li> <li>• There were different kalimaye for each caste.</li> <li>• The interviewee attended Rahh ke pooja.</li> </ul>		
Personal Observation	When talking about caste, the interviewee tone was quite loud. He seemed angry. At one point we even took a pause. The interviewee told me, that there had been many injustices due to caste issue. People of high caste did many "dominière". I also tried to ask him about his caste identity when we took a pause but he simply told me: "mo pas in dire ou mo pas croire lor la!".		
Remarks	The facial expression of the interviewee is the same as that of a person who had been victim of injustices and the latter is trying to voice out. The interviewee told us that he does not believe in the caste system but his neighbours (information obtained during field work) stated that he does not mingle with the high castes. Taking the case of Mr. Gopaul he seems ashamed to reveal his caste identity that is why he preferred to tell me that he does not believe in the caste system. Some days after the interview, I met the interviewee and he told me that he is Ravived.

Name of Interviewee:	P.B.	Anonymous	
		Not Anonymous	✓
Ethnicity:	<i>Hindu</i>		
Location of interview :	L'escalier at her place		
Date of interview :	12 July 2010		
Starting time:14 00	Finishing time: 14 50	Duration: 50 min	
Mode of recording:	Audiophone		
Language used :	Creole and Bhojpuri		
Sound condition:	Background noise		
Other people present:	Her sister in law; the latter also participated in the interview		
Technical problem:	None		
General review	<ul style="list-style-type: none"> <li>• The interviewee is 63 years old. She lives at L'escalier. She grew up and even got married at L'escalier.</li> <li>• She has two brothers and four sisters.</li> <li>• Her mother and father worked as at Savannah Sugar Estate. They also reared animals.</li> <li>• The interviewee has five children; three daughters and two sons. She got married in the Halwaai sub caste. Her parents were chamar.</li> </ul>		
Summary of main points	<p>For the interviewee someone belongs to a particular caste because of his/ her occupation. For instance those who were educated were called Brahman, those who worked with leather were called chamar, those who washed clothes were called dhobi, those who made garland were called malli, those who cook cakes were called halwaai, those who made utensils of clay were called kahar.</p> <p>She told us that the dusads reared pigs and they did "raah ke pooja". She even explained us how this ritual was carried out.</p> <p>Her children are married in high castes.</p> <p>When she was a child she had friends from different ethnic groups. In making friends caste was not important.</p> <p>High castes did not eat at low castes place. The high castes did not eat in the utensils of the low castes</p> <p>Both high castes and low castes were allowed to go in temples.</p>		
Personal Observation	<p>So far concerning our other interviews, when we ask a woman about her caste identity, she does not tell us the caste of her husband, which has become her caste too after marriage. They tend to tell us the caste of their parents. They first of all identify themselves with the caste or sub caste that they belonged to before marriage. However when we asked Mrs. Boodhun about her caste identity; she told us she is halwaai (the caste of her husband).</p>		
Remarks	<p>The interviewee was very hesitant to talk. When she mentioned that her parents were ravidas, she played with her hands. She seemed very embarrassed.</p>

General review	<p><u>Background Information</u></p> <p>The informant was a Muslim man of 86 years old. He was born at Caroline. He did not go to school. He married at the age of 18 years old. He has 5 children. He worked as a merchant selling flower pots, culinary tools, home tools and equipment in his mobile van from street to street.</p> <p><u>Grandparents:</u></p> <p>His grandmother's name was Chandi and she lived in Grande Retraite. She was a housewife and used to look after him and his brother.</p> <p><u>Parents of the informant</u></p> <p>He did not know her mother. His father did not go to school. His father had two sons. His father had re- married another woman and thus got a step brother. His father worked in the fields of Constance sugar estate. His father also worked in the lawn of the whites.</p> <p><u>Work:</u></p> <p>At the age of 10, he cut canes and performed 'dépaillage'<sup>4</sup> in the fields. He also worked as a pest killer and spread fertilizers and fumigants in people's house to prevent against harmful insect like Malaria. He had around 15-20 years of working experience in this field.</p> <p><u>Marriage:</u></p> <p>He married when he reached 18 years old. He mentioned that long ago, Muslim marriage was almost the same. It's nowadays that it is being celebrated with more enthusiasm. He also stated that in 'Nikaah'<sup>5</sup>, everybody group together and read kuran and had dinner.' The 'Miaji' also known as 'Imam' (Muslim priest) was the one who perform the marriage. The Muslim priest needed two witnesses for the marriage ceremony. He also told that Muslim marriage was similar to Christian marriage.</p> <p>According to his daughter in law, before fixing a marriage, in Muslim community, they had to look for lunar period which is auspicious for the marriage.</p> <p>The informant stated that marriage in the same clan was not allowed.</p>		
Summary of main points	<p><u>Life in village:</u></p> <p>In Grande Retraite long ago, there were many straw houses where all Muslim, 'maraz' and Hindu were all mixed and living in the same village. He still remembered during cyclone carol in 1960, there were only houses made up of straws and there was a single Muslim house and 3 Hindu families living in the village. One of the Hindu possessed an iron sheet while the other two lived in straw houses. Clothes were available to the residents of the village, but many could not afford as they were poor and did not have enough money. There was very few shops available during 1945, thus people were provided with rations and even benefit credit facilities with the shopkeepers.</p> <p><u>Relationships with other communities:</u></p> <p>He had a nice relationship with other communities as he used share cakes during Eid or any other festivals.</p> <p><u>Socio religious groups:</u></p> <p>In this village, long ago, there was no mosque, recently a mosque and a madrassa were built. In this madrassa only kuran book was being read in Urdu not in Arab. The kuran nowadays have many versions in Urdu, English, French, Arab, Creole and Urdu. According to his daughter in law, children are at ease to understand kuran in Creole translation than other languages.</p>		

	<p><u><i>Religion and Rituals:</i></u></p> <p>The informant said that in the past, there was no mosque at Grande Retraite. He had to go on foot to Bon Accueil mosque. He had to go Brisée Verdière mosque during Eid festival to do 'Namaz' prayer. For doing namaz prayer, man had to wear 'bonnet'<sup>6</sup>. In 1968, Muslim men used to wear red and black cap. He spoke about when a Muslim child is born, Allah send a 'pharishta' with the child. He also mentioned that everything one does, Allah is listening and the prophet convey all the messages of Allah to the humanity. He said that the Muslim festivals were all same in the past and is still being celebrated. According to him, among <i>Hindu</i>, Puranic and Vedic are just two different names, but the prayers are same.</p> <p>He remembered 'ghoon' festival which was celebrated mostly in cities in the past. Piercing in belly and other parts of body was a type of game which brought a sense of happiness.</p> <p><u><i>Caste:</i></u></p> <p>His daughter in law mentioned that the difference in caste lies just in prayers being performed. She said that there were castes like Sunni and Shiah. It was a small difference in prayers. She further explained that the prayer that made this difference was known as 'fathiya'. Though there are many castes, yet, he revealed that there is only one prophet. This prophet is known as Mohammad but he had many assistants. He did not bother about the Gujratis.</p>
Personal Observation	He did not want to talk about caste issues and preferred to stay quiet. He was a religious person and always refers to Allah. He had a nice relationship with his neighbours from different communities.
Remarks	He also did not like to share in details his religious belief regarding prayers he usually performed.

Other people present:	Grandchildren and neighbour.		
Technical problem:	None		
General review	<p><b><u>Background Information</u></b></p> <p>The informant is a widow of 72 years old. She was living with her grandparents. She has been the president of old age group of Petite Retraite since 11 years old. She is a 'snack seller'<sup>7</sup> in textile factory of Denim De L'île Ltée.</p> <p><b><u>Grandparents of the informant:</u></b></p> <p>Her grandparents were living together with her parents.</p> <p><b><u>Parents of the informant :</u></b></p> <p>Her parents had 5 sons and 1 daughter. Her brothers died due to 'dysphonic' disease during Sir Seewoosagar Ramgoolam period, when he was practicing medicine in Mauritius. She added that the Dr Ramgoolam had been treating these cases.</p> <p><b><u>Education:</u></b></p> <p>She went to Laventure and Bois D'oiseaux primary school. She had studied till Form I at Darwin college of Flacq. She pointed that previously there was only 'below and first'<sup>8</sup> and there were no tuition facilities.</p> <p><b><u>Childhood games:</u></b></p> <p>Though she was already married, she was very childish and used to play marbles with boys, sap si yai, play with elastic bang, feathers of coq, skipping ropes made up of piled of long strong grass known as ' laliane'</p> <p><b><u>Marriage:</u></b></p> <p>She was married when she was 13 years old. Her grandparents had chosen her groom. Her marriage was celebrated till 8 days where 'geet gawai'<sup>9</sup> function was being held all these days. Her marriage was done in puranik.</p> <p><b><u>Living conditions of the informant:</u></b></p> <p>She lived in a straw house with her husband but she was not happy in her in law's house and returned to her parent's house after one week of her marriage.</p>		
Summary of main points	<p><b><u>Life in village:</u></b></p> <p>She mentioned that previously life was difficult, as one had to work or rear animals, save money, rear children, buy land or something else. Even renting a house was expensive. They had to eat boiled sweet potatoes, boiled cassava, and 'satwa' and maize rice in the absence of rice. According to her, Petite Retraite was a good place, were initially straw houses were present and afterwards houses were congregated of iron sheets.</p> <p><b><u>Ethnic group/Caste:</u></b></p> <p>In Petite Retraite, she said that there were no Creole and Muslim communities. There was only <i>Hindu</i>, Telugu and Tamils. Among the <i>Hindus</i>, she explained that people of Ahir caste were in majority in the village.</p> <p><b><u>Baithka:</u></b></p> <p>She went to <i>baithka</i> to learn Hindi. There were two <i>baithkas</i> in the village; one of them was for the 'parjatiya' and other to the low caste. The <i>baithka</i> for parjatiya was found next to a kovil of the main road of Petite Retraite, while the other was found at a person's garage. Her grandparents did not see high and low caste and send her to Mr. Bhunjun's garage. In both <i>baithka</i>, activity such as 'Varshik Utsav was organised on a yearly basis. In these <i>baithka</i> she revealed that the names of people donating for the <i>baithkas</i> were being voiced out in public<sup>10</sup>.</p>		

	<p><b><u>Kalimaye :</u></b> In the kalimaye of her village, people used to sacrifice 'khasi'<sup>11</sup> and 'pathi'<sup>12</sup>. In the past, she mentioned that the meat of the sacrificed animals were being cooked in the kalimaye itself and later on people used to take the raw meat as an offering at home and prepared for food. Nowadays, she said that people no longer do such sacrifices in the kalimaye.</p> <p><b><u>Rituals:</u></b> She indicated that in puranic marriage, the sister in law was one who had the right to put vermilion on the bride's forehead after the groom application of vermilion on the bride's forehead. But in Vedic, this was not the case, only the groom put vermilion on the bride's forehead in the bride's room not in 'Mandap'<sup>13</sup>. High caste people performed rituals for 'grand dimoune'<sup>14</sup>. For the rituals, she indicated that these people offer the spirits 'roti'<sup>15</sup>, 'sardine'<sup>16</sup> and 'tapawan'<sup>17</sup>. While low caste (Ravidas) people sacrifice pigs when a son is born in the family to their 'khul Devta'<sup>18</sup> within 40 days. She revealed that the small dough which was offered to the spirits during this prayer was cooked together with the pork meat. She also stated that Durga pooja was not being performed in the past. She herself performed Durga pooja for 9 years continuously and invited many people at her place.</p> <p><b><u>Marriage and Caste :</u></b> In the past, she explained that grandparents did not let children to grow at age of 16-18 years old, thus, they married these children at a younger age. She revealed that her father made a big sin in marrying another woman from another caste in spite of her present wife. Thus, an elder person from the Ahir caste in the Petite Retraite gave him a punishment and was a lesson for all the people committing a similar mistake. Her father had to wear a garland of garden snail and make round the village with this garland. Her father did not say a word as he was guilty. She said that almost all her children had married in 'Monton' caste except one in Baboojee as her son had a love marriage. The Baboojee caste did not bother about their caste since 'Monton' caste was considered high caste and the boy possessed a good job and a house. She also indicated that now intermixed marriage are becoming popular like Creole and Tamils are marrying persons from other ethnic groups.</p> <p><b><u>Caste:</u></b> She spoke about low caste people were being looked down by high caste people in the past at any event. Even if someone of high caste invited a low caste person to give a help in a function at his place, other relatives (high caste people) were mocking these low caste people and they were looked down.</p>
<p><b>Personal Observation</b></p>	<p>She demonstrated her childhood games she played with her friends. However, when she talked about caste system in her family, she was lowering down her voice and looked a bit scared. She was afraid if someone of her family members entered in the living room while talking on this issue.</p>
<p><b>Remarks</b></p>	<p>She was very friendly and happy to impart her life experience. She gave a lot of examples regarding her own life and others on caste and religious issues.</p>

General review	<p><u>Background Information</u></p> <p>The informant is a widow of 82yrs old. She was born at Rivière du Rempart. She was the sole child of her parents. At the age of 16, she married and she came to live at Bois D'oiseaux in an extended family. She has three children. She was a and worked for planters. Her husband had his own ox cart. She came to live with her nuclear family at Petite Retraite.</p> <p><u>Parents of the informant</u></p> <p>She did not know her mother as her mother died shortly after her birth. His father plant tobacco on his own plot of land.</p> <p><u>Grandparents of the informant:</u></p> <p>Her paternal grandfather was born in Mauritius and he died in 1982. He had been working as a <i>sirdar</i> in the planter's field.</p> <p><u>Education:</u></p> <p>The informant did not go to school.</p>		
Summary of main points	<p><u>Life in village:</u></p> <p>The village of Bois D'oiseaux had only one borehole, afterwards the residents were provided with a common tap and finally got private taps at home. She was poor, thus could not even buy clothes as she did not have money .She indicated that when the cyclone Carol passed away in 1960, houses were broken down. The informant's son mentioned that after 1982, there has been development in Mauritius like creation of jobs. She specified that in Petite Retraite, there was a village hall where the roof was of concrete. In this village, there was a Tamil shop on the main road that led to the camp.</p> <p><u>Wage:</u></p> <p>Her initial salary as was Rs. 1.</p> <p><u>Kalimaye :</u> In kalimaye, rituals were being performed by people every year. However, she pointed out "Roti"<sup>19</sup> was being offered to god in kalimaye. The informant's son related that in 1980's, goat was sacrificed in kalimaye.</p> <p><u>Religion:</u> Informant's son stated that Vedic movement 'Arya Samaj' was introduced by Pundit Mohit.</p> <p><u>Marriage and Caste:</u> In the past, she said that people were taking 'jaat- paat'<sup>20</sup> into consideration. One had to marry in the same caste as his/her. She further explained that if one marries in another 'jaat', he/she becomes a stranger in that family. However, if one marries in the same jaat, then all families and relatives are united.</p> <p>She revealed that in her family, except Muslims and Ravidas, she could marry her children to any caste and religion.</p> <p>She also indicated that high caste people did not let low caste people to touch their things especially preparing of food. If ever, low caste were seen to prepare food at one's place, high caste people will leave that place and go away.</p>		
Personal Observation	She could not relate too much as she was helping her daughter in law to prepare food. His son was interfering and did not let his mother to reflect about the past.		
Remarks	Her life was good but she was poor. She was very serious concerning caste system and did not mention her own caste. She gave general views about castes in her village and her own experience.

Sound condition:	Child making noise		
Other people present:	Wife of the informant, grandchild		
Technical problem:	None		
General review	<p><b><u>Background Information</u></b> The informant is 72 yrs old. He was born at Crève Coeur but he knows his history since living in the village of Laventure. His parents had 11 children: 7 boys and 4 girls. He worked as a rice planter, and vegetable planter.</p> <p><b><u>Parents of the informant</u></b> According to him, there was no work for people in the past. His parents reared goats and cows. His father was a seller also known as 'commerçant' used to sell dried foodstuffs commonly referred as 'grain sec' to get an income. In addition, his father also works as a caretaker in a school.</p> <p><b><u>Education:</u></b> There were no government schools in Laventure at that particular time, but he did join Aided School that was managed by the society in Laventure. He was about 12yr when he got opportunity to join the primary level (1<sup>st</sup> Std) for about 6 months and afterwards, the government took the school he could not continue as he had already reach the age of 13yr. His children could not complete their studies as school was not free at that time and they had financial problem. His children had studied up to form 5 level.</p> <p><b><u>Childhood Memories:</u></b> He used to go to school and went to cut grass also known as (coupe l'herbe). When the school had been constructed, his father worked there as a caretaker.</p> <p><b><u>Food</u></b> He highlighted that during 1942-1945, there was world war, they did not had enough food to eat, they used to eat 'biya bouille'<sup>21</sup>, 'manioc'<sup>22</sup> and ' fruit a pain'<sup>23</sup>. With the help of government they were able to manage.</p> <p><b><u>Marriage:</u></b> His father had chosen a girl for him to get married. He had no choice as there were lots of responsibilities regarding his family. He was pressurised to marry at the age of around 25yrs in order to look after his 6 younger brothers and 4 sisters. After marriage he had 5 children (2 sons and 3 daughters). He had to struggle a lot to meet the needs of the family.</p> <p><b><u>Work:</u></b> The interviewee highlighted that it was very difficult to get a job; sugar estates were not giving work at that time. Even 80% one has to work in the harvest period so they could be employed. At the age of 12years old, he quit school and started to work as a rice planter at Mare D'Australia. He used to walk for long hours to reach his work. He did not have a permanent job and worked as a temporary wherever he got a job contract. As a result, he started to plant vegetables including chillies in his own plot of land.</p> <p><b><u>Housing infrastructure</u></b> They were living in an extended family consisting of 25 family members. The informants had taken loan and money from people and even mortgage their jewels in order to get contract and build a house. The kitchen was made up of soil also referred as 'matti ke la cuisine' The house was being cleaned by applying cow dung on the floor which was known as ''maçonner''<sup>24</sup>. He informant's wife stated that when she first entered her in- laws house, the bedroom only consists of a single bed and a small chair. When his brothers settled down and his children also grown up, all of them built their own houses and lived separately.</p>		

<p>Summary of main points</p>	<p><u><i>Life in village:</i></u>                  In the past at Laventure, the lanes were too narrow. The roads were covered on both sides with grasses. Everybody used to live deep inside the village. In the past, there was a borehole from which they used to fetch water from it. Afterwards, the village inhabitants got water from water pumps. During drought period, they used to get water from someone who had sufficiently collected water. Long ago, many buses did not pass through the village and after long hours some buses came into the village. His children were not being able to continue their studies due to these transport problems.</p> <p><u><i>Wage</i></u>                  His father worked as caretaker and received a pay of Rs. 30 on a monthly basis. This salary was spent mostly on the studies of the children. As rice planter, he used to receive a salary of 50 cents per day at the age of 12 years.</p> <p><u><i>Socio Religious groups / Shivala:</i></u>                  In Laventure, there were two 'baithka'<sup>25</sup>, one Guruduth pathshala also known as 'Guruduth Arya Samaj' which was situated near his house. While the other Arya Samaj was far away almost at the other end of the village. Youngsters were not interested in joining the society and people build houses far away and could not walk to the Arya Samaj. Conflicts between families and long distances were the main cause for the establishment of the two societies. According to him, for any person, it was necessary to be part of a society to benefit all the facilities provided by them. The 'Pradhan'<sup>26</sup> were person who were taking decisions and tackle any problems that prompt up in the society. The Guruduth Arya Samaj had a major hand in the construction of the Vedic school. All <i>Hindu</i> went to these societies. (Note: He mentioned that in Laventure there were only <i>Hindu</i> and 2 Christian families )</p> <p><b>Facilities provided by Society:</b>                  The informant appreciated the facilities provided by the Arya Samaj society. Such as woods (lalvesse and bamboo) were provided to build houses. However, members of society also helped to cook food and provide free catering and good hospitality in marriages. In case of death, a compensation of Rs 2000 was provided to the grief family by the society. The grief family now receives an additional of Rs. 500 that is provided by the society from the government subsidies.</p> <p><b>Fine/ punishment in case of absentees in society:</b>                  He highlighted that in the past, if someone was absent in society ( Arya Samaj), the person has to pay a fine of Rs 5 and do 'hawan'<sup>27</sup> at his home as punishment for the number of weeks not visited or participated in the functions of the society. But, nowadays there are not such rules as youngsters are not interested to be a member or joined in this society.</p> <p><b>Shivala:</b>                  The interviewee stated that there is only one shivala present in Laventure commonly known as 'Jharnat Shivalaye'. It was the first shivala which was first constructed in Mauritius in this village, but it was not recognised to be the oldest temple as it was not registered at an earlier period. The informant never went to shivala as he is an Arya Samajist who believes that ''jahan yaad karo, bhagvaan wohi''<sup>28</sup>.</p> <p><u><i>Religion and Rituals</i></u>                  According to the informant, he mentioned that before there were Mumbai, Indians, Tamils and all communities, but no one knew anything about their background families as all live together. Being an Arya Samajist, he used to go to Arya Samaj society and do prayers at home. He mentioned that, ''Dharma par jiyah, dharma par kaam karah''<sup>29</sup>. They usually performed 'yaj'<sup>30</sup> every month among themselves and chant mantra of god 'gayatri mantra'. His father had knowledge of Ramayana, while in his case, he did not know much about it but he told that he had not forgotten his dharma. He mentioned nowadays people every Friday do Ramayana in society which was mostly absent in the past.</p> <p>He highlighted that Aneerood Jugnauth (Prime Minister at that period) insisted that Ramayan should be access to all and all learned persons should become priests and be good preachers and perform marriages.</p> <p>He added that a 'hawan' needs only a few items which are much cheaper to gather to perform the ritual. While prayers at the shivala need more items and it is more costly than performing a hawan. Furthermore, he said that god is not satisfied with money but with love, a simple offer of flower pleases him.</p> <p>In Laventure, they did not know about the type of rituals others performed at their home. He mentioned that some people used to sacrifice animals such as male goat known also as 'khassi' to please god.</p> <p><u><i>Politics</i></u>                  The interviewee affirmed that in elections there should not be any 'jaat- pat' all should be united. He stated that one should look for his own benefits and services and give a vote in the election. From 1967, he never voted 'MMM' political party as he always supported the 'Travailist' party, believing that this party had struggled a lot to win the elections. In addition, he felt proud relating that the party include majority of <i>Hindus</i> who are leading the country. He did not want break up of parties instead support one party that will lead a mandate up to 5years.</p> <p><u><i>Marriage including religion and caste:</i></u>                  In the past, there were lot of 'jaat-pat'<sup>31</sup>. The interviewee's wife related that she did not know about caste before her marriage at 19yr (around 1963's). She mentioned that she had first heard</p>
-------------------------------	--

	<p>about caste after marriage when arrived in Laventure. She related her own daughter's issues regarding caste system. Her daughter had loved a boy from a high caste family, though she was a low caste and did not know much on caste system, so she did not accept it.</p> <p>Moreover, she related another fact when she was a child at that time ( may be around 1950's), she witnessed a relative of hers ( <i>Hindu</i> boy)who brought a ' kilyoline'<sup>32</sup> at her place, ''père ale ba, robe pehenké, père ale ba beni karké lejay,Calcutteea lage kaise rahi''<sup>33</sup> The priest were forced to left by the certain person known as 'deputé'. The Christian girl was then converted to <i>Hinduism</i> through marriage and purification done by 'yaj' in the Arya Samaj mandir and she had to wear traditional <i>saree</i> like a <i>Hindu</i> bride covered from head to toe.</p> <p>Around 1990, a friend's son of the informant loved a Christian girl who was very fluent in Hindi. The Christian girl was from a sect known as 'bado'. These people from the sect are commonly reputed to be vegetarians and who do not work on Saturday. She went to London University and learned Hindi language and astonished everyone by her communication in 13 languages. Even the <i>Hindu</i> priests could not compete with her in talking. Nowadays she worked as a Hindi teacher. Thus, the <i>Hindu</i> man married the Christian girl and they have their children and lived a bit far from Laventure.</p> <p><u>Caste:</u></p> <p>The informant related that in the past, (time not specified) elderly persons especially people from abroad, and 'maraz'<sup>34</sup> use caste system to create differences between people. In addition, he added that residents including children of Laventure did not see the differences nowadays and all (high and low caste) live together.</p> <p>The interviewee's wife stated that though all castes seemed together now but radio is playing a crucial role by disclosing all such issues to public. (i.e. caste issues involving Vaish, Rajput, Arya Samaj, etc...) to public. Furthermore, she illustrated that, 'apan apan siri ke sab koy apan apan'<sup>35</sup>.</p> <p>These issues should not have been mentioned on radio as nowadays children are intelligent, going to school or colleges, moving together ( with high and low caste) and even ministers are implied with such get together.</p> <p>The informant's wife elaborated that upon her arrival at Laventure people were talking about 'jaat-pat'<sup>36</sup>. She further related that there is a majority of Vaish and Kowri castes among the inhabitants of the village.</p> <p><u>Conclusion:</u></p> <p>Comparing the life in the past and present, the past was very harsh to live than nowadays with so many facilities available. The interviewee's wife elaborated that how ancestors and elders in the past could manage together with their children to face the hardships. Furthermore, she added that nowadays, life is much better and the Prime Minister Ramgoolam had done lots for the welfare of people. Both people and the government help and got courage from each other to move forward in life.</p> <p>The informant even said that the ancestors had always been examples of good sources of cultures and values. The ancestors, who had taught these people, became good recipients who are practicing them and are in good path while others who could not understand these cultures and values, don't respect elders and go astray and away from dharma.</p> <p>Concerning, caste system present in Mauritius, he mentioned that 'jaat pat ke mithayke'<sup>37</sup> and caste should not be remembered and thought about such issues. If <i>Hindu</i> and Muslims are not living as brothers, how could they live with the people from abroad? So, <i>Hindu</i> and Muslims should be united to be a good example of brotherhood in the country to the people abroad. In the past, there was little intermarriage (between <i>Hindu</i> and Muslims or Christians) now these are mostly frequently seen.</p>
<p><b>Personal Observation</b></p>	<p>The informant was not keen to elaborate caste issues regarding different castes present in his village. He was restricted only to the Arya Samaj Society and did not know much about other societies. The wife of the informant could not relate much on the caste system because of interference of her husband.</p> <p>Though they stated they had to struggle lot in life, it could be concluded that nowadays they have a good living with a suitable concrete house and all the facilities and comforts.</p>
<p><b>Remarks</b></p>	<p>The informant seemed to struggle a lot to meet the basic needs of his family. He has elaborated establishment of Arya Samaj in much details rather than caste issues. The <i>baithka</i> plays a crucial role in people living in Laventure village.</p> <p>Being an Arya Samajist, he does not believe in idol praying and think that those who could not understand god's presence, they moved to shivala and other places. For him dharma is a great thing and one need to adhere to it in order to lead a virtuous life.</p> <p>In politics, he always support the '<i>Hindu</i>' as he believed that <i>Hindu</i> will lead the country and he still affirms that caste system still exist in the country especially during elections and he emphasised that it should not have been given such a great importance.</p> <p>He even stated that the new generation does not bother about the caste in their daily life.</p>

### 3. CASTES IN MAURITIUS: AN ANALYSIS

In Mauritius, in public, most people interviewed stated they did not lend much importance to caste considerations. However, community actions strongly reflect caste identities and show that this has not only remained strong in some areas but is re-emerging in new forms through the subsidizing of socio-religious associations and lobbies (Gahlot Rajput Maha Sabha, Arya Ravived Pracharini Sabha, or Vaish Mukhti Sangh, for example), all openly displaying caste differences and hierarchies. At the individual level, caste endogamy is still practised widely.

The contexts in which caste is still present in Mauritius, among descendants of indentured labourers are:

- Wedding arrangements
- Commensality
- Devotional practices (low castes sacrifice pork, high castes sacrifice goat or have stopped animal sacrifices)
- Politics (for national and local or even student elections, most of all in vote-catching strategies engineered by candidates),

where caste has ceased to matter during and after indenture are friendships, estate working conditions.

#### The Mauritian terminology and classification

In Mauritius (as in India), the caste hierarchy is not fossilized. The identification of each caste's place in the overall system is permanently debated and negotiable. Furthermore, it depends on the context, and on the people interviewed. This is another indication of the extent of mobility between castes and fluidity in definitions of caste.

As such flexibility existed in the original Indian system, it is not really possible to state conclusively that fluidity in caste relationships is a result of indenture and/or of a possible slowing down of casteism in the contemporary Mauritian context.

However, it is fair to say that indentured migration contributed to social mobility for some as those who wished for a higher caste identity were able to do so through changing patronymics or caste names. The Bhojpuri land, and its migration tradition, offers many such examples, whether it consists in adopting the name of a superior caste or attaching it to the original caste name, or adopting a generic name which is not a caste name. Kurmi, in India, asked to be recognized as Kshatriya Kurmi, for instance. Teli asked to be recognized as Vaishya and low caste Noniya want to become Cauhan (a Rajput - i.e. Kshatriya - clan name). Most interestingly, the untouchable Dusadhs decided in Lahore in 1923 (during the Dusadh Mahasabha) to become Rajput. Mauritian Dusadhs followed the trend and are also known as Rajput (a Kshatriya caste) today.

At first sight, Mauritians seem mainly concerned with caste as '*Varna*':

People are then classified as follows:

Maraz, corresponding to the Brahmin *Varna*

Babujee, corresponding to the Kshatriya *Varna*

Vaish, corresponding to the Vaishya *Varna*.

These three categories are better known as '*grand nation*', while all others are '*Ti nation*'. '*Grand nation*' correspond to the Indian 'twice-born' population.

*Maraz* and Babujee are sometimes referred to as 'high castes', and Vaish as 'intermediary castes', while others correspond to 'low castes'. Depending on the context, Vaish can also be 'high castes'.

Certain terminologies refer to occupational specialization: *Dhobi* are still associated with laundry workers, *Chamar* with leather workers, etc. In Mauritius, many even exclusively associate a caste name with an occupation. The Brahmin will then be the priest, even if many priests (in India and in Mauritius) are of lower caste. Even the funeral specialist, bound to be lower caste because dealing with the impurities of death, is called *katha maraz* only because dealing with ritual matters, but notwithstanding the fact he is certainly not a Brahmin.

Others confuse ethnic categories with caste ones, or mix both of them: some individuals are referred to as 'dhobi [*Hindu* caste name] Creole [ethnic terminology]'.

More generally still, the caste-*Varna* category is blurred by many other classificatory categories:

- The subdivisions of '*Varna*' in *jati*: Koiri et Kurmi for example, are cited as castes in Mauritius, but so are the all-including 'Vaish' category Koiri and Kurmi belong to.
- The subdivision in gotra: along lineage lines, such as gwalbansh, perceived as a caste in Mauritius (belonging to the Ahir category) whereas it was originally a lineage group only.
- Geographic origins: Tamils, Telugus, and Marathis are frequently assimilated to caste names.
- Ethnic categories: the '*Hindu* caste' category is also cited as an identity claim.

A tentative classification and organization of castes is presented, pending further research. The associated occupation is included in brackets:

- **GRAND NATION**

Brahmin - maraz [ritual and intellectual matters]

Babujee - Katri + Ahir [rear cows] (gwalbansh; dharor, ghanreri)

- **INTERMEDIARY CASTE**

Vaish - Kurmi-Koiri [planters, worked with turmeric] - Halwai [cooked sweet] + Telli [trade in oil]  
+ Kahar - [pottery makers] + Tohar (made iron)

Rajbhar - [fill water]

Bostom

- **TI NATION**

Time did not permit to study Southern and Eastern Indian practices.

In Mauritius, it appears that Telugus associate caste with *gotra* (clan) and organize them hierarchically. The most common Telugu *gotra* in Mauritius: TELGAOLOU [make oil], NAAGGOTU, CAMPOLOU/KANPOLOU, REIDCOLOU, MARKANDE, SALOLOU, NAVDEKTA.

Among Tamil-speaking, the main castes in Mauritius are:

## To what extent the Indian caste system has been replicated in Mauritius?

There are many similarities in Mauritius with the Indian system. The key-features of the Indian caste system

- Caste endogamy

Intermarriage (in terms of castes) has generally been taboo within the Mauritian Hindu community. Interviewees remember endogamy constraints and the difficulties faced by those who tried to bypass them until recently. Suicides or, at least, individual or familial dramas, are typically linked with controversial (exogamic) love-affairs and tentative marriages. Still today, it is not uncommon to hear about parents marrying their children according to caste criteria.

- The same logic as in India prevail in Mauritius, in particular a stricter control over the choice of girls' marriage partners. Parents will prefer marrying their son to a lower caste girl than their daughter to a lower caste boy.
- In the same way, as is the case in India, re-marriages (after divorce or widowhood) are classically arranged in a caste lower than that of the first marriage.
- Last but not least, women are secondary in the patriarchal caste system, in Mauritius as in India. They have no individual caste, passing from their father's caste to their husband's caste.
- Devotional practices that, in Mauritius, previously spearheaded by women (at home and at the local *kalimaya*) allowed them to maintain their pre-marriage beliefs, practices and individual habits or preferences (towards a shrine, a deity or whatever devotional practice).
- The growing institutionalization of devotion in Mauritius (i.e., replacement of *kalimayas* by monumental temples controlled by a male-members' 'temple society' and where a male specialist officiates, probably contributes to reducing Mauritian *Hindu* woman's free choice concerning the individual devotion they practice.
- Then, commensality

Until a few years ago, high-caste persons would not share their food, nor drink water, with low-caste persons, if prepared by low castes, or in low-caste houses. During low castes' wedding ceremonies, if a high-caste individual was invited, he would only offer a gift, without drinking or eating. During high-castes marriages, food will be prepared by high-caste members, and if low castes are invited, they would be served last, and eat separately.

In the estate camps, river water was shared by all, even if it seems probable that high caste people would be served first, and would bathe upstream. All castes were supposed to use the same taps, but certainly not the same containers for water. Certain wells were located close to high-caste houses, and were reserved for them.

- Purity

The purity factor was prevalent in Mauritius among indentured labourers and their descendants, leading to a caste hierarchy.

Although as in India in recent decades, the issue of physical contact with other castes is less important, people still have stories of high-caste individuals bathing soon after they had been touched by a low-caste person. Commensality regulations, based on purity factors, have also been prevalent in Mauritius. High-caste members, for example, certainly bought uncooked food (and food that probably accepted from-low caste members, but never cooked food. The very *Hindu* criterion of 'cooking' (transforming the food by incorporating the very nature of the individuals cooking it) prevails in Mauritius too. As a matter of fact, the *pacca* (cooked)/*kaccha* (raw) duality translating this cooking terminology, sometimes appear in Mauritian discourses. But in contemporary Mauritius, very few higher castes refuse to socialize with so-called lower castes in public life. However, in the private space, inter-caste taboos are still alive. High-caste in-laws typically refuse to eat at their lower-caste daughter-in-law's place, or the meal that she would prepare, would often create familial tensions.

- Visible features of caste belonging

There are few visible markers of caste belonging present today in Mauritius. Tattoos, for example, (known as *godna*) used to be caste-bound: the form and the place of the tattoo strictly depended on one's caste. There is poor knowledge or memories of *godna* in the Mauritian population which indicates that its influence has all but disappeared in Mauritius. In the same way, clothes (length of dhoti, type of turbans) and jewellery which formerly indicated one's caste have all but disappeared. These items, although still worn, have lost their traditional role in categorizing *Hindus*.

What Mauritians have retained is also some of the stereotypical occupational specializations which categorized *Hindus*, such as that Chamars were leatherworkers, or that Ahirs were cattle-farmers and that Brahmins were priests. Behind this stereotypical occupational specialization associated with each caste group, lies the hierarchy of the whole system, according to purity criteria. What underlies it is a type of discrimination: Dusadhs rear and sacrifice pigs, and they eat pork meat; high castes rear cattle and sacrifice or eat only where they are not vegetarians, chicken or mutton. Pork is intrinsically associated, in India and still more, it seems, in Mauritius, with dirt and impurity. The recurrent reluctance, or even revulsion, of most interviewees, when asked to comment on pig rearing and pork meat, on sacrificing or consumption habits, or even to pronounce the word 'pig', is linked to their repugnance to evoke lower-caste persons. It is clear that activities considered 'impure' is linked with so-called 'impure' castes. But the logic can be inverted: the low castes are considered 'dirty' and 'impure' *because* they work in activities considered 'impure'.

Patronymics also reflect caste identity. Even when Dusadhs call themselves 'Rajputs', if they keep their original patronymics traditionally associated with the Dusadh caste, the identification will remain: they would still be considered 'lower caste' by the upper castes.

- Taboo

The taboos remain the most visible and problematic marker of the operation of the caste system in Mauritius. The very first reaction, shared by almost every interviewee, consisted of negating the existence of castes in Mauritius or refusing to speak about them. Many among interviewees even express fear to speak freely about the subject and requested anonymity. Others requested that part of the interview not be recorded or even erased.

Upper caste persons were proud of their identity. A wife will associate herself with her husband's caste whenever it is superior to the one she was born in. In fact, she will proudly retain her birth caste whenever she married in a lower caste. Conversely, and expected, was that most lower-caste interviewees claimed not to know their caste belonging.

All, low or high caste, were embarrassed about evoking low castes. It is true concerning family histories (it takes a neighbour's intervention to 'recall' to the interviewee and force her to admit, that one of her daughters did marry into a lower-caste family). It is also true in a general manner, when it comes to recognizing the very existence of castes known as 'low'. The term 'Chamar' or 'Dusadh' or the associated occupational or devotional habits such as rearing or sacrificing pork (what is associated with Dusadh in India) is expressed in a derogatory manner.

- Discrimination

Believing that castes belongingness refers to a hierarchy based on natural criteria seems to be losing ground in contemporary Mauritius. The local, more universal, versions of such conceptions appear when interviewees state that the only caste is that of God, or that there are only two castes, men and women. As a consequence, the most overt and/or violent forms of discrimination, whether physical (low-caste individuals being slapped for entering a temple) or psychological (in-laws refusing food from lower-caste daughter in laws) are cited, but only as examples from the past.

However, castes are still, in Mauritian popular belief, associated with a certain type of characters, which can be described as discriminatory and derogatory. Thus the stereotype of *Chamar* is that of

an alcoholic and quarrelsome person. When an inter-caste marriage is broken up, one often uses such classifications as a cause. When one criticizes a quarrelsome individual, or when one wants to insult him, one will accuse him of being a 'Chamar', or a 'Dusadh'. If, in India, such a negative use of terms constitutes a punishable offence, it is not so in Mauritius.

### Conclusion: An ambiguous evolution

Interviewees spoke in contrasting terms of how things were 'before' and how they are 'today'. However, the evolution in the Mauritian caste system is far from being so simple and unequivocal. It is even somehow remarkably paradoxical. On the one hand, Mauritians speak of a former time when 'caste' was important, and how it no longer is. Numerous elderly persons have described how they were married according to a caste criteria, and how typical family conflicts narratives, were sometimes turning to tragedy, because of caste incompatibility between two youngsters. They stressed that this would not be allowed to occur with their own children. Since this is impossible to state for a fact without accompanying studies, one can, nevertheless, tentatively conclude that inter-caste marriage is more frequent and feasible than 'before'.

In the same manner, numerous 'softenings' of caste-based rules have been noted. 'Before', only Brahmins could be priests. This is not the case anymore. The 'Brahmin' identity has even become somehow the equivalent of 'priest', so that a lower caste who becomes a priest 'becomes' a Brahmin though they were not born in that caste. Others, particularly, lower castes, have changed their caste names to leave this stigma behind. The *Chamars* have become *Ravived* and *Dusadhs* became '*Rajput*'.

At another level, status demands from organized low-castes groups, asking for more egalitarianism, are recognized. Some interviewees stressed that *Dusadh* must be called *Ahir* if one wanted to be polite; and it was not easy today to prevent low-castes from entering temples. Furthermore, many persons of low-caste origins have achieved an enviable social and economic position. Their wealth has made it possible for them to become 'sanskritized' in their everyday-life and devotional habits in order to be accepted as middle or high castes. Intermediary situations also exist, when high-caste members, who previously would not even speak or interact with low castes, now do speak and sit close to them, even if they might still hesitate to share meals with them.

Mauritian voices very strongly stressed the 'equalising' effect experienced in the past on estate camps among immigrants and descendants. The camp inhabitants saw themselves as members of one family, with all residents being equal members. Caste, as a discriminative criterion, seems to have played a very minor role. One can wonder to what extent this perception is linked with nostalgia and idealized memories of a social structure that is currently disappearing. Neither social relationships (friendship, for instance), nor the school or plantation world seem to have replicated the caste system hierarchy, nor imposed suffering from caste discrimination. Even if the '*sirdar*' often (but not always) belonged to high castes, this was supposedly due to their better education (they knew how to write and count), not so much to 'superior' status in terms of socio-religious purity. Interviewees remarked that '*sirdars*' today are not exclusively high-caste members.

According to this omnipresent vision, caste is perceived today by many Mauritians as an invention of unscrupulous politicians who use it for vote-catching purposes. Many recall playing with children from all castes and religions in the camp, which, they emphasise, is less evident today. Many also stated very strongly that they used to vote according to the proposed electoral list, even though they actually perceived elections being reflecting 'clientelism' following caste lines. The so-called 'socio-cultural organizations' are also cited as campaigning according to the castes backgrounds of the candidates.

The end of camp life signified the end of this period of acculturation to other cultures and castes for as indentured s and their descendants moved out of the sugar estates, local (inter-caste) solidarities that used to regulate camp living conditions may have been affected. Detailed, in-depth village studies are required to understand the ''camp to village' process better. Caste criteria may have been present to regain lost identity or as a tool for betterment, or through marrying within one's own caste, or/and through re-affirming one's 'Indianness'.

Reformist movements, initiated to fight caste prejudice, have not succeeded in shaking off 'caste' prejudices themselves. The Arya Samaj movement is a case in point. Most reforms, such as

promoting vegetarianism and the ban on ritual sacrifices, for instance, helped level the caste hierarchy. However, at the same time, the refusal of high-caste Arya Samajists to inter-marry with low-caste Arya Samajists (because they still reared pigs, according to Hollup, 1994) proved the complexity and permanence of the caste ideology. As a result of this refusal, the Arya Sabha split and low-caste Arya Samajists founded the Arya Ravived Pracharini Sabha in 1935.

Another example of the ambiguous evolution of castes in Mauritius will focus on castes and professional specialization. Most professions considered 'impure' have disappeared and are not considered as 'polluting' as before. But priesthood is still associated with higher castes. And when it is not, the Brahmin monopoly is a cause of conflict. Inside the Sanatan Dharma Temple movement, the Vaish have historically fought against this monopoly: Indian Brahmins were brought to Mauritius to train priests. High castes also dominated the Hindu Maha Sabha since its creation in 1925 where lower castes were excluded. Before, the Vaish took control of it in 1985 and founded the Sanatan Dharma Temple Federations. One year later, Brahmins created their own distinct organization, the Shri Sanatan Dharm Mandir Parishad!

Today, there are various attitudes towards this: for some, Brahmins should be looked down upon for their pretension to be the 'ideal' priests, while for others, they are proud when their priest is a Brahmin. Others still yearn for the times past when priests were (or so it is believed) all Brahmins.

It is thus possible to argue that the evolution of the Mauritian caste system parallels that of India. Modernization, Education, geographic mobility and urbanization appear to be conditions for the extinction of *jati* differences to the benefit of the *Varna* hierarchy. But castes in Mauritius are not restricted to the *Varna* system.<sup>38</sup> Public discourse of Hindu Mauritians sometimes echo this conception even though most Hindu Mauritians are aware of their *jati* identity. Most know it and are also aware of the fact that the ideal marriage for their children would be with someone in this same *jati*. If '*Varna*' only determined social stratification, why would *Dusadhs* and *Chamars* generally not inter-marry (since they are both Untouchables)?

## 4. RECOMMENDATIONS

- Preliminary remarks

The whole research team started tackling the project with a few preconceived ideas which proved to be misconceptions.

Our original guess was built on the idea that the Mauritian realities were severely cut off from the essence of the Indian caste system. Both the bibliography and the Mauritian general discourse on indenture and castes were misleading.

First of all, the bibliography described a logical incompatibility between indenture and the caste system. Such a system is supposed to have disintegrated during indenture (leaving India, crossing the *Kala pani* dark waters and settling in estate camps).

Second, the general taboo and ignorance that was shared in Mauritius as regards castes was mistakenly perceived as a symptom of its disintegration. We were prone to believe that a population confusing *Varna*, *jati* and ethnicity, for instance, was hardly able to live and think according to the regulations of the Indian caste system. At first, it seemed that the holistic Indian caste system needed a context where an overall balance of castes of distinct status would be reproduced, what has been constantly under-evaluated as a reality in Mauritius indenture history. Most of all, the caste system in India rules the whole Indian society, regardless of religious affiliations, and we initially doubted that the Mauritian communities of Indian origin could manage to preserve a caste system in a society with important populations radically unfamiliar with such a logic.

As a consequence, we started the project thinking that whatever was to be found as a social stratification system, and whatever were the discriminations promoted by this system, we should be careful to analyze them as a purely Mauritian process and construction.

True enough, all the implications of the Mauritian caste system must definitely be understood and considered a product of the specific Mauritian history, and of what is at stake locally when it comes to identity and political claims. In the same way, any discriminative process observed must be understood in the very Mauritian context. From this perspective, castes as they have been experienced by Mauritian Hindus during indenture and afterwards, are at least partially the product of the very process of indenture.

Nevertheless, and despite such methodological precautions, we have to admit that we were often surprised by what was to be found.

The caste system as it is found in Mauritius is certainly not cut off from the Indian logic. It reproduces the same fundamental search for purity that guides this sociological hierarchy according to the *Hindu* socio-religious ideology.

- Global evaluation of the project

While the research team was realizing the misconceptions carried by both the Mauritian common discourse and the bibliography, we also realized how crucial this project could be for scientific research as well as for TJC and its national unity concerns.

Of course, our project suffers from several limitations. More precisely, it could be improved by a more exhaustive field research covering all ethnic backgrounds (notably Muslims) and more numerous regions in Mauritius. Participant observation could be implemented more thoroughly in order to cross-check oral information that can always be misleading when it comes to caste issues. It is nonetheless hoped that our project could stand for a sound preliminary step for further research.

- **Global conclusions**

**1/ Castes exist in Mauritius**

- In Mauritius, caste stratifications are a much more pervasive system than has been assessed previously and than Mauritians are ready to admit.
- The long-lasting taboo about castes in Mauritius has probably caused most misconceptions about the issue.
- Castes in Mauritius are certainly not restricted to the *Varna* system. The *jati* hierarchy is deeply structuring social links.
- *Hindu* Mauritians are not unfamiliar with the ideology of purity (basis for the original Indian caste system). This is bound to foster discrimination and segregation against those low castes considered "impure" and "dirty" (they rear and sacrifice pigs, and eat pork).
- Crucial features of the caste system and ideology have never completely disappeared in Mauritius. Think about marriage caste-rules, or food-sharing habits, most of all.
- Three phases must be stressed in the evolution of the Mauritian caste system: 1/ Leaving India and crossing the "dark sea" has weakened without definitely destroying caste identity; 2/ In the Mauritian context of the estate society and of a multicultural society, many caste dimensions have been relativised, and some have disappeared; 3/ caste identity has been re-introduced as a means to artificially foster communalism through homogenizing pressure groups and political lobbies.

**2/ In Mauritius, castes are more political than religious**

- Contrary to the Indian caste system that can still be described as mainly religious, the caste system in Mauritius appears essentially political. It is one in many identity criteria that can be mobilized to claim recognition, national resources or separation from a "national" history.
- Most examples of discrimination on a religious basis that were part and parcel of the Indian system have been banned from the Mauritian realities. In Mauritius, castes are but one of many social stratification dynamics, and an important part of the population is not concerned at all.

**3/ A dangerous resurgence of castes in Mauritius**

- Though many re-inventions of caste dimensions appear rather artificial in the Mauritian modern context, it seems that unscrupulous pressure groups using castes as a vote-catching or state-wealth catching medium, can indeed re-introduce discriminative habits in order to stress their difference from "others".
- Castes resurgence in Mauritius is linked with a claim to religious roots away from Mauritius. The more anti-Creole Mauritian Hindus will want to appear, the more they will be prone to reintegrate casteism. The more Mauritius will be recognized (and be proud) as an original nation born from the interpenetration of various cultures (from Europe, Africa and Asia), the more Indian casteism will disappear.

**What should not be done? The dangers of positive discrimination about castes**

Mauritius is a pluri-confessional nation, mainly populated by Hindus. And so is India. India has a longer history of dealing with such identity stakes, first as a colony to be managed, then as a nation to be built. Surely some lessons can be drawn from the comparison.

First of all, sixty years after having banned untouchability from the Constitution, the observer is forced to recognize that the untouchable stigma and discrimination have not been fundamentally erased in India. Then, quotas that have been implemented for more than half a century in education or public employment, if they really helped discriminated against castes to go up the social ladder, have proved negative because fossilizing the overall caste logic. Last example: when Indian authorities forced Hindu temples to open their doors to all Hindus (including untouchables), they usefully broke a taboo but did not prevent privately owned temples to select their devotees, nor public temples to discourage unofficially low castes to address their devotion there. As a result,

temples in India (apart from huge pilgrimage sites) are still remarkably frequented along caste lines.

Castes are, first, a private matter. As it has been described in this report, marriages, food-sharing and devotional habits are the most important criteria illustrating casteism, in India and in Mauritius. The promotion of anti-casteism in the public sphere (through legal processes), though important symbolically, cannot reach the private sphere directly.

In addition, considering that castes in Mauritius are not as lively and structuring as they are in India, the risk is huge to be counter-productive and to fossilize discriminative stratifications. This is a reasonably good reason for hesitating to implement quotas, for instance.

Then, one must also acknowledge the main difference in this respect between India and Mauritius. The whole Indian social system, whatever one's religious belongingness, is dependent on the caste system. As for Mauritius, only Hindus, and not all of them, are concerned with casteism. Casteism must be described as one among many social stratification dimensions of Mauritius (class, ethnicity, gender, etc.). And caste discriminations are also shared only by one of the many Mauritian communities: the general representation of low castes as dirty because working leather or rearing and sacrificing pigs, is certainly not shared by Creoles.

Quotas aiming at correcting the caste discriminations in Mauritius would be perceived, and would effectively represent, a huge lever for increased ethnic discrimination, for example. If a percentage of public jobs are reserved to low caste Hindu Mauritians, this will increase the over-representation of Hindus in the Mauritian public jobs.

This is the second reason for being cautious about caste quotas in Mauritius: they would tend to deny and increase other social stratification realities that are as disruptive to national unity and equity.

#### What could be tried, and how?

*« Lorsqu'on est incapable de voir dans l'être que son identité ethnique et son appartenance religieuse, c'est que quelque part, on a raté notre indépendance ou du moins on n'est pas à la hauteur de cette indépendance en tant que nation [...] Le communalisme, c'est une des plus grandes tragédies de Maurice. Il illustre une incapacité à surmonter des fantasmes collectifs et historiques » (Abhimanyu Unnuth, Mauritian author, L'Express, 31/07/2009).*

In this recent article, Abhimanyu Unnuth points out the real issues. One cannot help remembering that the same author has himself been active in promoting the fantasy Indo-Mauritian identity founding narrative. The first pages of his major literary production, *Sueurs de Sang (La Pasina, 1977)*, may be read as a picture of Indians as eternally linked to Mauritius: they are described as discovering it, fighting for it and they are its legitimate owners (Claveyrolas 2012). Time has passed since the 1970's in Mauritius, and probably the legitimate goodwill to rehabilitate Indo-Mauritians' history was not possible without paving the way for the current "collective and historical fantasies" Mauritius now faces. Communalism and fantasies go hand in hand. Fantasies, particularly those founding so-called Indian rooted communities or identities, do need to be corrected in Mauritius. And this is deeply linked with caste consciousness.

#### • Census corrections

Opposite to the uncertain results of quota policies, we would recommend to be cautious about fossilizing and reinforcing casteism through official recognition. Remember the role of British colonial power in the fossilization of caste categories in 19th century India. We mentioned both a social control motivation ("divide and rule") and a perverse side-effect of the will to categorize the population. Once again, Mauritius illustrates such a process. Mauritian census categories fossilize the difference between "Indo-Mauritians" and the "general population". Both categories are grossly misleading. "Indo-Mauritian" evokes a mixed couple (an Indian woman with a Mauritian man, for example) or an individual with both nationalities (Indian and Mauritian), rather than someone being Mauritian of Indian origin. As for the "general population", it has often and rightfully been denounced as a useless and disrespectful residual category.

So-called "Indo-Mauritians" are all "Mauritians" before anything else and, nonetheless the recent (and respectable) popularity of root-tracing, their relation to India does not interfere with their loyalty to Mauritius. But the tendency of a growingly ambiguous relation to India, used to differentiate Hindu Mauritians with Creoles descendants of African slaves, mainly, must be taken with much caution. The more Hindu Mauritians will feel "Indo-Mauritian", the more they will be prone to respect and reintroduce caste logics and barriers. Our recommendation would then be to suppress or change census categories so as to allow Mauritians to identify themselves with categories other than "Indians" and to control the existence, activity and financing of so-called "socio-cultural associations".

No positive evidence has been found concerning colonial power or estate owners widely using castes as a means of social control of the labor force in Mauritius. Nevertheless, one has to be cautious about the fact that categorizations born during or even after indenture, and certainly being fossilized since then, represent a danger for the Mauritian nation, and an obstacle to its unity.

- **Penalizing caste discrimination**

First of all, the Mauritian society should protect itself from the worst aspects of caste discrimination, and its promotion.

In a very concrete perspective, caste discriminations should be penalized. The nation should have the legal means to sue any individual or organization promoting casteism in the official sphere, whether it is in official political discourses, or in the media, or in professional contexts. Advocating such perceptions as the relative "nature" of individuals, their relative rights and duties, according to it, should be assimilated to racism, and penalized. In this respect, both the panegyrics of casteism and the usage of pejorative, and insulting, caste terminologies should be equally penalized.

The role of political and religious leaders, and their promotion of potentially negative dynamics reinforcing casteism, should be watched carefully, and controlled. As casteism is a matter particularly raised during electoral campaigns, any usage of caste for vote-catching purposes, and the general clientelism along ethnic and caste lines, should be watched and punished.

We must add to this the necessary promotion of meritocracy in the professional sphere, and the penalization of caste discrimination in the selection and promotion of employees.

Nevertheless, some, more private and precisely religious dimensions of the caste system cannot be penalized. It is certainly not legitimate for the Law to interfere in ritual pollution matters: one cannot force high castes to accept pig sacrifices in their temples if they see it as polluting. In the same way, one cannot sue a family refusing to marry their daughter to a lower caste individual. Education will probably prove more reliable for this purpose.

- **Educating towards a shared history and identity (school system and media awareness campaigns)**

The most important recommendation proposed would be to implement serious and long-term educating programs valorizing the shared dimensions of all Mauritians' history and identity. Fighting communalism in Mauritius has a direct and long-term impact on casteism. If the quest for roots is respectable, it should be contextualized in a definitely Mauritian identity.

The school system (via text books and national programs) should be revised to incorporate more recent approaches of the Mauritian history. The need is 1/ to break the global division line between indenture and slavery in such a way that descendants of both slaves and indentured labourers realize their common historical fate in Mauritius, and their effectively shared living and working conditions in the estate system that resulted in common representations and practices that ought to be valorized whereas they are denied and forgotten. 2/ to promote the shared popular culture of indentured and slaves descendants. This popular culture needs to be valorized against current temptations to promote an invented root in Sanskrit elitist and orthodox Indian culture. The more people will be conscious and proud of their truly popular roots, the more they will realize their shared past and roots with all Mauritians.

Generally speaking, it appears that Mauritians are remarkably unfamiliar with their history. They are all the more sensitive to mythologies and invented "roots" that unscrupulous or ignorant elites tend to promote. Scientific research in history and anthropology is now available for training school-teachers and increasing their awareness of a Mauritian identity in the making.

Mass-media awareness campaigns can also be used in the same perspective, stressing the "all-Mauritian" history and identity.

Patrimonial events or sites could also be mobilized in order to promote this shared conception of identity. The actual heavy tendency for any celebration in Mauritius, whether patrimonial or religious, is to clearly distinguish oneself from the other. The Ganga Talao pilgrimage for the Hindu Maha Shivaratri festival, as the Catholic Père Laval pilgrimage or Muslim Muharram festivities were in the past shared by all communities. This is less and less true and should be corrected. Controlling the organization, and jointly implementing festivities on a non-religious national basis (as is the case for - originally Hindu-Divali festivities, for instance) seems feasible and potentially able to keep all communities together in the Mauritian nation.

Patrimonial sites are communalist-biased and commemorations there are increasingly religious (Hindu sacrificial prayers on November 2nd at the Apravasi Ghat, and claims for the Morne mountain to become a Catholic "sacred mountain"). The memories of slavery, as the memories of indenture, being dealt with separately, rapidly become rivals.

Promoting museums, sites and institutions that would deal jointly with the whole history of Mauritius would help make every citizen aware of what he shares with others. In this respect, the "Aventure du Sucre" museum can be used as a successful attempt to present proudly, but without dwelling on the dark side nor transforming indenture in a glorified conquest, what every community has brought to the building of a unique and potentially unitary nation.

Language policies can also be mobilized to foster unity. The recognition and promotion of Creole as the Mauritian global language seems recommended.

Census categories are an encouragement, and sometimes an obligation, to define oneself according to communalist categories. The more such communalist categories will prevail, the more casteism will be valorized in the Hindu Mauritian communities. Casteism being incompatible with Creolity, for instance, the promotion of an all-Mauritian original identity leaves less and less space to caste consciousness and realities.

- **Breaking the taboo of caste in private sphere**

One should be concerned about the apprehension and fear most people have when it comes to caste issues. Such a taboo seems the worst possible ground for awareness and evolution.

So, we would firmly advocate to break the taboo of caste in Mauritius; firstly, in the public sphere. This means allowing and encouraging scientific research to be pursued and publicized, for example; secondly, in the private sphere, thanks again to the school system and mass-media.

The false discourse denying the existence of castes in Mauritius is damage able to low castes, in the first place, who feel ashamed of their identity, while it allows high castes to feel proud of their so-called superiority. A better knowledge of Mauritian history, a deeper investment in it, may be used as a way of equalizing the status of different castes. Mauritian citizens having traced their roots were disappointed to learn that the caste of their ancestors was actually lower than what they, nowadays, pretend to be. This might well be the truth for many Mauritians. As a matter of fact, Vaishya, for example, have never represented such a huge part of the Indian Bhojpuri population, which means that Mauritian Vaish were probably lower castes in India who "became" Vaish somewhere in the process of indenture. A sincere tracing of roots might help realize the relatively coherent popular culture of most indentured ancestors, far from any Sanskritic or Brahmanic pretensions. Once again, this should be stressed as a reason for pride: ancestors and descendants of migrant populations did manage their way up, and did build today's nation.

Castes may be presented as a secondary, residual system that needs to be fought against in modern Mauritius. Everybody knows about youngsters unable to marry because of caste system (let alone

committing suicides). Promoting free marriage, and stressing un-free marriage imposed by caste considerations could be the subject of a global awareness campaign.

- **Promoting Mauritian Hinduism**

As will be repeated later on in these recommendations, religious Hindu authorities in Mauritius are not univocally pro-castes. A general discourse, including in religious spheres, criticizes Indian Hinduism for precisely this reason that it validates casteism. Mauritian Hinduism is then promoted as more modern and liberal compared with Indian Hinduism described as archaic and degenerate.

However, the general logic of castes recently re-appeared subtly or was reinforced in the Mauritian Hindu context via Indian influences. Take the omnipresent tendency to replace Mauritian ritual structures by an architecture imported from India, conceived and built by architects and artists brought from India. Mauritian Tamil temples, for instance, are more and more monumental structures reserving a specific space (*garbhagriha*) for the deities. This space is increasingly forbidden to others than religious specialists, and common devotees cannot touch the divine images any more. The overall logic justifying this new religious organization of the ritual space lies on purity, the need to preserve the pure divine image, and the risk impure individuals represent for her. Of course, ancient *kalimaye* were also probably a 'hierarchised' space, from which certain individuals thought impure, were excluded. We know that the order in which "*prasad*" (the offering returned to the devotee once ritually consumed by the deity) was distributed depended on castes (and gender). But most ritual spaces such as *kalimaye* were also "self-service" places where each individual could perform rites according to his personal knowledge, needs and preferences.

*Kalimaye* are slowly but surely disappearing from the Mauritian landscape, and are being replaced by monumental Indian-style temples. No doubt promoting the protection of *kalimaye*, and/or their renovation, and even embellishment or enlargement in a style closer to the Mauritian *kalimaye* tradition would help maintain Mauritians Hindus away from the new reinforcement of the caste logic.

Encouraging Hindu Mauritians to recognize their local roots, as advocated before, will certainly allow them to be proud of their original, Mauritian, Hinduism and to stop relying on the Indian model, thus disregarding the past Mauritian Hindu traditions.

#### **Religion and the Nation: Stressing a vigilant neutrality**

The role of the Mauritian State is not neutral, and we recommend that it enforces a more vigilant neutrality concerning religious affairs.

The Indian case is once more inspiring. The Indian Constitution, promulgated in 1950, organizes the relation between the State and religion in the frame of a regime known as «secularism». But the writers of the Constitution did not build this relation upon the principles of a separation of State and religion, as in the case of French «laïcité», nor on the exclusion of religion, but, rather, on the interdependence of religion and the State. India has never made religious unity the frame for political unity. Intrinsically plural itself, Hinduism played its role in accepting religious plurality.

In India, the confessional belongingness is part and parcel of the legal definition of social identity, reflecting the traditional acceptance of religious plurality. This is the «Unity in Diversity» first promoted by Nehru.

In India, universal laws, enforceable to all citizens, are penal, administrative and commercial laws. But such laws coexist with other laws (family and succession laws, mainly) differing according to confessional belongingness. Such personal laws are monitored by the same unitary State. Note that the differential treatment of religious communities had already been set up by the British colonial power.

However, such tolerance raised certain limits. The partition of India and Pakistan was experienced with violent bloodshed, and on a religious basis. As a consequence, Nehru and other national leaders were worried about certain groups defending identity and religious particularities at the expense of national unity. All manifestation of excessive loyalty to such or such belongingness appeared dangerously opposed to the compulsory loyalty to the Indian nation.

But what about castes? Castes, and Hinduism, in India keep an ambiguous relation with Indianness. In a coextensive perspective, the individual living in the caste system has been described as Hindu and Indian. But some Hindus deny and criticize casteism. And also, Muslims living under casteism are definitely not Hindus. And Sikh, Jain or Buddhist Indians, though living under casteism, do not acknowledge their legal assimilation to Hinduism.

In the Indian historical context of growing communalism, this is mainly a question of loyalty. How can non-Hindus stay loyal to the Indian nation, in the first place, when it is shaped by Hindu-inspired casteism? How can the Indian nation inspire loyalty when it treats its citizens differently, according to the hierarchical ideology of casteism, and according to the tolerant ideology of pluri-confessionalism?

Casteism in Mauritius may illustrate such a dilemma.

We argue, partly following OddvarHollup (1994:297), that, more than an overall disintegration of caste, «caste differences among overseas Indians came to be understood differently in terms of content and meaning ». Caste associations, for example, are conceived and manipulated as interest groups lobbying for political purposes. Behind caste identity, one finds a potential lever for pressure groups in order to have access to national resources. As the Mauritian State helps neutrally all religions, and funds equally the so-called “socio-cultural associations”, the risk (already verified) is to encourage a blossoming of many such associations whose goal will be mainly to capture part of the State resources. The descendants of Indian indentured labourers have already split between Muslims and Hindus, then Hindus split between Bhojpuri (so-called “Hindus” in Mauritius) and Tamils. Tamils are being more and more separated from Telugus. Inside Hindus, Arya Samajists and Sanatanists still represent two different and sometimes (according to the context) opposed communities.

No need to go further to realize the risk of such a tendency for national unity.

Other essential information would stress that castes are never very far behind different communities and their definitions. When Arya Samajists split in two different movements, this was along caste lines, between high castes and low castes, the latter creating the “Arya Ravived”. And Tamils do not share the caste system of Bhojpuri. They are mostly (as is the case in India) from relatively low castes, and quasi none of them are Brahmins.

This means that castes are a potentially powerful criterion for going on claiming an ever more specific identity, always separated from the “other”, and thus a potentially useful criterion for claiming right to State resources.

One of the most efficient rhetoric for backing such identity claims is to resort to so-called Indianness, the legitimate right to trace and find one’s roots again. True enough Mauritian Hindus are generally sufficiently cautious about the caste system they think prevail in India. They generally do not hold it as a desirable model to be imported again.

The more and more orthodox practices promoted by socio-cultural organizations (financed by the Mauritian state) probably participate in discrediting the relatively universal ritual skill in favor of a caste monopoly of ritual expertise. Notice that we underlined the role of this ritual monopoly as founding the whole Indian original caste system. There may be no broad gap between a reinforced ritual monopoly, an increased hierarchization and an increased discrimination through “pollution” representations thought of as more and more central.

Castes as identity criteria are mobilized under cover of religious faith to be respected. One must be aware not to play the game of unscrupulous pressure groups ready to reintegrate casteism in Mauritius even if it means undermining national unity and equity.

India (its history of castes and attempts to eradicate them) warns us about such a temptation; Mauritius sometimes seems to take the same dangerous path. We think that a greater dose of secularism-*laïcité*, separating more sincerely the State from religious affairs, is necessary for an all-Mauritian identity to prevail and flourish. The Mauritian state is sometimes too lenient about religious affairs, too prone to participate and validate them. The result is dependence on religion

making it uneasy for the State to interfere or correct unscrupulous use of religions. Casteism is definitely a good illustration of this.

Notice that all religious federations and "socio-cultural" associations are not unscrupulous manipulators of the religious factor and of the caste system. Many among them favor, or would like to favor, Mauritian traditions of Hinduism. The State being the main funder of such organizations, it seems legitimate enough in our perspective to lean on them, and control them also, in order to encourage and implement a dissociation of Mauritian Hinduism from any casteist tendency. Funding and controlling local schools for student-priests, managed by Mauritian religious authorities, would certainly answer the needs of these organizations and free them from the dependence on India they somehow regret.

- **Promoting national social programs: Welfare State**

The Welfare State is probably one of the main obstacles to communalism. Communalism can be seen as motivated by a desire to differentiate oneself from the other in order to capture scarce national resources. As a perverse result, much government funds are devoted to these blossoming communalist organizations. The overall logic should be reversed, through implementing national (regardless of each beneficiary's community) social programs concerning health or education, for instance.

Ultra-liberal policies harden the competition for social advantages, and consequently stimulate the tendency of citizens to gather in pressure groups along any identity lane available in order to capture these advantages.

It is observed that in India castes have been seen as a medium for denying and justifying class inequalities. One of the main advantages of a welfare state policy is to recognize class and wealth differences between citizens that need to be regulated. Recognizing social class categories leaves less room for ethnic or caste categories.

As a general conclusion, castes in Mauritius are but one of many stratification systems. They should not be considered apart from ethnic or religious categories.

Castes in Mauritius do correspond to an original (India-born) system based on discrimination and segregation. Hierarchical perceptions persist, and low-castes are still ashamed of their identity. Marriage practices are still endogamous, which slows the process of caste disintegration. But our investigation shows that caste discrimination is not and has never been the general and most important rule in Mauritius. From this perspective, caste discrimination cannot be a priority in the national agenda against discrimination.

We nevertheless wish to insist on the **contemporary ambiguity** concerning castes in Mauritius. The use of caste identity as well as religious identity, and the artificial but sometimes dangerous acclaimed link with Indian roots, is increasingly mobilized at the expense of Mauritian national identity and consciousness. This relatively recent tendency could well result in an increased discrimination against Mauritian low caste Hindus, and, in time, against all Mauritians not belonging to the Hindu caste system.

<sup>1</sup> Books by Burton Benedict 50 years ago, and more recently, by Pavi Ramhota and Suzanne Chazan in 2010 were removed from the bookshops.

<sup>2</sup> Among others, please refer to Claveyrolas 2008 and Sumathi Ramaswamy (2006, 'Enshrining the Map of India: Cartography, Nationalism, and the Politics of Deity in Varanasi' in Gaenszle & Gengnagel eds, *Visualizing Space in Banaras. Images, Maps, and the Practice of Representation* Wiesbaden: Harrassowitz Verlag : 164-188).

<sup>3</sup> *L'Inde classique* (1985, vol.1, p. 610).

<sup>4</sup> Manual trashing of canes.

<sup>5</sup> Muslim marriage.

<sup>6</sup> Cap.

<sup>7</sup> It means selling of snacks ( *samoussa* and croquettes, veg and non-veg).

<sup>8</sup> She refers 'below' to be pre-primary and 'first' to be standard 1.

<sup>9</sup> Singing function (wedding songs).

<sup>10</sup> This means that the more people were giving higher donation for the *baithkas*, the higher the applause and respects were being given to these persons in the past.

<sup>11</sup> It means scapegoat.

<sup>12</sup> It means small goat.

<sup>13</sup> It refers to the podium where bride and groom are seated together to perform the wedding rituals.

<sup>14</sup> It means spirits of dead elder persons.

<sup>15</sup> Bread.

<sup>16</sup> Salmon.

<sup>17</sup> It is a term used for white rum by *Hindus* when performing the rituals.

<sup>18</sup> It refers to the family clan's god.

<sup>19</sup> She is referring to *kheer* (Rice cooked in milk) and *puri*.

<sup>20</sup> Caste.

<sup>21</sup> Boil seeds.

<sup>22</sup> Cassava.

<sup>23</sup> Bread-fruit.

<sup>24</sup> Spread and polish.

<sup>25</sup> It could refer as a place which is managed by a society where people of similar interest meet together and organise various activities and also acts as a school to provide education to children.

<sup>26</sup> Head of the society (it can also be executive /board members of the society).

<sup>27</sup> Ritual similar to 'yaj' - pouring *samagri*, *ghee*, incense sticks in the sacred fire.

<sup>28</sup> This statement means that God is present everywhere, wherever one remembers him, he is there.

<sup>29</sup> He means that one should live and do actions according to dharma.

<sup>30</sup> Pouring of oblation in a sacred fire.

<sup>31</sup> Caste.

<sup>32</sup> Christian girl.

<sup>33</sup> Christian priest wearing a long dress came at the *Hindu* boy's place to purify the Christian girl to take her back home.

How could they let Christians live at Calcuttea (referring to *Hindu*)'s place?

<sup>34</sup> Priests or high caste ( Maraz Caste).

<sup>35</sup> It could means that every caste has its own hierarchy and should be private.

<sup>36</sup> Refer to footnote 9 (i.e. Caste).

<sup>37</sup> Castes system should be eliminated.

<sup>38</sup> This idea has been conveyed in studies by Hollup (1994) and more recently, Chazan and Ramhota (2009).

## 1. AIM OF THE REPORT

The aim of this report is, as per terms of reference, " to provide consultancy services with respect to furthering the Commission's understanding from a psycho-social point of view of the behavioral attitude of people believed to be of pure or mixed African and Malagasy origin and who are ranked among the poorest class of citizens of this country, given that:

- (a) Many do not own any property and live in housing estates as leaseholders;
- (b) Illiteracy is rampant in their milieu and many are unable to find employment in government services or private sector. Insecurity of employment has led many into casual work, hard manual labour which are poorly remunerated;
- (c) Social life impedes proper schooling of children;
- (d) Prevalence of alcoholism and other addictions;
- (e) Loss of self-esteem;
- (f) Tendency to overspend despite poor income;
- (g) Marked absence of the spirit of mutual aid, self help, self-reliance and
- (h) Frustration as a result of a perception of being excluded from public affairs."

## 2. METHODOLOGY

Since the report has to be achieved within a short period of time, i.e. five months, no new field work could be initiated. However, collection and analysis of statistical data have been carried out during these months. Cf. 3.

We have drawn from the following:

- 1) Our long and extensive research / action work on marginalization processes, deprivation and poverty at international level within institutions such as the CNRS ( "Centre National de la Recherche Scientifique") in France, UNESCO, UNFPA (1996-1999), UNICEF (2000-2001), the EU for Mauritius and Rodrigues within the Poverty Alleviation Program of the EU (1999-2001) and Empowerment within the Chagossian and Agalean communities. Our latest research was done in 2008 and 2009 on Social Needs Analysis on two deprived areas of the Black River District.
- 2) Psycho-social aspects in studies done in the Republic of Mauritius and other countries having experienced slavery and/or racism and discrimination based on ethnic differentiation.
- 3) Statistical data in some relevant sectors, compiled and analyzed according to ethnic origins. This section is more like probing more objectively the given assertion that slave descendants are excluded from mainstream development. Given more time, analysis would have taken on board precise evolutions across time, relating data to social, economic, political dynamics as well as emergence and consolidation of cultural pressure groups. In itself, this would have constituted a whole thesis program. In spite of these limitations, it is an enterprise that has required patience, perseverance and resilience<sup>1</sup>. First of all, to obtain the data, to select and afterwards, to disaggregate them according to the ethnic communities. For this time consuming exercise, the only way of operating was to go through each list of names and note down the community according to family and first names ( baptism names mainly). Family names in some cases of our target population are of no particular relevance. Some minor errors may have been introduced in this lengthy compilation, based on some subjective interpretation of names. But overall, the research assistants have been very meticulous and cautious. We are thankful to them.

### 3. INTRODUCTORY REMARKS

#### 3.1 Bias at work

Right from the start, let us emphasize the fact that research and, even more, reporting through mass media can be biased. Many authors working on people of African origin highlight the tendency of the media and others to over report the negative aspects of black communities, and to grossly under-report their positive aspects. The tendency to attribute the negatives of a discriminated community to the community as a whole, gives distorted perception of the community.

The negative stereotypical portrayal of blacks, especially those from slave descent has had detrimental effects on the psyche of members of these communities, who are constantly associated with negative and demeaning images of themselves. Not strong enough to resist negative psychological attributes, they internalize these negatives as truths. These, in turn, influence the perception that other communities have, adversely affecting inter-relationships and power-relationships which structure social and economic positioning as well as collective identity.

#### 3.2 Complexity of inter-related factors

Suppression of slavery history in the Republic of Mauritius has helped to keep their descendants in a state of instability, confusion, and self-loathing. This has produced and maintained low self-esteem, feelings of inadequacy and low self-image, generating a low regard for those who are of the same community, creating an environment of envy, distrust, disloyalty, and hatred within the community. These are complex processes at the heart of the dynamics involved in the relationships between the individual, groups of affiliation and society, at large.

Institutionalized adverse conditions, discrimination creating economic stagnation<sup>2</sup> and distress foster an environment ripe for dysfunction at different levels, individual and the community. Limitations on income continue to hinder prospects for upward mobility and bring forth increased frustration resulting in health issues such as hypertension and other stress related illnesses.

These conditions are slowly being investigated and should be more researched to understand more fully the trauma that has been endured and repercussions in terms of access to land, social and economic networks, capital and social prestige, experience of social and economic repression<sup>3</sup>.

Psycho-social issues are rarely dealt with, apart from a judgmental point of view, stressing stereotypes of laziness, lack of will to come out of poverty, lack of entrepreneurship, social ills associated with the community.

Because of serious lack of information in this sector, this report will focus mainly on some psycho-social dynamics that impede mobilization of resources, both at individual and group level for people of "pure" or mixed African and Malagasy origin to gain access to a meaningful position within the Mauritian society.

The complexity of inter-relationships between ethnicity and class cultures is such that we shall not be able to devote as much attention to the gender issue and its analysis as we would have wished.

Whenever possible, in the statistical data, we have disaggregated them, bearing in mind the following structure of the population:

At December 2010 (CSO Vital statistics)

- Population
  - On the island of Mauritius : 1,245,289 inhabitants
  - Rodrigues : 37,837
  - Other islands: 289
- According to 2011 estimates of population:
  - 0-14 years: 21.8% (male 145,185/female 139,579)
  - 15-64 years: 70.7% (male 457,743/female 463,875)
  - 65 years and over: 7.5% (male 38,944/female 58,391)
- Ethnic groups:
  - Indo-Mauritian : 68%
  - Creole : 27%
  - Sino-Mauritian : 3%
  - Franco-Mauritian: 2%
- Religions (2000 Population Census):
  - Hindu 48%, Roman Catholic 23.6%, Muslim 16.6%, other Christian 8.6%, other 2.5%, unspecified 0.3%, none 0.4%
- Languages (2000 Population Census):
  - Creole 80.5%, Bhojpuri 12.1%, French 3.4%, English (official; spoken by less than 1% of the population), other 3.7%, unspecified 0.3%

Though limited, because of lack of time, we hope that this report will generate both more objectivity and interest in researching psycho-social dynamics at work in situations of deprivation and powerlessness; specially, when historical trauma, as in the case of slavery, continues to affect a whole community. It is our interest as a nation to come to terms with these powerful mechanisms, which, repressed, are all the more powerful in suppressing hope and fighting spirit, deepening structural marginalization processes in modern Mauritius. This is the real issue

### 3.3. Terminology

For the sake of expediency, we shall use the term Creole in a restrictive way, with connotations to only "people believed to be of pure or mixed African and Malagasy origin". Reference here is made to class positioning, i.e. working class culture, the "ti-créoles" compared to "créoles bourzwa". The term "gens de couleur" will be used in the accepted association with populations of mixed European origins, the upper middle class "elite".

In the statistical analysis of data, to comply with the official distribution of the populations in Mauritius, we shall use the term "General Population" whenever it is not possible to identify accurately class positions. For example, in the division of labour according to ethnic origins, this term will be used, in the knowledge that status and salaries often follow the hierarchy of "colours" ("pigmentocratie"). Again, in the education sector, the same will be used, in the knowledge that geographical locations of schools can give indications of class identities, mainly working class or not.

## 4. FACTS, FIGURES, ANALYSIS AND INTERPRETATIONS

### 4.1 Facts and Figures<sup>4</sup>

It is impossible within this report to study the whole process of discrimination and segregation that affects Creoles. The facts and figures given below are to be considered, as said earlier in the introductory remarks, as “des coups de sonde”, on a more objective basis than the overall and repetitive discourse that is done on a recurrent basis about discrimination of Creoles in public life.

#### 4.1.1 Housing: CHA Estates in 2011

Post independent governments within the welfare for all politics have more or less adhered to the promotion of social housing policy, providing and extending house ownership with specialized institutions being set up, as for example the Mauritius Housing Company (MHC) and the National development Company Ltd (NHDC). These, however cater mostly for the needs of middle and low-income households, leaving aside marginalized populations, among them many Creoles and Rodriguans.

In this section, we shall pay attention mainly to “*Cités CHA*” (Central Housing Estates). These were built after cyclone Carol in 1960 destroyed the very precarious houses of poor people, mostly Creole living in the suburbs of Port-Louis and towns of Plaines Wilhems.

In 2011, there were in all 16,883 lessees in 128 CHA Estates. Cf. for complete details Appendix: Table 1.

- Among them, 11,145 were Creoles, representing 2/3 of the total number of lessees.
- Rents per annum paid by Creole lessees are around Rs.360, with a very few exceptions: the lowest Rs. 81 being in Baie du Cap and highest Rs. 1200 in Quatre Bornes.
- Out of 128 CHA estates, 74 of them have more than 50% of their lessees among Creoles Cf. Table 1 on following page.
- The most significant feature is these data is that Creoles tend to be in overall majority in bigger housing estates (starting from 101 lessees and increasing up to more than 400 lessees (874 for La Cure and 923 for Barkly).
- Among CHA housing estates from a total of 201 lessees and more, in the following 15 estates, Creoles lessees represent more than ¾ of lessees: Pamplemousses, Abercrombie, Pointe aux Sables, La Chaux, Atlee, La Caverne, Allée Brillant, Richelieu, Mangalkhan, Malherbes, La Briquetterie, Vallijee, Roche Bois, La Cure, Barkly.

Table 1: CHA 2011- Lessees with more than 50 % of Creoles						
Housing Estates with less than 20 Lessees

#### 4.1.2 Education: SC Candidates in 2009 and Passes

Studies on poverty in the Republic of Mauritius (Etude pluri-disciplinaire, 1997; Pre-identification study, 1999) as well as grass root work in local communities highlight the multi-faceted causes of low achievements among children of poor Creole communities. Already at CPE (Certificate of Primary Education) level, drop-outs concern a third of an age group in schools located in deprived areas. As mentioned earlier, poverty and low education are found in all communities in Mauritius. However, working on a UNICEF project for the drop-outs of the school system (Lew-Fai, 2000), we observed that many Creole youngsters very early set aside their dreams, highlighting overt racism towards Creole populations in the school and work institutions, internalized inferiority complex, socialization processes which comply to self-fulfilling prophecy.

The following table indicates the number of candidates at 2009 School Certificate examinations and passes by sex and ethnic community<sup>5</sup>. For more details as per school names and average number of credits, cf. Tables 2 and 3 in Annex.

	GP		Non-GP		TOTAL	
	Candidates	Pass	Candidates	Pass	Candidates	Pass
BOYS	989	701	4,954	3,645	5,943	4,346
GIRLS	1,507	1,183	5,790	4,835	7,297	5,534
<b>Total</b>	<b>2,496</b>	<b>1,884</b>	<b>10,744</b>	<b>8,480</b>	<b>13,240</b>	<b>9,880</b>

% of SC passes: 75%

% of SC passes Boys: 73%

% of SC passes Girls: 76%

% GP candidates / total no. of candidates: 19%

% GP boy candidates / total no. of boy candidates: 17%

% GP girl candidates / total no. of girl candidates: 21%

% GP Passes / total no. of GP candidates: 75%

% GP boy passes / total no. of GP boy candidates: 71%

% GP girl Passes / total no. of GP girl candidates: 79%

% Non GP Passes / total no. of Non-GP candidates: 79%

% Non GP boy Passes / total no. of Non-GP boy candidates: 74%

% Non GP girl Passes/total no. of Non-GP girl candidates: 84%

We can observe the following:

- We must highlight here that % of passes from GP candidates is comparable to those from Non GP candidates (75% to 70%; 71% for Boys to 74%; 79% for Girls to 84%)
- Except in colleges found in deprived areas and created especially for students coming from poor backgrounds ( ex. Loreto Convent Bambous Virieux, College Fatima for girls; Collège du St. Esprit Rivière Noire, Collège Père Laval for boys) where the gap is at least 20%
- The average number of units is also comparable.
- It seems that once the Form 111 has been achieved, GP students like Non GP students try to achieve their SC.
- This could corroborate what is found at field level, when girls and boys as young as 11, are left, as drop-outs, to fend on their own. And then at 14, failure at Form 111, lack of economical means (for lunch, purchase of uniforms and books), obligation to look after younger siblings or obligation to look for work as apprentice, orientation and harder studies, impossibility to pay for private tuition etc. There are two main periods of drop-outs, at primary level (standard 6) and at college (form 111).
- These are crucial periods and, if elimination is done at such a young age before 15 years old, peer pressure for misconducts can induce many of these youngsters into social ills.
- Further study should be done between CPE and Form 111 to analyze the rates of failure and reasons for dropping out.
- Once this is done, proper measures could be taken to cater for these youngsters.
- We should also be able to analyze vocational and professional training (rates of recruitment and certificates obtained, in what field, at what age) and see how this sector can attract and retain them

#### 4.1.3 Work

##### 4.1.3.1 Public Service in 1962, 1975, 2005

The choice of three years 1962, 1975 and 2005 are due to two main reasons: before and after Independence and exodus of general population elite to Australia, coupled with a rough estimate of work cycle (30 years) for the renewal of labour force and recruitment of a new generation.

We need to recall here that it was in 1829 that coloured people "gens de couleur": obtained civic rights and access to the Royal College. At the end of the century, they could be appointed civil servants.

Evolution can be summed up as follows, according to Social Fabrics (SF 1998), and our analysis of data collected from the civil service, concerning the percentage of GP:

In 1901: 89.7% (SF 1998)

In 1946: 70% (SF 1998)

In 1962: 55% (Present report)

In 1975: 28% (Present report)

In 1985: 15,5% (SF 1998)

In 1992: 11.4% (SF 1998)

In 2005: 31% (Present report)

##### Detailed analysis: Public Service Staff 1962

Table 3 A :Public Service Staff 1962 according to ethnic communities and salary per annum

Rs. 20,001-25,000	9.97	3.82	4.71	4.21
Rs. 25,000 and above	8.32	2.92	3.14	5.26
Total (%)	100%	100%	100%	100%

Per annum	GP (%)	Hindu (%)	Muslim (%)	Chinese (%)	Total (%)
< Rs. 5,000 p	38.17	35.83	16.16	9.84	100%
Rs. 5001-10,000	42.86	38.60	14.59	3.95	100%
Rs. 10,001-15,000	67.45	21.70	7.87	2.98	100%
Rs. 15,001-20,000	63.45	16.75	11.17	8.63	100%
Rs. 20,001-25,000	75.21	14.05	7.44	3.31	100%
Rs. 25,000 and above	76.00	13.00	6.00	5.00	100%

We can observe the following:

- In 1962, there were in total 1644 public servants with 913 from the General Population (55 %)
- 27 % Hindus, 12% Muslims, 6% Chinese
- Salaries are more or less evenly distributed in four parts:
  - 26% of staff earn a salary of less than Rs. 5,000 per annum
  - 20% between Rs. 5,001 to Rs. 10,000
  - 28% between Rs. 10,001 to Rs. 15,000
  - 11% between Rs. 15,001 to Rs. 20,000; 13% More than Rs 20,000
- Among GPs, they are more numerous to earn more than Rs. 10,000 per annum than other communities. They are in the Chief, Principal and Senior Executive Officer group.
- Likewise, they are more than other communities in the above Rs. 15,000 salary group - High administrative level in the Public Service Commission, Finance, Judicial, Agriculture and Natural Resources, Ministry of Works and Internal Communications, Police and Telecom.<sup>8</sup>. These would belong to the General Population elite "Gens de Couleur" or Franco-Mauritian
- Hindus, Muslims and Chinese are found in the less than Rs. 5,000 salary group

Rs. 3,001 - 3,999	25.42	2.54	29.66	2.54	27.97	0.00	11.86	0.00	100
Rs. 4,000 & above	44.16	1.30	29.87	2.60	14.29	1.30	6.49	0.00	100

We can observe the following:

- In 1975, there were in total 2512 public servants with an increase of 868 from 1962 (Nb: 1644) in 13 years
- 690 are from the General Population (28 % compared to 55 % in 1962, a decrease by almost half). 19 % are male GP and 8 % female GP
- 1085 are Hindus (43% compared to 27% in 1962); 32 % are male Hindus and 11 % female Hindus
- 466 are Muslims (18 % compared to 12% in 1962); 14 % are male Muslims and 4 % female GP
- 271 are Chinese (10% compared to 6% in 1962); 5 % are male Chinese and 5% female Chinese;
- Salaries per month
  - 32% of staff earn a salary of less than Rs. 500 per month (lower clerical class, general messenger)
  - 18% between Rs. 501 to Rs 1,000 (mainly upper clerical class)
  - 17% between Rs. 1,001 to Rs. 1,500
  - 16% between Rs. 1,501 to Rs. 2,000;
  - 16% more than Rs. 2,000
- Compared to 1962, GPs are in intermediate salary groups, mainly male GPs, less high executive and high administrative. Female GPs, like other females are in the lowest salary groups<sup>11</sup>
- Other communities, especially males are more than in 1962 in the same intermediate salary group, between Rs. 1,000 and Rs. 2,000 (lower executive class) and in higher administrative jobs in the above Rs. 3,000 salary group.

Rs. 40,001 & above	37.06	5.58	30.96	7.61	7.61	1.52	7.61	2.03	100

We observe the following:

- In 2005, there were in total 8828 public servants with an increase of 6316 from 1975 (No: 2512) in 30 years
  - 2755 are from the General Population (31 % compared to 28 % in 1975, an increase of 3%). 21 % are male GP and 10% female GP.
  - If we compare with the figures of Social Fabric 1998, 15,5% in 1985 et 11,4% in 1992, the increase is two fold
  - 4395 are Hindus (50% compared to 43% in 1975); 34 % are male Hindus (32% in 1975) and 16 % female Hindus (11% in 1975)
  - 1333 are Muslims (15 % compared to 18% in 1975); 9 % are male Muslims and 6 % female Muslims
  - 345 are Chinese (4% compared to 10% in 1975); 2 % are male Chinese and 2% female Chinese;
  - Salaries per month
    - Only 3% of staff earn a salary of less than Rs.10,000 per month (lower clerical class, general messenger)
    - 58% between Rs.10,000 to Rs. 15,000 (mainly upper clerical class)
    - 20% between Rs.15,001 to Rs. 20,000
    - 8% between Rs.20,001 to Rs. 25,000;
    - 6% between Rs.25,001 to Rs. 30,000;
    - 4% more than Rs.30,000
  - Compared to 1962 and 1975, GPs are in intermediate salary groups, mainly male GPs, but at executive level, between Rs. 20,001 and Rs. 30,000, male GPs on average are as well represented as Hindus (around one third). At higher executive and administrative levels, between Rs. 30,001 and Rs. 40,000, male Hindus represent almost half of this salary group. Over Rs. 40,000, male GPs are slightly more numerous than male Hindus (37% and 31%)
- Other communities, as in 1975 are in the intermediate salary group, mainly between Rs. 10,000 to Rs. 15,000 (upper clerical class)

We can see from this overview that there are pivotal periods for access of GP to the Public Service: before, and after, Independence, decrease and in 2005, an increase in recruitment compared to the eighties and nineties, political events such as 2005 General Elections.

Different factors have contributed to these evolutions concerning the general population recruitment in the public service. We just recall some:

- The massive emigration of the elite to Europe, Canada and Australia just before Independence
- The development of the private sector after Independence and the recruitment of GPs in commercial banks, private regional and international business; etc.
- Massive recruitment in the public sector and standards of recruitment not fulfilled by potential GP candidates
- After cyclone *Carol* in 1960, development of construction and recruitment of GP skilled workers

- Rise in educational standards of candidates and at the same time, lack of them from GP candidates
- Factors of discrimination which cannot be really measured and which discourage GP children from entering the competition
- Harassment in some forms or other in relationship with lobbies, group pressure.

#### 4.1.3.2 Para-Public: Ports Authority, Cargo Handling Corporation and Central Electricity Board

We have chosen these three companies because of traditional distribution of labour force, dockers, semi-skilled or skilled workers among Creoles.

Table 6: Mauritius Ports Authority Staff, 2011				
General Population (GP) and Non-GP according to Departments and Gender				
	GP		Non-GP	
	M	F	M	F

Port Development Department			5	
Estate Management Unit	10		67	
Technical Services Department				
<b>TOTAL</b>	<b>120</b>	<b>3</b>	<b>359</b>	<b>47</b>

We can observe the following:

- On a total staff of 529, 479 are males, 50 females ( mainly in administrative, legal and finance department, mostly non-GP)
- Among the male staff, 32% are GP; 68% Non-GP
- GPs are mainly in the marine department (32% of those in the Department) and in ports operations Department (31%)

### The Cargo Handling Corporation

The Cargo Handling Corporation Limited is a private company with state shareholding; it manages port handling operations: loading, unloading, delivery and reception. It is a full-fledged operator, which has entered into a concession contract with the Mauritius Ports Authority for general cargo, dry bulk and container handling at Port Louis.

<b>TOTAL</b>	<b>908</b>	<b>47</b>	<b>391</b>	<b>19</b>	<b>241</b>	<b>15</b>	<b>11</b>	<b>2</b>

We can observe the following:

- On a total staff of 1944<sup>13</sup>, 1881 are males, 126 females
- Among the male staff, 25% are GP; 59% Hindus and 16% Muslims
- In comparison with Cargo Handling, the % of GPs and Hindus is inversely proportional (52% GP and 35% in Cargo)
- Meter readers are mainly Hindus (95 out of 138; 69% ); GPs 16 out of 138; 12%
- GPs are mainly on the following posts:

#### Less than 40%

- Technical and Senior Technical Officer (30 out of 122; 25%)
- Handy worker (14 out of 56; 25%)
- Technician I (34 out of 135; 25%)
- Cadet technician (19 out of 62; 31%)

#### More than 40%

- Trainee technician (16 out of 34; 47%)
- Technician (70 out of 139; 50%)
- Technician fitter (42 out of 76; 55%)
- Technician fitter piper (13 out of 22; 59%)

Analysis from these three sectors confirms the absence of Creoles in sectors which require less skill. It will be interesting to analyze evolution over time and re-composition of labour division along ethnic lines.

#### 4.1.4 Poverty and Deprivation <sup>14</sup>

##### 4.1.4.1 Measured in monetary terms: Absolute and Relative poverty line

The Republic of Mauritius does not have a national poverty line “minimum vital type”, i.e. the cost of resources minimum to maintain a minimal standard of living. More than income-based poverty, taking into account adjustments for household size and composition, consumption expenditure is usually used, giving an indication of a poverty line incorporating basic needs.

The use of World Bank \$2 a day poverty line, equivalent to Rs760 in 2001/2002 shows that this criteria measuring absolute poverty (less than 1% of the population) is not relevant (Cassimally in: Poverty in Mauritius, 2008, p.86).

The relative poverty line, measuring more the inequality of well-being among households is, therefore, used, based on half of the median household income per adult equivalent (recommended by the World Bank). From household surveys (HBS) in 2001/2002, the relative poverty line is Rs.2,800 for a one person household and Rs.6,700 for an average household of 2 adults and 2 children. It concerns 7.7 % of the population. <sup>15</sup> Although focused on inequality and not very appropriate to monitor actual level of poverty, the following characteristics of those most vulnerable to poverty can be observed from the HBS surveys in 2001/2002:

- Couples with unmarried children (54%)
- One-parent households with unmarried children (14%)
- Single member households (11%)

Associated characteristics are as follows: single headed households headed by women, households with an elderly parent living alone and households headed by uneducated persons.

For all these figures, distribution according to ethnic communities is unavailable.

#### 4.1.4.2 Measured in non-monetary terms: The HDI and the RDI

The most well known is the UN human Development Index (HDI) which is not a poverty indicator per se. It is a composite index measuring basic opportunities for human development such as education (adult literacy, combined primary, secondary and tertiary enrolment, health status (life expectancy at birth) and standard of living (GDP per capita). According to The HDI of 2006 (for year 2004) Mauritius had an HDI value of 0.8 and ranked 63 out of 177 countries (one of high human development countries and with Seychelles, the only African countries in this group). Again, this index gives a general insight in the comparison with other countries but does not reveal inequalities according to disadvantaged regions and sub-regions of Mauritius.

On the basis of data collected from Housing and Population Censuses, a Relative Development Index for administrative regions (Municipal Wards and Village Council Areas - VCAs) has been construed to measure regions with low relative development. As with the HDI, it is not a poverty index per se but as a composite index, it gives indications of deprivation such as amenities within households ( piped water, electricity, flush toilet, concrete dwellings or not, rooms used for living purposes), house ownership, primary and secondary enrolment, educational attainment, literacy and employment rate. Again, this ranking of administrative areas can be useful in targeting areas of deprivation but fieldwork shows that being an aggregated index, it does not necessarily reflect actual pockets of poverty. Besides, various other services are not included at a reasonable disaggregated level to cover the basic daily needs that are lacking in some critical areas. The implementation of a Social Register at the Ministry of Social Security could serve as a basis to track poverty more on a day-to-day level, as well as its composition and evolution over time.

Because of the absence of a "national poverty line", lack of more complete data and lack of disaggregation at ethnic level, we cannot say that Creoles are more or less than others in situations of poverty. However, coherent data gathered in different sectors as well as in many detailed field studies show that inter-relationship of factors causing poverty (housing, education, employment and finance, health, access to networking), more present among Creole communities increase risks of falling into pauperization and poverty.

#### 4.1.5 Mental Health

The statistics which follow concern inmates at Brown Sequard Psychiatric Hospital, the only public hospital for mental health. Collected data have to be set in the context of general health services in Mauritius where coexist a public sector ( lacking equipment, trained personnel, financial means except for very specific interventions, ex. cardiology) and a private sector ( generalists, specialists, clinics) which, in collaboration with foreign investors, cater for the needs of well-off families.

It must be remembered that a clearer picture of mental health in Mauritius needs to be completed by the following data disaggregated according to ethnic origins, sex and age group:

- 1) Consultations in the private sector and nature of ailments
- 2) Regular consultations at Brown Sequard Psychiatric Hospital and nature of ailments

We must also bear in mind that lack of means (financial and social in terms of family or neighbourhood networks to look after ill persons) contributes for the most part to the referral of them to the public psychiatric hospital. A more precise study of the institutional processes from first visit to internment (episodic to permanent) as well as history of mental ills, treatment and support needs to be done.

The following table gives a distribution of inmates in 2011 according to ethnic origins, sex and age groups, irrespective of ailments.<sup>16</sup>

**Table 9 : Inmates of Brown Sequard 2011**

All diseases by ethnic origins, sex & age group

Chinese			3	1	2		4		10	4%
Total	2		34	24	86	44	59	31	280	100%

**Schizophrenia:**

67% of all inmates, irrespective of sex, age and ethnic origins

42% of inmates with this ailment are of General Population

Male GP almost one third of all inmates with same ailment (87 out of 280, i.e. 31%)

The following observations can be made:

- GP inmates, irrespective of sex, make almost half of all inmates (41%)
- GP male inmates are 28% of all inmates, 46% of all male inmates
- Among GP inmates, males represent 68% and females 32%
- As with other communities, the number of inmates increases as from 46 years age groups
- **A diagnosis of schizophrenia**
  - 2/3 of inmates ( 67% ) , irrespective of age, sex and ethnic origins
  - Nearly half of them are in the age group of 46-60 years old
  - Males are more numerous ( 64% ) than females
  - 42% of inmates suffering from schizophrenia are of General Population
  - Male GP are almost one third ( 31% ) of all inmates with same ailment ( 87 out of 280)

## 4.2 Psycho-social Analysis and Interpretations

### 4.2.1 Housing

Historical conditions to land access in 1872 for the Indian indentured labourers by the Royal Commission have been a major factor in the setting up of housing plans for individuals as well as the community, pulling together resources for long term goals. Lack of economic opportunities offered to “ex-apprentices” from the slave population as well as absence of provision for them as far as land was concerned have contributed to “nomadism”, transitory dwellings according to job opportunities. Unstable labour market coupled with absence of “*enracinement*” that a permanent house can foster have contributed to lack of savings for investment in housing from slave descendants. They are the most destitute in this sector and inhabit mostly “*Cités*”.

Housing conditions and environments, as already pointed out by many observers are such that promiscuity is a problem, whether in camps or in overcrowded houses of “*Cités*”. The following observations can be made:

1) Housing conditions of those, «less visible poor», i.e. those who do not readily come forward for income or social support, are located on the outskirts of the capital or in squatting areas. We know from field studies (Pre-identification, Social Needs Analysis,\*\*) that many of the poorest live in open camps and squatting zones across the island. Their number and ethnic distribution are not known exactly. However, a predominance of Creoles and Rodriguans, leaving their island and looking for employment in Mauritius is observed.

2) “*Cités*” although inhabited by all ethnic communities are more generally inhabited by Creoles. Cf. Section Facts and Figures\*. The social needs analysis conducted recently in Bambous and Rivière Noire confirm the acuteness of the housing problem already noted in precedent studies on poverty: overcrowded, lack of amenities and social infrastructure (Moutou, 1996; Etude Pluri-disciplinaire, 1997)

3) Housing problem is not confined to “*Cités*” since some families although not in living in iron-sheet or thatched houses, whether in Mauritius or Rodrigues face hardships. For, after long fought struggles for the purchase of a piece of land, at some point of the household income cycle, families start constructions in concrete but find themselves trapped, often through unemployment, living in «ene la coque vide», hardly able to cope with basic necessities, especially when housing loans are involved. Illiteracy, difficulties to cope with administration, lack of efficient network place these families in great vulnerability and risk of repossession. Compared to Asians, among whom land is symbolically very important, solidarity among the extended family is fundamental and upward social mobility is encouraged, among Creole populations who aim at getting out of their destitute conditions, neighbourhood and social networks are of no help. In fact, they are looked down and ridiculed.

4) Again, among squatters, field work shows that even if they include all populations, deprived sections of the Creole population tend to stay longer in such housing conditions. More in-depth and longitudinal studies need to be done to assess the causes, lengths of stay, geographical mobility and facilitating factors in getting out of squatting.

5) Ownership of land / house is usually associated with independence from landlords' wish or strategy. It is a sign of long term investment, sense of capitalization and transmission to next generations. It supposes an idea, an ideal of lineage, a valued position of self in a succession of generations, a representation of ancestry, therefore an apprehension of self / sacrifices / choices / sublimation process based on a sense of history. Denied of existence and of any form of future, slave descendants are in an impossible situation to look beyond the immediate and cater for a more stable future, a permanent home being one of its concretizations.

Housing like education are fundamental assets; they suppose that equal access is given to all. They suppose also social conditions in which individuals operate, which allow

projections, representations of proportionate rewards for self and group. When these conditions are broken "nou perdan touzour", resignation breeds closure. A different historical implementation of Asians and sense of self-realization over the past may explain the presence or absence of individual and group sense of sacrifice, desire of social promotion, capitalization and transmission.

#### 4.2.2 Education

For a complete analysis of structural, historical and social factors, readers will refer to Report on Education (Truth and Justice Commission, 2011).

As mentioned already, research in the Republic of Mauritius has never on societal level analyzed trends according to ethnic identities and economic status.

However, in many international studies on discriminated minorities (whether in respect to numerical, racial, political or cultural domination), strong correlations are observed between poor educational achievements and low economic status (UN Conference, Genève, 2000).<sup>17</sup>

To these known consequences of slavery, we shall add what other known authors suggest:

- The difficulty encountered in writing may be related to the inherited past, a dominance of oral and myth of book when the Code Noir forbade slave owners to teach slaves to write and read." *L'écriture relevant donc du mystère et du pouvoir.....le passage se ferait du cri à la parole* » (Confiant, 1995)

- Dislocation of families, " more a group of life shards strung together" (See further in the report), lack of space and promiscuity, emotional and financial insecurity have a direct impact on the value attached to children, valued when economically active or when contributing to family resources through care of children or help in households. The environment at large (family and network of neighbours) is not conducive to investment in formal education. The whole socialising process is set on short-term goals, fitting in the immediate survival strategies of families. Getting out of poverty as many case studies have shown, has been through determination (parents, usually mothers or self, against the disapproval of environment) to succeed in the school system

- According to Du Bois (1899, re-ed., 1996), faith in educational movements has been dampened by ongoing ridicule and denouncement, which serves to impede the will of many slave descendants to pursue self-development.

#### 4.2.3 Work and Attitude to work

There are many obstacles to proper access on the job markets. We shall underline here:

- a) Drop outs from the school system through early family responsibilities<sup>18</sup>
- b) Lack of educational achievements to compete in adequate terms in job recruitment
- c) Explicit or unconscious discrimination on the basis of origins, starting in the selection of CVs through criteria of family names, color and bias in interviews
- d) Social discrimination on the basis of residential areas. Stereotypes exist concerning areas "bons quartiers" "quartiers résidentiels" and other "difficult areas" associated with delinquency, drugs and prostitution. People located there are stigmatised and negative evaluation tends to operate in their recruitment.
- e) Lack of motivation from the people who are discriminated against.
- f) Self-renunciation in competition on the labour market and feeling of inadequacy
- g) Lower performance and attitudes to work. Work, especially among youngsters is to be associated with some dose of fun and enjoyment<sup>19</sup>. Value of work is not central as in other

cultures - absenteeism being high on certain occasions "lundis cordonniers". Unreliability to meet deadlines, "péna parole", etc. are social judgments regularly gathered on a day to day level. Bias like rumors function on a set of existing elements but they are dramatized, used on a discriminatory basis. More objective data needs to be gathered and analyzed in order to deconstruct these prejudices and bring change.

- h) Some researchers (Cf. first section of "Breaking the Psychological Chains of Slavery", Akbar (1996) state that slave descendants still carry the attitude they had towards "work" during slavery. Reference is to the toilsome and unprofitable work of slaves on a daily basis, to the fact that Sundays and holidays were a transitory emancipation from work. Hence, the association of work with enslavement, not working with freedom and a continuous state of mind hindering entrepreneurship.
- i) Restructuration in the labour market gives birth to growing concerns about future means of living among unemployed youngsters and those, coping with the educational system. Young married adults facing precarious jobs as "journaliers, cé qui pé gagné" are compelled to live with parents/ in-laws. The value of education, already low in the social environment is decreasing rapidly "a quoi bon travail, quand pas sire gagne travail". Parents, having made the necessary efforts and sacrifices, obliged to cope with changing conditions of entrance on stable labour market feel cheated. With the rising costs of living, this unexpected change gives rise to frustration and feelings that "pli ça va, pli vinne difficile pou débatta". Formerly, "ti capave trace, tracé" through a succession of casual jobs before proper entrance on stable labour market, and setting up families of their own. Additional family tensions, inactivity among youngsters and young adults breed high consumption of alcohol, drug addiction and prostitution among young women.

#### 4.2.4 Poverty and Deprivation

Housing conditions, poor conditions of living, low access to education and health, precarious jobs, underemployment and unemployment are structural causes that generate poverty and deprivation. Poverty cycles are reproduced, hindering social and economic integration. Reports stress psychological problems that children encounter, reduced vertical mobility, risks of sexual exploitation and high occurrence of risk behaviors.

Poverty, multi-faceted, cuts across all communities. It is an extremely difficult exercise to pin-point what is its exact link with slavery. However, what can be said from studies done on this subject from structural trends and indicators as well as field studies, mentioned before, is that an aggregate of indicators show more massive marginalization processes affecting Creole communities<sup>20</sup>. Some "specific" features can be observed:

- **Poor, not really poor, could be ordinary**

In field work, a less known issue is raised about segments of Creole population who are "poor, not really poor, could be ordinary". The threshold here separating the «ordinary», from those who «could be ordinary» is perceived by members of the community to be more of a socio-cultural nature. Stress is laid on life-styles, attitudes to life, options for the present instead of the future. Deprivation is less here in economic terms; it has nevertheless repercussions on life prospects of families and younger generations. Socialized in consumption patterns that they would not be able to afford, restricted access to stable labour market for low-skilled groups, the younger «could be ordinary» generations are facing increased risks of falling into the poverty trap and high levels of frustration.

Observed among youngsters in many deprived areas in Mauritius and Rodrigues, it is the loss of life prospects, expected to be widening with increased opportunities in education and overall development of the Republic of Mauritius that induces a pessimistic view of the future. The term «mi-normal» used by youngsters reflects this anxiety, that the process of «normalization», i.e. becoming ordinary citizens remains a life-long process, never to be achieved. Whereas the older «could be normal» generations stay in their condition through social deprivation, the younger «could be normal» generations run the risks of staying so, through increasing economic deprivation. High level of alcoholism among these

youngsters, as young as 12 years old as could be witnessed on many sites, cases of suicide translate deep concerns about this loss of sustainable life perspectives and pressure from the environment to get into «ordinariness». In Rodrigues, likewise, the gap between aspirations, expectations and limited prospects offered to new generations create fears of pauperisation for families who are coping with extra charges of grown up children and for the latter themselves, « falling below » the socio-economic status of parents.

- **Threshold of “pauvre”, “in pé dans bien”.**

There is a significant difference between Rodrigues and Mauritius on what is considered necessary in order to be able to cope with the basic necessities, as evaluated by participants themselves. In Rodrigues, to be “in pé dans bien”, in general, total income is expected to be half from that in Mauritius, both for an average family composed of parents and 4 children (2 of secondary education age and 2 of primary education age)<sup>21</sup>.

- **Poverty associated with discrimination measures**

In Rodrigues, unlike in Mauritius, the discrimination factor in the production of poverty is more political (Rodrigues in comparison with the island of Mauritius) than social. Unemployment and precarious jobs are due to impoverishment of the lagoon, land erosion, access to water, seasonal changes, a decline in jobs in the Civil Service. In Mauritius, due to centralisation and mechanisation in the sugar industry, disappearance of sand extractors, decrease of demands on small artisans or employees in the construction sector through emergence of bigger firms/ groups offering the same services, less recruitment in the EPZ sectors are indicators that the labour market is offering lesser opportunities to the population concerned in this report. Risks of downward social mobility and poverty, although associated with structural reasons are also strongly connoted with discrimination measures.

- **Poverty and culture of today.**

Sacrifices for education of children, savings, good management of loans and family budgets are strong elements of change. This investment in the future supposes socialisation processes, which enable self and collective projection in better life prospects, a cost analysis of efforts and potential rewards, abilities to postpone immediate pleasures. Dynamics at work in families, getting out of poverty, show the strengths of these elements. Again, the social environment of families, positive role models, implicit “social contract” of solidarity, binding members of family to “repay” or help others is a powerful factor in the mobilisation of families, not only for the present but also for the future.

Absence of sense of belonging, sense of personal history as mentioned before, incapacity to think the future, induce life-styles, as for example, ways of spending and saving which penalise whole families. The possible shift from poverty to ordinariness, linked with change in lifestyle and mentalities, leading to empowerment in different sectors of life demands a reconstruction of self in a perspective of history.

In its absence, living on credit, overspending on occasions of celebration (weddings, first communion) are ways of positioning self and the family, acquiring respect and dignity, whatever the price to pay.

Strategies implying self-sacrifices, individual as well as collective, as observed among Asian communities are strongly related to a strong notion of self, past, present and future.

The relationship to space and time has to be structured since early childhood and is done through many socializations processes, which are transmitted from generations to generations. When the past does not form part of history, when “lineage” cannot exist, projection in the future is blocked and the present overwhelms all our perceptions. Strategies cannot be set up, especially when in the absence of assets, financial and cultural, hope does not exist. Material conditions together with symbolic resources such self esteem and sense of belonging to a group socially valued help individuals to position themselves in a favourable social comparison (Tajfel, \*)

A fragmented social identity scatters inner resources and, instead of favoring resilience, increases sense of loss and despair. Compensating lack of inner resources may take different forms from overspending and incapacity to make budget / provisions for the future to "amizé, boire"<sup>22</sup>

#### 4.2.5 Mental Health

The diagnosis of schizophrenia that has emerged in Section on Mental Health (42% of inmates suffering from schizophrenia are of General Population) is in line with studies made overseas. For example, individuals in the lowest categories of both education and income are twice as likely to meet the criteria for a major psychiatric diagnosis. Often, African Americans are **over-diagnosed as paranoid schizophrenic** and under-diagnosed as affectively disordered. Researchers observe that the overall notion that slaves are subhuman and intellectually inferior has proven to be detrimental to their mental health. Williams and Williams-Morris (2000), postulating that African Americans have been the victims of both institutional and internalized racism examined their internalized impact. Living in a segregated environment that impedes socioeconomic mobility, the slave descendants show acceptance of the negative societal beliefs and stereotypes linked to their ancestry and this type of acceptance often leads to anxiety, feelings of worthlessness and powerlessness<sup>23</sup>.

Again, the negative impact of institutional racism on mental health is observed in Studies such as the Epidemiologic Catchment Area Study (ECAS) and the National Co-morbidity Study (NCS) in the USA. Robin and Regier's (1991) analysis of the ECAS suggested that adults in the lowest quartile of socioeconomic status based on income, education, and occupation are approximately three times more likely to have a psychiatric disorder than those in the highest quartile.

J.P. Muyard (2005), J.G. Leary (2005), C. Sterlin (1993) also studied transmission mechanisms of the impact of slavery. In the first stages, slavery generated an extinction of life drive (Eros) among slaves. Such an aggression, physical as well as psychological, remodeled all the energy of the person with consequences on memory, sexuality, aggressiveness/passivity patterns (See further: Reversal into the opposite).

Coping with reactivations of these instincts can result in forms directed

- Towards others (vandalism, thefts, crimes, etc.).<sup>24</sup>
- Towards Self (passivity and extreme shyness, pseudo-debility, psychosomatic illnesses, drug addiction, schizophrenia, suicide, etc.).<sup>25</sup>

Increased distress and frustration usually result in health issues such as hypertension and other stress related illnesses, requiring treatment. Treatment requires money and very often, not treated at the start of the illness, the poor and unfortunate end up, abandoned by relatives, in very distressful conditions in psychiatric hospitals or in hospices for old people. A specific study should be undertaken in this field.

Sense of legitimacy, dispossession of self, cognitive dissonance, inner conflicts are interwoven. They result from the social structure of slavery. On a more individual level, they are linked with a wide spectrum of factors:

#### Impossibility to position oneself in a lineage

We know from anthropological studies made in Africa and Madagascar the importance of lineage, ancestors and the dead ones in the definition of self. Personality is not conceived as in the Western world: dependency is not given a negative value and search for protection is constant to avoid feeling of being abandoned (Cf. for example Mannoni, réed. 1997). Self in traditional agrarian societies has its saliency through family roots and most importantly, from the encounter of two lineages. The vertical symbols that they embody through rituals mark the different generations. In the case of slavery, these ruptures in the succession of

generations through the dysfunction of families and absence of reference to ancestry laid the basis for dispossession of self.

It is known that transmission of values across generations foster resilience and help to project oneself in the future. The culture of the immediate, overspending and living without accumulation of capital - finance, education, material goods, as mentioned earlier - are also related to the obliteration of the past and impossibility to position oneself in a lineage.

### 1) Fear and Search for protection

In the traditional world, sense of self is borne and reinforced through communion with the exterior (*L'Afrique symptôme*, 2009). Social cohesion is pursued and valued in that it fosters self-esteem. In the case of slavery, identification mechanisms through lineage and community cannot operate, resulting in deterioration or destruction of identity, loss of reference and dysfunction of self. Threats and fear are generated, not only from the social system, causing deprivation of freedom, public as well as private rights. They are also produced by dislocations of the personality system itself, resulting in incapacity to think in terms of self-protection<sup>26</sup>. Fear of threats from the outside, the occult or divine forces invades all sectors of life and challenges all logics for protection (Eve, 1992; Boswell, 2006). These irrational fears are destructive forces and all sorts of "arrangement", implying affective, economic means are designed to counteract immediate or future threats. Instead of fighting against a system, energies are devoted to the search for protection, physical, emotional and spiritual.

The different generations of slave descendants have coped with these hardships, the first generation bearing the brunt of much distress, the second one with reactive behaviors to the shock encountered initially, and successive generations with more or less coping strategies to fend off the trauma of lost origins and loss in nothingness.

### 3) Importance of occult forces

Cross cultural studies ( cf. for example Benoist, 1993; *L'Afrique symptôme*, 2009) show that still today, mental health in Africa, Madagascar and slavery marked societies is differently conceived, compared to the Western world. In traditional societies, a mentally ill is a consequence of exterior forces, occult or divine, for ex. «Djinn», «Zaar», «Rab», "Mauvais Lizié". Illness results from an intervention linked with an offense that has been committed towards a divinity or another human being who has requested the powers of a divinity to intervene against the offender.

«Sorcery» or occult traditional practices are still potent in Mauritius. These practices have been studied. Different observations here and abroad point to the following:

- The importance of rituals, interpreted by dominant cultures as superstition. But they have a real, symbolic efficiency in that they are conceived to reconcile the individual with the group, taking off the feeling of solitude and alienation that results from broken links with significant others.
- The transmission of rituals, especially in popular cultures ensure transmission of memory, of values. This transmission facilitates affective support, reinforces resilience. Myths, histories, stories, legends in their repetitive and secure narration lend meaning to exile, eradication of culture (Rousseau C., & al, 2001).
- A traumatized group can revive if the members are able to reconstruct new myths and legends ( as in the case of other immigrants in Mauritius)
- Such reconstruction will operate best if the trauma is integrated, "assumé". This is not the case in the sequels of slavery in the Republic of Mauritius.
- Sorcery will use these different identification supports in the project process, orienting the person to possible sources of "malère", "mauvais oeil", "le mal existe" and help the reorganization of effects<sup>27</sup>.

- Quacks exploit the strong quest of reconciliation and cohesion, grounded in the definition of the person.
- All popular cultures, because they are produced in distressful living conditions have some "magical component". In the context of slavery, this "pensée magique" is magnified by the destruction of ancestral origins, hence creating dualities and conflicts between needs rooted in the core personality and more objective elements.

### Reversal into the opposite

Reversal into the opposite is a well-known defence-mechanism (Freud, 1915). It is one of the four vicissitudes of the instincts: repression, sublimation, turning around upon the subject's own self, which is closely linked to reversal into the opposite. In *The Ego and the Mechanisms of Defense*, Anna Freud (1936) included turning against the self in the list of defense mechanisms enlisted by the ego in its struggle against guilt-inducing instinctual impulses, citing this process as one of the most primitive ones, "as old as the conflict between the instinctual impulses and whatever obstacle may be erected against them."

Freud explained how the opposition love/hate depends on the economic polarity of pleasure/displeasure and the real polarity of ego / external reality in the dynamics of the psyche. The initial ego / reality opposition (or internal / external reality opposition) differentiates internal and external according to a sound objective criterion—the internal being the continuing pressure of the drive, which is inescapable, and the external being subtle stimuli that can be avoided. When the symbolic world is disturbed, affecting representational contents, a reversal of affect occurs, involving processes such as the turning around of activity into passivity and the reversal into opposite of the "contents" of the love / hate pair. This also applies to the whole notion of the sadism / masochism pair. Without falling into the psychopathological dimension, many daily, "ordinary" attitudes and behaviors rest on the reversal into the opposite as a defense mechanism.

However successful these strategies can be, research today shows that whether in the treatment of the mentally ill or coping behaviors, their unconscious foundations are not properly studied.

### 4.2.6 Psychological Health

#### 4.2.6.1 Low self-esteem, stigma of inferiority and resilience

We know from existing studies on slavery in Mauritius and elsewhere that the denial of human liberties stripped individuals of any sense of self-sufficiency, both physically and mentally. Anti-African prejudices and stigmatization have and still operate inter and intra-communities.

Still nowadays, among poor citizens of the Republic of Mauritius, stereotypes prevail on Creole communities, which stress their lack of ambition, a "certain philosophy of life" which reduces their chances of getting out of poverty<sup>28</sup>. Collective support in distress cases among Indians, Muslims and Chinese populations is a strong factor in providing basic elements for recovering sense of self-sufficiency and pride. But the sub-conscious doubts about one's legitimacy, sense of worth are destructive forces drawn from the coercive system of slavery.

The historical enforcement of a debilitating inferiority complex, which reinforces a self-loathing mentality result in individual and collective resignation to the threat of facing harsh reprisals, acceptance of lost opportunities for self-development and upward mobility, undermining efforts to achieve self actualization. The psychological beatings experienced by many slaves have forced them to surrender silently to the forces of severe chastisement for those seeking self-improvement and freedom from the plantations. What is best known today is the legal and social structure which denies all rights to slaves.

We need to deepen our understanding of the pernicious dynamics that have been generated from these enforcing laws, in terms of internalization, of being of no value at the individual level, of unhealthy projection towards significant rivals - inter- and intra-communities- as for example, under the subtle social hierarchies slowly being set down between field-slaves v/s house-slaves,

between slaves and Indian labourers<sup>29</sup>. These hierarchies, as will be mentioned later, have been set up to foster dissension and ensure supreme rule over potential rebellions.

Negative mental conditioning was reinforced by their owners and much of the rest of white society, through harsh treatment, and brutal reprisals, for seeking any form of knowledge of themselves or the world at large. Men were stripped of any form of pride and or self-respect, by being humiliated in front of their families for any attempt at seeking any resemblance of justice. Women were often taken from their husbands and raped at their owner's discretion. This further diminished the male's sense of self-worth as well as the women's (Du Bois, 1903). Being forced to work without compensation dragged slave descendants further into the psychological quagmire of self-loathing and depression. It is generally accepted today that one of the most damaging aspects of the institution of slavery and oppression is the development of self-loathing, with people starting to believe that they deserve the treatment that they receive.

This sub-conscious inferiority complex can be attributed to forced disconnection from the source of self-concept and identity. Fear of the other, fear of the other's judgment, " le regard de l'autre" at the same time measuring oneself as if in a constant power struggle to overcome inferiority complex diminish one's mental strength and corrupt the position of Self: "La fierté est affiliative et la honte désaffiliative." <sup>30</sup> Shame of self<sup>31</sup>, moral masochism <sup>32</sup> cannot be expressed (Cyrułnik, 2010) and result in emotional disorders.

Reconstruction of self demands not only change in the "regard de l'autre" but also change in social norms:

*"Les mécanismes de dégage ment exigent un travail en profondeur... Pour sortir de l'intimidation et redynamiser ses potentiels créatifs... Transformer son rapport aux normes sociales ...».* Gaulejac, 1996, p. 255.

Such a reconstruction is to be done as early as possible at an age (Schoore, 1998) when a child, around 5 to 7 years old is able, with the maturity of the nervous system, to have an accurate representation of time and relate past information ( traces, experiences) with the present and a dream of the future. Resilience, based on security at early stages of life, helps in this cognitive restructuring and getting out of confusion (Cyrułnik, 2010). Pivotal support systems or parental substitutes, as studied on trauma experienced by immigrant children, contribute to the repairing and healing process, through verbal expressions and images that change shame into pride.

Without this healing process, individuals may be tempted to indulge in self-punishment behaviours, failure conducts and resignation attitudes through illness or risk behaviours. These in turn increase feelings of inadequacy, worthlessness and shame (Tantam, 1998). "La boucle est bouclée".

Reconstruction of self also demands reworking at societal level for stigmatization and production of shame, worthlessness and powerlessness does not operate at the individual level only. It affects also deprived areas and "Cités". Identity of an area like Roche-Bois is a social construct, linked as inhabitants pointed out, with the issue of poverty «*Dimoune qui fine reste ici, banne ti dimoune pauvre ki reste dans la case tole, la case la paille; banne dimoune en dehors mal considere zot, zot pauvre*». Stigmatization increases in the case of visible, spatial references of small confined localities: risks of social labelling affect inhabitants inside the locality as well as outside (looking for jobs, going out with girls/boys of other localities). Changes in the social image of these stigmatized areas, as it is being done in Roche-Bois, can generate new positive local dynamics.

#### 4.2.6.2 Effects of internalized racism and negative stereotypes <sup>33</sup>

Studies have found a positive correlation between internalized racism and alcohol consumption, lower self-esteem, lower ego identity, low emotional intelligence among children. Other studies have revealed that the stigma of inferiority can negatively affect one's self-efficacy and confidence in performing various tasks. This concept applies to both race and gender. McCorkle's research (1991) disclosed that the victims of internalized racism typically experience lower self-esteem and lower ego identity. Children of mothers who score high on internal racism experience low sociological-emotional development, Delgado (1998) posited that internalized racism can affect very young children. In a recent study of 4-year-old African American preschoolers, approximately 75% of them preferred to play with their European American peers over their African American

peers. In addition, over 50% of them expressed their feeling of inferiority to their European American counterparts. According to Latif and Latif (1994), slavery produced a psychic trauma for African Americans. Counselors have to assist African Americans in recognizing some of the symptoms. The primary symptoms include their conscious and unconscious desire to be accepted by European Americans.

Negative stereotypical portrayal of minorities in general has had detrimental affects on their psyche. Constantly bombarded with negative and demeaning images of themselves and not strong enough to resist the psychological onslaught by the media and others, they succumb to accepting the negatives as truths. Suppression of their accomplishments in many countries has helped to keep them in a state of instability, confusion, and self-loathing, maintaining low self-esteem. Feelings of inadequacy and low self-image generate a low regard for those who look the same, creating an environment of envy, distrust, disloyalty, and hatred within the communities themselves.

These studies show that internalized racism is potentially as harmful as institutionalized racism due to their profound psychological and mental effects. In other words, Creoles in Mauritius do not experience the overall value of being of African descent. Shame of one's origins, especially when it remains repressed, is a powerful weapon of destruction - other's and/or self - (Harder, 1995; Gaulejac, 1996; Cyrulnik, 2010; Martin, 2006). It depersonalizes, surrendering to others power of judgment, evaluation, sanction and reward. Inner control is extremely fragile. Is this one cause of the diagnosis of schizophrenia (42% of inmates suffering from schizophrenia are of General Population)?

There are three ways of coping with negative stereotypes by the victims:

- To defend one's group at all cost, criticizing dominant groups without any differentiation ( " attitude victimaire" and/or reference to the " théorie du complot")
- To set up individual strategies along references and values of dominant groups, rejecting those associated with shame and indignity
- To work out a certain "distanciation" from both groups, which involves emotional intelligence, consciousness of emotional and social components of discriminations ( Forges, 1998)

Constant adjustments to cope with intimidation as defense mechanism leave lasting scars on learning processes, memory. They induce behaviors such as retreat or avoidance, "évitement", to reduce dissonance; they alter relationship with significant others from early childhood<sup>34</sup>. Reversal in the opposite operates through superiority complex and «nouveaux riches» behaviors.

Without a collective sensitization and opposition from victims, it is known that individuals perceive themselves as responsible for their situation through an internalization process, giving more value and importance "surestimer" to the causal role of self instead of situational factors. The Pygmalion effect, implying perceptive and unconscious cognitive operations is such that individuals tend to adjust "auto-realisation" to social prophecies. These processes are complex ones, unconscious and less modifiable than conscious ones<sup>35</sup>. On the other hand, it is also known that through illusionary correlation (Hamilton, 1976), society tends to "over-estimate" negative acts done by discriminated groups and "underestimate" their positive actions. In Mauritius, society functions in such a way that whenever Creoles are in situation of misconducts or show anti-social or delinquent behaviors, social categorization comes upfront and "confirms" social predictions. Individual responsibility is less emphasized as it is the case with other communities.

*"Le processus de catégorisation sociale se déclenche automatiquement lorsque nous sommes en présence d'individus appartenant à des catégories sociales stigmatisées et fortement associées à des stéréotypes négatifs." Channouf, 2010, p.72.*

## 5. SOCIAL IDENTITY, GROUP CONSCIOUSNESS, WORTHLESSNESS AND POWERLESSNESS

### 5.1 Sources of a fragmented social identity

#### 5.1.1 Economic status and skin colour.

Nearly all the studies done on trans-oceanic slavery communities, have pointed out, worldwide, a fragmented social identity through division within these communities. Two of the biggest dividers are economic status and skin. Lighter skinned slaves or labourers from India were given the most lucrative jobs within the slave community, such as working as servants within the slave-owners home, running errands outside of plantation grounds, usually better dressed and fed than those of darker skin. The masters boosted the ego of the lighter-skinned slaves who in turn despised those working in the fields or as woodcutters, stone cutters, coming mainly from Mozambique (Moutou, 2003). Darker skinned slaves and those with more pronounced Negroid features would usually encounter more difficult living conditions on the plantation. Deemed to be the most inferior of the supposedly inferior race, treated as such, they were usually housed far from the plantation house, and in close proximity to the fields in which they were forced to work. They were given the most demanding jobs, the most basic living quarters, and the least appealing clothing. In consequence, the act of giving better treatment to the lighter skinned slaves served as a tool in which slave owners kept an element of dissension and strife among the slaves.

This difference in treatment between the lighter skinned slaves and those of darker skin had tremendous psychological effects on slaves and free blacks years after the abolishment of slavery. The preference and status given to lighter skinned blacks had the effect of influencing the latter that they were indeed superior to the darker skinned blacks. In many instances, they would willingly inform their owners on the activities of the others. Rewards given to them for informing reinforced their loyalty to the slave owner and increased the distrust and disdain between the two groups of slaves. The repeated incidents of informing, reward, and punishment, created a psychosomatic cycle in which field workers and servants were continuously at odds with each other, thus making it easier for the slave owner to control the slave community.

To divide the community as a whole was to take the unity out and turn the hate inward. After extended periods of mistreatment, dark skinned slaves, reaching psychological exhaustion began to accept the belief that they were inferior to the lighter skinned blacks, reinforcing an inferiority complex, which in turn affected their behavior towards other dark skinned slaves. Displaying an attitude of submissiveness towards the lighter skinned slaves, they would have no qualms about becoming informants, taking sides against other dark skinned slaves.

If these different social stratifications, according to skin colour and division of labour on the plantations, "pigmentocratie" were set up between those freed before 1835, who will become the "elite" and those freed after 1835, i.e. the bulk of slave descendants, more importantly, economic competition after 1835 between «ex-engagés» and «ex-apprentis» left the latter in a marginalized situation since the colonial policies did not provide any form of training and access to land was denied to them. Competition is therefore set both within the community and among other communities, in a situation when "ex-apprentices" have to survive without hardly any asset. We know from conflict theories that competition for restricted resources accentuates categorization and social conflicts, giving rise both to negative discrimination towards more fragile groups and favoritism to members of one's group.

We have to study more in details not only the social and economic consequences of this unequal exposition to survival in a fast changing society but also the identification processes, development of sense of worth, resilience and coping strategies.

### 5.1.2 Religious and Popular culture in the search of identity

Religion is a powerful reference system that moulds personality from early childhood. It permeates family and social values; their transmission is both informal and formal. Beliefs, core religious messages are translated into words, interiorized and transmitted according to cultures, both in terms of civilizations and class cultures. In the case of slaves and their descendants, Christian faith encompasses all sorts of contradictions. With the intrinsic spiritual message, it had and still has to compose with the political and social - elite / popular -components.

#### 5.1.2.1 Disqualification of spirituality anchored in African traditions and freedom from alienation.

Almost all studies on slavery have pointed out the problematic rejection of core spiritual African/Malagasy beliefs and compulsion to cope with alien Christian faith (Nagapen, 1999; Moutou, 1996; Palmyre, 2007 ). Traces of these traditional beliefs are being slowly unveiled and rehabilitated as having inner logics and no longer considered as mere superstition. But this process, rehabilitation of popular culture within an "inculturation" approach, is new and needs to go further.

In comparison with Indian indentured labourers, who could practice their religious beliefs without encountering affective and cognitive dissonance, embracing an alien faith was for the slaves an enterprise of self-destruction, a denial of self, dissolving basic structuring of personality.

At the same time, the slavery system fostered fascination with what was dominant as system of reference. We should be able today to consider reasonably the havoc made in such conflicting inner situations, in the incapacity to share totally a single valued system of beliefs, giving sense and direction to one's life. Once these beliefs destroyed and new ones internalized through coercion and obedience to authority, personalities can be border-line and even use splitting defense mechanism.

Churches, however, played and continue to play a pivotal role in the search of identity, social and political recognition among slave descendants. Whether as a means of upward social mobility or obtaining social recognition, it is a fact that identity issues here are closely related to religious ones. These are intimately interwoven as it appeared in " Le Malaise Créole" , mentioned before, rendering them all the more complex, combining race and class elements in a structure of power. Church hierarchy, heavily drawn along colonial lines, is nowadays challenged and visions of faith, inclusive of popular Creole culture are generating new patterns of identity, more respectful of repressed African or Madagascan traditional beliefs.

#### 5.1.2.2 New forms of religious identity

Mauritius follows the trends observed in other countries with a history of slavery i.e. the conflicting tendencies between inherited traditional patterns of religious beliefs, based on popular culture and Christian faith linked with the elite culture of the slave owners.

Search of collective identity and social emancipation is very often related with Church affiliation. However, gaps between the Creole popular world and Christian institutions have challenged religious authorities. The "Malaise Créole" as well as multiplication of religious branches or sects questioned traditional practices. New communities with ostentatious discipline, strict moral code, obedience to new religious leaders / preachers, recruitment through charity organizations and proselytism reveal the need of protection and search of security from supernatural powers, "the magical world" (cures and miracles) and search of new social relationships which convey a sense of belonging.

These new forms of religious congregations reconstruct, in their own legitimate or illegitimate methods, individual loss of meaning, profound alterations in the conception of self/ others/ invisible world. These new shifts should not be considered as simple signs of popular fickleness, effects of fashion or temporary influence / indoctrination.

We are at a period of history where, everywhere, people renegotiate their multiple identities, at loss for new references. This process is transnational. What is specific in our case is that in addition to structural factors that compel to reassess ourselves, Creole communities feel somehow abandoned by the very institutions which represented and still represent their way out of despair. Institutional mediations are thought to be too complex. In a world of disruptions at all levels, a more simple approach to religion and taking on board traditional beliefs captures the minds, affects and souls of new converts, disillusioned by traditional faith. The often utilitarian role of religion as provider of identity, social promotion and protection from the “mal”, in spite of shifts in the religious institutions, remains unchanged. We assist at the same overpowering influence of fear in the psyche of slave descendants.

Rites, pilgrimages, sanctuaries are coherent means for older generations to reduce fear and threats (*Etude des comportements religieux*, 1995). Younger ones, though challenging these beliefs and adopting new forms of religious practices in fact show the same pattern of fear, fragility, imagined sense of persecution from unknown threat. This long quest for protection is not a contemporary contextual one. It is linked to the inherited trauma of abandonment from all forces of nature and creation.

Some international organizations / sects, under cover of charity, channel and exploit this unconscious fear while at the same time responding to the need for entertainment, dramatization, “mise en scène” and creation of myths, support for identification for those at loss of reference.

## 5.2 Social competition, social comparison, worthlessness and powerlessness

### 5.2.1 Envy, jealousy and lack of solidarity

The psycho-social dynamics generated at the time of slavery have produced, as with black communities in the West Indies, Brazil or the USA, an «implosion» of Creole communities. Violence against the dominant system is repressed and transformed into violence against Self. (J.G. Leary, 2005).

Social competition and social comparison are dynamics inherent in any society, be it mono-cultural or multi-cultural, egalitarian or not. Social performances and positioning of social groups are closely linked to a sense of belonging and affiliating processes. These are related with sense of gratification, through concrete or symbolic gains or rewards, immediate or long term. Group or collective identification rests on contextual factors, tactics and strategies within a global social framework. Seeds of dissension, division, as mentioned earlier, have been deliberately sown at the period of slavery and after 1835, between the “ex-engagés” and “ex-apprentices” and are present still today, as we have seen in many studies, specially related with poverty. The following, however, can be observed:

#### 5.2.1.1 Solidarity in survival: inter and intra generations

Solidarity, based on survival, as a value enacted already between slaves and “*marrons*”<sup>36</sup> shows itself through the following patterns:

- Grandparents taking care of young grandchildren (migration of Rodriguans to Mauritius, separation of partners, abandoned women having to work)
- Grown up children living with parents (teenage/ single mothers, married girls on separation with partners, coming home with children, young married adults being unemployed, young married adults without housing)
- Help, from parents, in-laws, in terms of small financial loans or in nature (rice, milk, etc)
- Elderly parents usually ill, living with their children’s family.

In these cases, additional charges induce a downward mobility process. Change in the social fabrics and individualistic strategies for survival among the generations of parents of to-day leave younger generations in greater distress than before.

- Case studies of getting out of poverty show differences with Asians, the impact of intra-generational solidarity - help in formal education or financing of studies / private tuition, mutual concrete help in house construction, loans for special events, etc. - operating as a real safety net. It is transmitted to younger generations as a primordial value of care from elders to younger ones. Among Creoles, solidarity will not often go beyond exchange of daily commodities, small loans and services performed in tragic events (death and illness).

#### 5.2.1.2 Inner contradictions among the upward mobile

Families, making sacrifices in order to get out of poverty feel the pressure of the environment «dimoune pas capav guette ou arrivé» Witchcraft is sometimes thought to be used as in Rodrigues to alter the successful course of a family.

Social comparison breeds envy and jealousy: these feelings cut the upward mobile from the root community. Mixed with envy is the recurrent fear of being left out in the same dreary life conditions while the system is reinforced by the recuperation of the brightest among the community. Conflict between being loyal to the community and not having to identify with the powerful is a powerful source of inner tension.

The sense of inner self may be endangered under a superficial ego, struggling to find a way out and compelled to “compensate” in such strategies as overspending.

#### 5.2.1.3 Against shame and rejection: Compensating practices

Finding a space between rejection from one’s community and acceptance - never achieved - by the dominant becomes a perilous social exercise, with its cycle of success and failure, attitudes of arrogance “ *vantardise*” as marks of distinction, hatred for one’s roots while claiming the same root identity in order to acquire social recognition and legitimacy. To achieve power and dignity, the way out is to emulate dominant value systems, to dissociate oneself from contamination of fracture and humiliation. Narcissic damage is compensated by different ways: yearning for power and status, acquisition of prestige goods, self defense against shame through *mythomania* ( Amiel-Lebigre, Gognalons-Nicolet, 1993 ).

«*Tout traumatisme est susceptible de déclencher le mythe comme processus de défense* ». Durand, 1999, p. 10.

«*La mythomanie protège d’un danger de mépris vu dans le miroir que composent les autres... Le mythe protège le groupe contre un danger de délutation ..... Compenser une blessure narcissique en inventant un masque merveilleux* ».

Fabrication of myths that compensate for the lack of self-esteem is translated through theatrical actions “ *un théâtre de l’honneur mettant en scène la prestance (élégance vestimentaire, signes extérieurs...), des rôles qui provoquent l’estime de l’entourage. Tout manquement à cette apparence constitue une déchirure* ».

Ways of living, spending, entertaining, looking up or down according to social stratification, coping with shame and denial or pride of one’s own root are all a composite picture of both collective and individual dynamics. They cannot be fully understood unless set on the background of inherited patterns, themselves intricately woven with “rapports sociaux” of class and race<sup>37</sup>.

Personal social loss in the climbing of the social ladder barely exists for upward mobile of other communities who, on the contrary, use same or similar success stories to capitalize on their social image, pride and resilience. If compared to a race, it is not only the starting phase which is strewn with hurdles, it is each successive phase which brings its own solitude, fury and challenge to cope with conflicting loyalties.

#### 5.2.1.4 Mixed groups: A lesser degree of cognitive dissonance

Groups with "more European blood" or descendants of those considered as free before 1835, commonly called "Créoles bourzwa" ou "faire blanc" were and are in a more favorable social position: the choice in their identity process was a "natural" one, the desire to climb the social ladder being aligned according to references set up within the dominant colonial culture. Rejection of the past, especially with the African folklore in order to be recognized socially "va de soi".

Less subject to self-denigration and hatred, they are capable of transcending particularities to meet higher social and economic objectives.

#### 5.2.1.5 Division: Taking the unity out and turning hate inward.

It has been observed in Mauritius, among those working with poor Creole population, that at some point of collective mobilization for better life conditions, for example in community based or mutual aid organizations, solidarity does not last long. Social combat with leaders from the community find its objectives rerouted towards quest of self-rewards, inflation of the ego, narcissism, search for the limelight. Simultaneously, grass root members are disappointed and tend to fall into social reclusion. Seems to be reactivated here the old fear of informants, traitors to the community. Such an observation has also been found elsewhere. One explanation is that division and sole mastership of destinies resting among the dominant has, as mentioned earlier, diminished forms of altruism, balance between one's interests and others' being rarely achieved. So deeply entrenched is the controlling power which has been inherited. So deeply internalized is violence against self and same.

It is known that only when a common exterior threat / enemy is clearly identified that submission to a leader is efficient (Garapon, 2002). Rehabilitating a degraded self and collective image is a sine qua non condition in the search of repairing images that give courage and resilience.

#### 5.2.1.6 Leadership and short sighted competition: Funny and entertaining

In a multi-cultural context such as Mauritius, the struggle of ethnic leaders for ideological and political space is a constant one. Closely related is a growing local concern with roots, "ancestry" and identification with "natural" leaders.

In several studies across countries, slave descendants have shown division and fragmentation in their social and political struggles. In the USA for example, until the recent election of President Obama, research has shown that within the black community, leaders were been put down by their own people. Two factors, according to scholars could explain such a rejection. The first one is that during slavery, slave leaders were either eliminated, isolated, killed, or ridiculed as "slave bodies with master heads." In other words, the leader was nothing more than the master's pawn. The second one is that in slavery, "the clown" was an essential tool for survival. Playing the clown saved slaves from feeling the wrath of their masters. Being entertaining was a coveted status because from nothingness, slaves could emerge in the master's favour. This identification process is still ongoing through comedy or entertainment rather than in the intellectual sphere. Funny and entertaining are attributes expected from role models, to such an extent that Black organizations are not only fragmented but have been reduced to the stereotype of "party and dine". Counter role models not confined to the entertaining stereotype and encompassing other skills than athletics are gradually rebuilding aspirations of younger generations, mitigating the dramatic effects of slavery on leadership.

Until this rebuilding is complete, at all levels, grass root or at upper echelon of social involvement, in political parties, leadership is very often subject to intra community misinterpretation, rivalry, dissension and constant threat of being illegitimate. Long-term objectives are re-oriented according to short-sighted status competition. We mentioned before that in many NGO or CBO projects involved in community empowerment or poverty alleviation, leaders once empowered find themselves challenged by others or cut themselves off from the community through impossibility to solve the equation of being

genuine representatives of those they defend while working with the funding parties. The psychological stress is such that in many cases, choice follows the lines of the dominant. "Vendu", treason, fickleness, capacity of being easily bought by the powers of the moment, pawn, the social image of Creole leadership in Mauritius is still associated with absence of proper will, resilience and power of negotiation. We see here the long life patterns of stereotypes, functioning within the transmission mechanism by internalization of the members themselves of what significant others, serving their own self interest select, project and reinforce within society.

This particular legacy from slavery time is a crucial issue. Uncovering the dynamics that have generated and maintained negative associations of slave descendants' organizations while fostering new ones is essential to liberate proper empowering forces from both inside and outside the community.

Empowerment of leaders within Creole communities therefore goes hand in hand with empowerment of the whole community, especially in the analysis of inherited associations and images of leaders and leadership. Significant others in the political, economic fields use this inherited weakness, and today as in the years of slavery, "congenital inferiority" implicitly underlies many social discourses and actions. This vicious circle has to be broken at the conscious or unconscious level. New symbols of leadership are necessary to instill ambitions, sustainable life projects which lift up individuals as well as the community.

In a brief comparison within Asian communities (Indian, Muslim, Chinese) in Mauritius, their "natural" leaders have never been in such an "illegitimate" position as were slave leaders or "marrons" who could unite and provoke rebellion. Asian communities, in spite of intra-community dissension or competition endorse their leaders; in return, based on this mutual contract, leaders have less intra-community fighting to deal with and can concentrate all their energies on group fundamental issues of social and political issues. Identity creation and claims are less problematic both at individual and collective levels.

### 5.2.2 Contrasting patterns: Unified against others. The Indian indentured labourers

In the initial phases of Indian settlements, the identity formation of the immigrants is to be understood in the context of their nature of work and new social setup, totally different from the experiences of the mother-land. They presented a unified Indian labour identity against the plantation regimes and this identity was asserted by groups as well as individuals.

At the same time, despite all hardship, many emigrants, especially from lower castes, did feel some improvement over their condition in India, given their experiences back home where they were permanently consigned to the fringes of rural Indian society as untouchable, tenants-at-will, and landless labourers with little hope of improvement in life. Indian identities became sharper in the later phase of their settlement, starting to live as a community in the villages. The Indian settlements were largely based in isolated areas, often a few miles away from the nearest town. Kin ties often played a role in determining post indenture settlements. Imams and Pandits were the leading figures within the communities, and under rural farming conditions, the social structure of the villages was similar to that in India. In these villages, informal social institutions also existed in order to celebrate marriages, coordinate religious ceremonies and celebrations. Similar to Indian villages, there were Panchayats (village councils) to settle local disputes. Members were affluent people of the villages who were chosen on the basis of caste, intelligence or education.

Less pressure towards assimilation in dominant Christian beliefs, rejection by slave descendants of Indian immigrants in the social competition for goods, services and esteem of the dominant led to a more unified identity. More collective day-to-day cooperation could be reinforced, since at source, no conflicting system of values and identification as in the case of slaves, acted as regressive forces to deter from social upward mobility.

Social competition to obtain the favour of the dominant acted as a powerful force of dissension and dislocation of leadership among descendants of slaves. Inversely,

counterparts in the Chagossian, Agalean and Rodriguan communities, show that long-term traces of symbolic scars differ in nature and scale.

### **5.2.3 Contrasting patterns: The cultural capital of Chagossians, Agaleans and Rodriguans**

#### **5.2.3.1 Transcending social differentiations: A distinct collective identity.**

Chagossians, Agaleans as well as Rodriguans identify themselves above all to specific cultural capitals linked to the characteristics of their islands. A distinct homeland district history and tradition as cultural capital is produced, reinforced by perceptions of ostracism by Mauritians i.e. people born on Mauritius island, feelings of resentment at being left out of mainstream development "Parent Pauvre de la République". As in any identity choice and alignment, partners and stakes determine the positioning of all parties.

In the case of Chagossians, Agaleans and Rodriguans, the common denominator is the struggle against what is perceived as structural domination to obtain access for better economic, social and political recognition. This is especially true in the case of the forced exile of Chagossians. In fighting exists but the sense of belonging, especially among uprooted or migrant communities on the island of Mauritius, helps to reduce cognitive dissonance and enables inner energies to focus on structural issues. Ilois and Rodriguan cultures present a positive rural identity as response to negative stereotyping (rural upbringing, social conservatism, traditional behaviours and attitudes, authentic values, alternative way of living and healing). Even if poverty exists and may be more vicious than on Mauritius, descendants refer less to the traumatic past of slavery. Theirs are histories with less social rivalry, negative discrimination, social comparisons pertaining to leadership, collective resources and upward social mobility strategies with reference to Indian immigrants.

#### **5.2.3.2 Repercussions on involvement in sectors of activity**

As a result of these different historical settlements and power dynamics, inhabitants' involvement in sectors of activity are different. Among Chagossians, Agaleans and Rodriguans, there is theoretically no domain of activity which is "chasse gardée" due to competition among ethnic communities or to taboo related to animal breeding. Worry about perception by ethnically different others does not act as an obstacle in engaging in entrepreneurial activity, in a social comparison with Asians perceived as more business minded but money grabbing and dishonest. Agricultural activities to get out of poverty are not, as in Mauritius, looked down by Creoles as a result of negative stereotyping towards Indian immigrants.

#### **5.2.3.3 Reversal into the opposite**

Negative social discrimination has resulted less than on Mauritius island in patterns of social representations among Creoles which are not acceptable because of their connotations with Indian immigrants. Consumerism as compensation for the bitter life endured seems to be less salient as anti-model, an asserting way of being different to the Asian model of hoarding and sacrificing for the future, for generations to come. In the educational sphere, Rodriguan youngsters suffer less from social comparison than their counterparts in Mauritius.

## **5.3 Family and the disjointed quality of relationships**

### **5.3.1 Dysfunctional families: shards of life strung together**

Social ills in Mauritius cut across ethnic communities. The same structural causes (lack of financial means and education, unemployment, housing and promiscuity, etc.) are at the root of their production. However, in all field work, local and elsewhere, these combined causes have had deeper effects among slave descendants in that slavery, as most researchers agree on, has affected the family the most.

The selective breeding of the biggest and strongest slaves was a profitable endeavor for the slave owner but devastated the slave family structure. It was a method that reinforced the idea that slaves were little more than human livestock, which were to be used and / or abused at their owners' whim. The psychological toil that the practice of selective breeding took on slaves is presumably immeasurable, and a valuable tool with which to wage psychological warfare against slaves. Due to selective breeding, some slaves were deprived of the right to develop monogamous family relationships. Through it, slaves could be forced to copulate with those that the master deemed suitable for breeding purposes, in order to ensure that he had a ready supply of strong able-bodied slaves to perform labor at the highest rate possible.

Psychologically, selective breeding influenced slaves to believe that family relationships were of little value, and fostered insecurity and anxiety within the slave psyche concerning the stability of a family unit. Fornication and adultery were eventually seen as everyday facts of life, especially for the stronger slaves who were more likely forced to engage in the selective breeding process. Hatred and rivalry could develop between the stronger slaves and the weaker slaves. Weaker slaves would more than likely suffer severe psychological trauma, when and if their mates were forced to copulate with one or more of the stronger male slaves. They would invariably suffer from feelings of inadequacy due to their limited mate selection and/or copulation opportunities, while the stronger males would most likely take on the alpha male persona, and tend to dominate most aspects of slave community life. The struggle between the stronger and weaker males could lead to assaults, suicide, murder, thefts and nervous breakdowns. Nervous breakdowns would most likely occur in the weaker male slaves, due the psychological pressure of being dominated by the stronger males within the slave community, as well as the slave owners and white society as a whole.

Female slaves forced to copulate with the stronger males would also most likely suffer psychologically, especially in the area of self-esteem.

Single parent households of today, at the lowest echelon of society - mostly headed by women - children from different fathers, high rate of teenage pregnancies as in Rodrigues (Lew-Fai, 1998), very often considered by the general public as a "way of living", compared to other communities in the same life conditions, contribute heavily to the reproduction of poverty. What is less understood is that this "way of living" does not come from nowhere and it acts as a powerful deterrent to get out of poverty.

### 5.3.2 Missing fathers and lone mothers

Hegemonic forces of the slavery system, colonisation and post 1835 work policies affected slave descendant males more negatively through isolation and fewer resources to contribute positively to the acquisition of a respected status.

A man's identity is, in part, measured by his ability to take care of himself and his family. When a man feels that he cannot provide for those that he is responsible for, his sense of self worth is significantly lowered. One who is not adequately providing for his family in some instances begins to lose respect from his partner and children, which increases sense of guilt and inadequacy. Lack of upward mobility coupled with added pressure of tension with partner and children, creates intense feelings of frustration within the individual.

The symptom of single headed families with the marked absence of the father and children from different partners is related, according to many authors, to the destruction of the role of the father during slavery. Since men could not do the basic things such as provide and protect his family, their role having been eliminated or disqualified, they have just stopped caring. They go from place to place having children and moving on to the next one. Today, precarious jobs, unemployment, rejection on the labour market increase this disqualification process. The mother's role was destroyed because, during slavery, a mother could not properly nurture and protect her children from the slave master. Now, slave descendants' women continue to have children at a young age, not knowing how to take care of them, hence perpetuating the cycle of the missing father and the lone mother. The

latter's distress is increased because of rapidly changing conditions in the work-force and coping work behaviours that do not match today's demands.

Without attributing undue importance "une détermination en dernière instance" to slavery as source of present family dislocations, we have to acknowledge that it contributed a lot to the disjointed quality of family relationships. Psycho-social Studies on memory and transmission of behavior patterns compel us to consider the impact of images, both explicit and subliminal, when they are anchored in a collective memory.

The psychological stress experienced by many slave descendants' males goes unnoticed by mainstream society until it manifests itself in the form of drug and alcohol abuse, domestic violence, psychosis, suicides, etc. The internal and external tension experienced also lead to health issues such as hypertension, cancer, and mental disorders, which only exasperate an already fragile condition. Difficulties in finding their ways on the labour market add to a fragile ego, trying to exercise authority. Again, here it may be symptomatic that Male GP are almost one-third (31%) of all inmates with same ailment (87 out of 280). Cf. section on statistics.

Machismo is in part responsible for the failure of many of them to share their feelings, as well as their perception that no one really cares. Many in lower socio-economic conditions are too busy struggling to obtain the bare essentials for survival, to take notice of the suffering of many around them.

Matrifocality is therefore a result of destruction of nuclear and extended families combined with a fragile status of men, inversion of roles, absence of authority figures. Children are facing increased difficulties in the absence of fathers to structure themselves in a stable way (Minde, 1992). Shame leaves its mark from early childhood (Schore, 1998). Self representation forms itself in such a way that children expect from others a type of relationships based on domination, "écrasement", violence and response to violence as normal reactions. All social programmes to sensitize the public on domestic violence will not be really fruitful if they do not address the issue of violence linked with conditions of living as an internalized code of behaviour, resulting from fear, shame, oppression and a way of asserting oneself in a world of nothingness.

### 5.3.3 Growing up: Boys and Girls on the margins

Anthropological research has always highlighted the importance of rituals "rites de passage" in the process of growing up. Their importance lies in the visible signs set up by a given community to its members in the life cycle and sequences which are associated with new responsibilities, acceptance of them and sense of worth. In their absence and absence of recognized "father" images or substitutes, growing up in a "feminine" world - grandmothers very often "dépassées", working mothers and aunts, less present to-day through long working hours and unable to respond to new demands of parenting - is becoming more and more problematic. The future is bleak for these youngsters, traditional support being wrecked through harsher life conditions. Social comparison with those, more well off with both present living conditions and life perspectives, throw many of them out of hope.

From our own studies in Mauritius and Rodrigues (Lew-Fai, 2000), we have observed that what is termed as "adolescence" with its period of relative tolerance towards behaviours and experimentations of young ones is absent in popular culture. Getting a job for the young boy and being able to position oneself on the " marriage market" for the young girl are very early objectives ( as from 11-12 years old). These are associated with recognized attributes of adulthood. Patterns of behaviours can change dramatically onwards as strategies are set up to acquire these attributes as soon as possible. Language, adoption of attitudes which are considered "male", "viril" exhibit a code of violence more or less explicit among young boys. Gangs are formed and membership confers identity, value, sense of belonging, where they are inexistent before. New rituals ( from harmless to more destructive ones) and identification to a leader are ways to cope with conflicts between shame, absence of significant adults to allow positive projection, poor self representations and dreams about self and the future.

Risk behaviours leading to juvenile delinquency, gang formation, prostitution, early pregnancies (Lew-Fai, 1998, 1999) “we have nothing to lose”, while constant in all poor and popular environments can be greater in scale and frequency because of a constellation of disruptions which have long been harboured from generation to generation. Ours is not a fatalistic approach. Nor is it one which lends to slavery all the origins of “malaise” or “mal être”, poverty and associated social ills. It has been a traumatic event and we need sense of measure and will (Garland, 2002) to discern more carefully the added injury it has inflicted over years in order to re-establish self and collective pride, foster resilience among new generations of boys and girls that their dreams of “normality” may be fulfilled i.e. to leave the margins of society and not perpetuate life on its margins.

## 6. The Challenge

The successive political issues in Mauritius have been and are still intricately woven with identity issues, i.e. “purity” in reference to ancestral traditions and trans-culturality as creation of new cultural and value patterns, re-interpreting heritage.

In order to achieve control or maintain hegemony, dominant groups construct fictions and homogeneity relating to various intra-community groups. Myth, legend and history as fictions against others enable the crafting and reinforcement of power. Struggle between the desire to obtain an “essential” identity that makes for political currency among the dominant groups and the experience of new cultural values, transiting in all ethnic communities has been and is still a main issue for power relationships.

More openness is needed in reflections on history to loosen existing controls over meaning and identity, political will not to reify ethnic groups as bounded wholes, unified and undifferentiated, allowing unsettling recombination of identity and society.

As long as slavery and the multiple trauma that it brought along are repressed and do not enter national social representations as symbolically significant and dynamic, social identity of slave descendants will remain in a vacuum, with no basic valued components to build upon. It is vital that new cultural dynamics, resting on heritage but reviewed within local dynamics be generated. Myths of purity and their prevalence in the collective unconscious should be deconstructed. Self-referential beliefs and real knowledge systems should be promoted in all fairness within a trans-cultural approach to life and society, fostering real pride and resilience for all. This is a first challenge for the whole of Mauritian society.

The second one, more specific to slave descendants, lies in the interplay of six factors: 1) A history of enslavement, servitude and oppression; 2) Demographic composition; 3) Economic positioning and intensifying competition with other communities; 4) Racial prejudice and discrimination; 5) Resources, internal structure, dynamics and leadership of the community itself, and 6) Capacity for self-determination and self-empowerment.

## 7. Recommendations for Empowering Mauritians of “pure” or mixed African and Malagasy origin

### 7.1 Recognition of distinctive African and Madagascan references

- To reject an essentialist approach<sup>38</sup> but to anchor identity with references to the popular past, actualizing this identity process, if necessary, in appealing to transnational forms of identity.
- To open up to wider sets of possible options within discursive, political, economic and social space.
- To introduce “socio-biography” of groups with particular emphasis on history and the forging of patterns in values, attitudes and behaviors<sup>39</sup>

*‘L’historisation est aussi une manière d’aider les agressés. Ecrire ou raconter l’histoire d’un blessé constitue un plaidoyer qui tente d’expliquer les causes de son amoindrissement afin de rendre moins écrasant le regard des autres’ p. 27.*

- To bring about change in feelings of shame and hurt through recomposition of inherited or internalized negative associations with slavery

### **7.2 Setting up of specific historical and cultural programs for a sense of belonging**

- Via community-based organisations, to offer parents and youngsters sensitizing sessions on their social, cultural, spiritual, artistic heritage through story telling sessions, "ateliers d'expression culturelle" in order to anchor identity<sup>40</sup>
- To understand the intricacies of social identity and religious identity and aim at their separation
- To organize interventions in educational institutions, involving teachers and students in order to limit cognitive dissonance within the parameters " dominants-dominés" and superiority associated with White / Western culture
- To design specific programs on parenting skills and socializing processes which anchor identity on the assertion of values centered on the family as a unit. Break a nomadic conception of family, transforming shards of life strung together into a whole pattern of common desires, aspirations and projects.
- To work with children on specific themes related to slavery and resilience
- To offer to youngsters identity support programs, adapted to meet their needs and rituals on entering adulthood. Identity construction and healthier management of identity crisis would be ensured instead of transiting through gangs, delinquency, violence, misbehaviors
- To develop clear strategies which will facilitate process of cohesion and sense of responsibility within the communities
- To recognize the importance of the "invisible world" and its impact on coping behaviours
- To recognize and develop knowledge about conceptions of health, ills and traditional cures in an holistic approach,
- To acknowledge and know better the importance of the body, energy, rhythm and skills
- To collect and share information on essential questions such as suffering, ills, death according to popular beliefs (Augé, 1984)

### **7.3 Setting up of a Trust for Education and Training: in search of Black Diamonds**

- To operate cognitive recomposition regarding education and training, changing negative perceptions among children and parents and self-defeating behaviors.
- To work at area level for a "designation" process by all parties, including families, re-affirming the importance of formal education and lending meaning to school institutions
- In order to foster positive role models, not only "funny and entertaining" and lift up aspirations, particular attention should be given to the search of "Black diamonds" <sup>41</sup> and education. Gifted children could be encouraged within a stable, studious environment to concentrate on their studies and serve as role models for others.
- Grants, sponsorships, scholarships to alleviate extra charges on the family or even temporary shelters when house conditions are not favorable could be set up.
- Mentors on a volunteer basis could monitor progress on a regular basis
- Teachers could be offered incentives to work with young children of deprived areas on non-traditional ways of learning
- Kindergartens as well as specialized schools for the handicapped children with participation of families could respond to real needs

### **7.4 Negotiation from strength**

- To learn to build both political and economic strength from a position of strength instead of thinking in terms of targeted victimization and pawns.
- To discard fragmented ineffective efforts and learn to network well together, without planning to rip each other off.
- To stop being satisfied on physical and sexual validation instead of knowledge and arts.

### 7.5 Need to work on discriminations, stereotypes, internalization of negative images, building of self and group esteem

- To have more research done on explicit or implicit structural discrimination and social stereotypes and prejudices affecting slave descendants
- To foster self and group esteem through cognitive restructuring, deconstruction of stereotypes, restoring self-confidence, pride and resilience through regular focused group meetings with help of social specialist / therapist
- To work on outcry of racism that emotionally cripples the community, alleviating inferiority complex, complacency, and impotence of action.
- To free minds from cognitive blindness and mental paralysis, through regular focused group meetings with help of social specialist / therapist<sup>42</sup>

### 7.6 Need for detailed disaggregation of data for a more objective analysis of social justice and formulation of new social policies

- To gather and analyze statistical data over a long period of time, taking into account criteria of gender and ethnic communities in their disaggregation<sup>43</sup> with detailed historical analysis of social, political and administrative structures.
- Particular attention should be given to the field of psychiatry, delinquency and crime
- To assess ( over time) with more precision, ways of living and equal access of Creoles to
  - land and housing
  - labour and its division from slavery, post 1835 for “ex-apprentices” in manual, semi-skilled and skilled work
  - social and economic networks ( from day-to-day survival to powerful lobbies)
  - education from pres-school to tertiary education, rates of failure / success and drop-outs
  - savings and earnings ( from traditional to new)
  - family structures, dynamics and evolutions ( evolutions of roles, expectations, frustrations, gratifications, inter-generational relationships)

---

<sup>1</sup> In all, a list of 47,258 individual names has been analyzed according to family and first names. They are as follows:  
Housing (CHA 2011): 16833 lessees  
Education (SC candidates and Passes 2009): Boys 5943; Girls 7297  
Public Sector Staff (1962= 1651; 1975= 2512; 2005= 8628)

Para Public Sector ( Ports Authority 2011= 529; Cargo Handling Ltd 2011= 1481; Central Electricity Board CEB 2011= 1944

Brown Sequard Inmates 2011= 420

Note: We wanted to analyze data concerning Prison Inmates 2011 but they were incomplete; they are therefore not included in the report.

<sup>2</sup> *“Even when laws, policies and programs appear in a formal sense to be objective and impartial, they may be skewed in implementation by public administration to favour one set of ethnic claimants over others. This ethnic skewing can be applied to matters of substantial value, including government contracts, access to land, credit, capital, business licenses and foreign exchange, and to a variety of public services such as higher education, municipal amenities, housing, water supply and recreational facilities.”* Esman ( 1997) in: *Poverty in Mauritius, 2008*

<sup>3</sup> *“In a period of growing inequalisation and wealth getting concentrated in the hands of a few, interculturality is under great strain. Creole groups are emerging and increasingly holding discourses around the idea that they are excluded from the system. There is resentment over the fact that they are heavily underrepresented in the public sector and that opportunities are not the same for everyone in a society which calls itself democratic”.* *Poverty in Mauritius, 2008*

<sup>4</sup> There is an open debate in some countries, for example, recently in France as to the necessity of disaggregating data according to ethnic origins, its relevance and social use. However, if done within a perspective of social justice, such an analysis can help to deconstruct myths of equal opportunity as well as victimization. Cf. Conférence mondiale contre le racisme, la discrimination raciale, la xénophobie et l’intolérance qui y est associée. Nations Unies. Comité Préparatoire. Première session. Genève, 1-5 mai 2000. Rapport : Étude des effets sur les enfants appartenant à des minorités et les enfants de travailleurs migrants de la discrimination raciale dans les domaines de l’éducation, de la formation et de l’emploi. The report recommends a detailed analysis : *« L’élaboration de statistiques et d’indicateurs ainsi que leur désagrégation en fonction de la condition de migrant, de l’appartenance raciale, nationale ou ethnique ou de l’appartenance à une minorité permettront d’améliorer sensiblement la mise en évidence des problèmes et la formulation des politiques aux échelons national, régional et international”.*

<sup>5</sup> Cohort analysis is recommended in future studies to observe more fully the selection mechanism within the educational system. In our example, disaggregation of children who were candidates at CPE level in 2004, their rates of pass as well as at HSC level in 2011.

<sup>6</sup> Note: Table does not include 472 candidates from 5 colleges due to difficulty to know if they are boys or girls through their names. Among them, 129 are GP with 93 passes; 343 Non GP with 230 passes

<sup>7</sup> For details, cf. Annex Table4

<sup>8</sup> Cf. Annex Table5 General Population the Public Service 1962

<sup>9</sup> For more details in the Public Service Staff for 1962, 1975 and 2005 cf. Annex Table 4 to Table 9

<sup>10</sup> Staff lists are given with salaries per month, not per annum as in 1962

<sup>11</sup> In 1975 and 2005, we have disaggregated data according to sex.

<sup>12</sup> For all details, cf. Annex Table 10

<sup>13</sup> For all details, cf. Annex Table 11

<sup>14</sup> A recent report on Poverty has been carried out by the National Empowerment Foundation (NEF). We have not been able to consult it.

<sup>15</sup> *« 7,157 families living in 229 pockets of poverty across the island”.* 2007/2008 Budget.

<sup>16</sup> In Annex Table 12, details of ailments are given for each ethnic group, according to sex and age.

<sup>17</sup> The Report concludes that : *“ Il est impossible de recenser toutes les catégories d’actes qui constituent une discrimination raciale contre des enfants de migrants ou de minorités dans le domaine de l’enseignement et de la formation. Les recherches à ce sujet sont minces et elles portent généralement sur certains pays ou certaines minorités au détriment d’autres. Les statistiques et autres données pertinentes sont encore plus minces »*

<sup>18</sup> A survey carried out by *Le Mouvement d’Action Catholique des Enfants* in Rodrigues indicated in 1993 that out of 264 children at work, 44 were between 6 and 12 years old, and 220 between 13 and 16. The major reasons for entrance on the labour market at these early ages were poverty and failure in the school system.

<sup>19</sup> In recent years with the emergence of IT sector, youngsters from Creole origins are massively recruited. The criterias of selection in the BPO sector are within their reach ( recruitment at SC and HSC levels), “ cultural” assets in communication and languages, flexibility in adjusting to odd hours working ( greater than among Asians). These “transitional” jobs offer short term economic freedom and long term careers for those who persevere. It is noted however that turn over is high: in some cases it is linked with work conditions, considered difficult; in others, drop outs are due to a shift to another company after a week-end’ s meeting with partners working elsewhere.

<sup>20</sup> *“Some people argue that the Creole group is responsible for its own plight, that they do not have a culture of savings and that they have developed a culture of dependency. Many cultural stereotypes are attached to them. There is also the argument that they fled from the sugar camps and did not want to work the land but there is enough historical evidence now that they were made to leave the camps. Land which is a major asset was never appropriated by them. On the other hand as a consequence of the “grand morcellement”, the Indians bought small plots of land. The possession of land by this group became an important means to sustain their livelihoods and also contributed to the mobility of the group. The landless poor are perhaps disproportionately present in the Creole group”* *Poverty in Mauritius, 2008.*

<sup>21</sup> Difference is mainly due to: Cost of renting/ paying loan for housing, cost of transport to go to work, to send children to school, less in Rodrigues since adults as well as children tend to walk long distances, self-subsistence in Rodrigues - families living mainly on products of vegetable gardens, own fishing, and, from time to time, at selling seasons, from cattle and poultry rearing -, private tuition for children rare in Rodrigues villages, necessities reduced to a minimum.

<sup>22</sup> These practices are well-known stereotypes : *«Tout réside dans l’engrenage de l’environnement du chef de famille qui reste emprisonné par le groupe d’amis dans lequel il évolue... En tant qu’individu, l’homme créole appartenant irrémédiablement à un groupe auquel il ne peut se soustraire et se retrouve contraint de boire, de manger et de s’amuser exclusivement dans ce groupe».* Eriksen, 1989

- <sup>23</sup> « *Des processus perceptifs cognitifs et émotionnels sub-liminaux qui sont de véritables reflets des rapports sociaux et des mémoires collectives héritées d'un passé proche ou lointain, interviennent de manière automatique* ». Channouf, 2010, p. 14
- <sup>24</sup> On a milder dimension, « triangaz », « trasă », according to Palmyre (2007) are forms of transgression « de la loi du maître », inspired by strategies of stealth and cunningness from the " marronnage" .
- <sup>25</sup> Cf. for example, Camilleri (1990)
- <sup>26</sup> A. Romaine (2003) suggests « *une conception prosécutive de la personne vivant constamment sous la menace, la peur [...] Le secours vient du dehors...le couple «menace-recours» étant une boucle de fatalité, laissant peu de place à l'espérance... la recherche est de salut temporel sans référence à la promesse d'un salut éternel..* »
- <sup>27</sup> « *Dans le système traditionnel, l'individu est toujours en communion avec l'extérieur. La maladie survient lorsque la cohésion de tout cet ensemble est détériorée ou détruite. La prise en charge des tradipraticiens consiste tout d'abord en des rituels qui visent à une réconciliation entre l'individu et la communauté. Est malade celui qui ne se reconnaît plus membre de groupe et se sent solitaire, n'ayant pas ou plus besoin des autres. La maladie survient toujours d'un autre, du désir d'un autre qui ne veut plus que vous soyez ou que vous soyez moins qu'avant. La sorcellerie va donc utiliser les boucles identificatoires, les identifications projetées. Découvrir le persécuteur autorise à le haïr ou l'aimer consciemment* » L'Afrique symptôme, 2009.
- <sup>28</sup> This on-going stereotype has itself a long history and has been used by many visitors of the last centuries such as Rev. Beaton (in Mauritius between 1859 - 1864) '*Le nègre mauricien est pataud, boucan et de bonne humeur mais manque d'ambition, de vision et d'honnêteté et de franchise. Il a en général très peu de besoin. Il peut de ce fait travailler que deux jours dans la semaine et gagner suffisamment pour se satisfaire. Il est un philosophe car il ne se plaint pas de son état. Son objectivité, c'est de gagner de quoi pour mener sa vie comme il l'entend, c'est-à-dire, débonnaire et désintéressé*'. Mentioned in : Moutou, 2003
- <sup>29</sup> 'Les Noirs de toutes les castes se réunissent les jours de repos sur des places séparés de la ville du côté du camp des Noirs ou de celui de Malabares. Cependant, ces derniers ne se mélangent pas avec les africains pour lesquels, ils témoignent le plus grand mépris'. Milbert, 1812, p.181.
- <sup>30</sup> 'La fierté est affiliative et la honte désaffiliative' (Nathanson, 1992)
- <sup>31</sup> Starting by given names which bring self-disdain and shame. Cf. Romaine (2006), Chanson (2008)
- <sup>32</sup> « *La honte dépersonnalise en attribuant à l'autre le pouvoir d'un regard sévère....la honte reste muette...Les mots de la honte sont difficiles à dire par crainte de la réaction de l'autre....L'ambition peut être un excellent masque de la honte, en tant que sursaut compensatoire qui donne à l'humilié la force de se réhabiliter mais dans cette légitime défense la honte demeure la référence....* ». Gaulejac, 1996, p.230
- <sup>33</sup> For research on this theme, cf. for example Devine (1989), Forges (1998), Hamilton, (1996), Plous (1995).
- <sup>34</sup> The attachment theory (Bowlby, 1978) shows the primordial importance of security as " empreintes" in the memory, enabling resilience processes to be set up after a trauma. " *Inversement, si le blessé n'a pas intériorisé dans sa mémoire une base de sécurité, le même événement devient une défaite supplémentaire. Son image se détériore* ».
- <sup>35</sup> Channouf refers to " *processus complexes inconscients, hérités de la socialisation à travers ses différentes instances, stockés de manière indélébile sous forme d'émotions, de croyances, faux raisonnements et clichés. Processus plus rigides, plus résistants au changement...Processus liés à la constitution neurobiologique faite de structures cérébrales sous-corticales et de structures corticales dont les liens, selon les neurologistes sont complexes* ».
- <sup>36</sup> This solidarity between slaves and « Marrons » is well described by Nagapen (1999)
- <sup>37</sup> « *Chez R. Bastide (Ré-ed.1996), les styles de vie ne peuvent être réellement compris qu'une fois mis en relation avec l'espace social, c'est-à-dire avec le système des écarts distinctifs entre groupes sociaux, système qui ne doit pas être appréhendé de manière statique, mais dynamique* ».
- <sup>38</sup> "Culturalistic "approaches can very often be « essentialist », serving the interests of a few. ( Severino, Ray 2010)
- <sup>39</sup> « *L'historisation est aussi une manière d'aider les agressés. Ecrire ou raconter l'histoire d'un blessé constitue un plaidoyer qui tente d'expliquer les causes de son amoindrissement afin de rendre moins écrasant le regard des autres*' Cyrulnik, 2010, p. 26.
- <sup>40</sup> « *L'histoire de l'esclavage est une histoire sans archives, une épopée à l'envers, la longue et terrible rumeur des grands bateaux chargés de chair noire et muette* » (Gerbeau, 1970)
- <sup>41</sup> With as example, the histoire Madame Françoise, "femme marronne" ( Nagapen, 1999)
- <sup>42</sup> « *L'objectif est d'analyser les freins psychologiques qui comportent des biais, des erreurs et des distorsions au niveau du jugement des compétences, des productions et des qualités des individus du fait des stéréotypes sociaux, des préjugés individuels et du contexte social et économique* ». Channouf, 2010, p.18
- <sup>43</sup> " *Il faudrait donc encourager les États à collecter et diffuser des données spécifiques sur la situation des enfants appartenant à des minorités et des enfants de travailleurs migrants dans les domaines de l'éducation, de la formation et de l'emploi, y compris des données sur l'âge de sortie de l'école, les niveaux d'alphabétisation, la participation de groupes particuliers à la formation professionnelle et les taux de chômage par rapport à la communauté en général, avec une ventilation par sexe et par groupe minoritaire ou de migrants* ». Conférence mondiale contre le racisme, la discrimination raciale, la xénophobie et l'intolérance qui y est associée. Nations Unies. Comité Préparatoire. Première session. Genève, 1-5 mai 2000.

## EXECUTIVE SUMMARY

Education is usually seen as a means to get people out of poverty, a vector of social mobility, a tool for peace and reconciliation, but when education fails to do the above, social cohesion is threatened and instabilities of diverse kinds are bound to arise. Multicultural Mauritius, whilst peaceful on the surface, has all the ingredients necessary for a social explosion, but only if managed carefully and if its education system is organised and delivered in a manner that permits and ensures genuine equal and equitable chances/opportunities for the children of the descendants of slaves and indenture, it would go a long way towards the creation of durable peace in the country. Peace, as Martin Luther King notes, is not about the absence of conflicts but the presence of justice. Can Mauritian education ensure social cohesion and justice? Education in the post-Independence period has no doubt been informed by the history of the country, and this history has had ramifications for the different segments and communities of Mauritian society.

The education team of the Truth and Justice Commission, amongst a number of other questions, seeks to address the following : 'Conditions of education of slaves, ex-slaves, indentured labourers and descendants, the state of 'enforced illiteracy' and its consequences on the slave population, the consequences of denial of education; consequences of non-inclusion of an oral culture. This Education Report also examines the articulations between the past and the present and how education can therefore be used as a tool for reparation and thus mitigating the tensions and injustices resulting from a history of injustice and oppression.

In order to answer the questions posed above, the Report examines the patterns of inclusion and exclusion during the colonial period. It argues that the denial of education to the children of slave descent and indentured labour meant that the oppressed, (for a very long time) could not reverse the unequal power relation, could not access resources and, in some cases, lost what they possessed and had to remain subjugated to the colonisers. The abolition of slavery and the arrival of indentured labour from India in the 19<sup>th</sup> century not only changed the demographic profile of the island, but also provoked a different response from the Colonial Government in as far as education is concerned. The colonial education project was a violent one and harmed the colonised in diverse ways. The role of institutions, particularly the Church, in repressing the culture and identities of the non-white is also discussed.

The democratisation of education during the post-colonial period opened up several windows of opportunity, but discriminations and inequities persisted. Several legislations marked educational developments both in the colonial and post-colonial period, but legislations are not enough to create equitable outcomes, as the Report demonstrates.

The Report argues that, whilst post-colonial education has contributed to producing a greater pool of expertise and relevant manpower in the country, several types of injustices such as curriculum injustice, linguistic injustice, socio-economic injustice, to name but a few, have continued to mar the educational system. The greatest aberration of the system is that it demands of Mauritian children that which they do not possess, the cultural and linguistic capital, and remnants of a Eurocentric model of education. In short, the Mauritian school does not cater for the heterogeneous cultures, diverse talents and multiple intelligence of the country. The system has for many years been failing the disadvantaged children, particularly those of Creole background.

Whilst 'illiteracy' is no longer enforced as during the slave period, the former still prevails amongst a relatively important section of the population. Enforced illiteracy had several consequences such as: a lack of opportunity to acquire assets, dispossession of land, denial of political rights, and these impacted on future generations in multiple ways. But illiteracy is the result of a system failing the children. Children fail the Certificate of Primary Education (C.P.E) exams without having mastered the skills of reading and writing. Schooling in Mauritius has not favoured an oral culture, which is generally closely tied to the 'being' of the child. Working-class children, particularly those of slave descent, have experienced multiple forms of identity repression and denial, making it hard for them to connect to schools with middle-class values and ethos.

Failure rates are concentrated in the deprived zones of the country where ZEP (*Zones d'Education Prioritaire*) schools have been set up. The deprived zones have important conglomerations of families of both indentured and slave descent but the latter are more predominant. Given the high failure rates, the State has opened up a number of pre-vocational classes/schools to cater for those who do not make it in the last year of primary schooling. The fact that Pre-vocational Education (PVE) schools capture large numbers of children from both slave and indenture descent, particularly those belonging to the working class, the education team also undertook a survey of the PVE schools to establish the extent to which these schools actually provide a second chance to the more deprived. The reality of the PVE School, however, is a sad one. The way in which education is organised and delivered shows that the emphasis is on access, with little concern, if at all, for equitable outcomes.

The debate on 'reparations' is a complex and a rather ethnicised one. Some segments of Mauritian society believe that the descendants of slaves have enough privileges and resources from the State and that there is no need for more, while others are of the view that the legacy of slavery is such that it demands reparation. Without the latter, peace and reconciliation will be threatened.

The methodology adopted for the study is a combination of both quantitative and qualitative methods. Primary data was obtained through a survey of pre-vocational schools, and a voice was given to some of the main actors in the educational process, particularly the students of the pre-vocational sector, through the use of Focus Group Discussions (FGD). Plans, policy documents, newspaper cuttings, the *Hansards*, as well as some relevant hearings, were also used. In addition, the education team organised 2 major workshops - one on the theme of *Consequences of slavery and indentured labour and their implications for contemporary Mauritius*, the other on *Consequences of slavery and indentured labour - Social Justice*, where former Ministers of Education gave their views on how the past has informed the present in the educational field.

## INTRODUCTION

Contemporary Mauritian society is very different from the past. The country has emerged from a history which has been marked by deep divisions characterized by conflict, racism, untold suffering and injustice. But today, the Republic of Mauritius is relatively stable and peaceful although cohesion and reconciliation are not complete and can perhaps be never complete, since reconciliation can be both a goal and a process. However, whether it is a goal or process or both, it should be worked at, so that a more just society, for each and everyone, irrespective of creed, colour, ethnicity, race and gender be obtained.

Cohesion and reconciliation depend heavily on our ability to see and understand what is happening today, right now - more than 40 years after Independence with all the learning and consequences (some visible and others not so visible) that our slave and indentured history has left us with. The legacy of the unequal power relations and deep divisions that existed between the haves and the have-nots, the White and the Non-White, the coloniser and the colonized, has taken many forms, and has had many consequences. Digging into the implications of this legacy, particularly as pertains to the educational arena, is a complex task since education in multiethnic Mauritius is often shaped and influenced by a number of forces with different vested interests. Several institutions have left their mark on education, some more positive than others. Education in Mauritius was, during the colonial period, a very rare commodity. When it did come on offer, it was for the privileged few. Enforced illiteracy had several consequences for the descendants of slaves and indentured labour, many of whom became assetless, powerless and voiceless as a result.

After the abolition of slavery and the arrival of indentured labourers, things started changing somewhat. The British Colonial Government was somewhat more willing and disposed to look into the educational requirements of the population but despite this, education was still largely limited to some sections of the society.

The imposition of a colonial curriculum on the descendants of slaves and indentured labour meant that a large part of their being and their experiences had to be put aside. Oral culture, which constitutes a central component of the people's lives, was not given its rightful place. Schooling was dominated by a written culture and a curriculum impregnated by the colonisers' culture and language. In the post-colonial period, some progress towards Mauritianisation of the curriculum has been made but the former did not mean an embracing of the local languages.

Educational policy-making has not always been made in an inclusive and participatory manner. While post-Independence policies have often talked about being inclusive and the need for quality education for all, the reality is a rather different one. Many children leave school illiterate and are often pushed to the fringes of society without much attention being paid to them. More importantly, education, which is supposed to be a vector of social mobility, has brought this only to some, thus causing a huge potential for conflict.

While examining issues such as the consequences of 'enforced illiteracy', the non-inclusion of an oral culture, the conditions in which the people of slave and indentured labour descent obtained education, the report emphasises the articulations between the past and the present. In so doing, it seeks to examine key questions such as what are the ingredients necessary to bring about durable peace and cohesion, give credence to national unity rather than simply talking about unity and remain divided. It will also explore the complexities associated with educational policy-making that make it so hard to move towards a genuine and true widening of opportunities for our children, while taking into consideration their multiple talents, their cultures and emotional intelligences. Whether Mauritian education has contributed to the emergence of a national identity and to Mauritianness is also a key question of concern and relevance to the education team.

Reconciliation is fundamental to the development of a just society and *vice versa*. Erik Duxtader and Fanie du Toit (2010) write:

Sometimes we think of reconciliation as our most prized idea, the next moment as cheap deception [...] sometimes it is a process, at other times it is a goal. Depending on the situation, it is the basis for national pride, institutional policy, a community initiative, or something that unfolds

between individuals. In some cases, it is all of these at once. Complicating things further, reconciliation evidently changes from over time and across contexts. Thus, not only is it possible to tie reconciliation in one precise meaning, but its dynamism makes it difficult to understand how reconciliation changes and transforms us.

And needless to say, education is perhaps one of the most powerful tools towards reconciliation but a lot depends on how it is organised and delivered and, most importantly, the extent to which equity is embedded in the system. One of the main arguments of this report is that education in the post-colonial period has been made more accessible but not equitable enough. President Wolfenhson from the World Bank has drawn our attention to how and why "*pride in one's own cultural identity is key for a community to take its destiny in its own hands*" but when schooling, in this case, Mauritian schooling, has for decades repressed the identity of the child, particularly that of the slave descendant, there is an urgent need for reparation.

In order to understand the myriad ways in which History has informed contemporary Mauritian education and the potential of the latter to constitute a tool of reparation, the education team has focussed on several dimensions of the Mauritian education system, whilst allowing the past to articulate with the present. The education team has also chosen to undertake a study of the prevocational sector in Mauritius so as to highlight how contemporary in-school processes speak to the persistent alienation of the children of slave and indentured descent, particularly those of the working class. The report is therefore built around the following outline:

- Introduction
- Chapter 1: Broad Aims and Objectives of Education
- Chapter 2: Methodology
- Chapter 3: Slavery and Indentured Labour - Commonalities and Differences - the Broad Consequences of same on Education
- Chapter 4: Patterns of Exclusion and Inclusion
- Chapter 5: The Democratisation of Education in the Post-Colonial Period
- Chapter 6: The Case Study - PVE Schools
- Chapter 7: Education as a tool of reparation
- Chapter 8: Conclusion and recommendations

Chapter one examines the broad aims and objectives of education and in so doing, it shows the difference between a conservative and radical mode of thinking. It argues that education is an important instrument of social change but if efforts are not made to shift the emphasis from equality of opportunity to equality of outcomes, the debate on 'the rights to education' would be meaningless.

Chapter two concerns the methodology. It explains how and why a mixed methods mode of data collection was important for the study. It emphasises the pertinence of the 'voices' obtained through the hearings, the *Hansards* and the Focus Group Discussions. These go a long way in highlighting the wounds and the injustices as well as how educational policies are shaped and formulated at different periods of time. Two workshops were also organised with a broad range of stakeholders, including some former Ministers of Education and a survey of the prevocational sector was undertaken as part of the research plan and methodology. Since the prevocational sector captures large segments of children of working class slave and indentured descent, it was deemed appropriate to target them for the study.

Chapter three examines the commonalities and differences between slavery and indentured labour. It argues that, whilst both constitute two important economic systems based on exploitation and oppression, slavery has had worse consequences with huge implications for the psyche of the individual. Slavery, which has been described as a 'crime against humanity', and 'indentured labour' show us the extent to which people emanating from these two groups have been deprived of certain fundamental Human Rights - including the right to education. More importantly, the impact and implications of these two systems on people's identities and the disconnect that emerged between them as 'beings' and the larger system and sub-systems such as schooling are discussed.

Chapter four examines the patterns of inclusion and exclusion during the French and British colonial periods. The role of institutions such as the Church and the part played by some key figures in the education sector is also discussed. It also examines some of the legislations during those two periods and the implications of these for the descendants of slaves and indentured labour. More importantly, the question of linguistic and cultural exclusion and the implications of these for a stratified society such as Mauritius is discussed.

Chapter five first describes the contemporary educational system and explains how education has been democratised during the post-colonial period. It shows how despite the fact that more resources have been pumped into the educational sector, the latter remains highly inequitable. Those who are most hit are the children of the disadvantaged groups, made up largely of children of Creole background. The chapter also examines the reasons behind the high rates of failure amongst the Creole children and thereby shows the articulations between their slave past and their contemporary plight.

Chapter six is the Case study of the prevocational sector. This is the sector which accommodates the children who fail the C.P.E twice. Both teachers' and students' views have been sought on a range of topics such as the curriculum, teacher-student relationships, gender equality, home-school connection, identities, their understanding of patriotism and citizenship. Some of the findings speak to the multiple discriminatory practices/mechanisms, often 'unconscious', which contribute to the reinforcement of the young person's exclusion and highlight the fact that prevocational, which is supposed to offer a second chance to the students, does so for the very few lucky ones.

Chapter seven entitled 'Education as a tool of reparation' argues that the suffering and injustices, experienced by the descendants of slaves and indentured labour, cannot be repaired through monetary means. It is essential not to attempt to commodify such a complex history which continues to inform the present. This chapter borrows heavily from hearings at the TJC to highlight the various discriminatory practices and prejudices which prevail in contemporary Mauritian society and argues for the urgent need for some form of reparations. Education which caters for mixed abilities and heterogeneous cultures and backgrounds, coupled with some kind of affirmative action, seems to provide part of the answer. The chapter examines the potential that education therefore holds as a tool for reparation.

Chapter eight is the concluding chapter and it also makes some recommendations. The argument is that for contemporary modern Mauritius to become a more cohesive and just society and unshackle itself from the downside of its slave and indenture past, it should rethink its education and educational policy-making. A number of recommendations are made in that direction. It is the collective responsibility of a wide range of stakeholders to ensure that these are implemented.

## CHAPTER ONE

**BROAD AIMS AND OBJECTIVES OF EDUCATION****1.1 Different Perspectives on Education**

Social scientists have been giving much thought to the important issue of education and its role in societies since times immemorial. Inevitably, they have held extremely differing views on the relationship between education and society. At one end of the spectrum, education is considered the most important 'ideological state apparatus', devised by the ruling classes, to ensure that society largely conforms to their ideas and interests. Gramsci (1957) is even more specific when he says that intellectuals, i.e. the upper sections of the products of the education system, "are officers of the ruling class for the exercise of subordinate functions of social hegemony and political government." Clearly, thinkers of this persuasion hold that education is an instrument forged by the ruling classes to serve and preserve their own economic and political power structure.

At the other end of the spectrum, there are many social scientists, politicians, educationists and educational planners who consider education as a very important instrument, if not the most important, of social change.

The role of education is to educate individuals within society and to prepare and qualify them for work in the economy, while helping to integrate individuals into society and teach them the norms, values and morals of society. However, there are 2 major sociological theories that differ greatly, when it comes to the role of education- Functionalism and Marxism.

By and large, many people view the role of education from a largely functionalist perspective. Education is largely linked to social stratification and is usually perceived as sifting, sorting and allocating people to their correct places in the economy and society. The idea of meritocracy is infused within the functionalist mode of thinking. But how meritocratic and just can an education system be, if it is not organised and delivered so as to cater for diverse talents and cultures and if it is informed and dominated by Eurocentric thinking. According to Marxist thinking, education is therefore seen either as a tool for the reproduction of inequality or an equalizer/ a tool of social mobility.

In Mauritius, education has played different roles at different times in the country's history but the way that education impacts on the different segments of society has been largely informed by the historical and socio-economic development of the country. In trying to analyse the consequences of slavery and indentured labour for education in Mauritius, one inevitably has to look at the way education was organised and delivered during the different historical periods.

**1.2 The Right to Education**

During the colonial period, education was largely denied to the colonised. The idea of education as a fundamental Human Right only saw the light of day as late as 1948 in the Universal Declaration of Human Rights, Article 26, of the Declaration notes:

*"Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit...Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups and shall further the activities of the United Nations for the maintenance of peace...parents have a prior right to choose the kind of education that shall be given to their children."*

### 1.3 Sources of Inequality v/s The Right to Education

However, during the colonised period, parents did not have a choice, nor even a say. But in the post-colonial period, Mauritian citizens do have a say, but despite such a say, there is very little that parents of working-class background can do to ensure that their children enjoy the fruit of education and development. The ADEA Report of 2006 for instance notes:

*"Mauritius has achieved commendable success in providing universal access to basic opportunities through its well established education system. However, the differences in achievement scores, for children attending the same level of education suggest that our system may not be addressing learning difficulties. Certainly, many sources of education inequalities exist. When questions about equal education inputs, processes and outcomes are raised in view of the Jomtien and Dakar objectives, we find that we are not yet meeting basic learning needs and ensuring a minimum level of competencies for all. Reforms in the primary education system must be geared towards reducing the differences in pupils' achievement as they progress in schools."*

Reducing differences in pupils' achievement and ensuring that the right to education is respected and enjoyed in all its forms, demands a whole range of interventions as well as a more holistic and humanist approach to educational reforms:

*"The production, positioning and consumption of knowledge are still far from a neutral objective and disinterested process; they are socially and politically mediated by hierarchies of Humanity and human agency imposed by particular relations of power."* (Bourdieu, 2004)

Questions such as who produces knowledge, for whom is knowledge produced and who it is consumed by and to what ends remain fundamental questions.

### 1.4 The Persistent Legitimation of Inequality

Looking at the broad aims and objectives of contemporary Mauritian education, in relation to the past, one is left with the impression that it is a system which caters for all. But the reality is that it revolves largely around an ideology of meritocracy and individual talent and in so doing, it often contributes to a legitimisation of inequality. When one starts deconstructing such legitimisation, one then starts understanding the underpinnings of Mauritian education and the extent to which Mauritius is still polarised and fractured.

### 1.5 A Holistic and Humanist Approach to Education

While the fracture and divisions of post-colonial Mauritius are very different to those of the colonial period, the people of indenture and slave descent have not been able to merge as one. The nation is still in the making and education has a major role to play towards healing people of the hurt and assisting to give meaning and value to 'Otherness'. But such meaning can only flourish and be enhanced when a National Education System allows for what the UNESCO Education Report entitled the 'Treasure from within' highlights. The UNESCO Report on Education for the 21<sup>st</sup> century states that education should centre around 4 pillars which are:

- Learning to know
- Learning to do
- Learning to live together and
- Learning to be.

There is no doubt that the colonial education system was very distant from what Delors was recommending but a question worth posing now is: the extent to which the contemporary Mauritian education system responds to these pillars. Making these pillars central to the education process could assist in achieving more equitable outcomes towards promoting a Mauritian identity, having an appreciation and understanding of 'Otherness' within our multicultural space. In short, a holistic and humanist approach to education can bring about a more just, cohesive society where reconciliation becomes more of a reality.

## CHAPTER TWO

### METHODOLOGY

The methodology used for this study is a combination of several methods and instruments. Mixed methods research is currently defined as research in which the researcher collects, analyzes, and integrates qualitative research and quantitative research to study a problem. This approach to research is emerging as a methodology that encompasses philosophical assumptions, designs, and methods, and it has been heralded as “the third research paradigm” (Johnson & Onwuegbuzie, 2004, p. 14), and ‘a way of thinking’ (Greene, 2007). As part of the mixed methods approach, the education team had recourse to both quantitative and qualitative methods of data collection.

The former included a survey of the prevocational sector (since it captures a large number of children of slave and indentured descent) within a broad case study framework. Qualitative methods consisted of unstructured interviews and FGDs.

#### 2.1 Primary and Secondary Data

Primary data was obtained from a variety of sources. The interviews carried out with teachers, policy-makers, researchers and administrators, as well as the Focus Group Discussions undertaken with students of the prevocational sector, constituted some very rich data.

Secondary data consisted of information sought from books, journals, newspaper cuttings, policy documents and educational plans/reports.

#### 2.2 Case Study of PVE

Though not so popular within certain disciplines, case study is often acknowledged as a powerful tool to describe and discuss certain realities. Reinharz (1992:174) notes: “*The power of the case study to convey vividly the dimensions of social phenomena or individual life is power that researchers want to utilise*”.

A case study approach can provide a way of thinking about the context that shapes the relationships and dynamics of the situation.

Case-study also allows a multi-perspectival analysis. This means that the research will include the voices and perspectives not just of the actors, but also of the relevant groups of stakeholders and the interaction between them. A salient characteristic of case studies is that it gives “*a voice to the powerless and voiceless*”. Children and young adolescents often constitute such a group.

#### 2.3 Random Sampling of the PVE Schools

A purposive random sampling was done out of a list of schools located mostly in the pockets of poverty of Mauritius. The list of poverty zones was retrieved from the National Empowerment Foundation, out of which 37 schools situated in those poverty zones were randomly identified for the survey to be carried out. The purposive sampling method is used mainly when a particular subset of people needs to be accessed for the survey. It is such that when taking the sample, those who do not fit a particular profile are rejected. A purposive sample can be defined as a non-representative subset of a larger population, and is constructed to serve a very specific need or purpose. A structured questionnaire was administered among PVE teachers and FGD with a group of 20 students in each of the sampled schools. The combination of qualitative and quantitative approaches was meant to complement the data collected among teachers and students, within the broader case study of the PVE sector.

## 2.4 Hearings at the Truth and Justice Commission - Giving a Voice

We have had several hearings at the TJC and some of them have actually discussed the educational question and the kinds of injustices that pervade the post-colonial education period. When one segment of the population feels that it is being discriminated against and is sometimes a 'victim' of diverse forms and types of injustices, then there is cause for concern and there is a need to decry the injustices and bring remedies quickly. Certain "TRUTHS" do not generally go down very well, especially if those TRUTHS hurt the powerful and those benefiting from the perpetuation of the system but TRUTHS are important since the TRUTH serves the needs of those asking for greater transparency and accountability and can assist in empowering the marginalised and the most vulnerable sections of society. In short, it can assist in restoring Justice.

## 2.5 Hansard

*Hansard* refers to the official reports of the debates of a Legislative or a Parliament and its committees. Given that it was important to understand how History informs the present, the education team deemed it important to use the *Hansards* as an additional tool of research. The *Hansards* helped to uncover some of the debates on education at different points of the country's history.

## 2.6 Workshops

The education team held two workshops which had as their themes "Consequences of Slavery and Indentured Labour and its implications for Contemporary Mauritius" and "Consequences of Slavery and Indentured Labour on Education in Contemporary Mauritius - Social Justice and Education". The second workshop brought some of the former Ministers of Education to the same platform and assisted the researchers with a further appreciation of how educational policy-making is arrived at and its implications for Mauritian society.

## 2.7 Research Ethics

One of the most important goals of Research is the production of Knowledge. The only value that is central to Research is Truth, the aim being to produce true accounts of the social phenomena. However, such goals cannot be pursued at all costs. There are ethical issues involved in any social research, and they need to be taken seriously.

Researchers need to be aware of the need to take responsibility to secure the actual permission and interests of all those involved in the study. For this reason, given the large number of respondents (students and teachers), where the survey (administration of questionnaire and FGDs) were conducted, all had to fill in consent forms. Questionnaires have been treated with confidentiality, as have been the transcriptions emerging out of the FGDs. The team also ensures that there will be no misuse of the information obtained.

## CHAPTER THREE

## THE SEQUELS OF SLAVERY AND INDENTURED LABOUR AND THEIR IMPACT ON THE EDUCATION OF DESCENDANTS IN MAURITIUS

## 3.1 Introduction

Slavery and indentured labour are two distinctive oppressive systems with adverse consequences. There have been long debates among History, Human Sciences and Law scholars to define the two systems, some wanting to assimilate indentured labour to slavery (Tinker, 1974) or subsuming slavery and indentured labour under other concepts such as “servitude” (Mishra, 2009), others considering slavery in the 18<sup>th</sup> and 19<sup>th</sup> centuries as a radical form of oppression which is historically unique. We argue that the two systems are radically different, although there can be similarities in conditions of work or living. To understand their impact on education, it is important to consider each system on its own and see how those concerned have been compelled or /and brought to adopt different paths/trajectories.

Education problems cannot be solved on their own. They require a holistic approach. As Manning (2007, 16) states:

*“The past is gone and will not return, yet it weighs on our lives today. It influences not only the facts of our existence but the interpretation we give to them. The work of historians, therefore, is not only to study the past itself, but to assess the legacy of the past. This second task of historians, the assessment of legacy, is made more complex by its dependence on both the past and the present. The case of slavery - the legacy it has passed on to succeeding generations - is a question not only of understanding past enslavement, but of understanding how the effects of past injustice linger in a world where slavery is condemned and largely eliminated.”*

Talking today about the sequels or legacy of slavery and indentured labour means that these colonial past events have had consequences which still persist in the present times.

Today’s need to know about the legacy of slavery continues to provoke new questions and deeper research into the historical past of slavery. Why do the descendants of slaves encounter obstacles to enjoying full citizenship in modern nations? Does slave ancestry provide a lasting stigma, passed on to subsequent generations? *“These questions arise repeatedly, not only because of the specifics of slavery, but because slavery—the subjugation of people into abject submission before their owners—serves as a compelling metaphor for all the social problems of inequality and oppression.”* (Manning 2007, 17). This explains why different oppressed groups, including many among the descendents of indentured labourers, compare the situation of their ancestors to that of slaves.

Nevertheless, it is crucial to the work of the Truth and Justice Commission not only to capture the similarities in conditions of work and living between the two groups, but also to acknowledge that there is an ontological difference, a difference of nature between slavery and indentured labour. Otherwise, the sequels of slavery and of indenture would not be assessed in a fair manner and the relevancy of the whole Black/Creole struggle for reparation would just be erased.

### 3.2 Slavery and indentured Labour in Mauritius. Differences and commonalities.

Presenting the differences and commonalities between slavery and indentured labour in table-form may help capture the main issues dealt with in this chapter.

Slavery	Indentured labour
<b>Presence or absence of contract</b>	
The question of free-will and choice did not exist for slaves. The absence of any contract was a first indication of how their rights were being violated.	The fundamental difference between slavery and indentured labour is that in the latter, labourers were recruited on a contract basis which they had to sign and for which they were paid wages.
<b>Procurement process and trade</b>	
The procurement process of slaves was through rapt in African countries and trade between Africans and Europeans. The slaves showed their freedom of choice by leaving their masters' estates at the risk of death (marooning), Le Morne being the symbol of that fight for freedom.	There were rules of recruitment. The recruits had to appear before a Magistrate in the district of recruitment, and not the port of embarkation. Indian recruiters had to bear penalties, if rules were not observed. Recruitment and arrival were closely monitored. This is why the symbolic place for indentured labourers is their place of arrival, duly notified.
<b>Protector of slaves and indentured labour</b>	
There was no contract or Protector at the start of the modern slave trade under the French period. Under British rule, Protectors (Thomas in 1829 following the Colebrook Commission, Jeremie in 1832) were sent to improve the conditions of slaves but could not enforce any measures due to the French colonists' resistance.	Many reports were written against ill-treatment and proposals were made to better the conditions of immigration. Protectors were posted to ensure that the rights of the immigrants were being respected.
<b>Permanent or temporary system /Possibility of returning to homeland</b>	
Slaves were violently uprooted from their countries of origin with no possibility of ever going back. The idea of a homeland or ancestral land was therefore lost forever.	The contract stipulated that the labourers could go back to their country of origin after a number of years' work. Some of them did, in fact, return, while others chose to stay in Mauritius.
<b>Imposition or freedom of religion, culture and language</b>	
Slaves brought to Isle de France came from various areas of Africa and spoke different languages which they could not keep in such adverse conditions. Their languages were repressed and lost. The <i>Code Noir</i> (1723) imposed the Catholic religion on all slaves as soon as they reached the island. The British enforced the same rule. Religion was a control mechanism tool and formed part of the "deculturalisation" process of slaves.	In Indian settlements in the vicinity of the sugar estates, there were <i>baithas</i> or village clubs, where the immigrants would gather in the evenings and read their religious books. This institution provided the scope for the preservation of culture, language and religion as well as a place for developing a new social, economic or political consciousness. No religion was imposed upon them.
<b>Dismantling or maintaining of family system</b>	
They came from different backgrounds and cultures in Africa and Madagascar. The link with ancestral traditions and family system was	At the very outset of regulated emigration of Indian labour in 1843, legislative measures supported family migration. In 1868, instructions were issued that the proportion of 40

severed. Slaves were atomised and alienated, with strong implications for identity because the family, as the main cultural transmitter and socialising agent, did not exist, and this had a devastating impact on children of slaves and generations after them.	women to 100 men should be adhered to and remained in practice for the rest of the indenture period. The joint family system provided help and support even to distant relatives.
<b>Work and wages</b>	
Slaves were considered as a mere workforce and were paid no wages or salary. No capital accumulation was possible under the slave system. This made land and any form of property acquisition very difficult even after Abolition, when slave owners were compensated and ex-slaves abandoned to poverty.	Labourers were paid very low wages on which there was often a “double cut” (security for good conduct and passage expenses in case of premature repatriation). Wages were not increased from 1834 to 1915. However, this laid the foundation for future economic development.
<b>Reification and control</b>	
Slavery denied the humanity of some human beings by reducing them to the status of ‘goods and chattels’ ( <i>Code Noir</i> , art. 39) to be sold, traded, used, thrown away or punished with mutilation and torture. A special Legal Code ( <i>Code Noir</i> ) controlled the minutiae of a slave’s life in all its aspects, and exercised coercion over his mind. Slaves were considered a sub-human workforce, at the service of the owner’s economic power. These methods were still in force under British rule.	While control was not exactly of the same nature, the indentured labourers were also subject to diverse forms of oppression and harassment. Ex-indentured immigrants who had completed contracts and went around looking for alternative jobs were defined as vagrants and arrested by the Colonial Authorities. The latter also imposed passes with affixed photographs limiting their mobility.
<b>Property and land acquisition</b>	
Slaves could not own any form of property or inheritance ( <i>Code Noir</i> , article 21). Under British rule, (1829, Ordinance 43, 23), they could buy land but only through their master and with his approval.	Indians became landowners during the Great Parcelling which began in 1890. At the turn of the century, Indians had saved money and were soon able to buy land from their employers on very fair terms. Low-level managers of large estates were often rewarded with small amounts of marginal land by estate owners.
<b>Human Rights Issue</b>	
Slaves were deprived of what are considered today to be fundamental Human Rights	The fact that indentured labourers came during the British colonial period, after the Abolition of slavery, meant that their rights have not been impinged upon to the same extent as the slaves.

### 3.3 Consequences of enforced illiteracy on the descendants of slaves and indentured labourers

Many slave-holders deliberately imposed the “no education policy” as an enslavement tool and, as such, vigorously enforced tactics designed to prevent slaves from learning to read and write and deliberately kept them away from employment in services that involved writing. Slave-owners understood and knew that “knowledge is power” and if slaves were to gain any form of knowledge they would start contesting and challenging the system in place. As Paige and Witty (2003, 83) note: “ignorance was a valuable control mechanism, many slave-owners strictly enforced illiteracy.” The latter has had many consequences for the slaves and in many ways; some of these consequences impacted on subsequent generations.

#### 3.3.1 Internalization of certain ‘biases’

Slaves were made to believe that they were not intelligent and could not cope with academic studies. In order to maintain them as a docile workforce, the dominant classes gave them only manual jobs. This bias has been internalized by some Creoles, inhibiting them in their capacity to acquire formal and written knowledge.

### ***3.3.2 No opportunity for acquisition of assets and asset-building***

Enforced illiteracy also cut off the opportunity for asset-building for slaves and many generations of poor Creoles after them. In all administrative steps, from the simplest to the most sophisticated, in the legal sphere, trade, business and access to economically rewarding jobs, reading and writing even in their basic forms were required. Thus for generations, poor Creoles could not save enough to upgrade their living conditions and those of their descendants.

### ***3.3.3 No elite emerging***

Enforced illiteracy also prevented the emergence of an elite and leaders from popular class Creoles. This, in turn, prevented them from developing their own role models. The socially available models were always outside their own people, and they could not identify themselves with these models (White and Upper-class Creoles or 'Gens de couleur', and later on Indians and Muslims). Education is a powerful tool for the emergence of an organic elite and role models who might have given an impetus to the development of slave descendants.

### ***3.3.4 Lack of social capital networks***

As the slaves were violently uprooted from their cultural, religious, ancestral and family capital and a new reality and religion imposed on them, it was very difficult for them to bridge the existent language and cultural divide, to reorganise themselves and develop social capital networks. Moreover, there were no African or Malagasy traders or elite to support their struggle for freedom and rights when they came to Mauritius. They had to start again almost from scratch to create and invent a new Mauritian culture and way of life. The Apprenticeship Period deprived them of the time and economic means they needed as free people to reconstruct themselves. The massive arrival of competitors on the labour market contributed drastically to their impoverishment and low-class status.

### ***3.3.5 Deprivation of political rights***

Last but not least, enforced illiteracy deprived slaves and their descendants of access to their political rights. The Mackenzie-Kennedy Constitution, of 1947, allowed all citizens aged 21 who were literate enough to write a few lines in any language, the right to vote. It was mostly Mauritians of Indian origin who could seize the opportunity and hence enjoy political emancipation, whereas slave descendants could not do so. This meant that the Creoles were largely deprived of the possibility for political mobilization and advancement of their conditions.

## **3.4 Socio-psychological impact of slavery**

Slavery is deeply embedded in the unconscious mind. Most historical studies rely on documents or interviews in which texts and written speech are analyzed. This is quite insufficient as written material was produced by the masters, while the human experience and reality of slavery were suffered by the victims and buried in the subconscious. It is that subconscious that must be tapped and brought to expression. It is there that lies the foundational Creole identity based on the slave trader complex and its master-slave relationship, as well as ancestral stories and the mediation of the reality of the Other. The slave system induced a problematic construction of identity in which the self is forced to deny itself (Benoist, 1996). The mimetic relationship with the master can bring the slave's own self-destruction as he violently denies part of his own self that recalls the master. The question of identity is always problematic.

Mauritian society was built on initial violence. Creoles have painfully reacted to that 'undignification' process by psychic postures born in a spirit of resistance. Creole subconscious arises from this first trauma, from this fragmentation, from the loss of the maternal languages and the desubjectivation process which were inherent to the slave system.

In the study of the sequels of slavery, new concepts such as the "Post-Traumatic Slave Syndrome" (Crawford & DeGruy Leary, 2003) have been devised to address the physical and psychological health problems, self-destructive impulses, family and relational difficulties of slave descendants. From the experiences collected in the study and cure of victims of rape, war veterans, victims of heart-attacks, victims of natural disasters and serious accidents, researchers have forged the concept of "Post-traumatic Stress Syndrome" (PTSS). Multigenerational trauma is also known through experiences of human groups who have experienced genocides, mass persecution and massacres in history. Regarding slavery as the starting traumatic experience, the "Post-Traumatic Slave Syndrome" captures its devastating effects that have been internalized from generation to generation and continuously reinforced by systemic racism and discrimination on the social level. It means that slavery has consequences for all parties and for the whole of society sharing that history.

One of the most important concepts linked to the slave status is shame. Shame fuels the behaviour of the descendants of slaves, the shame of oneself and the shame to live. Thus the PTSS reveals a social illness that cannot be healed only through the treatment of individuals or of a group. Mauritian society has built its social relationships and representations and maintained a system of injustice which perpetuates the initial trauma and demand collective healing. "The PTSS requires not only personal, mental, emotional and spiritual healing but social justice." There is no healing without the latter.

### 3.5 Socio-economic disempowerment

The 'malaise créole' was one among the symptoms of that problematic identity and socio-economic construct in the power sharing and making in Mauritian history. Between 1980 and 1990, there were rapid changes in Mauritian economy and society which have led to substantial improvement in the life conditions and education from which Creoles have been excluded. R. Cerveaux, a Catholic priest, denounced the fact that Creoles were poor and marginalized in society and in the Church. According to Cerveaux, Creoles have been victims of slavery, of their own intelligentsia, of the alienating culture of the Church and of politicians pursuing their own interests. The 'malaise créole' was the result of a concentration of problems and an accumulation of hurdles to be overcome: a mix of cultural oppression and identity problems, prejudice and stigmatization which are sequels of slavery and its subsequent history, as well as socioeconomic difficulties, precarious employment, low wages, housing problems: "*Education in the broad sense was considered a key issue in reducing inequalities and repairing injustices towards Creoles' situation*" (Romaine, 2010).

### 3.6 Indian presence before Abolition and Indentured labour

Indians were present in the island since the Dutch period. There were Indian slaves, convicts, skilled workers, sailors, artisans, traders from Madras, and most particularly from provinces under French occupation, namely Pondicherry and Karikal on the coast of Coromandel, South of India. The expansion of sugar production as the economic mainstay of the colonial economy, the abolition of the slave trade and the high mortalities amongst slaves (which easily surpassed their birth rates) led to an acute shortage of labour on the island, so that even before slavery had been abolished, the planters were casting about for alternative sources of labour. (Reddi 1984)

During the occupation in 1810, the British had found a small but flourishing community of Indian traders (both Hindu and Muslim), already well-anchored in Mauritius. They seized the opportunities for the import and export trade that opened up from 1835 onwards. As free traders, they were able to accumulate the wealth and independence that empowered them to preserve their languages, religious observances and cultural practices, and they acquired the social prestige that made them an alternative point of reference for indentured Indians. They thus provided a counter to the atomising structures of the indenture system and the threat of cultural assimilation that it posed for indentured Indians and their descendants.

### ***3.6.1. A crucial transitional period: Apprenticeship and mass importation of indentured labourers***

The Apprenticeship System was a tentative attempt to keep the ex-slaves on the plantations and this formed part of a 'Great Experiment', as Stanley wrote in 1842 Ordinance. Moses Nwulia (1978, 89) observed: "The apprenticeship system converted chattel slaves into serfs" and it is quite understandable that the ex-slaves left the sugar plantations and settled elsewhere. They had nothing and the overwhelming bulk of the ex-apprentices were reduced to extreme poverty and malnutrition, so that their numbers declined steadily. The withdrawal of the ex-apprentices created a labour crisis for the colony and the Government resorted to the renewed importation of indentured labourers from India in large numbers to save the sugar farmers from ruin and the economy from collapse. The artisans who had been emancipated before 1850 had begun to emerge economically, but the massive arrival of indentured labourers changed the demographic ratio and the new labour situation brought the majority of them to a state of extreme impoverishment.

## **3.7 The indentured labour assets and social capital**

The situation of indentured labourers was very difficult on their arrival in Mauritius and they had to face many hardships. They had to adapt to a new cultural, religious and political environment. The conditions of work and living were harsh but their cultural, religious, ancestral and family capital, which they could bring with them and relate to, were an essential asset in their adaptation to, and development in, Mauritius

### ***3.7.1 Baithkas - an integrating mechanism for children of Indian indentured labourers***

The *baithkas* played a crucial role in the conservation and development of the Indian culture in Mauritius: the *baithka*. The system of *baithka* (which means a place to sit together), was present in many villages in India. Bhojpuri served as the vehicle of expression and communication. When they arrived in Mauritius, the Indian indentured labourers did not meet with administrative obstacles and continued freely with this social set-up of which they were used to in their villages (Hazareesingh, 1962).

One of the assets of the *Baithka* system was its flexibility. It was a veritable socio-cultural hub, a gathering place, where the migrants interacted with each other. The *baithka* exerted great influence on the social, cultural, political and economic life of the indentured labourers and their descendants. It was the seat of the *Panchayat* (village community/committee) where disputes and marriages would be settled, the welfare of the community discussed, villagers' hardship problems solved and support given. *Baithkas* provided the scope for the preservation of culture, language and religion as well as places for developing a new social, economic and political consciousness.

*Baithkas* played an important role in education as (1) it imparted religious education and transmitted knowledge, even if under an oral form; (2) it provided an identity and a sense of cultural belonging so that collective issues were discussed and decided in *baithkas*, so that everything pertaining to education was also dealt with collectively and had more social and political impact. It is through *baithkas* that the decision to learn how to sign in Hindi was taken and this allowed the first Indian candidates to be elected; (3) Asian languages were taught and spoken; (4) *baithkas* would provide the scope for political mobilisation and action which would lead to important changes in the education system.

### ***3.7.2 Economic elite and leading figures: the Mauritius-India network***

Moreover, the presence of Indian traders, well settled in Mauritius, was important in terms of support and economic help. Acquisition of land, due to the accumulation of a small capital, the conditions of sale of the Great Parcelling, the emergence of an economic and a political elite under the benevolent protection of the British rulers, more prone to respond to their needs to make Indians compete with the Creole elite, played an important role in their social emancipation. Indentured labourers were also supported by Indian lawyers and preeminent figures from India like Gandhi who visited Mauritius in 1901 and Maganlal Manilal Doctor who stayed from 1907 to 1912 and awoke strong political consciousness in the Indian masses. Local intellectuals, such as the Bissoondoyal brothers, struggled for the teaching of Hindi, and the *Arya Samaj* movement was very forceful on the question of education including that of girls.

The Indians were able to “construct an Indo-Mauritian identity within a triadic network of relations that incorporates their attachment to the land for economic survival, to the village for their ethnic consciousness and to the Creolised Mauritian society at large for a definition of their national self”. They were able to maximize their cultural assets and the benefits accorded by the British, as well as devise political consciousness and strategies to use education as a means of economic empowerment and social emancipation.

### 3.8 Slaves’ and ex-slaves’ identity construction and role of the Creole elite

The Indians’ difficult path is unique and quite different from that of slaves who were deprived of their assets from the start. Differently from the Indian Elite which was organically linked with the working class and acted in the global interest of Indians as a group, the Creole elite emerged in the competitive and individualistic context of struggle for emancipation (which could only be nominal and personal) and of struggle for power in which education was considered as the emancipating tool. Writing about the Mauritian Creole elite, Simmons argues “many were becoming Franco Mauritians in all but colour” (Simmons, 1986: 372). Unfortunately, this elite was culturally alienated from the low working-class Creoles in its attempts to be accepted and co-opted by the White group. A well-organised Creole peasantry who could possess land and some capital did not even emerge in Mauritius in the Post-Abolition period. From such a group, perhaps an educated elite and leaders could have emerged, but that did not happen.

As from 1936, Dr. Maurice Curé and other Creoles with progressive universal ideals were interested in the class struggle against capitalists and became the Founding Fathers of the Mauritian Labour Party. They collaborated with people of diverse ethnic origins and promoted the rights of the working class, irrespective of ethnic origin or creed. Their struggle had many positive consequences which were capitalised on by Indians but could not be by working-class Creoles. Though noble in its aim, this supposedly “non-ethnic” position of part of the Creole elite was disconnected from the socio-historical reality and dynamics of ethnicity and ethnic politics in Mauritian society as it had become after Abolition and specially in the first part of the 20<sup>th</sup> century. This elite still holds the same position at present and counteracts any form of Creole cultural and political struggle. As regards education, the work of different Catholic religious congregations and later on the State schools reached the White and Free elites, then the Indian elite but failed to cater for the poor Creoles who were far from decision-making centres and were becoming part of a large working class and some of them part of a powerless proletariat.

The Pre-Independence period was disastrous for that group who was exploited by White and Creole elites alike for their interests. Without education, working-class Creoles had few means to become critical and take their own decisions. Moreover, despite class and race distinctions, Whites, upper-and working-class Creoles were seen by indentured labourers descendents as united by a common Catholic faith, an adherence to French culture and to the French language or its Creole derivative - Kreol. In the discussions around power-sharing for Independence, Creoles were marginalised and not recognized as the first Mauritians by the Constitution of Mauritius.

The immediate Post-Independence period was no better as large numbers of Creoles, mainly from the educated group but also from the working class, emigrated to various European countries and to Australia in the late sixties and early seventies. (Dinan, 1985) As well as depriving the Creoles of educated leaders, the administration of the country was practically totally taken by indentured labour descendents.

The economic, social and political plight of Creoles got worse and worse through the seventies, eighties and nineties. Their invaluable contribution to the economic and cultural development of the country was silenced, their history ignored and prejudices and unjust treatments inflicted to them. There was the Creole taboo before the ‘malaise créole’.

The 1999 February riots came as a climax to a long history of oppression and injustice. Kaya’s murder in prison was resented by poor Creoles as their symbolical *mise à mort* by the economically and politically powerful. Injustice towards a large group of the population, who had struggled and worked for the country, could no longer be perpetrated blatantly. Injustice could only destroy the social confidence of the different components of the nation and bring unrest and

instability. Chazan (2001) goes even further in suggesting that Kaya's death symbolized in fact the *mise à mort* of trans-ethnic Mauritian identity.

### 3.9 Different education paths / trajectories

#### 3.9.1 *Absence of mobility and persistent social injustice*

The paths of slave and indentured descents were different and depended on a large number of factors. Nevertheless, in post-Independence Mauritius, and the democratization of access to education, inequalities were revealed and even consolidated. Although poor children of indentured labourers also suffer from the system, the situation has developed in such a way that it is mainly generations of Creole children who have been, and still are, the victims of a series of decisions which go back to the slave period where the policy was to provide no education, and even enforce illiteracy as a means of control. The lack of economic resources and of political power, as well as their marginalization, caused by persistent social injustice, have disempowered Creoles even more, preventing them from achieving upward mobility.

The democratization of access to education could not be seized upon by poor Creoles. For decades now, problems have been diagnosed in the Mauritian educational system and seen to be centered around inequality, competitiveness, lack of relevance and insufficient access to higher levels of education. There has been a worrying rate of drop-outs at the level of primary education, with children leaving school without having acquired the basic literacy and numeracy skills. The highest drop-out and failure rates are persistently recorded in a number of schools located in disadvantaged areas, and it is no secret that the majority of children affected by such a situation are Creole children.

Low performance is known to be part of a cycle of poverty, with family and social problems that perpetuate the situation of marginalisation and exclusion in certain areas, mainly suburban areas of the country. A school with a poor reputation is caught up in a self-reinforcing cycle of low expectations, low morale and low performance; parents are insufficiently informed; the school lacks amenities, etc. It is known that school programmes should place the child at the centre of school activities, stress the need for early diagnosis and remediation, provide for strong linkages between the school and community and the need for the continuous concentration on the core competencies of reading, writing and numeracy (Parsuramen 2001, 38). But it seems that political will to change is lacking. Maintaining an unjust status quo has been long preferred to courageous decision-taking and implementation that would bring reparation.

### 3.10 Conclusion

As a 'crime against Humanity' perpetrated in the past, slavery has contributed to the psycho-social reality of individuals and groups who experienced it, and it still has devastating effects today. The consequences or sequels of slavery are disorders persisting after the injury inflicted by slavery, and there is room for an analysis of the psycho-social reality of the descendants of slaves today and for opening up new tracks towards their individual and collective healing. Treated as marginalized citizens, the descendants of slaves are struggling for the recognition of their Human Rights, according to the different United Nations Conventions signed by the Mauritian State.

Indentured labourers' descendants have been able to become upwardly mobile through political power and the democratization of access to education in independent Mauritius. Unfortunately, a just and equitable society is far from having been born out of Independence. Creoles are quite legitimately expecting long-overdue historical reparation towards them. Any reparation strategy will have to place education at the core of its process.

Today, there could be new opportunities for the people of Mauritius and for the Creoles, especially those of the working-class or lumpen proletariat. Education must be approached in a humanistic perspective in which the history and culture of all groups are taken into consideration. Education policy should be placed within its broader social, cultural, political and economic context, as an integral part of a human development strategy that places the people at the heart of the whole process. Education must help to engender a new Humanism, one that contains an

essential component and sets considerable knowledge of, and respect for, the cultures and spiritual values of different civilizations as a much-needed counterweight to a globalization of the world. If this is not urgently done, globalisation will reveal even more dramatically the inequalities of Mauritian society and paralyse it, as worldwide changes require new competencies and polyvalence on the labour market. This can polarize Mauritian society further and ethnic turmoil cannot be excluded. It is only through education, encompassed within a large vision of Mauritianness, that slave and indentured labour, descendants can finally unite within one Mauritian nation and make history.

## CHAPTER FOUR

## MECHANISMS OF EXCLUSION IN COLONIAL EDUCATION

In this chapter we examine the different mechanisms of exclusion during French and British colonisation. Although there were some policies which could be considered as genuine attempts at inclusion, our findings indicate that the existing inequalities in our educational system have their roots in some forms of exclusion in the colonial period which have impinged on educational achievements and social mobility. The analysis is grounded in basic historical information, which enables historical reading and discussion, and we engage critically with the events and phenomena to make sense of the past and to better understand the current situation. In a Truth and Justice perspective, *"time is regarded not only as a technical measure but a substance loaded with human-given meanings and moral issues"* (Ahonen, 2005). Our approach has been to adopt what contemporary research methodology in the History of Education considers as the important distinction to be made between the 'archives of memory' and the 'memories of archives' (Fitzgerald, 2005). Such a perspective coheres with the quest for Truth, Justice and Reconciliation as the challenge, therefore, is to interrogate the contents of the archives as well as the archives themselves to reveal their privileges, silences and absences.

## 4.1 Narratives of Exclusion

## FRENCH PERIOD (1715-1810): Education for Whites only

As early as 27 July 1736, a Treaty was signed between the Lazarist Congregation and the French East India Company in Paris which set up the Ecclesiastical Establishment of Isle de Bourbon and Isle de France. Catholicism became the official Faith of both islands. The Treaty made provision for educational services and contemplated the foundation of a college which would receive students as day pupils and boarding pupils (Ramdoyal, 1975). The *Code Noir*, whilst insisting on the obligation for the slave masters to have their slaves baptised, did not, however, make any educational provisions for the slaves.

*"The main concern of the colonizers was the provision of education to the children of the French settlers only, and especially to the free Franciliens who could not afford to travel to France to receive quality metropolitan education"* (Easton, 2011).

In 1790, the Colonial Assembly proclaimed that the State had to provide moral and political education to its citizens. In 1791, a school in Port-Louis was set up by M. Michelet and called "Le Collège National" and others were opened with an ephemeral existence. Some private tutors were employed by well-to-do families and their sons and daughters were sent to France to 'finish' (refine) their education. They were educated to occupy positions in the naval field. But most of the settlers devoted themselves to the development of the island as an agricultural colony. Those who acquired the rudiments of education joined the clerical staff of the Colonial Administration. But the need to establish an educational system was strongly felt in order to meet the needs of the new socio-economic profile of the French population and also to sustain the French colony.

## 4.2 Secondary Education for the Elite

After the French Revolution, it was understood that a uniform type of education would be made available to all, irrespective of their social class. In 1800, an adapted version of the 'Plan Lakanal' was implemented in the island with the setting up of *L'Ecole Centrale at Champ de Lort* as a national institution to provide secondary education for the elite. Primary education was recommended for the masses and primary schools were to be run as private schools. Hence, it was only towards the end of the eighteenth century that education started to become a concern for the French administrators. Under General Decaen (1803-1810), and following the Ordinance of 28 October 1803, the first Government primary school, *L'Ecole Centrale* became the *"Lycée de l'île de France et de la Réunion"* and provided both primary and secondary education. The Lycée was not only a Grammar School imparting basic education, but it was also a Naval School which imparted some military training. It became an elite school for the upper class of the White settlers. It

acquired regional repute and attracted foreign students from other French colonies in the Indian Ocean. Decaen also set up two primary schools for the education of coloured children. This could be considered as an attempt at inclusion, but it was a short-lived initiative as educational policies were more easily influenced by the bigger Whites plantocracy. In the same vein, there were also some early concerns for education of girls.

### 4.3 Education for girls

Decaen authorized the creation of two private schools for girls" (Duvivier, 1891). Commending the work of the school, Milbert (1812) "explains that the curriculum of the school was aimed at making girls look more graceful and agreeable to their companions and cultivating in them social graces and tenderness." He goes on to say that "music, drawing, French grammar, and sewing" were some of the subjects taught and also stressed that sewing was particularly useful as it fitted them for the role of housewives.

Women were socialized to accept their roles as wives and mothers as 'natural'. The socialization process in the school made the girls highly refined in their manners, while their academic knowledge remained scant. The one female school run by M. Deaubonne, during the French colonial period, closed in 1809. We can well imagine that the vast majority of slave women and girls did not have access to education. Had there been any form of education, it was left to some individual initiatives limited to the generosity of the slave masters. Some Parish priests of the Lazarist Congregation also catered for the education of slaves. However, the forms of exclusion were reinforced with the Napoleonic rule and the restoration of slavery.

### 4.4 The Colour bar system

Napoleon reintroduced the colour bar which was abolished during the French Revolution. This was highly prejudicial to the Free Coloured population who also aspired for education. Coloured children were excluded from the *Lycée Colonial* which was reserved for Whites and Europeans only. Decaen had the support of the White population who did not want to have their children sitting next to a coloured child at school. This system established a mode of social stratification in education based on the colour bar. As Prithipaul (1976) observed, this "*school system thus helped maintain the socio-cultural and economic disparities between the different social groups resident in the colony*" (p.62). Such a system would consequently impact our national collective memory, and especially on the psyche of the Creole community. The struggle for access of the coloured people to the Lycée, later known as Royal College was led afterwards by Rémy Ollier (1819-1845). This intense struggle of the coloured community would dominate the educational scene till the second half of the 19<sup>th</sup> century.

Hence, during the French period, education remained the privilege of the Europeans. Both the Colonial Government and the Church as institutions did not cater for slave education. A few individuals mostly French missionaries (Lazarists), provided basic religious education and opened a few schools to cater for basic academic education of coloured and slaves. The history of French colonial period is therefore largely one of exclusion. The non accessibility to education meant that slave descendants continued to remain in an unequal power relationship for a very long time.

## 4.5. THE BRITISH PERIOD (1810-1968)

### 4.5.1 French language and culture and Anglicisation

In 1810, British colonisation did not lead to a significant number of British people settling in the country. As a result, there was no significant change in the composition of the population. With regard to the slave population, although the slave trade became illegal under British rule, real politics triumphed and early British colonisation was more marked by a period of political positioning of the new colonizers than real concerns for the lots of the slaves. The 1814 Treaty of Paris awarded the island, together with the Seychelles and Rodrigues, to Britain. The Treaty allowed the residents the right to keep their property, to enjoy their own religion, and laws and customs prevailing before the conquest (Napal, 1984, p.2).

This French domination of the country's cultural and social life ushered a new *rapport de forces* during the early period of British rule (1810-1835). Given that the same former colonial masters still exerted economic and social control over the country, this did not change much the situation of the slaves and also for the coloured population. On the political scene, on the one hand we had the White plantocracy and Catholic Church hierarchy, and on the other, the new British coloniser. Between these two forces was the coloured population who tried to find a way to protect to the best its own interests. Its allegiance was at abeyance, depending on the circumstances and the local forces at play.

The first British Governor, Robert Farquhar, and his successors developed a policy of *détente* with these local forces. British Governors had to secure to the best the interests of the British Empire by adopting an open door policy with the White sugar plantocracy who controlled the economy. But education became an instrument through which the British tried to secure their interests by a tactful policy of gradual Anglicisation. British Colonial policies devised strategies to anglicise the country.

#### 4.5.2 Granting of British Scholarship and Access to Royal College

In 1813, Farquhar renamed the *Lycée Colonial* as Royal College and approved Rev. Jean Lebrun's project to open schools for all students and especially for the affranchised (Ramdoyal, 1975).

As from 1818, British scholarships were awarded to the best students for studies in England. This was a means to anglicise the country but it also led to the emergence of a local elite. It brought, to a certain extent, some forms of inclusion because when the Royal College became accessible to the coloured, boys of African descents (Governor Nicolay as quoted in Ramdoyal, 1975) successfully availed themselves of the opportunity to study in Britain. In fact, the Royal College, then situated in Port-Louis alone, was a powerful Anglicisation tool, even if French studies remained quite strong. In 1829, by a Council Order, Governor Colville made it possible for coloured people to have access to the Royal College, but it was only in 1832 that Free Coloured students really gained access to that College against the will of White parents. The presence of the coloured students was not appreciated. There was much resistance against their presence. Interest in the education of the slave population also gradually found its way as voices rose from Anti-Abolitionist Societies in Britain and America for the abolition of slavery during the 19<sup>th</sup> century. British Humanitarianism first appeared in the 1800s and pride in British morality reinforced the arrogance of British Colonial Powers. The British sense of superiority as the world's leader in liberty and representative institutions concurred with their view of themselves as uniquely benevolent among nations. It was within this paradigm that some measures were adopted to improve the conditions of the slaves.

#### 4.5.3 The Negro Education Fund or The aborted inclusion

In 1827, under the pressure of British humanitarians, a slavery amelioration policy was adopted but the indulgence of early British Governors towards the opposition of the White planters contributed to the collapse of the implementation of the policy. The English planter Charles Telfair was the first to introduce education for slaves on his estate at Bel Ombre in 1829 (Quenette, 1982). The arrival of Thomas, a Protector of Slaves, in 1829 following the recommendation of the Colebrook Commission did not bring real improvement in the conditions of the slaves. Thomas met with strong resistance and defiance from the slave-owners. The hostile attitude of both the coloured people and the White against the new Protector, John Jeremie, in 1832 further demonstrates the deep aversion that prevailed against the Blacks.

Initial attempts at the inclusion of the slave population through education came with the Mico Charity Schools. In 1835, a sum of £ 25,000 was voted by the British Parliament as a voluntary contribution towards the Negro Education Fund for the erection of school houses in the colonies. In Mauritius, the British Colonial Office decided to place at the disposal of the Trustees of the Mico Charity the sum of £1000 towards the establishment of a Normal School in Port Louis, and a further sum of £780 in aid for the erection of schools towards the instruction of the former slave population. However, the imperial grant channelled through Mico was aimed mainly to transform

former slaves into 'an industrious peasantry' (Kalla, 1998), and not for mainstream education. The Mico Schools aimed at combining "religious instruction and moral training with the general enlightenment of the native mind."

The Mico Trustees entrusted the schools to Lebrun. Since Lebrun was a Dissenter, this created a lot of tension between the Colonial Authorities and both the Anglican and Catholic Churches. Lebrun's work was not limited solely to the provision of education, as he also conducted Sunday Schools with the study of the Bible. This was very much in line with what is called today "*missionary literacy*" (Pennycook, 2005), whereby reading and writing were made through the study of the Bible. However, not much could be achieved in terms of basic educational achievements for the slave population. The Negro Education Fund could then be considered as an aborted inclusion. Finally, it was the coloured population who benefited most from the schools of Lebrun and from other measures to improve the lot of the slaves (Teelock, 1998).

Quenette (1982) gives a thorough analysis of the opportunism of the coloured people who, after having benefitted much from Lebrun, would afterwards shift their allegiance to the Catholic Church. Lebrun invested much in the fight for the recognition of the rights of the coloured people. In fact, very few slave masters were in favour of sending the children of the slaves to Lebrun's schools, and access by the apprentices was quite limited. According to Quenette (1982), the threat represented by Rev Jean Lebrun forced both Anglican and Catholic Churches to become objective allies and they made it a common cause to close down Lebrun's schools. Thus, sectarian jealousies seriously impeded the progress of education amongst the slave population. But it was also a class struggle. The coloured people represented the emergence of a new middle class who aspired to education and social mobility. Soon, the coloured population allied itself with the White masters who had denied them access to the Royal College.

By 1842, the Parliamentary grant, previously made to the Mico Schools, was discontinued. In 1843, the Mico Schools were handed over to the State. This led then to the need for an ordered system of education, and the focus was no longer on the education of the slaves but on the provision of education to all. This 'concern for all' led to the neglect of the specific educational needs of the slaves. The demise of the Mico Charity schools and the Negro Education Fund represents a real tragedy for the slave population because they disappeared just four years after the end of the Apprenticeship period (1839), at a time when former slaves needed education as a tool for social mobility. With the abolition of slavery and the end of Apprenticeship, a new economy emerged in which the ex-slaves were superseded by Indian indentured labour. This systemic change inevitably led to a 'systemic exclusion' of the former slave population. It provoked a change in the priorities of the British colonisers with regard to its subjects. Indian immigrants became the new subjects of His / Her Majesty.

#### 4.5.4 Indian Immigrants: British educational concerns

By 1850, the Indian labourers formed more than half of the population and had contributed to the economic recovery of Mauritius which was the aim for which they had been brought to Mauritius. This rapid change in the profile of the population was a cause of concern and the British began to think about the education of the children of the Indian immigrants. In 1851, Governor Higginson drew the attention of both the local and British Governments to the need to improve the state of the Indians. But no education was provided to working-class Creoles or ex-apprentices. In 1855, out of 23,500 Creole children, only 5,500 were in school (4.3%). In 1872, there were 260,000 Indians out of 310,000 people, but only about 10% of those of school age attended schools. Governor Higginson continued to fight for the education of children of labourers.

Attempts to educate the Indian population encountered two major difficulties: the medium of instruction and the procuring of competent teachers. In what language should education be provided to Indians? The colonials wanted to use French as the medium but the Government wanted to use the Asian languages. Even among the British, there were serious debates because some of them wanted the medium to be English. In Government schools, the study of English and French was compulsory but it was not easy for poor children to study and master two foreign languages. On the other hand, trials were made with teachers from India but that proved a failure. In 1876, under Governor Phayre, vernacular schools (Tamil, Hindi, Marathi) were opened on sugar estates. After his

departure in 1882, these schools became Anglo-vernacular and many children gave up their schooling because their parents perceived this as an enforced cultural assimilation policy. There are two schools of thought amongst historians of education about the Anglo-vernacular schools. In 1882, there were 47 Government schools with 6,571 children enrolled and 57 grant-in-aid schools with 5,316 children enrolled (Ramdoyal, 1977, p.72).

#### 4.5.5 20<sup>th</sup> century: National literacy and Universal Primary Education

In the twentieth century, education became another source of major concern for the administrators as the standard and conditions prevailing in schools left much to be desired. Dr. Bateman, the first Director of Education, appointed in 1901, published a report in 1923 with the following concluding paragraph:

*"Schools exist in Mauritius and cannot now be closed, but they were better closed than remain monuments of wasted money and useless energy, where children are looked after, perhaps kept out of mischief, but certainly not educated."* (Ramdoyal, 1977, p.117).

In 1908, only about 7,000 of the 60,000 Indian children of school age attended school because they had to work. In 1908, however, a Labour Act was passed, which raised the age from 10 to 13 years at which minors might enter into a written contract. With this provision, the establishment of more schools and the improving economic conditions of Indians paved the way for future advances in Indian education (Ramdoyal, 1977, p.89). The Indian children continued to go to vernacular schools, and progressively their defiance against English and French subsided. Moreover, an analysis of the role of the Catholic Church in its missionary education during the British period would help to understand better the mechanisms of exclusion of the slave and Indian immigrants.

#### 4.5.6 The Catholic Church as an institution of inclusion and exclusion

The role of the Church in education during the colonial period has been ambivalent. Its presence in the evolution of education has been marked by forces and actions of inclusion and exclusion. Both Bishop Collier and Father Laval were imbued with the idea of St. De La Salle who, back in the 17<sup>th</sup>-century France, advanced the social heresy that the children of the poor should be educated. But the social forces at play during the colonial period very often put the Church off track its original mission. Critical literature in Catholic education, and especially about the role of Catholic schools, is inexistent in Mauritius. Also, common criticisms against the Church do not go beyond the limited role of Father Laval in the emancipation process of the *affranchis* which has since then been established by Colson (1980). In fact, the controversial position of the Church can only be understood in the perspective that it is an institution which has always been shaped in its own history by various socio-historical forces at play, and its actions have been underpinned by forces of progress and Conservatism. For instance, it was not until post-February riots of 1999 that the Catholic Church would show real signs of concern for the education of the Creoles. This could be explained by the fact that education, in its global sense, could not be envisaged before from an ethnic perspective. In the same vein, it was only in 2007 that the Church, through Bishop Mgr Piat, presented its Pardon to the slave descendants and himself as a descent of slave owner.

The 'historical retardation' of the Church's concern for the education of the slave descendants can also be explained by the deep-seated bias against Creoles of African and Malagasy origins. The Church structures are not immune from this black racism as its hierarchy and clergy have been dominantly White and descendants of slave masters. Its lay establishment has long been composed of middle-class Catholics who used to distinguish itself from the 'Creoles', who are debased and were often referred to as '*nwar cholo*' (rough and rogue). Mgr Amedée Nagapen (1984) explains this as the rule of the '*pigmentocratie*', based on the colour of the skin and which governs all social relations. Early forms of anti-black racism of the slavery days were in fact transformed into 'anti-kreol racism'. Such forms of ostracism in society were obviously present in Catholic educational institutions, and even in other institutions or movements.

In 1856, an Ordinance was passed (Ordinance No.6 of 1856) by the then Council of Government entitled 'an Ordinance for promoting elementary education among the poorer classes'. Today, there are 52 primary Catholic schools, 46 in Mauritius and six in Rodrigues and 17 secondary

schools. It was not until 2000 that five secondary schools were opened in regions predominantly inhabited by Creoles of slave descent. College Père Laval was opened in 1996 and four other colleges as from 2006 (viz. Loreto Bambous Virieux, Saint Mary's West of Petite Rivière, Saint Esprit Case Noyale and BPS Fatima of Goodlands). All other Catholic colleges prior to 2000 were situated in the Lower and Upper Plaines Wilhems regions, which were mainly inhabited by the upper and middle class during the colonial period.

Although some slave descendants did find educational opportunities through the Catholic primary schools and some secondary schools run by the Church, yet class and colour prejudices were prevalent in the colonial period. Each school population had its own socio-economic profile, and access was very much limited to one's social belonging. But in the case of Creole students of slave descent, few families would venture to seek admission to these schools for their children. This led to the exclusion of a vast majority of slave descendants. However, in the case where we could find some forms of inclusion, they turned paradoxically into mechanisms of social exclusion and control. The case of Notre Dame College is very interesting. This Catholic secondary school, run by the Congregation of the Filles de Marie, opened its doors in 1954 in Curepipe to cater for the education of the girls of the working class. This case demonstrates the social stratification which existed amongst the Catholic secondary schools, marked by the historical context. Mgr Amedee Nagapen describes the socio-historical context of the foundation of Notre Dame College:

“Comment expliquer l'empressement des Filles de Marie à répondre positivement à l'appel de l'évêque, Mgr D. Liston, et à ouvrir une institution secondaire à Curepipe -Road en 1954? Au tournant du demi-siècle, de grosses vagues soulevaient la société mauricienne. En premier lieu, le pays connaissait une poussée démographique sans pareille. En second lieu, de nouvelles couches de la population faisaient l'expérience de la mobilité sociale verticale. Troisièmement, la jeunesse féminine augmentait sensiblement en nombre, avec dans le même temps une accélération de la promotion féminine. Dans un tel contexte, il n'existait que six collèges.

Les Filles de Marie surent lire les appels de l'heure, les signes des temps. D'où leur engagement dans l'enseignement secondaire en faveur des filles de milieux défavorisé.” (Mgr. Napapen, Préface in Lyempermall & Harmon, 2004, p.4)

Notre Dame College became a school for the girls of the maid-servants living in the home dependencies of the White residences of Curepipe and Floreal. Loreto College of Curepipe then schooled the daughters of the Whites. This situation persisted so much with time that Notre Dame College became known as the 'Collèges des Noires' (The Black Girls' College). Whilst the intention of the Church was to serve the poor in education, however, Catholic schools became rather an agent of social reproduction in education than of social agency.

Hence, the British colonial period was, when compared to the French colonial period, relatively more inclusive than the French colonial period, but despite this, children of slaves and indentured labourers did not benefit from much progress and mobility. Sectarian jealousies and competition amongst the principal Christian churches also contributed to blocking the education of the slave population. The ambivalence of the Church in its actions of inclusion and exclusion also impacted on the educational achievements of both groups.

## 4.6 Forms of Exclusion

### 4.6.1 Political Exclusion

By the turn of the 20<sup>th</sup> century, Indian immigrants moved into a period of 'Indian awakening'. The slave descendants till then, did not have any form of social, political and cultural organisation. The only place where the Creoles could gather was in the Church, mainly during Sunday mass and other celebrations, and this could at least have been a platform for them. But Church structures did not provide Creoles with any form of social organisation where they could address the societal issues with which they had to grapple with. The creation of the *Union Catholique* in 1877 did address social issues, but this organisation acted mainly as a powerful lobbying group of the bourgeoisie and it played a key role in the preservation of the interests of Catholic schools. Education of slave descendants was not at all the concern of this organisation.

*For Benoît (1985), "it is significant to historically show that even when the newspapers La Balance (2 April 1832-31 October 1835) by Berquin and La Sentinelle (8 April 1843-30 November 1853) by Rémy Ollier wanted to defend the unrecognised rights of the coloured people, they never voiced the opinion or propagandized the idiosyncracies of the Afro-Mauritians."*

Some bright poor Creole children managed to acquire education. Many benefited from the free tuitions given by middle-class Creole teachers. But no leadership emanating from the Creole people advocated the emancipation of the poorest. The Creole peasantry was destroyed at the time of emancipation. Very few managed to save, acquire and keep plots of land. The poor economic situation prolonged the day-to-day lifestyle that prevailed during slavery. For the poorest, education was not, and could not be, a priority. Everyday food had to be found and this was possible only through work. No economic or socio-cultural organization could support collective initiatives. The class-colour divide between Creoles played an important role in the marginalization of the poorest. While there were solidarity and support from first Indian immigrants towards the late-comers, this did not exist for the slave descendants in a highly hierarchical racist social organization which was the legacy of the French period.

#### 4.6.2 Cultural Exclusion

Durand and Durand (1978: 35 in Bunwaree, 1994: 31) write:

*"Les maîtres allaient jusqu'à interdire aux esclaves de chanter lorsqu'ils se réunissaient après le travail. Car la chanson, les rythmes appartenaient à leur culture africaine que les colons veulent voir disparaître à jamais en tant que maintien de leur identité, c'est-à-dire germe possible d'une révolte."*

The people of African origin lost their traditions, cultures, and languages and they were also the ones who were proselytized by Christian missionaries. In spite of this psychological trauma, they did show signs of resistance through the *sega* and other forms of cultural resistance. They reinvented new lifestyles and managed to keep some ancestral traditions which we can see in the popular religion which developed as a subterranean church (Pamlyre, 2008) within the official Catholic Church. Writing about the Mauritian Creole elite, Simmons argues that '*many were becoming Franco Mauritians in all but colour*' (Simmons, 1986: 372). This is in line with Sharp (1965) who quoting Macauley, explains that the colonial education system aimed at creating a class of persons, Indian in blood and colour, but English in tastes, opinions, moral and intellect. The French influence through language, culture and religion led to a far-reaching cultural alienation amongst the slave descendants. This has been compounded by the membership of the Creole community to a French Catholic Church. Although several initiatives have been taken in contemporary period to take into account the Creole culture within the Church, we note that Catechism is still for instance being taught at school in the French language and that the sacramental ceremonies for Catholic children, like baptism and the First Communion, are still dominantly French (Deponning of Filip Fanchette, Catholic Priest). We can also trace some forms of cultural alienation in the Creole community whereby signs of French mimetism, in terms of taste, colour and aesthetics, are displayed and the negation of everything which could be associated with Africa is still prevalent in its middle class. This group is often referred to as the '*Euro-Créoles*'.

In the case of the Indians, resistance took another form. At first, Indians did not trust the schools which they considered as too Westernised and Christian. This cultural resistance delayed their education in formal institutions. Indian culture was itself looked down upon by the dominant European culture. But the teaching and learning of Asian vernaculars went on in Government schools and the cultures of the different groups of Indian immigrants were, and are still, preserved through traditional learning networks, that is, informal or socio-cultural institutions such as the *baitkas*, *jammats*, and *madrassas*. The latter institutions still have a role to play in the preservation of these cultures, although Asian languages are now part of the primary school syllabus.

#### 4.6.3 Gender Exclusion

O.R.W. Connell (1987, 98-9) defines *Gender Order* as “a historically constructed pattern of power relations between men and women and definitions of femininity and masculinity”. This term is used for the structural inventory of an entire society.

Education for girls only started in 18 May 1815, when Governor Farquhar approved the opening of a free day school for children of all classes and colour, including girls, in Port Louis. Although the proposal was opposed by the Catholic Church, a girls' school was opened (Ramdoyal, 1977). In spite of Farquhar's approval, education for girls was also divided along racial lines. A segregationist policy was enforced in the school. Black or Coloured girls were not given access to the school. The White parents threatened to withdraw their daughters, if girls from other racial groups were admitted to the school. The school's administration complied because it was not in its interest to antagonise the powerful White community, particularly the French. Amongst the Indian immigrants, traditions compounded the state of neglect of education for girls. Girls' education in colonial Mauritius underwent some further development in 1845, when Bishop Collier of the Catholic Church invited nuns from the Loreto Institute in Dublin, to help further the education of girls in Mauritius (Bunwaree, 1994: pp. 83-84).

However, the Irish Loreto Congregation, which at first provided education to bourgeois girls of Port Louis, imported the Victorian image of a woman and perpetuated the patriarchal order by reinforcing the traditional gender roles that subordinated women. Education programmes for girls entailed knowledge of how to be good wives, how to cook well, and instruction in maintaining an hygienic home environment. This was further pursued in the 20<sup>th</sup> century with the setting up of '*Les Ecoles Ménagères*'. Although over the years, changes in curriculum bridged the gender divide, yet, girls of the working class were limited in their ambition by this predominant bourgeois ideology of charity which confined girls to their future gendered defined roles of care-givers and home-makers. It was mostly girls of the Creole community who fell victims of this situation, whereas girls of the Indian community benefited from the emancipation work engaged by the Arya Samaj movement in the 20<sup>th</sup> century. This Hindu reform movement laid much emphasis on education and social progress. Arya Samaj rejected child marriage and *pardah*, established equality between all human beings and so rejected casteism, and also equality between women and men, thus encouraging the education of girls.

#### 4.6.4 Linguistic Exclusion

Linguistic exclusion has been practised by the State of Mauritius since colonisation (International Hearing, Ledikasion Pu Travayer, 2009) against its own citizens. Language is a complex symbolic means through which knowledge is transmitted and transmuted, and where identities are constructed and expressed, and class legacies organized and imposed (Collins, 1999). As far back as the 1940s, two reports, namely Ward (1941) and J.E. Meade (1967: 208), during the British Colonisation, highlighted the fact that our current linguistic policy and practices represent major obstacles to an efficient education system. Ward (1941: 11) stated:

*“I now come to the work the teachers are called to do. The first and greatest problem here is the medium of instruction”. For J.E. Meade (1967: 208), the linguistic issue is the ‘greatest handicap to successful education.’*

Today, children of slave and Indian immigrants' descent are still deprived of a mother-tongue based curriculum. This situation explains persistent class inequalities in our educational system.

English has been kept as the sole medium of instruction, whilst it is a foreign language for the majority of Mauritians. In fact, it is a key element in reproducing social inequality (ADEA Report, 2005). We also consider that the exclusion of Mauritian Kreol as a medium of instruction in our educational system, by the time that it has emerged as the *lingua franca* of all slaves and indentured labour descendants, has caused great prejudice to the Mauritian child. The harm is still being done. It has been much more pronounced for children of slave descent who represent a majority of the working class and the down-trodden.

There have been remarkable strides made with the recognition of Mauritian Kreol at national level since Independence. It is now being introduced as an optional language in primary schools. In spite of the benefits, in terms of cultural reparation for children of slave and indentured labour descents, yet, it is too premature to assess what would be the significance of this measure. Given that Mauritian Kreol is still not introduced as a medium of instruction, it still does not enhance the democratisation of our educational system.

#### **4.7 CONCLUSION**

Hence, the narratives of exclusion and the political, cultural, denominational, gender and linguistic forms that exclusion took during the French and British colonial periods give an indication of the consequences of slavery and indentured labour. However, we might consider such policies as the opening of the Royal Colleges to the Coloured, the granting of scholarships and vernacular language policy in the early period of British colonisation and other measures in the late period of colonisation. Yet, the sequels of slavery since French colonisation and indentured labour, after the abolition of slavery, were compounded by a series of controlled and uncontrolled circumstances which led eventually to relative inequalities in educational achievements between the slave and the Indentured labour descendants.

Recent research, however, has shown that colonialism did significantly affect development patterns and that the identity of the colonizing power is important to subsequent growth (see Grier, 1997; Bertocchi and Canova, 1996; Hanson, 1989; and Harrison, 1985). The French Colonial Empire differed greatly from the British in its political and economic treatment of the colonies. Education was a key component in the French philosophy of a centralized Empire. Students were required to speak French, and all vernacular languages were forbidden, which resulted in large numbers of the population failing to achieve any kind of literacy. The British were more decentralized in their colonial approach. Issues such as domestic policies and budgetary matters were resolved by the Colonial Legislatures. British colonial education policies made a conscious effort to avoid alienating the native culture, by allowing teaching in the vernacular languages and training teachers from the indigenous tribes in Africa and India. But it was the local elite who demanded the same type of education as their colonial overlords because they readily saw its economic and political advantages. This explains why the local elite in Mauritius, during colonisation and after Independence, have not brought about any real significant reform.

## CHAPTER 5

**THE POST-INDEPENDENCE PERIOD AND DEMOCRATISATION OF EDUCATION****5.1 Context of the post-Independence period**

Mauritius acceded to Independence without a war of liberation and without a national revolutionary spirit. Opinions were divided on the question of Independence, and it was in an atmosphere of conflicts and tensions that the country achieved its Independence in 1968. Before Independence, schools did not effectively foster an Imperial sentiment in Colonial Mauritius; neither does present Mauritian education foster a Nationalist sentiment.

Education, which can be regarded as an arena for the development of Patriotism or Nationalism, did not occupy this role in pre-Independent Mauritius. Neither has it taken up this role after Independence. Hobsbawm's (1964: 166) assertion "that the progress of schools and universities measures that of nationalism, just as schools and especially universities became its most conscious champions" is perhaps correct for 19<sup>th</sup>-century Europe, but not for Mauritius. If Hobsbawm's meaning of 'schools' can be restricted to an expansion of school places and greater access to knowledge, then this has certainly happened in Mauritius, but no sense of Nationalism, belonging and sharing has actually emerged. There is no nationalist ideology: divisions which existed during the colonial period remain except that they are now more disguised." During the colonial period, there was nothing to unite the ethnically and linguistically diverse Mauritian population; even their oppression was not enough to unite them. Education too was organised in such a way as to keep the different groups divided. Prithipaul (1976) explains that, although there was an expansion of education in the British colonial period, discrimination on the basis of creed, colour, race and sex persisted in Mauritius. In post-colonial Mauritius, efforts to democratise education continued but issues which speak to equity, cohesion and the making of a nation have remained insufficiently addressed.

**5.1.2 The Post-Colonial Period**

This section details some elements of the first Educational National Plan (1971-1975 Plan) of politically 'decolonised' Mauritius and the most recent Plan called '2008 - 2020 Education and Human Resources Strategy Plan'. It argues that, while increasing levels of resources have been pumped into the education sector in the post-Independence years, (with emphasis on infrastructures and access), very little has been effectively done to turn Mauritius into an equitable, inclusive, sustainable and more just society. Divisions exist between the different communities, and if education is not made to provide a more equitable outcome, Mauritian society runs the risk of being further polarised under these conditions; hence reconciliation and peace become very difficult to attain.

**5.1.3 The 1971-1975 Plan**

The development strategy that the Government wanted to implement is clearly laid out in the 1971-1975 four year-Plan:

The most important resource of Mauritius is its manpower. A well-motivated force possessing the requisite mental and physical skills for a modern economy is the most valuable economic asset. While the cultural background and progress of education in Mauritius have provided the basis for an intelligent and adaptable labour force, there is a need to create the skills required to meet the demand generated by prospective economic development. This would require a change in the quality and content of education, from its present generally academic emphasis to more technical and vocational orientation at all levels. (1971-1975 National Plan 68)

As early as 1971, three years after Independence, mention was made of Technical and Vocational Education (TVE).

The educational policy formulated by the Government in the 1971-1975 Plans had the following objectives:

- To provide free education for all children at primary level.
- Opportunity for secondary and vocational training for at least 60 per cent of boys in the age group 15-19 by 1980.
- A balanced curriculum which will include technical subjects and integrated Science at all level.
- Technical and Vocational orientation of education at secondary and post-secondary levels.
- Equality of educational opportunity for all according to their educational potential.

The objectives in the 1971 - 1975 Plan and the general philosophy behind it was very much in line with the International Development strategy put forward in the second United Nations development decade, but an analysis of the objectives reflect a certain number of inequalities in the strategy to be adopted. The very fact that education was to be made free at primary level, but not compulsory, implies that there could well be a section of the population who would not be attending schools. Moreover, there is no mention of pre-primary schooling which, unlike the other educational sectors, remains largely fee-paying. We shall come back to this later.

The second objective is the most astounding one. The Plan grossly neglects Mauritian girls. Mention is made of opportunity for secondary and vocational training for at least 60 per cent of boys in the age group 15-19 by 1980, but nothing is mentioned for the girls. In this respect the plan reminds us of the situation of the colonial period when girls were strongly discriminated against and were deprived of education. The third objective speaks about a balanced curriculum. The policy-makers seem to imply that the inclusion of Technical Subjects and integrated Science at all levels brings about a 'balanced curriculum'. In the years immediately after Independence, the curriculum was very much the same as the colonial curriculum. Attempts to bring about a new curriculum only started when the Mauritius Institute of Education (MIE) was established in 1973. The fourth objective refers to Technical and Vocational education TVE, but there is no indication as to why and how the country should have more of such education.

The Government may have been prompted to promote Technical and Vocational Educational after the World Bank launched a 'new' educational policy with a strong vocational content (World Bank, 1974). A number of projects were financed by the World Bank, but the end of the 1971-1975 Plan, Vocational education had not achieved the desired results, namely to reduce unemployment. Critics went as far as to say that Vocational Education did not even get off the ground, in spite of the Government's effort. The question of Pre-Vocational Education constitutes an important element of this study since it is a platform that caters for large numbers of disadvantaged children of slave and indentured descent.

The fifth objective has little meaning in itself. 'Educational potential' is a term drawn from Ideology rather than Science. It is difficult to square the idea of equality of educational opportunity with a practice in which entry into secondary school is based on CPE, a competitive examination, resulting in a large percentage (some 35-40 %) of students failing. The optimum use of one's educational potential depends on a host of factors, but the latter have often not been taken into consideration.

#### 5.1.4 The post-1975 plans and Democratisation of Education

Several Educational Plans have been developed between 1975 and 2010. These include:

- Master Plan of Education of 1991;
- The Action Plan of Mauritius of 1998;
- The Education Reforms, 2001-2005;
- The Education and Human Resources Strategy Plan, 2008-2020.

Between the first post-Independence Plan 1971-1975 and the most recent one, i.e. that of 2008-2020, a number of progressive initiatives that point towards greater democratisation, have been adopted but the high rates of failures at the C.P.E., the entrenchment of the private tuition, robbing children of their childhood, the language issue, especially the utilisation of the mother tongue as the medium of instruction, have not been addressed adequately, thus posing important challenges to the State.

The problems mentioned here constitute some of the major weaknesses of the system. Needless to say, the high failure rate at the Certificate of Primary Education (C.P.E.) represents an important wastage of human capital and a potential threat to peace in Mauritius (Bunwaree, 2001).

## 5.2 Democratisation of Education

According to Bissoondoyal (2011), the country talks about democratization of secondary education but forgets about past initiatives to do so. The first step after Independence was taken by Sir Kher Jagatsingh in the 1970s, with the setting up of 15 Junior Secondary Schools. Then came free secondary education under SSR in 1977. The objectives of the Junior Secondary Schools and of free secondary education were not just to follow the same academically-oriented curriculum of the few existing State and Confessional schools. A Form III exam was devised by the MIE for post-Form III orientation after the Forms I-III curriculum was revamped to include some new areas, such as Industrial Arts and Home Economics. But the Form III exam was hurriedly withdrawn, even after the question papers had already been printed, due to the opposition of traditionalists and vested interests. The idea of a Form III exam was again mooted on and off, but not much came out of it. The most sustained effort was made by Kadress Pillay, Minister of Education between 1997 and 2000. He had proposed to build 60 identical lower Secondary Schools to get rid of the competition at the primary school level. This again came to nothing in the face of opposition from the same groups of vested interests.

### 5.2.1 Vested interests and lobby groups

The vested interest referred to by Bissoondoyal (2011) is a perennial problem of Mauritian society and highlights the complexity of a small multi-ethnic country, where elite groups within particular communities 'fight' each other to preserve their interests, and these trickle on to the education platform. These are often not in the best interest of every Mauritian child. These vested interests often create winners and losers. The most vulnerable and disadvantaged are those who do not have much of a voice, and they constitute the losers.

Education reforms between 2000 and 2005, and 2005 and 2010, meant that it was left to Minister, Steven Obeegadoo, from 2000 to 2005 to launch the most comprehensive Reform of the Secondary School structure so as to divide them into Forms I-V Secondary Schools and Form VI Colleges, with the construction of some 50 new Secondary Schools. But it was short-lived as Dharam Gokhool, who was sworn in as Minister of Education in 2005, preferred to walk backwards in the name of Reform, and empty slogans like 'world class education', instead of consolidating the progress already achieved.

Bissoondoyal's comments about the policies and actions of different Ministers of Education show how regime changes sometimes contribute to preventing a building-block process and continuity in Educational Reform (Bissoondoyal, 2011).

## 5.3 The 2008-2020 Education and Human Resources Strategy Plan

The strategic goals of the 2008-2020 Plan include the following:

- Improve completion rate at upper secondary level and minimise wastage at secondary education level.
- Improve all aspects of quality education through measurable learning outcomes.
- Undertake regular review of curricula to respond to the emerging needs of the economy and society.
- Ensure that students obtain optimal opportunities for academic and self-development.
- Introduce support technology in the system.
- Continuous in-service training of school personnel at all levels.
- Increase access to secondary education for children with special educational needs.
- Improve effectiveness of Secondary School Management System.
- Ensure equity among public funded schools.
- Create a strong Quality Assurance System to secure internal efficiency and quality teaching and learning.

## 5.4 Difference between rhetoric and reality

While the goals are lofty and mention some great ideals, the reality emerging from the ground so far shows us that disparities and inequalities persist and curricula changes remain very limited. For instance, the Plan states it will ensure that students obtain optimal opportunities for academic and self-development, but a glance at the Pre-vocational sector (Section 6) for instance, shows us that “opportunities are hardly optimal.”

Despite the strategic goals established by the different plans and all the attempts at reforms, the Mauritian Education System remains quite inequitable, with implications for the children from disadvantaged backgrounds. Out of every 100 boys and 100 girls enrolled in Grade one, only 39 boys and 46 girls reach Form Five (the end of the five-year secondary schooling). Moreover, only 13 boys and 16 girls reach Upper Six (the final year of the secondary schooling sector).

According to some sources, some 28% of any given cohort in Mauritius completes only 6 years of education, and they absorb some 14% of total public spending, while 20% of the most educated in a cohort receive 35% of all public spending on education. The system is therefore biased in favour of the highly educated.

When an important component of the population is forced to withdraw and lose access to public spending on education, the inequitable aspects of education become even more manifest. However, inequalities in education are not due to the financial resources only, but also to the content of the curriculum, the type of teachers, the teaching and learning strategies in the classroom, and the school- teacher relationship, to mention but a few factors.

## 5.5 Curriculum justice, Linguistic Injustice and Private tuition in the post-Independence period

Legislative debates, spanning decades, highlight how issues of curriculum and language, amongst other things, remain a fundamental problem of our Education System, and how they continue to hamper the promotion of social justice

One of the legislators in the 1983 debates notes:

*“There is another important problem which I would like to mention also, and unless something serious is done about it, we will never be able to reduce this inequality. In fact, the handicap which affects poor students in the country is the question of private tuition. Mr. Speaker Sir, I would like to make it clear that I am not against private tuition as such. Some students, who are weak, need be given a boost. But, once private tuition becomes institutionalised, once private tuition starts in standard I, II and III, this I think is criminal. When I made a surprise visit last Monday in a primary school, I was really surprised and shocked to see the students of Standard II attending classes as from 8.00 am. How can you expect these poor children, to undergo such cramming at that tender age? At the age of five, six or seven, it is really impossible. We, the grown-ups, after five or six hours of continuous work, feel the need to rest; but these poor children are being overburdened from 8 a.m. up to 5 p.m., receiving private tuition. In many cases, as soon as they are admitted to Standard I, the next day, they are told: “Well, if you want to take private tuition, you come. We’ll start on such a day and this is the price, etc.” (Hansard, 1983)*

Private tuition is still a huge problem today. Education may well be free but very often the poor cannot afford private tuition, which impacts on their performance. In a system where reward and recognition are largely based on academic performance, working-class children of slave and indentured descent have very little chance to succeed.

Mr. N. Virasawmy, Parliamentarian, in 1974 argued that

*“The Government refuses to see one basic flaw in our primary education system [...] it is the medium of teaching. You cannot teach young pupils the unknown through the unknown in primary education. As you have to teach the three R’s : Reading, Writing, Arithmetic and it has to be done through the known which is the mother tongue of the child and the mother tongue of the child finds no place in primary education. We have to throw away our prejudices, we have to look at our problems objectively. Let us look at it so. What is the real mother tongue? I*

*am not speaking of ancestral language but of the real mother tongue. Here I am not implying that foreign languages should be banned. Far from this, I know for sure that if you begin with the mother tongue of the child, you enable the child to learn a foreign language better." (Hansard, vol. 1. 1974)*

In his intervention in 1976, Mr. N. Virasawmy stated:

*"I want to be very clear here, because my views have been misinterpreted, perhaps misunderstood by some. It is axiomatic that the best medium of teaching is the mother tongue of the child, because when he goes to a primary school it is to learn first of all three subjects: reading, writing, arithmetic, and also to develop his senses, and the best medium to teach him these new skills is his mother tongue, and in this country there are two major mother tongues. They are Creole and Bhojpuri, Bhojpuri being spoken mainly in the countryside and Creole mainly in towns. But in the countryside the kids are bilingual as a matter of fact. They speak both Bhojpuri and Creole and if I suggest that we should do some research and if I have stood very firmly in favour of Creole it is for practical and economical reasons, because it would be very difficult to start something with two languages. This is why I suggested Creole, because it is cross cultural, because it is spoken by kids in towns and in the countryside." (Hansard, vol 1. 1976)*

On the other hand, in response to Mr. Gokhool, Minister of Education in 2007, Mrs. Labelle said:

*"May I take it from the Minister that, despite all recommendations by UNESCO and other organisations for the use of mother tongue, specially as he mentioned, for kids who have difficulties, it is still the policy of the Ministry not to take into account the use of mother tongue for a better acquisition of literacy and numeracy in our country." (Hansard, Debate No. 07 of 2007)*

The question of prioritising Academic Education over Technical Education is still very prevalent today. Despite 'democratisation', the curriculum and system of assessment has hardly changed, thus giving little opportunity to those who are not academically gifted to shine. "Vocational and technical education" is still largely seen as a sector for the less academically able.

Mr. Canabady (*Hansard*, vol. I & II 1982):

*"When the Hon. Minister of Education thinks of the reform he has to bring, we should stop this old colonial system of academic education and we should start thinking of real technical education. I would like to stress that point more because, at present, only those who are considered unfit for academic education are being channelled to the technical education whenever it exists. This is very strong because we do not want pupils to think that only those who cannot cope with academic education go for the industrial sector, when we know that much of our economic future depends on that particular sector. Of course, in that light, there is much need for manpower planning."*

## 5.6 Free Education - who benefits and who loses?

Free education, which was granted in 1977, has certainly had unintended benefits for the Mauritian population, e.g. for the poor, particularly girls and women (Bunwaree, 2005). Those who would not have been able to afford education manage to send their children to school. This provoked a big generational shift for some segments of Mauritian society. Education has therefore been an important tool of mobility for some. But the question that needs to be posed are: how and why have working-class children of slave descent been able to benefit to the same extent as working-class children of indenture descent?

While a number of Universities have mushroomed up in Mauritius in the recent years, the numbers of Creole children attending these Universities remain few in numbers. There is no official data collected along ethnic lines at University, but it is common knowledge that very few Creole children make it to the University. Increasingly, those without tertiary education will find it hard to find a job in the emerging sectors of the economy.

We shall come back to the question of Higher Education in a later section of this chapter, but for now let us turn to the causes of poor performance at C.P.E. since this exam, which has remained largely unchanged, determines the life chances of every single Mauritian in many ways.

## 5.7 Causes of poor performance and failure at C.P.E

There are a number of reasons as to why children perform poorly and/ or fail the C.P.E in such large numbers. These include: an irrelevant curriculum, the non-utilization of the mother tongue as a language of instruction, the lack of adequately-trained teachers, the absence of relevant remedial education, the lack of resources for private tuition, a strong disjuncture between the school culture and the home culture, and lack of parental involvement. These are just some of the causes. Another cause, which is increasingly being talked about, is the lack of relevant and quality pre-primary education.

## 5.8 Pre - Primary school

Poor and no attendance at pre-primary schooling by the economically weaker sections of society may also be a reason for the poor performance of children at C.P.E. While there is no scientific study available to show the correlation between the two, it is a well-known fact that poor families in a number of deprived zones cannot afford to send their children to pre-primary schools. In recent years, Government has made an effort to subsidise pre-primary education and to create some more pre-primary schools units but this sector needs attention. The first few years of a child's life, before entering the primary school, are crucial for the child's development and creativity.

Yet, this sector has, contrary to all other sectors of the Mauritian Education System, remained fee-paying and neglected for a relatively long period of time. Issues of quality and relevance are also burning issues within this sector and may have had consequences for children of the poor, particularly Creole children.

Discussing the pre-primary sector, Mr. E. Francois, Parliamentarian during in 1974 notes:

*"The Pre-Primary Education is practically non-existent in Mauritius. The Municipality of Port Louis for a few years has been running a pre-primary school – a kindergarten. Apart from the Municipality of Port Louis, there are a few people or organisations who have been operating on a rather private basis. But what have we seen? Those who can afford have done everything possible to see that their children have some sort of pre-primary education. They are to pay for that to such an extent that when their children join primary schools, those very children are admitted either in the second standard or the third standard as it is called normally. They do not start from the lowest standard. So, right from the beginning, we can see that there is inequality of opportunity in education, and as soon as the children start their education, the parents, as well as their teachers, have in mind one thing: the junior scholarship examination, and everybody, that is, the child, the parents, and the teachers work, put pressure on the child in order that he may be the lucky winner of a scholarship. Why do we have such a situation? This has been criticised by many people. Those who have been in education for quite a long time, who have long experience in the teaching profession, why do we allow certain people to benefit from free secondary education whereas the majority of children attend private secondary schools" (Hansard, vol. 1 of 1974).*

Many years have elapsed since E. Francois's intervention, and much progress has been made regarding Pre-Primary Education, but important gaps and issues remain unresolved in this sector. It is only the well-to-do who can afford good, safe and quality Pre-Primary Schools. More recently in 2005, it was argued that:

*"To ensure more equitable access to pre-primary education in regions of greatest social needs, three pre-primary units will be constructed at Quatre Cocos, Rivière des Créoles and Vacoas. Five new pre-primary schools will be operational during the coming financial year at Grand Sable, Baie du Tombeau, Bambous, Cascavelle and Terre Rouge. The upgrading of norms and standards of private pre-primary schools will also be pursued." (Hansard, Debate No. 10, 04.04.2005. Mr. P. Jugnauth).*

However, Pre-primary Schools have seen the light of day in only a couple of these localities.

As mentioned earlier, one of the biggest failures of the contemporary education system is the high failure rate of children at the end of primary school. The State has tried to address the problem by setting up 'Zone Education Prioritaire schools.' The idea behind the ZEP Schools was to resource the 'failing schools' better and to give them more attention, but in-school processes and the relationship between the home and the school have remained as they were before, thus causing

very little improvement. The results of the ZEP Schools assist in showing us how class and ethnicity can overlap. Many of the schools listed below are located in zones identified as poverty zones.

### 5.9 ZEP School - C.P.E. Pass Rate 2003 - 2010

	School	2003	2004	2005	2006	2007	2008	2009	2010
Zone 1	Résidence Vallijee GS	41.5	36.1	36.2	32.8	42.9	58.3	44	48.3
	Emmanuel Anquetil GS	9.2	16.9	22.4	19.7	20.1	26.7	23.3	25

	Surtee Soonnee GS	40.3	38.2	46.2	57.1	51.5	35.8	43.3	44.7
	Xavier Christian Barbé GS	42.9	55.2	45.5	35	35.8	29.3	33.3	31.7
	Zone 2	André Bazerque GS	43	34.9	23.7	33.3	41.7	39	43.8
Barkly GS		30.8	28.3	38	22.5	20.8	24.1	9.3	22.7
Aimé Césaire GS		30.5	46.2	35.3	18.6	26.5	40.8	33.9	41.4
R. C. NuckchadyGS		36	28.6	31	34.1	29.4	16.7	51.5	41.9
Zone 3	Bois Des Amourettes GS	60.9	65.1	45.6	57.6	58.3	69.6	61.1	79.2
	Révd Espitalier Noël GS	25.5	38.5	44.2	45	37.8	47.9	53.8	25.7
Zone 4	Black River GS	40.8	43.1	37.7	34.8	44.4	61.1	48	29
	Candos GS	34.1	29.2	23	37.5	28.1	20.8	36.5	40.7
	Cascavelle GS	16.3	14.6	11.6	26.5	28.9	48	50	34
	Petite Rivière GS	34	31.8	35.5	42.5	48.3	43.1	40.2	43.2
	Richelieu GS	32.7	31.1	30.2	32.9	51.2	48.7	37.5	44.4
Rodrigues	Ste Thérèse de l'Enfant Jesus RC	26.9	40	56.6	62.8	58.5	63.2	62.1	57.9
Overall		30.9	31.4	32.8	36.5	36	35.9	35.3	37

Such overlapping is striking when an analysis of who fails is undertaken. While children of the working class are the ones who constitute the bulk of those who fail, the vast majority of them are Creoles. How can one speak of a just and cohesive society when so many young people are pushed to the margins of society, with futures unplanned? The situation of the Creole children failing has not changed much over the years. The situation seems to be rather alarming in some localities. The District of Black River is a case in point and largely inhabited by slave descendants. Since 1982, attention has been drawn to the plight of children in Black River, but the situation has changed very little over the years, as reflected by the high failure rates at C.P.E. in Black River. A Parliamentarian intervening in 1982 had the following to say:

*"Les enseignants et le maître d'école de Case Noyale RCA leur a demandé. Là, ils m'ont raconté le drame des enfants de Rivière Noire. A leur avis, les élèves ne sont pas intéressés aux sujets académiques enseignés à cause du programme de C.P.E. qui est très chargé et aussi, peut-être, à cause de la présente méthode d'enseignement. Ils ont suggéré que des écoles techniques, des écoles pratiques, soient mises sur pied et qu'on adopte une méthode d'enseignement spéciale pour les enfants – les fils de pêcheurs et de travailleurs – qui vivent une vie tout-à-fait différente des autres Mauriciens. A travers cette rencontre, M. le Président, j'ai appris beaucoup de choses. Il y a un fort pourcentage d'absentéisme de la part des élèves, car beaucoup vont à la pêche ou dans les bois pour chercher du fourrage ou faire du charbon en compagnie de leurs parents, pendant les heures de classe. Ils ne comprennent pas la nécessité de l'instruction. Figurez-vous aussi, M. le Président, que beaucoup de ces élèves sont déjà ivres le matin, en entrant dans la salle*

*de classe, et d'autres se procurent du vin à midi, pendant la récréation, dans l'unique boutique existante ou alors, simplement, chez eux. Lorsque je racontais cela, il y a quelque temps, à un collègue, il a cru que je plaisantais et il a lancé : It's the joke of the year ! C'est vrai, M. le Président : Le vin et le tilambic sont devenus le café de beaucoup de gens à Rivière Noire. "*  
 (Ms. A.Navarre. vol. I & II, 1982)

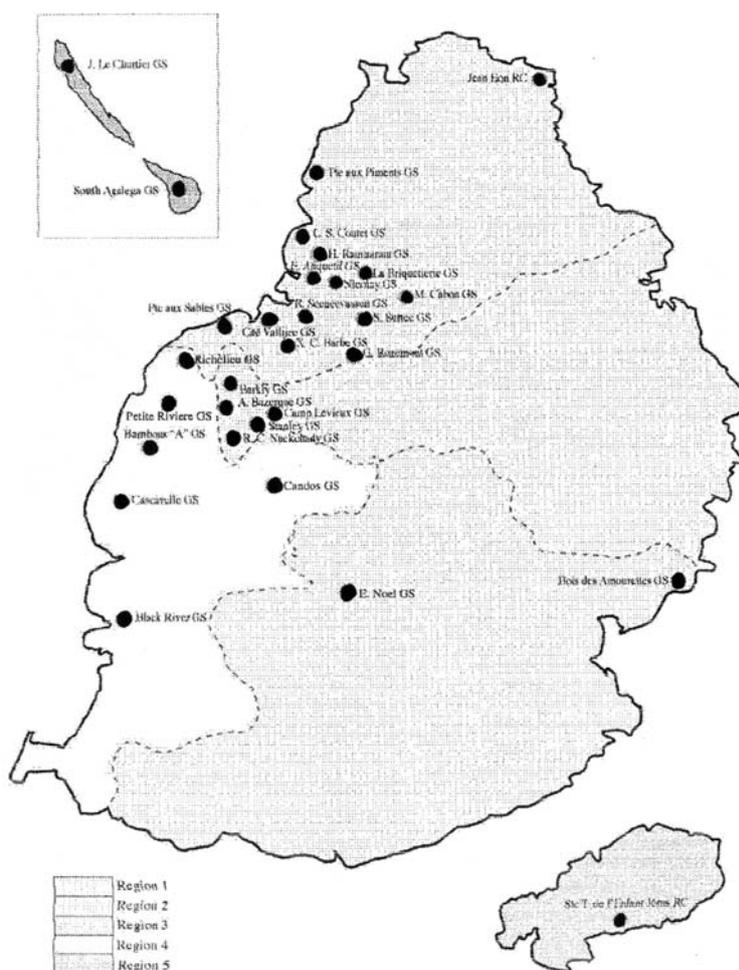

This view has been reinforced by what some teachers currently working in the schools in the Black River District have to say.

### 5.10 Spatial Inequalities and Poor Performance

Poor achievement level strongly correlate with spatial inequalities in Mauritius. The map below shows the location of the ZEP Schools. A number of the schools listed are found in localities identified by the Government as poverty zones.

Poverty zones are not inhabited by people of slave descent only. Some descendants of indentured labour, particularly those of the working class, also inhabit the poor neighbourhoods. Social dislocation such as prostitution, high rates of teenage pregnancy, alcoholism, high level of unemployment, often compound the problems of the poor. In these conditions, poverty becomes more complex and no doubt affects the school performance of children living in the deprived zones. The map below shows the poor performing schools, located in the deprived zones.

### Ministry of Education, Culture and Human Resources LOCATION OF ZEP SCHOOLS

### 5.11 Decentralisation of Universities and spatial inequalities

The Government is currently talking about the decentralisation of Universities, with the view of democratising education further, but those who fail C.P.E will not be able to aspire to attending those Universities. While those new Universities have already been ear-marked and there may well be certain deprived zones (as per the list above) not too far away from the sites, the poor children of slave and indenture descent will still not be able to access the Tertiary Sector. Admitting students to Institutions of Higher Learning in Mauritius requires that they satisfy certain criteria and passes in Higher School Certificate, but many young people of Creole background are already out of the system at a much earlier level of the schooling system and therefore have no chance of making it to University.

Democratising Education requires an understanding and interpretation of Education within a continuum. Sectors cannot be analysed in isolation; a holistic perspective is required.

### *5.12 The Mauritian Higher Education*

It must be remembered that the outputs of one sector are the inputs of the other sector. Education in Mauritius should be analyzed as a continuum - Higher Education being the summit of this continuum. But, who makes it to Universities is a key question that needs to be posed when interpreting Mauritian Education and society in the 21<sup>st</sup> century. A number of Institutions of Higher Learning have been set up in the country, but with little opening for the children of the deprived and the disadvantaged.

Between 1968 and 1981, the foundation was laid for four principal Institutions of Higher Education, which were:

- The University of Mauritius, which grew out of the College of Agriculture;
- The Mauritius Institute of Education, designed to replace the Teacher's Training College;
- The Mahatma Gandhi Institute, originally intended to be a tribute to the multicultural nature of the country;
- The Mauritius College of the Air, which started out as a sort of extension to secondary school, designed to work through the national TV network.

In recent years, some Tertiary Institutions, such as UTM and the Charles Telfaire institute, have opened up. Contrary to the University of Mauritius, these institutions are fee-paying and they do not necessarily attract the best 'best performers' of the system. Often, the 'best performers' of the system are those who are economically strong and who possess the necessary cultural capital. In other words, the State continues to privilege the children of the elite.

## **6. Conclusion**

Contemporary Mauritius is now speaking of 'One graduate per family' as part of its vision of Education but families of slave and indenture descent, particularly those who are poor and also continue to suffer from social dislocations and poverty-linked pathologies mentioned earlier, will hardly ever be able to fit into the above vision. The system fails them at a rather young age, and they may not even be able to dream of being at a University.

It is true that the State has continued to make efforts towards greater democratisation by building more schools and making transport free for all students, but if democratisation is to be more meaningful, there needs to be a fundamental reform of the system. This reform has become even more urgent, now that the country is aspiring to become a Knowledge Intensive Economy, with greater emphasis on the mental rather than on the manual. Emerging sectors of the economy demand new skills and aptitudes which only a few possess. Addressing the mismatch between the products of the Education Sector and the labour market requires that policies directly relevant to the children and youth of disadvantaged groups, particularly those of slave descent, should be borne in mind. In other words, policies speaking to equitable education, allowing for the utilisation of the full potential of the child and allowing for a more just society, should be urgently developed and implemented.

## CHAPTER SIX

**THE PREVOCATIONAL SECTOR IN MAURITIUS: A CASE OF MORE JUSTICE OR CONTINUED INJUSTICE**

The Prevocational Education (PVE) Sector caters for pupils who have failed C.P.E twice. This failure represents many of the injustices of the system. The reasons of why children fail have been established in the previous chapter. PVE is supposed to offer a second chance for children from the disadvantaged segments of Mauritian society, the vast majority of whom being of slave descent.

**6.1 The Nature of the Prevocational Sector**

The Prevocational Sector, in Mauritius, caters for around 4,000 students left out in the cold at the end of the primary cycle, as a result of their inability to meet the established benchmark for promotion to the mainstream in the secondary sector. As there is no other well-organized system or structure to provide for further learning opportunities and equal facilities to this category of students, a new Prevocational Education Scheme was launched in 2001, with a view to providing the necessary environment for the growth and development of these children, and also for developing learnability to eventually help them live a socially acceptable and economically self-sufficient life style (Ministry of Education & Human Resources, 2011).

The new scheme developed, for both public and private institutions and was aimed at ensuring equity in educational services. It offered learning opportunities with a view to mastering essential competencies in order to ensure Functional Literacy and Numeracy and basic learning competencies for further achievements.

The Prevocational Education Scheme proposes a shift in the pattern of traditional academic elitist educational goals to a more child-centered and need-based learning. However, the actual praxis is different in educational institutions governed by the State and Private sectors. Prevocational classes in State Secondary Schools tend to be more academic, while in Bureau d'Education Catholique (BEC) schools, much emphasis is laid on an inclusive pedagogy, where students are encouraged to participate in the various activities tailored according to the needs of those students, for example, cookery classes for both boys and girls.

**6.2 Broad Aims of the Study**

The main questions that the PVE survey seeks to answer are: (a) How fair is this sub-system within the larger system? (b) Is the sector really providing a second chance? (c) Is the PVE bringing about more social justice or is it a case of continued injustice? The main objectives of this case study of the PVE sector are to explore the extent to which children's experiences of schooling allow them to climb the social ladder. In other words, the study attempts to examine the various in-school and out-of-school processes, affecting students attending PVE, so as to understand the scope of their integration into mainstream society. Whether the PVE Sector provides assistance towards the establishment of a more cohesive society is a question that needs to be posed. In order to answer these broad concerns, a survey of some 35 schools having PVE classes, based in diverse locations, particularly the poverty-stricken zones, were chosen and some 35 focus group discussions (with one in each school) were carried out.

**6.2.1 The specific objectives of the study are:**

- (1) To examine the extent to which teachers are equipped to teach children from disadvantaged backgrounds, particularly those of slave descent and indentured labour descent attending the PVE.
- (2) To assess whether in-school and out-of-school processes within the PVE sector are assisting toward the empowerment of the children and actually providing a second chance.
- (3) Explore different avenues available, and which could be used in assisting towards ensuring better futures for children attending the PVE sector.

### 6.3 The themes of the questionnaire

The survey questionnaire included the following themes: curriculum, language and linguistic issues, gender equality, teacher-student relationship and teacher-home relationship. Views and perceptions of teachers on a range of issues relating to those broad themes, were sought. Different elements and sub-themes around those broad themes contribute to understanding and interpreting the broader interrogations of the survey.

### 6.4 The FGD themes

Some of the themes included in the FGDs are: Identity of students/ the perceptions of slavery and indentured labour; the experiences of primary schooling; what *prevoc* is doing for them, the aspirations and expectation; the knowledge of what generally happens to students who leave *prevoc*; the understanding of the notion of (i) citizenship (ii) being a patriot and patriotism and (iii) 'Ile durable'; the views on the use of Creole as a medium of instruction and as a fully-fledged language to be introduced in the school; parents' involvement in the education of their children, reading and reading habits; curriculum at *prevoc* and subjects the students can study.

Before presenting the findings of the study, it is perhaps important to understand the profile of those who attend PVEs.

### 6.5 Who attends PVE?

As mentioned before, those who fail the C.P.E twice are those who enter the Prevocational sector. All Secondary Schools, except for a few elite schools, have prevocational classes. As mentioned earlier, those who fail the C.P.E are mostly children from a working-class background. While the vast majority of them come from ZEP schools, some come from other poor performing Primary Schools.

A large number of the students attending PVEs are from broken families, single-parent families, absent parents. Moreover, their parents have had very little schooling themselves and often cannot connect to the 'culture' of the school.

Table 2 shows the pass and failure rates at C.P.E. Those who fail are those who have a very inequitable start in life, in other words, starting point is one of an unequal playing field. It shows the failure rates at C.P.E. over a number of years. It is the output of this system which constitutes the inputs of the PVE sector.

Year	Number examined			Number passed			% passed	% failed
	Total	Male	Female	Total	Male	Female	Total	Total
1982	28,537	14,983	13,554	15,513	7,852	7,661	54.4	45.6
1983	24,883	12,857	12,026	12,894	6,345	6,549	51.8	48.2
1984	26,386	13,673	12,713	13,488	6,435	7,053	51.1	48.9

1993	32,887	16,757	16,130	19,270	9,362	9,908	58.6	41.4
1994	29,535	15,094	14,441	18,074	8,663	9,411	61.2	38.8
1995	27,733	14,222	13,511	18,121	8,791	9,330	65.3	34.7
1996	25,629	13,129	12,500	16,737	8,120	8,617	65.3	34.7
1997	25,230	12,926	12,304	16,452	7,981	8,471	65.2	34.8
1998	24,804	12,528	12,276	16,622	7,823	8,799	67.0	33
1999	26,388	13,448	12,940	16,970	8,044	8,926	64.3	35.7
2000	28,058	14,444	13,614	18,617	8,836	9,781	66.4	33.6
2001	29,120	14,960	14,160	19,017	8,953	10,064	65.3	34.7
2002	27,842	14,486	13,356	18,079	8,641	9,438	64.9	35.1
2003	27,510	14,252	13,258	17,219	8,065	9,154	62.6	37.4
2004	27,332	14,084	13,248	17,217	8,152	9,065	63.0	37
2005	27,117	13,981	13,136	17,596	8,244	9,352	64.9	35.1
2006	25,007	12,942	12,065	16,987	8,028	8,959	67.9	32.1
2007	24,050	12,368	11,682	15,915	7,428	8,487	66.2	33.8
2008	23,664	12,299	11,365	15,957	7,633	8,324	67.4	32.6
2009	22,620	11,764	10,856	15,411	7,328	8,083	68.1	31.9

Large numbers of children who fail C.P.E. are from working-class backgrounds, often those not having the 'habitus' and 'ethos' required by the school. Children of slave descent are disproportionately present within this group; this highlights the fact that the chances for disadvantaged Creole children to be upwardly mobile remain very slim. Can contemporary Mauritian Education bring some kind of reparations? Is the PVE Sector helping to remedy some of the problems and assisting in the empowerment of the child?

## 6.6 Findings from FGDs: Giving a voice to children of slave and indentured descent

FGDs were carried out with a diverse student population within the PVE Sector in different geographical areas around the island. Questions and topics raised with students were mainly related to their identities, past and current school experiences, daily life experiences, their family life and parent involvement in their studies, and their knowledge of topics such as citizenship, 'Ile durable', patriotism.

Most Prevocational students could not describe their primary school experiences as being a happy one. In fact, they were labelled as 'good for nothing' and they were badly treated by their class teachers. Even before the final year exams, they were considered as failures and their seats were reserved in a far corner of the classroom.

FGDs and other interviews assisted in obtaining some kind of triangulation.

A summary of the responses to each FGD theme has been made below:

### 6.6.1 Identity of students/ the perceptions of slavery and indentured labour

Many students described themselves as Creoles or Indians. Some of the Creole children called themselves Catholic but very few could actually connect with their slave or indentured past. Creole students reported that certain 'pejorative' (sometimes seen as racist) terms were used by other non-Creole groups in describing and/or addressing them.

### 6.6.2 The experiences of past and current schooling

Prevocational students could not describe their primary school experiences as a wonderful one. Many of them were labelled as 'good for nothing' and stereotypes of diverse kinds were often used by teachers. They were considered as failures and their seats were often reserved in a far corner and in back row of the classroom. Some students reported that their teachers used racist terms in class like 'Mazambik', 'Noireau'. Creole students reported that Hindu teachers would 'guet zenfant malbar plis', 'Pas pren nu conte'.

Students also reported the bad treatment that they received from their teachers and this included physical, as well as verbal, abuse. One of the students even reported that her punishment was to kneel down on 'filao' seeds, while others were often beaten with a stick.

The following are some of the terms used by teachers to describe the students. These were mentioned when students were asked to recent their experiences:

- Sa bann zanfan la bizin fout zot dan enn kwin
- Aret vinn lekol. Al zet le kor
- Mous kaka, zako, kouyon
- Latet kokom, orit sek, latet sek, latet pike, toke, retarde, torti
- Al travay dan kamion salte, al netoy twalet parski zot pa konn lir
- Bon a rien, inbesil, sovaz, bann kaka, bourik
- Resamble zako
- Mazambik, sinwa nef
- Vinn barr zanfan so plas, vinn sof sez dan lekol, vinn pran dipain al lakaz
- Zot bann mongol
- Amenn gro kaye pou narien
- Faye batar
- Miss la get nek sa bann indien la, pa get bann kreol ditou

### 6.6.3. What *prevoc* is doing for them:

Students without any hesitation showed a preference for Prevocational classes, as compared to primary schooling. They enjoy a better treatment by their class teachers and for them, this is a great relief as to what they were compelled to bear in primary school. In some well-organised schools, students even felt privileged to have activities tailored to their specific needs and this acted as a positive reinforcement to boost their desire to attend school and to dream of a better future. In the other schools, there are one or two activities reserved for the Prevocational students, like swimming and music, but those activities are not practised on a regular basis. In general, students were satisfied with the way their time-tables were planned, with a good balance between academic and non-academic subjects.

Their relationship with mainstream students, as well as teachers, was also discussed. The responses varied from one school to another. Some reported being well-treated both by the students as well as teachers from the mainstream, while others described their relationship as being warm with the students, but quite unfriendly with teachers, who have already formed a prejudiced opinion of them. Others described their relationship with their mainstream friends as being hostile, since they are looked down as being 'zelev prevoc'.

Coming to activities organized jointly for both mainstream and Prevocational students, very few can be mentioned, like music day and sports day.

#### 6.6.4. The aspirations and expectations

When students were asked what they intended to do after their three years of Prevocational Education, most of them answered 'IVTB'. Some of the well-informed ones even corrected as 'MITD'. Still, they were observed to have low expectations. Most of them cited their technical courses at IVTB as if from a predefined list, namely mechanic, plumbing, electric, carpentry, while those living in the coastal regions added the broad term 'travay lotel', with a few mentioning the job of waiter. Some students even said that they would prefer to enter the job market immediately after their Prevocational classes, while a handful would like to pass C.P.E and integrate mainstream and later get a good job.

For the girls, the aspirations were somehow different and varied from one school to another. In very few distinct institutions, most of the students wanted to pass C.P.E., integrate mainstream and have a good job. Those aspirations simply reflected the quality of education they are receiving at school. In those same schools, those who preferred to enter the labour market, had very original ideas of what they will be doing in the future. A student mentioned operating a day care centre, while another said that she would create her own jewelries and sell them. Another one said that she wanted to operate a florist shop. In schools where students do not have great aspirations, 'hairstylist' was on the top list for future jobs.

#### 6.6.5. The knowledge of what generally happens to students who leave *prevoc*

Only a minority knew about those who have gone through Prevocational Education, completed IVTB training successfully and are now in employment. Those students tend to take these people as models, and they would also tend to choose the same career path as their models. We also learnt that in some deprived regions of Mauritius, unsuccessful Prevocational students have become drunkards, drug addicts and even delinquents.

#### 6.6.6. Students understanding of the following concepts: "Citizenship, Patriotism and Ile Durable"

The fact is that these terms are quite popular; students acknowledge having heard these words, but failed to explain or give definition of same. Overall, the response to this part of the FGD was poor. However, students, from most of the schools visited, claimed that teachers had never come up with discussions/ explanations around these topics.

Answers given by students:

Citizenship: zot tou res ansam, dimounn ki inn ne dan moris, dimounn moris,

Patriotism: inn tande me pa kone

Ile Durable: enn lil ki prop, lil ki pou dir lontan

#### 6.6.7. Their views on the use of *Kreol* as a medium of instructions and as a fully-fledged language to be introduced in the school

Students are happy with the use of 'Creole' as a medium of instruction in class as they are less able or some even fail to understand English and French. They claim that the use of 'Creole' in class enables them to better understand concepts. However, they also admitted that English and French are also very important to learn, as they will have to deal with a wide range of clients, according to the field of their professions. Almost all students welcomed the idea of introducing 'Creole' as a subject, as they feel more at ease with 'Creole' and above all it is their mother tongue'. It should be noted that in some private schools, students are taught 'Creole' as a full-fledged language.

Answers given by students:

Kreol nou langaz

Nou pli kapav konpran kreol

Nou servi kreol tou le zour

Nou abitye avek sa langaz la,

Nou bizin kapav konpran angle ek franse osi sinon nou pa pou gagn enn travay

Nou kontan kan nou prof. servi kreol pou explik nou, aköz nou pli kav konpran

#### 6.6.8. Parents' involvement in their Education

Of the population surveyed, most of the students came from broken families, single-parent families, had absent parents and a handful live in shelters. Very few of them get some kind of assistance from their parents at home, while doing homework and other activities. This is due to illiteracy among parents or due to a lack of time, because of overtime at work. Some of them even get help from elder siblings. Rarely do parents come to enquire about students' performances at school. Besides, parents are even failing to share basic knowledge on sexual reproductive health. Student said that in the case of any query about their biological growth or any other related issues, they prefer to discuss with friends or opt for self-exploration, as these issues are rarely discussed by teachers and parents. However, girls said that their mothers used to inform them about their physical and biological changes, but this information is very restricted, as they feel reluctant to discuss such issues. Almost all students are aware of HIV/AIDS, but have little information about how to protect them from such a disease. Most of the schools visited do not have a permanent School Counsellor, but from time to time, specialists would intervene on a case to case basis.

Answers given by students:

Paran pa gagn letan get nou aköz zot travay

Paran pe tro kone seki nou fer dan lekòl

Paran pann al lekòl

Paran pa la pou ed nou

Paran pa gagn letan pou vinn lekòl aköz zot travay

Nou pay PTA me paran pa vinn renyon

Mama ti deza koz avek nou lor sex

Nou al demann informasyon avek mama - most girls said so

Nou demann kamarad/ papa ti koz avek nou

Pa kapav koz avek papa, papa pou bate

Gagn Sida kan de disan zwin

Bizin servi kapot

#### 6.6.9. Reading and Study Habits

Students said that they liked reading, but unfortunately they do not know how to read English and French. A handful admitted that they hate reading because it is a boring and tedious exercise. The reading materials they mentioned are as follows: Books, Newspapers and Magazines. Moreover, they said that books with colourful pictures are more appealing to them. Few students said that they do not have access to a school library, as it is meant for mainstream students or they have been banned from entering the library, because of few students who would disrupt the silence and make a mess of the materials in the library. Very few said that teachers are doing reading practices in class, but they read the text and explain it in 'Creole' to students.

#### 6.6.10. Curriculum at Pre-Voc and Subject which they are Studying

Students are more or less happy with the PVE curriculum. They look forward to get a certificate at the end of their PVE schooling. They see the subjects they are studying, as a stepping-stone to their future career. However, they would prefer to have more practical classes in subjects like: Food and Nutrition, Computer, Agriculture, Science, Fashion and Fabrics, Wood-work, Sports, Music and Basic Electricity. Unfortunately, schools do not make space for PVE students to use the specialist rooms. Students have been doing these subjects without appropriate exposure to the various elements of the subject. In some schools, students said that they have limited access to specialist rooms, as those are reserved for mainstream students, for they had to prepare for important exams for the subjects which they study:

Isi nou fer bouko size ki pou ed nou kan nou pou al rod enn travay

Nou kontan fer sa bann size la me pena ase pratik

Nou ti pou kontan si ti fer bann klas pratik apre ler lekol

Nou pli kontan pratik ki lir ek ekri

## 6.7 Conclusion

While the PVE Sector has been developed and instituted to provide a second chance to those who fail C.P.E., very few of the students actually get a second chance. The learning experiences and the assessment proposed to pupils persist in not drawing from the personal experiences of the children, nor do they relate to their specific learning styles. In short, what is learnt, how it is taught and how it is assessed has not changed much from the Primary School except in a few of the Prevocational Schools. Resources, especially those relating to practical classes, are often not available for children attending *prevoc*. Many of them complete their three years at PVE without knowing where they will land up; some do end up at NTC Foundation Course, but there is no research available to know what exactly happens to those young people after the few years of post-primary schooling.

Can we speak of Justice under these conditions? If the young people are made to internalise their failures and to believe that something is wrong with them, when actually it is the nature of the curriculum content, the pedagogy and the culture of the school - often with all of those forming part of a dominant culture - there is an urgent need to rethink, revisit and repair all the wrong, much of which has been largely informed by the colonial history of the island. The next chapter in fact addresses the question of reparations.

## CHAPTER SEVEN

## EDUCATION AS A TOOL OF REPARATION

## 7.1 Mobility of Human Beings and Encounter of Cultures

Mobility of human beings, ideas and things entails encounters and the production or reproduction of similarities and difference, as those who move or who are moved always tend to position themselves or be positioned in relation to those they meet. Slaves were not only moved; they were uprooted and this uprooting has had several consequences, the most important one perhaps being the loss of traditions and cultures, one's heritage and identity, as already discussed earlier. The Indian indentured labourers were also moved but there was an element of choice here; they may have been pushed by some harsh circumstances but the final decision was theirs. There was some space for 'free choice and decision-making' in their movement, and this forms the basis of some of the differences that exist between these 2 systems, and which have been discussed earlier.

Cultures, with the power to cultivate and enforce ambitions of dominance, define not only themselves, but also the less empowered cultures that they encounter and humble in their 'culture game' (Oguibe, 2004). Hence, an African proverb states that 'until the lions produce their own historian, the story of the hunt will glorify only the hunter' (Achebe, 2000:73). There exists a small group of historians in Mauritius, but so far, Mauritian historiography is not necessarily produced within a homogenous perspective and does not always necessarily uncover the whole truth and 'the hunter' may not be totally unmasked and de-glorified. On the other hand, the work of the Truth and Justice Commission can go a long way towards establishing the Truth, proposing ways for reparations and bringing about Justice. This is why the Education Team has also chosen to use the hearings of the Truth and Justice Commission, opinions expressed in the press, parliamentary debates, amongst other findings, to think through the question of reparations in relation to Education.

Education in a number of post-colonial societies is still largely seen as the one factor that champions static dichotomies and 'boundedness' of cultural worlds and knowledge systems. And because of the colonial context in which the problematic 'education' was introduced, it is an education at the service of forces with ambitions of dominance. The latter has often been violent and has represented a cultural invasion of such importance that repairing the harm, the wounds and the diverse scars is a daunting task. Questions such as what should be repaired and how to repair remain most pertinent.

In multi-cultural Mauritius, debates around the question of reparation for the descendants of slaves arose out of the 'malaise Créole', referred to earlier. This malaise is itself a legacy of slavery and the neglect of Creole community by the State in the post-Independence period. Discussing the notion of reparations and compensation in Mauritius can have some kind of ethnic connotations; it is often perceived as the Creole community asking for more. Accompanying that is the stereotyping that goes with it, basically suggesting that the Creole community spends most of the time merry-making and do not work hard enough. An article which featured in the *Mauritius Times* of 26 February 2004 notes:

*"There is no case for compensation at all. The descendants of slaves have received more than whatever compensation is now being requested for. Since the days of SSR, they have been receiving all sorts of privileges; for e.g low-cost housing and the various funds that have been established to dish out all manner of assistance to them. The present government and its predecessor have established the Fishermen welfare fund, a 'nou dibou ensam', different micro credits, and provided assistance to sand diggers, ZEP (Zone d'Education Prioritaire' and set up other funds. Has any accountant ever calculated the enormous amount of money making up these funds and the assistance? This should be sufficient enough in terms of compensation and reparations."*

## 7.2 Non financial reparations

Some people believe that reparations can be done through monetary means but the complexity of Mauritian history and the facts of the contemporary situation weaken the case for financial compensation. This same idea has been very aptly put forward by the Parliamentarian Alan Ganoo in the Parliamentary debate no. 40, of 7 November 2003, when he notes:

*"Money is not a solution to poverty, not when poverty is culturally embedded, transmitted from generation to generation. There must be compensation... But it must be intelligent and work towards sustainable development. Sustainable development refers to the harnessing of resources for future generations. Giving money to individuals is unfortunately one way of making them vulnerable to consumerism and to the forces at work in a capitalist society. This will not necessarily generate future resources. It is not freeing them from mental shackles. We need to look how to empower our brethren of African descent to think critically about their assets and to make the best out of these so that future generations can benefit from these. It would be more intelligent to fund projects that look at community development [...]"*

## 7.3 Education as an asset for social, economic and cultural empowerment

Those made voiceless, powerless, assetless and futureless by slavery and indentured labour should look upon Education as one of the most important assets of modern times. Reparations within the world of education can revalorize the identity of the person, can make him or her upwardly mobile, can give him/her tools and knowledge to integrate the economy, in short can empower the descendants of slaves culturally, economically and socially.

## 7.4 The Pertinence of Truth and Justice Commissions for Reparations

Truth and Justice Commissions usually help to put into perspective a culture of impunity, to promote transparency and accountability, have the potential to heal past wounds, to provide a platform for citizens to engage with their fears and expectations, social justice. For this to happen, there needs to be reparations. Some of the hearings that have been done in Truth and Justice Commissions, inclusive that of Mauritius, have actually spoken of reparations and others have pointed towards the need for it. While historical periods and contexts are very different, many of the hearings across the board point to the need for healing, the need for forgiveness, the need for greater accountability and the urgent need of redress. The Mauritian Truth and Justice Commission which is digging in the consequences of a relatively distant history cannot, unlike many other Truth and Justice Commissions, bring the actual perpetrators of the violence to the platform but several voices emerging from the hearings speak of the violence perpetrated in the world of Education as well as the present-day prejudices and discriminatory practices that children of slave and indenture descent are having to experience. The former are much more pronounced amongst children of slave descent.

While the Mauritius Truth and Justice Commission of Mauritius has been asked to look into the consequences of both slavery and indentured labour on Education, the Education Team's findings point clearly to the fact that people of slave descent have been more exploited than descendants of the indenture labour and continue to remain more marginalized and discriminated against than other group.

The fact that ethnicity is no longer used as a 'category' in the Official Census and data is often not collected along ethnic lines, may make it difficult to argue in favour of any kind of Affirmative Action for the Creoles but there is enough of evidence from the ground that Creoles are discriminated against and do not enjoy the same fruits of development and do not enjoy the fruits of development to the same extent as others do. In an article entitled 'Blacks out in the cold in Mauritius', Selwyn Ryan notes: "Mauritius is widely regarded as a model plural society in which power is shared by all ethnic communities except perhaps of the black Creole." Discrimination and racial stereotyping also persist. The work of Bunwaree (1997), Eriksen (2007) and Geetanjalee Gill (2010) highlight this [...]"

It is perhaps the continued and persistent marginalisation of the Creoles which has led to the emergence of a number of Creole socio-cultural organization, clamouring for a more equal

treatment and for reparations. Some members of these socio cultural organizations actually deponed at the TJC.

## 7.5 Colonial Education- a violent project and the hearings at TJC

If Colonial Education is essentially a violent project, in Mauritius as in many other parts of the developing world, such violence took the form of hegemony through a particular form of Education: the 'simulacrum of an education system'. Fonlon (1965) notes that Education is repressed where it should have fostered, tamed, instead of inspiring, and enervated rather than hardening. It succeeded in making slaves of its victims, to the extent that they no longer realized that they were slaves, with some even seeing their claims of victimhood as ornamental and the best recognition possible'.

Often those who see themselves as 'success stories' of an externally imposed System of Education and who have acquired a certain set of values wish to continue imposing such same values and curricula contents on the young. Often what is selected as course materials is totally irrelevant to the realities of the child, thus provoking important forms of symbolic violence referred to in several hearings. How can such happenings be repaired?

## 7.6 Themes teased out from the hearings and giving a voice

Many of the deponents referred to the linguistic and cultural injustice, the discriminatory practices and prejudices that children of slave descent have to face in the schooling system. They see this as largely responsible for the students' failures and exclusion. Some people of indentured descent also deponed, but there was very little connection made to the education question.

A number of deponents of slave descent have also evoked the high failure rates of children at C.P.E. level and have highlighted the correlation that exists between poverty and school performance. Children of Creole background, particularly those from the working class, are often subject to diverse types of 'violence' and more importantly, see their life chances withering away from a rather young age. Education, which is seen as a passport for mobility, is often perceived as blocking the door for these children.

## 7.7 Deponents voices

One of the deponents noted that:

*".....if a child is made to do what he likes in school, he will attend regularly."*

Another deponent argues that:

Teachers often discourage children, telling them that they are losing time at school and this is often accompanied by insulting remarks. To set things right, we need a cultural change in the education system. Teachers must be made to respect the cultural identity of these children. The children in the ZEP schools, mostly Creoles, must be given Creole teachers who won't use insults which could apply to themselves as well. That's what I mean when I speak of Reform, it must be cultural and not just pedagogical...

Another deponent said:

*"....I cannot live fully as a Creole if my language is denied admittance in schools...."*

Some other deponent noted:

You cannot compel my children, in order for them to obtain a sixth subject, compel them to learn either Urdu, Tamil, Telugu or Marathi, but give them their language like you have given to the others. In this way, my children will also have a sixth subject because you are speaking about Education to me and consequently, you must carry out an Education System in which you are recognizing all the children of Mauritius and in what language they will make most progress... .

Only some of the hearings have been selected. But it is clear that they all highlight the gross injustices that poor children of slave descent face within and outside the educational system.

A number of voices from the hearings corroborate with those of the students of slave descent and indentured labour who participated in the FGDS. Their descriptions of their lives and their engagement with us regarding different facets of their schooling experiences, highlight the diverse forms of violence that many children continue to experience today. The cultural violence done to them within the schooling set up, explained in earlier chapters, assists in putting the 'reparation' debate into perspective. But for Education to constitute the tool of reparation, it has to be reformed in a fundamental manner.

## **7.8 Education as a tool of Reparation**

Given the various atrocities of the Educational System and the stories unfolding from the data obtained, it is important to understand that Education will only be able to constitute a tool for reparation if a multi-pronged approach is used. The latter will draw from symbolic action, Affirmative Action and institutional re-engineering to bring about transformation. While the next chapter details out the recommendations proposed by the Education Team towards reparation, it is important to note that the Education Team is of the opinion that the injustices and violations of rights associated with slavery and indentured labour cannot be monetized and therefore proposes the setting up of some kind of fund from which resources can be obtained to implement the recommendations proposed.

## CHAPTER EIGHT

**CONCLUSION AND RECOMMENDATIONS**

In a sense, the road to cohesion, reconciliation and a meaningful national unity puts us in the middle of a two-way street: reconciliation and cohesion offer an opening for a better appreciation and understanding of the fault-lines that currently divide us as a nation, just as our cleavages and divisions provide us with an opportunity and platform to understand the nature of the undertakings to which reconciliation and cohesion must be dedicated to.

In as far as Education is concerned, there is still so much more that needs to be done. But one key ingredient is that is necessary to rethink and revisit Education so that the playing field can become more levelled in some kind of consensus and the non-politicisation of the educational tool. (Bunwaree, 07 Feb 2011). But such consensus has to be informed by the TRUTHS and aspirations of the people, which, in turn, are informed by their cultural and social matrix, as well as the realities of the classroom. Consensus does not mean one or two powerful segments of society deciding what is best for all, but rather nationwide consultations which give a voice to cohesion between and amongst us.

It is a problem that cuts across institutions, politics, communities and culture. With multiple facets and formulations, the question of the role of Education in promoting Social Justice must be asked but, with the acknowledgment that easy answers may be just another name of disappointment. But the Education Team has no doubt that there are a large number of well-intentioned Mauritian citizens and policy-makers who are striving to make Mauritian Education more inclusive, more just, and in so doing contribute to making Citizenship become more meaningful.

**Forgiveness and Reconciliation**

Deconstructing the history and memory of certain people and places can assist in highlighting the various forms of oppressions and injustices that people have been subjected to, as well as the need for forgiveness and reconciliation.

Forgiveness and reconciliation play a central part in helping to break the vicious cycle of bitterness, hostility and grievance that is at the root of many continuing conflicts around the world. If the slate is not cleaned and 'ubuntu' not, entrenched peoples' grievances will lead to alienation, vengeance and conflict. Education certainly holds many answers towards reparations and forgiveness, but it is the collective responsibility of all that does so.

The findings, inclusive of the hearings constitute a solid base which informed the recommendations made below. The recommendations include:

**Recommendations****1. Apology from the Church, the State and the Corporate World**

When the scars of multiple injustices and oppressions continue to haunt a society, it is important that those who have been responsible in some way or other, directly or indirectly present, an apology to the victims. It is therefore important that the Church, the State and the Corporate World present an apology to the descendants of slaves and indentured labour. This, though symbolical, can contribute to addressing wounds which run deep and can facilitate the healing process.

**2. The Creole Language, Politics of Recognition and Improvement in Performance and Achievement**

Creole should be recognized and introduced as an ancestral language in schools. It should also be accepted as a medium of instruction. Worldwide, it has been recognised that teaching and learning in one's mother tongue can have a positive impact on children's' achievements and performances. Mauritius is still lagging behind on this score. Using Creole as a medium of

instruction without neglecting the teaching and learning of English and French (which remain major linguistic assets in this increasingly globalised world) would go a long way towards improving the performance of the linguistically and culturally disadvantaged and in so doing, assist in minimising the current waste of the country's human capital.

Introducing Creole as an ancestral language has already been agreed in principle, but this should be carried through by means of the necessary Legislation, and implemented as rapidly as possible.

The purpose of introducing Creole as a medium of instruction, as well as an ancestral language in Primary Schools, will assist in enhancing a politics of recognition and give Creole the same status and treatment as that of other languages in the School System, throughout the curriculum. The introduction of Creole in schools as a medium of instruction, as a language of support and as an ancestral language will be an important symbol of national recognition of the place and importance of Creole culture and identity and their contribution to enriching Mauritian multiculturalism and cohesion. In so doing, Education can contribute efficiently towards reconciliation and durable peace.

### **3. Bhojpuri - Revival of Oral Culture**

As far as Bhojpuri is concerned, it is viewed as an important vehicle to preserve oral culture, particularly music (*samgit*), folk songs, story-telling and theatre. Women have played an important role in preserving and transmitting this village oral tradition, reflecting an interesting part of Mauritian culture, both in preserving and in creating new elements. Measures should be devised to introduce elements of the language within the Hindi classes, this being considered as more economically and socially viable in the present context.

### **4. Review the Curriculum, Heterogeneous Cultures and Mixed Abilities**

The Mauritian school curriculum is exam-driven rather than driving exams, thus posing critical questions on content and styles of teaching and learning. There is therefore a need to reorganise and reframe the curriculum so as to review the assessment modes, the content and ensure a more child-centred learning. A modern curriculum informed by an inclusive pedagogy should balance the 'creative' with the 'academic', and respond to the needs of children with more varied forms of intelligence, diverse cultures and talents.

The new curriculum could easily be worked out to cater for the higher achievers at one end of the scale with a variety of enrichment programmes, and for the children at the other end of the spectrum with special programmes (during school hours) designed to help late developers and slow learners catch up with the rest of the class. In short, a curriculum which addresses the heterogeneous cultures, class backgrounds and the mixed abilities of children should be the order of the day.

### **5. Introduction of New Subjects and an Institutionalised Reward System for Children at all Levels**

Subjects such as Citizenship Education, Arts, Music, Gardening /Agriculture and Sports should be introduced and assessed. Citizenship Education should consist of 3 core parts - one on Political Literacy and History, one on Intercultural Education and one on Family Life and Sex Education, incorporating the specific implications of associated problems such as HIV AIDS and teenage pregnancies. Assessment modes should therefore change to something more rigorous and regular but in the overall context of the abolition of the C.P.E.

Assignments/projects and regular class tests, which cater for the diverse talents and potential of the child, should be developed. This should be accompanied by an institutionalised reward strategy. Children, particularly slow learners, should be given recognition for what they can do, instead of being relegated to the back rows of the class, which tends to be the practice right now. A well-thought out reward strategy can go a long way towards re-establishing the self-esteem of the child and help towards healing and greater social justice.

## **6. Abolition of C.P.E Exams and Adoption of an effective Regionalisation at Secondary Level**

Getting rid of the fierce competitive exam and teacher-centred learning that the C.P.E. represents should be accompanied by child-centred 'Extra learning' opportunities which can be built into the daily time-table, and run concurrently with a programme of 'extra murals' or an 'enrichment programme' at the end of each day. This will obviate the need for private tuition, which should be done away with, as an institution, and will have the added advantage of allowing children to enjoy their childhood. The abolition of C.P.E. and children being transferred to Secondary Schools in the locality/region will also help towards a greater mix of students of all abilities and backgrounds. This can also create a window of opportunity for the regionalisation of scholarships at higher levels of secondary schooling.

## **7. Move towards a more Consolidated Counselling, Psychology and School Social Work Service at the Primary and Lower Secondary levels**

Teams made up of Counselors, School Social Workers and School Psychologists, should visit the schools on a regular basis. The teams' terms of reference should be clearly spelt out. They need to work closely with the classroom teacher to identify children with problems, vulnerabilities and risks, as well as the slow learners so that all possible remedial action can be identified and implemented at an early age. Such work should be done in a coordinated manner so that there is a concerted effort towards the true empowerment of every child, particularly those in the deprived zones where social pathologies and social dislocations exist and affect the child in more ways than one.

The newly created **Ministry of Social Integration**, in collaboration with the Ministry of Gender Equality and Children's Rights, should develop a common platform for this particular purpose. The Office of the Ombudsperson for children could also be part of this process. This particular office could launch a national campaign to this effect and thus draw some volunteers who have the necessary expertise to help with this endeavour. This could turn into a nationwide initiative, thus helping to move towards reconciliation, peace and social justice, albeit indirectly.

## **8. Revisit Teacher Recruitment and the Need for Innovative Teacher Training- (needs to be more relevant to slavery and indentured labour)**

These would be the greatest thorn in the side of any reformer of the Educational System: the resolution of this problem is central to the issue, and the solution will require able wielding of both carrot and stick. Some suggestions: initially, a lot of money will need to be spent to (a) get rid of the worst elements in the profession, including some trade-union leaders, and (b) employ young graduate trained teachers on short-term contracts from abroad. These would lead and help train 'teaching teams', using improved objectives and methods. We need to introduce such concepts as 'whole-class teaching/ no child left behind/ peer-teaching/ co-operative learning techniques into every classroom.

More importantly, the recruitment policy and pay packets of primary school teachers should be revisited so that the teaching job gains more status and attracts some of the best talents in the country. Teachers should be innovators and testing them for their innovative capacities and their commitment to the utilisation of multiple talents should also be done at the time of recruitment. An effective audit of the contents and relevance of Primary School Teacher training, as it is being done at the MIE, should also be undertaken with a view to adapting it to multicultural set-ups and modern trends of teaching worldwide without forgetting the realities of the local context.

## **9. Turn the PVES into NEW ACADEMIES. Optimising on the Creative Potential of Mauritian Youth (needs to be more relevant to slavery and indentured labour)**

It will be necessary to establish at least 3 new Academies for the development of creative Art, Music and Sports. These would help identify talent early, and help train teachers to work with the New Curriculum. They would also be able to offer short holiday courses for all students both at Primary and Secondary levels. The emphasis would be put upon the Creative Arts, Western and Modern forms of Music, Drama and Athletics and Sports. With access to scholarships within the system for these subjects, this single measure would go a long way by way of compensation, especially for those Creole children in Pre-vocational classes in Mauritius who have little or nothing

of a Sports programme, no real Art class or classroom, no Drama classes. This is more of a short-term measure to cater for the existing PVES but as the abolition of C.P.E. takes place and the effective nine-year schooling is implemented, all children would have been exposed to all the subjects and be given the chance of being part of the mainstream.

#### **10. Leadership and Administration of Schools**

Leadership and effective management at school are crucial to discipline and success. Absentee Heads and tardy, lazy school teachers should be sanctioned. The appointment and selection of Head Teachers and Rectors should not be based on qualifications and seniority but should be informed by rigorous testing of their general behaviour, ethics, morality and personality. As school managers and leaders, they should be able to develop a school strategy reflecting the values and aims of the school. It should ensure the empowerment and success of each and every child and teacher without simply focussing on the '*pourcentage de réussite*' [pass-rate] as the sole measure of success.

#### **11. Turning Failing Schools into Success Stories**

A large number of primary schools, particularly in the deprived zones, constitute failing schools. Many of these have predominantly Creole children as their school populations. A couple of those schools should be turned into model innovative schools on a pilot basis where young and able people are encouraged to work with the deprived children on a voluntary basis with the view to consolidating the children's learning skills and aptitudes. A partnership programme between the school teacher and the volunteers should be worked out so that well-defined goals and means of achieving same are defined. For this to happen, there is a need for more space and autonomy at the school level.

#### **12. A Multi-Stakeholder Approach for 'L'Ecole des Parents' [School for parents]**

To consider and treat parents as fully-fledged partners in Education is important in coordinating and consolidating responsibility-sharing and convergent objectives in children's schooling process. In this view, schools need to build up strong networking with parents as well as develop projects and programs empowering them in their effort as educators. Training and animation sessions, adapted to their environment and cultures, would keep up their interest and consolidate their competencies in sustaining their children's learning. The intergenerational dialogue, as well as reinforcement of certain values, would also constitute part of the core programme. An "Ecole des Parents" focusing on these objectives in each school would definitely help improve the success of students.

#### **13. The Development and Consolidation of a Reading Culture**

There is an urgent need to develop a sustained reading culture in the country. Different stakeholders such as the District Councils, the Social Welfare Centres, Community Development Centres, should work together to develop a mechanism/ platform where parents and their children would be invited to regular reading sessions and other fun activities. This would have the advantage of building a community spirit in the locality concerned, as well as developing a reading culture across generations. The intergenerational dialogue, as well as reinforcement of certain values, would also constitute part of the core programme of the 'Ecole des parents et enfants'. Some sort of financial incentives for parents who are assisting with the development of reading skills of their children should be worked out with the business sector within the overall framework of Corporate Social Responsibility.

## INTRODUCTION

This report is based on events related to me by many of the respondents who were interviewed in the years 1995 to 1997 with regard to the social development among the Indo-Mauritian community. My research work culminated in the publication of a book whose title is "La Femme Indo-Mauricienne - Son Cheminement."

During their narration, my respondents, about a hundred men and women, told us about events that have marked their lives or their parents' lives. They also told us about the numerous prejudices and intolerances that shattered so many lives in a discriminating manner until the first half of the Twentieth Century.

From the time of the French occupation of the island of Mauritius, the trend was to give privileges to the higher classes and to those affiliated to the Christian Church. No one cared about the humble and poor people who were brought in mostly to work in the sugar cane fields. Indian immigration, which started even before the abolition of slavery, reached its peak in the middle of the nineteenth century, so much so that they soon formed the majority of the population on the island.

Literacy, education and such academic developments were meant only for the privileged classes. During the nineteenth Century and the first part of the twentieth Century, there was absolutely no question of promoting the welfare and advancement of the descendants of slaves and later of the Indian immigrants. And the divide between Christians and non Christians was too wide a gap which, at a later stage, caused the non Christians to rise against the injustices caused to them. They were unfortunate enough because culturally they did not belong, were meant to be kept apart and to be ignored except as labourers.

Once the Indians settled on the island, they set up their own social network of *baitkas*, evening schools and language tuition as well as madrassa for the Muslims. That was part of their culture. They did not wait for the Government to educate their young ones. Descendants of slaves had come under the influence of the Catholic Church. They were taught that their duty was manual work and obedience to the privileged classes. God had to be obeyed and it was the will of God that they spend their lives serving their masters.

## EDUCATING THE DESCENDANTS

The second generation of Indian immigrants did not want their children to continue in the same ruthless and hard path that they had to take. They witnessed too many injustices from the employers, as related in the report of the Royal Commission. So there sprang some among them who became social leaders, who began to think of ways of giving their offspring some education for a better life in future. Even as they toiled day and night to provide for their families, they also got involved in teaching in the vernacular language. And when that was possible, they dutifully sent their children to school for general education because otherwise, these children will be stuck in tilling the land for others.

Schools were few and far between. Even then, children walked bare foot up to three miles one way to attend schools, come rain or shine. Some of the schools were state owned while so many others belonged to the Christian churches, Roman Catholic and Protestant. However, the prevailing tendency, more so at the start of the 20<sup>th</sup> century was to admit mostly non Indian children to schools. All the more so since all the teachers came from the Christian community. They had so many prejudices against non Christians that relationships were very rough edged.

In the meantime, demand from the Indian community for admission of their own children in schools grew. The authorities could not forever refuse the increasing appeal from the Indian community and gradually more and more of the new generation were admitted in schools all over the country. Also, more and more educated Indians wanted to work as probationers in schools until they can become qualified teachers. But the choice of accepting probationers rested solely on the head masters of the schools and there have been many tales of discrimination in this domain as well.

While more and more primary schools opened their doors to children of all races, there were no rules for admission. Admission to schools depended on the decision of the school master who decided who to turn away. Excuses such as the classes are full were put forward and so the Indian community had to pressurize the Government and the missionary schools to admit their children. And when that did not work, they decided to open schools with the help of the locals. It was not an easy job, money was scarce and for Hindu parents to part with their hard earned money for the education for their children was no easy job. It was an everyday struggle but the social workers persevered in spite of all the odds.

At the secondary level, it was the same story. The Royal College of Curepipe was the only state college up to the 1930s. Almost all the teachers at this institution were of French and British origin. They favoured people of their own racial appurtenance and religion. The Royal College of Curepipe admitted only whites and Christian students and private establishments favoured their own kind. However, here too Government had to give way in face of the increasing pressure from non Christians belonging to the labouring class and finally a few young men of Indian origin were accepted little by little. At the same time, as from the thirties, private colleges, run by the intellectuals of a new order, were set up to provide for the increase in the student population.

When the Teachers Training College opened its doors in 1945, more and more non Christians were trained and naturally intake of non Christian children in schools also became more regular. The pace was now set and more and more primary as well as secondary schools opened their doors, more teachers were trained and the creole and non Christian children rose up to the challenge. Soon, some of them were going abroad for further studies and the story became one of an upward trend.

Non Christians made a very big effort in propagating education by voluntary work, especially concerning the education of girls. Literacy of girls in the non Christian community had a social repercussion in liberating women who started going out to work for a salary. They were no longer cloistered at home while the rate of literacy kept going up.

But the path of education for the first non Christian girls was fraught with perils as related by my respondents who have themselves been subjected to untold prejudices, taunts and insults. It must be noted that all educational institutions were funded by government and they were not entirely private. The cases below are first hand materials that I have personally collected through direct interviews with the persons concerned or their children.

### **MRS. ROHINEE ROY, BORN RUGHOO**

*Pensionnat Bunel* in Curepipe refused to admit her in January 1930, in spite of being the winner of a scholarship because, according to the female Director, "We do not accept people wearing an Indian dress." The matter was brought forward at the Legislative Assembly. Not able to unravel the dilemma, the Director of Education suggested that, in a matter of conformity, the Government would bear all the expenses related to the education of Miss Rughoo if she accepted to have private tuition instead. Her father refused. Months went by. The Director of the school finally relented in March but wrote a note saying that the young woman would be accepted if she agreed to be called *Renee*. As a result, Miss Rughoo lost three months of schooling and had to work hard to catch up in class.

And at the end of the first quarter, she did so well that she was made to write all the answers of her questionnaire all over again in the Director's office to make doubly sure that she had not had recourse to some tricks!

### **MRS. MOKSHDA KISTOE-WEST**

She came out second at the Junior Scholarship examination, *ex aequo* with a Christian who was admitted at the Loreto convent in 1944. The nun in charge of the school stated they were not admitting non Christians. Her father went to seek help in higher quarters and a week later she learnt from her friend that she was expected at the college. For having been so daring, things

became very stressful for her. For example, while walking quietly along the pavement to catch the train home, she heard one of the girls walking alongside shout to her: "Do not walk with us! Walk on the other side of the road!"

Or the St. Esprit boys who made fun of her: "Don't you think that you would be better off working as a maid for us?" She was terrified at so much hostility but after some time, no one took notice of her except when she had to be punished in class. Was the punishment justified? She has always wondered!

### **MRS. RASSOULBIE ALLEESAIB**

In 1930, Rassoulbie Alleesaib had been working for the last 24 years as a teacher. She had gladly replaced the Headteacher for several months at the school in Belle Vue Maurel, looking forward to becoming head of a school in her own right. However, her superior had other plans. When she protested, she was told "You have to accept that we cannot promote a woman at the head of the school." Léon Auguste Vollaire was promoted in her place. She nursed her crushed feelings as best she could.

### **MR. V. MOHONEE**

It was the year 1916. Mr. Mohonee was the child of very poor labourers working on a sugar estate in St. Pierre. One of his acquaintances told him that if he changed his religion and with the good results obtained at school, he could be given a teaching job in an Anglican school. He shared this piece of news with his parents who agreed. The Anglican Church became richer by one more member. Mr. Mohonee was sent to Surinam to work but he was very unhappy because the new religion did not appeal to him nor was he at ease in a milieu which was different from his original culture. All sorts of stratagem were brought out to prevent him from walking away. Among other things, the priest under whose supervision he was working, presented him to a lady who could become his wife. He was lucky enough to come across Mr. Chuttur who went to see the head of the Anglican Church to free his colleague from his promise.

### **MRS. SHANTA DYALL, BORN BUNDHOO**

She came out first at the Junior Scholarship examination in 1947 and was admitted at the prestigious Loreto Convent in Port-Louis but with one condition: that she would be called by a Christian name. She did not object. But this acceptance has carried its weight all throughout her working life. Her School leaving certificate bears her first name as Chantal, name given to her unofficially instead of her registered first name which was Shanta. She told us about the embarrassment felt and the need to explain each time her Christian name was mentioned: "I had to carry my birth certificate to prove my saying." And even then, many brows were raised out of disbelief at her story.

## A FEW EXAMPLES OF DISCRIMINATION IN EDUCATION IN THE 1930s AND 1940s

- **Change of names**

It must be reminded that all non Christians entering the Loreto convent were given new names that were of Christian origin. They were not allowed to play Volley Ball either and were told to make balls of sand to play with during recess. All this nonsense stopped by 1950 when questions were being put at the Legislative Assembly by influential members who dealt with these new challenges on an official level.

- **Primary schools**

**1940:** A group of learned Hindus in the village of Camp Fouquereaux decided to open a school for general education because they noticed that there were never enough seats for their children at the local school. This pattern was repeated especially in the region of Moka and Flacq where several villages opened their own schools.

**1950:** Unable to sustain the running of these schools, the supervising committee usually appealed to the Government to take over. One such school where Government stepped in helpfully was situated in Castel. However, the authorities wanted to give a new name to the school, that of a local land owner of Christian origin to the school. Given that the school was founded by Hindus, there was a huge protest and after much wrangling, the school kept its name and came to be known as Shri Shamboonath Government School.

- **Mr. Bundhoo**

He was a scholar who attended the Royal College at Curepipe in the second decade of the last Century. His reputation was made as a very good primary school teacher, but when the time came, he did not get a promotion as expected. According to his daughter, it was hinted to him beforehand to him that he should embrace Christianity but he refused. He wrote an anonymous letter to the press which was printed in *L'Oeuvre*. He was found out and was sent away without more ado.

- **Cultural values**

Several of the girls who have been to Catholic schools were easily influenced by the mention of hell in Bible classes which they attended regularly. They felt a necessity to be converted and one of them even had nightmares of burning in hell because of not belonging to the right community. Others were caned for speaking Bhojpuri among friends in school, or were addressed in insulting tones "So you did not get married, did you? on their first day of work at the hospital.

- **Mr. Alleesaib**

Only one of the three potential candidates was going to be promoted as inspector of schools. The first one was a Muslim, the second one a Protestant and a Hindu was third on the list. Given the state of things at that period in the thirties, number two came out first, although seniority was the rule. Mrs Bhunoo, his daughter, told us it was a hard blow for her father. He was deeply disappointed and saddened but had to carry on as best he could.

- **Lise Renee Rajahgopal, born Venchard**

This lady stated to me frankly that her father accepted to be baptized in order to get a job in the Police Force in the early 30s. According to several witnesses, this was common occurrence up to four decades in the last century either in government employment or in the private sector. It is well known that many of those who changed their religion in exchange for a job were ruthlessly rejected and looked down upon by members of their family as well as the community.

- **Deviamball Vencatasamy**

Her father, a graduate, was called upon to teach at the Royal College of Curepipe while the Second World War was raging. As soon as he appeared in class on his first day, all the white boys of the class walked out.

- **Injustices and inequalities**

Rajeshwarsing Seenundun told us that, after brilliantly passing the 6<sup>th</sup>. Standard exams, was refused admission at the Royal College in 1929 because he had not studied Latin. He had no other recourse but to work in the factory at Highlands from 5am to 5pm like his father before him.

There came a time when rumours were rife that some students knew beforehand about questions coming out in questionnaires of the Higher School Certificate examination. That was in 1926, the press mentioned it and it created fervent debates. However, was it a coincidence or not! The next year, two Muslim boys from the Rose Hill Mohamedan Aided School came out winners of the scholarships.

## CONCLUSION

Whatever could be the provisions of the law, the set up in Mauritius was such that non Indians got favours in education, employment and all public life for a very long time. Even if they were better qualified, those of Indian origin were not considered fit or worthy unless they showed an affinity which was acceptable and that was not on grounds of academic performance. It boiled down to changing one's religion. Become a Christian and one will immediately rise in status.

History of Mauritius shows the great struggle that went on starting well before the setting up of the Labour Party in 1936. Political pressure began to build up and the silent murmur became louder and louder. The press, such as *L'oeuvre*, *Arya Patrika*, *Arya Vir* and *Advance* helped to arouse the consciousness of the people until Government had to give in by setting up the Public Service Commission in the late forties of the last Century.

The culmination of political struggle was the 1948 Constitution which gave the right to vote to every single adult living on the island. This can be seen as the foundation of democracy in Mauritius. From then on, it was believed, any injustice will be questioned in the Legislative Assembly and non Christians were assured that injustices and discriminatory action of the past would disappear and they would be given their rightful place in society.

There is no doubt that there existed a way of thinking that was discriminatory towards a section of the Mauritian community, be it cultural, religious or otherwise.

Whilst a swallow does not make a summer, so can we say there is no smoke without fire. Our stories might be taken with a pinch of salt for lack of proof, but it is the duty of the Truth and Justice Commission to record in its report the facts that could be perceived as discrimination. If nothing else, we may call it a series of blunders based on unfair motives that was very distressing for a community who asked for nothing else but to live in peace and justice.

*“For years this little island was regarded as the Sanatorium of the East, and people flocked from the unhealthy heats of India to recover their shattered constitutions in the salubrious air of the Southern colony. But, since the outbreak of Malaria, the conditions have changed. It has been looked upon by the outside world with averted eye.”*

(Lieutenant-Governor Hubert Jerningham, 1892)

### *Acknowledgements*

This report is the product of the collaborative effort of the Consultants, the vision and mission of the Truth and Justice Commission and the support of the Commissioners. We wish to thank the Chairperson and the Vice-Chairperson of the Commission for the trust they laid in us in assigning us the project. We would also like to thank the Health Commissioners, Mr. Benjamin Moutou, Chairperson of the Health project, and Dr. Palma Veerapen for their unflinching support in helping to bring the project to fruition.

We seize the same opportunity to express our gratitude to, and place on record, the hard work and dedication of the Research Assistants Ms. Vandannah Potiah and Mr. Nadeem Nabeerasool, who retrieved relevant books, reports and other documents from the Mauritius National Archives, the National Library, and other sources.

The Consultants would also like to express their gratitude to Mr. R. Beebeejaun, IT Trainer and to Mrs H.D.A. Venkatchellum, Word Processing Operator at Mauritius Health Institute, for their valuable help in formatting the manuscript and their constant support until the final production of the present report.

# PART I : DIET AND NUTRITION

## 1 INTRODUCTION

This study provides a brief description and analysis of the dietary intake and nutritional status of slaves (imported mainly from Madagascar and Mozambique) and Indian indentured labourers, and their descendants on the Island of Mauritius, covering the French (1715-1810) and British (1810-1968) colonial periods, with some comparison with contemporary Mauritians. Those bondsmen were mostly employed as labourers on the sugar plantation. The quality of life of slaves or indentured is a complex topic since each plantation had its own unique way of being run, and their experiences on the plantation differed in their access to food, housing and clothing, and treatment and punishments.

Mauritius had no native inhabitants, and between 1642 and 1835 it was a classic slave society. Slavery dominated the Mauritian economy and way of life from the earliest colonial times until emancipation in 1835. The economy was dependent on the French planters, who were in turn dependent on slave labour. In between 1807, when slave trade was abolished by the British, and the abolition of slavery in 1835, slaves were illicitly imported from the East African coast to satisfy the labour demand in an expanding sugar economy. With the abolition of slavery in 1835, an alternative form of labour was found in the importation of indentured labourers mainly from India (Boodhoo 2010, Fokeer 1922, Teelock 1998, Valentine 2000).

Although slaves accounted for more than 75% of the island's population between the 1730s and the 1820s, information about most aspects of slave life remains sketchy, especially during the 18<sup>th</sup> century, but relatively more information became available for the indentured labourers under the British administration. However, available information on food rations, diet and nutritional deficiency diseases was usually incomplete and sketchy. Moreover, during the 18<sup>th</sup> and 19<sup>th</sup> centuries, not much was known about food and its relationship to health and disease. However, the nutritional requirements of slaves and indentured in the 18<sup>th</sup> and 19<sup>th</sup> centuries, were similar to what people require today, and they too needed a balanced diet (Allen 1999).

The owners most probably knew that the productivity of their field workers, and therefore their own profit, were related to their workers' diet, but they knew nothing of basic nutrition. Few people at that time understood what vitamins were and their connection to diseases. Hardly any slave owners knew how to create a balanced diet with appropriate amounts of nutrients. It should be noted, though, that slaves relied almost totally on their owners for their food provisions, whereas indentured labourers were given a food ration plus a basic wage. Some slaves and indentured could sometimes supplement their diet with food from provision grounds, fishing or gathering wild vegetables and fruits, although both groups frequently complained of inadequate or irregular food rations provided by the owners (Boodhoo 2010, Teelock 1998).

The nutrition of slaves and indentured will be described and analysed under the following headings: (i) Food supplies and consumption and dietary pattern; (ii) Malnutrition and nutritional deficiencies; (iii) Alcohol consumption, and (iv) Nutrition and Health Education. Regarding food supplies and consumption and dietary pattern, the information will be presented under the following periods; (i) Slavery during the French period; (ii) Slavery during the British period, (iii) Indentured 1835-1900, and (iv) The 20<sup>th</sup> century. Regarding the other sections, historical information is more sketchy and only information available for specific times will be presented, while we attempt to give as comprehensive a picture as possible.

## 2 FOOD SUPPLIES AND CONSUMPTION, AND DIETARY PATTERN

### 2.1 Slavery during the French Period (1715-1810)

#### *Le Code Noir* and Food Rations

During the early French occupation, the Island never attained food self-sufficiency and relied on France for its food supplies, including salted meat and fish, beans, oils and fats, biscuits and wine. Other foods needed to feed the population, like rice, maize and pulses, were imported from India and Madagascar.

*Le Code Noir* (or the *Black Code*) of 1685 enjoined slave-owners to provide food to their slaves as follows:

- Slaves aged 10 years and above: every week 2½ ‘*pots, mesure de Paris*’ of manioc flour or three cassava roots weighing at least 2½ pounds each, or equivalent foods, with 2 pounds of salted beef or 3 pounds of fish, or other foods in similar proportion. Provision of alcoholic drinks to slaves for subsistence was prohibited.
- Children from weaning age to 10 years: Half of the above food ration.

The above ration which provided only about 1,000 Kcal daily (500 kcal for children) was definitely inadequate to meet the total daily needs of the slaves who therefore had to produce or look for additional foods to supplement their rations. In fact, the land grants in the French period stipulated that one third of the land had to be planted in provisions for slaves (Teelock 1998). The fact that *Le Code Noir* contained clauses related to punishments for stealing food products and animals suggests that the foods rations were insufficient and that slaves had to steal for their subsistence. However, the stipulations of the *Code Noir* were rarely respected (Fokeer 1922).

The revised *Code Noir* of 1723 did not specify a food ration in quantitative terms but left it to the local administrators to decide, although their recommendations had to receive the prior approval of the French Crown before implementation.

#### Agriculture and food supplies

When Mahé de Labourdonnais arrived as Governor of the *Isle de France* and *Isle Bourbon* in 1735, there were 2,760 inhabitants on the island, including 1,448 slaves. When he left the Island in 1746, there were 3,000 whites, 600 Indian immigrants and coloured, and 14,400 slaves (Filliot 1974).

During the French occupation, Mascarene economic development was governed by Labourdonnais’s strategic considerations, with emphasis upon producing the foodstuffs and naval stores to the main French expeditionary forces in the Indian Ocean. The arrival of Pierre Poivre as the colony’s first Royal Comptroller (1767-72) heralded a serious attempt to encourage the large-scale production of tropical commodities such as cotton, indigo and spices. These attempts to transform the Island into a plantation colony failed. Competition from established producers of these commodities, periodic natural disasters which destroyed crops, and the lure of much more maritime activities combined to undercut the island’s potential development as a bastion of plantation agriculture. For four decades, the island served as an increasingly important commercial *entrepôt* (warehouse) for the Western Indian Ocean, especially when the island was designated a free port. The number of vessels calling at Port Louis each year rose from 78 in 1769 to a record high of 347 in 1803 (Allen 1999).

In an attempt to make the colony self-sufficient in food supplies and protect the inhabitants from famine, Labourdonnais introduced manioc or cassava (from Brazil and the Island of St. Jago) as a strategic staple food: cheap, abundant, and relatively secure from destruction by cyclones, as well as from the risk of capture in transit. He promoted the expansion of agriculture by the introduction of other products (rice, wheat, beans, oats and many other plants) from every known region of the tropical world. Salted beef, rice and other grains were imported from

Madagascar. Labourdonnais especially developed the sugar cane industry and built a flour mill as well as other factories (Anderson 1918, Fokeer 1922).

Sugar cane, first introduced by the Dutch during the 17<sup>th</sup> century, had been reintroduced following the French arrival in 1721. However, despite the active encouragement of Labourdonnais and his immediate successors, the cultivation of sugar cane soon languished to the point where the industry was unable even to satisfy the local demand for sugar. A growing demand for arrack, needed by the French naval expeditions, spurred a modest increase in production late in the 17<sup>th</sup> century. By 1810, the island had 9,000 to 10,000 *arpents* planted in sugar cane (Allen 1999).

In 1756, while many of the colony's planters became rich as a result of high income derived from their agricultural produce (to meet Government demand for food stuffs and naval supplies), the island could not feed itself and relied upon provisions from Ile Bourbon, Madagascar and India to survive. However, the agricultural sector was overall underdeveloped - in 1766, less than 200,000 of the island's 400,000 cultivable *arpents* had been distributed to colonists, and less than one-fourth of all granted land had been brought into production. In 1789, only 1,000 *arpents* were planted in cane and the colony contained only 8 to 10 sugar mills producing a mere 300 tons of sugar a year. On the other hand, the commercial sector was booming as a result of the designation of Port Louis as a free port in 1769. Therefore, the low level of commodity production at that time underscores the colonial propensity to pursue commercial rather than agricultural interests (Allen 1999).

#### Diet of slaves

Slaves were generally fed on high carbohydrate foods like manioc, sweet potatoes and maize, and for protein foods, they relied on lagoon fishing for fish, and some raised livestock for animal produce. According to Bernardin de St. Pierre, slaves were given 3 lbs of manioc daily (about 2,000 Kcal, negligible protein) or 2 lbs of maize (3,500 Kcal, moderate in protein). Usually the slaves started work at day-break with only a meal of boiled maize or manioc cake. After having laboured the whole day, the slave was obliged to search for his food in the woods and lived on unwholesome roots. White inhabitants did not eat maize or manioc, giving it instead to slaves, cattle and poultry (Filliot 1974, Fokeer 1922, Teelock 1998).

Apart from common diseases, Dazille also linked the poor health of slaves to their tasteless, monotonous and hard to digest diet based on manioc (often poorly cooked) and *brèdes*, and only a few could afford a *curry* of some animal and vegetable products with chillies. The Indian culinary was introduced early into the colony, as early in the 19<sup>th</sup> century to the Island housed many Indian, as well as African, Malagasy and Malayan slaves. About 10% of the colony's slaves were of Indian origin, although there was also a community of Indian merchants, artisans and craftsmen (Allen 1991, Dazille 1776).

The slave population grew steadily until the British conquest as follows:- 1735: 648 slaves, 1767: 15,207 slaves, 1787: 33,382 slaves, 1807: 65,367 slaves. In 1807, there were also 6,489 Whites and 5,912 free coloured inhabitants (See Chapter on "Disease Pattern").

## 2.2 Slavery during the British Period (1810-1835)

The formal incorporation of Mauritius into the British Empire in 1810 brought an end to the island's role as an important regional free port. The island lost its commercial position, and also many of the wealthier inhabitants returned to France with their money leading to the colony's economic hardship. Mauritian colonists eventually turned to sugar production for the imperial market. At the end of the French occupation 1806-10, some 9,000-10,000 *arpents* were planted in cane. However, it was not until late 1820s that sugar began to dominate the island's economy. In 1825, the repeal of the preferential tariff on West Indian sugar entering Britain revolutionised Mauritian agriculture. The area planted in cane dramatically increased to 51,000 *arpents*, and the island's metamorphosis into a sugar colony was under way (Allen 1999).

The local slave regime was, by many accounts, a rigorous one marked by high rates of mortality; it was also a regime which apparently became more oppressive as the cultivation of

sugar spread, the aim of the colonists being “to extract from the slave the utmost possible amount of labour” (Allen 1999).

### 2.2.1 Sea voyage

During their long ship voyages from the African coast to Mauritius, 30-40 days, slaves were fed on rice or maize and small portions of fish. Disease was commonplace and many died during the voyage from various disorders and infectious diseases, including smallpox. The crowded conditions on board the ship also caused huge mortality (Baker 1996).

### 2.2.2 Food production and food supplies to slaves

#### Food imports

Although prior to the Indian immigration in 1834, the French and African populations lived partially on locally produced wheat, maize, potatoes, beef, pork goat and milk (Wilson 1946), the shift to a single cash crop economy was accompanied by much increased imports of rice and wheat from Madagascar, India, South Africa and other countries. Even so, the massive contraction of land producing any other crop than sugar cane must have severely limited the variety of foods eaten by slaves, thus reducing the quality of their diet (Baker 1996).

#### Food supplies to slaves

The British administration took a keen interest to ensure the slave food provisions. Slave food habits continued on from the 18th century. The following systems of food procurement for slaves were used:

- i. Distribution of rations every day or every week;
- ii. Allocation of a plot of land (prescribed by Law) to slaves for cultivation of staples (this dated from the French period);
- iii. Slaves were permitted to farm individual plots of land and grow their own provisions and rear cattle and poultry.

None of these could actually ensure an adequate supply and variety of food to slaves. Owners who preferred to distribute rations depended on availability and financial liquidity, quite apart from their own willingness to follow the legal requirements which were quite low. Moreover, locally-grown supplies were often destroyed by cyclones and drought, causing serious shortage bordering on famine. It is not known what each estate actually produced and whether this was sufficient. (Teelock 1998).

A 70-kg. male slave working on a rice plantation is estimated to expend about 4,400 kcal during an “easy day” of repair work and 8,700 kcal on a “hard day” during the harvest, making an average energy expenditure of 5,500 kcal over the year in order to maintain the slave’s body weight and strength (Blogen 2004). So, if we suppose that a male adult slave in Mauritius weighing 60 kg., he would need between 3,800 to 7,500 kcal per day with an average of 4,700 kcal. It is known that work on the sugar plantations was more intense compared to other cultivations. The duration and amount of labour required by each slave varied with the season; hence, the slaves’ energy expenditure also changed with seasons.

Therefore, the rations provided were barely sufficient and slaves had to produce, steal or gather in the wild, foods to supplement their rations. The task system allowed time to slaves who finished early and still had the strength; they were able to attend to personal tasks like gardening, fishing or gathering wild foods to add supplemental foods to their diets; however, the system was unfair to the weaker or older slaves. But there is no evidence of the types and amounts of those supplemental foods. This supplementation allowed the slaves a more varied diet than just the rationed food they were given (Blogen 2004).

Despite the variety of methods employed to provide food for slaves, their diet was nutritionally inadequate: the aim was to barely cover the caloric needs but the diet was inadequate

in protein (especially if they did not fish nor had livestock) and vitamins and minerals (if they did not have vegetables gardens nor collect wild fruits and vegetables).

### Changes in diet 1810-1833

The staples of the slave diet were rice, mainly imported from India, and loaves or cakes made from the locally-grown manioc root. Some masters continued to supply maize, which had been displaced as the main local food crop when manioc was introduced by Labourdonnais. Potatoes were also a common item but green vegetables only rarely supplied. Protein was occasionally available in the form of salted meat or fish but infrequently enough to be regarded as a special treat. Typical festive provisions for New Year's day were a bowl of salt, three bowls of rice, a little meat and a glass of 'arrack' for each slave. Rice and maize were the two principal food items in the slave diet. The sheer monotony of the diet was indeed the commonest impression at that time. The manioc cake was quite unpalatable and had to be gulped down by drinking large quantities of water (Anti-Slavery Reporter 1831, Baker 1996, Telfair 1830).

With all its minor variations, the diet of slaves seriously threatened their physical well-being. The slave diet was deficient in the calories necessary for physical labour, in protein needed to rebuild and repair body tissues and in vitamins to ward off infections and deficiency diseases. If the slaves' diet ever approached adequate standards for maintaining health and sustaining hard labour, it was through their own efforts rather than through their masters' indulgence. Protein was much more likely to come from fishing or from livestock such as pigs and fowls reared in their own time, than from their masters' food allowances. Green vegetables which they grew themselves were the likeliest sources of vitamins and other nutrients (Baker 1996).

Manioc cakes were less nutritious than rice. On the other hand, a diet too dependent on rice increased the risk of beriberi; in Mauritius, beriberi was identified, even though its dietary causes were not known (at that time). Indeed Charles Telfair (1830) referred to its ravages on an 'epidemic' scale (Baker 1996).

### Food rations

Food provision to slaves consisted of maize, rice, manioc, sweet potatoes and was distributed by owners according to their availability. Food rations were normally distributed to slaves on a daily or weekly basis. The 2 lbs of maize given in the 'French' period were converted by the British as being equivalent to 5 lbs of manioc or 30 ounces of prepared manioc, or 5 lbs of sweet potato (*patate*) which was not available in the rainy season between October and February. When these were not available, it was substituted by 1½ lbs of rice. On some estates, rations would be distributed straight after work in the evenings, so that slaves could begin preparing dinner. Sundays were also ration days. This daily ration provided 2,500 to 3,500 kcal of high bulk and high carbohydrate food; while maize and rice contained moderate amounts of protein, manioc had negligible amounts. Therefore, the slaves had to supplement their diet with other foods (protein, vegetables and fruits) by their own means. Telfair claimed he provided each slave with 600 pounds of rice or 1,000 pounds of maize per year, i.e. equivalent to 3,000 to 5,000 kcal per day, apart from vegetables, yams, *cambards*, sweet potatoes, and groundnuts grown on his estate. But the slave ration consisting of only 1.25 pounds of maize or 3 pounds of manioc was also reported by Governor Cole in 1825 (Allen 1999, Teelock 1998, Telfair 1830).

Rice was given when other foods were not available. On some estates, rice was given once a week on Sundays, while on weekdays, they were fed manioc. Aside from manioc, slaves received half a herring and 1 lb of salt every Sunday. Disputes with owners occurred over the measurement of rations, with complaints being lodged about smaller measures being used (Teelock 1998, Boodhoo 2010).

On large plantations, slaves also received salt, 2 ounces of salted fish or meat (occasionally) and a cup of 'arrack'. On some estates, slaves could take as much cane juice as they liked. Women who were nursing were fed from 'the master's table' for 2-3 months. Slaves also grew their own provisions: *brède* (greens) while those in forest estates could hunt for the *tandrac* (hedgehog). Coastal estates had many slaves employed as fishermen and others picking 'bambaras' ('sea slug') (Teelock 1998).

If food supplies to slaves on small estates were deficient, it was felt that this was compensated for by the less strenuous work of cultivating manioc, grain and vegetable gardens and transporting these goods to market. Some slaves had access to provision grounds, while others were permitted to engage in petty trade (Teelock 1998, Allen 1999).

#### Cash crop v/s staple foods

By the 19th century, the practice of reserving one-third of estate land for planting food provisions for slaves was not widespread and many estates were in a state of abandon. Sugar cane became more popular and profitable and because of the labour shortage, slaves were not allocated to subsistence crops that would not yield revenue. Between 1808 and 1830, land devoted to sugar production more than quadrupled to 11% of the island surface area and over the same period, the area of cultivation of manioc or cassava (a staple of the slave diet) had been more than halved. Far more spectacularly, the area under cultivation of the various grain crops almost disappeared. Therefore, when required, sugar estate owners bought food supplies from Government or small estates to feed their slaves (Baker 1996, Teelock 1998).

Between a third and a half of estate lands were cultivated in sugar and the rest in other cash crops (cloves and coffee) or food crops (manioc, maize, sweet potato) or animal farming (cattle, pig, poultry) or covered with forest. Food crops were probably planted by able slaves, after the sugar harvest, with the weak slaves employed in cattle and poultry farming (Teelock 1998).

#### Supplementing the food ration of slaves

A feature that developed in later years of slavery was the practice of providing slaves on sugar estates with individual plots to farm for their own provisions to supplement their food rations. The slaves produced mainly root crops (high in carbohydrate) and some vegetables, but the type and amount of food produced varied widely from estate to estate. Other slaves fished, hunted or simply gathered wild fruits and vegetables: *brèdes* (greens) which grew in abundance all over the island. Therefore, slaves had traditionally supplemented the rations given by the owner by procuring their own food through a variety of means. A Civil Commissary observed that the quality of food was good by looking at the 'state of the slaves' (Teelock 1998).

A wide variety of some 78 types of vegetables and fruits grew on the Island but it is not known whether slaves, in fact, enjoyed the same variety in their diet on a regular basis (Telfair 1830, Baker 1996).

The smallest estates produced only what was necessary for subsistence. The living conditions of the slave and owner were not vastly different and many of the owners were themselves destitute and could not feed slaves. In smaller estates that have enough land, it was common practice to allow slaves as much as they liked. However, there were wide differences in the amount and variety of food available between, and within, sugar producing districts, as well as between large and small estates (Teelock 1998).

On the sugar estates, slaves were allowed to consume sugar cane and sugar, adding considerable calories to their diet. So, despite their heavy work, they were reported to appear 'well-nourished'. On some estates, slaves freely drank molasses and cane juice with a marked increase in their calorie intake, as carbohydrate-rich sugar provides considerable energy (Teelock 1998).

#### Women and children

Males outnumbered females and only a small proportion of adult slaves lived in family groups, while the majority was single-parent, overwhelmingly female headed. Slave women faced immense difficulties to be able to care for, or even feed, their young children. Slave women often complained of ill-treatment, sexual exploitation, were obliged to work unduly hours despite having young children to care. And the insecurity of women necessarily increased the vulnerability of children and the impermanence of family life. If babies suffered from inadequate maternal care, they did not remain babies for long. As children, they soon faced directly the mistreatment (e.g. they were put in chains, flogged) which had made maternal care so difficult. Clearly, the nature of

the power structure meant that children could not rely on support from parents who were themselves so vulnerable to their masters (Baker 1996).

Slaves were provided mainly with starchy foods in their rations. But if meat became available, plantation labourers were first to receive it, and the last to receive meat would be the children and the aged for this was considered too costly. The owner considered the provision of food as an investment in labour and constantly neglected children who needed proper nutrition for growth (Teelock 1998).

Slave women had to carry out their domestic tasks in addition to their agricultural work. Based on a study in Nyasaland, on average, every woman spent about 7 hours daily on such routine domestic tasks as preparing cereals, fetching water and collecting fuel and leaves from the bush for food and food preparation (Proc. Nutr. Soc. 1946).

#### Complaints and punishments regarding food

Between 1832 and 1835, common complaints registered related to lack of proper food (in quantity and/or quality) and meal times, overwork, Sunday work and ill-treatment. The biggest culprits were the richest districts on the island and in particular, the large owners. Priority was given to work, and meal times shortened or very often done away with altogether. Some owners supplied cooked food and other uncooked food to reduce the time allowed for meal break so that slaves would not waste time preparing it, although the slaves would have preferred otherwise (Baker 1996, Teelock 1998).

There were also many complaints relating to punishment (flogging with leather hide) for stealing or allegedly stealing food (mostly for personal consumption or friends and rarely for sale). Punishments were also meted out to children for stealing or alleged stealing, or even to slaves for complaining. On some estates, the denial of food became a form of punishment. Slaves placed in the stocks or in prison, for example, often went for days on nothing more than manioc root and water (Teelock 1998).

### 2.3 Indentured labourers 1835-1900

Despite the clandestine importation of more than 30,000 slaves during the first years of British rule, it became apparent during the 1820s that the local slave population was inadequate to meet the labour needs of the colony's expanding sugar industry; this situation was compounded by the high mortality among slaves, especially during the cholera epidemic of 1819. After the abolition of slavery in 1835, as all the ex-slaves abandoned the sugar plantation (as a result of their bitter experience) after their period of apprenticeship (March 1839), indentured labourers were imported from India to supply the colony with cheap labour. By 1846, Indian immigrants comprised more than 35% of the colony's total population and soared to 192,634 in 1861 or 62% of the total population. By early 1880s, importation of Indian indentured labourers already showed signs of exhaustion and ended by 1910 (Allen 1999).

The island was fast changing into a sugar economy. By the mid-1850s, production exceeded 100,000 tons a year, and Mauritius, fortunes were linked irrevocably to those of sugar. The 1850s and early 1860s was commonly regarded as the heyday of the Mauritian sugar industry and the island's economic prosperity. However, by 1890s, the island was again facing severe economic difficulties (Allen 1999).

#### 2.3.1 Sea voyage

Act XV of 1842 redefined the Indian indenture system by laying down new structures for recruitment and registration at the Indian depots and regulating the sea voyage. Concerning food, a supply of rice, bread, biscuit, flour, oatmeal, to the amount of seven pounds and five gallons of water was proposed every week for each passenger. Food was also to be provided to each passenger for 48 hours after their landing at the Depot in Mauritius or during their stay at the quarantine stations. This was just a survival ration providing less than 2,000 Kcal and 2.5 litres of water per day (Boodhoo 2010).

On board the ships, only biscuits were distributed in the morning, while cooked rice and *dholl* were served in the afternoon. However, Indians were not used to European type of food, such as biscuits (sometimes infested with weevil or hard to break). Indians were used to eating *chupaties* (unleavened cakes made of flour). Later, rice became the main food item on board. Moreover, children and infants did not have any proper food. Women who lost their appetite while they were sick were unable to feed their babies. This was reported to be a major cause of death among infants and babies during the voyage (Boodhoo 2010).

On board the ships, Indians were affected by three main diseases: typhoid fever, diarrhoea, and dysentery and cholera. Overcrowding on ships, insanitary conditions, poor quality of food and drinking water, and insufficient ventilation contributed to high morbidity and mortality (Boodhoo 2010)

### 2.3.2 Food production and supplies

On some estates, Indians cultivated vegetables and reared animals such as cows, goats or pigs. Estate owners allowed the rearing of animals inside the camp, in order to encourage labourers to stay on their estates. In the same way, some planters provided land to labourers for them to cultivate gardens (Boodhoo 2010).

Rice and *dholl* and other Indian food items were imported. Rice was imported from Madagascar and Java, and increasingly from Bengal, when Indian immigration intensified. The quantity of rice imported and supplied to the workers depended sometimes on food prices abroad. The 1860s were particularly difficult when the price of rice shot up in India, because of poor harvests caused by floods. In the second half of the century, Indians could buy certain food items from the shops on the estates or from the hawkers. There were complaints about the high prices of foods such as poultry, pigs, goat, fruits and vegetables (Boodhoo 2010).

Many Indians had other food resources which they produced themselves, such as milk, poultry, meat and vegetables. The sale of animals brought a substantial increase in their revenue. This trend, which started in the mid 1850s, accelerated in the decades that followed, as Indians moved to set up independent enterprise, as soon as they terminated their contract with the estates. However, not all estates of the island provided facilities to Indians to keep animals or cultivate gardens (Boodhoo 2010).

Indians could improve their consumption of vegetables and milk following the *morcellement*, when they moved to the Indian villages and produced vegetables and reared cows, apart from growing sugar cane (Boodhoo 2010).

### 2.3.3 Indian diet

Most of the Indians came from rice-and-flour eating areas in India. On the estates, they were provided with food items that were familiar to them: rice, flour and *dholl*. They refused to consume manioc and maize or food unknown to them. Rice remained the main ingredient in any meal, but it sometimes happened that its importation was affected by poor production in India, the main supplier. Immigrants, drawn from different parts of the subcontinent, had many variations in cooking and eating customs (often based on the caste appurtenance). Due to their various taboos, their food at first was simple and monotonous. Some variations became possible only on some estates, where they were allowed to do some gardening, and rear animals and poultry. When shops were opened on the estates, more Indian food items, such as spices, became available (Boodhoo 2010).

### 2.3.4 Food rations of indentured labourers

One of the regulations of Ordinance No.6 of 1845 defined the weekly provision of food rations. Before 1842, 'usual rations' were mentioned without giving any details. Indians complained of food items that were unfamiliar to them. Employers had, therefore, to provide Indian food items such as, rice, ghee (clarified butter), *dholl*, salted fish, tamarind, salt and sometimes tobacco. Attempts to provide local food items like manioc and maize to Indians failed. Planters also preferred to distribute imported rice instead of cultivating local foodstuffs on their estates. The Indians, who formed the bulk of the population (in the second half of the 19<sup>th</sup>

century), were mostly semi-vegetarians, whereas ex-slaves consumed mainly rice, *brèdes* (greens), salted fish or boiled salted beef. The Whites ate rice, salted beef and fish, and a lot of vegetables. The Typical Indian meals included rice, *dholi*, vegetable curry and salted fish, garnished with *chutney* (Boodhoo 2010).

Food rations were provided to indentured labourers in lieu of part of their wages, i.e. they received five rupees or ten shillings a month as wages and food and a clothing allowance, in addition to free housing on the estates and free medical attendance. The daily rations were as follows: two pounds of rice for one man, one and a half pound for one woman, half a pound of *dholi*, two ounces each of salt, mustard, oil and tamarind. This was a ration high in carbohydrate, moderate in protein, low in fat, with low levels of B-vitamins. The ration (if provided in full and regularly) was slightly more than adequate for an adult's needs; however, it often had to be shared with other members of the family. Labourers who freely drank cane juice experienced a marked increase in calories as carbohydrate-rich sugar provided considerable energy (Boodhoo 2010, Mishra 2009).

Estate owners often provided either salted fish or *dholi*, but not both, saying that Indians preferred *dholi* to fish. However, this ration did not cover the needs of labourers with families, women and children too young to work. Those who became sick, while at work, received the whole ration, while those who did not attend work at all did not receive any ration. Rations were distributed on Saturdays during the 'entre coupe' (non-harvest) season and on Sundays during the harvest season. Rations and wages were given to labourers who fell sick or had an accident at work. Those who were sick and absent from work did not receive any wages or rations. But working conditions varied widely from estate to estate (Boodhoo 2010).

For the field work on the estates, the labourers were organised into three gangs (McMillan 1914):

*La Grande Bande* and *La Petite Bande*, with weekly rations of: 12½ lbs of rice, 2 lbs of *dholi*, ¼ lb of oil and ¼ lb of salt. This ration providing 3,800 Kcal daily is adequate to meet the energy and protein needs of one labourer, and if supplemented with some vegetables and fruits, would also cover his vitamin and mineral needs; but this ration was also shared with other members of the family.

The third gang consists of the boys "chokras" with weekly rations of: 10½ lbs of rice, 2 lbs of *dholi*, ¼ lb of oil and ¼ lb of salt. This ration providing 3,300 kcal daily largely exceeded the energy and protein needs of a 10 year-old boy, but was shared with other members of the family.

However, work contracts were not uniform, with different allowances for foods, lodging and medical care, although there were suggestions to uniformise all contracts (Boodhoo 2010).

Food rations remained a major issue throughout indenture as rations were often reduced or stopped altogether for those absent from work or sick, thus causing great difficulties to workers and their families. Labourers complained about food ration distribution as being irregular or insufficient (Boodhoo 2010). The Royal Commission (1865) found that it was a universal practice to give ¼ lb of rice over the 1½ lb, as stipulated in their contract. Further, salt fish was replaced by a double allowance of *dholi* (Teelock 2009).

## 2.4 The 20<sup>th</sup> century

While the advent of the 20<sup>th</sup> century witnessed a recovery from the various natural and economic disasters of the 1890s, the problems facing the Mauritian economy remained fundamentally unchanged. The outbreak of World War I in 1914 spurred a short-lived recovery in sugar prices which soared to astronomical levels by 1920 before falling back to pre-war levels by 1925. The island's mono-crop economy could not cope with the global depression that began in late 1929 and the social and economic distress created by this situation led to widespread political protest that contributed to the rise of the Mauritius Labour Party in 1936 to represent the interests of agricultural and other workers, and small planters. This set the stage for the movement leading towards Independence which came on 12 March 1968 (Allen 1999).

By the 1940s, the main staple food of the Island was rice, particularly in the case of the Indian section of the population; pulses were also used, and a valuable element was the oil in which the foods were cooked. Animal protein was mostly in the form of fish, meat being scarce. A limited amount of wheat flour was used; fruits and green vegetables were cheap and plentiful at most times of the year. Milk and dairy produce were rarely used owing to the scanty supply. The diet as a whole contained too large a proportion of carbohydrates to protein. Of the vitamins, there appeared to be a shortage of vitamins A and B, though not usually to a serious degree; there was some indication of a calcium deficiency (HMSO 1943).

In fact, in 1939, the Committee on Nutrition in the Colonial Empire (HMSO 1939) noted with regards to the Colonial territories:

- i. that the problem of proper nutrition was of great importance to the British Empire, involving as it does, general administration, particularly in regard to agriculture, public health work, and the maintenance of virile populations;
- ii. that throughout the greater part of the Colonial Empire there was a low standard of living in which ignorance was an important factor;
- iii. that malnutrition was one of the chief causes of the excessive infant mortality in most Colonial territories;
- iv. that the single most striking feature was the almost complete absence of milk and animal products from most tropical diets.

The Committee had no doubt that improved nutrition could bring great benefits to the general improvement in the standard of health and well-being in the Colonies. It made several recommendations to improve nutrition and it was left to each Colonial Government to decide on their application in its own territory. The Committee considered the first requisite was the supply of energy needs and an attempt to increase the quantity of foodstuffs consumed by increasing the variety in order to improve its nutritional quality. Because of the low energy yield per acre of animal products, the Committee recommended a combination of cereals and legumes as nutritionally valuable, as well as soya beans, groundnuts, red palm oil, fruits and green leafy vegetables. Animal products were regarded as most desirable (although their energy yield per acre was low), and livestock production would also contribute to agricultural development. The Committee thought that fish was the animal product which might be more useful than any other in supplementing Colonial diets and encouraged the development of Colonial fishery resources. Although the Committee considered milk to be the 'most valuable of all foods', it pointed to the dangers of contamination of fresh whole milk in tropical climates and considered cheese, curds and ghee to be less risky. It also suggested the import of dried skimmed milk (as a relatively cheap source of protein, calcium and B-vitamins) by the colonies (at any rate for use in bulk) to partially make up for the shortfall in local milk production and increased consumption (HMSO 1939).

#### 2.4.1 Food rationing during the Second World War

Until the First World War (1914-1919), the bulk of imported rice was paddy. The grains were husked in the home by pestle and mortar, followed by sifting. These implements were a feature in almost every Indian home. During and immediately after WWI, refined rice replaced the paddy. Although at first the rice was unpopular, one of the common complaints being that "it did not hold in the stomach", it was soon accepted generally. The supply of all imported foods, i.e. cereals, pulses, meats, dried fish and oil was constant throughout the pre-WWII years (Wilson 1946).

During WWII a food rationing system was generally implemented mostly through Chinese shops. At no time did rations furnish more than 2,000 kilocalories per person; at some periods, the rations only furnished 1,400 kcal. Sweet potatoes and cassava were not rationed and generally used, but would be too bulky and virtually impossible to make up for the 800 kcal deficit (it was estimated that 2,800 kcal was the minimal requirement for a typical labourer during the crop period). Apart from bread, which was not always available and had to be made from ration flour, no other energy foods were available. Although white sugar was not rationed, the ration included 125 grams of brown sugar per day (equivalent to 600 kcal), which is approximately twice the

amount of sugar consumed per day per man-value pre-WWII. Sweet potato was generally disliked and was chiefly used in mixture with flour in chapattis. Cassava was appreciated by all, and maize was most popular among Creoles (not Indians) (Wilson 1946).

In 1941, the Labour Department estimated that in the inter-crop season, the typical labourer would be consuming 2,700 to 2,900 kilocalories and around 3,200 kcal during the sugar cane harvest season. Labourers cutting cane during the 1942 harvest were found to be consuming approximately 2,450 kcal and 2,600 during 1943. The calorie supply of field labourers during this period averaged at 2,300 kcal. During 1944, harvest labourers were eating approximately 2,800 calories. (Wilson 1946).

Visits to labourers' homes during the war period confirmed extreme feeding difficulties. The failure of rice supplies and its substitution by flour which, unlike rice, must be prepared in some way before cooking, led to general nutritional malaise. Apart from bread, the only ways known to the local population for preparing flour involved the liberal use of oil and frying, which caused digestive problems, when consumed in large amounts at that time (Wilson 1946).

#### 2.4.2 Food supplies

Food supplies in the 1940s were dominated by the import of the staple rice (60,000 tons) followed by *dhol* (3,000 tons) and lentils (2,000 tons), salted fish, soya oil (1,000 tons) and potatoes (1,000 tons) for a population of over 400,000. Several thousands of heads of cattle normally came from Madagascar. Considerable quantities of butter, ghee, cheese, wheat flour, lard and various other items, which the Island could hardly produce for itself, were also imported. Despite the rising cost of rice import, the possibility of making greater use of locally-produced foodstuffs as a partial substitute for rice was considered but it was feared that it would be resisted, due to ingrained food habits (HMSO 1943).

There was a low consumption of dietary nutrients even between 1925 and early 1942, after which the food conditions changed owing to the war. Protein was adequate, but there were serious deficits in niacin and moderate deficits in thiamine, riboflavin, calcium and vitamin C. (Wilson 1946).

Furthermore, it was shown in the Annual Report of the Health Department in 1936 that a hypothetical dietary, yielding some 63 grams of protein and 2,800 calories, was well within the economic reach of the average agricultural labourer and his family. It was also pointed out in this Report that pulses, leafy vegetables and a small variety of tomato, all commonly consumed, would supply sufficient protective elements. A possibility of insufficiency of animal protein appeared to be the most deficient feature of the labourer's dietary (Wilson 1946).

British experts in London estimated that the daily energy requirements for adult workers in the colonies were as follow in table 1 (Proc. Nutr. Soc. 1946):

	Heavy work	Light work
Male	2,460 to 3,125	2,146 to 2,560
Female	2,340 to 2,825	2,070 to 2,550

In 1942-43, there was serious shortage of essential foodstuffs (that continued until 1945). The amount available was the bare minimum, and the supplies of animal fats, edible oils and protein were insufficient to maintain a reasonable level of nutrition. As a result, evidence of deficiency diseases increased in hospital and dispensary practice. In 1946, food supplies improved (especially in the case of rice, cattle and salted fish) except for wheat flour, *dhol*, bacon, ham, salted meat and lard. The food balance sheet of 1948 showed an overall increase in the supplies of some foods, notably rice and fresh milk, but low supplies of B-vitamins. However, the food balance sheet contained insufficient information on locally produced food supplies. It was notable that a high proportion of calories was obtained from sugar (20% of total calories). The colony was

producing relatively little food at that time, viz. maize, insignificant quantities of rice, some potatoes and other root crops, vegetables and fruits. The bulk of the food was, accordingly, imported from the East and Far East and from Australia. The whole island economy was dependent on a single crop (sugar cane) which constituted 97% of the domestic export value. As a result of the higher prices paid for sugar in the 1950s, land formerly used to produce food crops was diverted to sugar cane plantations, thus making locally-produced foods (including animal protein and vegetables) more expensive (MHD 1943, MHD 1945, MHD 1946, MHD 1948, MHD 1950, MHD 1952).

Based on food supplies data, the average calorie supply per man-value was estimated at 2,487 kcal/day and protein 54.9 g/day during the period 1925-39; in 1940, the figures were 2,774 kcal and 59 g protein respectively. Food supplies were at a lowest during 1942-43, with an energy supply per man-value of 2,023 kcal/day and protein 48 g/day before rising again as from 1944. During the war period, there was therefore a significant drop in the supplies of calorie, protein as well as certain vitamins and minerals like calcium, vitamin A and B-complex vitamins, indicating the possibility of hunger and malnutrition during the period 1942-44 (Wilson 1946).

Rice provided 57 percent of calories pre-WWII but by 1944, wheat was supplying 42 percent of total calories, causing a major change in food habit. This change from rice to wheat flour occurred suddenly as a result of the Japanese occupation of Rangoon (Burma) (from whence the bulk of the colony's rice supplies were imported). There was also a marked fall in the supply of pulses, an important source of protein and B-vitamins in the mostly vegetarian diet of the Indian population. However, the slightly higher protein content of wheat flour compared to rice, made good the protein deficit quantitatively, but not the B-complex vitamins deficit. Rice as the main staple was largely replaced by wheat flour, maize and manioc during the war period (Wilson 1946).

In 1940, nearly 40% of the Island's surface (total area 460,775 acres) was under agriculture, of which the major part (151,000 acres) was under sugar cane plantation. Various food crops were also cultivated on a much smaller area of about 9,600 acres, including manioc, maize, rice, potatoes, ground nuts, sweet potatoes, taro (*arouille*), bananas, pineapple, coconut, vegetables, orchards, tea and coffee (HMSO 1943).

#### 2.4.3 Food consumption and diet

From enquiries made by the Labour Department in 1938 and 1942, a field labourer consumed (per man-value) about 480 grams of rice, 75g flour or bread, 40 grams pulses, 20g potato, 20g manioc, 17g fresh/salted fish, 4g meat, 70g leafy and other vegetables, 30g milk, 10g fruit, 60g sugar and 18g oil per day in the pre-WWII years (i.e. pre-rationing). Such a diet would supply 3,000 calories and 70 grams of total protein. The field labourer consumed somewhat less (2,800 calories) intercrop and somewhat more (3,200 calories) during harvest. There was a calorie shortage compared to the pre-war period in the diet of the labourer during 1942, 1943 and to a lesser extent in 1944 (-22%, -19% and -12% respectively). Periodical examination of the labourers' diet during the period 1942-43 revealed a serious fall in protein consumption during 1942-43 (a mean of 38g in 1942). Of perhaps greater importance as far as the working efficiency of the labourer is concerned, is the sharp fall in the B-complex vitamins in the labourer's diet in 1943-44 (Wilson 1946).

After 1942, the ration of flour was generally consumed by Indians chiefly in the form of *farahatas*, whereas Creoles ate noodles and bread as well. Curries were eaten at each meal and were most often made from green bananas, pawpaw, Jack and bread-fruits. *Brèdes* (green leafy vegetables) and *pommes d'amour* (a small tomatoes) chutney were frequently eaten, the latter raw and generally accompanied by chillies, ginger, tamarinds, onions, garlic; coconut and mint were also habitually used (Wilson 1946).

Fish and octopus were eaten daily in the fishing villages. Fish was sold daily in coastal villages and on most estates, while it was less available in towns, and frequency of purchase depended on the income level. Salted fish and *bomli* (dried Bombay duck) were sold in all Chinese shops and eaten once or twice a week. Indians ate fish (fresh or salted) more often, and meat or eggs less often, while Creoles ate meat several times a month. Very little milk was consumed generally (Wilson 1946).

*Brèdes* generally grow wild and were normally eaten several times a week. Two meals were eaten daily, in the morning and the evening. The main item of both meals in the case of Indians, consisted of 1 or 2 *farahtas*, with a curry or *fricassée* and chutney or *bouillon*. In some villages, flour and sweet potato mixture in a ratio of 1:1 was used for making *farahta* and to make the meal more substantial. Oil was used in the preparation of all dishes (Wilson 1946).

Goat meat was eaten on a small scale by Hindus, in the lower groups, once or twice a week in small amounts. Creoles, on the other hand, ate varied sources of animal food, whenever they could get it, and generally managed to have some sort of animal food at least three times a week (Wilson 1946).

*Brèdes* (green leafy vegetables) were eaten practically every day by Hindus and Creoles. They were often picked wild. The two common methods of preparation, namely a *bouillon* in which the water is eaten with rice, and *touffé*, that is, steamed with a little vegetable oil, entailed relatively little loss of vitamins; only some 50% of the vitamin C, the most labile vitamin, being lost in each case (Wilson 1946).

The nutritional profile of the typical diet of an Indian agricultural worker in the 1930s was estimated to provide 2,800 kcal, with the following nutrient to energy ratios: carbohydrate 74%, protein 8% and fat 18%, i.e. a high carbohydrate diet, low in fat and moderate in protein (MHD 1936).

#### 2.4.4 Nutritional quality of diet

Data from a survey on the cost of living conducted in 1941 showed that calories, protein and iron were approximately adequate in all income groups, with higher intake of protein, iron and calcium in the upper income groups, due to higher consumption of fish, meat, eggs, wheat flour and milk. Thiamine (vitamin B1), riboflavin (vitamin B2), Vitamin A and ascorbic acid (Vitamin C) were low in all groups. Parboiled<sup>1</sup> rice, the variety generally consumed locally, contained appreciable amounts of B vitamins, but unfortunately, the cooking water was generally thrown away with loss of thiamine and riboflavin (Wilson 1946).

The daily use of green leafy vegetables (*brèdes*) and tomatoes (*pommes d'amour*) which grew wild and abundantly all over the island, by the whole population was an excellent habit. Those leafy vegetables supplied most of the vitamin A, and vitamin C, and an appreciable proportion of the calcium and B-vitamins requirements for the bulk of the population. The use of spices and chillies added flavour to the predominantly vegetarian diet (Wilson 1946).

Parboiled rice is a fairly good source of vitamins of the B-complex vitamins. In fact, the drop in the supply of B-vitamins since 1942 was due chiefly to replacement of parboiled rice by white flour. The practice of discarding the soaking and boiling water during rice cooking entailed the loss of 55-80% of the vitamin B1. In the field labourer's diet, 75% of the total protein was furnished by cereals (mainly rice and flour), 15% by pulses, and only 4.7% by animal food (Wilson 1946).

#### 2.4.5 Children's diet

Babies were often breastfed until two years of age, although they frequently received a supplement of local 'corn-flour' (in fact, manioc starch), when only two or three months old. At about six months, they were given bread and began to eat *farahta* (Indian pancake) at a year or eighteen months. Faulty infant feeding, especially weaning, was a cause of malnutrition and high infant mortality (Wilson 1946). A pre-war survey showed 95% of school children brought a meal to school consisting mainly of *farahta*, followed by maize, bread or rice supplemented chiefly with vegetables and sometimes with animal protein (mainly for semi-skilled workers)(20%) or pulses (10%), plus sweetened tea or water, and 25% had some milk. The school snack provided about 400 kcal and 10 grams protein. 86% of schools reported a deterioration of the apparent health and energy of pupils since the war (Wilson 1946).

---

<sup>1</sup> Parboiling is a process whereby the rice is soaked sometimes as long as 4 days and then steamed for 10 to 20 minutes. This allows the B-vitamins to diffuse into the endosperm and prevents excessive loss during milling.

## 3 MALNUTRITION AND NUTRITIONAL DEFICIENCIES

### 3.1 Malnutrition

#### 3.1.1 Slaves

##### Diet and mortality

Even with the abolition of the slave trade in 1807, there was no improvement in the conditions of slaves on the plantations. The 1832 Census showed high mortality amongst slaves; thus, little changed regarding slave nutrition and health (Boodhoo 2010, Teelock 1998).

During the British period, owners normally gave priority to slave labour for food provisions at the expense of children. The vicious cycle of malnutrition and infectious diseases resulted in high mortality and growth retardation in the early years of childhood. It was only when children entered the labour force that the slave-owners would provide them with a more varied diet. It was also possible that slave parents supplemented their children's diet but the extent of this is not known (Teelock 1998).

Slaves in Mauritius, whether male or female, did not often live longer than middle age. If high mortality rates reflect harsh living conditions, the Mauritian slave regime was particularly cruel at this level (Valentine 2000).

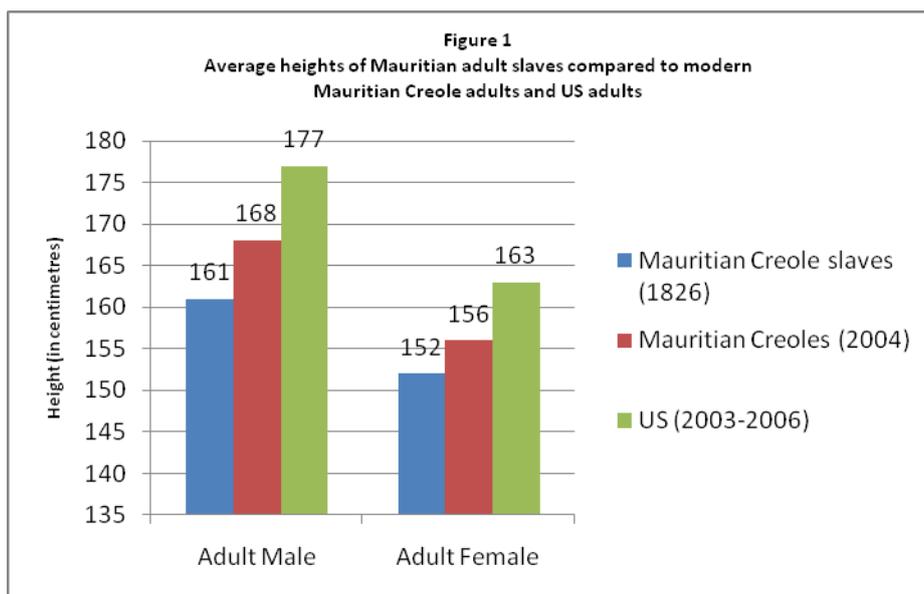

##### Height of slaves

Height-for-age of children is accepted as an indicator of the long-term (chronic) nutritional status in childhood. There is evidence that the nutrition of Mauritian slaves was inadequate. Adult human height is the result of both genetic and nutrition: height is affected by occurrences in childhood as well as by genetic inheritance. A lack of suitable food, disease and too much physical activity – such as overwork – in childhood all reduce the nutrients available to the growing body, and result in decreasing average heights (Baker 1996, Teelock 1998, Valentine 2000, WHO ...).

A comparison of the heights of 3,739 slave children aged 4 to 18 years, with the NCHS<sup>2</sup> Growth Charts made in 1826, showed that the heights of Mauritian slave children were significantly below the NCHS reference throughout the age range studied. These differences in heights may have a genetic component, particularly since some Mauritian children had Indian and Malay ancestry, but it seems likely that malnutrition, disease, and hard work played a part in keeping the slave children short in stature. At 18 years of age, boys were about 25 cm shorter and girls about 15 cm shorter than the NCHS reference for the respective sex (Valentine 2000). Both slave boys' and girls' growth curves started to level off much earlier than the NCHS growth curves, indicating that the nutrition of slave children was inadequate to support growth, as well as hard physical labour to which they were subjected at a young age. Figure 1 compares the heights of Mauritian Creole slaves (i.e. born in Mauritius), and modern-day Mauritian Creole adults and US adults. It is obvious that Creole slaves were shorter than even their modern-day descendants as a result of the chronic under nutrition, hard labour and disease prevalence which they experienced during the slavery days.

---

<sup>2</sup> The United States National Center for Health Statistics Growth Charts (1976) were also recommended by WHO as reference for international use (WHO 1983). Nowadays, the new 2007 WHO Growth Curves are used.

### 3.1.2 Indentured

The expansion of the sugar industry created more problems for owners as far as health care and the supply of food were concerned. There was a correlation between sugar production and slave mortality, due to, among other reasons, severe labour, insufficient food and living conditions. The 1832 Census revealed continued persistent high mortality figures in most estates, as a result of little improvement in the provision of food and health care for slaves (Teelock 1998).

The average height of 120 adult Indians (aged 20 to 39 years) who arrived from Calcutta in 1843 was 159.2 centimetres (calculated from data available at the Mahatma Gandhi Institute) compared to 167.5 centimetres for contemporary Indo-Mauritian male adults (MOH 2004). This indicates that the Indians immigrants were chronically undernourished even before their arrival to Mauritius.

Data on heights of Indian children in the early colonial period are not available, but a small study in 1942 on primary school children (5-13 years) showed average weights much below European norms at that time and Creole children had higher weight-for-height than Indian children (Wilson 1946).

During the malaria epidemics of the mid-1860s, it was observed that many Indians (especially those coming from Calcutta) could not resist the onslaught of various fevers, and they died because they were already exhausted by hard work in the cane fields. They were found to be weak and vulnerable to disease, due to poor nutrition believed to be related to their religious food taboos. Quinine was the main medicine for fever. In 1905, one Official wrote: "Indians are old at fifty". They suffered from various other diseases like bronchitis, pneumonia and heart disease. Indians were already in deplorable physical conditions when they arrived from India (Boodhoo 2010).

It should be noted that, in the 1870s/1880s, although it was compulsory for men (Indian labourers) to attend the estate hospital when ill, women and children often did not, either due to ignorance or cultural norms or poor hospital conditions (including food not being to their liking). Children were often not vaccinated. Women would not deliver in hospitals and gave birth in their

huts with the assistance of traditional midwives (*dais*). They attended hospitals only in case of complications. This resulted in high child and maternal mortality on the estates. But things gradually improved, when medical care and living conditions in estate hospitals improved (Boodhoo 2010).

In the 1920s, about a third of total deaths was among under five year olds', indicating that malnutrition among under 5's was an important contributing factor, apart from infectious diseases (MHD 1922).

### 3.1.3 Twentieth Century

#### School children

Apart from infectious and parasitic diseases in the 1920s, malnutrition among school children was also widespread ("thin and sometimes emaciated frames") in the schools of the slums of Port Louis. This deplorable state of child health led to the appointment of a School Medical Officer to examine school children in Port Louis for developmental and health problems, including infectious and parasitic diseases, and promote health and hygiene of school children. School medical examination in Port Louis started in mid-1922 and the most common diseases found were worm infestation (mostly *ankylostomiasis*), malaria, anaemia, scabies and *pediculosis*. The School Medical Service was extended to the districts of Plaines Wilhems and Flacq in 1923 (Balfour 1921, MHD 1922, MHD 1923).

#### Mother and child care

A survey of medical practitioners in 1943 revealed that they believed that malnutrition was common among the lower wage-earners of the colony. Those affected were mostly labourers of Indian origin, children and adolescents, pregnant and nursing women. A majority considered that malnutrition had increased during the war period (i.e. up to April 1943), and that there had been deterioration in the health of the working class in the past 25 years (i.e. 1918-43). A majority of doctors also stated that breastfed infants were usually given supplements (e.g. corn-flour, arrowroot starch, gruel, bread soup, rice or cow's milk, in that order), a practice that was detrimental to the health and nutritional well-being of the infants (Wilson 1946).

In order to address the high maternal and infant mortality, qualified midwives were placed on sugar estates from 1918 onwards, but unfortunately the scheme was defeated by the unwillingness of the poor to use the services, albeit provided gratuitously, mainly due to the fact that for a meagre remuneration, the *dais* accepted to do the laundry. This problem was addressed by Health Education and the training of *dais*. A health visitors' scheme was also started for home visits to provide maternal and newborn care, and educate young mothers in the care and upbringing of infants, including hygiene and infant feeding. The Poor Law Department provided support to deserted and widowed mothers and neglected children (MHD 1924).

It is known that malnutrition, in all its forms, increases the risk of infectious disease and early death. Protein-energy malnutrition, for example, plays a major role in half of all under-five deaths each year in developing countries. In 1942, Mauritius, with an infant mortality rate of 163 per 1,000 live births, was among the highest in the British colonies (Cf. Seychelles 55‰ and Fiji 63‰), (WHO 2000, Proc. Nutr. Soc. 1946).

#### Indian labourers

The majority of the manual labourers appeared to be definitely undernourished, and this was borne out by the improvement which took place in the weight and height of prisoners undergoing sentence. Some further support was given by the generally expressed view that the labourer of the present day was less robust than the worker of a generation ago. An important factor in this change was probably the abandoning of the former system of issuing rice as part of wages. This never formed more than a basic ration but it did, at least, encouraged a full, if unbalanced, diet (HMSO 1943).

Indian labourers generally worked for six hours a day and five days a week, and it was not possible to make them work longer hours to increase efficiency due to their poor physique and low

performance. The poor work performance of the Indian labourer in Mauritius was linked to the poor physique of the average worker, even compared to the Indian labourers in British Guiana. There was also a widely expressed view that the worker in Mauritius in the 1940s could not accomplish the output of the man of 50, or even 25 years ago. Various reasons were adduced for this: ill-health, undernourishment, drunkenness, inherent laziness, etc., according to the point of view of the speaker (HMSO 1943).

The Committee on Nutrition in the Colonial Empire (1943) observed that:

*“The picture is, therefore, that of a poorly paid, undernourished, sickly population, capable only of such a limited output of work that an increase of wages offers little promise of improved performance. Such a position must obviously be equally disastrous for the employer and the worker.[...] obviously the primary need is for a determined attempt to reduce the prevalence of hookworm and malaria. Efforts with this object has been in progress for many years past, but activities have been limited chiefly to the Medical Department; the cooperation of the Education Department is essential if the rising generation is to be made fully aware of the dangers of these diseases and the steps necessary to combat them” (HMSO 1943).*

A possible consequence of malnutrition was the relatively low working efficiency of the average Indian labourer even in the pre-WWII period. Since 1942, there was a further reduction of efficiency, particularly a reduced capacity for sustained effort. For example, in the pre-1942 period a cane-loader would average 7-8 tons/day, whereas in the 1944-45 crop, the average loaded had fallen to 2-3 tons. Though often other nutritional factors have operated, the fall in the level of nutrition has probably played an important part. There was a drop in the supply of calories (from 2,487 to 2,023 calories per man-value per day) and other dietary nutrients. The role of the B-vitamins in energy metabolism is well-established. The fall in calories, coupled with the further fall in B-vitamins from a previously low level, is probably the main nutritional factor responsible (Wilson 1946).

#### Nutrition Unit and Nutritional Studies

Because of severe food shortage and nutrition problems created by the WWII situation, a Nutrition Unit was created in the Medical and Health Department to advise on nutrition and carry out nutrition education (including hygiene and mother-craft education) all over the island, using three travelling vans. However, in 1945, its activities were suspended and staff diverted to deal with the *poliomyelitis* epidemic and finally in 1951, the Unit was abolished due to budgetary constraint. In 1948, an Interdepartmental Nutrition Committee was set up to collect information and to formulate a general food programme for Mauritius (MHD 1944, MHD 1945, MHD 1948, MHD 1951).

During that period, several research studies were carried out on the nutrition of the population, including anthropometric surveys and a study of nutritional deficiency symptoms among school children, food habits, experimental feeding of school children, relation of malnutrition and malaria, haemoglobin surveys and nutrition of field labourers, as well as chemical analysis of local foodstuffs (protein, calcium, phosphorus, oxalate, vitamin C and iron contents). Studies were also carried out on local preparation and the use of yeast (as a source of B-complex vitamins), and local preparation and the use of shark liver oil as a source of vitamin A (Wilson 1946).

#### Supplementary Feeding Programmes

In the second half of the 20<sup>th</sup> century, in order to combat malnutrition among the vulnerable groups, various supplementary feeding programmes were implemented. Government food subsidies were also granted on the staples, rice and wheat flour, in order to protect the lower-income group of the population.

It was thought that the solution for the dietary improvement of the labouring class ought to be largely bound up with education, whereby modern ideas could be inculcated in school children for improved nutrition. A recommendation was, therefore, made for the introduction of a simple mid-day meal for all pupils in elementary schools, to include milk (if possible), even if this would entail the import of powdered milk or preserved foods. This would not only provide much-needed

nourishment for the child, but would also permit the introduction of various desirable novelties in foodstuffs, in connection with the campaign for the encouragement of home-grown produce. The mid-day meal could also be combined with the distribution of nutritional supplements such as cod liver oil, iron or vitamins. This would certainly result in a beneficial effect on the health and physique of the rising generation, while, in addition, the nutrition education imparted would be far better appreciated by the pupil (HMSO 1943).

In order to combat malnutrition among school children, in 1947 a hot mid-day school meal was started in the Grand Port Area for 1,600 children and a snack consisting of a milk drink, biscuits and yeast tablets (rich in B1, B2 and B3 vitamins) for 1,000 additional children. The nutritional status (height and weight) of children was monitored by the Health Officer of the Education Department (MHD 1947). Food yeast was imported from Jamaica and successfully tried in various foods, including bread, as a possible solution to increase coverage (MHD 1948).

Subsequently, a School Milk Scheme was started in April 1950, providing a full-cream milk drink<sup>3</sup> (as there was prejudice against the use of dried skimmed milk) to all primary schools of the Island (MHD 1950) and a school snack continued to be provided throughout the 1980s.

During the 1980s, dietary supplements (dried skimmed milk and corn soya milk) were also provided to pre-school children and pregnant and lactating women (MOH 1979-80).

However, although the free issue of a light meal to labourers at the beginning of their day's work was considered to be a sound investment for the employers, the suggestion was not pursued (HMSO 1943).

The Government has been providing blanket food subsidies on 'ration' rice and wheat flour since the 1970s up to this date in order to ensure minimum supplies of the basic staples to the most vulnerable sections of the population, even during difficult economic periods.

#### Nutritional Status of Children

A survey (1942) of rural school children showed that Creole boys were, on average, 600 grams heavier than Hindu boys of the same height. Creole girls were also heavier. This indicates a higher level of malnutrition among Hindu children. The nutritional status of non-school children appeared to be slightly inferior to that of school children. Children who did not attend school, estimated at roughly 50% of the children in the colony, were generally from poorer parents and helped them in the home and in the field (Wilson 1946).

A Nutrition Survey of pre-school children (0-5 years) in 1985 showed no difference in the prevalence of stunting (i.e. low-height-for-age) between Creoles and Indo-Mauritians (average 21.6%) although the prevalence of underweight (i.e. low-weight-for-height) was higher amongst Indo-Mauritians children (26% v/s 19%), i.e. although both groups were about the same height, Creole children being heavier than Indo-Mauritian children (MOH/UNICEF 1988). This trend is further confirmed by the 2004 NCD/Nutrition Survey on children 5-18 years, which shows that the height growth curves for both groups are almost the same and close to the WHO reference curve for both males and females. However, Creole children were taller than Indo-Mauritian children after puberty (see Figures 3 and 4). This shows that the linear growth of children of both ethnic groups has equally caught up with the WHO norms since the first generation of children of slaves or indentured labourers. It is known that linear growth of children is influenced by both genetic and environmental factors, particularly the state of health and nutrition of the children and their mothers.

#### 3.1.4 Malnutrition and infectious diseases

Malnutrition is often the result of a synergistic effect between food deficiency and infections, such as malaria or hookworm. Many diseases are known to be directly caused by a dietary deficiency, while others are aggravated by them. An inadequate diet itself weakens resistance to infectious diseases and leads to weakness and lack of well-being.

---

<sup>3</sup> A drink consisting of 20 grams of milk powder and 10 grams raw sugar, providing 137 kilocalories, 5.1g protein and 187.5 mg calcium at a cost of approximately 5.9 cents per child.

A deficiency of nutrients can result in an increased susceptibility to various nutrient-related diseases. Protein-calorie malnutrition results from regular deficiencies of energy and protein; it predisposes the body to infections and diseases, can cause liver damage, and can possibly result in death (Bloninger 2004).

Balfour observed that the chronic malarious child was so debilitated that his output of work was diminished by 75 to 90 percent and his physical strength by two-fifths, compared to a normal child of the same age living in a non-malarious district (Balfour 1921).

Malnutrition was prevalent in Mauritius. A study carried out on the nutritional state of children in rural villages and the sugar estates showed the close relationship between malnutrition, malaria and anaemia. Malnutrition was more frequent among children living in malaria-prone villages (especially in the coastal belt). The study also demonstrated that supplementary feeding of malarial children was beneficial and enhanced drug action, as well as improving nutritional status. A malaria survey (1942-44) revealed that infected young children showed Vitamins A and B-complex deficiency signs. Several village level nutrition surveys were carried out to study the nutrition state of children (MHD 1944, Wilson 1946, MHD 1948).

An outstanding factor was the prevalence of infectious diseases, notably *ankylostomiasis* and malaria; these two, alone were responsible for an enormous loss of vital energy every year. Hookworm is, of course, not normally a disabling or fatal disease; nevertheless, it has a constant debilitating effect producing a varying degree of anaemia and predisposing the victims to other diseases. Malaria, again, is limited in its obvious effects to periodical disability for a few days only; nevertheless, its cumulative effect upon energy and enterprise must be very great. Concerning diet, the labourer was not adequately nourished; while he might have been seldom actually hungry, his meals did not provide him with the necessary sources of nourishment and energy. This coupled with the aforementioned prevalence of diseases, affords an adequate explanation of the poor physique and lack of energy of some of the workers. A remoter, but important, consideration was the cumulative effect on the rising generation; weakly parents could not bear healthy children, and the babies were furthermore handicapped by poor nourishment and prevalent diseases, which they were ill equipped to resist.

## 3.2 Nutritional deficiency diseases

### 3.2.1 General deficiencies

A survey of Medical Practitioners in 1943 revealed the following observations relating to various nutritional deficiencies or infectious diseases: cases of *stomatitis*, *oedema*, *peripheral neuritis*, skin *dermatoses* and ulcers, spongy and bleeding gums, enlarged or infected tonsils, anaemia, diarrhoea, and bronchitis and pneumonia were commonly observed. Cases of *pellagra* or night blindness, Bitots' spots and *keratomalacia* were rare. This indicates that the labouring class commonly suffered from iron, thiamine and riboflavin deficiencies and less commonly from vitamin C, niacin and vitamin A deficiencies (Wilson 1946).

However, an examination of rural school and non-school children (in 1942), based on clinical signs, showed an almost complete absence of the more marked and characteristic deficiency states such as *beriberi*, *pellagra*, night blindness and scurvy. No cases of nutritional or famine *oedema*, involving the lower extremities, were noted. Only 5 cases of Bitot's spots were seen (i.e. 0.1% of 4,864 children) (>0.5% being indicative of a public health problem). Rickets, although frequently observed in poorly-fed children at Child Welfare Centres, was not diagnosed in older children. *Peripheral neuritis* was not observed at all. *Pellagrous dermatitis* was not observed in children. Dental caries was found in 79% of children examined (Wilson 1946). In view of the several nutrients deficits noted between 1925 and 1942, the relatively low incidence of clinical deficiency signs suggests a possibility of sub-clinical conditions or functional impairment which could not be detected at that time.

Concerning nutrient deficiency diseases during the 1940s, scurvy was absent, while rickets and *pellagra* appeared rarely; *beriberi* was more common, though diagnosed cases were less than

50 in most years. In addition, cases of *avitaminosis*, amounting to several hundred per annum, were reported from the various dispensaries; these were ill-defined but suggested deficiencies of vitamins A and B. The condition was mostly confined to the Indian population and was more common among females than males. Anaemia was also prevalent; some interesting work was done in this connection, in treatment with yeast extract, which was a by-product of sugar manufacture. Results were encouraging and offered the prospect of a cheap and ready means of remedying this condition. Malaria and hookworm seriously affected the health of the population and several Departments of the Medical and Health Department were detailed to deal with those two diseases (HMSO 1943).

Other vitamins like B6 and B12 might also have been deficient, although they were not all recognised at that time as many manifest themselves in more or less the same signs as weakness, neuropathy and *dermatosis* (Blonigen 2004).

However, it should be noted that the symptoms of nutrient deficiencies overlap. *Dermatitis* can result from deficiencies of zinc, riboflavin, or niacin. Muscle weakness and fatigue are symptoms of vitamin C, riboflavin, niacin, vitamin B6, and folate deficiencies. A loss of appetite can be the result of many different vitamin deficiencies. Mental symptoms can occur with a niacin or vitamin B12 deficiency. Inadequate protein intake on a regular basis would have led to a protein deficiency, resulting in a weakened immune system; deficiencies of vitamins A and C also results in a weakened immune system and an increased susceptibility to infection. Skin problems could have been worsened by the wet conditions that the slaves and indentured worked in throughout the planting season, making them more susceptible to infection (Blonigen 2004). As many of these symptoms were prevalent before the 1950s, it can be concluded that the working population in fact suffered from multiple micronutrient deficiencies, although all could not be diagnosed at that time.

### 3.2.2 Thiamine (B1) Deficiency (*Beriberi*)

*Beriberi* (which means “extreme weakness” in Sinhalese) is a disease affecting the nervous system and is caused by a deficiency of vitamin B1 (thiamine) in the diet; it affects both children and adults. In a population afflicted by *beriberi*, a large number of people are found to be suffering from loss of appetite, malaise and general weakness, especially in the legs. Such a condition, which greatly reduces work capacity, may persist for months or even a year until suddenly the disease develops and may lead to sudden death. In Mauritius in the late 19<sup>th</sup> century, the mortality rate from *beriberi* was estimated at 5 to 40 percent (WHO 1974, Anderson 1918).

In the 19<sup>th</sup> century, there was still a debate on whether *beriberi* was caused by a germ or nutritional deficiency. It was commonly associated with a poor monotonous diet, high in carbohydrate and low in protein and fat. It became a public health problem with the introduction of steel rice mills producing decorticated rice in the 1870s, stripping it of its vitamin B1. Production of parboiled rice eventually ensured a rice of moderate vitamin B1 content (WHO 1974, Anderson 1918).

*Beriberi* existed in Mauritius in an endemic form since 1808. Sporadic cases occurred in different parts of the island, in prisons and in hospitals. In 1878-79, the number of cases increased and the disease spread rapidly all over the island, reaching epidemic proportions. The disease was controlled in 1880.

The treatment for *beriberi* included the administration of desiccated yeast (a good source of vitamin B1) and a good diet of eggs, fresh milk, vegetables, soups, and oatmeal. However, in the 19<sup>th</sup> century, it was sometimes treated as an infectious disease (Anderson 1918).

Outbreaks of *beriberi* in the local population in the early 20<sup>th</sup> century followed the importation of refined rice (deficient in vitamin B1) that was mostly fed to Indians on the estates and prisoners (on account of its cheapness). Deaths from *beriberi* continued to be recorded through the 1920s. The disease was almost entirely confined to the Indians and was sporadic among the Chinese population. The Medical and Health Authorities later wisely encouraged the importation of parboiled rice to control the problem. As a result of this measure, *beriberi* virtually disappeared by 1950s (Anderson 1918, MHD 1923, Wilson 1946).

### 3.2.3 Riboflavin (B2) deficiency

Riboflavin deficiency symptoms include poor appetite and growth, muscular weakness, and extreme sensibility to touch and temperature. Changes in the mouth and mucous membranes, known as *cheilosis*, *stomatitis*, and *glossitis*, are also characteristic of a riboflavin deficiency. These dermatitis symptoms generally develop gradually as the deficiency worsens (Blonigen 2004).

Skin conditions related to riboflavin deficiency were noted in 1942 and the prevalence of the condition was confirmed. About 10 percent of school children were affected; boys slightly more than girls. The incidence increased during the cold weather (May to October). Infants below two years were rarely affected and the condition was very rare among adults, and was then entirely restricted to young male adults. The highest incidence occurs around puberty. The affection did not appear to be connected to hookworm or malaria infection. It was commonly found in cool and damp districts (Vacoas, La Caverne, Henrietta) with a fluctuating regional incidence. There appeared to be no difference in incidence between Africans and Indians; the condition had not been seen in children of European or mixed descents (Wilson 1946).

In places where the diet is likely to be deficient in riboflavin, the presence or absence of clinical deficiency signs often depends on seasonal variations in the quality of the diet (WHO 1974).

#### 3.2.4 Vitamin C deficiency

Sailors landing at the Port Louis harbour during the administration of Labourdonnais (1735-1746) were found to be stricken by scurvy. This was due to a lack of vitamin C in their diet on board of ships that did not include fresh fruits and vegetables. Labourdonnais even set up special hospitals to treat the affected sailors (Boodhoo 2010).

No marked symptoms of *avitaminosis C* were noted during the WWII period. Tropical fruits (litchis, mangoes, loganberries) were plentiful during the summer months, November to February. The abundance of vegetables (and fruits like guava and *masson*, both rich in vitamin C) during the cooler months of May to October replaced the seasonal lack of fruits and the possibility of vitamin C insufficiency was restricted to the period March-April-May. There were also leafy vegetables (particularly abundant in the cooler months) and bananas available almost throughout the year. Cyclones and droughts exerted a very marked influence on the supply of foodstuffs, particularly fruits. Fruits accounted for only a third of vitamin C intake of the lower-income groups; leafy and other vegetables are the main source (Wilson 1946).

#### 3.2.5 Anaemia

In the 1920s, anaemia was already a health problem; it was commonly found during school medical examination and was mostly attributed to malaria, malnutrition, worm infestation (*ankylostomiasis* and *schistosomiasis*) and poverty (MHD 1922).

In the 1950s, nutritional anaemia continued to be one of the most serious health problems. It was widespread in the working class and affected mainly women in their childbearing period and young children. In women, anaemia was invariably exacerbated during pregnancy and lactation. The prevalence of anaemia was lower among the middle class, but women were more affected than men. However, no section of the community was protected or immune from anaemia. The severity of the disease was conditioned by low dietary iron intake and losses through parasitic infection (especially by hookworm and *ascaris*, and sometimes malaria) and it was, therefore, routinely treated with iron supplementation and de-worming. A striking improvement in the anaemia situation became evident with the success of the malaria eradication programme coupled with an improvement in the post-war food supply position (MHD 1952).

#### 3.2.6 Pellagra

*Pellagra* results from a niacin deficiency, and is characterized by skin lesions—skin that is cracked, scaly, is darker in colour, and hardened. Other symptoms include delirium, depression, anxiety, and fatigue (Blonigen 2004).

In 1948, a *pellagra* outbreak occurred in Beau-Bassin Prison and dietary improvement was introduced. As prisoners showed some unwillingness to take yeast tablets (containing vitamins B1, B2 and B3), food yeast (3 g per head) was incorporated in the pulses and was undetectable. Some

cases were reported among the population, but the outbreak in prisons might have been related to maize-based diet (MHD 1948, MHD 1950).

## 4 ALCOHOL CONSUMPTION

### 4.1 Production and import

Rum being derived from molasses was an industry existing wherever sugar was made. In Mauritius, prior to 1895, a distillery was attached to almost every sugar estate, and over 100,000 litres were produced per month, bringing high amount of revenue to the Government. But with decreasing exports to Madagascar and East Africa, the revenue from the sale of rum fell significantly, and most of the distilleries closed their doors, thus greatly decreasing the level of alcohol consumption on the Island (Anderson 1918).

In the early 20<sup>th</sup> century, liquor consumed in the colony was either imported or manufactured locally. Imported liquors included whisky, brandy, gin, vermouth, rum (very small quantities), liqueurs and cordials, wine of every description, ale beer porter and cider. The local product was rum, obtained by the distillation of sugar cane molasses. It was generally consumed as it comes from the distillery, or after having been artificially coloured or flavoured, subsequent to distillation (*Rhum préparé*). Later, large quantities of “prepared rum” on the market were replaced in the form of local “brandy” or “liqueurs” (Balfour 1921).

By the mid-20<sup>th</sup> century, wine or country liquor were manufactured mainly from imported dried raisins and on a small scale from local fruits, such as guavas, prunes and bananas. There were 13 wine factories in Port Louis (MHD 1949). Local production of beer started in 1963, using imported malted barley from Australia and Europe.

### 4.2 Sale

Retailers, hotels and inn-keepers as well as taverns, restaurants, refreshment rooms and public billiard rooms were authorised to sell alcoholic beverages, but the opening hours and authorisation to consume “on” or “off” premises was strictly regulated for each facility. Chinese shops, scattered all over the Island, supplied their customers, who belonged mostly to the working classes, with liquor, principally rum, in pints (*chopines*), and in small measures, popularly known as *topettes* or *petits baquets*, which is consumed on the premises. The maintenance of control and order over drink shops or drunken men was carried out by the Police (Balfour 1921).

The health and social consequences of this overindulgence raised concerns among the authorities. This affected mainly the working-class population (fishermen, artisans, agricultural and dock labourers, and the lower classes) although it also became noticeable among the younger generation and the Indian population. To address the situation, the authorities decided to strengthen control on sales of liquor, prohibit the giving of liquor as payment for salaries and wages, or as a gratuity, and promote awareness on the dangers of alcoholism (Balfour 1921).

### 4.3 Consumption

There was an alarming increase in the consumption of rum from 1909 to 1920. During the period 1909-19, the average annual consumption of rum was 1,022,785 litres. In the year 1919-20, it reached 1,832,589 litres, i.e. exceeding the average of the preceding 10 years by nearly 80%. Therefore, within a period of about 10 years, the per capita annual rum consumption increased from 2.74 to 4.95 litres (Balfour 1921, Kuczynski 1949).

High alcohol consumption had been the cause of sickness and mortality among slaves, apprentices and troops. During the 1825-40s period of sugar expansion, the widespread distribution of liquor to slaves as an incentive to work proved to be detrimental as slaves turned into alcoholics. The amount and frequency of arrack distribution differed on each estate but ranged from as little

as once a week to several glasses a day. Liquor became cheap and freely available as slaves began to distil it in their huts and sell it to other slaves. Alcohol consumption increased dramatically during the crop season and affected both men and women. It led to various social ills including fighting among slaves, general disorderliness, theft, lateness at work, insubordination, accidents and, even sometimes, suicides. There were also many unlicensed liquor shops in the districts (Teelock 1998).

Alcohol abuse also became the cause of great concern during indenture period, when an increase in drunkenness caused a reluctance to work among Indians. On some estates in the 1840s, rum was even distributed free together with the rations. It was realised that high alcohol consumption was detrimental but the Government was reluctant to increase taxes on arrack production as this would be unpopular among distillers, and it took no measures to decrease consumption as sale of rum-generated important revenue for Government (Teelock 1998, Boodhoo 2010). High-sales of rum and locally-made wine, both almost exclusively consumed by the Coloured population, were regarded, to some extent, as symptomatic of low vitality and limited interests in work (HMSO 1943).

Consumption of alcoholic beverages increased by 50% from 1961 to 2007. Energy supplies from alcoholic beverages increased from 29 kcal *par caput* per day in 1961 to 44 kcal *par caput* per day in 2007, i.e. equivalent to about 4 and 6 grams of alcohol *par caput* per day respectively. While in 1961 alcohol consumption was mostly in the form of spirits followed by beer and wine, in 2007 that pattern has changed to mostly beer followed by spirits and wine (FAO 1961, 2007).

## 5 NUTRITION AND HEALTH EDUCATION

### 5.1 Multiracial population

In a colony with formerly a majority of illiterates, with diverse racial, religious and social habits and customs, mass awareness creation was found to be a prerequisite to any activities in the field of health and nutrition. Some success was obtained in dealing with the heterogeneous population of this colony, with a population of 425,000, of which 60% were of Indian origin (Hindus, Muslims, and Chinese), 35% Coloured and 5% European. The Hindus were mostly semi-vegetarians (and would eat only goat meat, fish and eggs) although some were vegans (abstaining from all flesh foods and eggs). The Muslims ate beef, avoided pork and fasted during Ramadan. The White and Coloured communities had, in general, the same food habits and had taken to the liberal consumption of rice, curries and spices. As with all insular communities, changes and new ideas were generally unpopular (Wilson 1946).

### 5.2 Second World War dietary changes

#### Need for nutrition education

Prior to the war, there was practically no interest in nutritional matters, and the subject was looked upon as irrelevant in terms of local conditions, even by educated persons. The sudden failure of rice and other food supplies in 1942, highlighted the problems of food and feeding. Consequently, the need for nutrition education was acknowledged as a need to create awareness (targeting non-educated masses and educated differently) on the importance of nutrition, encourage the adoption of good nutritional and culinary practices and the avoidance of detrimental ones, the preparation of the population for changes in foods and food habits either for purely nutritional ends or necessitated by war conditions. The latter, in view of the revolutionary changes provoked by the war, assumed prime consideration in 1942. However, awareness campaigns were based on a thorough knowledge of local conditions and practices (Wilson 1946). Useful work on Nutrition Education was carried out by the Nutrition Unit of the Medical and Health Department (MHD 1943). Nutrition Education talks were also given to mothers at Child Welfare Centres (MHD 1948).

#### “Flour-rice”

“Flour-rice” (a form of small noodles made of wheat flour to look like rice grains) was devised as a substitute for rice. Until 1942, the working population ate 400 to 500 grams of rice a day and only a little flour, chiefly in the form of fried *chappatis* or *farahtas*, which they complained were harder to digest. When rice supply suddenly failed, and as bread was often scarce, the population found itself compelled to consume flour in large quantities, thus causing dietary distress. An intensive campaign was launched to teach the population how to prepare “rice flour” and bread so that wheat flour became more acceptable in their dietary habits (Wilson 1946).

### Targeted strategies for Nutrition Education

Nutrition Education strategies targeted different groups of the population differently, as follows:

- In urban areas, exhibitions proved to be the most popular methods. An exhibition was organised at the Municipality of Port Louis (pop. 50,000) with stands on Malaria, Hygiene and Nutrition. Cooking demonstrations comprised the making of “flour-rice”, bread and leaven-making, soup-making, preservation of various vegetables and fruits in season, directions for infant-feeding, formulas for feeds, directions for weaning, etc. Pamphlets were also distributed. A similar exhibition was organised in Curepipe during a fair and visited by some 15,000 people. Town people are perfectly willing to come to a centre; rural people are more refractory (Wilson 1946).
- In rural areas, three vans were organised for demonstrations in cooking, elementary hygiene and child care, on similar but simpler lines to the Exhibition. Posters were also fixed around the vans, when parked. The audience was assembled before the arrival of the van. This was the only way in which Indian women could be made to attend the demonstrations. There was also the promotion of a vegetable garden with seeds distribution and flour-rice demonstration. Each place was re-visited several times to maintain contact with the inhabitants. Regular courses in nutrition and hygiene were organised for the staff so as to maintain motivation, and the vans inspired a certain degree of confidence and comfort among an uneducated population subjected to revolutionary changes and severe privations (Wilson 1946).
- For the educated population: Short article of nutritional interest with recipes were inserted in the press; a series of 24 ten-minute talks on general principles of nutrition and the best methods of meeting war-time difficulties, was delivered, and a course of lectures, ten half-hour periods, on the practical aspects of nutrition, proved successful. Lectures were also given to the various learned bodies (Society of Arts and Sciences, Medical Association, etc., 5,000 copies of an elementary book on nutrition were rapidly exhausted (Wilson 1946).

The lack of knowledge of child hygiene and nutrition locally was appalling. Young infants a few months old were fed on scalding sugary tea, and were subsequently weaned on pure starch gruel. Parents were very attentive to advice, and thousands of mothers called at the Exhibition for advice. As instructions were somewhat complicated, they were written down for them so that they could get someone else to read (Wilson 1946). In general, it was found that the better-educated and better-housed sections of the community showed the lowest infant mortality rates (MHD 1922).

### 5.3 Health education

A campaign against *ankylostomiasis* (hookworm infestation) was started in 1922, with massive health education supported by conferences, lectures and printed materials (thousands of posters and pamphlets) (MHD 1922, 1923).

In the early 20<sup>th</sup> century, mass Health Education was carried out with the use of cinema films portable projection apparatus (electric power). Films on mosquitoes, Malaria, flies, rat menace and hookworm were shown. Films were shown free of charge in schools and at open air exhibition (MHD 1923).

Health Education on hygiene and nutrition in primary schools, with the participation of teachers, was part of the School Medical Service activities in the 1950s. Health exhibitions were also commonly held for pupils and the general public (MHD 1952).

It is noteworthy that in the 1940s, there were 40 cinema halls on the Island which were almost entirely dependent on the patronage of the poorest classes. Motor bus service was available, and there were race meetings at Port Louis (HMSO 1943).

## 6 DISCUSSION

The diet of the inhabitants of the Island of Mauritius evolved over the French and British colonial periods, as a result of changes in the ethnic composition of the population, food supplies consideration and economic transformation of the island. The Island was never self-sufficient in food supplies and always relied on food imports to feed its population, despite attempts at food self-sufficiency under French Governor Mahé de Labourdonnais. The basic food staples evolved as shown in Table 2 below.

Early French period	Maize was the main staple of slaves
Under Labourdonnais	Manioc displaced maize as the main staple of slaves
Early British period (1810-1830)	Shift to sugar mono-crop economy and rice became the staple food of slaves followed by maize and manioc
British period (1835-1900s)	Rice established as the main staple with arrival of Indian indentured labourers
British period (1940s to 1968)	Wheat flour became the second staple to rice following the rice supply shortage due to the Second World War
1980 - 2000	Rice and wheat flour became equally important staples

During the French and early British periods, the working population was mostly slaves of Madagascar or East African origin. Slaves during the French period were fed on locally-produced manioc (*cassava*) and sweet potatoes, and locally-produced or imported maize, occasionally supplemented with a little salted fish or salted meat. Many slaves could obtain additional protein foods from fishing or keeping livestock in their own time; vegetables were rarely supplied and slaves relied on wild vegetables (*brèdes*) and fruits which became less abundant, with the increasing mobilisation of land for sugar cane plantation. Apart from the poor diet of adult slaves, slave women faced immense difficulties to care for, or properly feed, their young children leading to child malnutrition and high mortality.

With the transformation of the island into a mono-crop sugar economy in the early part of the British occupation, local food production was largely abandoned and rice was imported to feed the slaves. Rice and maize became the two principal food items, followed by manioc, in the slave's monotonous and tasteless diet, with occasional animal protein foods and small quantities of vegetables. The massive arrival of Indian immigrants from 1834 onwards reinforced the position of rice as the main local staple for the whole population, although after WWII, wheat flour rivalled with rice as the second staple. During WW2 the population also had to face a severe food stress. The Hindu section of the population mostly used pulses to supplement their diet in protein, although fish (salted or fresh) was also occasionally consumed. In addition, other sections of the population (Creoles, Muslims and Chinese) also occasionally consumed meat. Milk consumption was low. Vegetables and fruits (mostly seasonal) were commonly consumed. Labourers who freely drank cane juice experienced a marked increase in calories as carbohydrate-rich sugar provided

considerable energy. Although African slaves and Indian immigrants came with their own traditional food habits, this evolved over time, with considerable blending in the dietary pattern of the population.

The diet of the working population during the colonial period was predominantly vegetarian and very small quantities of animal products were consumed. Milk consumption was particularly low. In general, the diet was high in carbohydrate, low to moderate in total protein, and very low in animal protein (considered to be of high-biological value) and fats. Consumption of vegetables and fruits was variable, depending on availability and seasonality. Calcium and iron also appeared to be generally deficient. Deficiencies of vitamins A, D and C were sometimes reported but deficiency of the B-vitamins was much more common. In fine, while the diet more or less covered the minimal energy requirements of the working population (and probably inadequate during periods of intense activity as during harvest time), it could not be considered nutritionally adequate. It was generally a bulky diet that lacked variety and nutritious foods. A bulky diet had a low energy and nutrient density, and the workers felt replete before ingesting sufficient amount of energy and nutrients to meet their nutritional needs. Moreover, both slaves and indentured labourers often complained that they were given less food than the amount stated as food ration, and their distributions were not always regular.

So, throughout the whole period of colonisation, the diet of slaves, ex-slaves and Indian immigrants contained essentially high amounts of carbohydrate (including high sugar consumption) and was low or moderate in protein, low in fat and high in bulk.

Year	1938-42	1961	1980	2007
Kcal per capita per day	No data available	2,372	2,622	2,965

1. Wilson Frank A. (1946). *Nutritional investigations in Mauritius (1942-45)*. Government Printer, Port Louis, Colony of Mauritius. (Based on typical diet of a field labourer in 1938-42. FAO Food Balance Sheet not available prior to 1961).
2. FAO Food Balance Sheets for Mauritius 1961, 1980 and 2007. FAO. Rome.

Food Balance Sheets could not be obtained prior to 1961, but from 1961 to 2007 there was an increase per capita of energy supplies (see Table 3), while there was a gradual fall in the amount of carbohydrate-energy and a concurrent increase in the level of fat-energy - see Figure 2 (FAO 1961, 1980, 2007).

In addition to the overt signs of vitamin and mineral deficiencies, chronic sub-clinical deficiencies of vitamins (A, Bs and C) could also have resulted in fatigue and increased susceptibility to infection. Chronic caloric deficit, coupled with B-vitamins, and iron deficit caused muscle weakness, loss of appetite and fatigue, leading to low working efficiency.

Although anaemia was a serious problem during the 1900s until the 1960s generally affecting the lower-income groups of the population, it was particularly common among the Indian section of the population and affected mostly women of child-bearing age and young children. The disease was generally associated with Malaria as well as hookworm infection. With the eradication of Malaria, improved sanitation, public health measures (including iron supplementation and free shoes or boots to school children and labourers) and improved nutrition, anaemia ceased to be a major public health problem by the end of the 20<sup>th</sup> century.

Alcohol consumption was high among slaves and ex-slaves, although later on it also became a problem among Indian labourers. With the consumption of salted meat and salted fish, the sodium intake of slaves and ex-slaves would tend to be on the high side.

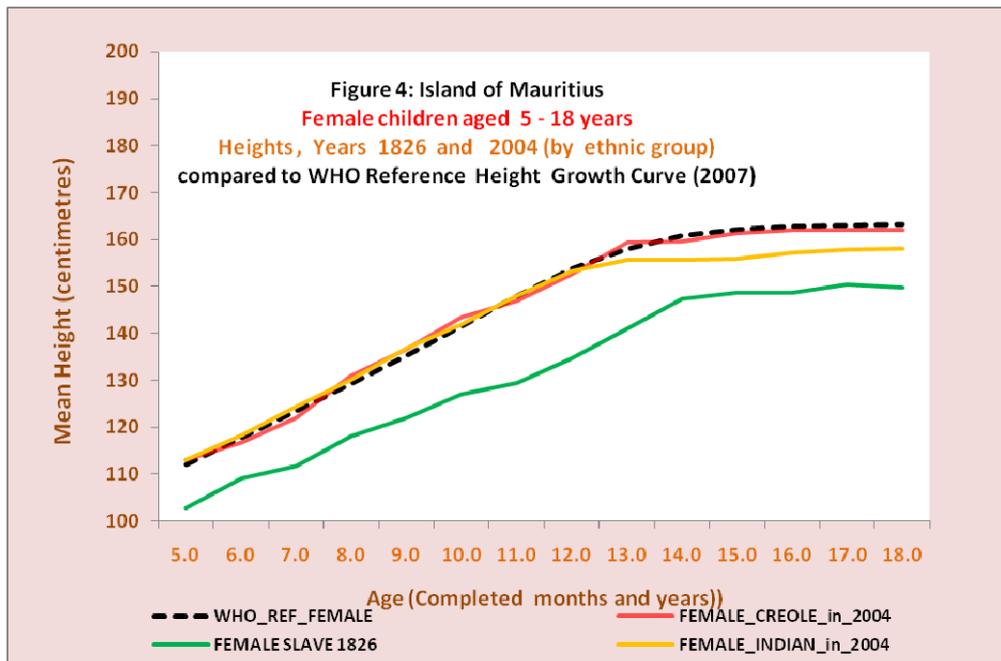

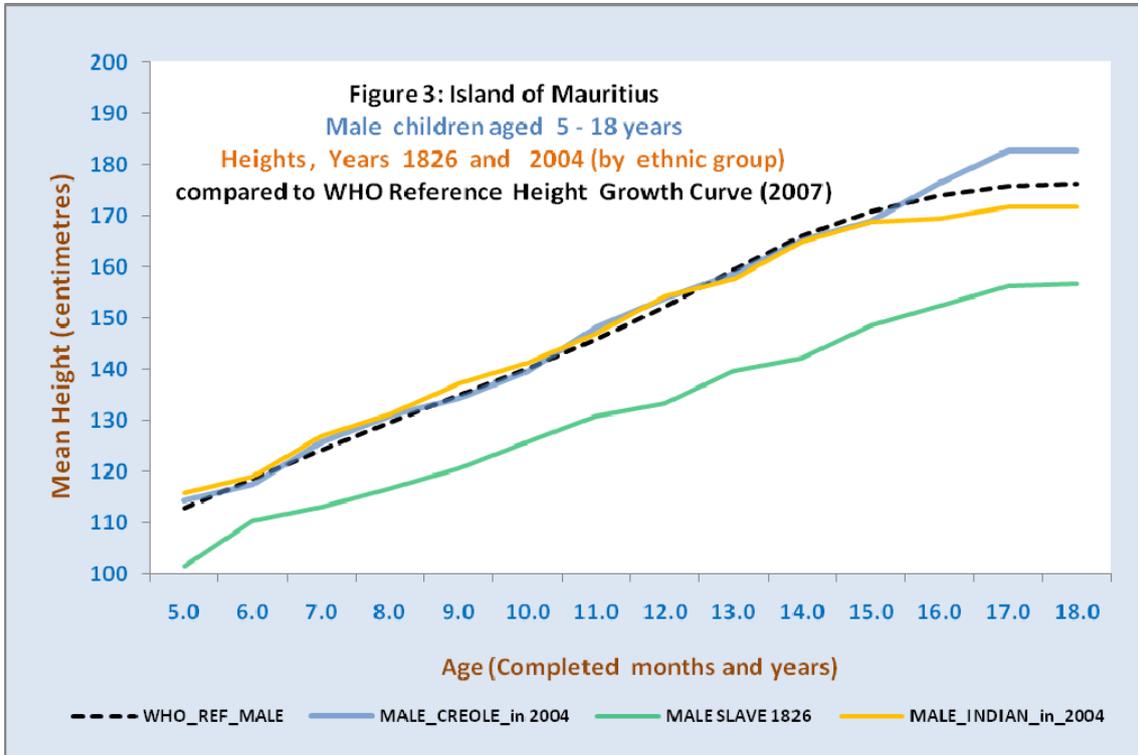

The Committee on Nutrition in the Colonial Empire noted that malnutrition was one of the main causes of the excessive mortality in most Colonial territories and that the single most striking feature was the almost total absence of milk and animal products from most tropical diets (HMSO 1939). In Mauritius too, the infant mortality rate was very high (although it fell considerably after Malaria was brought under control) and the main causes were malnutrition and repeated infectious diseases.

As a result of chronic malnutrition and hard physical labour at a young age, slave children were subjected to severe growth retardation, as evidenced by their short stature by age 18. Figures 3 and 4 show that the heights of Mauritian slaves' children (both boys and girls) (in 1826) were far below the WHO Reference throughout the age range 5 to 18 years, while contemporary Mauritian children (Creoles and Indians) (in 2004) have caught up with the WHO Reference, except for the post pubescent difference between Creoles and Indians. It is known that stunted growth among children is related to chronic protein-energy deficiency as well as to repeated episodes of infectious diseases. In 1942, a small number of primary school children were found to weigh much below European norms at that time and Indian children had lower weight-for-height than Creole children. Newly arrived Indian adult male immigrants were also less tall than male Creole slaves (159 and 161 cms respectively) although the heights of contemporary adult male Creoles and Indians are close (168 and 167.5 cms respectively). That is, early generations Creole slaves and Indian immigrants were of short stature, but the descendants of both groups gained several centimetres by 2004 and nearly caught up with the WHO norms.

Apart from poor diet and the high prevalence of infectious diseases in Mauritius during the colonial period, the underlying causes of malnutrition were, most importantly, the low standard of living, followed by lack of awareness coupled with certain prejudices. The low standard of living of the labourers was the result of inadequate food rations, low wages insufficient to supplement their rations and too little food provisions from family production or gathering in the wild. The economic policy prioritising the production of cash crop (sugar cane) for export further decreased available land for food production.

In the latter part of the 20<sup>th</sup> century, with the eradication of Malaria, improvement in primary health care, sanitation and water supply, improvement in the standard of living and continued improvement in food supplies (including food subsidies and supplementary feeding programmes for the vulnerable groups), malnutrition, vitamin deficiency diseases and anaemia gradually declined, so that by end of the century, the country began to face the emerging problem of non-communicable diseases and obesity, although anaemia is still common among adolescent girls and underweight persists among young children. The mostly non-vegetarian diet is high in energy, fat, sugar and salt, and low in fibre contents. Although vegetables and fruit consumption trebled from 1961 to 2007, the present level (of about 300 grams *par caput* per day) is still far

below current recommendations. Increasing alcohol intake and decreased levels of physical activity further contribute to the development of obesity. This tendency is worsened by the increasing consumption of 'fast-foods' and packaged snacks, and the adoption of sedentary leisure activities (mostly television and electronic gadgets) by the young population (MOH 2004, FAO 1961, 1980, 2007).

## 7 CONCLUSION

Therefore, based on the findings of this study, the evolution of the diet and nutritional status of the inhabitants of the Island Mauritius can be summarised as follows:

- a. The slaves of African origin were on a mostly vegetarian high bulk diet, having high carbohydrate and low protein content, with occasional consumption of salted fish or meat. Alcohol consumption was high among slaves, especially on weekends. They needed high caloric intake in order to meet the energy requirements for their intensive labour. Their caloric intake barely met their needs, resulting in chronic under-nutrition of both adults and children, as evidenced by stunted height of both adults and children. The diet was monotonous and deficient in various vitamins and minerals. Overall mortality was very high and life expectancy very low (hardly reaching middle age).
- b. The Indian indentured labourers were mostly vegetarian, with occasional consumption of animal protein and little milk. Their diet was high bulk, high carbohydrate and low to moderate in protein. Vegetable consumption was higher than among slaves. B-vitamins deficiencies and iron deficiency anaemia were prevalent. Their caloric intake barely met minimal needs resulting in chronic under-nutrition. Both overall and infant mortalities were high and life expectancy was low. Indian labourers in the 1940s had poor physique and low work performance related to their poor diet and recurrent diseases, and seemed to suffer premature ageing. The prevalence of malnutrition, coupled with Malaria and other infectious diseases (including hookworm infestation), gave rise to a sick and debilitated population. Faulty infant feeding, especially weaning was a cause of malnutrition and high infant mortality.
- c. From 1950s to 1980s, Malaria eradication and improvement in water and sanitation and socio-economic measures led to improved health and nutrition status of the descendants of slaves and of indentured labourers. Their nutritional status improved with increased protein intake, a more varied diet, free distribution of food supplements to the vulnerable groups and Government subsidies on staple foods. Prevalence of vitamin deficiencies decreased gradually, although anaemia among adolescent girls was still common and prevalence of child underweight (particularly among Indo-Mauritians) remained relatively high. The average diet remained relatively high in refined carbohydrate, although the fat content had increased considerably. Infant mortality was rapidly decreasing and life expectancy was increasing as a result of better health and nutrition.
- d. After the 1980s the population was faced with the problem of overconsumption and dietary imbalance, with increasing per capita caloric supply as well as increasing fat content of the diet and although the carbohydrate content gradually decreased from 1936 onwards, carbohydrate to energy ratio was still elevated at more than 60% in 2007. High consumption of alcoholic beverages and fatty/salty foods, and inadequate consumption of vegetables and fruits are a serious concern, as well as increasing consumption of alcohol and low level of physical activities. Obesity and non-communicable diseases started as a public health problem among adults. The height growth of children below 18 years has reached the 2007 World Health Organisation norms, and obesity is an emerging problem among children, although underweight still persists among young children. Mauritius is now reaching the level of human development indicators of emerging market economies, with a low level of infant mortality and a relatively high life expectancy, with concomitant high prevalence of non-communicable diseases (including diabetes, cardio-vascular diseases and cancer).

## PART II: DISEASES PATTERN

### 1 INTRODUCTION

Health and illness in a population are associated with factors that relate to the surrounding environment, the climate, the housing and sanitary conditions, the food habits, the quality of water and the working conditions of the people. The types and scale of ill-health and diseases in a population reflect the living conditions of the people and the way they manage their lives. The disease pattern at a given point in time is not only the biomedical disorders caused by ill-health, but also a reflection of harm done by the prevailing social, economic and political environments.

The disease pattern in Mauritius during 18<sup>th</sup>, 19<sup>th</sup> and 20<sup>th</sup> centuries are given under the following headings:

- Slavery and indentured labour
- Pre-Independence
- Post-Independence

### 2 PERIOD OF SLAVERY AND INDENTURED LABOUR (1715-1916)

Statistics of the population of Island of Mauritius before the arrival of indentured labour is shown at table 4:

Year	Europeans	Free	Slaves	Total
1735	190	-	648	838
1767	3163	587	15207	18777
1777	3434	1573	25154	29761
1787	4372	2235	33382	40439
1797	6237	3703	49080	59020
1807	6489	5912	65367	77768
1817	7375	10979	79493	97847
1827	8009	14831	63432	86272
1830	8135	18019	64919	91826

The food consumed by the slaves consisted of *cassava* mixed with vegetables and meat cooked under unhygienic conditions. The daily intake of this insipid food was a possible source of ill health to the consumers. The climate with frequent passage from hot to cold weather and vice versa was another common cause of illness among the slaves who did not wear appropriate protective clothing. Their lifestyle which included abuse of alcoholic drinks and having multiple sex partners was detrimental to their health. Furthermore, they were subjected to harsh working conditions and the workload was well beyond their physical capacity, resulting in fatigue and exhaustion.

The clinical manifestations of common diseases prevalent among the slaves in “Ile Bourbon” (Reunion Island) and “Ile de France” (Mauritius) as described by Dazille\* in 1772 are summarised as follows:-

- (a) Fevers associated with respiratory infections including pneumonia, or with signs and symptoms of what is now known as typhoid fever or with spasms of voluntary muscles signalling tetanus; reflecting a hostile disease environment with exposure to infectious diseases.
- (b) Digestive disorders with diarrhoea, dysentery, scurvy and worms infestations, which relate to consumption of food that was either contaminated or deficient in essential nutrients or both.
- (c) Venereal diseases such as gonorrhoea and syphilis were common with urinary and ophthalmic complications. The prevalence of these conditions was connected with the practices and behaviour of individuals.

The abolition of slavery created the need to look for alternative sources of labour, to cope with the ever increasing demands for workers in the expanding sugar plantations. From 1834 to 1912, around 450, 000 indentured labourers also called coolies were brought to Mauritius. They were housed in dingy shelters, under unsanitary conditions, without potable water and latrines. The source of water was from wells and rivers. They were exposed to a new disease environment. They had to cope with new work requirements, adapt to changes in diet, and learn new hygienic practices suitable for life on sugar cane plantations. Contaminated food and water through faecal-oral route were ideal conditions for dysentery. Poor nutrition gave rise to nutritional diseases such as: beriberi and scurvy. The other common diseases included respiratory infections, *diarrheal* diseases and parasitic infestations.

In addition to prevailing common ailments and diseases, Mauritius witnessed several outbreaks of epidemics. Those that caused devastating effects on the economy and demography of the Island, included smallpox in 1792, cholera in 1854, Malaria in 1868, plague in 1899 and Spanish flu in 1919. These epidemics were responsible for more than 440, 000 deaths from 1792 to 1919. Some of these diseases were brought to control, while others became endemic and were eradicated much later, when appropriate technologies were developed. Notes on the epidemics that have marked the history of Mauritius are given in the next pages.

## 2.1 Leprosy

Leprosy has affected humanity for over 4000 years. It was recognized in the ancient civilizations of Egypt, China and India. Leprosy and cures for it were described in the Vedas (Atharva-Ved). The first-known written documentation on Leprosy dates back to 600 BC (Sushruta Samhita).

The causative agent is *Mycobacterium Leprae*. It was discovered in 1873 by G.H.A Hansen in Norway, which witnessed a rapid increase in the number of Lepers in the 1830's. Leprosy is an infectious disease. It is transmitted via droplets, from the nose and mouth, during close and frequent contacts with untreated cases. Untreated it can cause progressive and permanent damage to the skin, the peripheral nerves, the limbs, the eyes and the upper respiratory tract.

Not all people who are infected by *Mycobacterium Leprae* will develop Leprosy, because the body is naturally immune to the bacteria. It is estimated that due to genetic factors, only 5% of a population is susceptible to get the disease. Marginalised and under-served communities are most at risk. Leprosy is contagious but infectivity is low. It is transmitted via droplets from nose and mouth, during close and frequent contacts with untreated cases. The incubation period is about five years. Symptoms can take as long as 20 years to appear.

Leprosy came to Mauritius in 1770 with the slaves from Madagascar, where it was introduced from Mozambique. In 1781 a commission was set up to inquire into the prevalence of the disease and in 1803, the lepers were exiled to Ile Curieuse, from where many escaped to Seychelles.

In 1850s the laws against lepers were relaxed and leper-beggars were seen wandering in the streets of Port Louis and in the country side. As from February 1857 the Catholic hospice of St. Lazare, situated in the north of Port Louis, was used as Leper's Asylum with the support of public

charity, under the care of Dr. Poupinel and the sisters of mercy. In 1860 the government decided to subsidize the hospice for care and hospitality offered to the lepers.

However there was no law compelling compulsory segregation of lepers, who used to come and go to the hospice as they pleased. Many lepers stayed in the home of their family, marry an unaffected person, thus continuing to propagate the disease. Leprosy infected prostitutes also used to spread the infection.

Year	Study	Population	Number of Cases		Average Death Annually
			Inpatient	Outpatient	
1879	First Leprosy Census	360,000	243	519	288
1887	Leprosy Commission	370,000	209	500	40

On the 1<sup>st</sup> February 1924 all the patients from St. Lazare - 27 in all - were transferred to Powder Mill and put under the care of 3 sisters of charity with medical supervision by the government Medical Officer in charge of Long Mountain hospital. The Powder Mill became the Leper Hospital and later in 1970, it was integrated into the skin disease unit of the Sir Seewoosagur Ramgoolam National Hospital with 40 beds and an average of 34 occupied throughout the year. The staff comprised 2 sisters of Mercy, one departmental Supervisor, 7 female and 9 male attendants. The responsibility for medical care was taken over by specialist dermatologists. This institution served as the treatment centre for all leprosy cases from the island of Mauritius and from all its dependencies. The first group of eight patients from Rodrigues was admitted to Powder Mill in 1928.

The common pre-modern treatment was Chaulmoogra oil, product of a tree called 'Chaulmoogra adorata'. It was used externally as well as internally. Taken orally it was extremely nauseating. Given by enema it could cause peri-anal ulcers and fissures. By injections it caused fever and local reactions. However the oil remained a popular treatment, despite its side-effects, until the introduction of sulfones.

Since its introduction in Mauritius in 1770, leprosy had remained endemic in the country till late 1990s. All components of the Mauritian society were affected. Throughout history, lepers were ostracized by their communities and families. This old age stigma associated with the disease, was an obstacle to self-reporting and early treatment. The situation was bleak, given the incurability of the disease by traditional medicines.

There was need to educate the population and encourage the lepers to come forward and receive treatment. Around 1952 an association called "Les Amis de Moulin à Poudre" was founded to look specifically after the welfare and well-being of lepers. Raoul Follereau, famous crusader against discrimination towards lepers, visited Moulin à Poudre on several occasions. His visits usually coincided with the World Leprosy Day, which was launched in 1984 at the initiative of Raoul Follereau, himself.

The first break-through in the treatment of leprosy occurred in 1940s, with the development of the drug Dapsone. It was effective but the duration of the treatment was too long, even a lifetime making it difficult for patients to follow. Moreover by 1960s the Mycobacterium Leprae had developed resistance to the drug.

In 1981 a WHO (World Health Organization) study group on chemotherapy of leprosy, recommended Multi Drug Therapy (MTD) which combine three drugs: dapsone, rifampicin and clofazimine. This drug combination kills the pathogen and cures the patients.

The final assault on *Mycobacterium Leprae* was made in 1980s and the multidrug therapy was the key element in the strategy to eliminate leprosy as a public health problem in the Republic of Mauritius. The leper hospital was closed in 2006.

## 2.2 Smallpox

Smallpox, also known as *variola*, is a highly contagious febrile disease characterised by successive stages of skin eruptions. The causative agent is a virus, transmitted usually by direct contact with the patient through airborne droplets. It may also be spread through handling of articles, contaminated by the patients. The incubation period ranges between 6 - 14 days. It is reported that during epidemics, as many as 30% of those infected, were killed by the disease, and between 65% - 80% of survivors were marked with deep pitted scars, most prominent on the face.

Smallpox is believed to have originated over three thousand years ago in India or Egypt. It was one of the most devastating diseases known to humanity, disseminating populations through repeated epidemics across continents. In 1798 Edward Jenner demonstrated that inoculation with cowpox could protect against smallpox, and brought the hope to control the disease through vaccination. However, in early 1950s - 150 years after the introduction of vaccination - an estimated 50 million cases of smallpox were occurring in the world every year. In 1967 the World Health Organisation (WHO) launched its plan to eradicate the disease and the global eradication of smallpox was certified by the World Health Assembly in 1980.

In Mauritius, cases of small pox were reported as far back as 1771. But the first major epidemic occurred in June 1792, when a slave ship from South India reached Port Louis with smallpox on board. The disease spread rapidly among the population, amidst heated debate over the practice of inoculation. Some slave owners asserted their right to inoculate their slaves, while others were vehemently against this practice because of the possibility of the inoculated person developing a severe infection and transmitting smallpox to others. Megan Vaughan of Nuffield College Oxford writing on Social History of Medicine has made the following observations on the attitude adopted by the colonists "Eighteenth-century colonial medicine was largely geared to keeping the bodies of slaves and workers productive and useful, but formal medicine never had a monopoly. Slaves on Isle de France brought with them a rich array of medical beliefs and practices from Africa, India, and Madagascar. We have little direct historical evidence for these, but we do know that many slaves came from areas in which forms of smallpox inoculation were known and practised."

By September 1792, the death toll by the smallpox epidemic had risen to 4,000 in a total population of 98, 000. The authorities were alarmed with this turn of events and decided for the inoculation of all the slaves. By January 1793, the epidemic was finally brought under control.

In addition, two other severe smallpox epidemics occurred in the country. In 1856, several immigrants' ships arrived from India with smallpox on board. Eight coolie ships had to be put on quarantine. At that time Mauritius was already under the grip of the second great cholera epidemic. The quarantine station was overcrowded and the Flat Island as well as Gabriel Island had to be requisitioned for quarantine purposes. The vaccine against smallpox was introduced in Mauritius in 1801.

The other epidemic came to Mauritius in 1891, by a ship coming through Reunion Island with smallpox on board. Some important factors and practices were responsible for furthering the spread of the disease - the lack of vaccine in the Island at the outbreak, the ignorance and the superstitions of the natives, and the wakes-that is the custom of watching the dead before funeral. Numerous persons were infected during the epidemics and many developed the disease. But mortality was not heavy because the authorities had recourse to vaccination which was made compulsory. The last indigenous case was reported in 1913. However, vaccination against small pox was maintained until 1981, when it was stopped after the global eradication was certified by the World Health Organisation and subsequently endorsed by the World Health Assembly in May 1980.

## 2.3 Cholera

### Brief History

Cholera is an acute intestinal infection, caused by ingestion of contaminated food and water with *Bacterium Vibrio Cholerae*. Transmission via direct person to person contact is rare. The incubation period varies from less than one day to 5 days.

*Cholera Vibrio* is transmitted via the faecal-oral route. When swallowed it grows in the intestines and produces a poison called enterotoxine that causes profuse, painless, watery diarrhoea leading quickly to severe dehydration and death, in the absence of prompt treatment. However, most *Vibrio Cholerae* infections are asymptomatic. An estimated 5% of infected persons will develop *Cholerae Gravis*.

Worldwide, seven *cholera pandemics* have occurred since 1817. The first six occurred between 1817 and 1923. All these pandemics originated in Asia and subsequently spread to Europe and the Americas. The causative agent, *Vibrio Cholerae* was identified in 1883 by Robert Koch.

*Modern methods of treatment and control are:*

*(a) Curative measures.*

- Hydration to replenish fluid loss caused by diarrhoea and vomiting. Intravenous fluid is a life saving procedure.
- Pharmacology plays a secondary role in the management of cholera. However, treatment with an antibiotic to which the *Vibrio Cholerae* is susceptible, diminishes the duration and volume of fluid loss and thus hastens clearance of organisms from stool.

*(b) Preventive measures*

- Consume boiled water, and hot meals.
- Education in environmental control is critical for the prevention of cholera. The source of *Vibrio Cholera* is human excrement and the most common vehicle of infection is water. Environmental control must focus on keeping these elements apart.
- Public health planning and engineering of water conservation and sewage disposal.

*(c) Prophylactic measures*

- Vaccines prepared from either attenuated or killed *Vibrio Cholera* are available in the market, for protection against cholera. However, vaccination provides protection only for a limited period.

### Cholera in Mauritius

Six cholera epidemics visited Mauritius in the years 1775, 1819, 1854, 1856, 1859 and 1862. During eighteenth and early nineteenth centuries the health professionals had no notion about the real cause of the disease. Some blamed the atmospheric conditions, others even thought of occult forces. One medical report on cholera ends with these words “The disease is of so mysterious a nature as to be beyond the search of human investigation that rests with the Divinity alone.”

Two of these epidemics were particularly virulent. The 1819 epidemic killed more than 2,000 people. There was little or no understanding of the disease among the people and the health workers. Ignorance resulted into panic and disarray in the population. The 1854 epidemic raged over the Island with an extreme violence, killing more than 12, 000 people in a population of 181, 000. The population was at a loss to comprehend what was happening. There was despair and

desolation everywhere. Two eminent personalities participated actively in bringing support and assistance to the victims of cholera. They were Dr. Edouard

Brown Sequard, famous physician who later became a member of “College de France”, and Father Jacques Désiré Laval, Catholic Missionary who devoted his life, to the welfare of the poor and the destitute.

However, Doctors were able to trace outbreaks of cholera epidemics with the arrival of Coolie Ships from India. It was observed that the epidemic was occurring during the hot season, which coincided with the intensification of cholera in India. The infested ships were put on quarantine at the mouth of Grand River North-West. But quite often there were infringement of quarantine laws, as local people used to communicate with those on board the ship, thus contributing to the spread of the germs inland. As from 1862 the quarantine laws were tightened and observed rigorously.

It is significant that some pertinent observations were made in medical reports on the cholera epidemics. It was observed that the invasion by cholera was mild in the well-watered district of Moka, which had streams with swift course to the sea. It is also reported that the fatal power of the epidemic did not affect persons who lived on Montagne Chamarel situated 1000 feet above sea level and rather isolated from the populous areas. Another observation concerns the Chinese population of the island, who suffered the least form cholera epidemics because they never drank any liquid except tea, infused in hot water.

### **Ancestral Remedies**

The medical profession modestly admitted that, being uncertain of the actual cause of the disease, they could only combat the symptoms. Their remedies consisted of:

- (a) Purgatives were used ‘to drive out the vitiated contents of the bowels’ which contained the cholera poison.
- (b) Emetics and fluids were administered to assist Nature in getting rid of the poison.
- (c) Opium was given to soothe the abdominal cramps and check excessive evacuation.

## **2.4 Malaria**

Malaria is an infection caused by plasmodium parasites that are transmitted to people through the bites of infected anopheles mosquitoes, called Malaria vectors, which bite mainly between dusk and dawn. Four species of plasmodium parasites, vivax, ovale, falciparum and Malariae - can infect humans and cause Malaria. Vivax and falciparum Malaria are the most common and falciparum is the most deadly. In 2008 around, 247 million cases were reported worldwide and nearly one million deaths mostly among children in Africa, where a child dies every 45 seconds of Malaria. It is an acute febrile illness. Symptoms appear between 10 to 15 days after the infective mosquito bite, with fever, headache, chills, and vomiting. If not treated within 24 hours, the falciparum Malaria can progress into severe illness, often leading to death.

In 1880, Alphonse Laveran identified the causative agent of Malaria in red blood cells of Malaria patients. In 1885, Ronald Ross discovered that Malaria was transmitted by Anopheles mosquitoes. It is estimated that the burden of disease caused by Malaria can result into significant economic losses, leading to a decrease of the gross domestic product up to 1.3% in countries with high levels of transmission.

The health costs of Malaria include expenditures on treatment as well as prevention. According to the World Health Organisation (WHO), in countries with high levels of transmission, the disease accounts for up to 40% of public health expenditure. It is also observed that Malaria disproportionately affect poor people who have limited access to health care or cannot afford treatment, thus trapping entire families in a downward spiral of poverty.

Malaria was unknown in Mauritius during French occupation (1715-1810). Significant outbreaks of Malaria occurred in 1856 - 1859, 1862 and 1865. But the first serious epidemic struck the Island in 1867. It was a major calamity causing 40, 000 deaths in a population of 333, 000. Ronald Ross qualified the epidemic as the greatest disaster in Mauritian history. Thereafter, Malaria remained endemic in Mauritius until 1950's. The result was a serious source of wastage in terms of manpower and money, through deaths and reduction of population; loss of manual labour in plantations, factories, farms etc; sickness among labourers and officers, incapacitation and deaths among higher officials and soldiers.

In 1907, Sir Ronald Ross, Nobel Laureate and Professor of tropical Medicine, University of Liverpool, was invited to visit Mauritius and report on measures for the prevention of Malaria in the colony. His recommendations focussed on 3 types of activities:

- (a) Treatment of the sick with anti-Malarials
- (b) House protection to exclude Anopheles mosquitoes, through wire netting and other means.
- (c) Mosquito reduction through destruction of breeding sites and drainage of marches.

A Malaria unit was created to coordinate all works connected with Malaria. The control programme advocated by Ross could not be carried out totally, but the incidence of Malaria decreased greatly. In 1948, Mauritius launched a three-year project with the view to eradicate Malaria by residual spraying of houses with D.D.T and hexachlorocyclohexane. There was a remarkable decrease in the incidence of the disease but one could not talk of eradication because, Malaria was still present, although at a much reduced rate. In 87 years, from 1865 to 1952 Malaria had already killed 413, 000 Mauritians.

The final assault was made in 1960. A motivated and dedicated staff with an excellent organisation, supported by an active participation of the community, succeeded in producing rapid and excellent results. The strategy consisted of surveillance and treatment of all detected cases with spraying of the foci. The last indigenous case was found in 1965. In 1972, a sero-epidemiological survey confirmed the absence of local Malaria transmission since 1965. The World Health Organisation (WHO) certified that the eradication of Malaria from Mauritius was an established fact. This was a remarkable public health achievement.

However, Malaria came back to Mauritius in 1975, after devastation caused by cyclone Gervaise, which created abundant new breeding places for mosquitoes. An outbreak of plasmodium vivax Malaria occurred in Roche Bois where immigrant workers from Africa and India were staying. They had come to support post-cyclonic cleanup and reconstruction works. Furthermore, the island was hit by a series of cyclone between 1979 and 1983. Malaria transmission peaked in 1982 with 623 indigenous cases. The technical support of the WHO was sought to launch the Malaria elimination programme. Mauritius was determined to restore the country's Malaria free status. The campaign was a combination of indoor residual spraying, destruction of all mosquito breeding places and robust surveillance. It succeeded in reducing the number of locally transmitted cases to 3 by 1989. The last indigenous case of Malaria in Mauritius was detected in 1997. But Mauritius is situated in an unstable Malaria zone and Malaria vector is present in the island. The risks of re-introduction of the disease are real. Hence very strict measures are taken to prevent a resurgence of Malaria. These measures include:

- (a) Surveillance - Ensuring that all aircrafts coming from malarious countries have disinfection carried out in conformity with international health regulations.
- (b) Active case findings - all passengers from malarious countries are visited by health surveillance officers.
- (c) Residual spraying - routine spraying of port and airport areas at six monthly interval
- (d) Larviciding - potential mosquito breeding grounds are treated with insecticides at regular intervals.

- (e) Malaria prophylaxis - drugs for Malaria prophylaxis are dispensed free of charge to travellers proceeding to malarious countries.
- (f) All Malaria cases are treated free of charge and followed up for a period ranging 3 to 12 months.

## 2.5 Plague

Plague is a deadly infectious disease caused by bacterium which is transmitted between animals and humans by the bite of infected rat fleas, which deposit the bacillus from its saliva, excreta and urine into the skin wound. The incubation period is 3 to 7 days. Patients experience a sudden onset of fever, chills, head and body aches and weakness with vomiting and nausea. Clinically the disease manifests itself in 3 forms - bubolic, septicaemic and pneumonic - depending on the route of infection. Plague can be a very severe disease with a case fatality ratio of 30 % to 60 % if left untreated.

### Brief History

Plague is believed to have caused more fear and terror than any other infectious disease in history. It has been responsible for multiple epidemics and at least three great pandemics:

- The first pandemic originated from the Middle-East during the 5<sup>th</sup> and 6<sup>th</sup> centuries. It spread to the Eastern Mediterranean region, killing almost half the population in these areas.
- The second pandemic struck Europe between 8<sup>th</sup> and 14<sup>th</sup> centuries, destroying nearly 40% of Europe's population - 25 million people were killed out of a population of 125 million.
- The third pandemic began in China in 1815 and spread to all inhabited continents with devastating results.

During the third pandemic, researchers succeeded in identifying the plague vector and the plague bacterium. In 1894 Alexandre Yersin isolated the germ and developed a treatment, an antiserum to combat the disease. He was the first to suggest that fleas and rats may have been responsible for the spread of the disease. Subsequently the bacillus was named *Yersinia pestis* in his memory.

### Plague in Mauritius

According to reports plague reached Port Louis in April 1890 with passengers coming from Madagascar, but the major epidemic outbreak occurred in January 1899, in the region of Plaine Verte at Calicut Street. The disease spread rapidly throughout the Island killing 1,147 persons. From then on, Plague became endemic in Mauritius until 1927, when it disappeared from the Island. It is estimated that a total of 7900 people died of plague in Mauritius between 1899 and 1927. As the cane fields were infested with rats, the authorities imported mongoose to eliminate the rat population. However when the rat population was controlled, the mongooses started eating the sugarcane and had to be eliminated in their turn.

Statistical incidence of death and disease of plague patients indicates that out of five patients four died as shown in table below:-

Year	No. of plague patients	No. of Deaths	Mortality Rate
1899	1416	1147	78.9%
1900	796	593	74.5%
1901	1093	805	73.6%
1902	505	386	71.3%
1903	1305	1035	74.2%
1904	568	449	79.0%
1905	308	251	81.5%

#### *Control measures undertaken*

- Vaccination of persons conducting anti-plague activities.
- Fumigation of contaminated houses.
- Destruction of huts inhabited by plague patients.
- Eradication of rat population
- Treatment of the sick with antibiotics - streptomycin or tetracycline.

## 2.6 Diphtheria

Diphtheria is an infectious disease. The causative agent is *Corynebacterium* also known as Loeffler's Bacillus. It spreads from person to person by respiratory droplets from the throat through coughing and sneezing. The incubation period is 2 to 5 days. The majority of victims are children below the age of 10. The symptoms range from moderate sore throat to life threatening diphtheria of the larynx/ respiratory tract. The disease can be fatal. Between 5% to 10% of diphtheria patients die even if properly treated. Untreated patients remain infectious up to 2-3 weeks. The treatment consists in the administration of diphtheria antitoxine and antibiotics. The effective control of diphtheria in the population is carried out by mass immunization.

Diphtheria was present in Mauritius since the earliest period of its history, with sporadic outbreaks. However in 1878 the disease started in Moka District and spread rapidly to Port-Louis and to the Southern Region. During this first epidemic the cause of the disease and its treatment were not known. Consequently no skill could rescue the victims from the claws of death.

After 1878 there was no other epidemic of diphtheria until 1901, which witnessed a mild and easily controlled episode. This was followed by an outbreak in 1907 that lasted for 3 years. By this time Loeffler's Bacillus was well-known and antidiphtheria serum was available. The Government had also opened a Medical Laboratory at St Pierre under the charge of a bacteriologist. Although this epidemic was more severe and extensive than that of 1878, injection of antidiphtheria serum to all the affected and suspect cases became a very effective weapon against the disease and a fatal issue was very rare.

As from 1961, Mauritius is protected against diphtheria, through a vaccination programme that also includes immunization against pertussis, tetanus and poliomyelitis.

## 2.7 Dengue Fever

Dengue fever also called Breakbone fever occurs everywhere in tropical and sub-tropical countries especially along the seaside. It is caused by dengue viruses that are transmitted to humans through the bites of infective female day-biting *Aedes* mosquitoes. *Aedes albopictus* is the local vector. There are four serotypes of dengue viruses. Infection in humans by one serotype produces lifelong immunity against reinfection by the same serotype, but only temporary and partial protection against other serotypes. The incubation period is 2 to 5 days. In some countries dengue fever recurs only after 20 to 30 years interval, most probably because in these cases the immunity produced is of long duration.

The disease is endemic in more than hundred countries. The World Health Organisation estimates 50 million dengue infections worldwide every year. Dengue fever is a severe flu-like illness that affects infants, young children and adults, but seldom causes death. The clinical feature is either a mild fever or an incapacitating disease with high fever, severe headache, retro-orbital pain, muscular and joint pains and rash over face, neck and extremities and haemorrhagic manifestation in very serious cases.

There is no specific treatment for dengue fever. Destruction of mosquito hiding places and protection against mosquito bites are essential to control the spread of the disease.

In Mauritius, the dengue epidemic first occurred in the summer of 1873. It lasted only 6 to 8 weeks, and was not fatal. The disease came with the coolies from India. It started in Port Louis and quickly spread to all the districts. Everybody, in every house was ill. The daily work in the country came to a standstill whilst the disease lasted.

The second epidemic occurred in June 2009 when around 250 cases were recorded. Once introduced in the country, dengue fever is very difficult to eradicate and tends to recur periodically. Furthermore, there are many high risk environmental pockets in the island, favouring the spread of imported viruses of the disease in the local mosquito population. In addition, Mauritius has extensive trade and travel links to dengue endemic zones. Hence, there is a real need for a plan to prevent and control dengue fever.

The surveillance tasks for inter-epidemic period, as established by health authorities include:

- (a) Situation monitoring through active case detection of all arrivals from dengue endemic countries.
- (b) Passive detection in the community.
- (c) Spraying operations for adult mosquito control.
- (d) Larviciding for source reduction.

### 3 PRE-INDEPENDENCE PERIOD (1917-1968)

In 1917, the population of Mauritius was around 370 000. Slavery was already abolished in 1835 and the indentured labour ended in 1916. The country was under British colonial rule since 1810. Mauritius with its dependencies formed part of the British Empire. The livelihood of its inhabitants was dependent on export of sugar and the British imperial economic policy.

Mauritius was on the move from oligarchy to democracy. But the health situation was catastrophic. In a report to the Secretary of State for the colonies on medical and sanitary matters in Mauritius, Dr. A. Balfour wrote “its general unhealthiness had reached a degree unparalleled in any similar tropical dependency of the empire.” He added that Port Louis was regarded as the “filthiest port in the world” and concluded “if only Mauritius were freed from the diseases, which render it notoriously unhealthy its future might be assured”. Furthermore, inside the country there were glaring disparities between what was known as urban and rural areas. This is spelt out in very clear terms by Dr. Tekman Rajkoomar in his book entitled “Medical Services in Mauritius” under the heading “The two faces of Mauritius”, it reads as follows:-

“In the towns of Plaines Wilhems and Port-Louis, the educated and well-to-do people enjoyed all the amenities of city life: electricity and telephone, good water supply, schools and colleges, tarred roads, fresh fruit and vegetables in the market, good hotels and restaurants. There were also many forms of entertainment like cinemas and theatres as well as facilities for sports.

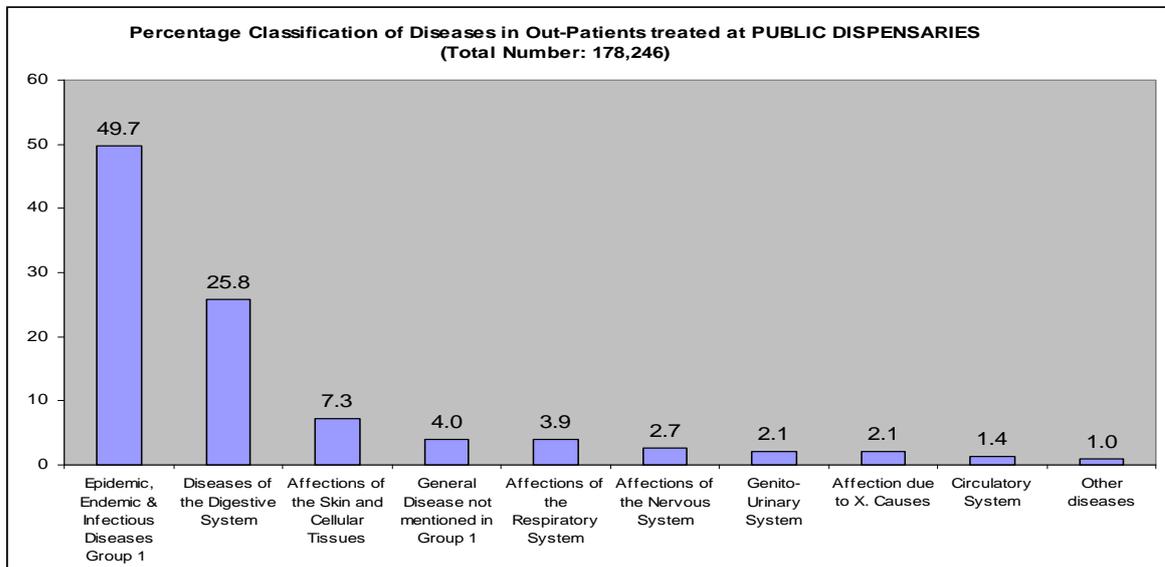

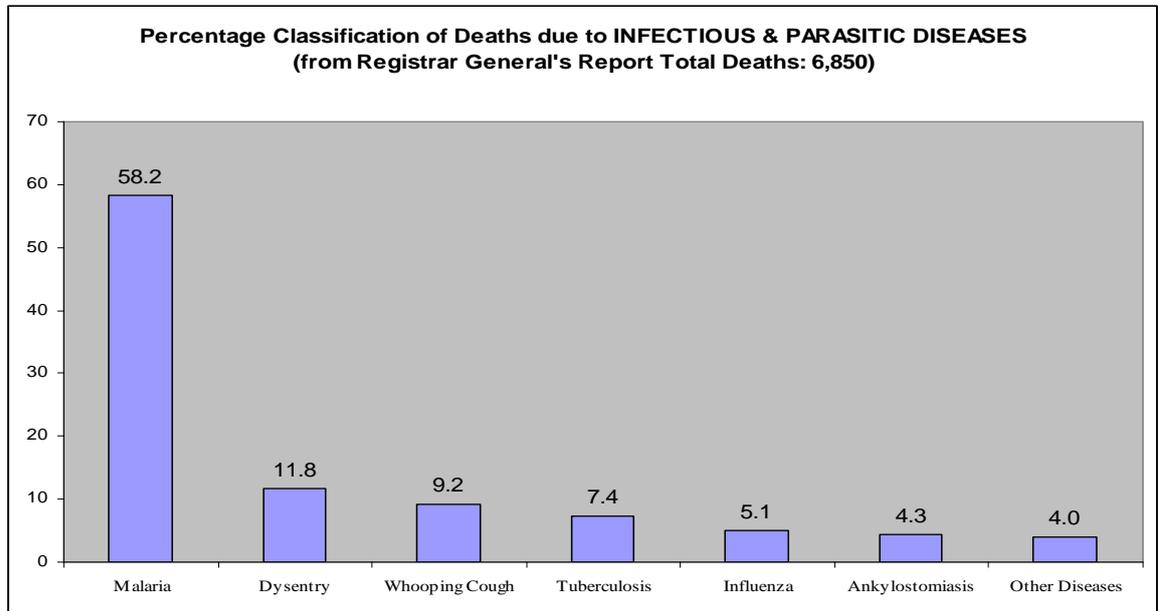

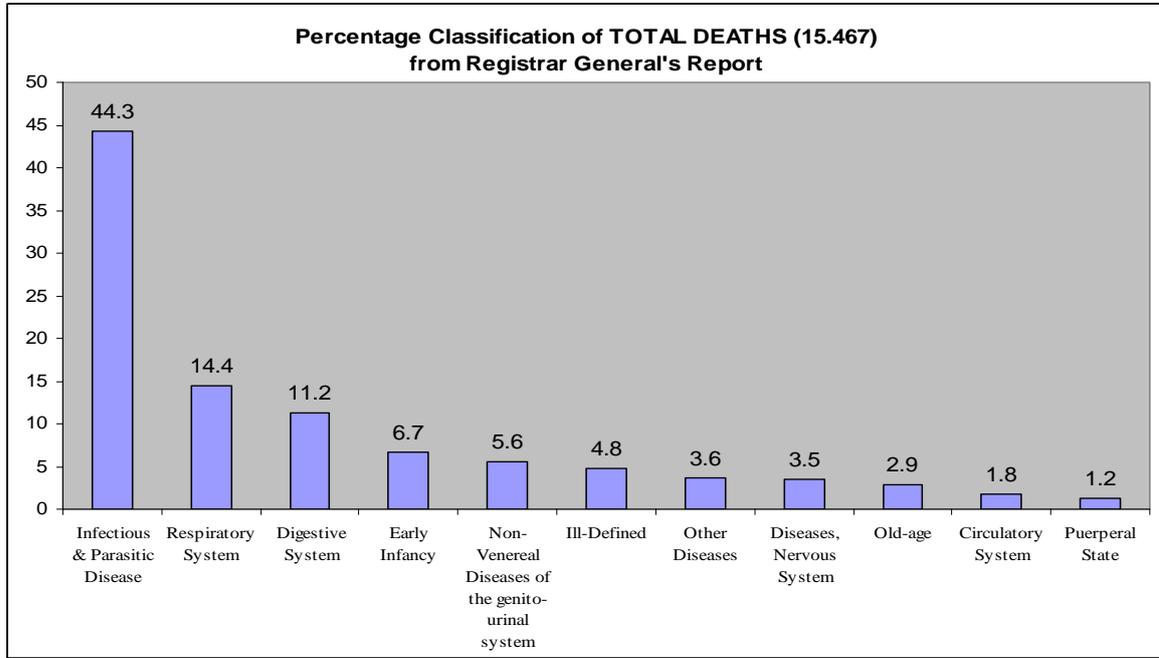

By contrast, the people in the rural areas were left to themselves. They walked bare footed on muddy roads and rarely attended the few primary schools scattered far and wide in the district areas. Little wonder that nobody could reach the colleges which were the exclusive preserve of the privileged few. Ignorance, poverty and disease created a vicious circle from which there was no escape. Half the children died before reaching the age of ten. Mothers died in their teens or early twenties, after giving birth to two or three children, from “maternal exhaustion syndrome”, a condition of extreme anaemia and malnutrition. Children, who survived, were pale specimens of humanity. The life expectancy was 32 for males and 34 for females.”

The population in 1921 and 1962 censuses were 376,485 and 681,619 respectively. Selected vital statistics (Table 7) indicates the rapid population growth as from the fifties.

Year	Crude Birth Rate	Crude Death Rate	Rate of Natural Increase	Infant Mortality Rate
1921 - 1925 (Average)	39.0	31.0	8.0	141.8
1936 - 40 (Average)	33.9	27.7	6.2	155.6
1945	38.5	36.1	2.4	188.0
1950	49.7	13.9	35.8	76.3
1955	41.8	12.9	28.9	67.2
1965	35.4	8.6	26.8	64.1

Morbidity and mortality statistics are useful for the study of the health status of a population and its evolution overtime. Figure 5, borrowed from the Annual Report of 1931 of the health department, shows the causes of death in the Island and also the principal causes of attendances at the dispensers. It confirms the predominance of infections and parasitic diseases during pre-independence period. The disease load in the population is not fully reflected in the official health services reports, because many episodes of illnesses were dealt with at domiciliary level by the application of traditional methods or through the intervention of medicine-men, - (the dais, the healers, the priests and the sorcerers also called “Ojhas” - although the effectiveness of interventions by “Ojhas” is questionable). The major problems faced by the health authorities during this period were infectious and parasitic diseases; Provision of safe water supply to the population; Malnutrition and anaemia; Impending population explosion.

Figure 5:

### 3.1 Spanish Flu

This was the deadliest epidemic that hit humanity in the 20<sup>th</sup> century, killing nearly 80 million people world-wide. It struck Mauritius in May 1919 at a time when the Island was confronted with poverty, unemployment, Malaria, bacillary dysentery and pulmonary tuberculosis.

Being of viral origin with an incubation period of 8 days, it spread like wild fire affecting more than one third of the population. The clinical manifestations were fever, irritating cough and extreme weakness, causing all family members to be bedridden. No effective treatment, neither vaccine nor antibiotic was available. People died by the thousands and had to be buried in common graves. The epidemic lasted for 6 weeks and had killed 11, 194 victims, in a population of around 365, 000.

### 3.2 Pulmonary Tuberculosis (TB)

Tuberculosis (TB) is a contagious disease caused by mycobacterium tuberculosis. Poverty, overcrowding, poor living conditions and under nutrition contribute to the development and spread of pulmonary TB. It was a dreadful and fatal disease until late 1940's, when effective anti-tuberculosis treatment was introduced, with the advent of Streptomycin, P.A.S (para-aminosalicylic acid) and isoniazid. The following table indicates death per 100,000 population from pulmonary tuberculosis for the period 1941 - 1949.

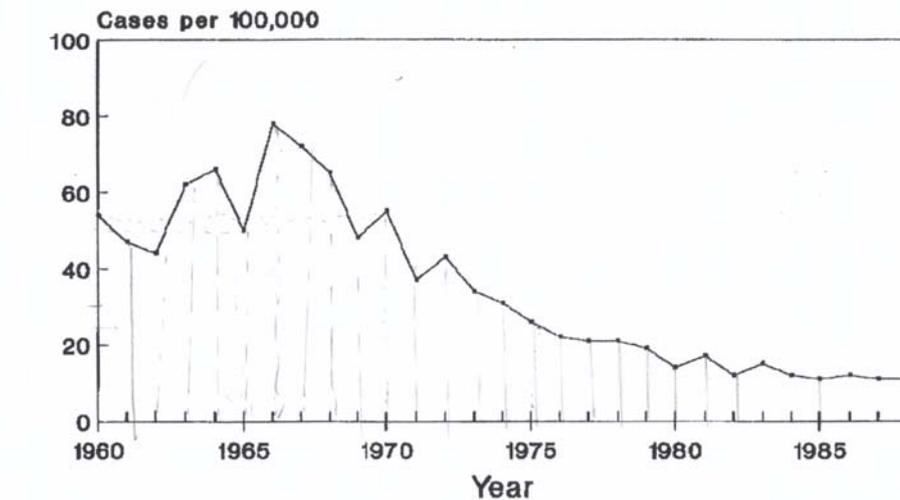

Years	1941	1942	1943	1944	1945	1945	1946	1947	1948	1949
Death Per 100,000 population	50.83	47.06	51.67	51.49	55.24	45.49	38.39	60.20	65.24	50.78

In 1949, tuberculosis was included in the list of notifiable diseases and compulsory medical certification of deaths was extended to the entire districts of Port Louis, Moka and Plaine Wilhems. These measures provided some precise information on the magnitude and nature of problems caused by tuberculosis.

A World Health Organisation (WHO) assisted tuberculosis project became operational in 1965. Curative as well as preventive activities including health education, case finding and B.C.G vaccination were developed. An assessment of this programme, carried out in August 1989 by a WHO team revealed the following:-

- (a) From 1960 to mid 60s the incidence of notified pulmonary TB increased from 45 - 50 to 70 - 75 per 100, 000 population.
- (b) From mid 60's to early 80's, the notified incidence decreased to 15 - 20 per 100, 000.
- (c) The conclusion was that the magnitude of TB problem had decreased to 1/5 in 15 years, as shown in Figure 6. This was described as a drastic decrease, due to effective implementation of TB control measures combined with socio-economic development.

Figure 6:  
Incidence of pulmonary tuberculosis Mauritius, 1960-1988

Source: Mauritius MOH

The TB situation has continued to improve and the incidence of pulmonary tuberculosis for period 2000 - 2010, has been brought down to 9 - 11 per 100 000 population.

### 3.3 Poliomyelitis

Poliomyelitis is a viral disease caused by an enterovirus known as poliovirus. It affects mainly children and adolescents. One, in two hundred infections, leads to irreversible paralysis. 5 to 10% of those paralysed would die, when their breathing muscles become immobilised. The virus enters the body through the mouth and multiplies in the intestine. It invades the nervous system and can cause paralysis in a matter of hours.

The clinical features usually appear 7 - 10 days after infection. They include fatigue, headache, vomiting, stiffness in neck and pain in the limbs. Some cases show signs of meningeal irritation which end up with paralysis of a group of muscles. Death is usually due to paralysis of respiratory muscles.

There is no cure for Poliomyelitis, but it leaves behind a trail of paralysed victims who will need lifelong rehabilitative support. However, Poliomyelitis can be prevented. Vaccination can protect a child for life. The first vaccine, discovered in 1955 by Dr. Jonas Salk, was an inactivated polio virus vaccine that is administered by injection. Later a live polio vaccine, (Sabin vaccine) taken orally was available.

In February 1945, Mauritius witnessed its first polio epidemic. It was a sudden outbreak of acute Poliomyelitis. The first cases were notified from Rose-Hill. It spread quickly to other districts. The peak of the epidemic was reached in the third week of March 1945. The total number of cases notified was 1,103. There were 80 deaths.

Assistance for the rehabilitation of polio cripples was sought from United Kingdom. A hospital was established at Floréal to cater specifically for polio cases. Professor Seddon arrived in April 1945 to take clinical charge of Polio patients. In May 1946, he was succeeded by Dr. M. Fitton.

An orthopaedic workshop was set-up to manufacture splints, artificial limbs and other aids for the cripples.

An epidemiological investigation was also carried out. It concluded that the epidemic was an outbreak of an endemic disease. Malnutrition, overcrowding and an increased prevalence of intestinal disease were present all over the Island. The infection spread mainly by means of healthy carriers. It was also spread from faeces by flies or by contaminated food.

A second out-break of polio epidemic occurred in June 1959. It lasted 14 weeks and left 99 paralysed victims. A Sabin vaccination campaign was launched in August 1959. 195 000 children aged between 6 months and 10 years were vaccinated, out of a total of 203 000 in this age group. This marked the beginning of polio eradication programme in Mauritius.

### 3.4 Schistosomiasis

Schistosomiasis is a parasitic disease. It is also known as Bilharziasis, in honour of Theodore Bilharz, who in 1851 discovered the causative agent of the disease in Egypt. There are three different forms of the disease- urinary, intestinal and vascular.

Urinary schistosomiasis must have existed in Mauritius before 1810. In a Study entitled "Topographie médicale de l'Isle de France" conducted by Chapotin in 1812, mention is made of the presence of symptoms under the name "pissement de sang" (pissing blood). But the first case reported in Mauritius was in 1890. In 1933 it was established that schistosoma haematobium, a Trematode worm was the parasite that caused the disease and the snail Bulinus Cernicus was the intermediate host.

The life circle of this parasite involves two hosts. Eggs released in fresh water, hatch into a miracidium which penetrates and infect the snail (Bulinus Cernicus) present in the water. Inside the snail the miracidium multiplies asexually producing cercariae, which are able to enter its primary host via pores in the skin and migrate to the organs like the gut, spleen and liver, where it matures into a sexually reproductive adult. The mature form undergoes a second migration and lays eggs in the walls of blood vessels of the bladder. The eggs are excreted in urine and released into water containing the susceptible snail and thus the cycle is propagated. Mature parasites have a life span of up to 20 years, during which period many batches of eggs may be laid.

Study of the intermediate host suggests that Bulinus Cernicus is unique to the island and appeared in Mauritius millions of years ago. It evolved slowly in its present form. The parasite (schistosoma haematobium) was introduced in Mauritius in the 18<sup>th</sup> Century by slaves coming from Africa and Madagascar.

Human contamination occurs through bathing and washing clothes in rivers, and cultivation of watercress. Five yearly statistics of attendances at dispensaries and hospital outpatients are given below to show the evolution of Schistosomiasis in Mauritius from 1928 to 1962.

Period	Attendances	Number of cases diagnosed	Number of cases per 1000 attendances
1928 - 1932	685,920	396	0.58
1933 - 1937	1,319,225	1,213	0.92
1938 - 1942	1,741,663	1,213	0.70
1943 - 1947	1,484,108	1,902	1.28
1948 - 1952	1,784,009	1,991	1.12
1953 - 1957	2,372,361	1,949	0.82
1958 - 1962	5,029,697	2,359	0.47

From 1960's onwards the prevalence of the disease continued its downward trend. By 1975 Schistosomiasis was limited to 3 districts - Pamplemousses, Port Louis and Grand Port. It was gradually reduced because of outpatient treatment, improvement of water supplies and sanitation including environmental management initiated with Malaria control activities. By 1986, no patient was admitted to hospital with a primary diagnosis of Schistosomiasis and Mauritius was heading towards elimination status.

### 3.5 Hookworm

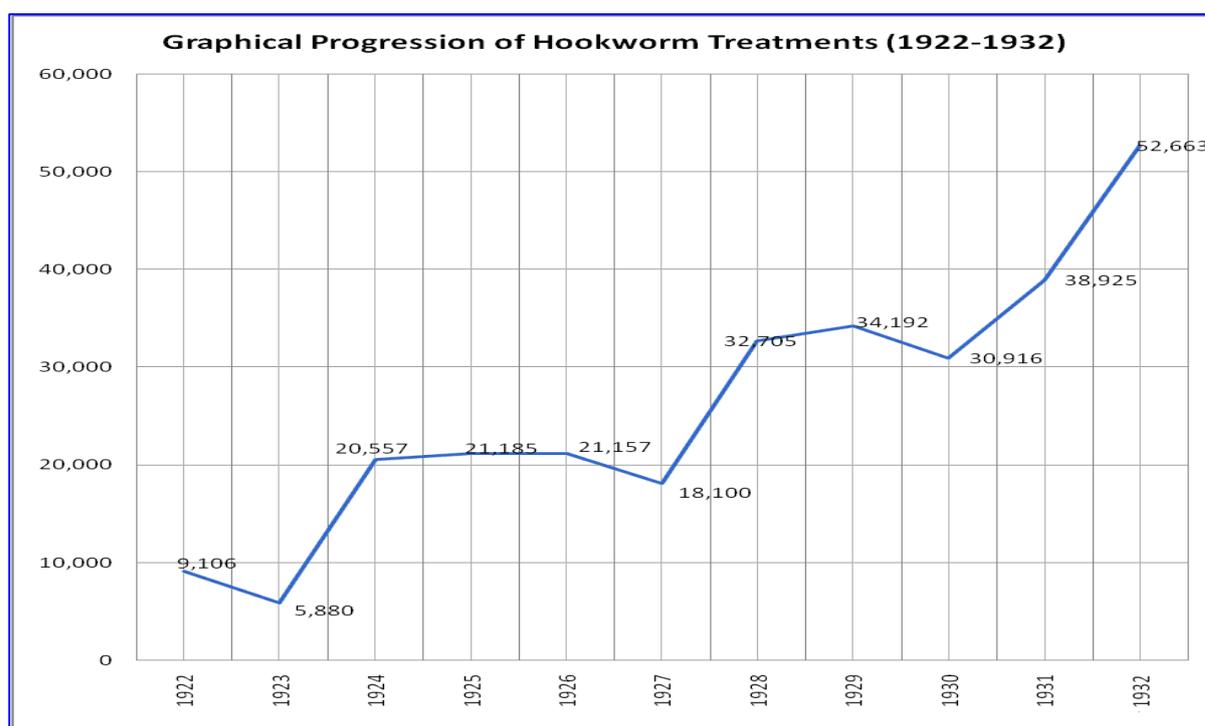

Hookworm infection had become a major sanitary problem. The warm climate, poor sanitation, soil pollution with human excreta and barefooted population, were factors that constantly exposed people to re-infection by *Ancylostoma duodenale* also known as roundworm.

The life circle of the parasite starts with the excretion of eggs in the stools of infected persons. The eggs hatch in the soil and develop into larvae that penetrate the skin of persons walking barefoot on soil contaminated by human faeces.

The infection was so widespread and important that in 1922, the authorities had to set-up a Hookworm Branch under the charge of a medical officer. In 1932 the estimated rate of infection among labouring classes, who were all barefooted, was around 85%. Hookworm infestation was responsible for blood loss, severe anaemia and slow growth among the victims.

In 1934, the number of cases treated in dispensaries and hospitals was 22,587 and the number of deaths due to ankylostomiasis was 108 in a population of 391 807. The figure 7, borrowed from the annual report of the Department of Health indicates hookworm treatments in the Island.

Figure 7:

### 3.6 Filariasis

Filariasis is a chronic disease due to threadworms that obstruct lymphatic vessels causing enormous swelling of tissues (elephantiasis) which affect the scrotum and legs.

The life circle of the parasite starts with the adult form living in the lymphatic organs, circulating system and tissues of vertebrates, including men. The female adult produces larvae called microfilariae which reach the peripheral blood or lymphatic vessels, from where they are ingested by a blood sucking mosquito (intermediate host) which deposits the filariasis on the skin of the host.

Lymphatic filariasis was introduced in Mauritius on several occasions during the past three centuries, reflecting the waves of human migration to the Island. A study conducted by S. Gebert of the Entomological Laboratory of the Department of Health, concluded that filariasis was present all over the Island, although the infection was very low in some districts but alarmingly high in the districts of Black River and Port Louis, where the rate of infection varied between 21% and 28%. The study also confirmed that mosquitoes were the main vectors, with *Culex fatigans* being the more important one.

The incidence of the disease began to decline after 1950 - 1951, which coincided with wide scale D.D.T spraying for Malaria control. In fact filariasis disappeared from Mauritius without any specific intervention. It is assumed that the combined action of mosquito control activities against Malaria and economic development was responsible for the interruption of filariasis transmission.

### 3.7 Typhoid

Typhoid fever is caused by a bacteria known as *Salmonella Typhi*, a highly virulent and invasive enteric pathogen, identified in 1881 by Eberth, German bacteriologist. Only humans are affected by ingestion of food and water contaminated with excreta from carriers of typhoid bacteria. This infection is closely associated with poor food hygiene and inadequate sanitation.

The incubation period is between 5 to 21 days after infection. The symptoms include fatigue, headache, abdominal pain and fever. A furred and coated tongue is typical of typhoid. Occasionally intestinal perforation and haemorrhage may occur. The diagnosis is confirmed by the presence of typhoid bacteria in urine, stools and blood. Usually typhoid fever results in lifelong immunity.

Typhoid like disease existed in Mauritius right from the time when the first settlers came to the Island. The disease would last for weeks and even months. The fatality rate was high and almost half of the victims died, until the discovery of chloramphenicol, which was a very effective antibiotic in controlling the disease.

In February 1956 a small epidemic of typhoid broke out in Grand Port district. 50 cases were notified. Health education, sanitation campaign, mass inoculation with TAB vaccine and treatment with Chloromycetin succeeded in controlling the situation within one month.

Humans are the only source of infection of typhoid fever. The transmission of *Salmonella Typhi* is by faecal-oral route. Consequently, any programme aimed at preventing the development of typhoid in a population, must include measures to improve sanitation and food hygiene, which are closely linked to socio-economic development.

### 3.8 Scabies

Scabies is a parasitic skin infection caused by mites. It is a highly communicable disease and it spreads easily from person to person on physical contact, often affecting an entire household.

The parts commonly affected are hands, in between fingers, the wrists, the axillae, beneath breasts of women, genitalia and inner aspects of the thighs. The dimension of the problem can be measured from statistics on scabies, borrowed from the annual report of the department of health.

Year	Population	Attendances at dispensaries and hospitals outpatients	Admission to hospitals (number)
1932	388,400	6257	399
1933	390,497	8178	440
1934	393,733	6446	331

Scabies had become a serious problem and a nuisance causing suffering especially to children and embarrassment to other members of the family because of overcrowding. It was also an indication of poor living conditions.

### 3.9 Malnutrition and Anaemia

In the mid 50's malnutrition and under nourishment became a common cause of morbidity and mortality, particularly amongst infants and school children. Anaemia was rife as evidenced in the following table:-

Year	New cases (in and out-patients)	Rate per 1000 population
1956	36,074	63.4
1957	40,063	68.2
1958	45,873	76.0
1959	45,484	73.2
1960	36,456	57.1
1961	34,899	53.2
1962	29,895	43.9
1963	40,407	57.6
1964	38,392	53.2
1965	49,450	66.7

This situation was a cause for serious concern to the health authorities. From August 1956 to December 1959, a WHO team headed by Stott carried out an extensive dietary survey. It was found that iron deficiency anaemia was wide-spread in the Island, particularly amongst women and children. The causative factors were identified as being: low dietary iron, blood loss through hookworm infestation, cooking losses of iron and iron requirements for adolescent, menstruation, pregnancy and lactation.

Measures recommended to combat anaemia include iron therapy and control of parasitic infections, especially hookworm and ascaris infestations.

### 3.10 Measures Taken

The last quarter of this period corresponding to 1950's and 1960's, will be remembered for the bold and scientifically sound health initiatives taken by the health authorities. These initiatives were translated into programmes that proved to be very effective at the community level. These included Malaria control programme, the tuberculosis control programme and the vaccination programme against diphtheria, pertussis, tetanus, poliomyelitis and tuberculosis. In addition an innovative, people centered family planning programme received wide acceptance from the population. The successful implementation of these programmes made Mauritius complete its epidemiological and demographic transition. Furthermore, diseases like amoebiasis, helminthic infections, gastroenteritis and enteric fever were eliminated by public health engineering works that ensured safe disposal of human waste through a sewage system development, and provision of safe water supplies.

## 4. THE POST-INDEPENDENCE PERIOD

Since 1960, Mauritius has developed from a low-income, agriculturally based economy to a middle-income diversified economy with growing industrial, financial and tourist sectors.

The backbone of the Mauritian economy has been sugarcane till the 1980`s. At that period of time the Mauritian economy was very vulnerable to fluctuating climatic conditions such as cyclones and droughts as these lead to a decrease in sugar production and revenue. Therefore the government had to diversify the economy from the mono-crop king sugar. This lead to the emergence of the textile industry in the 1980`s and later on the tourism industry. Today our main source of income comes from the tourism sector followed by the services sector and cane industry.

As the economy evolved, the standard of living has increased quite rapidly. Mauritians started to lead sedentary lifestyles with more frequent use of motor vehicles as means of transportation. Such rapid development has brought new difficulties like lack of proper infrastructure (e.g. Traffic jams) and environmental hazards.

### 4.1 Emergence of Chronic Diseases

Mauritius has also undergone a demographic and an epidemiological transition from communicable to non-communicable diseases over the past few decades. The first half of the century was mostly dominated by infectious diseases (such as Malaria, small pox, cholera, etc) whereas the second part of the century has seen an increase in the number of Non-Communicable diseases *and* ageing of the population. Metabolic syndrome started to appear in the eighties. Nosocomial infections crept in, in the nineties.

### 4.2 Achievements of Independent Mauritius in the Health Sector

Few countries have achieved so much in so short a time. The main achievements of modern Mauritius can be listed as follows:

- 1.The eradication of Malaria (Eradication program started in 1949, as from 1956 no case of death due to Malaria has been reported).
2. The supply of clean pipe water throughout the island.
- 3.The control of population growth.
- 4.The introduction of Family Planning methods has led to planned families (parents were able to better educate their children).
- 5.Improvement of health by an integrated approach of control of Hookworm and Amoebiasis, provision of shoes to school children and boots to labourers and supply of school meals and milk to school children.

6. Regionalisation of Health Services and distribution of resources equitably to all parts of the island.
7. Introduction of specialised care like cardiology services, neurosurgery, dialysis centres and dental care.
8. The increase in the number of doctors and nurses has led to an easily accessible health service.
9. The visits of foreign teams in cardiac surgery, neurosurgery and renal transplant have greatly helped in the training of local doctors and nurses. Today complicated cases are being dealt with by local teams.

### 4.3 Life Expectancy

An increase in life expectancy (see Table 12) leads to a gradual ageing of the population resulting in an insidious development of chronic degenerative diseases.

	1961-1963	1971-1973	1980-1984	1989-1991	1993-1995	1996-1998
Male	58.2	60.5	64.4	65.6	66.4	66.6
Female	61.9	65.9	68	73.4	74.8	74.4

With independence on 12<sup>th</sup> March 1968, Health Services were regionalised, the existing structures improved and new centres built to provide health care to every part of the island.

Two new regional hospitals were built, the S.S.R.N Hospital at Pamplemousses in 1968 and the Jawaharlal Nehru Hospital at Rose Belle in 1990. Many Primary Health Care Centres were opened such as Community Health Centres, Area Health Centres, Dental Clinics, Family Planning Centres, and Mediclinics.

Special operation units like the Cardiac Surgery Centre, the Renal Transplant Unit and the Neurosurgery Unit, all based at SSRNH were commissioned. The setting of those centres marked the beginning of the development of high tech medicine in the country.

### 4.4 Cardiac Centre

In the early 1990s, most of the cardiac patients had to travel abroad for interventions. Therefore such type of treatment was not affordable to poor families. The inauguration of The Cardiac Centre, situated in Pamplemousses in 1999 was a major milestone for the health system of Mauritius. Cases like Cardiac Surgery (adult and paediatric), Angioplasty, Vascular Surgery and Thoracic Surgery are routinely performed at the Centre. All the services provided are free of cost and are accessible to all Mauritians. With the growing years, thanks to the dedication of the medical and paramedical staff, the Cardiac Centre has developed into a Centre of Excellence in the field of cardiac surgery and cardiology both locally and abroad. It also plays an important role in the field of Medical Tourism. Patients from neighbouring islands like Madagascar and Comoros come to the Centre for treatment. The Cardiac Centre is the only ISO Certified health institution of the country. It is also the only Clinic of the island dealing with Paediatric Cardiology.

There have also been few successful missions carried out abroad by a team of doctors and paramedical staff from the Centre, e.g. The first Cardiac Surgery in Madagascar, Botswana and Comoros.

Table 13 gives the statistics on interventions carried out at the Cardiac Centre in the field of Cardiology and Cardiac Surgery in Mauritius

	Year										
	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010
Cardiac Surgery	348	410	383	415	470	510	533	526	457	476	487
Thoracic Surgery	-	-	-	44	81	37	24	9	5	20	21
Neurosurgery	300	314	223	177	234	222	185	255	208	219	146
Vascular Surgery	-	-	-	-	-	104	104	160	172	87	121
Angiography	763	947	959	1392	1257	997	1052	832	782	919	986

PDA closure	-	-	-	-	-	-	1	-	5	4	3
PDA coiling	-	-	-	-	5	-	5	-	10	3	9

#### 4.5 Current Trends

According to available data compiled since 1960, the mortality rate of infectious and parasitic diseases has encountered a considerable decrease. The reasons of this decrease are mostly the anti-Malarial campaign started in the 5<sup>th</sup> decade of the century, improvement in the quality of domestic water supply and easier access to education which led to a rise in the standard of living and quality of life of Mauritians.

On the other hand, this change in lifestyle has also led to greater access to cars and machinery. Mauritians started to lead sedentary lifestyles coupled with more and more day to day stress resulting in a dramatic rise in the mortality rate due to Non-Communicable Diseases such as Diabetes, Hypertension, Heart Diseases and Cerebro-vascular diseases. Leading authors like KIRKLIN have described a phenomenon in developing countries and which is verified in Mauritius, that countries with fast growing economies experience a rise in the prevalence of Non-Communicable diseases coupled with a decrease in the prevalence of infectious diseases as shown at Figure 8.

Figure 8:  
Mortality Rate per 10,000 mid-year population

The first NCD Survey was carried out in 1987. Since then regular surveys at 5-6 years' intervals have been carried out in 1992, 1998, 2004 and 2009. These surveys have documented the prevalence of NCDs. Mortality rates due to NCDs show a five-fold increase in deaths caused by diabetes mellitus, as shown at table 14.

Table 14:  
Death rates due to NCDs

Underlying cause of death	Year						
	1980	1985	1990	1995	2000	2005	2009
Heart Diseases	13.1	13.4	13.6	14.4	14.8	15.9	13.9
Cerebro-vascular Diseases	6.2	6.2	6.2	6.4	6.6	7.6	6.1
Hypertensive Diseases	2.3	1.6	2.6	1.5	1.7	2.5	4.3
Diabetes Mellitus	3.8	5.3	8.2	9.9	12.9	14.7	16.5

#### 4.6 Diabetes Mellitus

The number of patients diagnosed with Diabetes Mellitus in the population aged 30 years and above, has doubled between 1987 and 2009, as shown in table 15. The causes of this increase are attributed to a rise in standard of living, consumption of high glycaemic index food, leading a more stressful life and less daily physical activities.

	1987	1992	1998	2004	2009
Male	14.2	16.3	18.4	18.9	28
Female	14.5	17.4	20.6	19.7	25.8
Total	14.3	16.9	19.5	19.3	26.9

#### 4.7 Hypertension

The prevalence of hypertension has also increased from 30.2 % in 1987 to 37.9 % in 2009. This is due partly to modern lifestyle with stress at work and on road or because financial and social tensions.

	1987	1992	1998	2004	2009
Male	31.7	26.5	30	29.7	40.5
Female	28.7	26.1	29.5	29.9	35.4
Total	30.2	26.2	29.6	29.8	37.9

#### 4.8 Overweight and Obesity

Since 1987, there has been a dramatic rise in the number of people who are overweight or obese. The prevalence of obesity has increased nearly three-fold from 6.3 % in 1987 to 16 % of the total population in 2009. This can be related to a more sedentary lifestyle, consumption of rich food and alcohol and greater access to cars.

	1987	1992	1998	2004	2009
Male	3.1	5.2	6.4	5.6	11.3
Female	9.2	14.5	15.4	13.7	20.5
Total	6.3	10.2	11.5	10.3	16.0

#### 4.9 Physical Activity

In 2009, only 16.5% of Mauritian adults aged between 25 to 74 years were undertaking sufficient physical activity to meet the national guidelines of 30 minutes of leisure time activity per day to maintain good health.

#### 4.10 Cancer

Cancer has become the third major health threat after diabetes and cardiovascular diseases in the Republic of Mauritius. Nearly 1400 new cases of cancers and 950 cancer deaths occur each year. In 2008, cancers accounted for 11.9 % of all deaths in the country. There were, in total, 2286 and 3280 new cases of cancer in men and women respectively between 2005 and 2008. The total number of new cases has risen by 41% in men and 40% in women between 1992 and 2008.

The incidence and prevalence of the different types of cancers vary in different parts of the world. In Mauritius, breast cancer in females and cancer of the colon and rectum in males are the commonest, while in children acute leukaemia is the commonest (as shown in the Table 18):

Males			Females		
	Number	%		Number	%
Colon	320	14	Breast	1239	37.8
Prostate	241	10.5	Cervix	334	10
Lung	220	9.6	Colon	159	4.8
Oropharynx	186	8.1	Ovary	183	5.6
Lymphoma/Leukemia	192	8.4	Uterus	166	5
Stomach	182	8	Leukemia	73	2.2
Bladder	112	4.2			

### High Risk Factors for Cancer

Although the exact causes of cancer are unknown, the development of cancer is often associated with life styles, diet and environmental conditions. Cancers of the lung, throat, mouth and oesophagus have been directly linked to tobacco smoking. Cancer of the cervix has been linked to sexual transmission and certain Human Papilloma Virus subtypes. Diet has also been linked to causation of cancer of the bowel, stomach and breast. Infection with Hepatitis B and C viruses is associated with liver cancer.

### National Cancer Control Program

Many cancers with known causes can be prevented and their incidence will eventually fall. Many patients with cancer can be cured of their disease with adequate therapy, if detected early. Patients with incurable cancers should expect to receive a good quality of life. A four year National Cancer Control Program has launched in 2010.

The main objectives of this program are:

#### 1.Cancer Prevention

Certain cancers may be easily preventable, e.g. Cervical cancer (by promoting sexual health) and lung and other tobacco related cancers (by banning of smoking in public places and air pollution control).

#### 2.Screening and Early diagnosis

The outcome of cancer treatment is generally improved when cancers are detected at an early stage as in cervical and breast cancer. Cancer may be diagnosed early by proven screening methods. Therefore Public Awareness Campaigns have been started to alert the population about cancer symptoms which will lead to early diagnosis.

#### 3.Curative therapy (free of charge to hospital patients)

The treatment modalities of most types of cancers are surgery (provision is being made to recruit a surgical oncologist), radiotherapy (the current infrastructure has been upgraded e.g.: the linear accelerator at Victoria Hospital has been modified) and chemotherapy (availability of more than 40 chemotherapeutic drug, stem-cell transplant, hormonal and immunotherapy).

#### 4.Palliative care

To offer the best symptomatic and supportive treatment to incurable cases such as liver, lung and pancreatic cancers is important.

In general, one third of all cancers is preventable, one third is treatable and the remaining third is at present incurable. Palliative care provision, which includes the control of pain and relief of symptoms need to be structured and patient-centred. This aspect of cancer control, costs little and yet is important in improving the quality of life of cancer patient.

#### 4.11 Human Immunodeficiency Virus

HIV is a retrovirus that affects cells of the immune system. It destroys or diminishes the efficiency of our antibodies. During the first stage, the person has no really noticeable symptoms. However, as the infection progresses, the immune system becomes weaker, and the person becomes more susceptible to so-called opportunistic infections. The most advanced stage of HIV infection is acquired immunodeficiency syndrome (AIDS). It can take 10-15 years for an HIV-infected person to develop AIDS. The HIV/AIDS epidemic in Mauritius dates back to 1987 when the first HIV positive case was detected. Since then the number of recorded cases has continued to increase and according to statistics produced by the AIDS Unit of the Ministry of Health, the rate of progression was mild during the early years following detection. Since 2003, the country seems to be heading towards a critical phase with the rate of increase assuming an almost exponential trend. And it is predicted that it would become still sharper in the years to come. So, the causes of this trend and the social impact on the society should be analysed and ways have to be found to be able to counteract this crisis.

The main mode of HIV transmission was heterosexual but nowadays the main route through which it occurs is through the sharing of injecting needles in intravenous drug addicts (IVDA). Up to 95% of the newly current cases of HIV infection is contracted by IVDAs. The modes of transmission of HIV/AIDS are:

- Having unprotected sexual intercourse(anal or vaginal or oral)
- Transfusion of contaminated blood
- Sharing of contaminated needles
- Between a mother and infant during pregnancy(child birth and pregnancy)

Contrary to many African countries, where the main reason of HIV spread is due to sex, in Mauritius, the transmission is mainly through needle exchange among drug users. According to the AIDS unit of the ministry of health, most of those who are HIV positive live in Port Louis and in the region of Plaines Wilhems. It accounts for 74% of the total HIV cases for the country. To counteract this rapid increase in the number of HIV positive patients, the Government has initiated a number of actions:

- 1.A needle exchange program has been started since 2006 to prevent needle sharing among drug addicts.
- 2.The Methadone Substitution Therapy was launched to encourage IVDAs to quit drugs.
- 3.Antiretroviral therapies are provided free of charge by public hospitals.
- 4.Creation of AIDs Unit and Harm Reduction Unit to coordinate field work.
- 5.Sex education has been started in Secondary Schools through the school health program to educate children about the risks of unprotected sex.
- 6.Mass Media awareness campaigns have been initiated to sensitize and educate the population about HIV/AIDS (what is HIV, its methods of transmission and precautions to be taken to avoid infections and to prevent the stigmatisation of those living with the disease).
- 7.Free HIV screening programs (results are kept confidential).
- 8.Compulsory HIV screening test to all foreigners prior to the issue of work permits.

9. Free distribution of condoms to sex workers.
10. Proper training and recruitment of additional staff, from peer educators, nurses and doctors to tackle the increasing number of HIV positive patients.
11. Creation of an AIDs Hotline.
12. Construction of a new wing in Beau-Bassin Prison to house HIV positive inmates therefore preventing transmission to HIV negative inmates.
13. Prevention of mother to child transmission program.
14. The Paediatric HIV/AIDS treatment, care and support program is currently being finalise to enable better management of paediatric patients.

#### 4.12 H1N1

Diseases due to human influenza viruses have huge health and socio-economic consequences. Two forms of influenza diseases are known: seasonal and pandemic.

Seasonal influenza occurs every year in the winter months of temperate climates. It can cause death among persons with pre-existing diseases like chronic heart diseases, respiratory diseases, etc and is responsible for work days loss and absenteeism from school. A yearly vaccine is available for the prevention of seasonal influenza.

Periodically the seasonal human influenza virus combines with an animal influenza virus to generate a novel virus that results in a pandemic, spreading across the globe in all age groups and during any time of the year. Major past epidemics includes the Spanish influenza of 1918, the Asian flu in 1957 and the Hong Kong flu in 1968 which caused over million deaths each. Besides disease and deaths, pandemic influenza has huge socio-economic impacts by: putting pressure on the health system, disruption of trade and commerce, restriction of travel, social disruption and mass panic.

The only way to prevent the arrival of a pandemic strain of influenza lies in the active surveillance. In 2003, the world saw the emergence of an avian influenza, the H5N1 that is found in the poultry population of Asia. The H5N1 virus is associated with high mortality and has pandemic potential, although it has not spread across the globe. Since April 2009, a novel human virus H1N1 has emerged simultaneously in USA, Mexico and Canada. With the extensive travel and trade links existing between Europe, Africa and Asia, the arrival of the virus in Mauritius was inevitable.

**What are the symptoms of Influenza A H1N1?**

They are similar to the symptoms of regular human flu, and include:

- Runny nose
- Sore throat
- Cough
- Fever ( $\geq 38$  C)
- Body aches
- Headache
- Chills
- Vomiting & diarrhoea, in some cases

In some cases there may be complications such as difficulty in breathing and pneumonia. Pregnant women, younger children and people of any age with certain chronic lung or other medical conditions appear to be at higher risk of more complicated or severe illness.

How is Influenza A H1N1 virus transmitted?

The virus is transmitted in two ways:

- by inhaling contaminated droplets generated when an infected person coughs or sneezes.
- by touching objects and other surfaces which may be contaminated by infected droplets being deposited on them, and then touching the mouth, nose, or eyes without washing hands.

What are the preventive measures?

- Washing of hands frequently with soap and water.
- Avoid touching eyes, nose or mouth with unwashed hands.
- Use of face masks.
- Cleaning of hard surfaces such as table tops, door handles and taps regularly using any usual cleaning product available commercially.
- Reduction as much as possible in the time spent in crowded settings.
- Ensure good ventilation in living spaces by opening of windows as much as possible.

In the presence of respiratory illness:

- The nose and mouth should be covered when coughing or sneezing, with a tissue if possible, then the tissue should be disposed in a closed bin after use.
- Hands should be washed immediately after coughing or sneezing to reduce the spread of the virus from the hands to other people.
- Limited contact with other persons to prevent spread of infection.
- Those ill should stay home until symptoms have cleared up.

Vaccination

Influenza vaccines are one of the most effective ways to be protected from contracting illness during influenza epidemics and pandemics. Vaccination is therefore recommended in order to boost the body's resistance against the new influenza, and help ensure public health as the pandemic evolves. About 2 weeks after vaccination, antibodies against the virus develop in the body and provide protection against infection. The Government has recently put into use thermal scans at the port and airport in order to screen all passengers arriving in the country.

#### 4.13 Chikungunya and the Re-emergence of Dengue in Mauritius

Chikungunya was first described in Tanzania in 1952, whilst Dengue Fever and Dengue Haemorrhagic Fever were first recognised in the 1950s during the Dengue epidemics in Philippines and Thailand.

Chikungunya fever is caused by Chikungunya virus which is a member of Alpha virus. There is one serotype of Chikungunya so far and so immunity is believed to be life-long. DF/DHF is caused by Dengue virus which belongs to genus Flavivirus family Flaviviridae and includes serotypes 1, 2, 3 and 4. Therefore when a person has had the classic Dengue (i.e. infection by one serotype), a second infection later by another serotype increases the likelihood of suffering from DHF.

An outbreak of Chikungunya occurred in the Comoro Islands in early 2005. Due to the extensive travel and trade links between the Islands of the Indian Ocean, Mauritius rapidly became affected. The first case in Mauritius was reported in late 2005. It was a Comorian citizen who had arrived in the island few days earlier. Dengue has re-emerged in Mauritius in 2009 after more than 30 years, but the outbreak was short-lived because of the institution of control measures and the arrival of cooler and drier weather. The re-emergence was probably caused by introduction of DENV-2 by unrecognized infective travellers. In 2008, an imported case of dengue was diagnosed in a child returning from India, but control measures were rapidly instituted and no local transmission occurred.

No case of dengue hemorrhagic fever was recorded in this outbreak, probably because the population has not been exposed previously to another serotype. The vector of the outbreak was likely to have been *Ae. albopictus* mosquitoes, which are widely distributed in Mauritius (*Ae. aegypti* was eradicated from the country in the early 1950s as a result of a DDT indoor-spraying campaign in 1949-1951 to control Malaria). However, the rapid increase in the number of observed cases in June 2009 is more consistent with an *Ae. aegypti*-borne dengue outbreak, and a new comprehensive entomologic study is needed to exclude the possibility that *Ae. aegypti* has recently been reintroduced into Mauritius.

#### 4.14 Action Plan

To prevent the propagation of the virus, the following measures are in force:

1. Larviciding and fogging operations in affected regions
2. Proper outbreak investigations and control
3. Clean up campaigns have been stepped up by providing waste litter bins in high risk areas.
4. Cleaning up of bare lands and river banks where waste accumulate
5. Wasteland management by legal actions against offenders
6. Ensure elimination of breeding sites from irrigation areas
7. Supplement workforce for vector control
8. Sensitize planters on proper water storage for irrigation
9. Launch of national awareness campaign
10. Incorporate health promotion in the school curriculum
11. Surveillance of travellers from dengue-endemic regions has been instituted e.g.: the thermal scanner, recently installed at the airport.

#### 4.15 Road Traffic Accidents

Since its Independence in 1968, the Republic of Mauritius has undergone fast economic growth. The standard of living has greatly increased during the past years. Things which were unaffordable to the common man few years back have now become at reach of most of the citizens. There has been a rapid increase in the number of motor vehicles on our roads.

Since the road network of the country has not been designed to cater for so many vehicles, an increase of fatal and non-fatal accidents has been noticed. Table 19 shows the trend in Road Traffic Accidents in Mauritius from 2000 to 2010.

**Table 19:**  
**Statistic of Casualties of Road Accidents in Mauritius for Years 2000 to 2010**

Year	Fatal	Seriously injured	Slightly injured	Total
2000	163	266	2862	3291
2001	126	288	2850	3264
2002	158	216	2530	2904
2003	131	291	2276	2698
2004	144	245	2562	2951
2005	136	358	2266	2760
2006	134	348	2040	2522
2007	140	500	2415	3055
2008	168	517	2746	3431
2009	140	479	3036	3655
2010	157	352	3032	3541
Total	1597	3860	28615	34072

With a view to counteract this increase in the number of road accidents, a Traffic Management and Road Safety Unit has been set up to manage the traffic throughout the island and promote safety and security measures to reduce the number of road accidents and casualties through the application of the 4 E's concept:

- Education:** To sensitize and create awareness among the population on road safety.
- Enforcement:** To enforce road traffic laws related to road safety with a view to improve the behaviour and attitude of road users.
- Engineering:** To identify/gather and forward significant information respecting improvement needed in our road structure to concerned authorities like TMRSU, RDA and the parent Ministry.
- Evaluation:** To analyze records statistics and trends of road occurrences and to develop action plan and remedial measures.

#### 4.16 Education

Education is one of the four pillars whereby much emphasis is being laid to inculcate a road safety culture in the population. The road safety unit is engaged on delivering lectures on road safety matters to road users as hereunder;

- Schools children (primary and secondary),
- Senior citizens,
- Professional drivers,
- Police officers (police training school)

With a view to increase awareness among the population, the unit is also often engaged in organizing and conducting campaigns on road safety in collaboration of the Ministry of public infrastructure, Land transport and Shipping. The unit is also involved in seminars /exhibitions on road safety on several occasions to increase awareness.

Much progress has been made in improving road user behaviour. Education shows people how to use the roads safely and tries to persuade them to change unsafe behaviour, while effective enforcement and appropriate penalties to deter people from potentially dangerous behaviour. The general public is also sensitized on road safety matters through the daily `info route` on radios.

#### 4.17 Enforcement

The Traffic branch and the regular police are permanently deployed in a systematic way with priority to track down traffic offences related to road safety. Regular crack down on drunken drivers throughout the island and joint speed checks operations with handheld radars are also being performed. To achieve a better result in enforcement of traffics laws each police divisions has a team `Divisional Traffic Police` (operational since December 2009) operating in their respecting divisions (district).

Motorway Patrol is a sub unit of the traffic branch providing a permanent policing on the motorways from Grand Bay to SSRIA on a twenty four hours basis with main objectives to provide security to the public and to prevent and detect offences.

Year	Exceeding speed limit	Alcohol test	Other Road Traffic Offences	Total
2002	30155	900	24539	55594
2003	39442	716	22597	62755
2004	31521	442	26368	58331
2005	20352	212	25290	45854
2006	31455	256	37750	69461
2007	31191	183	33227	64601
2008	20963	214	25934	47111

#### 4.18 Engineering

Information respecting shortcomings, damages, hazards and improvement needed in road structures are gathered and transmitted to concerned authorities for necessary actions. These information are received from:

- Examination of spots of road accidents,
- Surveys carried at accident prone areas,
- Observations during police patrols,
- Complaints from the community,
- During community forum organized by the police at different localities.

## PART III: HEALTH AND LIVING CONDITIONS

### 1. INTRODUCTION

Living healthier and longer is one of the fundamental tenets of life. Individuals, institutions, communities and governments work incessantly to ensure the health and well-being of societies. For centuries, scientists have been trying to understand and measure the dynamics of health and subdue diseases. Successes have been achieved. Epidemics of diseases are being reined and, in some cases, wiped out of planet earth (smallpox 1980). Lifespan has doubled within decades in many countries in the nineteenth and twentieth centuries. Nonetheless, disparities still persist in some regions and in less developed economies. The explanation lies in a web-matrix of complex factors. Physical environment, clean air, safe water and houses, healthy workplaces, community living, customs, traditions and beliefs, health care services and access to facilities contribute to good health. People are happier, healthier and work better in congenial working conditions. Also, genetics and gender have an influence on the health status of individuals.

And yet, the history of human civilization on health and living conditions as far as slavery and indentured labour are concerned is a dark spot carved on stone. Historians, writing about the health of slaves and indentured labour in the 18-19<sup>th</sup> century Mauritius, have portrayed a picture that has left an impression of 'quasi torture' and an extremely harsh life with death as liberation from persecution (Teelock 1998, Barker 1996, Nwulia 1981). The general consensus is that these labour constituted an asset for the planter owners and a necessity for the colonial powers for the exploitation of land in pre-industrial times. Slave labour was so essential to the economy that the French colonists defied all attempts of the authorities to enforce abolition of slavery. If the human labour force was a critical factor for the colonial administrations, inevitably the health of the slaves and the indentured labour should have been paramount to promote their interests. Was it so?

Two sets of conditions are discernable. Raiding, abysmally shocking transactions over their capture, physical and emotional suffering, beating and battering, injuries, and undernourishment were not alien to the treatment meted out to the slaves before, during and after their immigration to the island (Barker). The indentured labour had a different set of conditions for their recruitment, voyage to Mauritius, care and treatment and their housing and contractual working agreements (Teelock 2009, Boodhoo 2010).

In 1920, C.E.A Winslow defined Public Health as "the science and art of preventing disease, prolonging life and promoting health through the organized efforts and informed choices of society, organizations, public and private, communities and individuals". In the country of the colonizers, the field of public health was expanding very rapidly in the light of evolution on several fronts. Medical knowledge was gaining grounds and, industrial revolution was beginning to shape twentieth century engines of growth of emerging economies. The transition from using the sail for trans-Atlantic travels to steam engines and mechanical power narrowed the time to cross the oceans and facilitated movement of people. So did the travel of epidemics as the West Bengal cholera in 1832 reaching the shores of Britain

If, in the 18<sup>th</sup> and the 19<sup>th</sup> century, the physical environment such as clean water and air, good sanitation, safe houses and roads were most important factors impacting on the health status of individuals, late 20<sup>th</sup> century public health in Mauritius saw a seamless relationship bonding with lifestyles on top of the physical, social and environmental factors. The epidemiology of diseases shifted from communicable to non-communicable diseases. Likewise, the weight of pathologies shifted. Physical activity, weight control, healthy nutrition, stress management, limiting alcohol use and avoiding smoking have now become more important for the maintenance of good health.

This paper will try to examine the factors that shaped the state of health or ill-health of the slave population, the indentured labour and their descendents till Mauritius gained Independence in 1968. The last section will cover the period of post-independence health developments in the Island.

## 2. SLAVERY AND INDENTURED LABOUR

The history of slavery and indentured labour in Mauritius takes its roots in the presence of visitors and settlers of colonial empires stretching over a period of two and a half centuries starting in the eighteenth century. Stuck in the trademark trappings of possession of the island, de-possession of its resources, trade rivalries, strategic presence for control of trade routes lapping the Indian Ocean and economic exploitation for the production of sugar were the dominant reasons explaining the Dutch (1698-1710), French (1710-1810) and British (1810-1968) occupation of the Island.

To achieve those ends, the occupier-residents initially brought slaves mainly from Mozambique, Madagascar, East Coast of Africa and some from India. Altogether, some 100,000 slaves were brought in during the period 1715-1810. With the abolition of slavery in 1833, the British, through the British East India Company, looked towards India as a source of cheap labour to lubricate the economic machinery they were establishing in the country to pursue the leftover work of the slave population.

## 3. POPULATION AND HEALTH DURING THE DUTCH OCCUPATION

The Dutch first landed in Mauritius in 1598. The Island was uninhabited. With the arrival of the first Governor Cornelis Simonsz Gooyer came 25 men included a 'ziekentroosta'- translated as 'le chirurgien (cumulant aussi les fonctions de barbier et d'apothicaire)'.<sup>1</sup>

Gooyer in his record on 30 July 1638 wrote there was in the detachment a 'barbier well provided with everything in the way of both medicines and instruments'. Vijaya Teelock<sup>2</sup> makes mention in a translated document (from Dutch) 'among the list of goods required by the inhabitants in 1665, 1 case with medicines'.

1665 is the earliest record in the history of Mauritius of the presence of a 'chirurgien' and a chest of medicines.

At the time of abandonment of the Island by the Dutch in 1710, the population counted at 894 individuals including 507 whites and 387 blacks (Balfour 1921).

## 4. HEALTH CONDITIONS, CARE AND TREATMENT OF SLAVES

This section will focus mainly on the health conditions, care and treatment of the slaves from their port of origin to the time of their liberation from bondage that runs beyond abolition of slavery in 1834 during the transition period that indentured labour supplanted them.

Before dwelling on the subject, two points need clarification: (1) literature on the health situation of the slaves in the eighteenth century is scanty (Teelock, UOM) and of doubtful reliability (Valentine 2000); and (2) a culture of medical practice existed in the home environment of the slaves which they carried with them in their new environment. For example, inoculation against cholera was practiced by the slaves. And in 1888, Dr. Daruty de Grandpré mentions of elderly creoles knowing cures for leprosy and other cutaneous diseases.

The history of slavery is the history of inhuman treatment, misery, exploitation and violation of human rights scarring the dignity and self-esteem of individuals in the innermost sanctum of their body. Historians concur on this thread of slaves' life-course journey.

Anthony J Barker in *Slavery and Antislavery in Mauritius, 1810-33*, describes a livid picture of the treatment the slave population had to endure from the time of their capture and throughout their stay in the island until emancipation. 'Shock and detachment' are the words used by Stanley Elkins to describe the ordeal most slaves were subjected to, before embarkation on their journey to their new destinations. Kidnapping, raiding, trading, fierce discipline on board over-cramped vessels, often flogging, chained and underfed were common features for the slaves. To dissuade any

attempt to mutiny on board the ships, there is report that ‘two guns loaded with grapeshot were kept pointed at the male slaves while bags of nails were ready to be strewn on the decks to hinder movement’ (Barker 2000). Between 1811 and 1827, the mortality rate on slave vessels, sailing from the East African, Malagasy and Comorian ports to Mauritius, was estimated as ranging between 7 % and 20%. Deaths rates among Liberated Africans brought into the colony between 1813 and 1826 and working for British government officials ranged between 20-60% (Stephan Karghoo).

On arrival, once sold and possessed by their ‘masters’, the slaves were put to their tasks - majority of them in the agriculture sector and the rest as artisans or domestic workers. Under both conditions, the hours of work were long and arduous, typically from dawn to dusk.

Despite all efforts of peopling the Island with colonists from the Island of Bourbon (Reunion), the administration of Governor Maupin (1729-1735) proved to be very unpopular with the French planter/colonists and the attempt proved to be a failure.

Mahé de Labourdonnais arrived in Port-Louis in 1735 and observed the prevailing degree of ‘anarchy’. The infrastructure to support a colony of settlers was lacking. He observed there were no hospitals, stores, fortifications, navy or army to sustain living conditions and provide security against threats of potential invaders from outside. The fear came also from ‘black maroons who lived as savages in the woods and attacked in gangs the settlements where they committed the greatest of excesses.’ He also related how he ‘discovered the secret of destroying them (runaway slaves) by arming blacks against blacks and in forming a constabulary of negroes from Madagascar who finally succeeded in purging the Island of most of those bandits’.

One of the first actions undertaken by Labourdonnais was the construction of a hospital in Port-Louis to replace a wooden structure that accommodated about 40 beds. He took great care in identifying an appropriate site to locate the hospital near the harbour with good ventilation. The first wing of the hospital was ready to accommodate the first patients in January 1740 when a cyclone completely damaged the wooden 40-bed hospital. A hospital without water supply was inadmissible. Labourdonnais identified that water from Grand River North West could be diverted to supply the hospital and the city of Port-Louis.

At the time of the departure of Labourdonnais in 1764, the population was, according to Abbé Raynal, estimated at 3,163 white, 587 freed slaves and 15,022 slaves. By 1830, Mauritius had the third largest number of slaves in the British Empire.

#### 4.1 Shifts in the composition of the population between 1767-1807

Changes in the composition of the population harboured fear implications in the minds of the colonists.

The following tables show the proportion of the whites decreasing from 16.9% to 8.3% between 1767 and 1807 whilst the free coloured increased from 3.1% to 7.6%. The proportion of the slaves increased from 80.0% to 84.1%.

The slave population increased by 77% (15,027 to 65,367) over the four decades compared to 51.2% for the whites (3163 to 6489) and 9.0% (587 to 5912) for the free coloured.

As early as the 1740s and throughout the late eighteenth and early nineteenth centuries, the island had a disproportionate average of eight slaves for each of its white inhabitants. Runaway fugitives were reported to pose a serious threat to life, limb and property. They also coupled murder, arson and kidnapping with plundering and destruction of crops, livestock and buildings.

Year	Whites	Coloured	Slaves	Total
1767	3,163	587	15,027	18,777
1777	3,434	1,173	25,154	29,761
1782	3,831	1,418	28,352	33,601
1785	3,379	2,138	33,134	37,651
1787	4,372	2,235	33,832	40,439
1788	4,457	2,456	37,915	44,828
1797	6,237	3,703	49,080	59,020
1806	6,798	7,154	60,646	74,598
1807	6,489	5,912	65,367	77,768

Year	White	Free Coloured	Slaves	Total
1767	16.9	3.1	80	100
1777	11.6	3.9	84.5	100

1797	10.6	6.3	83.1	100
1807	8.3	7.6	84.1	100
% change	51.20%	90.00%	77.0%	

## 4.2 Health of Slaves

Writing about the health of slaves in 1772, Dazille postulated that long hours of work, poor nutrition, insalubrious water and their in-adaptation to the humid and torrid climate put their physical resistance to the limit of fatigue. Little time was allowed for recuperation and they often fell victims to and suffered from irascibility. They could not resist exhaustion and succumbed to a host of diseases. Most common diseases were typhoid, worm infestations, bronchial infections, intestinal affectations of diarrhoea and dysentery and depression. To overcome these maladies and to let off the steam, the slaves spent their little night time unwinding in sex and alcohol. The result was a vicious cycle of hard work, exhaustion and free lifestyle.

The most common form of treatment applied by Dazille as was prevalent in Europe, was bleeding the body of toxins 'il est presque toujours nécessaire de faire précéder tous les remèdes d'une ou plusieurs saignées, soit du bras, soit du pied, parce que la fièvre est ordinairement beaucoup plus forte' and the use of emetics.

Discrimination against the slaves during their living was oppressive. Even after death, on a visit to Mauritius and South Africa in March 1844, James Backhouse wrote: 'The place of sepulture is divided into several compartments, to accommodate the prejudices of the living, for these even separate the ashes of the dead. The main burial-ground is surrounded by a wall, and another separates the portion occupied by persons of white skin, professing Christianity, from that in which the coloured people are interred! So strong is the prejudice that slavery has nursed'

## 5. FRENCH COLONIZATION

In a successive wave of interest and occupation by the French, colonization of the Island started with the arrival in June 1715 of Dufresne D'Arsel who named it Ile de France. On 24<sup>th</sup> December 1721, about 15 people arrived in Port-Louis accompanied by a chaplain and a surgeon. The Order for settlement of population was started in 1722. The population was counted at 160 persons.

An expedition from Bourbon to Mauritius arrived on 8 December 1722 on the *Ruby* with 65 slaves comprised of 27 men, 18 boys and 20 women. Almost immediately, 15 men and 4 boys became maroons. Why? The story of the dark ages of slaves in Mauritius unfolds in all its dimensions.

The historiography of slavery, under all three administrations (Dutch 1638-1710, French 1715-1810 and British from 1810 until abolition of slavery on 1 February 1835, is replete with cases of maroonage, desertion and vagrancy. By early 1820s, maroonage rates had climbed to a stunning 11-13 per cent. (Richard B Allen). Even after abolition of slavery, maroonage persisted. An average of 7.7 per cent of the island's apprentices was apprehended for desertion each year between 1838-37.

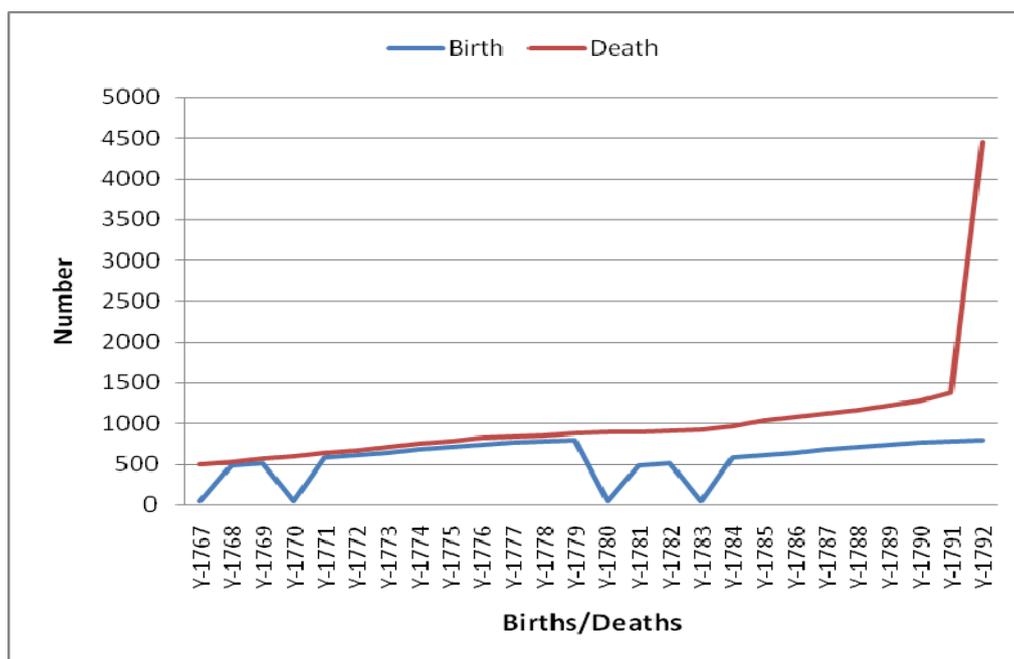

Running away from their masters became a natural avenue of escape to avoid the misery and ill-treatment meted out to extract the physical labour of the slaves<sup>4</sup>. What were the harsh conditions imposed upon the slaves are covered in great detail by Vijaya Teelock. Maladministration of justice, denial of rights in-human treatment, non-application of anti-slavery act, perpetration of 'illegal' entry of slaves from Madagascar in the 1820's, innumerable complaints to the Protector and failure to apply the manumission of slaves in 1812 left an indelible scar, physically and psychologically. According to Barbara Valentine three ways out of slavery were: maroonage, manumission and mortality and most common of these in Mauritius was death. How all these conditions impacted on the health of slaves are reflected in their numerous complaints made and ultimately in the levels of mortality.

### 5.1 Mortality

Seven episodes of epidemics struck the Island during the French administration in 1742, 1754, 1756, 1770-72, 1782-83 and 1792-93 leaving behind heavy casualties. It is reported that the epidemic in 1756 killed 50% of the slaves and 20% in 1770. Mortality of slaves was always very high. A yearly death rate of 30 per thousand was reported during the period 1767-1824 (D'Unienville).

The graph 9 shows that deaths outnumbered births at all times during the years 1767-1792. High mortality, preponderance of males among the immigrants and the general segregation of keeping male and female slaves apart did not allow family formation leave aside stable families.

Graph 9: Number of Births and Deaths in the slave population 1767-1792

Understanding the real nature and extent of the harsh conditions of slavery is fraught with inaccuracy as different writers on the historiography of slaves have presented facts and figures that are fragmentary, lacking in accuracy or contradictory. Vijaya Teelock, in 'Breaking the Wall of Silence' posits that the sources were planter centered, mainly official records, or European travellers' writings. Also, planters' families did not keep many records and, if they did, would not likely share them with non-white historians. Seemingly no slave-based sources existed, and so also no way of ever reaching the "inner world" of the slaves.

Moreover, tracking of demographic events was not easy for the slave population, as civil registration of births, deaths and marriages was introduced in the Island in March 1793 nearing the end of French colonization. Previous to the promulgation of the decree, records of baptism, marriages and burials were the responsibility of the parishes. It was in July 1805 that Governor Decaen issued a decree providing for the registration of births and deaths of slaves.

## 6. HEALTH CONDITIONS OF INDENTURED LABOUR

Health conditions before arrival, during the voyage and their stay

The historiography of Indian migrants recruited to work on the plantation economy, their health status and the conditions of their stay in Mauritius are linked to endemicity of diseases from where they originated in India, the terms of recruitment, application of Ordinances regulating their work and medical treatment, housing conditions, sanitation and their wages.

The country and place of origin of the migrant workers, the Indian sub-continent was a most hostile disease environment. Malaria and cholera were prolific in endemic or epidemic forms. Accustomed to living in disease prone areas, the workers had a level of immunity that afforded a degree of protection. However they were not immune to diseases in their new environment.

Before the arrival of indentured labour from India in large numbers, the British had made several attempts to recruit workers in the neighbouring countries mainly from Madagascar. Finally, it was

the abolition of slavery in 1834 that gave an impetus for large scale immigration of cheap labour from India.

Recruitment of labour had its own peculiarity. At that time, minimal measure of control was exercised on the recruitment process. And that opened the doors for abuses with respect to their recruitment procedures, treatment on the voyage and in Mauritius. Mortality on board ships bringing immigrants from India was high.

The table 23 shows an increase of 36.5 per cent deaths over a three year period (1858-1860) on board ships from the port in Calcutta. Over the same period infant deaths increased by 57.2%, 77.5% and 72.5% respectively from the ports of Calcutta, Madras and Bombay. There was necessity for greater vigilance in the examination of infants presented for embarkation.

Port	Year		
	1858	1859	1860
Calcutta	2.62	2.56	4.14
Madras	.49	.60	.76
Bombay	.57	.99	.76
Calcutta (Infants)	12.40	9.79	28.99
Madras (Infants)	1.30	2.87	5.78
Bombay (Infants)	1.96	2.88	7.14

Food served on board the ships was also a bone of contention. Quantity, quality, time of servings and catering for infants and pregnant mothers were often not to the liking or needs of the Indian passengers. In the Report No 20 of 1860 of the Immigration Committee, it was recommended that all the arrangements to address the shortcomings be placed under the responsibility of the Medical Officer on board the ships.

On the arrival of the coolies, the passengers were medically examined and placed under quarantine if the need arose. The Lazaret at Flat Island was visited and found to be deficient in ample supply of good water.

Early contracts made in India did not specifically mention that lodgings be provided to the immigrants. However, as for the slaves, it was generally understood that accommodation should have, de-facto, been provided by the planter employers. It was through the proclamation of Ordinances that the employers were made to provide labourers with 'sufficient and wholesome lodging according to the usage of the colony'.

The outcome was evident. Visiting the log-huts in January 1864 Sir Gabriel Froppier remarked they were not good. But, (cynically) he added that under 'present difficult circumstances encountered by the planters, it was next to impossible to enforce considerable improvement' and 'if there is one to suffer, it must be the coolie'. He added that the 'labourers seem to be perfectly content with these rudely built huts' for they 'never made complaints'. If the dwellings were kept tolerably clean inside, such was not the case around the huts. Straying animals around the huts were bound to create an environment that would certainly not be conducive to a clean and healthy environment.

Despite all the criticisms levelled against the behaviour and social habits of Indians as indenture, yet the case for their importation was supported in a correspondence to Governor Gomm by Stanley.

*'The abolition of slavery has rendered the British Colonies the scene of an experiment whether the staple products of imperial countries can be raised as effectually and as advantageously by the labour of free men as that by slaves. To bring that momentous question to a fair trial, it is requisite that no unnecessary discouragement should be given to the introduction of free labourers into our colonies'.*

(Stanley to Governor Gomm, 22 January, 1842, MA, SA 33/47)

Vijaya Teelock in Mauritian History quotes: 'And Mauritius was the first of the colonies in which this great Experiment was attempted... although at first there was much concern over the protection of immigrants' rights, and a desire to strike a balance between planters' wishes and immigrants' rights, these rights were later abandoned.'

To what extent these rights were safeguarded right from the time of recruitment is minuted in the Royal Commission Report of 1875, paragraph 4066. 'Notwithstanding, very frequently persons are recruited as agricultural labourers who ought never to be accepted as such'.

In fact, non observance of the terms of the Labourer's Contract on housing, medical care and treatment facilities, food and payment of wages were the sources of resentment expressed by the immigrants. The Royal Commission Report of 1875 is very candid on the recruitment process. At paragraph 4044, the whole system of recruitment in India was denounced on the following counts: (1) The recruiters in India, (2) The Protector in Mauritius, (3) The employers of labour (4) The Police, (5) The Magistrates and (6) The Legislative Council as the framers of the Labour Laws. On the last point, the Report found that in matters of the application of a New Labour Law of 1867 to address the issues of vagrancy, idleness, improvidence, inhumanity towards each other during epidemics, filthy habits and, participation in the crime of *dacoitee*, the 'Law was enforced both by the police and the Magistrates in such a reckless and indiscreet manner as to cause cruel hardship to a number of the Majesty's subjects' and that 'the spirit of the law was too often overlooked and even the letter of the law was often far out-stepped by the manner in which it was carried out'. Investigating on the form of treatment expended to the immigrants, William E Frere and Victor A. Williamson had acknowledged that the 'traditions of slavery' still prevailed on the island's Indian residents modelled on old fugitive slave laws.

How these affected the health and productivity of the indenture is understandable. Deduction of wages to pay agents and recruiters in India, travel needs, monthly contribution for return journey back to India, absenteeism for sickness or other reasons were practices that affected their morale and health. The system of keeping wages in arrears and the 'double cut' were found to be unacceptable by the Royal Commission Enquiry (1875). They formulated the opinion that Articles of the Ordinances were 'universally overlooked both by planters and Magistrates and other Government Officers'. Large sums were annually, illegally deducted from the wages of labourers. As for food, the Commission found that it was a universal practice to give ¼ lb of rice over the 1½ lb stipulated in their contract. Further, salt fish was substituted by a double allowance of *dholi*.

The only holiday allowed was on New Years' Day. On other holidays, most often the practice was to deduct their wages if they took leave and frequently including their rations too. By Ordinance No 17 of 1841, the only work that the labourers were 'obliged' to do on Sundays was work of immediate necessity (*corvée*) up to 8 am. The provision of this Ordinance was hardly respected. Record of pay-books were kept in such manners that, on inspection were found to be worthless for the great irregularities amounting to deliberate and intentional fraud and inadmissible as evidence of proof in any enquiry.

Interpretation for offences of illegal absences, desertion and vagrancy were often not contemplated according to law with the result that in many cases there were great injustice and hardship caused.

According to their contracts, lodgings were to be provided to the immigrants on the estates they were recruited. The camps were often stuffy and damp with no openings to allow circulation of fresh air. Around the 1930's the labourers occupied the accommodation previously used by the slaves. With the arrival of the big wave of workers in the late nineteenth century, the housing situation became very alarming causing great harm to their health. The Royal Commission found great diversity in the arrangements of the camps. Some, constructed at great cost were of good

repair while in others the dwellings were scarcely fit for human habitation. Paragraph 4080 of the Report is eloquent: 'the camps generally were in a filthy condition externally, owing to the quantity of animals allowed to run loose about them, a state of things due mainly to the aversion of employers from interfering to enforce cleanliness and order, for fear of offending their labourers, and also from the state of the law, which does not make the proprietor personally liable for the condition of his camp'.

The Ordinance of 1845 established that each estate employing forty labourers or more was required to operate a hospital to provide treatment to the workers. The Royal Commission of 1875 made an explicit incursion into the state of hospitals and their management.

All the above provisions, applied or overlooked had an impact on the health of the Indians. Ordinance No. 6 of 1845 provided for the creation of hospitals with certain norms on the estates. Previous to the Ordinance of 1845, the few hospitals that existed were in such deplorable conditions that Magistrate Anderson observed 'the hospitals on the establishments which I have seen, are generally more calculated to increase disease than to alleviate sufferings..'

The Report found 'the Hospital Ordinance (No. 29 of 1865) to be incomplete unless supplemented by the regulations' that ought to be so' by the General Board of Health, but was not framed as should have been. According to the Ordinance No. 29, there should be:

- A hospital with accommodation at least 4 beds and with certain space in proportion to each bed.
- A medical attendant visiting the hospital once or twice a week according to the size of the estate.
- Store such medicines as may be considered necessary by the Stipendiary Magistrate.
- A hospital attendant qualified to attend the sick and to keep a Hospital Register.

Enquiries had also shown that there was hardly a Hospital in the Island (except one at Midlands), that could be considered complete. The buildings were considered excellent in structure but were such in 'character as for it to be a gross misnomer to call them hospitals at all'.

As regards the hospital attendants, in vast majority of cases they had no qualifications that made them fit for their duty of attending the sick. The Report found the Registers as simply valueless for the purposes of statistics or as evidence of stay in hospitals.

In the 1870s, the sanitary conditions of the Island had reached a deplorable state. Application of Health Ordinances was often not observed much to the detriment of the sick needing medical care. A tug-of-war type of mentality existed between the Council of Government, the planters and the Indian immigrants on the provision of hospital care (Boodhoo).

In 1909, the Royal Commission investigations had observed that in a Military Report dated 1905, there was much scope for improvement in the sanitary condition of the Island. Malaria, dysentery, enteric fever, tubercle, and syphilis were prevailing extensively. During the 15 months that the Commission was working, the diseases were on the increase. Most of the food consumed in the Island was imported. With custom duty applied on all foodstuffs, prices were high to the detriment of the working classes. Scarcity and dearness of the food were, according to the Commission members, some of the causes of high sick and death rates.

In 1908, Dr. Ronald Ross submitted his comprehensive report on measures for the prevention and control of Malaria. In the summary of facts regarding the amount of Malaria, the report mentioned the abnormally high death rates in the population and the costs to government, loss of labour, labourers' loss of wages and losses to the general community.

Of particular interest is the observation of a high number of children found with enlargement of the spleen, 62,000 out of 182,000. How sustained Malaria-related morbidity affected the young population's health and the plausible generational effects on chronic metabolic diseases need further investigations.

## 7. PUBLIC HEALTH MEASURES UNDERTAKEN IN MAURITIUS

A proper understanding of measures undertaken to improve the health infrastructure in Mauritius has its origin in the developments taking place in Europe. Many of the initiatives taken and the Ordinances promulgated were patterned on British models though with a lag in their implementation.

## 8. 18TH, 19TH-CENTURY PUBLIC HEALTH IN BRITAIN AND EUROPE

18<sup>th</sup> century medical sciences in Europe were lagging in modern scientific knowledge as the ills of the human body was yet to be fully understood. Causes of illnesses were based more on ancient beliefs (Dazille) such as humours, bodily tensions or on cultural dogmas. Practice of medicine was strongly influenced by the theory of contagion (person to person causation) and miasma, (transmission of diseases by noxious invisible gas). In 1854, Dr. John Snow founded the science of epidemiology and the germ theory. The modern era of public health did not begin until the 1880s, with Louis Pasteur's germ theory and production of artificial vaccines.

In the early 19<sup>th</sup> century, the growing towns of Britain were characterized by overcrowding, poor housing, bad water and contagious diseases.

Three massive waves of epidemics struck the nation between 1830s and 1840s. In the first, two influenza epidemics and the first outbreak of cholera claimed thousands of lives. The second wave encompassed major epidemics of influenza, typhus, typhoid and cholera between 1836 to 1842 and the third wave saw serious outbursts of smallpox and typhoid in the mid 20<sup>th</sup> century.

As the 19<sup>th</sup> century progressed, major sanitary measures were undertaken that transformed the public health landscape. Introduction of the railroad in the 1820s and the telegraph in the 1850s brought the towns closer. A new urbanization culture started growing calling for measures to dispose of sewage, tackle the problem of overcrowding and the accompanying problems, mainly hygiene and water supply.

Further, to come to grip of the unsanitary conditions prevailing in those days, Government funded investigations in the conditions of health in towns and the countryside in the 1830s to the 1860s.

It was common belief in those days that diseases were the main reasons for poverty, and that preventing diseases would reduce poverty and cut down morbidity and mortality rates.

Adding weight to the theory, Thomas Mc Keown, a physician and demographic historian put forth the view that the growth of population in the industrialized world in the late 18<sup>th</sup> and 19<sup>th</sup> centuries was due not to life-saving advancements in the field of medicine or public health, but instead, to improvements in overall standards of living, especially diet and nutritional status resulting from better economic conditions. His historical analysis called into question the effectiveness of some of the most basic and widely applied techniques in the public health armamentarium, including sanitary reforms, vaccination, and quarantine.

In the mid nineteenth century, the health status of the population in Britain was summarized in high mortality and low life expectancy.

In England and Wales in the six decades 1841-50 to 1891-1900 Infant mortality-rates as a sensitive indicator of health were 153, 154, 154, 149, 142 and 153 respectively. Infant deaths to children raised under ideal conditions of good sanitation, clean environment and breastfed were about 80-100 per thousand live births compared to levels of 300 or higher for inner city rates. Poverty, poor housing and sanitary conditions and insalubrious environments were factors contributing to high levels of infant mortality. Surprisingly, infections transmitted by doctors and midwives were also attributable to infant deaths during childbirth. The work of Holmes, Boston (1843) and Semmelweis (1858) showed that simply scrubbing and washing of hands and disinfection of instruments had a significant influence on the decline of mortality- simple measures with tremendous impact.

Life expectancy at birth was about 40 years by the end of the 18<sup>th</sup> century. By 1900 it was about 47 years for man and about 50 for woman. During the late 19<sup>th</sup> century, living standards improved substantially and most people were better nourished. There were also huge improvements in public health with sewers being dug under cities and clean water supplies created. By the early 1930s life expectancy for man at birth was about 60 and rose to about 65 in the 1950s. Today life expectancy at birth is 77 for man and 81 for woman in the United Kingdom.

Two important reasons have been advanced to explain why public health in Britain did not receive much attention for many years.

1. Most governments felt they should not interfere too much in people's lives.
2. Any large scale public health improvements would be very expensive, and taxes would have to be raised.

At first the government tried to prevent illnesses among the population by public sanitary measures.

The first public health measures were based upon the idea that miasmas (bad smells) caused diseases. Although the idea was wrong, the measures against the miasmas involved a greater focus on cleanliness, and this improved public health.

Between the 1830s and 1940s investments in sanitary and legislative measures coinciding, in parallel, with scientific and medical breakthrough made a leap-frog progress in the health of the population. Development of vaccines, antibiotics, medical instruments for better and more accurate diagnosis, new drug formularies and use of anaesthetic agents during operations contributed significantly in improving health and saving lives.

## 9. LANDMARK DEVELOPMENTS OF HEALTH SERVICES IN MAURITIUS

Several distinct phases in the history of health development are discernable in Mauritius. The period up to the 1850s was characterized by a minimalist health care system during slavery and indenture. Between 1850s and the end of the century the colonial government started, a gradual introduction of a system of health services modelled on the pattern in Britain. Dreadful damages caused by episodes of epidemics in the first half of the 20<sup>th</sup> century saw an acceleration of public health measures and the creation of health infrastructures in terms of hospitals and dispensaries until the time of Independence in 1968. The new post-independence government, in parallel with the private sector, invested heavily in infrastructure, personnel, medical and paramedical training institutions and a regionalized outreach system (Map 1 at annex). To-day, it is viewed as a 'medical hub' and an envy of countries in the region. In a welfare state where health services are free for primary, secondary and tertiary care, high expectations for a modern health service with state-of-the-art cutting edge technologies are creating qualitative and quantitative 'medical system stress' for the future.

Building a foundation for medical and sanitary measures relies on the availability, collection, analysis and reporting of population data, vital events and causes of death.

Civil and vital registration was introduced in England and Wales in 1837 (DV Glass 1973) and an international classification of causes of death was first approved in 1900. The first comprehensive population census in Britain was undertaken in 1801.

In Mauritius, the 'Demographic Survey of the British Colonial Empire by R. R. Kuczynski (Vol 11), Oxford University Press, 1949, presents a very comprehensive set of data on the population and vital events from 1753 till the mid 1940s. Time series data, though incomplete, for births, deaths and marriages for the slaves, Indian migrants, free coloured, and the Whites are available. However, the information becomes more complete and meaningful with compulsory reporting and registration of vital events and the holding of population censuses. An Order in Council of 30 January 1826 required that information on all births and deaths shall be communicated to the Registrar within a month of the event. After abolition of slavery in 1835, registration of vital events

was unified in 1837, putting an end to all distinctions among the population thus limiting the scope for disaggregation of data by status, slave/indenture. The first population census was conducted in 1846.

Measures taken to improve the system of health care and treatment were based mostly on the outcome of findings and recommendations of Enquiries and Reports of Commissions on health matters. The main reports are listed below.

- Report of the Committee to Investigate the History and Particular Conditions of the Cholera Epidemic of 1854, F. Bedingfeld.

The Report gives a detailed account of treatment administered to patients with symptoms of cholera with relative success. Spread of the disease was mainly by proximal contamination with patients suffering from cholera. This was pointed out by the more numerous cases of incidence of the disease among the ex-apprentices living in the same dwelling as the patient or visitors.

- Royal Commission Report 1909

The Council of the Government of Mauritius had appointed a Commission to investigate and report upon the condition and resources of the Colony as regards administration and the financial situation with a view to introduce such economies in the establishments and expenditure as may be possible without detriment to the public interests.

On Medical and Sanitary Services, the Commission had recommended three important measures:

1. Reorganization of the Medical and Health Department
2. Improvement in the quarantine laws and
3. Implement the measures advocated by Dr. R. Ross for the prevention of Malaria.

On 1, the Commission had observed: (a) an over centralization of managerial responsibilities at headquarters and (b) overburdening sanitary measures in the district of Port-Louis and Plaines Wilhems to the health department when it should have normally been the responsibility of the Municipalities.

On 2, the Commission expressed the view that the laws should be amended to match those in Britain and Ceylon.

On the issue of Malaria, the Commission believed that the recommendations of Dr. Ross should be carried out to the fullest extent to render the colony more salubrious.

The Report on Hospitals (Chapter XX) had recorded that under proclaimed Ordinances, immigrants were 'to receive all medical aid on the respective estates to which they attached' but was in many cases 'little more than a declaration that there should be a hospital on all estates' and as a general rule 'the law was a failure'. The Stipendiary Magistrate had noted that 'not one of the sugar estates possesses a building provided with everything required by a hospital and as to the building, it was a mockery to call it a hospital.

In general, it was on the goodwill of the planter to decide whether to provide the type of accommodation, care and treatment as required. Some were willing to play the game as the case of the hospital in Midlands while others provided a semblance of the services and yet others were simply neglectful of their obligations.

- Report of the Committee on Emigration from India to the Crown Colonies and Protectorates, June 1910.

The terms of reference of the Committee were the following:

- The general question of emigration from India to the Crown Colonies.

- The particular Colonies in which Indian immigration may be most usefully encouraged.
- The general advantages to be reaped in each case:
  - ❖By India itself
  - ❖By each particular Colony

It is interesting to note two remarks made in the report concerning indenture and time-expired immigrants. First, the general result of the enquiry was to show the existence of serious abuses affecting the immigrants and an absence of proper legislative and administrative measures for their protection and second, according to universal testimony the Indian immigrants when justly treated are a singularly quiet, law-abiding and easily managed class not to occasion any political trouble'.

➤ Report on the Prevention of Malaria in Mauritius Ronald Ross, 1908

The terms of reference were to report on measures for the prevention of Malaria in Mauritius.

Some measures proposed by Dr. R Ross included:

- Periodic medical examinations of children in schools and on estates and the continuous treatment of all of them found with enlargement of spleen.
- Continuous house-to-house distribution of quinine
- Continuous performance of minor works where required in towns and villages
- Appointment of a Malaria Authority, personnel, and conduct of annual Malaria report.

➤ The Epidemics of Mauritius, Dr. D Anderson, 1918

The book written in 1911 as a Thesis for a degree of Doctor of Medicine and later updated by two chapters on the Geography, Industries and History of Mauritius was published in 1918. It gives a concise and comprehensive description of the episodes of epidemics that struck the Island in the nineteenth century. It presents a chapter on Sanitation in the country as at that time followed by a descriptive outbreak and effects of the epidemics of: leprosy, cholera, small-pox, (1856 and 1891), Malarial fever, dengue, beri-beri, diphtheria (1879 and 1907-9), plague and the phagedæni.

➤ Report on Medical and Sanitary Matters in Mauritius, Dr. A. Balfour, 1921

The term of reference entrusted to Dr. Balfour was to investigate the sanitary conditions of the Colony and the measures needed for the general improvement of the health of the population.

Of a wide encompassing nature, the document reported on:

- Communicable diseases and sanitation
- Structure of the Medical and Health Departments
- Health conditions prevailing in the country
- Medical and health facilities *viz.* hospitals including sugar estate hospitals, dispensaries, infirmaries, orphanages and crèches, reformatory and industrial school, school health, water supply, collection, removal and disposal of excreta and refuse, disposal of sullage water, conditions for preparation, treatment, transport, sale and storage of food and drink, slaughter houses, disposal of the dead and, streets, housing and town planning.

➤ Report on Health Conditions in Mauritius, Dr. A. Rankine, March 1944

The aim was to report on ‘a scheme embodying a long-term policy for the improvement of health conditions generally .... and, to form part of a general development programme’.

Beginning with a brief review of prevailing health conditions and the broad principles to guide future orientation and policies, the report presented an organigramme with guidelines for a reformed set-up in administration, laboratory, medical and health divisions. It concluded with proposals for the provision of essential health services in the districts and re-grading of salaries, staff requirements, maintenance of infrastructure including buildings and equipment, establishment of school health service, measures for increased production and marketing of certain foods.

- Demographic Survey of the British Colonial Empire by R. R. Kuczynski, 1949.

Published in 1949, Volume 2 (out of 3) of the Demographic Survey of the British Colonial Empire gives a very detailed and comprehensive demographic presentation of facts and figures between 1753-1946 and covering the Dutch, French and British occupation of Mauritius. The demographic data, disaggregated often by origin and sex on slaves and the indenture, reconciled, corrected and updated on analysis of other authors on the subject matter are as complete and accurate as was available then.

- Social Policies and population Growth in Mauritius, Richard M. Titmus, 1960.

The Report on Social Policies and Population Growth in Mauritius by Richard M. Titmuss and Brian Abel-Smith was presented to the Governor in 1960. The term of reference was to ‘advise the Government of Mauritius as to the provisions to be made for social security, bearing in mind the resources of the territory and the needs of its people’.

- The Economic and Social Structure in Mauritius, J. E. Meade, 1960.

The terms of reference were ‘to survey the economic and social structure of Mauritius and to make recommendations concerning the actions to be taken in order to render the country capable of maintaining and improving the standard of living of its people, having regard to current and foreseeable demographic trends.

In its conclusion, a set of 129 recommendations were made to deal with the numerous problems in the various sectors of the economy. The unequivocal point of the report was the high population growth rate with the potential to rise at a level that would thwart and negate all developmental efforts.

- Fertility change in Mauritius and the impact of the family planning programme, Christos Xenos, 1977.

The Report outlines the post world war II demographic changes and the transition from high to low levels of mortality and fertility in Mauritius.

From 3.1 % in the period 1952-62, the population growth rate dropped to 1.9 % in 1962-72, resulting in an aversion of about 100,000 populations on predicted values with two thirds attributed to a drop in fertility and one third to net emigration.

Three major contributory factors to the decline in fertility were: (a) widespread postponement of marriage; (b) massive decline in marital fertility, and (c) Use of contraceptive methods.

While postponement of marriage was more pronounced among the Hindu and Muslim communities, contraception was practised by all the groups.

- Non-Communicable Diseases Survey Reports, MOH, 1987, 1994, 1999. 2004, 2010.

The Ministry of Health commissioned a team of International Experts with wide experience in the field of Non Communicable Diseases Epidemiological Surveys to make investigations on the prevalence of associated risk factors in the population in 1987. An International Advisory Committee was set-up to monitor implementation of the recommendations and to advise

government on the course of action to curb down the trends. Follow-up longitudinal surveys were conducted on the sampled population in 1994, 1999, 2004 and 2009 to track the long-term outcomes.

Important findings in the NCD survey, 2009:

- The prevalence of diabetes has increased by over 60% since 1987 in adult and for every known case of diabetes, there was one newly diagnosed case.
- The prevalence of type 2 diabetes in the Mauritian population aged 25-74 years was 23.6%: 24.5% in men and 22.8% in women representing 172,400 people.
- Using the European Body Mass Index (BMI) cut-points, the prevalence of obesity was 16.0%: 11.3% for men and 20.5% for women and the prevalence of overweight was 34.9%: 34.7% in men and 35.1% in women.
- Thus, 50.9% of the participants were overweight or obese. The rate for men was 46.0%, and for women, 55.6%.
- Using the ethnic specific BMI cut-points, the prevalence of obesity was 43.3% (47.9% for women and 38.4% for men) and the prevalence of overweight was 22.3% (20.3% in women and 24.4% in men). For BMI, the Asian-specific cut-points were applied to the Hindu, Muslim and Chinese populations while the European cut-points were applied to the Creole and other (Franco-Mauritian) population.
- Thus, 65.6% of the participants were overweight or obese. The rate for men was 62.8% and for women 68.2% giving an estimated 477,000 people between 25 and 74 years of age obese in Mauritius in 2009.
- The prevalence of hypertension was 37.9%: 35.4% for women and 40.5% for men.

➤ The NCD Report in 2004 for Rodrigues showed the following:

#### Diabetes Mellitus:

The prevalence rate of Type 2 diabetes in adults aged 20-74 years in 2004 was found to be 9.4% with a downward trend from the 10.6% documented in 1999. In 1992, the prevalence was at 8.1%.

Case ascertainment of diabetes in the population remains at 40% showing that three in every five persons with diabetes still do not know that they have the disease and among males, the case ascertainment rate is still around 22% and with a rising trend over the years.

The rate of poor control in those with the disease remains high with 60.4% of all diabetics surveyed being poorly controlled. In 1999, the prevalence of poorly controlled diabetes was 37% and this figure has fallen down.

#### Hypertension:

The prevalence of hypertension continues to remain around 32.8%, after having peaked at 36.8% in 1999. Case ascertainment rate continues to increase from 40.1% in 1992 to 50.1% in 1999 and 60.1% in 2004 and the level of poor control of blood pressure in those with the disease remains at 37%.

#### Overweight and Obesity:

Obesity has increased during the period 1992 to 2004 with a sharp increase noted during the period 1999 to 2004 from 19.6% to 22.9%. The prevalence of overweight in both males and females has not changed much over the years and stays at around 31-34%. The prevalence of overweight and obesity in 2004 was around 55% with the condition being more prevalent among women than among men.

### Tobacco Consumption:

Tobacco consumption continues to decrease steadily with current smoking among males decreasing from 58.4% in 1992 to 39.1% in 2004. In females there was a decrease from 1992 to 1999 (i.e. from 4.9% to 1.7%) but during the period 1999 to 2004 there is an increase to 4.5%.

### Alcohol Consumption:

The prevalence of abusive alcohol intake in males was 19.1% in 1992; this level dropped to 9.8% in 1999 and since then it has shown a dramatic increase to attain 40.9% in 2004. Among women, although the levels are relatively much lower, there has been a significant increase during the period 1999 to 2004 to reach 5% in 2004 from 0% in 1999. Abusive alcohol intake remains a major health problem despite health education and a number of measures (legislative, fiscal and others) taken to discourage people from drinking excessively.

In many ways, the findings of the reports prior to Independence triggered actions by the colonial administration to redress the prevailing sanitary and public health situations.

### Mauritius: Paradise Lost

Comments made by some observers and authors were eloquent on the state of sanitation in the colony.

In 1920, Dr. Balfour reported 'that despite the many advantages of the Colony, its general unhealthiness had reached a degree unparalleled in any similar tropical Dependency', and concluded that 'it was a case of Paradise Lost, and it remains to be seen if the sequel, Paradise Regained, will ever become an accomplished fact.' He had noted that generally there was a want of cleanliness everywhere on the Island and applicable to the whole population of the Colony. Moreover, about the deficiencies in hospitals, he had complained of an absence of ambulances, laundries, incinerators, disinfecting apparatus, poison cupboards, lavatories and temperature charts.

Making a comparison in the death rates of troops in various British Colonies for the years 1860-1864, Dr. Andrew Davidson reporting into the Causes of Malarial Fever in Mauritius commented that there was only one conclusion to be derived in that the Island was never a healthy place. The mortality was nearly three times that of Great Britain.

## 10. THE HEALTH SYSTEM IN MAURITIUS

Nineteenth century epidemiology in Mauritius was dominated predominantly by infectious diseases. In Europe, the germ theory on the principle that a specific disease is caused by a specific organism was established in the 1870s. Vaccine against cholera was discovered in 1879, against typhus 1896 and against plague in 1897. The same year (1897) Dr. R. Ross established that Malaria was transmitted via mosquitoes.

On the technological side, the stethoscope was discovered in 1816, use of drugs in anaesthesia in the early nineteenth century, use of antiseptics in surgery in 1867, discovery of X-rays in 1895, blood typing opening the door for transfusion in 1901, use of insulin in the treatment of diabetes in 1922 and the 'miracle' antibiotic drug streptomycin in the treatment of tuberculosis and other diseases in 1943.

All these developments had an impact in the health sector in Mauritius. Application of the Ordinance of 1844 saw the establishment of hospitals on sugar estates, creation of the Medical and Health department with two divisions catering for the curative and preventive services in 1895. Ordinances on sanitary and public health matters proclaimed during the nineteenth century culminated in the consolidated Public Health Act of 1925. The scope of this Act covered a large number of health issues on (1) Sanitation; (2) Infectious or Communicable Diseases; (3) Certificate of Death; (4) Dangerous Epidemic Diseases; (5) Disposal of Effluents by Hotels; (6) Leprosy; (7) Protection of Foods; (8) Food and Water Supply; (9) Hospitals and Dispensaries; (10) Cemeteries;

(11) Cremation; (12) Building Permits according to Sanitary Requirements, and other miscellaneous issues.

By 1901, there were seven hospitals in the public sector, namely the Civil Hospital, Barkly Hospital and district hospitals in Pamplémousses, Montagne Longue, Flacq, Grand-Port and Souillac. Altogether there were about 1000 beds in the general hospitals, 400 at the Barkly Hospital and 50 beds at the Lepers' Hospital in Poudre D'Or. Victoria Hospital was opened in 1922.

At the time of independence in 1968, the Island of Mauritius with a population of 781,615 inhabitants had 8 general hospitals 46 dispensaries including 2 in the prisons, 11 out patients departments, 13 specialized units for tuberculosis (1); chest diseases (1); maternity wards (7); mental hospital (1), Lepers' hospital (1) and prisons hospital (2). There were also 22 Sugar Estate Hospitals; 20 Sugar Estate Dispensaries, and 5 Nursing Homes. 7 Maternity and Child welfare Centres and 35 Social Welfare Centres providing Maternal and Child Health services were subsidized institutions.

In 2009, the Island, with a population of 1,237,283 inhabitants had 5 regional and 2 district hospitals, 2 community hospitals and 5 specialised hospitals in the fields of psychiatry, E.N.T, Ophthalmology (Moka in 1972), chest diseases and cardiac surgery. 757 outreach clinics for Maternal and Child Health, Family Planning, Community Health and Vaccination complement the hospital set-up. Map 1 (annex) shows the wide geographical distribution of the services within a radius easily accessible by the population. The Cardiac Surgery Centre at the Sir Seewoosagur Ramgoolam National Hospital (SSRNH) commissioned in 1999. Other high-tech units include renal transplant and neurosurgery. Two new regional hospitals were built, the SSRNH Hospital at Pamplémousses in 1968 and the Jawaharlal Nehru Hospital at Rose Belle in 1990.

## 10.1 Laboratory Services

In 1887-1888, an outbreak of rabies followed by the cholera epidemic of 1899 and the 'surra' in the cattle population alerted the medical profession and confirmed the need for the creation of laboratory services to isolate causative agents. In 1909, a small bacteriology service was set-up at the Civil Hospital in Port-Louis and run by a qualified pharmacist. A more expanded laboratory with autoclaves was started in Malsain in St. Pierre in July 1907 before a transfer to the Agricultural Research Station in Réduit in December 1908. The Central Laboratory at Candos was opened in 1958. Dr. Rankine had recommended that laboratory facilities be regionalized to all the major hospitals to make facilities immediately available to the staff. Now, the laboratory covers eight distinct fields, namely biochemistry, haematology, bacteriology, parasitology, virology, hispathology, cytology and blood transfusion. The Medical Laboratory Services also provide facilities for practical training of medical and paramedical students.

## 10.2 Blood Transfusion Service

Blood transfusion service was started around 1925. The Blood Bank was started in 1953 in the private sector. The government service was inaugurated in 1959. A Blood Donor's Association was launched on 10 November 1999 with the aim of educating, informing and recruiting people into the act of donating blood voluntarily and regularly. At present, around 80% of blood is collected through voluntary donors. With a growing number of patients with cancer, renal problems and cardiovascular diseases as well as sophisticated medical interventions carried out in private clinics and hospitals, the blood bank has a rising demand for blood.

## 10.3 Radiology

Radiology services were introduced in 1922 and modernized in 1950. A training school for radiographers was started in 1962 and radio protection measures effectively put into practice in 1994. Magnetic Resonance Imaging was introduced in 1997. The X-Ray Department provides two distinct services: the Therapeutic Radiography and the Diagnostic Radiography Services. The Department of Therapeutic Radiography was started in 1956 to provide treatment through linear

Accelerator and Cobalt Machine (in 1982) to cancer patients. The Therapeutic service consists mainly of giving radiation to patients.

With expansion of the radiology services, a school for training of radiographers was started in 1962.

## 10.4 Maternal and Child Health

Maternal and Child Health is one of the corner-stones of any public health measure worthy of its name to tackle maternal and infant mortality. The figures for infant mortality were 161, 141 and 154 per thousand births for the periods 1911-1920, 1921-1930 and 1931-1945. As a comparison, in Britain the rate was around 150 per 1000 births in the 1900's. In his Report, Dr. Balfour made a strong case to start the training of midwives, establishment of a maternity ward at the Victoria hospital and (if possible) a ward for the treatment of infantile complaints related to disorders of nutrition and dietetic diseases. Dr. de Chazal, a Mauritian, made a generous contribution with the prime object that the fund be utilized to provide maternity nurses to the poor women. Through trials and tribulations the Maternity and Child Welfare Society took off the ground on 5<sup>th</sup> March 1926 and by 1935, it was regarded as a permanent feature in the life of the Colony.

## 10.5 Training

Worldwide, the healthcare industry is a large employer of human resources. Combining medical technology and the human touch, the industry diagnoses, treats, and administers care around the clock to the needs of the sick in all their stages. The health sector comprises a wide range of services from hospitals, nursing and residential care facilities, home care services, ambulatory services and the offices of doctors, dentists and pharmacists. A number of essential complementary services such as laboratories, transport and catering add to the list. At all levels, dedication to the job by skilled professionals, technicians and technologists, and the mix of the different professions determine and shape the quality of life of the people served.

In Mauritius, prior to local training of nurses started in 1904 at the Civil Hospital, skilled health personnel were recruited from overseas to run the institutions. In 1944, Dr. Rankine reported the need to set up training facilities for the expanding health sector. As a start, sanitary officers, technicians and technologists were initiated by the highly qualified heads of institutions in such fields of radiology, physiotherapy and pharmacy. A three-year programme of training of nurses was started in 1946.

Training of health personnel evolved in phases.

The Faculty of Science at the University of Mauritius set-up in 1965 started training for technologists and sanitary officers. In the last decade, the University moved to a three-year course for doctors and completed by further training in Universities in Britain and France. The University has now upgraded the training to a full medical education course.

The Mauritius Institute of Health was established in 1969 with the objective to undertake training at national and regional levels and research in the health sector and health related disciplines. Through regional and international cooperation and developing linkages with training and research institutions, the Institute has further increased the range to Post-Graduate medical education with the University of Bordeaux.

Private Medical and Dental institutions have opened faculties for the training of medical and dental professionals with demands from new players to cater also for the needs of the region.

## 10.6 School of Nursing

Training of nursing students was started in 1906. One of the sore areas of the Health Care System was the supply of trained nurses. The first batch of students was registered in 1906 and qualified in 1908. However it was only in 1946 that real ground was covered with a formal three-year course in nursing and has continued progressing with the passage of time.

The Report of Dr. Rankine contained important policy measures designed to potentially change the landscape of health services post second-world war II. Improvements were proposed for better housing, sanitation, water supplies, standard of nutrition, ante-natal and maternity services, infant welfare programmes, school medical service, health education, electro and physiotherapy departments in all regional hospitals, dental services, nursing including better training and recruitment of a larger number of nurses for district nursing and on sanitation. Adoption of these measures had far reaching impact on the health of the population.

## 10.7 School Medical Service

Dr. Balfour had noted in his report that the growing child should, after the age of five years, come under the care of the School Medical Officer, a service that was inexistent and yet most needed where a large number of children were victims of parasitism, ankylostomiasis, worm infestations, schistosomiasis, scabies, pediculosis and the sanitary state of schools in a disgrace. School absenteeism was high at nearly 33 %. Started as a part time scheme in the 1920's, a structured school medical service was launched in 1952. Through the School Health Service, children were supplied with milk and iron tablets to overcome nutritional deficiencies and shoes to protect against infestations. The outcome was a significant improvement in anthropometry of children.

## 10.8 Water Supply

Most of the intestinal and food borne infestations had their origin with the quality of water used for domestic and drinking purposes.

Water supply in Mauritius developed in three distinct systems starting in the Port Louis region, the Mare aux Vacoas and the districts' water supply systems.

The supply of piped water to the city of Port Louis goes back to some two centuries when water from the Grand River North West was diverted to the inner city by the Canal Dayot. The City is supplied with treated water from the Pailles Filtration Plant since 1926.

The Mare aux Vacoas supply system was inaugurated on 3 March, 1888. Water from this system serves the Upper and Lower Plaines Wilhems, part of Port Louis, localities on the Western coast and some areas in the south. The water is filtered and chlorinated at La Marie filter plant before distribution.

The third district system supplies filtered and chlorinated water to the rest of the Island.

Today nearly 100% of the population has access to safe drinking water through piped water on premises (UNICEF 2003).

## 10.9 Private Sector

Private practice of medicine always existed in Mauritius. The Dutch, French and British had a two-tier system of health service in the Island. The private sector was resorted to mostly by the whites and the free coloured and those Indians who could afford to pay for the services.

Besides the General Private Practitioner Service, there are a number of private clinics that operate in the Island complemented by a large number of pharmacies scattered in the country, the latter also providing counselling services.

## 10.10 HIV/AIDS

The first case of AIDS was diagnosed in 1987 and since then the number of cases has been growing steadily to reach a cumulative figure of 3671 among Mauritians and 170 non-Mauritians, (Total: 3841).

To counteract the rising number of HIV positive patients, the Government has initiated a number of actions:

1. A needle exchange program has been started since 2006 to prevent needle sharing among drug addicts.
2. The Methadone Substitution Therapy was launched to encourage IVDA's to quit drugs.
3. Antiretroviral therapies are provided free of charge by public hospitals.
4. Creation of AIDS Unit and Harm Reduction Unit to coordinate field work.
5. Sex education has been started in Secondary Schools through the school health program to educate children about the risks of unprotected sex.
6. Mass Media awareness campaigns have been initiated to sensitize and educate the population about HIV/AIDS.
7. Free HIV screening programs (results are kept confidential).
8. Compulsory HIV screening test to all foreigners prior to the issue of work permits.
9. Free distribution of condoms to sex workers.
10. Proper training and recruitment of additional staff, from peer educators, nurses and doctors to tackle the increasing number of HIV positive patients.
11. Creation of an AIDS Hotline.
12. Construction of a new wing in Beau-Bassin Prison to house HIV positive inmates therefore preventing transmission to HIV negative inmates.
13. Prevention of mother to child transmission program.
14. The Paediatric HIV/AIDS treatment, care and support program is currently being finalized to enable better management of paediatric patients.

## 10.11 Vaccination

Influenza vaccines are one of the most effective ways to be protected from contracting illness during influenza epidemics and pandemics. Vaccination is therefore recommended in order to boost the body's resistance against the new influenza, and help ensure public health as the pandemic evolves.

Government has been implementing a child vaccination programme since 1801 against smallpox which was stopped in 1981, after WHO declared the world free of smallpox following global eradication. Nowadays there is a universal immunisation programme to protect children against common diseases, including tuberculosis, diphtheria, poliomyelitis, tetanus, measles, mumps, rubella and hepatitis (UNICEF 2003). With the ageing of the population came the need to also offer protection against flu that may increase morbidity among the aged. Flu vaccine is therefore given freely to all senior citizens and those who are at a greater risk of falling victims to influenza of viral origin.

## 10.12 Primary Health Care

The concept of Primary Health Care (PHC) has been applied in Mauritius since Independence (1968). The essential components of PHC are integrated in the health care system

and covers health education for the control and prevention of diseases, supply of food and nutrition, safe water and basic sanitation, maternal and child health care including family planning, immunization against major infectious diseases, prevention and control of endemic diseases, treatment of diseases using appropriate technology, promotional of mental health and provision of essential drugs in relation to the prevailing pathologies.

In line with the policy of the Government to improve the health status of the population, Mauritius has achieved most of the Millennium Development Goals ahead of the target date of 2015.

## CONCLUSION

1. Ill-health took a heavy toll of lives of slaves and indentured immigrants.
2. Access to health services was not easily and adequately available.
3. Often denied of adequate food and a balanced diet, proper sanitation and shelter and harsh labour conditions caused undue harm to their physical and mental health.
4. Some timid measures to improve living conditions were undertaken by the colonial administration in the 20<sup>th</sup> century often with a lag on health services development in Britain.
5. Post-Independence Mauritius witnessed a significant improvement in public health measures and services within the welfare state concept leading to a decline in and levelling of morbidity and mortality across all ages and population groups.
6. Having successfully managed the demographic and epidemiological transitions, Mauritius missed the opportunity of managing the risk transition in between the two phases thereby getting trapped in non-communicable diseases.

## PART IV:

### TRADITIONAL MEDICINE AMONG SLAVES AND INDENTURED LABOURERS

*"..[I]t is almost an everyday occurrence that medical skill, having exhausted itself in its endeavours to cure these distempers, physicians are obliged to acknowledge themselves beaten, and allow, or, very often, suggest the appeal to unorthodox treatment."*

Lieutenant-Governor Hubert Jerningham, 1892

## 1. INTRODUCTION

Mauritius is a settler society, peopled by successive waves of migration spanning over a period of some 400 years. Each wave of migration brought its own specific social and cultural ways, beliefs and practices, resulting into a rich multilayered and kaleidoscopic society. Overtime food habits and culinary arts, medication and healing practices as well as social organization of immigrants underwent transformations through living together and culture contacts. Those divergent beliefs, culture and practices contributed to folk medicine. New settlers re-invented or improvised new medication using their own knowledge and skills of plants and materials available and their understanding of the diseases, often attributed to the invisible in the first place. Recourse to the natural and supernatural elements for explanations and means of dealing with health problems was the only choice as shown by oral history and tradition. Scientific explanations and remedies gradually unveiled new methods of healing and medications for diseases. However, folk medicine continued and continues to be used either as complementary or alternative means of treatment.

For the purpose of this study, three main theories will be looked into to explain worldviews, beliefs and practices among slaves and Indian immigrants to Mauritius:

1. The theory of spirit
2. The theory of poison
3. The theory of germs. These theories will underpin discussions of the different systems pointing out the logic behind social and cultural practices as regards health and treatment of diseases.

## 2. SOME ANCIENT THEORIES RELATING TO DISEASES

Folk medicine and traditional healing exist since time immemorial. The causes of diseases were attributed to the natural elements which were then enigmas to man and beyond the control of his power. His natural instinct for survival led him to search for cures in nature namely plants (leaves, stems, barks, roots, fruits, seeds), clay, stones, and metals etc. to find relief from pains and sicknesses. Supernatural powers were called upon and healing dances, trances, rituals in the forms of incantations, invocations, prayers, offerings and sacrifice were performed to cure diseases.

### 2.1 The theory of spirit

Beliefs founded on the basis that disease and death, are the works of devils and demons, witchcraft, the Evil Eye etc have their roots in antiquity. Disease and death were not considered as the result of natural causes. Certain varieties of diseases such as hysteria, dementia, epilepsy, convulsions, and the delirium of fever were perceived as the actual working of an evil spirit that has attacked the patient. Diseases such as cholera, because of its sudden and unexpected appearance and the capriciousness in the selection of victims, suggested the idea that they are caused by demons. The belief in the origin of disease from spirit possession is still common, even in rural England today (P. K. Maity). Fits, the falling sickness, ague, cramp, warts are all believed to

be caused by a spirit entering the body of the patient. The idea that the spirit which is working the mischief is therefore logical; it can be scared by a charm or by the exorcism of a sorcerer (Cooke). The major causes of ill health and diseases are attributed to possession by evil spirits/ intrusion of spirit in the body; angry deities with reference to taboos; angry ancestors; witchcraft.

## 2.2 The theory of poison

The theory of poison is associated with the “rich lore of serpents” of the Indian, Chinese and Buddhist traditions (Alex Wayman). According to the Indian tradition, poison comes from the realms of plants (roots) and animals while the Buddhist theory stresses on psychological poisons, both based on the notions of purity and impurity. Elimination of poison consists in ritualistic performances converting poisons into non-poisons using the four elements, that is earth, fire, water and wind. Similarly, infection of any sort was attributed to the penetration of poison in the body either through insect bites, intake of food or taking in bad air. The general treatment consisted of sucking the poison out and the application of *sinapisme* of herbs, or practicing *la saignée* and use of purgatives in the form of oil or infusion commonly called *lavement*. This practice prevailed well into the mid 19<sup>th</sup> century until the theory of germs was put forward by bacteriologists.

## 2.3 The theory of heat and cold

The theory of heat and cold has persisted to this day. It is closely related to the humoral theory whereby each humour was also associated with the physical environment and the change of seasons or climates, and exposure to excess of heat, coldness, dryness or wetness causing an imbalance in the body. Bloodletting or *la saignée*, purges and enema were means to restore the balance. This theory which remained dominant well into the 19<sup>th</sup> century made its way into folk medicine. A new physical environment and sudden change of climate with different seasons, were perceived as the cause of ill-health as evidenced in Mauritian folklore and folk beliefs. Excess of either manifests itself in the form of inflammation or *chauffement* in the Mauritian context *rafraîchi* is taken to eliminate heat. Some of the most common *rafraichis* are *orge* and *grain de lin*, roots of the coconut tree, tender leaves of the *Bois d'Oiseaux* among others (Gopauloo, 2010).

## 2.4 Cosmology, nature and traditional medicine

Pre-historic and simple societies lived in unity and harmony with nature, and with the laws of the universe. The notion of a power that permeates all beings is a thread throughout the natural societies (Eliade, Mircea, *The Sacred and the Profane*, 1959). All aspects of reality and of nature are perceived as expressions of this non-material and mysterious essence behind the physical phenomena, expressing a synchronistic and symbiotic interconnectedness of all things within the natural order, becoming a survival imperative for the individual and for the collective to maintain a balanced relationship to this other world and with the spiritual forces that inhabit it. Successful hunting, plentiful harvesting, fertility, physical well-being and healing are all manifestations of this balanced relationship. Disease and misfortune are direct expressions of the same kind of interruption within the energy system.

This energy or awareness of an interconnected intelligent “Other”, behind the perceived reality, bears many names. The African Masai call it *ngai*; the Australian Aborigines call their dreamtime *alcheringa*, *ugud* or *jugur*. These primordial energies correspond with the Chinese *Ch'i*, the *Ki* of the Japanese and the *prana* or *akasha* of the Indians, the universal matrix.

This symbiotic relationship between man and the natural order is man’s reliance on plants for his own survival. Healers and Shamans can access into the “vegetable mind” within nature in order to learn directly from plants what their medicinal properties are and how they should be employed. Plants that are now considered toxic possessed a privileged status as sacred plants in many cultures. Tobacco is sometimes called “flesh of the Gods” in the Amazon Basin; the coca plant, in South America, is the cornerstone of the medicinal practices of the Andean cultures, considered to be a divinatory master plant....Cannabis, opium or *gandia* and other narcotic plants which are considered harmful to health have been used in rational doses to cure illnesses.

Different traditional systems of medicine prevail - the Chinese system of medicine from plants and insects, the Indian medical systems which include Ayurveda, *Siddha* in South India, as well as the *Unani* system, which has its origin in the ancient Greek medicine. Traditional folk healing practices were widely prevalent until the beginning of the 19<sup>th</sup> century. The advent of science and the theory of germs has gradually dissipated the beliefs that foul odours propounded by the miasma theory, or evil spirits could cause a person to fall ill, and supplanted traditional medicine.

### 3. SOCIAL AND CULTURAL ATTITUDE/BEHAVIOUR OF SLAVES AND INDENTURED TOWARDS DISEASES AND HEALTH SERVICES

Anthropological studies show that the notion of hospital was alien to both slaves and indentured labourers. In both African and Malagasy as well as in Indian cultures, the sick were taken care of by the family and the healers of the clan or community. The sick was surrounded by kith and kin or rejected altogether depending on the perceived cause of the disease. Hospitalisation and confinement were unknown to migrants, forced or free, and as far as possible they evaded public health services. Official reports on epidemics and diseases are replete with instances of sick people hiding their diseases, evading vaccination<sup>4</sup>, running away from hospitals, taking French leave or clamour to be discharged. Hospitalisation was looked upon as a punishment. Women, especially the Indians, avoided hospitals as they abhorred being examined by male doctors. Incidents on board the ship were numerous. Childbirth was a woman's affair.

In addition to this cultural aspect, hospital care was lacking in both physical and humane conditions so much so that patients' health deteriorated, if not physically, psychologically leading them to commit suicide. Poor sanitation in Mauritius and contamination of water supplies were attributed to the "filthy habits of the natives and the Indian population" (Anderson, 1854). They were perceived as culprits, which instilled very low self-esteem among the lower classes. Dr. Bolton reported pollution of rivers in relation to Malarial fever thus: "The water was dark coloured and gave evident sign of the washing of large quantities of dirty clothes along the course of the rivers".

#### 3.1 The social stigmas and diseases

The origins of diseases as well as their propagation were attributed to slaves and Indian immigrants as they were most afflicted by them. They were not perceived as victims of the oppressive systems but as vectors of diseases. The evils of working and living conditions which the systems imposed on them were rarely questioned by the authorities. If any measures were taken, they were haphazard for instance in the case of leprosy. Leprosy was introduced into Madagascar from the Mozambique Coast at the commencement of the eighteenth century and the disease came to Mauritius with the slaves in 1770. Tombe who visited Ile de France in 1801 says that he saw "many lepers amongst the black population of the Island", which consisted of 60,000 slaves, two-thirds being Mozambiques, and one-third Malagasies and Indians (Anderson, 1854).

Although a Commission on Leprosy had inquired into the prevalence of the disease in 1781, nothing was done until 1803, when the lepers were exiled to Ile Curieuse, some 500 miles north of Mauritius. In the 1850s, leper- beggars in Port Louis and villages had become a threat to the civil society. However, it was only in 1868 that the Government started to subsidize the Roman Catholic Hospice of St. Lazare at Vallée des Prêtres, as a leper asylum. Dr. Poupinel who treated patients at the asylum was of the opinion that the disease was also probably propagated by trades people, servants, and laundresses.

---

<sup>4</sup> As regards smallpox, evasion of vaccination was believed to be the common cause of spread of the disease and death. Mr. Walter reported that "a considerable number of Mohammedans every year evade the Law relating to vaccination the folly of those who endanger their own lives and those of others."

### 3.2 Fear of removal to hospitals and loss of personal property

In the case of the plague epidemic, while the mode of its propagation by rats and fleas was not yet established, “disinfection was carried on in such a way that it was soon considered synonymous of ‘destruction of property,’ and, as the compensation granted by Government was always inferior to the value of the articles damaged or destroyed, the people removed their infected goods and chattels and lodged them elsewhere as soon as they suspected a case of Plague on the premises”. The blame was always laid on “ignorance and obstinacy of the uneducated classes”. They hid their sick members of the family, which are often discovered only when other inmates of the house or hut have become infected.

For instance the Chinese shopkeepers removed their sick at night so that their shops should not be disinfected and would scarcely inform the Sanitary Authorities if there were rats in their shops. Balfour pointed out the great difficulty in fighting plague due to “concealment of cases, difficulties in diagnosis and getting cases removed to hospitals, lack of faith in the protective powers of plague vaccine, want of cooperation in the anti-rat campaign etc.” Again sleeping on or near the ground, among poorer inhabitants was recognized a considerable danger.

The inspectors often had to bribe their Creole or Indian neighbours to denounce the removal of the sick, and to point out the shops where rats were seen dead or alive. On sugar estates the planters were also held responsible for the spread of Plague for failure to inform the Sanitary Authorities of dead rats in the estate’s grain store.

As regards the 1891 smallpox epidemic, the blame for the spread of the disease was laid on “the ignorance, stubbornness, and superstition of the natives” despite the fact that it was to mainly to an “insufficiency of vaccine at the time of the outbreak”.

### 3.3 Lifestyle, food and clothing

Dazille deplores the living conditions of slaves and attributes the causes of diseases to poor food, inadequate clothing for a tropical climate, libertinage, overwork and extreme physical exhaustion, little rest and liberal consumption of strong liqueurs such as *guldive* and *taldia*. He says that the root of manioc and especially the way it was prepared for consumption by slaves were the main cause of malnutrition and the high mortality rate among the Negro population of Isle de France. Slaves were afflicted by many types of diseases and died relatively young. Their life expectancy was short compared to that of the white population. As regards the indentured labourers, Balfour (p. 24) observed that the diet (consisting of salt fish and *dhol*, rice, ghee or oil and salt only) provided by sugar estates hospitals to patients suffering from dysentery and diarrhoea was unsuitable and “inhumane”. No supplement of nourishing food such as milk was given to patients for reasons of economy. *Beri-beri*, the food deficiency disease “attains epidemic prevalence”; it was believed to be due to the habit of eating highly polished rice. In the same way, Indian and Creole “habit of closing up all windows of sick rooms especially at night” was viewed almost as a cultural deficiency, and was responsible for the spread of diseases. It was hardly ever admitted that many Indians died from pneumonia because they were given inadequate clothing and could not afford to buy any with a meagre wage.

Balfour also observes that alcoholism favours pneumonia and “of late years many among the Indians have taken to drink and are becoming even more careless of their health than usual, suffer accordingly.” (p. 51) He further observes that rum-drinking has become a way of life among the Creole population and also among the better class of Indo-Mauritians. He adds that the “Indians are less fitted than the Creoles to withstand its ill effects...” (p. 54)

However, the epidemics did not choose their victims. Jerningham writing about Mauritius in the last years of the 19<sup>th</sup> century was appalled at the way cholera and smallpox had “scourged” the island “turning one of the fairest spots on earth into a veritable charnel-house, and leaving traces of mourning and affliction in every home.”

He also stresses on the psychic conditions of an afflicted population, the trauma that characterized the Mauritian society so much so that “... everything from a mere headache, in an

ascending or descending degree, is impetuously denominated *la fièvre*... A child upset by unwholesome food, a man annoyed by any inconvenience which might befall him elsewhere without notice, is immediately said to be under the influence of the dominant sickness, and is treated accordingly.” (p. 16)

#### 4. TRADITIONAL HERBAL MEDICINE

Since the arrival of the first settlers, Mauritius was considered to be an ideal spot for the cultivation of exotic and medicinal plants. Even formally educated medical practitioners had faith and relied heavily on medicinal plants, particularly in the absence of scientific explanations of the causes of diseases and relevant remedies (Dazille, Anderson, Balfour). The ordinary people as well as the elite treated the sick members of the family in the home relying on their own experiences and knowledge. Plants and water were popularly used.

Slaves and indentured labourers had their own repertoires of medicines and healthcare practices which they had recourse to in times of sickness and epidemics. They relied entirely on their own knowledge, judgement and skills and on nature's bounty in the island. They sought plants and materials they were familiar with and shared experience handed over across generations in their lands of origins. Each group had its own pharmacopeia and rituals. The slaves originating from Madagascar contributed immensely to traditional medicine which includes plant therapy, invocation ceremonies, ancestor worship, trances, *gris gris* or *cri -cri*.

The indentured labourers had come from different cultural regions of India and had brought along native methods of healing, embedded in their belief systems and worldviews, for instance sun worship, tree worship, river worship and worship of the earth, which are still practised in some forms or other. Indentured labourers have also contributed to medicine through their knowledge of plants and metals derived from popular knowledge of the Ayurveda, the Siddha and the Unani medical systems among others.

Slaves as well as indentured labourers, arriving in the new land completely different from their homelands, adapted to new forms of healing and they constituted new pharmacopoeias. Plants had been introduced by naturalists and travellers and were acclimatized. Poivre, Daruty, Aublet, Rouillard, Guého and recently A. Gurib-Fakim have inventoried some of these plants. Names of plants that had been used by slaves and indentured labourers, and those that are still used to day by their descendants have been listed in the text.

According to Guy Rouillard and Joseph Guého, authors of *Histoire des Plantes d'Intérêt Horticole, Médicinal et Economique a l'île Maurice Volume I*, “une trentaine d'années après l'occupation par les Français, Jean Baptiste Fusée-Aublet fut envoyé à l'Isle de France afin d'y “établir un laboratoire qui pût fournir les comptoirs en médicaments, un jardin qui rassemblât les plantes qui pourraient devenir avantageuses à la colonie [...] Mes provisions, ajoute-t-il, me donnaient les listes de botaniste et de premier Apothicaire Compositeur de la Compagnie des Indes à l'Isle de France”.

The authors trace the interest in medicinal plants to the beginning of the colonisation of Mauritius. The Dutch made a list of the main medicinal plants that they came across in 1677. The first French settlers also searched for means of healing and curing diseases among the vegetation they lived. Migrants from Africa, India and China subsequently brought with them more therapeutic practices of healing with plants.

In his account of his voyage to Isle de France in 1812, Milbert observed that the rich biodiversity of the island was harnessed in view of curing a number of diseases. He refers to *Le lilas des Indes* and the following plants and their uses in the Isle de France which are indicative of medicines used by slaves, Coloured, and Whites:

1. Le Palma-christi, dont l'huile est un puissant vermifuge ;
2. Le gingembre (*anomum zingiber*) vient aussi facilement que le *curcuma*: on l'emploie également en médecine et dans la cuisine ;

3. Le benjoin (*benzoinum amygdaloides*). Indigène de Siam, de Sumatra. Exhale une odeur. La fleur de benjoin est un excellent pectoral; on l'emploie contre les obstructions ;
4. Le papayer (*carica papaye*). La papaye est un excellent vermifuge ;
5. Le jacquier: Le fruit est un puissant aphrodisiaque ;
6. L'huile de rarabé, un muscadier sauvage, originaire de Madagascar est aromatique. Les Malgaches se frottent le corps et les cheveux avec cette huile ;
7. Le harame: Le jus est blanc, résineux et aromatique. Les femmes malgaches en font une pâte qu'elles regardent comme un cosmétique précieux pour préserver la peau ;
8. Le tanguen: Les Malgaches font un usage fatal de son fruit qui contient un poison mortel. C'est une mancenille ;
9. L'avang-biri: Plante à grandes écoses carrées coulent une fève qui est un anti-hémorroïdal ;
10. Le raven-tongharts: Plante balsamique ;
11. Le vaguinang-boua: Sa racine est un bon vulnéraire ;
12. Le coutoubanda: Sorte de pimprenelle qu'on applique aux enflures ;
13. Le voai-marang: Arbuste dont l'écorce a des qualités astringentes ;
14. Le son-di-fa-fa: Les Malgaches se frottent le corps de sa feuille lorsqu'ils ont essuyé des fatigues, et ces frictions les raniment et les rafraîchissent ; ils prétendent que la feuille de cette plante est incorruptible ;
15. Le bois montbrun: Arbrisseau dont l'écorce est employée en médecine ;
16. L'herbe divine ou de Flacq ;
17. L'aya-pana et le coulier sont des plantes médicinales de Brésil ;
18. L'herbe blanche, végétale, indigène et vermifuge.

Milbert also refers to the *Les Yolofo*s who arrived as slaves from West Africa (page 163). He wrote: «Ils se font remarqués au tatouage bizarre par lequel ils s'imaginent décorer certaines parties du corps : ainsi, par exemple, ils se dessinent sur le ventre un large soleil qui le recouvre tout entier, et ressemble à une espèce de cuirasse». It was deemed apparently as a protection against the evil which includes diseases, mishaps, death etc.

#### 4.1 Some common diseases and healing with plants

Petite fougère ou Tambavine : The word *tambave* draws its etymology from the Malagasy term *tambavi* which means “maladies de la première enfance”. A number of recipes exist to cure this disease, mostly using a combination of plants such as *Tambavine* with *chandelier à piquants*, *gros ayapana sauvage* or with *Fahame* and *vouatouke*, and other plants. ) Jerningham speaks from personal experience about this disease that was very common in Mauritius even in the late 19<sup>th</sup> century.

“A disease incident to children, named *tambave* or *carrean*, is also easily and readily cured by herbalists, after medical aid has proved abortive.... The disease manifests itself in children. They refuse to eat, become pale and emaciated and slowly droop under their parents' eyes. Herbalists propose a mixture. After the first dose or two, there is instant relief and the child is restored to the mother's arms.”

Langue de bœuf: Dr. Chapotin in his *Topographie médicale de l'isle de France* (1812), speaks about a species of “*ceterach* », which Malagasies used at that time. This plant is prepared in infusion /decoction and is taken by breast-feeding women (mothers, and nannies, often slaves), whose milk is improper for feeding babies. Daruty indicates its use as “*dépurative et calmant*” in case of hepatitis, *tambave* and cough.

*Bois d'harrange (Haronga madagascariensis)*: A handful of harounhe leaves is boiled in one litre of water. The infusion is cooled. Several cups are taken a day pour “faire revenir les règles”. The milky juice of the *bois d'haroungé* is rubbed in the part of the body infected with *darters*.

*Patte poule à piquants (Toddalia asiatica)* According to Bouton (1866), the skin of the roots is used by Telenga doctors in India against intermittent fever. All parts of the plant have very stimulating properties. The bark of the plant is employed as tonic and *depurative*; *la sève et la résine* (resin) possess abortive properties. It can be used for abortion without affecting the mother's health. The fresh leaves are used against abdominal pains, headache and syphilis. The ripe fruits are used in gargles in case of sore throat and bronchitis, and also in bath, and as a tisane for diuretic, and on wounds as cataplasm. Daruty names it *Toddalia aculeata* and states that it holds medicinal properties to cure the following diseases and sicknesses: Abscess of the breast on women who are breast feeding women; Asthma, Bronchitis, *fièvre paludienne*.

Neem, *Nime. Margosier* - this last variety originates from S.E. Asia. (*Azadirachta indica* A. Juss) All parts of the plant possess a resin having antiseptic properties. Céré refers to it as “Margosier de Trinquemalay”. Thompson - *Melia azadirachta*. Boyer - *lilas sacré*. Daruty calls it *lilas sacré or Nime*. He indicates that the bark is “febrifuge”, astringent, bitter. It is recommended in case of fever, in appetite and to cure wounds.

*Lilas de l'Inde (Melia azedarach)* Origins India grows up to 5 to 15 metres high. Bouton says that the bark and the roots are considered as a powerful *vermifuge*. Dr. Chapotin, in his *Topographie Médicale de l'île de France*, prescribed infusion of two big fresh bark of the root, boiled reducing the liquid to a cup...”To Daruty it is a tonic as well as a *vermifuge*. He writes :

“*Les Indiens, pendant la durées des épidémies de éra que nous avons subies, suspendaient des rameaux et des feuilles de lilas, qu'ils considéraient comme un préservatif, à la porte et jusqu'à l'intérieur de leurs cases.*»

*Sensitive (Mimosa pudica* L.) originates from South America. There are two varieties, *hispida* and *unijuga*, the latter is more abundant in Mauritius. It was introduced by Abbé Rochon who named it *Anakuey*, a Malagasy name. Bouton writes that the leaves and the stems of the plant possess narcotic and sedative virtues. Daruty recommends it as a remedy for diphtheria of the pharynx. In fact it was a remedy of patent Sylvain transmitted to him by his father, a Creole of Martinique. It is to be used in preparing a gargle with *grain de lin*. A cataplasm of the leaves of *bois noir sinapise* on the neck

*Ayapana (Triplinervis)* originates from the Amazon Bassin. It has a solid reputation as medicinal plant. It was brought by Baudin because of its panacea properties.

*Orthosiphon (Artistatus)*. It is widely used by Javanese to treat infections of the kidney and the liver.

*Baume du Pérou (Plectranthus madagascariensis)*. It grows on rocky mountain slopes. Bouton calls it “Petit baume” or “Baume sauvage”. He says in decoction it cures bronchial infections, contusions. Daruty says it is a good expectorant used in case of cough and cold.

*Toc Maria, Tocque Maria ( Salvia coccinea Etlinger)*

*Abrisseau* originating from South America, had already been cultivated at Le Réduit in 1816. The *mucilagineuses* grains are used to prepare cooling drinks. The grains are used against dysentery and diarrhoea.

Thyme derives its name from the Egyptian word *tham*. It was known to Egyptians who used it for embalmment of mummies. The plant was highly honoured and venerated by the Ancient

Greeks and the Romans. Priest included thyme in sacrificial offerings. The Romans used it as condiment and medicinal plant.

*Melisse batarde* (*Stachys officinalis* L. ) It is a European plant. Bojer singled it out in 1837. It was grown in gardens as medicinal plant. It is no longer to be found in Mauritius.

*Betel* (*Piper bettle*): It has its origins apparently in Malaysia. Very anciently cultivated and propagated in Tropical Asia. Much later it was introduced in Madagascar, East Africa and Les Antilles. Mastication of *betel* dates back to antiquity. Herodotus (340 B C) refers to it. This practice is current among Hindus, Malays, Indonesians and even Polynesians. Daruty says that the *betel* is a *sialagogue*, febrifuge, a powerful pectoral, and can stop the secretion of milk.

*Poivrier Sauvage* or *betel marron* (*Piper barborenze*). According to Daruty it is “diuretique, stimulante, contre le gonorrhoea et les fleurs blanches”. *Betel marron* or *liane de poivrier sauvage* is according to Daruty “ febrifuge, antiscorbutique, depurative” and is recommended for children.

*Citronelle*, Lemon Grass (*Cymbopogon citratus*). It probably originates from Malaysia or Ceylon. It is now widely cultivated in the tropics. It is present in Mauritius since the mid 18<sup>th</sup> century. It figures on Aublet’s list. Bouton writes : «Les feuilles en infusion donnent un breuvage fort agréable, diaphorétique, excitant et pouvant être avantageusement substitue au thé.” Daruty indicates its use in decoction against eruptions of the *cuir chevelu*. As *diaphorétique*, ‘pour faire transpirer abondamment donner une décoction chaude de graines de coton, de sommités de vieilles filles, de citronnelle, de capillaire, des racines de vétiver”.

*Chiendent*, Bermuda grass, couch grass (*Cynodon dactylon*). In the medical domain, it is an emollient, has cooling properties and is indicated in cases of inflammation.

## 4.2 Information based on field work/interviews

Some plants were used by slaves, indentured labourers and the General population for healing. These have become part and parcel of the Mauritian cultural heritage and way of life. The following list plants and the ailments against which they are used, is based on information gathered from herbalists, village healers and inhabitants.

*Ayapana* - vomiting  
*Citronelle* or lemon grass - fever, cold and cough  
*Bétel* - cough  
*Camomile* - fever, indigestion, vomiting etc.  
*Catepen* - fever  
*L’herbe de bouc* - fever  
*Lingue* - skin diseases  
*Savonnier de l’Inde* - cholera/dysentery  
*Lilas de Perse* - skin diseases  
*Lila de l’Inde* or neem - smallpox  
*Tourterelle* - anemia  
*Sensitive* - sleeplessness  
*Anana sauvage* - abortion used by slaves  
*Baume du Perou* - fever  
*Tulsi* or *basilica* - cold, cough and digestive ailments, rafraîchi  
Quinine: Malaria  
Eucalyptus- Malaria, child birth  
Banana green - diarrhoea  
Ginger - cough  
Onion - antiseptic  
Garlic - blood circulation  
Clove - tooth ache

## 5. HERBS AND FORMAL MEDICAL TREATMENT

Herbs were used to complement the healing effect of formal medical treatment as evidenced by government's reports, travellers' and residents' accounts and ocular witnesses. Medical science relied very heavily on plant derived medicines for curing patients in the hospital and that well until the 19<sup>th</sup> century. Lieutenant- Governor Jerningham gives a firsthand account of the inadequacies of scientific medicine on the island, its utter helplessness and recourse to popular medicine and healers. The extensive quote below illustrates the situation in 19<sup>th</sup> century:

“Two ordinary illnesses dysentery and diphtheria, are very rife in Mauritius, and against them medicine often proves utterly helpless... But, fortunately, this approved science is supplemented by successful empiricism. Certain herbs, known or assumed to be known only in certain families, are the ingredients incorporated into draughts, which are looked upon as sovereign remedies for these two distressing maladies... It is almost an everyday occurrence that medical skill, having exhausted itself in its endeavours to cure these distempers, physicians are obliged to acknowledge themselves beaten, and allow, or, very, suggest the appeal to unorthodox treatment... So far this is recognized, that for diphtheria the Government authorizes the employment of unqualified practitioners, and in all cases of the real or supposed disease they are immediately summoned, it be universally felt that if cure is possible it can be attained by this means... But when recognized means have been used to the utmost without effect, while amelioration at once attends the efforts of strangers to the profession, it must be frankly conceded that their discoveries, whatever they may be, are invaluable... Doctors know, or say they know, the components of these beneficial *pharmacopoeias*, practitioners are not at liberty to make use of them. Unless cogent reasons exist against the herbs being allowed to rank among legitimate remedies, it would certainly appear to be a step in the right direction to at once employ them under proper authority...” (Jerningham, pp. 16 -18)

The section below on 18<sup>th</sup> century medical treatment with special reference to the slaves and traditional medicine shows that alternative or complementary healing practices had changed very little over almost two centuries. For instance the remedies for *fièvres putrides* were *la saignée* and the use of *tisanes* (pp. 45-55) as summarized by Dazille in these terms:

« Il est sensible que les boissons acidulées conviennent a tous égards dans les fièvres putrides, & l'on a dans l'Isle de France ce remède sous la main: l'orangeade, la limonade, la bigarade, sont les tisanes ordinaires que l'on doit employer dans ces cas. Ce secours que la nature semble fournir avec abondance dans ce pays comme des moyens les plus propres a remédier aux effets du climat, est bien préférable aux tisanes émoullientes qu'on y emploie presque toujours dans les maladies putrides, puisque plusieurs de ces émoullients entrent dans la nourriture ordinaire des Nègres ; leur usage doit être regarde comme une des causes de leurs maladies... ».

Another instance when herbs were used was «Si le ventre est météorisé de manière à suspendre les évacuations, il convient de donner des laxatifs quelque fois émétiques, & d'appliquer sur le ventre des cataplasmes d'herbes aromatiques [...] J'ai vu quelquefois faire usage dans le cours de cette maladie d'apozèmes nitreux, auxquels on ajoute des sels purgatifs, *le tamarin, la manne, la casse et la tartre stibiée...*» He adds that «toutes ces tisanes doivent être préparées sans ébullition, et mêmes quelque-unes sans feu». He recommends “la guérison des fièvres intermittentes par l'usage du *quinquina*,” - a plant that grew in abundance in Réduit, until the woods were cleared to build the University building, according to Naiken, seller of medicinal plants.

Regarding gonorrhoea or *chaude-pisse* <sup>5</sup>Dazille writes, «Dans les termes où je faisais usage de ces remèdes, je n'ai point vu l'écoulement arrêter avec les tisanes charges des principes extractifs de *l'ortie blanche*, de la *queue de cheval*, la *mille-feuille*, *l'herbe au charpente*, la *bistorte* ou autres plantes toniques, auxquelles on attribue mal a propre la propriété d'arrêter l'écoulement de la gonorrhée car l'expérience démontre toujours le contraire» (pp. 199-204).

«Il est inutile d'observer que les tisanes apéritives, ainsi que celles des bois sudorifiques dont quelques praticiens font usage, sont absolument contraires dans cette maladie, puisqu'elles

---

5

augmentent l'inflammation» (pp. 186-7). And to « faire apparaître l'écoulement, de rappeler la gonorrhée à son premier état, pour effet on prescrit des tisanes adoucissantes de grain de lin ou de fleurs pectorales ; on fait prendre aussi, selon les circonstances, deux ou trois bols par jour, chacun de quatre grains de camphre, et huit grains de nitre, on applique sur les parties infectées, des cataplasmes de farine de lin ou de pulpe d'herbes émollientes, à quoi on ajoute une poignée de camomille et de mélilot, afin de modérer un peu leur propriété relâchante; le plus souvent, je donne même de préférence aux cataplasmes de mie de pain et d'eau végéto-minérale; on a soin de les renouveler de trois en trois heures.» (Dazille, p. 217)

Venereal diseases were very common among the Negro population, and did a lot more ravage among them. The diseases are more complicated as Negroes suffer also from many other diseases chiefly scurvy, and so extremely difficult to treat. (Dazille, p. 150).

Medicinal plants were used to complement and reinforce treatment prescribed by medical science. A very good example from first-hand expérience, is given by Dazille, and he elaborates, “ Lorsque les symptômes vénériens résistant aux frictions, je suis dans l'usage de faire prendre le jour d'intervalle, entre chaque friction, une cuillerée à café d'une solution de douze grains de sublime corrosif, dans une pinte d'eau distillée: on prend cette petite quantité de solution mercuriale, mêlée avec du lait, du bouillon, ou dans une légère infusion de fleurs pectorales, telles que celles du bouillon blanc, de *guimauve*, de *violettes*; on peut même substituer à ces fleurs, les sommités de ces mêmes plantes, ainsi que toute autre infusion adoucissante ; on a soin de choisir celle qui convient le mieux à l'estomac du malade.» (p. 159)

For des maladies vermineuses, characterised by vomiting, he prescribes «vomitifs produisent de fort bons effets... toutes les préparations antimoniales sont efficaces contre les vers; j'emploie pour boisson, les infusions de *camomille*, de *mélilot*, l'eau de *chiendent*, même la *limonade*, et l'eau bouillie avec le mercure cru. Je purge de jour à autre ordinairement...» (p. 109)

For diarrhoea and dysentery, Dazille stated he fed patients principally, in the first few days, with “des crèmes de riz à l'eau et du sucre...” and prescribes even “des fortes décoctions de riz connues en Asie sous le nom de cange”. (p. 162)

For diseases of the chest and lungs, chiefly common among Negroes, which is often characterised by weak pulse and weakens the sick person, he employs remedies that will activate the blood system, les vaisseaux. He writes “... ainsi contre l'usage ordinaire, il convient de mêler aux incisifs, les aromatiques légers, pour réveiller l'oscillation et diviser l'humeur engorgée dans la substance du poulmon: *la fleur de camomille*, de *sureau*, de *mélilot*, *l'écorce du citron*, fournissent par une légère infusion de l'eau, une boisson aromatique et légèrement incisive...” (p. 122)

For inflammation, *des cataplasmes anodins* with milk or *liquides adoucissants* are placed on the vesicles. For l'ophtalmie vénérienne, l'on fait l'usage de boissons adoucissantes telles que l'eau de veau, le petit lait, et les infusions de *fleurs pectorales*; on prescrit aussi plusieurs lavemens émollients... trois bols par jour composés chacun de quatre grains de camphre et huit grains de nitre. » (pp. 249 - 254)

## 5.1 Plants and epidemiology

Plants and their derivatives were used by medical men during the several epidemics that struck the island. The cholera epidemic that devastated the island of Mauritius in 1854 was the third of its kind in intensity since the epidemic of smallpox of 1792 and that of cholera of 1817. The government report on the 1854 cholera epidemic shows that practically no improvement had been made to detect the real causes of the epidemic. Jerningham writing on Mauritius in the last years of the 19<sup>th</sup> century, was appalled by the conditions in Mauritius. He observes, “Mauritius has frequently been scourged by cholera and smallpox, which have paid her untimely visits, with deadly result, turning one of the fairest spots on earth into a veritable charnel-house, and leaving traces of mourning and affliction in every home.”(p. 15)

The miasma theory which dates back to the 4<sup>th</sup> or 5<sup>th</sup> century B. C. in Ancient Greece, was still resorted to, to explain the cause of cholera, Malaria, plague, leprosy and other deadly fevers. The cause of the epidemic was attributed to foul smells and an impure atmosphere, deemed

polluted by the physical environment and filthy living. Poor sanitation, dubious sources of water supply, housing conditions, overcrowded living spaces, co-habitation of animals and man, poor ventilation, burial grounds, unattended rivers and canals, ill-drained marshes and filthy habits are indicated as some of the causes of atmospheric pollution.

#### Cholera, *ayapanah* and other plants

Treatment of cholera still was given according to knowledge of scientific medicines that was available; doctors relied heavily on traditional medicines. The report on the 1854 carries ample evidence of the use of plants and their derivatives in the treatment of cholera, in the form of infusion, *sinapisme* or cataplasm. Plants namely *ayapanah* was used in infusion or decoction. *Ayapanah* stands out as a major medicinal item though other plants might have been used. *Ayapanah* and ginger infusion mixed with brandy was also commonly given to patients by Mauritian doctors, which is still a very common home-made medicine today in the treatment of cold, cough and chest congestion. Plant-derived products namely oil was used as purgatives and for massage or frictions. Plant based products included mustard, castor oil, opium, ginger, bark (not indicated which one), camphor, olive oil, turpentine oil etc. For children eucalyptus oil in milk was used.

Stimulants such as wine, brandy, porter, gin, champagne and ether were used during the stage of reaction. Castor oil was very frequently used as an *enema*. *Sinapisme* or cataplasm were also used by some doctors. Mustard plasters or poultices on the chest or the abdomen were used or as “an emetic generally rubbed with dry towels or the hands to stimulate the lineaments” Anti-choleric pills made of ginger powder and extracts of opium were administered as a preventive measure.

There was much scepticism as to the contagiousness of Cholera. Different kinds of treatment were adopted by doctors practising in the Island at that time. The treatment of each depended on the opinions held with regard to the cause of the disease and its contagiousness. Some believing it to be due to a “carbonization of the blood, a want of oxygen in the blood, as in suspended animation, collapse, and asphyxia,” recommended the cold- water *douche*. Others simply dashed water on the patient’s face, and said that it was as good as the *douche*, and condemned the latter as causing more rapid collapse. A second class of physicians paid special attention to the vomiting and diarrhoea, and tried to arrest these by dilute sulphuric acid and calomel combined with *opium*. A third group, gave emetics and purgatives, in spite of the antecedent or actual vomiting and purging, and thus tried to drive out the poison ; afterwards rubbing the patient and keeping him warm. A fourth filled their patients’ stomach with *tisanes*, the *Ayapanah* infusion being considered the best, with ginger and brandy as well.

Experts such as Sir Ronald Rogers of the Cholera Institute of Calcutta advised barley-water, and *opium* in the promontory stage, and common salt as well. Diet to consist of barley water or farinaceous food, arrow-root or corn flour, custard and soups.

#### Ulcer - *camphor* and *sorrel leaves*

The poorer classes which comprised descendants of former slaves and indentured labourers were often afflicted by ulcer. Dr. Rouget’s treatment was “found most efficacious.” He used “Hanson’s cauterisation of the ulcer with pure carbolic acid... and afterwards the dressing of the wound was done with powdered *camphor*...” The wound rapidly healed despite a few relapses. A poultice of powdered *camphor* and pounded *sorrel leaves* (*Oxalis corymbosa*) was frequently used by the common people for ulcers (Anderson, 1854).

#### Leprosy and *Chaulmoogra* oil

Beaupertuis and Crocker’s intramuscular injections were used for the treatment of leprosy. However, the *Chaulmoogra* oil was the commonest treatment. Dr. Poupinel preferred this oil to all other treatments, to be continued over 4 to 5 years internally as well as externally, either in pearls or in milk. He said that “cleanliness, open-air work, and good food were of utmost importance” and that “the classes of people most vulnerable to the disease could afford none of these” (Anderson, 1854). Furthermore, the disease was most prevalent among the Indians although the coloured race was in general more vulnerable. *Acajou* and *Gurgeon* oil were also used for cicatrization.

## Diphtheria and *tisanes*

As disinfection of rooms was not thorough, the diphtheria, *beri-beri*, and plague epidemics had become more or less endemic in the Island. Moreover, “the Indian and black servants steal the contaminated clothes from the infected rooms before the disinfection has taken place” and it was “impossible to force sulphurous fumes into a thatched Indian, hut or into a black man's shanty”. Recourse to compulsory burning down of the “thatched houses and shanties” caused much suffering and distress to the inmates. Recourse to healers such as Gentrac and Flauricourt were common.

### Gentrac, the healer

Before the discovery of the *Bacillus diphtherice* and *serotherapy* all forms of therapy for diphtheria failed. Anderson (1854) writes “... a layman in Mauritius of the name of Gentrac, who had made out of simple herbs a secret remedy, which when applied to the patient's throat before the fourth day of the disease, was invariably successful, – and from morning to night this man was hard at work curing the little ones”. Gentrac's *tisanes* were so successful that Professor Brown Sequard of the College de France “persuaded him to visit Paris, and try his remedy on the children, who were dying from Diphtheria by the hundred at the Trousseau Hospital. The Paris Academy at once placed the children under his care but his remedies here had no effect...” Gentrac failed in his endeavour because “the herbs he used in Paris, though the same in every respect as those of Mauritius, grew on French soil [...] the same plants have different properties according to the soil they grow in”. Gentrac returned to Mauritius, very disappointed. He however imparted his secret knowledge to Monsieur Flauricourt, who became as successful a healer in Mauritius.

### Dengue (Dandy or backbone fever): *chiendent*, *vouatouc(ke)* and *mustard*

*A firsthand account from a healer's attempt at self-medication (1854):*

“The symptoms were typical with pains in my feet and hands and a slight feverishness. These symptoms lasted the whole day and night, and the next day the doctor declared it to be Dengue, and a rubeolar eruption covered my whole body, producing an intense pruritus, especially of the scalp, and more swelling of the face, hands, and feet than before. So great was this irritation that for a couple of hours I off and on kept my head under a tap of cold water, and took during the day two or three warm baths containing bran and bicarbonate of soda and medicinal herbs (*chiendent* and the *vouatouc*). Neither the secondary fever nor the irritation lasted longer than a couple of days and the eruption disappeared....”. Warm baths and drinks concocted from medicinal plants namely *chiendent* and *vouatouc* were used against the disease in many families.

Generally, the treatment consisted of cold *camphorated* water-compresses to the head with lots of *mustard* foot-baths, which relieved the headache. Quinine was given empirically without any good result.

### Ankylostomiasis and the oil of *Chenopodium* or *botrys*

In his report, Balfour explains the use of plant medicine in curing Ankylostomiasis (p. 21-23). He writes, “Oil of *Chenopodium* is now generally regarded as the most satisfactory vermifuge in ankylostomiasis. It is interesting to note that the plant, from the fruits of which the oil is distilled, grows plentifully in Mauritius as a common weed. There it is known as *Botrys*, its scientific name being *Chenopodium ambrosioides* var *anthelminticum*”.

Scientific distillations from the local *botrys* plant were made by Dr. Tempany. The yield of oil being “too low... In addition to placing the local plant under cultivation, he was going to obtain from the USA... high-class seed for planting to obtain a satisfactory yield of oil of good quality”. He strongly advised the cultivation of *Chenopodium* on a large scale and of other drug-yielding plants under scientific control “as the island appears to be well adapted for the growth of many kinds of medicinal herbs and trees.” As the oil of *Chenopodium* was likely to possess a considerable market value, a profitable industry might be established in Mauritius in view of the uncertainty of the future of sugar cultivation. He however observes that the recent introduction of carbon tetrachloride, already widely used, may possibly “oust oil *Chenopodium* from the first place in anti-hookworm remedies”.

Besides stressing the need for education of the populace in matters of hygiene and the public in health matters and trained hospital personnel, Balfour recommended (p.140) the “cultivation of medicinal plants” to alleviate economic difficulties and supplement revenue from sugar so that the colony could invest in public health.

### Malaria and *Eucalyptus*

The outbreak of Malaria in Mauritius was explained in terms of the effluvial theory, and treatment consisted of quinine therapy. The use of aromatic herbs and the making of bonfires were advised to chase out mosquitoes. In the 1960s, bonfires of *eucalyptus* leaves were strongly recommended on estate camps. During fieldwork in Beauchamp, elderly informants referred to *eucalyptus* as a deterrent to the propagation of Malaria.

### *Rubeficient (Rubefacient): Mouroungue*

Anderson notes the great usefulness of the *mouroungue* tree. Besides its widespread use as a source of food - “the leaves and fruit are cooked and eaten with rice”, the bark and roots were powdered together and used as a *rubeficient* poultice.

## 5.2 Interview with a local herbalist

Jay Mootosamy, 43 years old, seller of medicinal plants, and a practitioner of herbal medicine who has graduated from folk to ayurvedic medicine were interviewed. Both concur that plants have remained a source of medicine for all Mauritians and that Mauritius has its own repertoire of herbal and folk medicine.

Jay Mootosamy owns a medicinal plants stall at the Port Louis market. He attributes his trade calling to his patrilineal lineage, belonging to the caste having as profession natural healing in India. The know-how was brought by his great grandfather who came to Mauritius in the 19<sup>th</sup> century. The knowledge has been passed on to him by his elders across four generations and he has enriched it through practice, experience and personal search as new diseases have appeared.

Jay Mootosamy has earned not only national but also international fame. He has created his own website and foreigners often contact him for advice and purchase of herbs. His trade has suffered considerable setbacks with ruthless deforestation of lands destroying plants of great medicinal importance. His grandfather used to offer some 600 types of plants and three generations later there are only about a hundred available. Among the plants which he offers, a large number of them were used by indentured labourers and continue to be used by their descendants, and other Mauritians as popular folk medicine. Some of these plants have transcended their medicinal meanings and acquired spiritual and religious significance because of their potential medicinal properties. The courtyard of every Hindu temple prides itself of the *lila de Perse* or *neem*, the betel, the *basilica* or *tulsi*. Many families have these plants around their residence.

*Lila de Perse* or *neem* was very commonly used to cure smallpox, mumps and measles, and other epidemic diseases. According to Jay, it is anti-bacterial and it kills microbes; it protects from infection, purifies the blood and can cure many diseases. Systematic bath with solution of *neem* and Indian green *safran* over a period of seven days cures the diseases. It is an antiseptic and is used to cure *maladie Sept Soeurs*, the disease of the Seven Sisters. It is an age-old tradition and was a widespread practice among indentured labourers especially during epidemics.

When the inmate of a home is suffering from *maladie Sept Soeurs* or smallpox, a string of *neem* leaves is placed across the top of the doorways and windows to inform visitors that the house need to be kept “clean”. Any transgression would rouse the anger of the Seven Sisters which would manifest itself in sudden intensity of disease. It is believed that as the *neem* leaves dry up, the skin eruptions subside and heal. Antibiotics or any other pharmaceutical products aggravate the disease. Cleanliness, in terms of personal hygiene and the immediate environment, and vegetarian food are vital. The bath is prepared with *neem* leaves and *safran vert*. If the disease is more serious, the leaves are ground, made into small balls and consumed.

Besides *neem* leaves, Jay Mootosamy sells readymade products, in the form of oil and cream made from *neem* or Aloe Vera. There is a growing demand for these products as they are readily available and easy to use. *Neem* oil is described as miraculous by his customers who have used it for skin problems.

Betel chewing is an ancient tradition and was very common among indentured labourers until the 1950s. Betel leaves were sold at the market by a close relative of Mr. Mootosamy. It is said to strengthen the gums, to prevent bad breath, help digestion and prevent gas. Lime, cloves and aniseeds were wrapped in betel leaf and chewed. In fact, aniseeds forms part of local folk medicine and are consumed in decoction with mint leaves. The juice of betel leaves is used to cure cough, cold and respiratory obstructions.

The *tulsi* is a very common medicinal plant according Jay Mootosamy. A lot of basilica is used to prepare a drink which is consumed during the fasting period. It is taken to start the fast and break the fast as it is a good *digestif*; it prevents heart burns, and cleanses the digestive system.

Curcuma or *safran vert* has multiple functions. It protects the skin. *Safran* in milk is used to cure cough and remove phlegm. Our informant cautions that this medicine must not be taken for more than two or three days. Exceeding the dose leads to irritation of the digestive system. *Safran* is also an antiseptic; it protects against impurities.

Our informant says *tiraita* or *sene* is also recommended for curing *la fièvre endan*, a fever which persists and affects the palate. *Saponaire* is also used. Aloe Vera or *Mazambon* has become fashionable in natural healing. *Ayapana* is generally taken in infusion to stop vomiting, diarrhoea and gastro- enteritis problems. An overdose causes constipation.

A combination of plants is often used to cure a particular disease. *Citronelle* or lemon grass holds many digestive virtues. Infusion of *citronelle* is always mixed with ground ginger and honey. Jay Mootosamy offers plants that are not easily found in family gardens. He has *l'herbe de Flacq*, prepared in the form of *tisane*, to cure diabetes. He explains that the dosage is very important. He prepares it and includes a plant to counteract the side effects.

According to our informant all ethnic groups in Mauritius consume medicinal plants. "*Toutes les couches sociales, politiques, professionnelles dont les médecins, les vedettes du cinéma, de la musique, stars, techniciens ....*", go to his stall. He points out that Indo-Mauritians suffer mainly from digestive problems because they do not consume yogurt which is an integral part of traditional Indian cuisine.

*Lingue* is used against dermatological problems such as eczema, skin eruptions, the itch and also against digestive problems such as heart burns and gastric states. It is prepared in infusion with other plants namely *pok pok*, *bois de l'eau*, *bois de chandelle*; the infusion is consumed and added to bath water. Jay has a hundred varieties of tisanes for prostate, kidney stones etc. For these diseases even doctors recommend *tisanes*. He offers only dried plants, naturally dried in the sun. "*Tou plant kan li sec li preserve so bienfaits plus longtemps*". Plants lose 75% of their medicinal virtues if artificially dried.

Plants are consumed in the form of an infusion or decoction. Poultices of plants and/or clay are widely used to cure wounds, draw out excess cold or heat, and remove pain in the body and in cases of sprains and swellings. Leaves are crushed and placed on the infected region to stop bleeding, disinfect and neutralize poison. They are also used raw in cataplasm which is normally used

The main threats are deforestation, the excessive use of pesticides and herbicides, the importation of commercial herbal products which are flooding the market and pharmaceutical products. Dosage, indicating effectiveness and side effects, is also prescribed.

## 6. AYURVEDIC MEDICINE AND OTHER PRACTICES

Herbal medicine is gaining widespread popularity not only among consumers but also dealers. Home-made remedies are gradually becoming commercial activities. There are many practitioners as ayurvedic medicine has become a revolutionary activity. A practitioner<sup>6</sup> says that his interest in natural herbal medicine lies in his childhood experience: “I was still young when he came to live at his paternal uncle’s place in Quatre Bornes. When I was small, I used to suffer from stomach ache very often. One night I could not sleep due to the pain, and my *chachi* (uncle’s wife), took a root, crushed it to make a *lok* and I drank the medicine. I recovered, and since I have never suffered from the same ache.”

Our informant explains that herbal medicine was used by our ancestors and there were medicines for all types of diseases whether stress, cough or skin diseases. “*Hamni ke pourvasa, dada, pardada ke zamane, eye nani ke zamane se, ton ton ke zamane se, hamni keanelansa hiyan, jan pourvasa log se...ancestors anelansa, aaj ayurved pehela ta...*» In the days of our ancestors, grandfather, great grandfather, since the days of our grandmother they have been using plants; they brought with them in some form what is called today ayurvedic medicine.

He adds. “Our ancestors used to suffer from much pain in the body. It was a common health complaint among our ancestors, our great grandfather, father etc. Hospitals *dour rahale*, were far; they treated their pains in the family itself, among *dadi* and *dada*. Moreover they did not have the time. But they performed *Yaj* or hawan regularly and chanted the Ramayana.

He recalls that his *dada* and members of the family would never go to hospital when sick. It was the same in the days of his ancestors according to what he heard his *dada* say. Members of the family looked after each other at home, doing *sewa*. Moreover, there were very few hospitals and were far away. They relied solely on home-made remedies. His *dada* who was a nursing officer, also knew a lot about *tisanes* and had great faith in them. He used to give injections to patients and also advised them on *jaribouti* medicines. For kidney stone *bois de ronde* was recommended. He has learnt a lot from his *dada* as he always used to accompany him on his trips. He adds that leaves, roots and bark of trees have medicinal properties. Ayurvedi pills are made from leaves and also clay; they are also available in the form of powder.

*Jaribouti* or any parts of the plant used for ayurvedic medicine is not exposed to insecticides, herbicides and chemical fertilizers; manure is used for the plants. There is strict quality control and a high sense of professionalism in the production of ayurvedic medicine. It works slowly but surely. There are several healing techniques; transcendental meditation, yoga, *jaribouti* or ayurvedic medicine, chanting of the Ramayan, horoscope etc. “*Ghar mein* (at home) or any sacred spot where there is *pooja paat ... sewa kari* (prayer and social service) produces vibration. Patience is most important in this form of healing”, concludes our informant.

### 6.1 Traditional healers

On estate camps both Creole and Indian communities had *femmes-sage* or mid-wives practitioners. After delivery the mother is given a tablespoon of oil of the *de lila de Perse* or *neem* (available on the market) on empty stomach. It was done over a period of 12 days. This treatment was given to the mother to clean the uterus and heal any injury or bruise that might have occurred during the process of delivery. Mothers, who have had several babies delivered at home under the expertise of the mid-wife, say that women who underwent caesarean did not consume the oil of *Lila de Perse*. At bed time mothers take half a glass of green *safran* boiled in milk, to keep the body warm and prevent it from catching cold besides acting as an anti-septic.

Bath was a ritual. Depending on availability, five or seven types of leaves are required for the bathing ritual: camphor leaves. leaves of *eucalyptus, citronelle, lila, feuille d'argent,, lingue,*

---

<sup>6</sup> The informant, aged 68, has graduated from folk to Ayurvedic medicine in his practice. He participated in the project on condition that he remained anonymous. Like most healers, he believes that the power or knowledge of healing is sacred.

*l'herbe cahtte, feuille rouge, catepen, feuille zemblon, feuille sampo*, which is a sweet-smelling (it could be camphor leaves). The leaves are boiled in a large *deksi* or rice-cooking recipient till the water turns yellow or green. First, a mug containing at least a litre of water is kept aside to bathe the baby. Before the bath, the baby's scalp is rubbed and massaged with a paste made of dhal *petit pois* mixed with coconut oil to remove *tambave* or prevent its formation.. The *dhall* is soaked overnight and ground into a thick paste. After the bath the baby's body is massaged, and is made to do simple arms and legs exercises. The baby wears *kajol* or kohl made from the soot of burnt castor oil, as a protection against the evil eye. *Hingue* or *massala* and *kesar* were the main medicines during post delivery period.

*Hingue* was a home-made preparation that was consumed by the new mother over a period of 9 to 12 days. It is taken after bath, massage and body-warming. This is followed by *eau de vie* or brandy and *kesar*. The ingredients were available in grocery shops and markets more especially at the central market. The ingredients consist of *mangrella* (cows were fed *mangrella* to increase milk production) dried raisin. The spices were ground on the *roche cari* (curry stone). The mixture was made into small balls and dipped in a flour paste and fried in ghee. *Hingue* was imperative for the breast-feeding mother.

The mother's whole body was massaged with warm oil of coconut boiled with garlic by the midwife, especially the abdomen "*pou mette li dans so place*". In post natal treatment the mother ate another home-made medicine known as *kesar* for cleansing, reconfiguring and firming the lower part of the body. It was consumed on empty stomach or around 9 a.m. once a day over a period of 9 days. It was concocted with *pistache* or ground nut; 7 or 9 cereals namely *dhall petis pois, lentille rouge, zamberique, dhall embrevade, moonque ke dhall, lentille noir,...*; dried ginger; cardamom, grams; sugar. The cereals and the groundnuts were roasted and powdered on the *roche carri*. The paste of cereal, made into small balls, was cooked with sugar, dried ginger cardamom and water.

## 6.2 Other healers

There exist several other methods of healing and different categories of healers. The practitioners are placed into a social hierarchy on the basis of cultural constructs and the perception of practices. Religious and spiritual healers occupy the highest rung of the social ladder, followed by herbalists and folk healers usually practised by elders. Healers having recourse to the world of spirits occupy the lowest rungs of the ladder. The last category consists of several types of healers depending on the materials used for healing and the medium called upon in divination, whether good spirits, the spirits of ancestors, the folk divinities or the evil spirits.

Religious healing consists in performing simple or elaborate ceremonies seeking the grace of the highest divinities or God which manifests Himself in various forms. The ceremonies are usually presided over by a priest known as *maraz* or *poossari* either at the residence of the sick person or in a temple, river, lake or the sea. Indentured labourers could afford to have very simple ones, so they relied on the Tamil temple and the shrine of kalimaya for prayers. They also organized communal *Kathas* in *baithkas*, and participated in the ceremonies organized by the Tamil temples. All indentured labourers irrespective of places of origin in India had recourse to the Cavadee, fire-walking and sword-climbing prayers for health purposes. All participants in the ceremonies interviewed said that they were carrying the Cavadee or walking on fire for health purposes. Women participants often carried a sick child or an infant. While some participants were doing the penance for healing a current disease, others were fulfilling vows for having recovered.

Selvam Chenghen whom we interviewed explained that the *Kanji* is a special offering to Goddess Draupadi. People perform *Homana* that is *hawan* so that the goddess would protect people getting *malade li yeux, la rougeole etc.* Tamils also celebrate the fire-waking ceremony and Cavadee. These are preceded by a long period of fasting.

Regular prayers, fasting, penance, vows, offerings, rituals, pilgrimage and *neuvaines* that is fasting for nine consecutive days or weeks, are generally observed. Many informants say that they have recovered after having prayed to *Mama Tookay*, well-known Tamil temple at Camp Diable. Indentured labourers also prayed to *Père Laval, Saint Antoine de Padoue* and *La Vierge*. In the course of time, many Indian immigrants and their descendants turned to Christian divinities for

health purpose, without however undergoing any form of conversion. Elders testify that they have prayed in the church, grottoes etc for the health of a member of the family.

Other forms of folk medicine comprise passes, marking, bone-setting, massage and home remedies involving the elements, especially water and fire and certain specific metals. For *coup de soleil*, water is used and for *amidale tomber*, a steel spoon. Many people turn to the *ojha* and the *traiteur* or *longaniste* for healing, especially when the cause of ill-health is attributed to evil spirits or the wrath of the dead.

## CONCLUSION

1. Use of medicinal plants in the forms of infusion, decoction and cataplasm complemented allopathic medicine throughout the 18<sup>th</sup> and the 19<sup>th</sup> centuries. However, reliance on plant medicine gradually diminished as new medical discoveries and inventions were made in the late 19<sup>th</sup> and first half of the 20<sup>th</sup> centuries.
2. Since the last decade especially with fundamental change in lifestyle, propelled rapid industrialization and modernization, and the toll taken by non-communicable diseases interest in plant-derived medicines has re-emerged. Herbal medicines are proposed as alternatives to scientific medicines. There also an increasing *prise de conscience* in traditional remedies namely plant therapy.
3. Traditional medicines are being reinvented and repackaged to meet the needs of consumers. There is a growing industry of herbal teas. It is claimed that they can provide relief to a wide range of health problems, from minor ailments and cure cancers. The Bois Cheri tea estate offers *Citronelle* tea, *Ayapana* tea and *Tulsi* tea and La Chartreuse offers *Thé vert* or Green tea.
4. The manufacture and commercialization of herbal medicines and cosmetics under the Ayurvedic label have developed considerably over the last two decades. “Herbal” or “natural” is the maitre-mot in marketing strategies.
5. There is growing faith in ayurvedic medicine and acupuncture. Formally trained practitioners from India and China as well as Mauritians are working on a full time basis in the island. Specialized clinics and pharmacies have been set up in various parts of Mauritius.
6. Oil and water therapies coupled with exercises have also gained in popularity. Health clubs and wellness centres are mushrooming. They offer treatment of oil massage, water therapy in the form of sauna, meditation and yoga.
7. As part of the conservation of the intangible heritage programme, UNESCO is actively engaged in carrying out inventories of traditional and folk or popular medicine and forms of healing in all parts of the world., for example at Le Morne. Indigenous cultures /societies are specially being studied in view of preserving these cultural elements. However, multinational pharmacological concerns may take undue advantage of traditional knowledge and skills. Pharmacological enterprises are tapping the rich biodiversity in developing countries to find cures for new diseases.
8. The recent growth of religious fervour and ritualistic celebrations in Mauritius is indicative of a latent ill-health in Mauritian society. Many people turn simultaneous to healers of various descriptions, from priests to diviners, to recover from illnesses.

## PART V: MENTAL HEALTH

### 1. INTRODUCTION

The Commission has to make recommendations to improve the health and quality of life of descendants of slaves and indentured labourers. To achieve this end, it was important to probe deep into the treatment meted out to their ancestors, as regards the provision of food, excess alcohol consumption, housing conditions, health care and working conditions, etc.

Ill-treatment meted out to the slave population and of indentured labourers and its bearings upon both types of immigrants and their descendants up to this day. The inhuman treatment meted out to the slaves from their capture and shipment in frail sailing vessels was characterized by a high mortality rate, up to 30% from West Africa, and an average of 12% for those captured from the Eastern side of the continent and from Madagascar. This has been the subject of moving descriptions by historians (e.g. Filliot). The traumatic experience endured by the survivors must have left deep scars on them; the miracle is that they were able to survive and that both men and women were passed fit for work, once landed.

Throughout the eighteenth and early nineteenth centuries, the country's medical science was still rudimentary and depended largely on herbal remedies. It was still a matter of the law of the survival of the fittest.

The main interest, at that time, was to have slaves and indentured labourers who were in good physical health, and no one was too concerned about their mental health, unless the person in question was absolutely mad.

When did we start to recognize the psychological effects of slavery and the consequences of the ill-treatment suffered by the indentured labourers? Did the patients and their families seek help for their psychological ailments?

If we are looking at what can be done to improve the mental health programme in Mauritius, we need to ask some important questions, such as:

- Which mental disorders affected the slaves and indentured labourers?
- Whether there was racial inequity in the delivery of mental health services?
- What aspects of racism and discrimination caused emotional and psychological harm to victims, including Post-Traumatic Stress Disorder?
- Whether there are risks and resilient factors among the descendants of slaves and indentured labourers?

We have searched through reports and stories about slaves in Mauritius, and we have not come across any writings about the psychological trauma of the slaves in Mauritius.

We are trying to look into what could have happened to them or what marked the slaves, without much evidence to substantiate this work. Hence, the scarcity of information, records and reports on psychiatric treatments have tested our efforts to produce this paper.

Previously, only acute cases and those who were very disturbed and violent needing admission came to the Mental Hospital and in those days, many never recovered. This was, to some extent, responsible for the stigma attached to the Mental Hospital, and many patients who needed psychiatric care were afraid to come forward.

The difficulty of the Medical and Social Service Team Task lies in the widespread belief among all strata of the Mauritian population that mental illness cannot be cured and is "irrecoverable". Its cause is sometimes attributed to some supernatural powers, such as "mauvais zair" or "diable", in which case, no human being can cure it.

Mental illness has been a serious and growing problem over the years. In the period 1880 to 1945, mental patients were brought to the Mental Hospital only when they were very disturbed and when other methods of treatment had failed,

In 2000, there were, overall, 79,000 contacts with Health Services by persons with mental disorders (counting primary health care visits, outpatient attendances, hospital admissions and admissions to private clinics). That represents an average of one contact a year with Mental Health Services for every 15 persons in the country. Traditionally, Mental Health Services have been provided centrally at the Brown Sequard Mental Health Care Centre. It provides in-patient care for many different types of cases, including for those who are mentally ill and for mentally handicapped patients, and for those who need long-term care, alcoholics and others who have been in the Centre for many years and for whom it has become their home.

Patients who were willing to see private doctors for their mental illness, or even who showed signs of psychosomatic problems were either being treated as outpatients, or were admitted to the Mental Hospital, and few of them even went to private clinics.

The Mental Hospital and the Psychiatric Units at the Regional Hospitals have been providing a service to anyone willing to consult them for any mental illness, and this is reported in the increasing numbers of attendances.

There is now less stigma attached to seeing a Mental Health specialist, and those willing to combat the taboo are freely attending psychiatric care. However, admission to the Mental Health Care Centre is still difficult to accept.

Psychiatric care has remained the least developed type of care in Mauritius, and a lot still has to be done to improve the status of Mental Health.

## **2.METHODOLOGY**

We have been to the National Archives to consult relevant books, documents and papers and were given access to the Medical and Health Department's Annual Reports from 1885 to 1960.

The Lunatic Asylum had been keeping some records and general statistics, and they were reported as Special Return of the Government Lunatic Asylum.

From these documents, we were able to draw information about the patients who were residing there, the services and the facilities.

This is a desk study of the materials provided, and we are trying to understand the mental diseases pathway and psychiatric care in Mauritius.

We are looking at the types of treatments and care given to persons with mental illnesses. This will give us an understanding of how psychiatric care has evolved in Mauritius.

We do not pretend to know all the causes of mental illnesses here, nor can we link mental illnesses to a specific group of persons or regions of Mauritius.

We suggest that a study be done, at a later stage, of specified groups of descendants of slaves and indentured labourers, to identify disorders and risk factors for mental illnesses. But it is more important and relevant to gather more data about their resilience to mental illnesses.

## **3.LEGISLATIONS**

During the British occupation (1810-1968), the asylum admitted and treated patients with mental disorders. These patients (lunatics) were placed there, and the rules about their keeping were simple, they were in a place of safety and there was a provision of basic needs.

### **Lunacy Ordinance Act of 1906**

The first legal instrument which regulated the admission and treatment of Mental patients in

Mauritius was the Lunacy Ordinance (Act) of 1906.

This Act made provision for the custody of criminal and non-criminal mental patients. The General Mental Hospital was the only place where mental patients were kept and treated in Mauritius. The Central Board, consisting of the Permanent Secretary of the Ministry of Health, a District Magistrate, a Medical Practitioner, was to meet once a month and inspect the hospital, and the patients in it, as well as transact all such other business as was required under the Act.

Whenever mental patients were kept at Poor Houses, there was an obligation for prior written consent by the Minister of Health. The Act made provision for licensing of private Mental Hospitals. The Governor-General was able by Proclamation to declare that any place shall be used as a mental hospital, and that any enactment concerning a mental hospital shall apply, or cease to apply, as the case may be, to that place.

The District Magistrate in the area from which the patient was removed, was responsible to sign the order which committed the patient to the Mental Hospital. An application to the Clerk of the District Court for the district in which the patient was residing, stating his desire to obtain an order for the removal of his patient, had to be made before the patient was received into the Mental Hospital.

For a pauper patient of unsound mind, an application also had to be made to the Magistrate, as provided in the Social Aid Act.

The person seeking the committal order replied to the Magistrate on oath about his belief that the alleged patient was insane, the grounds of his belief, the reasons why he desired the removal of the alleged patient to a Mental Hospital, whether he or any other person was willing to pay or contribute towards the maintenance of the alleged patient in the Mental Hospital.

There were two Commissioners appointed for Mauritius. When they received an Order of the Magistrate for the examination of an alleged patient, they would meet at the time, and at a place specified in the Order, usually at the Mental Hospital, and personally inspect and examine the person named in the Order. When they agreed that the alleged patient was insane and a person fit to be removed, they would draw up and sign a certificate to that effect.

Where the two, or any two of the three Commissioners, differed in their opinion about the admission of a patient to the Mental Hospital, the Central Board would reexamine the person and make appropriate recommendations.

Patients' relatives were ordered to pay for the support and maintenance of the patient admitted, whenever they had sufficient means to do so. Whenever there were no next of kin able to maintain or support the patient, the Permanent Secretary would be charged.

A patient in a Mental Hospital, under an order of a Magistrate until his final discharge, was governed by the provisions of the Code Napoléon relating to the guardianship of persons of age.

The patient would be discharged by the Central Board to his relatives' care for a period of leave from the hospital or permanently after his cure. There was an Occupational Department on the hospital premises, where the mental patients would be rehabilitated by doing different manual activities.

Criminal mental patients were admitted or discharged from the Mental Hospital upon the order of the Prime Minister, after consultation with the Minister.

There were different registers kept at the Mental Hospital: the Book of Admissions, Discharges book, Medical visitation book, Case book, Visitor's Book. All these would be available to the Central Board to review especially in the case of any patient who had been confined in the Mental Hospital.

The Act also made provisions relative to the custody and protection of patients in the Mental Hospital, and when there would be improper treatment of patients or misconduct towards a patient by a person, the latter would be liable to imprisonment.

The Lunacy Act constituted the law governing the admission of mental patients to the Mental Hospital for a long time. As it was not compatible with patients' rights principles and services development, there was a need to change the legislation.

In July 1966, measures were taken to come up with another legislation, the Mental Health Ordinance (No. 31 of 1966), but it did not come into force, as it was not proclaimed.

On 21 June 1974, the Solicitor General's Office had a new draft legislation prepared, but there was no consensus on who would be responsible for the admission and discharge of patients.

By 1980, WHO published a paper on Mental Health Legislations, and the Ministry of Health made a contribution on this, which then served as guidelines for the preparation of a new bill.

It was only in the 1990s that serious work was done to prepare a new Mental Health Care Bill, after a report on "Principles and Proposals for the improvement of the Mental Health Care System in Mauritius", by a WHO visiting team of mental health experts led by Dr Tom Fryers and colleagues (1992). The draft bill was discussed at length by technical experts of Brown Sequard Hospital as from 1995. The bill was also discussed at Parliament and proclaimed in December 1998.

## **Mental Health Care Act 1998**

The Mental Health Care Act, is a comprehensive legislation providing for the admission, treatment and care of mentally ill patients. It sets up the necessary infrastructure for Mental Health Care, the conditions of admission of persons suffering from mental problems, the treatment and the conditions of living of patients at Mental Health Care Centres, the protection of mental patients, their rights and the principles applicable to accused persons who plead mental disorders or are found to be unfit to plead to a criminal charge. It makes psychiatric services more accessible through the decentralization of care, and makes the admission and discharge of both voluntary and involuntary patients possible.

Any mental patient can be examined and treated with his/ her informed consent at any one of the six psychiatric facilities in the country, and thus mental patients are not discriminated against.

Even the involuntary Patients are allowed to go on leave from the hospital for a period determined by the Commission, so as to facilitate their reintegration into society. The parents or relatives of these patients are involved in their care plan, and this would help them to continue with their follow-up appointments.

The Mental Health Board advises and recommends to the Ministry of Health in all matters relating to the care, protection of patient's rights, training of nursing and paramedical staff, and investigations of complaints and grievances of patients, patients' next-of-kins, visitors and staff.

The Mental Health Commission reviews matters relating to the admission, treatment, leave, discharge and continued treatment of patients. It brings to the notice of the Board any breach of discipline, professional misconduct and violation of patients' rights.

There are now new amendments being proposed to the Act, which are being discussed and would ensure a better treatment and service of mental patients. There is a need to destigmatise further the treatment of mental illnesses.

The Law is necessary as a safety net for the protection of patient's rights and the improvement of quality care, but there is still a lot to be done to change attitudes and beliefs about mental illness and patients with mental disorders.

## **4. MENTAL HOSPITAL**

The Barkly Asylum, Beau-Bassin, was a Government institution consisting of infirmary wards, where paupers were received and maintained, as well as an orphanage with a school attached, a separate compound where all the harmless patients from the Government Lunatic Asylum were maintained, and a hospital for the sick inmates of the institution and the district. Sections for paupers, orphans and imbeciles were under the control of the Protector of Immigrants and Poor Law Commissioner. The hospital was administered by the Medical and Health Department. In the Poor Law branch, there were six wards - two for females and four for male paupers- containing 13 beds. In the Imbeciles' compound, there were 100 beds- 68 for males and 32 for females. Three buildings in the middle of the grounds formed the orphanage, where 42 orphans were maintained and educated.

The Hospital had four wards containing 153 beds, a maternity ward of 6 beds and a ward with forty beds for females, the latter buildings being away from the main structure. At the extremity of the grounds were five wards with eighteen beds for contagious diseases.

The staff of the Poor Law section numbered fifty-one persons, and that of the hospital thirty-five persons. The buildings included two chapels, one for Roman Catholics and the other for Protestants. In addition to the institution a sewing class was conducted, under the direction of a seamstress, which catered for all the able-bodied female paupers, who helped in the production of the clothes for the inmates of both the Poor Law and Medical branches.

The grounds of the Institution (about 80 acres) formed part of an old sugar estate, which derived its name from the beautiful pond, Beau- Bassin. The establishment was lit up by electricity and with its roads and the cottages of the resident officers, it had the appearance of a village of about 620 souls. It was named after Sir Henry Barkly, K.C.B. who, at the time of its inception, was Governor of Mauritius.

### **The Brown Sequard Mental Hospital**

The Barkly Asylum became known as the Brown Sequard Mental Hospital in 1879, and was named after the distinguished Mauritian-born, Neurologist, Brown Sequard. The number of beds had increased to 875, and the hospital was the largest one for Mauritius. The Hospital has 7 dormitories of 475 beds for acute cases and 18 dormitories of 400 beds for the chronic patients.

The Psychiatric Hospital changed its name after the proclamation of the latest Mental Health Care Act, (1998), to be known as the Brown Sequard Mental Health Care Centre. Facilities were the same as the buildings were partly renovated, and living conditions improved.

A new complex, which retained the name Brown Sequard Mental Health Care Centre, was built next to the old hospital in 2002, which caters for some 360 acute patients. There are also separate wards for younger patients, males and females, aged under 18 years old.

The old Brown Sequard Hospital has remained a home for the 400 or so chronic patients, some of whom have been institutionalized for more than two decades.

## **5. GENERAL HOSPITALS**

Although there has always been one Mental Hospital, patients with minor psychological disorders and physical illnesses attended local Area Health Centres and General Hospitals.

Regional Mental Health Services for outpatients and some in-patients in medical wards have been provided since the late 1990s throughout the country, including Rodrigues Island, as part of a decentralisation process of Mental Health Services, where patients with mild to moderate psychiatric illnesses are treated. There are now 9 Psychiatric Outpatients Units around the island at the different Regional Hospitals. The liaison Psychiatrist in the Regional Hospitals would be treating these patients, whenever he is called.

Moreover, a visiting Psychiatrist travels to Rodrigues every four months where, during one week, he attends to both outpatients clinics, and in-patients. Whenever, a patient needs more extensive psychiatric care, he/she would be transferred to Brown Sequard Mental Health Care Centre.

In the 1998 NCD Survey, 16 per cent of adult males were heavy drinkers. Heavy alcohol intake may result in a variety of health problems, including a number of psychiatric disorders. Although Alcoholics are admitted mainly at Brown Sequard and at Flacq hospitals for long-term care and rehabilitation, short-term detoxification of alcoholics is done at the Regional Hospitals, in the medical or surgical wards, where patients are primarily admitted. There are about 30% of the admissions at the General and Regional Hospitals caused alcohol-related illnesses. About 70% of admissions at Brown Sequard MHCC are due to alcohol problems.

## Admissions at the Mental Hospital during the period 1885 to 1945

This review of the Special Returns of the Government Lunatic Asylum has led to a better understanding of the treatment of mental patients as far back as 1866.

The normal bed capacity corresponding to the actual floor space available in the institution was about 660 beds. This was divided into: 9 male Dormitories, 1 female infirmary, for the common people, and 2 private quarters with 14 rooms for females and 11 rooms for males.

There were 2 Day Rooms, one for males and one for females, for occupational and other activities.

There were 34 cells for violent and suicidal patients.

Patients were allowed out in the airing court and grounds for daily exercises. Patients also were allowed to work in the outer gardens and were also allowed out in the town (1932 *Mauritius Blue Book*).

They were entertained with gramophone music, Police Band playing once a month; games like cards, draughts, dominoes, chess and loto were favourite games. Male patients would play football. Periodicals and papers, both English and French, were sent by people interested in the welfare of the patients, but these were never enough. There was a piano in the female Department which was used occasionally by patients, friends and relatives. There were monthly masses for Roman Catholics and 2 Church of England services during the year (1932).

Patients were employed at the Mental Hospital, doing agriculture and gardening, carpentry, mattress-making, and tinsmith for the men while the women were doing the house work, sewing and drawing water.

The diets of patients were different for the Europeans and Creoles and Indians: Beef, lard, chicken and coffee and more of the basic foods were given to Europeans, whilst tripe was for the Creoles. Indians were given more rice and dhol, lentils and beans, salted fish like the Creoles. Extras, like eggs, milk, chocolate, were given to those who were on a 'sick diet'.

There was overcrowding in the wards and with the rapid increase in the population, a serious problem had to be faced.

Often, admission was sought for feeble-minded children, and the presence of these children in the hospital, constituted a most difficult mental nursing problem.

The males admitted were mainly skilled, unskilled workers and unemployed, whereas the females were mostly housewives. They were both within the age group 21- 40 years.

The patients were identified as; Europeans, Creoles and Indians. The majority of in-patients were from the Indian population: 364 out of 498 in 1885. There were also an average of 7 Chinese admitted yearly.

Admissions and re-admissions were coming mainly from the District of Port-Louis, 137 out of 262 (1885). There would be an average of 3 males admitted from Rodrigues yearly.

The forms of Mental Disorders in 1885, that patients were suffering from were: Dementia, Chronic Mania, Senile Dementia, Mania, Sub-acute Mania, Epileptic Insanity, Epileptic Imbecility, and Imbecility. Patients were divided into four classes: Maniacal and dangerous; Quiet and chronic; Melancholy and suicidal; Idiotic, Paralytic and Epileptic. They were grouped in different wards according to the class to which they belonged; this was to facilitate their treatment and management. Later in 1945, Acute Confusional Insanity, Schizophrenia and Manic Depressive illnesses were diagnosed and managed.

Seclusion and physical restraint were used to prevent injuries and to calm violent patients.

The Medical Superintendent, Medical Assistant, Matron, Four Nurses and Head Attendant would reside in the quarters provided in the Asylum. The others including, nurses, cooks, seven warders, 30 male servants and 13 maid servants, would be working on shift during the days and nights.

The number of in-patients, on an average around 770 daily, has showed little variation from year to year, despite the rate of increase of the population of the island. This is due to the active treatment at the Outpatient Department and to the monthly provisional discharge by the Central

Board, of patients who, though not cured, have sufficiently improved to stay outside the hospital, and lastly to the yearly transfer to Poor Law Houses of old chronic mental patients, who are neither troublesome nor dangerous, and who usually have no relatives to look after them.

A rather disquieting fact was the incidence of alcoholics as first admissions; they constituted nearly one-fourth of the male admissions. Further, there was evidence that alcoholic intoxication, here, was an aggravating factor in other mental illness, precipitating relapses and thus increasing the number of readmissions.

Members of the Red Cross and Mental Health Association visited patients and provided amenities and moral support.

The prejudice against this hospital was waning, as was evidenced by the increasing number of patients attending the Outpatients Department.

The Outpatient Clinic steadily assumed greater importance and was attended by an ever-increasing number of patients. It functioned as an important Therapeutic Centre for the diagnosis, treatment and prevention of mental illnesses. Mostly, Neuroses were treated there, but a number of psychotics also called for treatment and advice.

Insane population of the Colony as at 31 January 1958 was 1,292; of these, 62.6% were males and 37.4% were females. Out of these, 588 were at the Mental Hospital and the rest were on probation, on leave and in convents.

The rate of insanity per 10,000 population was 20.89 for an estimated population of 618,516, as at 30 June 1958, including Rodrigues, the rate per 10,000 in the urban areas were 38 and 14.7 in rural areas.

Causes of Insanity: the major etiological factors according to their importance were Alcohol, heredity, epilepsy and stress.

The proportion of Epilepsy in the country was quite high, and the main causes of epilepsy were:

- a) Brain damage, and asphyxia at birth;
- b) Acute delirious illness with pyrexia in early childhood;
- c) Congenital and hereditary and degenerative disorders;
- d) Infectious diseases like typhoid fever, whooping cough, measles.

These factors also accounted for the greatest number of cases of mental deficiency seen in outpatients.

Syphilis was not considered a major problem until two cases of General Paralysis of the Insane and one case of Tabes were discovered.

The BSH, with its Outpatient Department, continued to cater for the different types of mental patients. Chronic Schizophrenics, manic depressives and the feeble-minded formed the bulk of the permanent hospital population. The manic depressive patients represented the highest percentage of those admitted for the first time in 1961; there were also many psychoneurotics.

The most striking feature was the admission of 27 Opium Addicts in 1961. Opium addiction per se does not cause mental illness, but it leads to ethical depravity. The severity of the addiction is such that nothing will stop the addicts from getting their drugs.

On the other hand, Gandia addiction was then widespread and is a cause mental disturbance and, together with alcoholism, it causes aggravating factors in other mental disorders, precipitating relapses and thus increasing the number of readmissions.

## Treatment Administered

In the period 1881 to 1945, the treatments consisted of seclusion, physical restraints, occupational therapies, group therapies and few medications that were available.

In 1947, Dr. Comty introduced Electro Convulsive Therapy (ECT), at Brown Sequard Hospital. Although its mode of action is still not clear, its effectiveness in the treatment of mental illness is well-established.

“Shock Electrique” commonly known here, sounds more shocking and frightening. Many people wrongly believe that ECT is administered to patients as a form of punishment. Patients who are disturbed and aggressive usually improve rapidly and calm down after 3 to 4 ECT treatments. ECT is a very useful method of treatment of mental illness, especially in cases of severe depression.

In March 1958, a new approach to psychological problems was found and Group Therapy, including the new Sevadon technique, a well-established feature in the treatment of patients.

As regards treatment of Schizophrenia, two conflicting trends of ideas were under investigation. Certain psychiatrists were of opinion that Paranoid Schizophrenia should be treated by Insulin therapy, and others only by psychotherapy combined with large doses of tranquilisers.

Cerebral stimulation in the treatment of psychoneurosis was introduced that year.

Occupational Therapy also gave excellent results and a great number of patients benefited from that form of treatment.

Work on Electroencephalography started that year and some interesting results had were obtained. The introduction of this new important diagnostic method marked a great step forward in the medical history of the colony.

The usual mode of treatment followed classical lines:

Eletroplexy, Insulin therapy, psychotherapy and leucotomy in some cases where other forms of treatment had failed.

The drugs used most extensively were: Vitamins, Antabuse, phenobarbitone, Epanutin, tridione, largactil, equanil, Dexedrine, niamid, frenquel and stelazine.

## 6.MENTAL DISORDERS

Mental illnesses in Mauritius have followed the same trend as worldwide, and Psychiatrists who came back from their overseas training diagnosed and treated these at the Psychiatric Hospital, with the same available medications.

Most patients would complain of “la tête fatiguée, tête vide or tête faire mal” and attend hospital on their own, Those with severe mental illnesses, would come accompanied by their relatives and the complaint would be: “Li cause n’importe, li tann tapaz dans la tête (hallucinations), Li faire désordre” (behavioural problems). Often the symptoms are more severe than what they tend to report.

Cases have been recorded using the ICD 1975 revision, in the different groups as follows: Alcohol Dependence Syndrome, Psychoses, Neurotic disorders, Subnormality/Mental Retardation, Dementias, Epilepsy and Behaviour Disorder.

Between 1995 and 1998, cases treated as in-patients at the Brown Sequard Psychiatric Hospital were Alcohol Dependence Syndrome 54%, Schizophrenic psychoses 24%, other Psychoses 13%, Depression 4%, Anxiety 1% and Drug dependence 0.6%.

In 2005, using ICD 10, the list of mental illnesses was lengthened, including all commonly known disorders (Tables 2005 and 2009).

The mental and behavioural disorders due to the use of alcohol, was 50%, Schizophrenia 30.4% and disorders due to multiple drug uses 1.7%.

There are other less common disorders like Alzheimer's Disease, Sleep Disorder, Obsessive Compulsive Disorder and Conduct Disorder which have been treated more recently.

## 7. SUBSTANCE ABUSE

Drug use has been closely associated with our immigration history. Illicit rum production by slaves under the French colonization (1715-1810). After the abolition of slavery in 1834, the then British Administration brought Indian indentured labourers who came with their culture and traditions. They introduced cannabis, known as gandia, while the Chinese immigrants, who came during the same period, introduced opium to the colony. However, these drugs, gandia and opium and illicit rum, were traditionally used in a controlled socio-cultural context in certain localized areas. They were mostly consumed by adults without much serious public concern.

In the mid-sixties, the craze for drugs, as highlighted by the popular music and the Hippy culture, reached the shores of Mauritius. The drug situation changed radically from its controlled socio-cultural use in the late seventies, with the introduction of a crude form of heroin known as "Brown Sugar" from the Golden Triangle and the Golden Crescent, through the Indian sub-continent. Brown sugar was smuggled through the airport, harbour and through postal packets. Mass drug proliferation developed a Mauritian drug sub-culture, with its own conventions and jargons. Mauritius was then facing a real "brown sugar" epidemic by mid 1980s. It was estimated that the number of heroin addicts vary between 5,000 and 20,000.

Subsequently, in 1986, a Commission of Enquiry on drugs was set up. The National Advisory and Research Council on Drug Addiction (NARCODA) was set up under the chairmanship of the Ministry Health in 1986, with representatives of various Ministries to coordinate the anti-drug activities. But as it did not deliver, the National Agency for the treatment and rehabilitation of substance abusers (NATReSA) was set up in 1996. The Police and the Customs and Excise Departments are responsible for the enforcement of the legislations against drug abuse and trafficking. Special Units have been set up, namely the Anti-Drug Smuggling Unit (ADSU). They are supported by the National Coast Guards in the surveillance of land, water and air routes. An important component in the fight against drug abuse and illicit trafficking is certainly drug education and proper use of information. The Brown Sequared Hospital was until 1986 responsible for the treatment of drug addicts. The National Centre for the Rehabilitation of Drug Addicts, Vacoas (NCRA) took over the medical treatment of drug addicts, i.e. the detoxification and then followed the assisted by the NATReSA.

Since 2002, there is a Drug Centre in Beau-Bassin which is a specialized Unit for the treatment of male Drug Users. They are detoxified and rehabilitated, whilst they are put on substitution Methadone therapy.

## 8. MEDICAL TREATMENTS

Treatments of mental disorders with medications have been available generally at the Brown Sequared Hospital; Hypnotics, Tranquilisers, anti-psychotics and anti depressants were standard treatment given to all mental patients.

As the numbers attending the Outpatients Department and the in-patients wards have been increasing, there has been a tendency to make a rapid diagnosis and towards the administration of psychotropics.

Medications available are:

Neuroleptics: Chlorpromazine, Haloperidol, Thioridazine, Terfluxine, Flufenazine Decanoate.

Anti-depressants: Amitryptiline, Dothiepin, Imipramine, Fluoxetine.

Hypnotics and Tranquilisers: Alprazolam, Nitrazepam, Diazepam.

Patients are sometimes not willing to take these medications, because of the side effects, and a lot of persuasion and collaboration from doctors and relatives are required.

With more research and better molecules, that is with less side effects, treatment of mental illness has been improving. Combined with psychotherapy and occupational therapy, the majority of patients do not require admission to the Mental Hospital, but are treated as outpatients.

Psychiatric care is now considered less stigmatizing and patients are willing to take their medical treatment. Moreover, many people are seeing private Psychiatrists, as they can afford the consultations and want better medications. Newer molecules are used in the private sector, and the public hospital is also making an effort to make these available.

## 9. OTHER TREATMENTS

Although there may be a prevalence of about 22% of mental illness in the population of Mauritius, only one in four will see a psychiatrist. There is a considerable proportion of people with a mental problem who seek the help of Religious priests or even "Treter".

The causes of mental illness are multifactorial: rapid changes in society, dysfunctioning families, lack of employment, poverty, and also exclusion.

Patients tend to consult professionals for physical illnesses but self-prescribed medication is also used and bought off the counter. Local brews and tisanes are often taken.

However, as a rule, people will wait for the problem to aggravate to the extent of being unmanageable; then they will bring the patient to the Mental Hospital or seek private care.

## 10. RECOMMENDATIONS

Mental Health care has to be accessible to all, and prevention of mental illness is very important to have a society which is productive and content.

People need to be sensitized about mental illnesses and the promotion of Mental Health. As they become more educated, they will be more interested in looking after their own mental health.

There should be more Psychiatric Units around the Island both for easier access, and to break the stigma attached to attending a Mental Health Care Centre. Even in Primary Health Care, Mental Health Care can be given by the general practitioners.

Training of more professionals in Mental Health, from nurses, general doctors, psychologists, and psychiatrists is necessary. Also the paramedical people, like medical social workers and community health care assistants should be available in the system.

## 11. CONCLUSION

The idea of slavery is often visualized as prisoners with chains, subject to bondage and harsh punishment or physical abuse. However, most people fail to realize that the most powerful type of slavery is "Mental Slavery", as described by Noble Drew Ali. This type of abuse is often not identified as abuse because the victims do not realize they are being abused, since there being no physical pain being inflicted. The deceptive tactics of "Mental slavery" embeds itself within the deeper regions of the subconscious, while disconnecting the higher faculties of consciousness to create a "Social Zombie".

This "Social Zombie" refuses to accept any type idea of psychological progression as they fear the pain of "thought", conscious action, or material deficiency due to active expression and utilization of higher mind faculties. It was, and is, the unfortunate effectiveness of the dehumanization of "Willie Lynch" curriculum that has its victims perpetuating psychological and physical destruction onto themselves. To relinquish the parental rights of Willie Lynch, instructions must be provided to reverse the psychosis of self-destruction and victimology. As we exist in a time of disorder, confusion and psychological chaos, it is paramount that one should educate themselves and utilise

internal direction to ensure future progression and the reduction of a self-defeating mind state.

Often, a well-respected “Doctor” is needed before the sceptic begins to take select theories as fact. In this case, a book written by Dr. Joy De Gruy Leary has emerged as a scholarly defence against sceptics that perpetuate the feeling that “mental slavery” does not exist. The following has been stated: “ While African Americans managed to emerge from chattel slavery and the oppressive decades that followed with great strength and resiliency, they did not emerge unscathed. Slavery produced centuries of physical, psychological and spiritual injury. Post-Traumatic Slave Syndrome: America’s Legacy of Enduring Injury and Healing lays the groundwork for understanding how the past has influenced the present, and opens up the discussion of how we can use the strengths we have gained to heal” .

We would like to stress the fact that we are not in a position to pretend that we know the psychological problems which affected the descendants of slaves and indentured labourers, as we have no documented reports of these.

From the book *Slavery and Antislavery in Mauritius, 1810-33*, there are many paragraphs relating to the psychological traumas inflicted on the slaves and their detailed behaviours, such as regression and inability to work. Some were so dehumanised that they committed suicide. It was unfortunately seen by some as a normal consequence or fate.

The ill-treatment of slaves and indentured labourers, obviously affected them at the time, but they had to be resilient and continued to fight for their survival.

We can recommend that a study be carried out on a group of individuals who are descendants of slaves and indentured labourers, where we can then identify risk factors for mental illnesses and resilient factors, which have helped them to survive the difficulties which their ancestors had sustained.

May be we could look into their behaviour also to see how they have dealt with difficulties, and discover more about their coping skills.

We cannot assume that the consumption of daily ration of alcohol by the slaves have made future generations turn out to be alcoholics. There is no evidence of this, although we know that alcoholism can have a genetic effect.

This study will demand more resources, both human and financial, and will only be possible, if a sample of that population made up of descendants of slaves and indentured labourers were to be identified.

## PART VI:

# HEALTH CHALLENGES AND OVERALL CONCLUSION

## 1. HEALTH CHALLENGES

Survival from epidemics during the French and early British administration, the control of infectious and parasitic disease followed by a population explosion during pre-independence period, a very successful family planning programme and the emergence of chronic non-communicable diseases with an ageing population during the post independence period, characterise the evolution of the disease pattern in the country.

In the early 1980's Mauritius had completed its demographic transition. The country was in a relatively safe economic zone with a rising income per capita. There followed a shift in the pattern of work. Sedentary factory work replaced hard physical labour in the sugar-cane field. Household appliances substituted manual labour at home. Sale of cars and two-wheeled vehicles increased annually. Eating-out particularly high glycaemic index food (fast foods) became commonplace and watching television, a favourite pastime. Within a decade, non-communicable diseases (NCD) manifested themselves in the population. Mauritius was ill-prepared for the 'risk transition' phase leading to NCDs. The outcome is the epidemic of NCDs of an unprecedented magnitude according to global comparison.

Within a short period of time, the life expectancy of the population increased from 33 years in 1944 to 51 years in 1952 and within the next ten years it increased by a further 10 years to reach an average of 61 years in 1962. Thereafter, life expectancies of males and females increased more gradually with more gains on the female side. In 2008, the figures for males and females were 69.3 and 76.5 years. The downside of the entrenchment of chronic diseases in the population is an increase in the burden of diseases in later life. Statistics on healthy life expectancy for 2007 show figures of 62.3 and 69.5 years for males and females respectively, meaning a deficit in the quality of life of 7 years.

The health sector in Mauritius is facing a 'double barreled' threat. After successful control of Malaria, poliomyelitis, smallpox and reigning in the vaccine related diseases, and a rapid demographic transition in the list of achievements, the country is facing challenges from two sources.

The National Sexual and Reproductive Health Strategy and Plan of Action 2009-2015 (MOH&QL), pinpoints areas of concern and new challenges on the horizon. Rising teenage fertility, abortions, unwanted pregnancies, high number of caesarean deliveries among some sections of the community, domestic violence and violence perpetrated to children are emerging areas for action.

Twentieth century ailments are rooted in the dynamics of changing determinants of health. Modern day lifestyles overlap with the environment to create threats of new and re-emergence of 'previous' diseases. HIV/AIDS, Chikungunya, H1N1 and mutated AH1N1 viruses overlap with diseases of modern day lifestyles. Mauritius had joined the league of the industrialized countries which are grappling with the epidemiology of non-communicable diseases. Surveys conducted over the last three decades point towards a worsening of the prevailing situation for type II diabetes, hypertension, obesity and cancers. Care and treatment to patients suffering from chronic diseases including dialysis is a heavy drain on the scarce health budget. Cardiac and renal surgeries and amputations are on the increase annually.

The health sector, in a welfare state is responding to this situation by introducing, sophisticated technologies and pharmaceuticals for the care and treatment of the sick. However we are dealing with chronic conditions requiring life-long treatment. The ageing process is entailing an increase in the burden of chronic diseases, often requiring costly high-tech interventions. The cost of health care is escalating. The limited resources are stretched beyond sustainability.

Chronic non-communicable diseases are now the main causes of morbidity, death and disability in the country. Non-compliance to treatment is a cause for concern and contributes to rising complications. A national health policy must aim not only at treatment of the sick, but also at taking vigorous measures to prevent the occurrence, development and entrenchment of morbidity, necessitating invasive treatment such as amputations, cardiac surgery and renal dialysis. The preventive measures should also include commensurate rehabilitation to match the demand. The N.C.D. survey reports for the last three decades indicate that the national authorities have not been able to control the epidemic of non non-communicable diseases; yet low cost and highly effective measures are available to prevent the development of these diseases and their complications.

Most non-communicable diseases result from poor food habits, unhealthy lifestyles including stress, substance abuse (alcohol, tobacco, illicit drugs) and physical inactivity. They are largely preventable. The strategies to prevent their onset and reduce complications include early detection, good nutrition, exercise and stress management. The care of chronic conditions goes beyond the walls of health care institutions and permeates in the living and working environment of the individual. It requires family support, community involvement and a team of dedicated health workers, capable of providing continuing care. The challenge for decision makers is to mobilize the community for public participation in the fight against NCDs and to empower individuals in self-management of chronic diseases within an environment that promotes healthy living.

## 2. OVERALL CONCLUSION

Over the last two centuries, the Island of Mauritius witnessed a tremendous transformation in its social, economic and political landscape as well as its demographic and racial composition, the epidemiology of diseases and lifestyle pattern of its population. Mauritius had no native population. When it was colonized by the French in 1735, there were less than 1,000 inhabitants; they used the island mainly as a free port and warehouse. When the British took over the island in 1810 there were about 80,000 inhabitants and at the time of abolition of slavery in 1835 the population was estimated at 91,000 inhabitants. Throughout those periods, more than 75% of the inhabitants were African slaves and the rest mostly European colonists. In order to service the fast expanding sugar island economy, cheap indentured labour was imported from India. The total population rapidly increased to nearly 230,000 by 1855 (about 40% of African or mixed origin and more than 50% of Indian origin); this transformed the racial composition of the population. The population reached nearly 370,000 by 1900 and 500,000 by 1950, stabilising the composition to about 60% Indian and the rest mostly Creoles and minorities of European and Chinese origins. A population explosion occurred after 1950. The population is presently levelling off at about 1.3 million, growing at a declining rate and at below replacement level fertility. It is one of the most densely populated countries in the world.

The epidemiological changes that followed can be broken down into four phases (see Figure 10).

- i. During the early French period, the island was relatively healthy and was even regarded as a sanatorium for visiting travelers. Diseases were introduced inadvertently by the early settlers. Outbreaks of measles, cholera and smallpox in the later French period caused heavy casualties. The population density was very low and was made up mainly of African slaves working for the trading economy and agriculture. As health facilities were minimal, the inhabitants commonly used traditional medicinal remedies. Mortality among slaves (which outnumbered births) was high as a result of diseases and harsh conditions.
- ii. This was followed by 70 years (1850 to 1920) of a succession of epidemic outbreaks, which, coupled with the harsh living and working conditions required by the sugar economy, resulted in very high mortality and morbidity, leaving the island with a sick malnourished population constrained to low work productivity. Their lifespan was reduced as a result of poor physical condition and premature ageing. The health and nutritional status of children was even worse as evidenced by very high infant mortality and retarded growth.

- The cholera epidemic was followed by Malaria, plague, Spanish influenza, poliomyelitis and measles causing thousands of deaths. Other infectious diseases afflicting the population during the period included dysentery, intestinal worm infestation, tuberculosis and leprosy.
  - The plague epidemic was followed by the epizooty *surra* (1902) that decimated the animal population and disrupted the transport and sanitation system.
  - The population commonly had recourse to traditional medicine (including the services of *dais*) due to the inadequacy of health services as well as prejudices against their utilisation.
  - The population lived on a predominantly vegetarian, high-carbohydrate rice-based diet that barely met their energy needs and was nutritionally inadequate. Vitamin deficiency diseases and anaemia were common.
  - The prevalence of malnutrition coupled with Malaria and other infectious diseases (including hookworm infestation) gave rise to a sick and debilitated population.
- iii. Between the Post-World War II and up to 1980s, there was a dramatic change in the epidemiological profile of the island.
- The breakthrough in Malaria control coupled with improvement in public health measures and health services within a welfare state concept led to a rapid decline in mortality and morbidity across all ages and population groups.
  - Various other developments during that period contributed to improve the health status of the population (particularly women and children), including improvement in sanitation, access to safe drinking water, universal vaccination and a primary health care system covering the whole island as well as a network of regional hospitals providing secondary and tertiary care. Health services were free as well as primary education.
  - To combat malnutrition in the impoverished population (GNI per capita: US\$ 1,280 in 1981), especially among the low income groups, food subsidy on staple foods and supplementary feeding programmes targeting children and pregnant and lactating women were put in place. This positive discrimination policy shielded the vulnerable segments of the population from hard economic times.
  - Fall in mortality coupled with increased longevity resulted in a population explosion that seriously threatened the economic survival of the country; this was addressed with the setting up of a successful family planning programme that brought the island's population to replacement level in the mid-1990s.
  - The diet of the population gradually improved nutritionally with quasi disappearance of clinical deficiency diseases although anaemia and child underweight continued as a problem. However, the average diet remained relatively high in refined carbohydrate with the fat content having increased considerably.
- iv. By 1980, the country was facing a severe economic crisis and had to embark on a stringent structural adjustment programme. Despite the difficult economic circumstances, Government maintained the welfare state services like free health and education, and food subsidies in order to protect the population, especially the vulnerable groups. Eventually, the economic reforms undertaken transformed the country into a middle-income economy with a GNI per capita of US\$ 3,870 IN 2000.
- The Human Development Index (HDI) which is a composite measure of three basic dimensions of human development encompassing health, education and income, rose from 0.525 to 0.701 between 1980 and 2010 placing Mauritius in the high HDI category and giving the country a rank of 72 out of 169 countries, being the highest in Sub-Saharan African.

- The growth performance of children (an outcome of health and nutritional status) confirmed that the population as a whole benefited equitably from public health measures with child malnutrition relegated to marginal levels in all groups.
- However, improved economic status and living conditions led to overconsumption and dietary imbalance, and in increasingly sedentary lifestyle with concomitant high prevalence of obesity and non-communicable diseases (including, diabetes, hypertension, heart disease and cancer).
- The health, social and economic consequences of non-communicable diseases at epidemic proportions is alarming and a cause for concern for both Government and society.
- Traditional medicine is regaining popularity as a result of increasing prevalence of chronic diseases and, concerns about overuse of pharmaceuticals. Ayurvedic medicine and acupuncture are even offered as parallel medicine in the health care system.
- Centres offering modern forms of traditional medicine, like various massages, spas, saunas, yoga, meditation, etc. are mushrooming over the island, and supermarket shelves are loaded with various herbal teas (*tisanes*) and other naturopathic products.

We, therefore, conclude that:

- The country has been able to effectively control and virtually eliminate the main contagious and deficiency diseases afflicting the population from the 18<sup>th</sup> to the mid-20<sup>th</sup> centuries.
- Mauritius has made substantial progress in the health sector through a nationwide system of care accessible to all and free of charge in the public sector.
- Having successfully managed the demographic and epidemiological transitions, Mauritius missed the opportunity of managing the risk transition in between the two phases, thereby getting trapped in non-communicable diseases.

## Preface

Volumes three and four contain all the research reports, technical studies and surveys carried out by the team of consultants, researchers and volunteers appointed by the Truth and Justice Commission. Where the Commission could not find appropriate or qualified persons, Commissioners have headed teams of younger researchers to study a particular topic. The mandate of the Commission is to investigate the history of slavery and indenture, its consequences and suggest reparations. It was clear that two years would not allow for the task of reviewing 350 years of history and consequently, the Commission focused on a number of topics for in-depth study. Assessing the consequences or even identifying descendants was less easy as the reports show, since so few Mauritians are aware of their history and still less of their family history. Consultants, scholars and researchers have expressed their personal views on issues, and it is clear that not all views converge. The Commission has studied and considered all views expressed and given its own views in its report in Volume 1. It is understood that the views expressed here are those of the writers themselves, and not those of the Commission.

There are many myths and perceptions about Mauritian history that Mauritians have. This has become evident from the nationwide surveys undertaken by the Commission to seek the views of, not only those who are vocal and visible, but also of Mauritians who do not normally have the chance to express their views publicly. The analysis of these surveys by various consultants and researchers are reproduced here, while the original interviews and transcripts are to be found in Volumes 5 and 6. Some interviews have been 'anonymised' to protect the interviewees.

The studies were regrouped under twelve projects monitored by the Commission. In each project, a Team Leader was appointed responsible for guiding and supervising the studies and preparing the final report for the Commission. In some projects, however, Team Leaders could not be found and so Commissioners acted as Team Leaders.

The most important set of studies for the Commission has been those which directly examined the situation of 'descendants' of slaves and indentured labourers and which sought their views. However, it was important also to study descendants of slave owners as well, since slavery is both about slaves and slave owners. Among descendants of slave and indentured labourers, *métissage* has led to difficulties in identifying who were descendants, and it is clear in Mauritius, that phenotype is the popular delimiting factor in deciding who may be a descendant of a slave or indentured labourer. Yet these stereotypes are not only misleading but dangerous and need to be vigorously corrected. Not all 'blan' (white) are descendants of slave owners, as not all those with an African phenotype are descendants of slaves, and not all Indians were indentured labourers. For the population of mixed origins, we have used the term 'gens de couleur' to refer to descendants of the following relationships: a) whites and Afro-Malagasy and b) whites and any other group. These represent also persons of a higher social class.

It is, above all, the variety of life experiences of Mauritians that is highlighted in these studies, and it is hoped that they will prove material for institutions and individuals in the future to better plan people-centred policies, more in line with Mauritians' wishes, interests and expectations.

## EXECUTIVE SUMMARY

One of the objectives of the Commission is to enquire into the history of slavery and indenture and to uncover truths hitherto hidden, ignored, falsified or simply forgotten. Focus has been on those parts of history that might have an impact on society and economy today. Recommendations for the direction of further study are given as well as institutional support for these studies recommended to achieve a more complete picture of the history of slavery and indenture.

The Commission, having noted that so few Mauritians know their history, have adopted the approach of providing as large a spectrum of Mauritians with the information and tools to study Mauritian history and especially the history of slavery and indenture. The Commission believes that 'knowledge is power' and empowering Mauritians to guard against the forces of reaction is the safest way to ensure that systems such as indenture and slavery do not repeat themselves on Mauritian soil. Mauritians must have the tools as well as the information to research their own history in a scientific manner. Although much research has been undertaken in Mauritius and overseas on slavery and the slave trade, it is nevertheless true that many of these searches reflect personal academic interests and opinions, often based outside Mauritius and do not address the concerns of Mauritians. The Commission has been privileged to have the support of many historians in Mauritians and overseas who have understood the need of Mauritians and responded to its work positively.

There has also been a historic reluctance to address or confront problematic issues of Mauritian society. Perhaps the belief was that these concerns would go away with time. But the enduring legacies of slavery, emancipation and indenture have ensured that the debate never really goes away and, in fact, resurfaces from time to time. It has become all too common, in order to present to foreigners the image of an idyllic Mauritius, to hide our history of inequality, injustice, racism, casteism, communalism and prejudice. Despite the fact that Mauritians continue to endure these experiences daily, few institutions, public and private, admit this publicly or even attempt to deal with it. Those who perpetrate injustice are guilty, but those who stay silent in the face of injustice, are equally guilty.

### Slave Trade

The slave trade to Mauritius was started to supply the island with cheap labour and as any commercial venture, as a profit-making activity. Without the establishment of a slave society and economy, there would have been no Ile de France in the 18<sup>th</sup> century and no sugar industry in 19<sup>th</sup>-century British Mauritius. While the economic contribution of the free persons to the setting up of the colony is amply recognized in daily life (street names, books, plaques, genealogies, buildings and archives) the memory of slaves who built Port Louis' infrastructure, who cleared the land for the first sugarcane, wheat, manioc and indigo plantations, who built and manned the French fortifications and naval squadrons, or provided the domestic labour in all households is barely known or seen in everyday life. Most Mauritians are unaware that the cobbled streets they walk on in Port Louis, the classified fortifications they visit, the 18<sup>th</sup>-century stone buildings they enter were built with the labour of slaves. The slave trade permitted many in Mauritius and France, to make small or big fortunes that later were invested in estates, land and businesses. Thus the fortunes of many today were built on the prosperity of those who traded and used slave labour in the 18<sup>th</sup> and 19<sup>th</sup> centuries.

It is therefore crucial that these facts be known and acknowledged and that memorialisation in daily life and in a permanent way is established. The TJC has focused on accumulating historical data on the 18<sup>th</sup> century as these are lesser known in Mauritius as most archives are located out of Mauritius. Some of the information gathered has been inputted in the form of databases and made public through the International Conference on the Slave Trade launched by the Prime Minister of the Republic of Mauritius on 11 April 2011. Popularisation of research will allow for more targeted historical research and more voices to be heard. It will allow also for more memorialisation policies and activities that are more historically accurate.

In addition to understand better the slave trade, the TJC has undertaken selected studies of French slavery in Isle de France. The economic contribution of slaves and their cultural heterogeneity is

highlighted. Preliminary research was carried out in Mozambique and France but it is clear that more of the sources that exist need to be consulted. For France, Thomas Vernet from the University of Paris 1 (Sorbonne) was solicited to assist, while in Mozambique, TJC secured the services of Benigna Zimba of Eduardo Mondlane University. Both were provided with 1 research assistant in those countries to undertake a survey of sources. A large number of volunteers also assisted TJC's search mainly from France: Mr. Jean Yves Le Lan provided free advice and data from his own database; Patrick Drack digitized a large number of documents to allow us to construct a digital historical database.

The traditions and culture of Mauritians of African and Malagasy origin are currently being erased from our physical and cultural landscape through tourist, ecotourism and IRS projects. It is also a matter of great concern that 'Maurice Ile Durable' project or National Strategy for Sustainable Development makes no mention of protecting the culture of people in the physical landscape of Mauritius and of ensuring access to sites of great emotional and spiritual value to Mauritians.

Questions that Mauritians continue to ask themselves show many perceptions that don't conform to the archival evidence. TJC has attempted to investigate some of them and answer some of these questions. For example,

**Where do I come from?** It is generally felt that of all groups in Mauritian society, those descended from slavery are unable to trace their ancestry. The Origins project has gone some way towards answering this question in Mauritius but more needs to be done to attempt to identify more precisely the villages from where slaves came. In addition, TJC has collected many Civil Status Records as possible on the slave population with the help of Mr. Patrick Drack in France and hope to recommend the establishment of a Genealogy Centre in Mauritius.

**Where did slaves disembark?** This has been a perennial question and with reason. Public perception goes as follows: The French can claim to have first landed in Vieux Grand Port the Indians at Port Louis at Aapravasi Ghat, but what of slaves? There is no memorial except the one at Pointe Canon chosen for no other reason than the availability of space. It is important to memorialize; if no site is found, the Memory group will make suggestions as to what is an appropriate place.

**How many slaves came to Mauritius?** This is a question that has never been answered, and to which academic historians have stated was impossible to find an answer, given slave ships carried slaves to both Mauritius and Réunion. A slave trade database is being compiled so that Mauritians can access at the click of a mouse all ships arriving in Mauritius, as well as those undertaking coastal shipping i.e., from Souillac, Mahebourg to Port Louis.

**What was the importance of the slave trade and slavery for and in Mauritius? What was the contribution of slaves to the economy and society of Mauritius?** Slavery is often considered in Mauritius to be a separate institution from whatever else was going in Mauritius. It is rarely seen as a product of colonial society and economy, and slaves are not seen as an intrinsic part of Mauritian society in the 18<sup>th</sup> and 19<sup>th</sup> centuries. How important was slavery to the economy of Mauritius? What was the value of slave labour? What was the extent of their participation in the economy? What ideology did slavery create in Mauritius? Why was there so much opposition to the abolition of the slave trade? Who benefited from the slave trade? What was the extent of Government participation in the slave trade? Why was there such a big increase in the slave trade in the 1770s?

### **Organisation of Report**

The Slave Trade report is therefore divided into three parts: a review of the slave trade, a proposal for a slave trade database, and an inventory of sources on the slave trade and slavery found in one of the most major repositories in France. As parts of the work of the TJC is presented in electronic format, only a description and summary of the contents of the databases and inventory are given here. The databases are found in volume 5 of the final report.

## INTRODUCTION: STUDYING THE SLAVE TRADE TO MAURITIUS 1720s TO 1820s

### 1. THE INDIAN OCEAN IS NOT THE ATLANTIC

The study of slavery and the slave trade in the Indian Ocean has more often than not been based on previous studies of the Atlantic world. Yet these were, and are, two vastly different worlds.

As far as Mauritius is concerned, it is the specificity of the nature of the European slave trading in the Indian Ocean that interests us and the differences with the Atlantic world. Given the short time span available to the Commission, searches have been concentrated on selected themes in relation to the slave trade. Recommendations for further studies are made. Because the focus of slave trade studies was on the Atlantic, the ports which traded in slaves from those heavily involved in this Atlantic trade have been studied in far greater depth and publicised. The Indian Ocean trade, and in particular the Mascarenes trade, have been neglected even though Mauritius with its excellent and safe harbour (compared to Réunion), became in the 18<sup>th</sup> century the headquarters for the European slave trade.

Some of the differences need to be highlighted before looking at Mauritius proper. In the Atlantic, Britain was the largest trading power, while in the Southwestern Indian Ocean, the French dominated the slave trade. The Mascarene Islands were used as a base to engage in the slave trade, with slaves being taken from Madagascar, India and Eastern Africa to the Mascarene Islands, but also to South Africa, South East Asia and the Caribbean.<sup>1</sup> France was without question the largest slave trading nation in the Indian Ocean at the end of the 1780s. According to Daudin, the total value of its long-distance trade — trade with Africa, Asia, America and re-exports to the rest of Europe — was equal to £25 million. The total value of British long-distance trade was only £20 million. The growth of French long-distance trade from the 1710s had been faster than the growth of English trade.<sup>2</sup> It is also contended by some historians that the main support to long-distance trade, the plantation system, was larger and more efficient in the French colonies than in the British ones.

In past research, the methodology traditionally employed in studying the French slave trade in the Indian Ocean was based on studies of the Atlantic trade. The structure of the slave trade, the itineraries, financing, arming, networking and type of trading were studied. However, this ignored the fact that while the slave trade was a specialist's activity for the British, French ships were, by contrast, used both for the slave trade and direct trade with the West Indies. In the Americas, the French needed slaves for their plantations and so, according to Daudin, "As buying slaves was the main reason why plantation owners in the West Indies had to go into debt, the slave trade was more prone than other trades to long repayment periods. As the financial position of plantation owners declined continuously during the eighteenth century, their debts were more and more difficult to recover for French traders". Footnote missing

The slave trade has often been described as a 'triangular trade' and this refers mainly to the Atlantic. This was not necessarily the case in the Indian Ocean or for Mauritius. Evidence of 'quadrangular trade' appears more and more in the recent literature.<sup>3</sup>

While we can find the list of ships arriving in Port Louis or departing from French ports, we do not know yet how many of these went to East Africa and Madagascar and procured slaves as most of the time, the cargo is not listed. The sources relating to these will have to be studied as well.

### 2. THE DISAGGREGATION OF FIGURES

Up to 2009, it was not possible to say exactly how many slaves came to Mauritius. Figures were always aggregated with Reunion island. Disaggregation of figures for Mauritius and Reunion has been started and needs to continue. It will only be possible to arrive at a disaggregated figure once entries in the database are complete. Only then, when the total number of slaves actually brought and sold in Mauritius is known, will we be better able to understand and assess the social, economic, demographic and cultural impact of slavery on the island.

### Assessing importance of the slave trade through a database

To assess the importance of the slave trade, knowledge of French commerce and trade is also necessary. However, because sometimes the slave trade was activity carried out surreptitiously, it is not always known whether ships carried slaves or not, as they are not listed as 'passengers', but as cargo. We need to know and determine how many ships in general traded with, and arrived in Mauritius and assess which may have brought slaves. The differences in figures between the various works of historians and others are largely due to different sources being tapped in different countries. There exists no single study that has so far collected and put these various sources together and attempted a holistic analysis. At the Truth and Justice Commission, in Mauritius, we have initiated this work and we expect that this work will be continued by institutions and scholars in the future in Mauritius. Thomas Vernet from France and Benigna Zimba from Mozambique have been kindly assisting us with this research, and we expect these two persons to be closely connected to future projects on the slave trade. Thomas Vernet, Anwar Chuttoo and Sharonne Philips have designed, and contributed to, a comprehensive database of all ships arriving in Mauritius since 1721, and in the search for additional information on potential 'slave' ships. Jean Yves Le Lan has voluntarily contributed his database on Lorient. The aim is to collect, as far as it is possible, all potential slave voyages from the various repositories in France, Mauritius, Portugal, India and the UK. Currently, the TJC has focused its research on material available in Mauritius and France.

Recent research with aggregated figures, compiled by Richard Allen, up to 2009, are presented in Table 1 for the Indian Ocean as a whole.

Table 1: Numbers of slaves exported from the Indian Ocean  
(by period and region of origin and not necessarily to Mauritius)

Exported from	Period	Total
Madagascar	1670 - 1769	35,314-37,931
Madagascar	1770 - 1810	46,203-53,427
Madagascar	1811 - 1848	43,808-51,365
Eastern Africa	1670 - 1769	10,677-11,468
E Africa	1770 - 1810	99,614-115,189
E Africa	1811 - 1848	75,767-88,835
India	1811 - 1848	4,994-5,327
India	1670 - 1769	14,755-15,739
SE Asia	1770 - 1810	3,804-4,759
Total		334,936-384,040

Of the total estimated by Allen to date (2010, *Journal of World History*), the French slave trade is still by far the most substantial in the Indian Ocean:

Portuguese total	41,875 - 83,750
Dutch total	43,965 - 66,465 slaves
British total	10,525 - 12,539 slaves
French total	334,936 - 384,040 slaves

However, this figure does not include those slaves who never made it on board the ships. Those who were captured or traded but did not survive the march or the captivity in the slave depot are not accounted and cannot be accurately calculated as yet, given lack of information.

### 3. BRIEF REVIEW OF EXISTING LITERATURE

The difficulties encountered by scholars in the past are being slowly overcome with the advent of new technologies and means of communication. There is also a better mastery of two of the three required languages to study the slave trade: many French historians are now fluent in English and similarly, Anglophones are becoming conversant in French. Access to Portuguese-language archives is no longer a barrier as it used to be. Digital databases, some online, mean that slave ship data and

inventories can move across continents without the scholars having to undertake expensive trips. For historians in Mauritius, however, it is still expensive, given that access to online databases is not always free. Nevertheless, research in several locations has been facilitated to enable scholars to review substantially past historiography.

### Earlier historians of Mauritius

For Mauritius, *Auguste Toussaint* was undoubtedly the greatest compiler of data for Mauritian history before the 1980s. On the subject of trade and commerce, he compiled an impressive list of ships with details of tonnage, destinations for the period 1773 to 1810. In this, Toussaint listed 515 slaving voyages between 1773 and 1810. This data includes tonnage, size of cargoes and slave mortality. However, the slave trade *per se* was not his focus of interest, and he does not include much more information in the published versions. His private papers are not to be found in Mauritius.

Toussaint concluded that by far, the largest number of ships left from Bordeaux, and not from Breton ports such as Lorient etc. for the Indian Ocean. In his list, the numbers of ships leaving French ports were as follows:

Bordeaux	267
Lorient	166
Marseille	129
St. Malo	54
Nantes	40

*Vernet*, several years later, with further research, has more or less maintained this list in order of priority: Bordeaux ('loin devant les autres'), then Lorient, Marseille, Nantes and then Saint-Malo, Le Havre and La Rochelle.

*Jean Marie Filliot* was the first historian to focus exclusively on the slave trade; he conducted a detailed survey of the trade to the Mascarenes, with a periodisation that is still used today by most historians of the slave trade.

More generally, *Daget and Mettas* documented hundreds of voyages including those to the Indian Ocean, in Jean Mettas' *Répertoire des expéditions négrières françaises au XVIII<sup>e</sup> siècle*; *Daget's Nantes and Ports autres que Nantes* (Paris, 1984). José Capela produced *O Tráfico de Escravos nos Portos de Moçambique, 1773-1904* (Porto, 2002) with a section on the Mascarenes on pages 311-27.

The difficulty with these is that Mettas did not consult local Mauritian sources, while Toussaint did not consult French sources. Thus Toussaint could estimate the trade from ships reaching Mauritius but did not have access to the data on ships leaving France.

It would be fair to say that most studies have concentrated on the periods for which most data is available fairly easily i.e., after 1767 when the Royal Government took over the island. As yet, we know very little on the pre-1767 slave trade and on the illegal trade after 1810. Toussaint stated that he was not able to find any sources for the pre-Royal period, except for the pre-Labourdonnais period. The only historian to have worked on it was Albert Loughon, and no other scholar has attempted to estimate figures of the trade, still less the slave trade.<sup>4</sup>

Recent work such as that by Jean Yves Le Lan, Richard Allen, Thomas Vernet, Pier Larsson, Pedro Machado and Satyendra Peerthum has enabled us to obtain more details about the post-1767 trade.

Only Le Lan has focused on Company Trade, thus allowing us an insight into trade before 1767, as his research is carried out in Lorient. He has generously provided the Commission with a list of ships belonging to the FEIC practising the slave trade between 1720 and 1756 and thus was the second, after Albert Loughon, to attempt to examine the pre-1767 period. For departures from Lorient and from the Mascarenes up to 1760 he uses Filliot and Mettas: 46,000 slaves were traded in total without counting those ships starting from the Mascarenes.

More recently, Richard Allen's research shows that Mauritius not only played a central role in the expansion of the French slave trade in the Indian Ocean, but that the volume of the slave trade to the Mascarene Islands was much larger than previously believed.

### Secondary sources

As stated previously, a quantitative study of the slave trade is difficult, given the absence of statistics and accurate figures, especially for the early period. However, this will be attempted. An excellent review of statistical material available for the 18<sup>th</sup> century exists in Toussaint's *La Route des Iles*. Recent research that may improve Toussaint's observations on 18<sup>th</sup> century material and possibilities for future research is being investigated.

Toussaint recommended several studies as an initial 'preview' of French trade. These are also valid for the slave trade. According to Toussaint, Arnould's *Commercial handbook* contains a good chapter on French islands<sup>5</sup>, while Pierre Blancard's opinion on French trading with the Mascarenes is also relevant. However, the most cited source of statistics, Baron D'Unienville's *Statistiques de l'île Maurice* is criticised by Toussaint, especially 18<sup>th</sup> century data for 1773-1809. Definitions are questioned as it is not clear for Toussaint what D'Unienville meant by *nationaux, grands caboteurs, étrangers*.

As far as particular ports' contribution to Mascarene trade is concerned, Toussaint has noted Rambert's list of ships leaving Marseille for the Indian Ocean between 1767 and 1785, of which 18 were bound for the Mascarenes. For 1785 to 1789, Toussaint gives the figure of 33 ships for the Mascarenes. Dermigny, in *Cargaisons Indiennes*, listed ships also from Marseilles and more particularly gave an insight into the workings of the slave trade through the papers of the Solier family between 1781 and 1791, of which 6 voyages included Mauritius. For the period 1769 to 1785, 147 ships left French ports bound for Mascarenes. He even studies the ships leaving the Mascarenes to engage in the slave trade in East Africa.

Other more recent secondary sources include Toussaint once more, Filliot, Mettas, the Geneamau database, Daget, Capela, Jean-Yves Le Lan, Richard Allen, Thomas Vernet, Pier Larsson, Pedro Machado, Satyendra Peerthum, as well as those who focussed on specific ports such as Saugera, Binaud for Bordeaux, Mettas for Honfleur, Forcari and Sannier for Nantes. An exhaustive bibliography is attached to this report.

The focus of Richard Allen has been on the period between 1768 and 1810, when according to the latest figures, there was a total of 641 confirmed slaving voyages made between 1768-1809. He has thus added to Toussaint's original 515 voyages by a re-reading of the *Déclaration d'arrivées* and by adding further sources derived from British lists. According to him, the dramatic increase in the volume of the slave trade between 1768-1809 may be due to three principal causes:

In 1769, the islands were opened to free trade carried out by all French nationals.

In 1784, free trade privileges were extended to Americans.

In 1787, free trade privileges were granted to all other foreign nationals.

These events turned the Mascarene Islands into a major regional commercial *entrepôt* and into an important centre for slave trading, not only in the Southwestern Indian Ocean, but also a base from which slave trading expeditions to South Africa and the Americas were launched.

According to Richard Allen, the 549 vessels currently known to have transported slaves to the Mascarenes between 1768 -1809 may represent 50-55 per cent of all such voyages during this period (See Table 2).<sup>6</sup>

From	Period				Total
	1768-79	1780-89	1790-99	1800-09	
Madagascar <sup>a</sup>	32	18	32	147	229
Mozambique <sup>b</sup>	37	27	51 <sup>c</sup>	81 <sup>d</sup>	196

(Source: Richard B. Allen, The Constant Demand of the French: The Mascarene Slave Trade and the Worlds of the Indian Ocean and Atlantic during the Eighteenth and Nineteenth Centuries,' *Journal of African History*, in press).

Another innovative approach has been the attempt at a more precise and up-to-date *quantification* of the slave trade, even though the 18<sup>th</sup> century was 'not the age of statistics'.<sup>7</sup> Economic and accounting historians of the slave trade believe that the study of slavery and the slave trade, from an economist's or financial analyst's perspective, allows them to study history more 'objectively' than traditional historians because they are studying history 'without passing judgement'. This self-laudatory approach ignores, however, the fact that economic historians can only study what is quantifiable, such as trade statistics, prices, tonnage, numbers, heights and weights of slaves, rather than deal with 'intangible' issues of history such as identity or culture loss, mental and physical stress, mobility, laws, consequences on family life or the sense of loss felt as a result of being removed from one's homeland. It is extremely useful, however, as most of this Literature emanates from France, where indeed the bulk of documents exists in Paris at the Archives Nationales as well as in Departmental Records in various ports and towns of France.

#### 4. THE 'LANGUAGE' OF THE FRENCH SLAVE TRADE

We have used the French terms, since often, there is no exact translation in English. A glossary is provided.

- the *armateur* who was not only a ship owner, but an entrepreneur who engaged in maritime trade and was engaged in a variety of economic activities. He normally had

considerable personal capital and was experienced in hiring able captains, in choosing the right ship, etc. He also owned part of the cargo.

- The *négociant* was a merchant who also fitted out ships, was involved in maritime insurance and in banking. In the eighteenth century, the term came to imply large-scale commercial ventures, and especially international maritime trade.<sup>8</sup>
- The *négrier* which was a vessel engaged in the slave trade.
- *Nègre Pièce d'Inde* : a slave between the ages of 15 and about 25 to 30 years, in good health, not limping and with a full set of teeth.
- *Négrillon/capors*: young male slave between ten and 14 years.
- *Négritte/caporine*: young female slave between ten and 14 years.
- *Captains* were not only responsible as Commanders of ships, but also for carrying out trade on the African Coast.
- *Agents* or *Commissionnaires* were in charge of the sale of the cargo on the arrival of a ship in the colonies and worked as intermediaries between slavers and the planters.<sup>9</sup>
- *Indiennes*: cloth imported from India used in the slave trade
- *Mise hors* means to equip a ship; in the case of a slave trading ship, it is to collect all the goods, crew and find the funds to equip the ship.
- The *Calfats* or *Caulkers* were workers employed in the naval construction industry. They were in charge of traditional caulking applied to wooden vessels, generally to ensure that the joints between all the planks of wood inside and out were watertight.<sup>10</sup>

Those on board the ship included:

- The *Tonnellier*<sup>11</sup> was responsible of the quality of water and of its good conservation to prevent any type of contamination that could result in the loss of both slaves and the crew members.
- The *Carpenter* was the one in charge of the laying out and fitting of the ship, mainly for the transportation of slaves.
- The *Chirurgien* was assigned to protect and insure the crew members and the slaves against diseases; he was very often in charge of the branding of the slaves too.
- The *Cuisinier* was in charge for feeding the crew and essentially of hundreds of slaves aboard.
- The *Mousse* or *Mate* was generally an apprentice sailor recruited from the age of ten to sixteen years old.<sup>12</sup> He was assigned to the maintenance and cleaning of the ship.
- The *Master Gunner* was in charge of the ship's guns and ammunitions during the voyages.
- *Mise hors* means to equip a ship; in the case of a slave trading ship' it is to collect all the goods, crew and find the funds to equip the ship.

## 5. PERIODISATION

It is important to establish a periodisation to understand better the slave trade, whether it be the operation of the trade, the numbers and origins of slaves, as well as the sources of information.

A preliminary periodisation for the Mascarenes was established by Filliot.<sup>13</sup> This has been adapted to the Mauritian situation as follows:

Year	
1721-1727	1721 represents the beginning of settlement of Mauritius by the French East India Company. It represents also the period when Mauritius was governed by Bourbon or Pondichéry
1721	In 1721 the <i>Ruby</i> is sent to trade in slaves in Madagascar.
1727	Mauritius was given the right to trade directly with Madagascar.
1735	Arrival of Governor Labourdonnais.
1735-1746	Administration of Governor Labourdonnais. He was instrumental in expanding the slave trade.
1735	<i>Conseil supérieur</i> regulates the slave trade: Article 12, for example. Company will charge 200 piastres per slave for bringing slaves from India, also for the distribution of slaves arrived, rewards were offered to officers.
1741-1744	Very little information is available
1746-1767	This period represents the post-Labourdonnais Company administration.
1746-1750	Less precise information is available and a decrease in numbers of slaves imported is noted and a shortage of slaves is felt on the island
1750	After 1750, the slave trade resumed.
1754	Reward given by Governor David to officers bringing in slaves is stopped.
1762 - 1766	Filliot found no statistics for this period but that does not mean there were no slaves imported.
Post-1767	Marked difference in the data emanating after Company rule.
	Due to the greater number of ships arriving, and because of the outbreak of war in the Indian Ocean, information is more voluminous. However, these sources are silent about the number of slaves on board. Hence, the need to collect all ship lists and then analyse whether they could be carrying slaves or not.
1767-1790	Royal Government administration was an economic boom for islands. Trade was liberalised on 29 November 1766. Port Louis became a free port.
1787	Inhabitants could trade anywhere in Madagascar. Post-1789 there was also a higher number of manumissions (Filliot 89)
1790-1803	Revolutionary Government administration
1790 - 1793	Sugar cane cultivation expanded because of the revolt in Saint Domingue.
1794	Slave trade ban but numerous violations occur with the help of corsairs.
1803-1810	Napoleonic administration
1802	30 Floreal An X (20 Mai 1802); the slave trade was permitted again on the grounds that cultivation and prosperity were suffering. <sup>14</sup>
1810-1825	Beginning of British rule
1807	The slave trade became illegal but it continued.
1825	It is the passing of Trade Bill that effectively ended the slave trade

## 6. THE SOURCES

Primary sources are scattered between Europe, the Mascarenes, Eastern Africa and India. The most obvious of sources on slaves arriving would have been Customs Records on arrivals of slaves for tax purposes. These are totally missing for the earlier period. Toussaint found that most statistics covered the post-1767 period. Toussaint's *La Route des Iles* gives an excellent account and description of the type of goods imported but next to nothing about slaves, except the figures. These, however, are not reliable. Illegal trading, fraud and falsification of documents were also rampant, leading us to question the sources. A holistic approach and understanding the mechanisms of fraud in Illegal trading will help us make more accurate assessments of the numbers involved.

Toussaint found several discrepancies in the sources, as historians continue to find out today. He compared his own ship lists, compiled from documents from the Mauritius National Archives with the published writings of Dermigny, Deschamps and Furber. The French historians, for their part, had looked at lists of ships sent out to the Indian Ocean by private merchants, commissions issued by FEIC for the same destination. Ships entered at Port Louis. He came to the conclusion that the two lists did not match and that there had been an underestimation of the number of ships actually arriving in Mauritius.<sup>15</sup> In 1783, on Dermigny's list, only 10 ships are mentioned as having left France for Mauritius, and another 31 ships were bound for other destinations. Yet, lists of arrivals in Port Louis mention 64 ships. For Commissions, issued by FEIC, 30 ships left Lorient bound for Mauritius; yet, 36 are listed as having arrived in Mauritius between 1785 and 1790.<sup>16</sup>

Among primary sources, we have also used sources recommended by Toussaint and categorised in the following way:

- the Admiralty Records or *Amirauté*
- the shipping registers
- Bureau des Classes et Armement
- The Customs (La Douane)
- The Police and Service des Ports.

However, in assessing slave trade figures, other statistics need to be used, as well as Census returns, Maroonage Registers, advertisements for sales of slaves, genealogical and demographic data to estimate how many arrived or were born locally.

- *Déclarations d'arrivées and congés de navigation*

In the MNA, the *déclarations d'arrivées* provide rich information on ships and their voyage to Mauritius. We have complete records from 1773 to 1810, although in a bad state. The *déclarations diverses* also contain all kinds of maritime contracts, while the *congés de navigation* contain commissions given to ships. Unresearched as yet are the notarial records recording slaves and purchases of slaves.

- *Customs Records*

Customs records only start at 1797; so it is not clear where slave tax records were kept, if they were paid at all. Even after the establishment of the Customs Department, there is no evidence that duties were paid by ships on arrival at Ile de France, especially as this was an unstable period for the island.

- *Bâtiments arrivés à l'île de France depuis 1er avril 1806*

The Decaen papers contain lists of ships for 1806 and 1809, consisting of 117 pages: *Bâtiments arrivés à l'île de France depuis 1er avril 1806*.

- *Affiches, Annonces et Avis Divers*

The newspapers also record arrivals of ships, but they only start in 1773. Of the *Affiches, Annonces et Avis Divers*, only three years have been found so far in Mauritius. There is no sign of any others. Toussaint was unable to find them during his searches. A thorough search was again made in Mauritius and only copies from 1773 to 1776 were found. According to Vernet, these are quite

indispensable, as “la gazette est vraiment riche sur les mouvements de navires négriers.”<sup>17</sup> A preliminary search in France in the Archives d’Outre-mer revealed only a few pages found interspersed between the folios in the volumes of the C4 series.

It is incomprehensible to us that of the first French newspaper printed in the Indian Ocean, there is not a complete set to be found in France, Reunion or Mauritius. Recently however, it has come to the attention of the TJC that some copies belonging to the Leclezio Collection have been sold to the staff of the Mauritius Commercial Bank.

- *Mauritius National Archive OB, OC, F and GB series*

In the Mauritius Archives the OB, OC, F and GB Series are the richest, but the documents have deteriorated over the years, making many illegible. The TJC has digitized the most important ones. These will be donated to the National Archives, the University of Mauritius and other repositories.

The OC 57 series contains the ‘Congés de Navigation’ which provides information on the names of the ships’ Captains, *armateurs*, the weapons and the number of the crew on board (Appendix 1).

- *French National Archives*

Preliminary research has been undertaken at the National Archives in Paris, in Bordeaux at the Archives Departementales and Ministère de la Marine. The C4 series were consulted, and an inventory was compiled relating to slavery in Isle de France and published. This series has yielded much material and constitutes a gold mine for scholars of 18<sup>th</sup>-century Isle de France. It is to be hoped that the inventory of the remaining microfilms will be completed in the implementation phase of the TJC recommendations.

Due to lack of time, archives relating to Madagascar G5 and C5 were not consulted.

The Archives of the Ministère de la Marine were also consulted, in particular JJ Marine. The *Série Marine JJ* represents information from Archives of the *Depot* of maps and plans and also from the Hydrographic Service of the French Navy. It contains information before and after the French Revolution in 1789. The diversity and volumes of these documents, kept at the National Archives of Paris, have led to their classification in ten respective *Sous-série*. Among these, the 4JJ Marine contains the most information on voyages to Mauritius, Mozambique and Indian Ocean These will soon be online in 2012. These are:

- i. 4JJ/74: Voyages dans l’océan Indien. 1738-1769.
- ii. 4JJ/75 à 85: Voyages aux îles de France et de Bourbon. 1682-1788.
- iii. 4JJ/86 et 87: Voyages à Madagascar et sur les Côtes Orientales d’Afrique. (1666-1788).
- iv. 4JJ/144/A à 144/O: Journaux, extraits de journaux, rapports et lettres : Voyages sur les Côtes d’Afrique, dans l’océan Indien, en Chine, aux Antilles, dans la Mer Rouge, en Amérique du Nord et du Sud, dans l’océan Atlantique, dans les mers d’Europe, sur les côtes de France, dans la Méditerranée. 1666-1846.

The complete list is to be found in Appendix 2.

- *Bordeaux*

As Bordeaux was the prime slave trading port for the Indian Ocean, these were the first Archives outside Paris to be consulted. Private Archives were also consulted for information on slave trading companies. A complete set from the Fonds Monneron in the Fond Privés at the Archives Municipales de Bordeaux was copied and inventoried to allow for an in-depth study of one family (list in Appendix 3).

## 2. THE SLAVE TRADE TO MAURITIUS

### 1. THE SLAVE TRADE AND THE MERCANTILE SYSTEM OF THE 18<sup>TH</sup> CENTURY

French Mercantilism in the Indian Ocean began in earnest after the establishment of the East India Company. Colbert was given the task of creating this Company and take over all 'affaires de la Marine'.<sup>18</sup> Out of the 15 million *livres* worth of shares, the King himself owned 3 million, with others going to the French Authorities and Officers of the Finance. The merchants were in a minority, with Nantes possessing some 200,000 *livres* worth of shares, Bordeaux 400,000 *livres*, and Lyons, 1,000,000 *livres*.<sup>19</sup>

In Jean Meyer's *La France et l'Asie: Essai de statistiques (1730-1785). Etat de la question*, it is estimated that over 1,000 trips were made from France to the Indian Ocean: at least 493 ships went to India and China, while about 397 ships were bound to the Mascarenes between 1730 and 1785.<sup>20</sup> Meyer estimates that Weber and Dermigny have underestimated figures for India. Weber, for example counted only 179 ships. China was not as much of a destination, as the Mascarenes and India since it was less profitable.

The French East India Company participated directly and indirectly in the slave trade. When it was not profitable for the Company to engage in it, they relinquished their rights to private traders from whom they also derived financial benefits in the form of a duty of 13 *livres* per slave introduced in the islands. Because they had a monopoly over trade in Asia, they were able to obtain goods used in the slave trade at very cheap prices and sell these to the slave traders who needed goods to exchange for slaves, as well as to clothe slaves.<sup>21</sup> Indian textiles were preferred by slave traders to French textiles.<sup>22</sup>

There were three main destinations for the slaves: Louisiana, St. Domingue and the Mascarenes. The King instructed Captains to bring back certificates for each slave arriving and for each slave sale, to enable the Company to receive 13 or 15 *livres* raised by the King for every slave. In exchange, they benefited from exemptions for port duties and duties on goods used in the slave trade, as well as on sugar.<sup>23</sup>

In addition the Company also owned slaves who worked in various capacities. When the King took over the island in 1765, the slaves belonging to the Company were ceded to the King. There were in 1769: 162 Malagasies, 436 Guineans, 345 Creoles, 254 Mozambicans, 25 Indians, 2 Creoles from Bourbon, 1 from Pondichéry and 3 from Macao for a total of 1,228 slaves. They were divided into 662 men, 139 boys, 21 young male children, 271 women, 126 girls and 9 nine female infants.<sup>24</sup>

French slave trading in the South West Indian Ocean was started in Madagascar to supply Bourbon island, colonised earlier in bbbb. The slaves engaged in agriculture and the women among them married, or cohabited with French men, due to the shortage of French women. Indian prisoners were also left there. Distinctions between French on the one hand, and Malagasy and Indian on the other, appeared some years later in 1674, when an Ordinance of Jacob de la Haye Article 20 ordered that there would be no marriages between French and *négresses* or between *noirs* and white women. The term 'slave' also appears for the first time in Bourbon.<sup>25</sup> It is there that slavery, as it is understood in Mauritius, became established with maroon hunts, separate Parish Registers and domestic servants being treated as property.<sup>26</sup>

#### 1721-1735

On 20<sup>th</sup> September 1715, when Guillaume Dufresne D'Arset took possession of Mauritius in the name of the King, slavery and the slave trade were already established in neighbouring Reunion (Bourbon). It started in earnest in Isle de France after the island was ceded to the FEIC on 2 April 1721.<sup>27</sup> Mauritius, until 1735, was subservient to Reunion. From 1721 to 1767, however, although the FEIC controlled the island, the French Government was increasingly present through Royal Commissaries, Directors of the FEIC nominated by the King, and the Syndics chosen by the Assembly of shareholders.

According to the Lougnon data, some 156 ships called at Mauritius, and 162 at Bourbon between 1721 and 1735, before Labourdonnais arrived.<sup>28</sup> Of these, most were Company ships, according to Toussaint, outfitted either in France or India. Only 2 foreign ships were noted.

A total of 650 slaves, according to Filliot, were brought to Mauritius from Madagascar, Mozambique, India and West Africa.<sup>29</sup>

Between 1721 and 1727, Mauritius was governed from Reunion (Bourbon) or Pondichéry, and thus traders could not bring slaves directly to Mauritius. However, a letter of Governor Denyon dated 4<sup>th</sup> November 1722, notes that on 11<sup>th</sup> September, the *Ruby*, Captain Grenier, arrived in Port Bourbon on 4 November from a slaving voyage in Madagascar. He had left on 7 October.<sup>30</sup> Clearly, Company directives were not being followed.

#### How many came between 1721 and 1727 to Mauritius? Look in censuses

In 1727, Mauritius was given the right to trade directly with Madagascar, without going through Reunion, to build ports, warehouses and houses. With the arrival of Governor Dumas, according to Filliot, trade increased.

#### 1727-1734

##### How many came between 1727 to 1734?

In 1732, M. Teinturier de Gennicourt, an inhabitant of Ile de France requested the Governor that he be allowed to bring slaves at 100 *livres* each. He also advised that Madagascar was a surer source of supply rather than the Guinea coast because Malagasy slaves were better workers and 'more intelligent'. Slaves from Guinea had the tendency to maroon and *be perfides*. The FEIC has also sold slaves from India at 3 to 4 piastres *d'achat* and 1 piastre for food during the voyage.<sup>31</sup>

Thus preferences for certain types of slaves for labour began to be expressed as early as then. It was not only the price, but their propensity for hard work, to maroon, that were taken into consideration. Linking ethnicity to occupation started at a very early stage and can be said to have continued throughout Mauritian history.

#### 1735-1746

The period between 1735 and 1746 is crucial for the establishment of the slave trade, since Governor Labourdonnais chose Mauritius, rather than Reunion, as his base of operations to expand French influence in the Indian Ocean. Vast infrastructural works were envisaged to transform Port Louis into a capital, port, warehousing and commercial centre. Slave labour was seen as the most reliable source of labour, although a certain amount of free labour was also brought in, in the form of French *engagés*, and skilled Malagasy and Indian workers and artisans.<sup>32</sup> While books on Mauritian history focus on the 'Founding Fathers' of Mauritius, the economic contribution of the underclass from all countries to the foundations of the French colony remains as yet unrecognised.

When Labourdonnais arrived in Mauritius in 1735, there were 638 slaves among the 838 persons living in Mauritius. He personally took charge of acquiring slaves for the island and undertook the massive construction projects in Mauritius: roads, houses, the port, a naval base, the Botanic Gardens etc. Labour from France, Madagascar, Mozambique, West Africa and India was tapped.

According to Filliot, 1,200 to 1,300 slaves were brought annually (Filliot 71). Within five years, the number of slaves had quadrupled to 2,612, while the number of French had barely doubled.<sup>33</sup> From Port Louis, several voyages were made to procure slaves in India, Madagascar, and Mozambique, while Company ships brought slaves from West Africa.

Toussaint has stated, however, that for the administration of Labourdonnais, there were no statistics available.<sup>34</sup> Certain figures can be gleaned from the C4 series which Toussaint did not probably have access to.

A letter, for example, from Labourdonnais states that the the ship *le Mozambique* arrived with 360 slaves, of whom 260 had died.<sup>35</sup> The *Duc d'Anjou* came back from Madagascar on 22 June 'et

nous remit de sa traite 114 esclaves, 170 bêtes à cornes, 38 milliers de riz blanc et 26 milliers de riz en paille.<sup>36</sup>

Labourdonnais also wrote of the slaving mission of the *Aigle* :

« L'Aigle partit d'ici le 27 avril pour Madagascar commandé par le Sieur de la Baume et revint le 9 juillet avec 70 esclaves, 15 bêtes à cornes, 12 milliers de riz blanc et 29 milliers de riz en paille. Il partit le 18 suivant pour aller chercher du riz et du bled à la Côte Malabare. »<sup>37</sup>

And of the *Jupiter* :

« Le 29 juillet, le Jupiter commandé par M. Chevert arriva avec sa cargaison de l'Isle de Madagascar le 9 septembre et nous remis 123 esclaves, 161 bêtes à cornes, près de 15 milliers de riz en paille et environ un millier de riz blanc. »<sup>38</sup>

Much therefore remains to be included in the lists compiled by Toussaint and others as far as the early history of the slave is concerned.

### Slavery in French economic history

In Mauritius the *Code Noir* is often quoted as a measure introduced to protect slaves and thereby, the humanity of this law is often applauded. This view is not justified, if one analyses the reasons why it was introduced. The logic was purely financial and responded to the need to declare slaves as a good which could be insured so that any loss of slaves could be compensated for.

McWatters has analysed the relationship of the slave trade with the Mercantile System that was emerging in 18<sup>th</sup>-century France; the 'Ordonnance de Commerce' of 1673, according to her, brought together the private sector and the State to regulate trade and to protect legitimate businesses from bankruptcies or remove some of the obstacles in obtaining credit.<sup>39</sup> However, when it was found that the *Ordonnance* did not allow the insuring of human beings, the *Code Noir* was introduced to declare slaves as '*bien meubles*' (Article XLIV); in other words, possessions which could be insured and inherited as fixed assets. In case of loss of slaves during a revolt, bad weather or disease, compensation could be claimed.

In 1741, the Company authorized the Governor General to permit all French citizens to purchase their own goods and to procure slaves from Mozambique, Madagascar and India. However, this permission according to Filliot, was 'illusory' as there was an insufficient number of boats on the island to engage in trade. The Company not only lent out its boats, but taxed all arrival of goods, causing French inhabitants to claim a return to the pre-existing situation.

Free trade was abolished in 1746.<sup>40</sup>

### 1746-1767

This period represents not only the post-Labourdonnais Company administration, but also the period for which less precise information is available. There appears to be a decrease in the slave trade, probably due to the Wars of Succession in Europe.

After 1750, the slave trade resumed, and some 1,300 to 1,400 slaves were brought every year to the Mascarenes. There also appears to be more slaves being brought from Mozambique than Madagascar.

For the period 1762 to 1766, so far very little information has been obtained as far as numbers of slaves arriving. Filliot feels that this is because illegal slave trading was going on.<sup>41</sup>

### 1767 - 1790

When Mauritius became a French Crown Colony in 1767, the Company's monopoly was abolished. An economic boom ensued for the islands. Thousands of slaves were needed to work in the ports and to supply passing ships. A Director for Slave Trading was appointed e.g. Maudave and Benyowski. There was subsequently a huge increase in the slave trade which has been studied and interpreted in various ways by historians.<sup>42</sup>

The effects on slave trade were felt soon after in Mauritius. The ratio of slaves to free in Mauritius jumped from 1:5 in 1767 to 1:9 in 1783.

Although the focus of historians has been on the French East India Company, the French Government was very much involved, directly and indirectly, in the slave trade from the beginning. In the Indian Ocean, they turned a blind eye to the hostilities occurring between different European powers in Europe. Thus, despite official hostilities between France and Portugal, in the Indian Ocean, officials of both countries engaged in an extremely lucrative trade which included slaves. This had been the case since the period of Labourdonnais. Frauds were also known, but not suppressed nor investigated fully

Thus, despite the official relations that may have existed between European countries and their desire to separate their trading spheres, ship Captains, slave traders, merchants did not care too much for these imperial ambitions and carried on contraband trade whenever possible.

### Of *primes* and frauds

According to Roman, the system of *primes* was at the heart of the slave trading system. However, not all trading ventures were profitable and as elsewhere, profits were calculated as the difference between the cost of outfitting a ship and the amount collected during sales of slaves. Profits took a long time to accrue as planters never paid for their slaves on time.<sup>43</sup>

The slave trade could never be profitable for the King, unless France had a monopoly over the slave trade with the Madagagascar. There were too many people bringing in slaves illegally. If this had been stopped, profits would have been more. A letter of 3 September 1771 outlines this problem clearly: Governor "Desroches n'a pas signé une instruction pour la flûte du Roy *La Normandie* que M Poivre m'adressa pour le Capitaine de recevoir 8000 piastres à bord et d'en acheter des noirs pour le compte des particuliers nommément du Sr. Amat qui était dès lors parti pour Batavia [...] concurrence des particuliers qui font la fraude" [...] "qui ne paient ni frais d'armement, ni les autres charges des vaisseaux équipés aux frais et risques des particuliers" [...] "le commerce a procuré 7,000 noirs à la Colonie depuis mai 1770 jusqu'à may 1771. En cette année si la fraude reprend, on n'en traitera peut-être pas 700".<sup>44</sup>

Apart from the fact that free trade was established, the boost to the slave trade came also in 1776 from the *prime* of ? paid per slave traded beyond the Cape of Good Hope. In October 1784, an *arrêt* of 26 October replaced the exemption of *demi-droit* by a 'gratification' of 40 *livres* per *tonne jauge*.<sup>45</sup> The aim was 'to revitalize the trade'. It was essentially a 'bounty' system 'consisting of State subsidies paid in function of ton burden and could amount to more than one-quarter of the initial investment'.<sup>46</sup> In the Memoirs of Angenard, Second Lieutenant on board a slaving ship, the latter writes that he obtained a monthly salary of 25 piastres, 2 slaves for himself, a commission of one *franc* per every slave that he traded.<sup>47</sup> The *Arrêté du 5 juin 1785* further gave 4 *livres* per head of slave introduced into Mauritius.

According to Roman, the Government almost 'invited' fraud in slave trading, when it gave a 40 *livres prime* for every *tonne jauge* of a slave ship: 'miraculously' ships' tonnage increased. The *Baron Binder* of 450 to 602 *tonnes*,<sup>48</sup> the *Saturne* initially listed as being 350-tonne, when built suddenly reappeared as a 475-tonne ship at this time.<sup>49</sup> According to Roman, "à vrai dire les hésitations et les atermoiements du gouvernement s'apparentent à de la tolérance, voire de l'approbation tacite".<sup>50</sup>

From 1787 the inhabitants of Ile de France could trade anywhere in Madagascar. This must have further contributed to the numbers of slaves arriving.

### 1790-1803

It is also felt by historians that from 1790, sugar cane cultivation expanded because of the revolt in Saint-Domingue. This, it is claimed, led to a rise in the slave trade. However, there are no corresponding figures to show a rise in sugar exports from Mauritius to France. The slave trade was also declared illegal. Despite the ban on the slave trade by the Revolutionary Government in France, slave trading continued fraudulently in the Indian Ocean. Corsairs were particularly active in continuing this illicit trade.

### Corsairs *cum* traders

Another feature of the colonial slave trade in the Indian Ocean was that those practicing it did not engage solely in it. They transported other goods as well and, according to Villiers, they very easily shifted from one kind of trade to another. Corsairs turned slave traders when the need arose, and then became planters and merchants, the most famous example being Robert Surcouf. The reconversion *course-traite-commerce* could be practised in the Indian Ocean. Corsair activity became prevalent when regular trading was no longer possible. That there was a human cargo was immaterial to the traders. The French Marine had given them its blessing to trade through the '*lettres de marque*' and indirectly blessed also the slave trade. *Le Coureur* also recently explored also participated in this type of trade.

Various tactics were employed to circumvent the ban on slave trade. For example, merchants falsified official destinations: the *Sans Culotte*, armed by Marouf and Le Mème, though officially going to Madagascar to purchase rice, went instead to Mozambique and took on 340 slaves bound for Reunion island.<sup>51</sup>

### 1803 - 1810

On 30 Floréal An X (20 Mai 1802), the slave trade was permitted again on the grounds that cultivation and prosperity were suffering.<sup>52</sup> Napoleon had concluded a Peace Treaty with the British at Amiens on March 26 1802. During the month of April, he received in Paris a delegation of Deputies from Nantes, Bordeaux and Marseille, to whom he promised the re-authorization of slave trade.<sup>53</sup>

On the 20<sup>th</sup> June 1802, the Colonial Assembly of Ile de France legalized the slave trade; the same decision was taken by the Colonial Assembly of Bourbon Island on September 28.<sup>54</sup> This period was marked by a fierce revival of the French slave trade activities in Mozambique. Eric Saugera<sup>55</sup> states that :

*"La fièvre négrière échauffa les esprits: on arma partout en quelques mois des dizaines de navires pour la Côte d'Afrique. Ce retour à la légalisation du trafic négrier comble les vœux du négoce métropolitain qui souhaitait sa reprise officielle, pour l'humanité, même la morale, et pour nos colonies qui la réclament indispensablement."*

Saugera has outlined the slaving activities of La *Confiance*. The *Confiance* was armed in Bordeaux for Ile de France on 6<sup>th</sup> May 1802, with Captain Sr. Paul Castagnet and as *armateur*, Jacques Conte. On 10<sup>th</sup> August 1802, in Mozambique, the Captain declared that he was in possession of 15,000 '*patacas espanholas*' for the slave trade and other goods that would be sold in Ile de France. 516 slaves were disembarked from the ship in Ile de France on 17<sup>th</sup> October 1802. On the 28<sup>th</sup> of the same month, the sale of the slaves from the *Confiance* was already advertised in a local newspaper, "*s'adresser à Icery, à l'établissement Monneron au bord de la mer, où est la traite, tandis que les officiers vendent leurs noirs de port permis à bord du navire.*" During this period at least twelve Portuguese ships arrivals in Port Louis, Ile de France have been recorded between 1802-07.<sup>56</sup>

## 2. HOW TRIANGULAR WAS THE SLAVE TRADE?

It is clear that for the Indian Ocean, the classic picture presented of the slave trade (and for the Atlantic), of a 'triangular' slave trade is not quite accurate. It was traditionally believed that ships left France laden with European goods, went to Africa to exchange them for slaves and then on to the Americas to sell the slaves for colonial goods which were then taken back to Europe. Even for the Atlantic Ocean, this classic picture has its flaws. The reality, as Pétré-Grenouilleau has shown, is that they did not simply import slaves; they also exported them. The same situation existed for the Indian Ocean, as Richard Allen has recently clearly demonstrated.

Historians have concluded that to understand better the slave trade and the issue of profitability beyond the figures, one must not rely on the official itinerary of a ship, but one must actually follow the real trajectory and pay close attention to the timing of the voyages, their tonnage and the goods that they contained and country for which they were *really* destined.

The practice of diverting ships bound for the Indies, or going back to Europe for short slave trading voyages to Madagascar and Eastern Africa, started as early as 1723, according to Filliot.<sup>57</sup>

Thus, voyages, officially listed as going to China, meant also stops at Mauritius and Reunion and included trips to the Malagasy and East African coasts. The ships leaving France contained a cargo destined for the Mascarenes where they could be sold easily. Trips destined to India and China, which stopped at the Mascarenes. Those stopovers, should not therefore be viewed as simple transit stops, but rather as ones which could yield substantial profits as these goods did not necessarily sell well in India or China. Indians, according to a *mémoire*, ate little, dressed with cloth made locally. Thus, European goods were not purchased by Indians, but rather by Europeans and others who had settled in the Mascarenes. Thus, in the *mémoire*, it was seen as beneficial as the profits of sale of European goods were made in Mauritius.<sup>58</sup>

High-tonnage ships bound for China also stopped at the Mascarenes and on the East African coast and Madagascar. It appears, therefore, that stopping at the Mascarenes was important for the longer voyages to China and India to be profitable. For the East India Company, an anonymous pamphlet written in 1785 states: "one can afford to lose in India because the benefits of the islands are between 100 and 200%".

Meyer uses the example of two ships, *L'Auguste*, 990-tonne, and heavily armed with 22 canons, which departed on 18 November for China with 175 men. The cost was 776,252 *livres*. Of this amount, the cargo destined for Pondichéry was worth 511,229 *livres*, while the cargo for China was worth only 420 *livres*. By contrast, the *Puysieux* weighing 700 tonnes, with 20 canons and 144 men, with a cargo worth 601,090 *livres*, left Lorient on 21 October 1752. 66,437 *livres* worth of goods were bound for Bourbon, 108,377 *livres* for Isle de France and 188,402 *livres* for China.<sup>59</sup>

An innovation brought by French East India Company ships coming into the Indian Ocean was that they did not use French textiles in the slave trade; Indian textiles were far cheaper and so, when they brought French textiles, they sold it off in the Mascarenes where they were bought at high prices by the French settler population. Indian textiles were also purchased in India and then exchanged for slaves destined for the Mascarenes and the Americas.

More evidence of the distinctiveness of the Mascarenes and Indian Ocean trade comes from the research of Max Guerout who has also been examining the history and shipwreck of the *Utile* which left Malagasy slaves stranded on Tromelin Island for several years. He describes the trade as a '*double traite*' (double trade). He believes that historians have ignored the shorter trips made by the same ships that made long-distance voyages.<sup>60</sup> Both Toussaint and Mettas missed these short trips in their lists. Richard Allen has come to the same conclusion and is also substantially reviewing Toussaint's and Filliot's figures. Thus, during the Seven Years War (1756-1763), when the Governor based in Mauritius banned the slave trade, his orders were ignored by the Captain of the *Utile*, Jean de Lafarge, who embarked, not only cattle and rice from Madagascar, but slaves also. Many other such cases abound. East Indian Company ships also carried slaves during the ban, but this information never entered Company account books. One example is the *Jesus Maria Jose* which, in 1761, carried 210 slaves from Mozambique to Mauritius. When the ship reached Mauritius, the Company had to buy the slaves at 55 *piastres* each.

*Double traite* also occurred with ships going from France to Mozambique. The *Constance Pauline*, belonging to Frabaud & Co from Marseille, went from France to Mozambique but also made other trips: between August 1788 and July 1789, to Ile de France and back. The same occurred from Bordeaux: *La Victoire* left on 27<sup>th</sup> June 1783, reached Mauritius on 8 November, then to Kilwa, where it bought 200 slaves and then on to Bombetoc (Madagascar), when it bought 80 slaves. We do not know yet how many reached Mauritius. The same ship went back to Mozambique, bought 162 slaves and went on to the Cape and Haiti. Cochon Trop Long owned the *Oiseau* which left Bordeaux 2 March 1786, made 5 voyages, 4 of which were between Mauritius and East Africa. His last trip was to the USA. According to Guerout, there was perfect 'synchronism' in activities between Marseilles and Bordeaux between 1781 and 1792.

### Outfitting the slave ship

The 'success' of a slaving voyage depended on the careful planning and the work of three individuals on board the ship: the barrel-maker ('*tonnelier*'), the carpenter and the cook. The

carpenter had to rebuild the interior of the hold to accommodate as many slaves as possible; the comfort of slaves not being a major consideration. But the ship also had to accommodate other items: provisions, water, cargo etc. The barrel-maker had to supply abundant fresh water, particularly for long distances or lengthy voyages.

The financing of slave voyages was a high-risk venture. French long-distance trade, including slave trade voyages, was an expensive high-risk venture. Either only the wealthy could engage in, or those who had also invested in other ventures. Long-distance trade could generate very high profits because of *arbitrage* and because the costs of high investment declined as distances increased. The financing of the slave trade has, however, been little studied generally, even though evidence points to the fact that banks and international commerce did finance the Atlantic slave trade.<sup>61</sup> Whether the same occurred in the Indian Ocean remains to be established.

Our preliminary reading indicates that for the Indian Ocean, much of the capital required was financed through the 'sociétés' (companies) created, and where various groups and individuals provided the funds with the main person retaining majority shares. Moreover, those who financed the slave voyages were, more often than not, from existing merchant families, i.e. in St. Malo. When they did not have sufficient funds, they associated with merchants from other ports or even with the nobility.<sup>62</sup> In Mauritius (Ile de France), one of the early companies to be created and to engage in slave trading was *no less than* one created by Mahé de Labourdonnais himself, on the ships *Aigle* and *Parfaite* in 1742 and *Jupiter* and in 1744.

An interesting study by Albane Forestier has looked at the slave trade from the point of view of principal-agent problems in the port of La Rochelle, between 1763 and 1792. This appeared particularly acute in long-distance trade where the principal *armateur* had no control over what the agent was doing in the trade; the jargon called this 'agent opportunism'.<sup>63</sup> Solutions found included a reliance on kinship ties because "family disapprobation require low monitoring and enforcement".<sup>64</sup> According to Forestier in La Rochelle, most kinship links were established through the settlement of a son or a brother in the colonies. Religion played a role as a 'a low-cost screening device'.<sup>65</sup> Protestants dominated the trade in La Rochelle, despite the fact they were a numerical minority. Another guarantee against 'agent opportunism, was the "social sanctioning power" of the community. How else did the principal agent ensure that Captains and crew did not engage in practices detrimental to his business? The Admiralty, created to regulate maritime shipping, became a 'third party enforcing agency' and expected written contracts between the *armateur* and his crew members. Copies were sent to the Admiralty. Incentives were another way of minimising the hiding of information and ensuring the 'optimum effort' was ensured. Thus, in La Rochelle, 'commissions for captain and officers, by tying the pay to output and productivity, served to align the agents' interests with those of the *armateur*'.<sup>66</sup> Colonial Agents received between 2 and 5 per cent of the slave sale; Captains' monthly wages amounted to 150 to 200 *livres* per month and 5 to 7 percent commission on slave sales. They were also sometimes given a slave and bonuses. This ensured that slaves were taken care of during the voyages. According to Leforestier, these salaries were high.<sup>67</sup> According to Forestier, by the end of the 18<sup>th</sup> century, "the Captains and agents also acquired shares in the ventures". Out of the 211 ventures, listed by the Admiralty, Captains had shares in 45 of them, i.e. about 21.33% between 1763 and 1792, a trend which increased. The sale of *pacotilles* was another incentive, although some *armateurs* did not allow it. With inspection being relatively slack, it appears that Captains turned a blind eye to it, as many were involved in it and made a little profit from it. Finally, the possibility of promotion always existed from sailors, to Captains to *armateur*. Captains became outfitters, some even purchasing plantations.

Although this information deals with the Atlantic trade, there is no reason to suppose that there was any difference in the Indian Ocean, as a quick perusal of the names of ships, *armateurs* and Captains, reveals that the same people were involved in both Atlantic and Indian Oceans.<sup>68</sup> The development of these networks, born from slave trading and other activities, created a moral community "in which mutual trust could flourish and which benefited to commercial activities". It led to a trading bourgeoisie with an ideology that underpinned social and cultural norms and which could be differentiated, at the national level, from other socio-economic groups.<sup>69</sup>

In Mauritius, the emergence of this trading bourgeoisie has been well-documented by Auguste Toussaint in his various works. The links between the Atlantic and Indian Ocean worlds have yet to be studied. Some preliminary studies have been carried out, in comparing efficiencies of British

*versus* French traders, with English traders being considered more efficient, because of the 'personal nature' of French business structure.<sup>70</sup>

### 3. PROFITS, PORTS AND PRICES

The differences between the Atlantic and the Indian Ocean's experience of the mid to late 18<sup>th</sup> century are quite stark. Two examples: in contrast to the Caribbean where the Haitian revolution and a fall in plantation production decreased long-distance trade 'for a generation', in Mauritius sugar and plantation production increased. Secondly, the impact of European wars on the slave trade differed in the two oceans. Unlike in the Atlantic, in the Indian Ocean the wars were not necessarily detrimental to the slave trade or trade in general, as corsair activity in particular proved very profitable.

Thus, "War changed the way trade investments were conducted, but it did not shut down all opportunities for profitable operations". The Mascarenes, where the bulk of the maritime traffic was centred, also served as a naval base. It was rare to find any voyages specifically destined for the Mascarenes, unless they were small ships with small tonnages, where the investment resembled one in *droiture*.

The *Seven Years' War* differed in its impact on slave trade:

1. It reduced considerably slave trading from Nantes to Atlantic but what about other ports? To Indian Ocean, for example?
2. French figures have not been compiled completely and averages are calculated from, for example, mortality rates on board a small number of ships.
3. There was a boom period in 1780s for the Atlantic, but what about Indian Ocean? In the Indian Ocean too, a huge boom in slave trade was caused partly by the rise in the Swahili states.

A third area of difference between the two oceans is the profits derived from the slave trade which was possibly more consequential in the Indian Ocean than in the Atlantic. This deserves further study in the future.

### PROFITS

The profits emanating from the slave trade have been the subject of study in the Atlantic Ocean for a long time by pre-industrial economists and cliometricians. According to Daudin, there are three methods to study slave trade profits: first, theoretical results from competition theory; secondly, theoretical reconstruction of profit rates, and thirdly, examination of traders' accounts.<sup>71</sup> The different estimates of annual profit rates, based on the second method, range between 7.1 per cent and 30 per cent.<sup>72</sup> Estimates of annual profit rates, based on the third method, range between 8 per cent and 10 per cent.<sup>73</sup>

For the Indian Ocean, it would appear from the Literature that there was more chance of the Indian Ocean slave trade being in the long run more profitable than in the Atlantic for the period after 1780s. Daudin's study thus recommends the use of Private Archives to calculate the profits of the slave trade; in other words, to examine the aggregate data of one *armateur* and one vessel. There are, however, few detailed studies of voyages relevant to giving a conclusive answer. We are better able to understand the mechanism and operation of the slave trade through recent works of French historians published by the *Anneaux de la Mémoire Association* in Nantes.

Research so far on sources on Mauritius does not reveal much about profits derived from the slave trade: in 1760s, profits from Madagascar were considered negligible for locals, according to a letter from Governor Dumas on the 'Bénéfices de la traite à Madagascar' in 1768:

*"Si la traite produit des esclaves il faut en compléter les ateliers du Roy et ce complet va au moins à 300, après quoi il faut encore les distribuer aux habitants à peu près au prix qu'ils*

*reviendront et recevoir en paiement leurs denrées, de tout cela peut-il entrer un sol dans la caisse? ”<sup>74</sup>*

However, on other occasions, profits were clearly made. Captain Francois Remi Cotte of the *Saturne* wrote to the *armateurs* that he had made a 92% profit from trading 503 slaves at 760 *livres* per slave in and selling them for 1600 *livres*.

A word about currency is necessary here. *Livres* were used in public offices since the foundation of the island. The *Livre* was a ‘nominal coin value of about one-fifth to about one-tenth of the value of the Spanish dollar and *doublons* (the latter being legally current at 16 spanish dollars). However, individuals and companies and Customs kept accounts and subscribed engagements in Spanish dollars. One *livre* was about \$10 (Spanish) in 1790s. With the Imperial Government Rule, the currency used was *francs*, at the rate of five *francs 50 centimes* for the Spani dollar. By 1810, 200 hundred *sous*, ten *livres* or two rupees of colonial money made one dollar.<sup>75</sup>

Where did the funding come from? Historians seem to concur on this point that most had have been quite wealthy to have engaged in it. Wealth could have come from inherited fortune or through marriage to a rich family or to have accrued from accumulated profits during trade. We do not have enough information about the genealogies of families to study this in depth.

Agents and *armateurs* were the principal persons involved in the economic side of the trade: agents received commissions for the sale of slaves for all transactions. Captains too benefited, while the *armateur*, often sitting in La Rochelle or Nantes etc. had to wait for the profits to materialise slowly from the time the slaves were sold, since plantation owners took their time to pay. Profits were thus long-term profits. This no doubt led Garesché to write: “Expeditions for the slave trade only make victims now [...]. Captains, agents are the only ones to benefit from it, and the *armateur* is forced to bear loss or grow old waiting for profits”.<sup>76</sup> Risks involved in those days included shipwrecks, revolts, disease etc. in the Atlantic, as in Indian Ocean, or seizures of ships by the enemy, notably the British.

Finally, according to McWatters, most research about the Atlantic underscores the fact that trade was not highly profitable, but provided modest market returns. Indeed, an individual voyage could be interpreted as a lottery in which the possibility for great profits (or losses) existed, depending on the confluence of a number of market and political factors, but this is not conclusive because of the absence of detailed accounts.<sup>77</sup>

Calculations have begun to be made for the Americas, but not for Indian Ocean, as historians have yet to coordinate their research efforts. While Richard Allen has focused on ships arriving in the Mascarenes, Vernet has looked at those which left the East African coast but did not necessarily reach the Mascarenes.

Pétre-Grenouilleau notes: “[...] que la durée d’amortissement du prix d’un captif est courte (un an et demi à la Barbade anglaise, vers 1645), que l’individu en question représente un capital toujours disponible, et qu’il ajoute au prestige de son propriétaire”.<sup>78</sup> The return from slaves, in terms of production, was also discussed in various reports to the Chambre de Commerce at Nantes. For instance, in the Archives Départementales, the amount of sugar produced is discussed, relative to the cost of slaves in different years.<sup>79</sup>

## PORTS

It is also important to look at the role of specific ports engaged in the slave trade to the Indian Ocean and the Mascarenes specifically, as there are significant differences between the Indian Oean and the Atlantic. The most important port for French slave trading for the Atlantic was Nantes, but not so for the Indian Ocean. Five main ports were engaged in the Indian Ocean.

According to Toussaint’s compilation in *La Route des Iles*, between 1773 and 1810 for private (non-Navy) ships:<sup>80</sup>

Bordeaux	267
Lorient	166
Marseille	129
St. Malo	54
Nantes	40
La Rochelle	22
Brest	22
Le Havre	7
Sete	4
Rochefort	4
Painboeuf	3
Bayonne	2
Honfleur	1
Pauillac	1
Toulon	1

What about Naval ships?

We will therefore look at each of these ports briefly and assess the volume of ships arriving at Isle de France and which were possibly carrying slaves.

The general situation of trade in these ports will be analysed first, and then information given about their relationship with Mauritius, wherever information is available. The percentage of slaves taken away from their homeland by the ships leaving these ports has been estimated as: Nantes 41.3 per cent, Bordeaux 11.4 per cent, La Rochelle 11.3 per cent, the Havre 10.8 per cent.

### BORDEAUX

The first ship to arrive in Mauritius carrying slaves was the *Bretagne* from Pondichéry.

As Bordeaux came late to the slave trade, it faced tough competition from other ports, and this may have been a reason why it switched its source to the Eastern African coast. It developed rapidly, having a rich hinterland and producing wine. Thus trade flourished, including slave trade. It became France's second slaving port after Nantes.

According to Eric Saugera's work, the first slave ship started out from Bordeaux in 1672 and last one in 1837. Between those dates, some 480 ships left Bordeaux for the French Caribbean and carried 150,000 or more Africans from their homeland.<sup>81</sup>

The first trading venture was in 1674. The destinations of the Bordeaux ships were diverse: ships went to obtain supplies in Guinea, the Gold Coast, Angola and Mozambique. The Indian Ocean plays a small part in early years.

Out of 386 slaving ships, the destinations were as follows:

270	St. Domingue (Haïti)
31	Martinique
13	Guadeloupe
14	Cuba (19 <sup>th</sup> century)
37	Mauritius <sup>82</sup>

According to the Bureau des Douanes in Bordeaux, it was not a triangular trade but rather a quadrangular trade.<sup>83</sup> However, Bordeaux found in the slave trade a complement to her existing trade which began to make her the second slave port of France, next to Nantes. In estimation of scholars, the trade involved 130,000 to 150,000 slaves taken away in 480 expeditions, thus representing 11.4 per cent of the total leaving French ports.<sup>84</sup> The figure of 480 ships is higher than the estimate of Saugera. It was not a specialist's activity and, according to the Conservatoire, the ship Captains undertook many other voyages other than slave voyages. Ships used at first were small ships, sloops, goëlettes and corvettes, but after 1763, ships had a higher tonnage, 250 to 500 tonnes.

Our knowledge of slave trading from Bordeaux is partly limited, due to fire occurring in the Port Archives in 1919.<sup>85</sup> The *Journaux de bord* are our only detailed source for daily events occurring during a slave trade voyage. The log book of the *Patriote* from Bordeaux to Mauritius, for example, is one such example, showing that there was not a simple triangular trade: It left Mauritius on 10 April 1789 and arrived in Bordeaux on 17 February 1791. Numerous slave trading stops took place along the way.<sup>86</sup> The voyage of *Licorne* is also interesting: although the slaves were destined for the Atlantic voyage, this ship made a stop over in Mauritius, according to Toussaint on 4 June 1787 before going to Mozambique to procure slaves, and then on to the Cape of Good Hope where some slaves were disembarked before making the Atlantic voyage.<sup>87</sup>

From 1783 to 1793, in total, some 262 slaving voyages were made out, of which 80 ships to the Indian Ocean went from Bordeaux, increasing its share of the slave trade from 5 to 12 per cent.

The first ships from Bordeaux appear to have arrived as early as 1773, clearly having come to engage in the slave trade, judging from their destinations in the South West Indian Ocean (see database): the *Aventurier*, a 150-tonne *senau*, made one voyage in 1773-4 from Bordeaux to the Indian Ocean. It made several trips within the region: to Kerimba, Madagascar, Bourbon and Mauritius, and back to Bordeaux.<sup>88</sup> It was commanded by Brugevin. The *Affiches, Annonces {...}* of 13 January 1773 noted that the ship made two stops in Kerimba and Madagascar, before arriving in Port Louis on 9 January 1773, loaded with slaves for Mr. de la Maretty. It then went to Bourbon in March 1773. Another trip was made to Mozambique in 1774. It arrived in Port Louis on 22 June 1774, but the future owner of slaves was not mentioned in the records.

Two further trips were made to India but no cargo was listed in the *Affiches, Annonces et Avis divers*.<sup>89</sup>

The *Bourbonnaise*, commanded by Descormiers, arrived in Mauritius in December 1773 from Kerimba. This originally privately-owned *goëlette* had previously made several trips from Port Louis to Black River District, transporting wood, then made longer trips as a King's ship to Bourbon and, by the end of December, it was going again as a private ship to Kerimba. As for the *Alliance*, it arrived in Mauritius in September 1774 from Bordeaux but there are no records of stops in Africa or Madagascar.

Not much activity occurred in the 1770s from Bordeaux to the Indian Ocean. In the 1780s, many more ships arrived only to stop again from 1794 to 1795, probably because of the abolition of the slave trade. Corsairs and non-French ships continued supplying Mauritius with slaves illegally. A large number of American ships left Bordeaux to come to the Indian Ocean in this period of 1794-5, but there were no French ships from Bordeaux, it would appear.

Table 3 List of ships arriving in Mauritius from Bordeaux

Name of Ship	Nationality	Tonnage	Port d'armement	Captain	Port of departure	Date of Arrival
<i>Bourbonnaise</i>	French	NIL	Bordeaux	Descormiers	Kerimba	8 December 1773
<i>Bretagne</i>	French	444	Bordeaux	Mancel	Pondichéry	28 November 1773
<i>Alliance</i>	French	330	Nantes?	Macé	Bordeaux	17 September 1774
<i>Aventurier</i>	French	180 (150)	Bordeaux	Brugevin	Kerimba	22 June 1774
<i>Citoyen</i>	French	280	Nantes	Groleau	Bordeaux	11 August 1774
<i>Bretagne</i>	French	444	Bordeaux	Mancel	Bordeaux	16 October 1775
<i>Vaillant</i>	French	300	Bordeaux	Brugevin	Bordeaux	22 April 1776
<i>Vaillant</i>	French	300	Bordeaux	Brugevin	Bordeaux	23 June 1778
<i>Mouche</i>	French	93	Bordeaux	Bonneau	Bordeaux	15 August 1779
<i>Castor</i>	French	428 (440)	Bordeaux	Dupin	Lorient	13 December 1781
<i>Princesse d'Henin</i>	French	490	Bordeaux	Olanier	Bordeaux	16 September 1782
<i>Union</i>	French	375 (347)	Bordeaux	Roy	Brest	3 August 1782
<i>Garonne</i>	French	482 (400)	Bordeaux	Nicolle	Brest	9 August 1782
<i>Iris</i>	French	400	Bordeaux ?	Forget	Brest	17 July 1782
<i>Jeune Aimée</i>	French	380	Bordeaux	Couzicot	Bordeaux	16 September 1782
<i>Auguste</i>	French	398 (360)	Bordeaux	Boudein?	Brest	30 July 1782
<i>Bienvenu</i>	French	552	Bordeaux	Merlan	Brest	1 August 1782
<i>Brabant</i>	Flamand?	NIL	Bordeaux	Devries	Bordeaux	19 November 1782
<i>Pacificateur</i>	French	390	Bordeaux	D umas	Brest	30 July 1782
<i>Tançrède</i>	French	420	Bordeaux	Gourrège	Bordeaux	31 July 1783
<i>Union</i>	French	400	Bordeaux	De la Motte	Trincomalé	? September 1783
<i>Jeanne Cécile</i>	Imperial	300	NIL	Baer	Bordeaux	27 November 1783
<i>Garonne</i>	French	482	Bordeaux	Nicolle	Goudelour	8 July 1783
<i>Bellamy</i>	French	300	Bordeaux	Comte	Bordeaux	29 September 1783
<i>Bonne Espérance</i>	Imperial	400	Ostende	Tempier	Bordeaux	27 June 1783
<i>Princesse d'Henin</i>	French	490	Bordeaux	Dupuy	Trincomalé	19 September 1783
<i>Casimir</i>	French	350	Bordeaux	Bernard?	Bordeaux	4 August 1783
<i>Iris?</i>	French	400	Bordeaux	Forget	Trincomalé	8 July 1783
<i>Calypso</i>	French	280 (250)	Bordeaux	La Fuente	Bordeaux	9 August 1783
<i>Victoire</i>	French	400	Saint-Malo	Michel	Bordeaux	7 November 1783

<i>Hippopotame</i>	Imperia l	700	Bordeaux	Van den Berghen	Bordeaux	1 July 1783
<i>Aimable Marine</i>	French	400	Bordeaux	Chassaing	Trincomalé	28 August 1783
<i>Courrier Impérial</i>	Imperia l	NIL	Ostende?	De Saint- Valéry	Bordeaux	28 May 1783
<i>Discrète</i>	French	470	Bordeaux	Boyreau	Ile d'Aix	18 April 1783
<i>Jeune Stanislas</i>	French	400	Le Havre	Menard	Bordeaux	22 December 1783
<i>Maréchal de Duras</i>	French	406 (440)	Bordeaux	Compère	Trincomalé	21 November 1783
<i>Maréchal de Duras</i>	French	406 (440)	Bordeaux	Compère	Ile d'Aix	18 April 1783
