### LORIENT

In Jean Meyer's study, *La France et l'Asie*, it is estimated that over 1,000 trips were made from France to the Indian Ocean. From 1730-1734, according to him, only one *armement* of the East India Company left Lorient. This increased considerably after 1746 but dwindled again a few years later. Latest figures, compiled by Le Lan for the recent Slave Trade conference organized by the TJC, estimated at about 92 000, the number of slaves whom the Company exiled, using Lorient as a base.

The first ship from Lorient to bring slaves to Mauritius was *La Méduse* which embarked 237 slaves from Juda. Between 1728 and 1756, all ships appear to have gone to West Africa to procure slaves.

Table 4 Ships arriving from Lorient

Year of Departure	Name of ship	Port of trade	No. slaves Embarked	No. slaves disembarked	No. deaths	Destination
1728	La Méduse	Juda	237			Ile de France
1729	La Diane	Gorée	302	248	54	Ile de France
1729	La Vierge de Grâce	Gorée	380	291	89	Ile de France
1730	La Badine	Gorée	200	37	163	Île de France - Pondichéry
1738	Le Griffon	Sénégal	250			Ile de France
1744	La Favorite	Gorée	438	356	82	Île de France - Île Bourbon
1749	Le Dauphin	Gorée	52			Île de France
1749	Le Bristol	Gorée	350	267	83	Ile de France
1749	L'Hercule	Gorée	500	353	147	Ile de France
1750	Le Chevalier Marin	Gorée	240	169	71	Ile de France
1756	Le Duc de Béthune	Gorée	388	289	49	Ile de France
Total					738	

(Source: Translated from Jean Yves Le Lan, 'Les armateurs privés de la traite lorientaise pour l'île de France, 1769 - 1791' and 'La Cie des Indes et la Traite des Noirs', 17-20)

Haudrère has stated that the slaving voyages, with 630 slaves on board, between 1729 and for 1730 were a total failure because of the high mortality. He has described these voyages as a 'hecatomb'.<sup>90</sup> In one ship, out of the 200 slaves, 35 died before reaching the Cape and another 30 died in transit at the Cape, due to the cold and not being properly clothed. 93 more died en route to the Mascarenes. 42 disembarked, out of whom 11 died during disembarkation.

The FEIC had two main trading posts in West Africa: Juda in Dahomey and Gorée in Senegal. In Gorée, a fort had been built where French traders, their slaves and goods were 'secure'. According to Le Lan, « la Compagnie avait de nombreuses implantations de traite en Afrique, dont deux importantes: un fort à l'île de Gorée au Sénégal et un à Juda au Dahomey ainsi que de nombreux points de contact baptisés escales. Un fort était une infrastructure mettant à l'abri les ressortissants français, les captifs et les marchandises, des vélicités adverses alors que les escales n'étaient que des parcelles de terrain sur lesquels les chefs indigènes avaient autorisés les français à commercer. »<sup>91</sup>

In addition to these ships, the C4 series mentions another ship, the Fleury, which was to bring slaves from Senegal, but this is not mentioned in Le Lan's list, for some reason.<sup>92</sup>

Le Lan has analysed the 19 voyages mentioned by Mettas to Ile de France between 1769 and 1791. He found that of the 19 ships, only 3 definitely came to Mauritius, while 5 others probably came; the others went to on to seal the slaves in the Caribbean.

In bold and larger characters are those which landed slaves in Mauritius, The others went to the Caribbean

Table 5 : Slaving voyages from Lorient through Île de France from 1772 to 1791

Twelve companies undertook these 19 trips, trading some 6,205 slaves and some 2,910 slaves to Mauritius alone between 1771 and 1791.

### MARSEILLES

Marseilles developed a powerful set of merchants in the 18<sup>th</sup> century, from 250 merchants to over 750 by the end of the 18<sup>th</sup> century. According to latest figures, most of these went to the Americas, and it was only at the end of the 18<sup>th</sup> that they came to the Mascarenes.<sup>94</sup> Many reasons have been advanced for the lack of interest before this period, all the more so intriguing as voices were raised against the slave trade: lack of knowledge of Atlantic compared to other ports, lack of freight (they only had wines and cloth).<sup>95</sup> They were also more used to quicker returns, having traded with Mediterranean countries for so long. One of the most important of slave traders was Georges Roux, who owned the

On Toussaint's list was the *Felicité* on 9 July 1793. Although trade resumed after 1803. Only a few ships made it to Mauritius from Marseilles: the last ship was the *Paquebot de Marseilles* whose captain was Chauvin in 20 September 1805.

The destinations of these ships was as follows:

Marseille	102	Kilwa	5	Moka	4
Batavia	6	Surat	2	CGH	2
Pondichéry	1	Mozambique	1	Mongale	1
Wampou	1	Kerimba	2	Goa	1
African coast	1	China	1	Canton	1
Calcutta	1	Aleppey	1		

But the main reason for the rise of Marseilles in the slave trade was the *prime* offered in colonies for every head of slave brought as from 1784.

### ST. MALO

In the French slave trade, St. Malo ranks as perhaps the fifth port and deserves its appellation as the port of corsairs. It started slave trading later than other ports and began when trade restrictions were imposed by peace treaties; it preferred more traditional activities. The *Malouins* entered the slave trade timidly:

1748 - 1775: 4 voyages per year

1751: 10 voyages

1753: 9 voyages

1763- 1778: 86 voyages, 6 per year

1763-1770: 52 voyages

1170- 1778: 34 voyages

The biggest trader was Magon de la Balue between 1717 and 1744, but it is between 1748 and 1788 that there was a real boom with largest fortunes made in Marseilles; Magon armed several slave trading ships, *Zélé*, *Le duc de Choiseul*, *Le Duc de Praslin*, *Le Modeste*. Charles Carrière has compiled a list of some 40 merchants engaged in the slave trade. How many came to the Indian Ocean is not yet known, nor how many of those engaged in slave trading acquired plantations in Mauritius in the 18<sup>th</sup> century.

129 ships set sail from Marseilles to the Mascarenes between 1773 and 1819 alone, according to Toussaint. On Toussaint's list, 134 ships are listed as having arrived or werearmed in the Mascarenes from Marseille. Buti says that it was because of the terms of the Seven Years War and the Treaty of Paris, that the sugar islands in the Caribbean and the Indian Ocean became more important and the plantation economies started emerging.<sup>96</sup>

However, they seem important for the Indian Ocean, especially for the Huguenot traders among them. According to Carrière,<sup>97</sup> they also belonged to Freemason Societies, La Loge Saint Jean d'Ecosse, in particular. Names of ships reflect this freemason influence: *Les Bons Amis*, *La Concorde*, *l'Union*. Among famous names of traders were Aenaud, Beaussier, Bigaud, Chauvet, Dallest, Mathieu, Solier, Martin and Salavy. Many were also academics.

Rambert lists 18 ships bound for Mascarenes between 1767 and 1785.

For 1785 to 1789, 33 ships are listed. Dermigny in *Cargaison Indiennes* lists 6 voyages from Marseilles between 1781 and 1791.

How many were engaged in slave trading remains to be determined.

Among the Captains of ships, many names are familiar to Mauritians today: Audibert, André, Blancard, Bouille, Carosin, Fabre, Mariette. Simon was in charge of the *Auguste*, the *Euphrosine* and the *Pintade*. Pinatel headed the *Iris* and the *Malabar*. Rimbaud captained the *Sardine*. Most ships appeared only once or twice, and very few came for more than 4 voyages. At this stage, it was not possible to find out how many or which made other shorter trips during their stay in the Indian Ocean. The last ship, according to other traders joining in after the Wars of Succession.

For Mauritius, in the early years of French colonization, St. Malo was the first port to supply slaves regularly, and many 'Malouins' were actively engaged in the slave trade to Mauritius and Reunion. The best known (Malouin) is Governor Labourdonnais himself. Other Governors, such as Bouvier de Lozier and Rene Magon, also contributed to the expansion of the slave population on the island.

From Port Louis, several voyages were made to procure slaves in India, Madagascar, and Mozambique, while Company ships brought slaves from West Africa. Many of these ships' Captains and traders were from St. Malo.

However, as Roman reminds us, while the corsairs were active in periods of war, during peace time, they were active in trading and in commerce, of which the slave trade played a vital part. How important for the Indian Ocean, and particularly for Mauritius, was corsair activity, has not yet been estimated by historians, who have chosen to study the more 'heroic' past of St. Malo and its people than its corsair and maritime activities.

Roman has also looked at the earlier period, when slave trade was becoming a necessary part of commerce, but was not yet a trade manned by 'professionals'. Many undertook one voyage and then ceased.<sup>98</sup>

There was no barrier between different maritime activities. People engaged in all maritime activities, depending on the circumstances. The existence of '*négociants/négriers*' or merchant/slavers was a reality; in other words, people who were merchants were also involved in the slave trade. In St. Malo, the best example and the most famous of these persons was Mesle de Grandclos, whose biography has been written.

**Mesle de Grandclos:** The extent of his activities in the Indian Ocean and, in particular with Mauritius, needs to be examined. He amassed a huge fortune from his commercial activities in the Atlantic. As well as engaging in the Indian Ocean, he inevitably became involved in political activities during the Revolutionary period. He had to flee France for a short period and still had considerable funds left even when his possessions were seized. During one trip to China on the *Modeste*, he made 800% profit.<sup>99</sup>

85 ships from St. Malo alone came to Mauritius between 1775 and 1810. Many of these also had been to Eastern Africa, India and Batavia and brought back slaves.

**Louis Athanase Ohier** was born in 1730 in a modest maritime family and became Captain of several slave trading ships. At the age of 9, he embarked for Pondichéry, and again in 1742-43. Contact with slave trading began when he was on the *Grande Vigilante* commanded by his uncle, Louis. Other ships included in 1753-4, the *Heureux Captif*, in 1755, the *Perle* which was the 11<sup>th</sup> ship of the grandfather of Surcouf.

In 1757, he married Nicole Merven whose brother Joseph Merven had settled in Mauritius. His son was Louis Marie Joseph who in 1776-7 was a volunteer on the *Severe* commanded by his father. He embarked on several trading missions and was captured by the English several times. Other trading missions included:

- 1760-1: *Amaranthe*, armed by Chateaubriand and commanded by Claude Dominique Avice
- 1764: *Heureux*<sup>100</sup>
- 1766:, 1769, 1776, *Sévère*
- 1783: arrived in Mauritius on the *Deux Soeurs*
- 1785: *Mesry* (6<sup>th</sup> slave trading trip on Mesry)
- 1790: *Bon Ménage* which went later to Pondichéry

Did he become rich? An inventory of his belongings at time of death of his wife in 1781 lists substantial property. From 5 of his slave trading ventures between 1763 and 1777, he collected some 15,000 *livres* or on average 3,000 *livres* per voyage. On the 5 voyages, some 2,200 Africans were captured as slaves, with a commission of 2%. In addition, most slave trading ships also carried *pacotilles* and so revenues far exceeded the 45,000 *livres* from slave trading alone.

**Beaugeard**, a millionaire by today's standards is an interesting case to study. Apart from slave trading, he was also engaged in number of voyages to India and China and invested massively in his voyages. 8 slaving voyages between 1763 and 1770 in Indian Ocean and only 4 after 1771 to 1778:

- Betsy*: 50-ton, journey of Port Louis (Orient) to Aleppey on 19 February 1799.
- Mentor*: two trips to Zanzibar between 1802-1803.
- Rencontre*: between and 7 February 1803 and went to Zanzibar in August 1803.
- Robust*: Went to Zanzibar on 29 December 1807 and 31 December 1808.
- Captained the ship *Sultany* flying Arab colours
- Uni*: also on 15 December 1803 and on 12 June 1804 went to Zanzibar.

**Magon:** There were also a small number of traders involved. Apart from Magon, there was also his nephew Magon de la Lande, who organized 16 voyages after 1763, together with Nouail de la Villegille; René de Chateaubriand, the brothers Surcouf, Beaugard, Le Breton de Blessin, Sebire des Saudrais.<sup>101</sup> How many of these came to Mauritius is unknown as yet.

If the ship *Maurepas* going to St. Domingue and the *Comte de Maurepas* are the same, the ship is interesting, for after trading in high seas, it becomes a *vaisseau de cote* in Mauritius and is finally shipwrecked. The Captain, Magon, is the same throughout.

**Le Bo:** Many were associated by kin. Françoise Datour, according to Roman, widow of Le Bo, organised 4 expeditions, her son-in-law, took over Joseph Le Gentil, with 2 voyages, in 1763-4,

while her daughter, who married P. J. Mesle de Grandclos, sent 25 ships between 1763 and 1777. He recruited his brother-in-law as Captain, Louis Marie Harrington, who also became *armateur* before the Revolution.

*Captains* trading after 1763 included : Jean Baudry, Paul Hardy, Jean Francois Corbille, Merven. Grandclos employed Nicolas Le Gue, Joseph Daniel des Landes, Dominique Jallobert, Baudran de Maupertuis, Louis Athanase Ohier, Toussaint Leforestier, Charles Ozelle and Pierre Carre.

#### Decline after 1770

St. Malo's trade in slaves appears to decline after 1770. In later years, many traders abandoned slave trading. Pottier de la Houssaye continued, as did Mesle de Grandclos. But the others, Hercouet, Deshaies, Harrington, Dubois and Fichet Desjardins, abandoned the trade.

Toussaint, who consulted archives relating to arrivals in Mauritius, noted that between 1769 and 1810, only 54 ships arrived from St. Malo. According to Roman, who has tried to complement this information by consulting French archives between 1771 to 1792, 100 ships left for the Indian Ocean, 4 per year. Saint Malo sent 54 to Ile de France and 24 to China and India. Ten of them passed through Lorient, Marseille and Bordeaux, a fact of which Toussaint, was not aware, according to Roman. 8 never reached their destination, 2 were seized by the British, three were shipwrecked and 2 are not known and 1 was abandoned in Bordeaux. Many St. Malo slave traders relocated to other ports.

Ships involved in slave trading included: the *Victoire* in 1783 from Bordeaux and 3 from Marseille: the *Duc d'Orléans*, *Bon Ménage* and *Eugenie*.

#### 1793 to 1803

Trade continued but was much slower; ships coming out of St. Malo to Indian Ocean included: the *Bon Ménage* belonging to Harrington, that came to Mauritius, traded in slaves in Mozambique and took them to Martinique. Between 1793-4, the *Navigateur* of Captain Lejof, with young Surcouf on board, undertook 2 voyages to Mozambique: it bought over 1000 slaves, but we do not know yet how many came to Mauritius. In 1795, Surcouf armed a ship *La Créole* to trade slaves in Mozambique. Other possible slave ships to the Mascarenes include: *Général Moreau* belonging to Corson and Deshays, commanded by Le Forestier, *Minerve*, *Fortune* and *Marengo* going to Mauritius. Only *Petite Africaine* was a known slaver; at 143 tonnes, it was armed by Le Mème and Gautier and commanded by Jacques Pinou des Prairies. It was taken by the British on 20 Fructidor An IX according to the *armateur* on its way from Zanzibar to Mauritius.<sup>102</sup>

**Surcouf** This family, including the grandfather and great uncle of Robert Surcouf, had been trading in slaves since the 1720s. St. Malo played its role in the illegal slave trade, with Robert Surcouf operating between 1815 and 1824.

Table 7: Ships arriving from Saint-Malo

## NANTES

We have little information yet on how many ships arrived in Mauritius before the end of Company rule. The latest research on Nantes-Mauritius slave trade comes from Alain Romaine who noted some 15 ships registered with the *Amirauté* and who went to Mozambique to procure slaves.<sup>103</sup>

Name of Ship		Tonnage	Captain		Date of Arrival

## 1763 TO 1792

According to McWatters, who has studied trade from this port for the period 1763 to 1792, the total number of ships 'outfitted' at Nantes rose from 127 to 230 per year; the average tonnage increased from 182.28 to 235.97 tonnes.

The corresponding averages for departures of *négriers* are 29 in 1763 and 21 in 1792; average tonnage rose from 117.52 to 233.7 tonnes.<sup>104</sup> The trade expanded to other centres in the late eighteenth century, with a decline in the dominance of Nantes-centred operations after the Seven Years' War. From then on, trade increased, with the average number of vessels departing from France each year and returning compared to that experienced in the pre-war period. Growth brought a greater participation of traders from other centres, including Bordeaux and La Rochelle. Prior to the war, vessels originating in Nantes represented more than 50 per cent of the trade, but only about 40 per cent in the period immediately following the war. The percentage of captives

carried by vessels from Nantes also declined from approximately 50 per cent before 1759 to less than 40 per cent after 1763.<sup>105</sup>

During the period between 1773 and 1810, studied by Toussaint, a total of 43 ships came from Nantes to the Mascarenes. How many traded in slaves is not yet clear.

1772 and 1778: However, as far as the Indian Ocean and Mauritius were concerned, ships from Nantes were not numerous. Only 7 ships are armed for the East African coast between 1772 and 1778.

1783 and 1793: Only 14 or 15 arrived between 1783 and 1793, as against 80 from Bordeaux. It appears that there were cash-flows and liquidity problems, and they could not supply Arab and Portuguese intermediaries with the required amount of *piastres*. They thus preferred to engage in trade with partners who could purchase Nantese or French products.

#### LA ROCHELLE

Generally, according to Deveau who has focused on the Caribbean, 427 ships left La Rochelle to engage in slave trading.<sup>106</sup> As with Bordeaux and Nantes the French Government allowed them, from 1716 to trade privately in slaves as long a tropical products were brought back to the port: wood, sugar coffee etc. According to Deveau, these were extremely profitable ventures.<sup>107</sup> The boost to trade came in 1784 with a *prime* of 40 livres given to every *tonne jauge*. Evidence is fragmentary since we do not have in France private archives of slave trading companies. However, there is physical evidence that companies improved their economic status with trading families living in middle class neighbourhoods in La Rochelle today. It makes slave trading all the more inhuman since the gains were not necessarily worth the cost in human lives.

As elsewhere, slave trading was a family affair. Few would undertake the financing of a slave voyage alone and usually took on partners from the family and shared profits proportionately. Trade dwindled during the Revolutionary Period and ended completely by 1792 because of the revolution in Haiti. The slave traders organized lobbies to maintain the trade and were supported by metal and textile manufacturers who were supplying slave ships. They sent a representative, Jean Baptiste Nairac, to defend their cause in the National Assembly on the grounds that lack of trade would bring ruin to the port. The slave trade was maintained.<sup>108</sup>

As far as Mauritius was concerned, 39 ships are listed by Toussaint and said to have arrived in Mauritius in this period with the last ship arriving in 1790. Twenty-two of these are said to have carried Captains, who engaged in multiple voyages, included Robin, Lalande, Desplannes/De planne.

Table 9: Ships arriving from La Rochelle

Name of Ship	Tonnage	Captain	Port of departure	Date of Arrival

## BREST

There was very little slave trading between the Port of Brest and Mauritius. Most ships were Government ships, and it is not known whether they carried slaves before 1762. However, the last slave trading ship the *Épervier* from Brest went to the Indian Ocean and to Mauritius; it made its slave trading journey from Ibo disembarking on 3 January 1785. Although the records showed a Brest to Brest trip, they fail to mention the slave trading trip to Ibo. We do not know yet how many slaves came to Mauritius.

From Brest also came some well-known names, such as the Trebuchet family.

## LE HAVRE ET HONFLEUR

According to Eric Saunier, the Hague and Honfleur saw the start of about 500 slaving voyages.<sup>109</sup> Out of these, however, according to Toussaint, only one came to the Indian Ocean between 1773 and 1803 from the Hague and 7 from Honfleur. None appear to have come during Company rule.

Slave trade increased dramatically, according to Saunier, after the French Government *offered prime* of 40 *livres* for each *tonneau de jauge* and 160-200 *livres* for every slave disembarked in the colonies

## ROCHEFORT

The hinterland at Rochefort was ideal for trading, as it supplied the crew required for long-haul voyages, even though slave trade was not that important. The *Boulongne* and the *Boutin*, both of equal tonnage, arrived on the same day in Mauritius (see slave trade database 1729-1765). Whether they carried slaves is not known yet.

Non-European ports have rarely been considered in the list of ports being studied for the slave trade. But as the list below shows, these were numerous. Our knowledge of the slave trade will not be complete unless these are studied too and their role in the slave trade examined. Also of

concern is the fact that on Toussaint's list, the ports of departure for some 326 ships out of a total of 3,183 ships are not listed.

## PRICES

Accounting historians have also been investigating how the accounts of the slave trade were kept. A unique journal, the *Guide du commerce*, written by Gaignat de l'Aulnais in 1771, has led to a detailed and equally unique historical study by Cheryl McWatters.<sup>110</sup> According to McWatters:

*"Le Guide du commerce [...] est le seul ouvrage à présenter de manière détaillée le traitement comptable des opérations de la traite négrière, notamment des diverses transactions relatives à la « cargaison » humaine".*

In this journal, McWatters highlights the basic documents required for a slave trading expedition, according to Gaignat. These were: "*Le journal de traite, le livre de factures, le journal de vente*"

*des noirs et achats en retour et enfin le grand livre*" [Eng trans: *The slave trading journal, the receipt book, the sales of slaves book, and purchases book and finally the big book*]. Although written for Atlantic voyages, it seems unlikely that it would have been any different in the Indian Ocean, since many of the ships and Captains were the same. A greater search of the accounts of slave traders might reveal as yet unknown facets of the history of slavery and slave trade.

To assess the value, in modern terms, of the price of the slave, one must look at the prices at which slaves were bought and sold in the country of origin, as well as when they were landed in Mauritius and when they were traded internally. Not all trading was carried out in currency and slaves, in the country of origin, were often exchanged, but this exchange often involved currency.

Slaves continued to bring in revenue from transactions, even after they were sold to a master for they could be hired to others. Thus in 1735, the *Conseil Supérieur* fixed the tariffs of hire of slaves at 15 *piastres*.<sup>111</sup>

There were also those who were simply captured and kidnapped from their villages and where no trading took place. This is currently impossible to quantify. But oral tradition in Mozambique exist and deserve further study. Benigna Zimba has recommended that memorialisation of this part of the history of slave trade should be included in future representations of slavery in Mauritius.

The medium of exchange was at first textiles, rum and muskets. But the Malagasy increasingly began to demand hard currency, in Spanish *piastres*. By 1807, the French trader, Sylvain Roux, wrote that slaves cost 45 *piastres* as well as 2 bales of blue cloth. i.e. forming 80% of the transaction.<sup>112</sup>

The French Government believed such trade could only be profitable, if it had exclusive rights over Madagascar slave trading, because it could not compete with private traders:

*"La traite à Madagascar: La partie nord de Madagascar ne peut nous être utile ici pour la traite du Roi et des esclaves, que lorsque le Roi y aura fait un établissement exclusif [...] "*<sup>113</sup>

It appears that traders had goods produced in India, which Malagasy traders did not want, and they were forced to ask for hard currency in piastres:

*"L'exportation des piastres à l'île de Madagascar, ils ont fait fabriquer dans les différentes parties de l'Inde des marchandises qu'ils connaissent propres à déguster ces insulaires de ne consentir à traiter qu'en piastres les esclaves de cette Isle [...]"*.<sup>114</sup>

Currencies became increasingly used; one must also bear in mind the multiplicity of currencies at the time and fluctuations in the value of each currency during wars, for example, or depending on the economic fortunes in France and in Europe generally. *Piastres* or *livres* were the currency used in Mauritius.

Prices ranged widely according to the country of origin at the time. Prices mentioned here refer to a male adult slave, the typical slave sought after for the various tasks being undertaken in Mauritius.<sup>115</sup>

In the early years of 'Isle de France', slaves could be procured for 100 *livres*. In 1732, the East India Company bought Indian slaves at 3-4 *piastres* per head in India.

Within Mauritius, however, in 1738, slaves were being sold for far more at 200 *piastres* per slave.<sup>116</sup> This was still the case in 1745 for Mozambican and Malagasy slaves, while West African slaves were the most preferred and sold at 250 *piastres* per slave.<sup>117</sup> By 1758, this had gone up to 400 *piastres* for a slave from Madagascar.<sup>118</sup>

In 1763, it was stated that the Company was selling slaves cheaper than private traders: Malagasy and Mozambican slaves at 25-30 *piastres* per slave, while those from Goa fetched 40-45 *piastres*.<sup>119</sup> On 30 November 1767, M. Poivre provided details of prices of slaves:<sup>120</sup>

Pièce d'Inde and from Guinea: 720 *piastres*      Mozambique: 540 *piastres*  
 Madagascar: 360 *piastres*                                  Indian: 300 *piastres*

Prices fluctuated in the country of origin and according to traders or so it would seem:

1774:      25 *piastres* according to Mayeur  
 1787:      115 *piastres* according to Dumaine  
 1806:      90 *piastres* according to Froberville

#### HOW WERE SLAVES SOLD IN MAURITIUS?

Slaves were sold in various ways if they were introduced legally.

- Slaves brought by the Company would be 'distributed' between the various inhabitants who had required them.
- Others would be sold by the notary usually in his office
- Slaves were also sold at auctions. One recorded site of sale was at the Place d'Armes.
- In the 1790s, because of the smallpox epidemic, slaves were sold on board after being vaccinated. This occurred on the *Saturne* whose voyage has been described in detail by Alain Romaine.<sup>121</sup>

Information about the arrival of slaves on ships was given to the public by a poster appearing on walls, at least in the 1760s:

*"chaque vaisseau chargé de nègres sera annoncé par une affiche ou avis général et les noirs seront distribués à chaque habitant sans préférence, à raison de ses besoins ou de ses forces au prix dont on conviendra".*

We have not been able to trace any of these posters so far since those repositories at the time of writing have not provided access yet, notably the MCB and the MSIRI.

When Liberated Africans were brought, they too passed through the same Customs House as slaves. A certain continuity thus existed in the sites used for embarkation. After formalities were completed, they were taken to the Immigration Depot where they would be registered as indentured immigrants just like the indentured labourers who were later brought from India.

These sites need to be adequately memorialised, since currently there are no such sites related to the landing of slaves in Mauritius. While other landing places exist for people who have come as immigrants, such as the Salines or at the Aapravasi Ghat, a memorial place for those people brought as 'cargo' is also necessary so that the Mauritian population may see and understand the full breadth and all facets of how immigration has occurred in Mauritius.

#### THE GOODS

Ships brought back slaves as well as rice, cattle and sacks made of 'vacoa' in exchange for *piastres*, muskets, cloth from Madagascar. From Mozambique, ivory, gold and cowries were traded in exchange for Spanish *pataques*, pottery from Bengal, arms and ammunition and *eau de vie* and foodstuff. From Europe and India, textiles were one of the most important cargo purchased.

The textile trade deserves a special mention as it plays a major role in the slave trade, due to the demand for cloth in Africa and to the need to clothe the slaves in the colonies. Up to 60% of the cargo would be composed of textiles.<sup>122</sup> But it was not any clothing that was demanded by slave

traders; Indian printed or painted cotton were in high demand. These cloths had been made in India but gradually, they began to be manufactured in France. They were commonly called '*indiennes*' in French because they had been originally imported, printed or painted from India and gradually copied by French manufacturers. These '*indiennes*' were exchanged for slaves in Africa by French traders. According to Gilles Forster, constituting a cargo for slave trading was not cheap as African chiefs were often quite demanding. 60 to 80% of the costs of the slave trading expedition would be taken up by purchasing of the cargo. The demand for textiles and other goods could not be met by one trader alone and the cargo leaving France was often constituted with the help of manufacturers outside France. Textile manufacturers in Switzerland often supplied these '*indiennes*'.

However, this history is also linked to the flight of Protestants from France and Switzerland, when they also took with them the knowledge and textile trading which was linked to the slave trade. While people are familiar with the abolition of the Edict of Nantes in 1685, another event also occurred, namely the ban on importing painted cloths. The flight of Protestants is linked to the opening up of new factories along the Rhine to produce these '*indiennes*'.

With the wars in Europe in the 1750s and early 60s, contacts between Dutch and French companies were disrupted since French traders turned inwards in Europe towards the Swiss to supply them with the '*indiennes*'. The spiritual unity and marriage links of Huguenot diasporas strengthened these business contacts between manufacturers of '*indiennes*' and those involved in with the slave trade. After 1759, when the ban on production of painted cloth was lifted, many Swiss textile manufacturers settled in France, notably the Jeanjacquier, Pasquier and Koenig families.

A language of the textile trade exclusively destined for the slave trade emerged: *guinées blanches* ou *bajutapaux, bleues, guingas, korrots*.

#### 4. THE SLAVE VOYAGE

##### TRAUMA DURING THE PASSAGE

Much has been written about revolts and mortality on board ships and very little will be said of this here. More recently, attention has been focused on the state of mind of slaves during the wait in the slave depot, and during the transportation on ships and the psychological trauma that ensued. If narratives of the passage abound for immigrants later in the century, they are sorely missing from the slavery record in the Indian Ocean; only the acts of slaves give us some indication of their state of mind.

The journal of the *Espérance* also shows the psychological trauma endured by the enslaved through the case of one female slave who allowed herself to die. She was described as being '*tracassée*' or worried, '*roulant d'un bord sur l'autre et chantant ensuite est tombée dans un assoupissement dont elle est morte*'.<sup>123</sup>

In some cases, the crew took the trouble to avoid any additional trauma for the slaves. Again, on the *Espérance*, when a baby and mother died, they were thrown overboard, with the baby being later found in the belly of a shark. This discovery was hidden from the slaves for fear of upsetting them, since it was feared that this might lead to a revolt.<sup>124</sup>

What enslaved peoples felt and thought as they boarded the ship taking them away can only be guessed at by those of us today. One can only imagine those moments through accounts of people who witnessed this departure. Henry Salt, witness to these moments, reflected on this:

*"I subsequently saw several dances of the same kind, in the slave-yards on the island of Mozambique; but on these occasions it appeared to me that the slaves were compelled to dance. I shall never forget the expression of one woman's countenance, who had lately, I understood, been brought from the interior. She was young, and appeared to have been a mother, and when constrained to move in the circle, the solemn gloom that pervaded her features, spoke more forcibly than any language, the misery of her forlorn condition. If there be a sceptic who*

*hesitates to approve of the abolition of the slave trade, let him visit one of these African slave yards, a short time before a cargo of these wretched beings is exported, and if he have a spark of humanity left it will surely strike conviction to his mind".<sup>125</sup>*

Figure 2: Mossuril, from which thousands of Africans were forced to leave their homeland

(Source: Henry Salt, *Voyage to Abyssinia [...]*, 1814)

One has yet to calculate the numbers who died during the long walk to the coast, from the interior to the Mozambique for example; Epidariste Colin estimated it to be half:

*" Les négociants ont des agents qui pénètrent jusqu'a 250 et 300 lieues dans les terres pour faire les premiers achats et expéditer les noirs par bandes de 4 à 500, sous la conduit d'un chef [...] accompagné de noirs ladines (civilisés). Et la troupe marche à petites journées, et bien souvent pendant la nuit. Durant ce voyage, où l'on traverse des déserts, la troupe manque quelquefois de provisions, et ne se nourrit alors que de raciness et de plantes qu'elle rencontre sur son chemin: elle arrive enfin à Mozambique, diminuée au moins de la moitié. Ces esclaves alors sont accablés de fatigue et de besoin, et ont déjà quelques symptômes de dysenterie" .<sup>126</sup>*

## 2. MORTALITY AND REVOLT

Slave mortality on board ships has yet to be quantified accurately by statisticians and demographers. Estimates range from 10% to 50%, depending on the length of the voyage, supplies on board, disease, resistance of slaves etc. From East Africa, the figure was 21%. From West Africa, mortality was estimated to be between 25 to 30%.<sup>127</sup> According to Richard Allen, the 'overall mortality' appeared higher than for the Atlantic.<sup>128</sup>

The voyage from Madagascar took about 21 days and mortality rates were about 12%, while Mozambique voyages which took longer had on average a 28% death rate.

However, as Gerbeau reminds us, distance does not necessarily explain levels of mortality since other factors may be responsible: the illegal status of the voyage, for example, and the need to cram as many slaves on board, the spread of disease etc. In the 1790s, this had not changed. The *Saturne*, however, registered 9 % mortality during its voyage, in November 1793 from Kilwa, a lower percentage than the 14% figure provided by Allen and Filliot.<sup>129</sup>

When the French East India Company administered the island, it rewarded officers for bringing slaves alive.<sup>130</sup> According to Le Lan, this is because it hoped to make huge profits of the slave trade. Regulations were established for this purpose. Rewards were given to the Captain, 1<sup>st</sup> and 2<sup>nd</sup>

lieutenant for every slave brought alive to Mauritius. Thus, in June 1724, the Company acknowledged that officers were undertaking perilous missions that required intelligence and dedication, if slaves were to be brought alive. In addition to recommending that the best officers be engaged in this trade, a list of remuneration, according to the grade of officers, was established. The lower orders, sailors etc., did not receive anything.

Source: Le Lan, 10.

By 1749, this reward had increased to 25 *livres* per slave brought alive and 70 *livres* for every cargo exceeding a certain number.<sup>131</sup> Thus, for a ship carrying 400 slaves and with a mortality rate of 25%, this reduced the slave cargo to 300 slaves. On the first 200 slaves alive, 25 *livres* per head would be given, totalling 5,000 *livres*. On the 100 remaining, 70 *livres* per slave i.e., 7000 *livres* were paid. Total rewards thus would amount to 12,000 *livres*. This was distributed as follows:

- To Captain .....	6000 <i>livres</i>
- To Lieutenant .....	1650 <i>livres</i>
- To 1 <sup>st</sup> enseigne.....	900 <i>livres</i>
- To 2 <sup>nd</sup> enseigne...	675 <i>livres</i>
- To surnuméraire...	225 <i>livres</i>
- To Surgeon .....	1650 <i>livres</i>
- To maître.....	900 <i>livres</i>

However, the fact that revolts often caused the deaths of slaves, a small part of the mortality can be attributed to these. It was disease, ill health and change of diet that caused heavy mortality.

### Revolt and escape

The revolts of slaves on board have been studied to some extent by several authors: Peerthum, Allen, Filliot. Both revolt and escape occurred on board and appeared to have been expected, when the ship was being outfitted for voyage i.e., extra strong fences, more guards etc were provided. For ships bound for Mauritian ships, a number have been documented in earlier studies: Allen's database of voyages lists only 23 voyages with revolts. Vernet's transcription of the journal of the *Espérance* also shows escapes occurred among women as well.

Epidariste Colin who was on board these slaving voyages made several observations on the voyages to the Mascarenes: "Je dirai d'abord qu'on embarque trop d'esclaves sur les navires de traite". On the one which he observed, a ship of 100 tonnes, there were 318 slaves on board: only 128 reached Mauritius alive. Had it taken only 200 slaves, he commented, mortality would have been much less.<sup>132</sup> He was also against the practice of putting the strongest men in irons. This practice made the people more likely to revolt.

The change in diet proved fatal for many slaves; it was months before they were fed on vegetables. There was little variety as they were fed on rice twice a day, and rarely had maize or millet. The

worst feature of the voyage, according to Colin, on board was the excrement piling up in barrels and which was only seldom changed every quarter: the smell itself made slaves more ill. Ventilation was a huge problem, despite incense being burned to counter the putrid smells. Dysentery was the greatest killer.<sup>133</sup>

## Conclusion

Attempts to abolish the slave trade during the French period had been aborted by the slave traders themselves. But in the 19<sup>th</sup> century, this was less possible. In French ports, the *commerçants* of the Hague attracted all those traders, French and British, and it became the centre of opposition to the abolition of the slave trade. The Hague refused any extension of Human Rights in 1791 to free coloured population of the port. This has earned the port a notorious reputation for defending slavery.

Freemasonry was also closely linked to both the slave trade and its abolition, as many traders were also members of the freemason societies as well as of the *Amis des Noirs*.

After 1815, it is almost impossible to trace the trade between Mozambique and Mauritius since the slave trade was officially abolished in Mauritius and everything carried out in an even more surreptitious manner than before. An illegal slave trade ensued. Estimates of the illegal slave trade are based on material wherever this information is provided accidentally i.e., when a ship was seized or sunk or a revolt occurred. Sometimes, as Laurent Pavlidis has shown, it came from ports that had little to do with the slave trade. Accurate figures have not been compiled as yet, but the most recent estimate is that 52,550 slaves were illegally imported. Mozambican slaves formed the majority of slaves (60%) before 1806-1808. After that period, illegal trading led to Malagasy slaves being brought in. The percentage of Malagasy slaves in the total slave population rose from 25.1% to 36.8 % in 1826.

## 3. MEMORY AND IDENTITY

### 1. THE PEOPLE INVOLVED

A large number of studies have been undertaken on the slave trade and published in various works:

(a) on internal networks, slave routes by Alpers and Zimba, Alpers and Teelock, MGI conference papers, all show active local involvement of Arab French Portuguese traders, local Makhuwa and Yao chiefs, Portuguese and French officials.

(b) Lesser known and more recently, there has been a spate of studies on the owners and outfitters of the slave ships, the 'armement' of the slave ship. These *armateurs* and their associates entered into slave trading ventures hoping to make 'potentially significant financial returns'. Risks varied, depending on the political and economic situation of the time, but with increased risk came increased expected returns.<sup>134</sup>

Another feature according to Daudin, was the fact that it was a relatively closed network of people involved in it. The merchants and traders did not seek external funds, hence it was a 'close circuit' network. This was corroborated by Meyer's analysis: "L'examen des parts de navires nous conduit à admettre une circulation des capitaux en vase clos."<sup>135</sup> Often friends or family were recruited in these trading ventures. Most agree that the family connections were important in the slave trade being the business of fathers, sons, uncles etc., as well as relatives by marriage. However, this appears to be less so in the late 18<sup>th</sup> century.<sup>136</sup> The fact that by then, there was already a member of the family settled in the colonies was an added factor in facilitating the slave trade.

Furthermore, Eltis and Richardson have shown that English slave traders were more efficient than the French ones. Stein argues that the personal nature of business structures in the French Atlantic

impeded the development of an efficient organization and prevented merchants, reluctant to work in sectors where they lacked a commercial network, from adapting to new opportunities.

Carrière's study of the Marseilles merchants, although not focussed on the slave trade, clearly demonstrates this. Of the 76 merchants in Marseilles, of whom were studied, 482 71% per cent married among themselves. They did not take each other to court but resolved matters amicably (*règlement à l'amiable*),

According to Carrière's study of merchants in the 18<sup>th</sup>-century Marseille, the classic company was "a family enterprise with perhaps one brother serving as a silent partner and the other actively managing the "affaire." An average firm would employ about four clerks or commis, who would handle the books and ecritures though rarely the strongbox, which stayed in the possession of the head of the firm. Some, usually sons of negociants, would eventually make their way to full partnerships. Surprisingly, there is little evidence of travel abroad by either young apprentices or full partners. Travel expenses, like fixed assets, were rarely listed in the account books and no doubt were minimal [...] A suspicion of parochialism is also suggested by the absence of foreign languages in the training of apprentices and by a lack of commercial manuals [...] On the other hand, the account books (*grands livres*)-those of the Roux and Bruny firms, for example, were superb specimens of legibility and clarity, with double entries and indexes".<sup>137</sup>

Source of table: Le Forestier, 'Principal-Agent Problems in the French Slave Trade'.

There has also been some writing on the origins of the families involved. As in La Rochelle and Bordeaux, there was a large number of Protestants, and many slave traders consequently were Protestant. In other ports such as St. Malo, they were all Catholic. The slave trade would also appear to involve a family network, which linked the port to colonial-based companies (Table 13). In Marseilles, 15% of merchants were Protestants, most of whom intermarried. The Swiss connection meant that financing was more readily secured for their ventures than others.<sup>139</sup>

We have few detailed individual studies of slave traders operating in the Mascarenes. Recently, Thomas Vernet has published on Morice who started the French slave trade with Zanzibar, through the log (*journal de bord*) of the *Espérance*. Morice was perhaps different to most traders but combined the talents of diplomat, explorer, medical man and businessman. His ships carried interpreters speaking Arabic and Swahili and goods but not only for the trade in slaves, but also to supply Mauritius, which was always short of foodstuffs. There have also been studies of Crassous de Medeuil. The genealogy of one family is reproduced below.

Although in the early years of the slave trade to the Mascarenes, the *armateurs* and traders came from France, by the last quarter of the 18<sup>th</sup> century, some of the trading was carried on from Mauritius. A total of 72 merchants and traders are listed in Port Louis and a good number were involved in the slave trade. Allen has quoted, for example, Messrs. Closnard, Cloupet, Collique, Drieux, Geoffriou, De La Rochelle, Le Blanc, Rolland, Le Bouchet, Le Bourdé, Dahuy Solminiac, La Corte, Laurent Raphaël, d'Hotman and Vally. Louis Monneron also had family links with merchants in India, while Morice focused on slave trading with Zanzibar. Sharonne Philips has reconstructed part of the family's history in Mauritius.

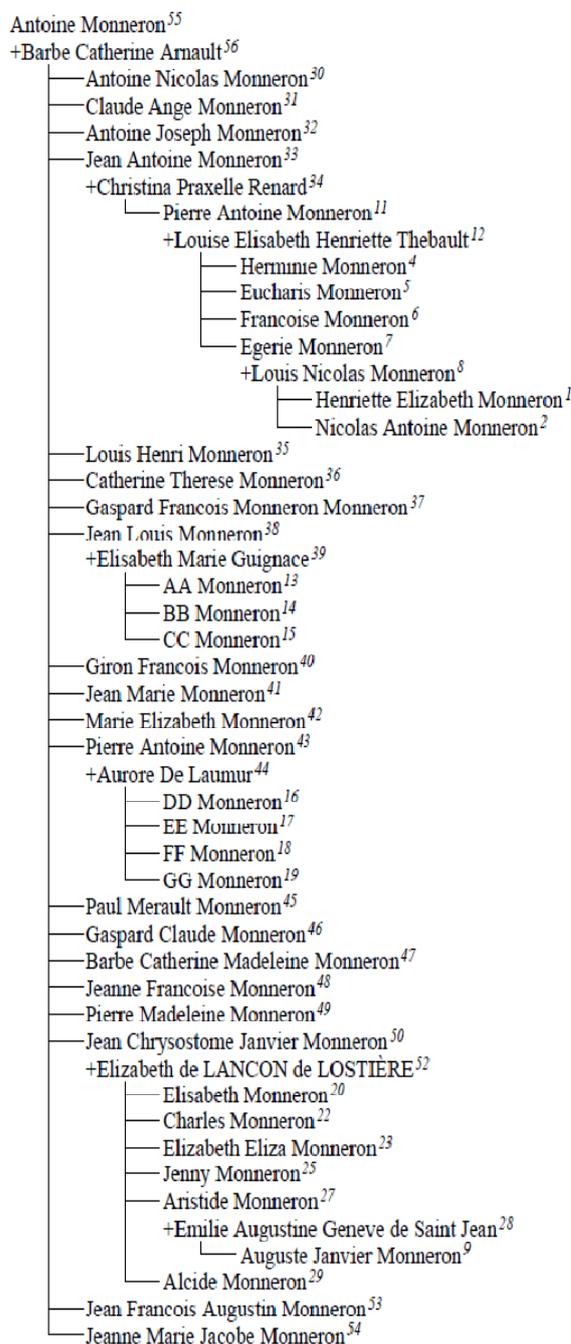

### The Monneron Family

Originally from Annonay in the Ardèche region of France, the Monneron family is also known as the *Monneron des Mortier* descended from a family of Huguenot<sup>140</sup> lawyers. Antoine Monneron was a successful and rich Government advocate who married Catherine Barbe Arnault in February 1733. Out of their twenty children, they lost ten sons and daughters at an early age. The Monneron family was therefore left with ten heirs: Claude Ange Monneron, Antoine Joseph Monneron, Jean Antoine Monneron, Gaspard François Monneron, Jean Louis Monneron, Jean Marie Monneron, Pierre Antoine Monneron, Paul Mérault Monneron, Jean Chrysostome Janvier Monneron and Jean François Augustin Monneron.

Figure 3 Location of the Annonay village in Ardèche, France and Monneron Brothers

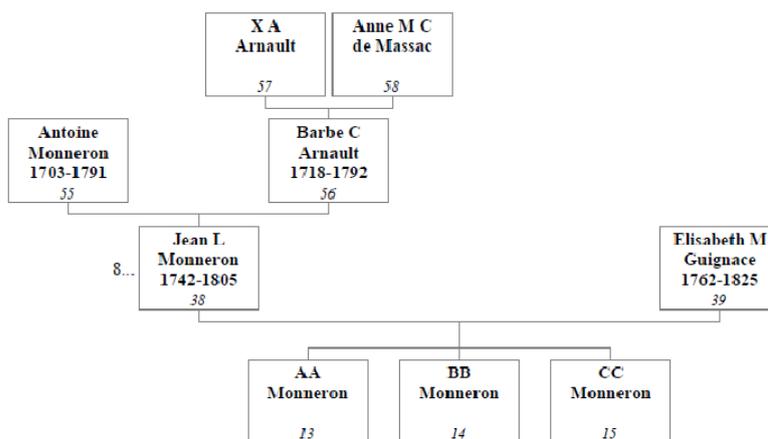

Claude Ange Monneron, the eldest brother, was born on 15 April 1735, in Antibes. He earlier decided to engage himself in the French East India Company where he began to work as an assistant merchant.<sup>141</sup> He worked under Dupleix who was Governor General of the French establishment in India at that time. In 1785, he was sent to Mauritius as Administrator General. Even though the family was wealthy, most of the Monneron brothers decided to join the French East India Company, as sons of most noble families did in the 18<sup>th</sup> century. According to Jean-Yves Le Lan, “Le négoce est souvent une affaire de famille, l’affaire familiale est poursuivie de génération en génération, les enfants développant quelquefois leur propre société en s’expatriant parfois dans une autre ville”.<sup>142</sup> The Monneron were also known to be Freemasons in the *Loge de vraie vertu*.

List of descendants of Antoine Monneron and Catherine Barbe Arnaud<sup>143</sup>1. DESCENDANTS

Jean Louis Monneron born, in 1742, joined the Company as an agent in 1769. He married Elisabeth Marie Guignace with whom he had three children and became a very successful merchant in Pondichéry.<sup>144</sup> He quickly made a fortune and became a member of the prestigious Freemason group made of merchants, the *Loge* of Pondichéry in 1771. Following the Revolution, France's ruling Constituent Assembly made him Deputy for the French Indian Settlements in 1789.

5. Jean Louis Monneron and Elisabeth Marie Guignace

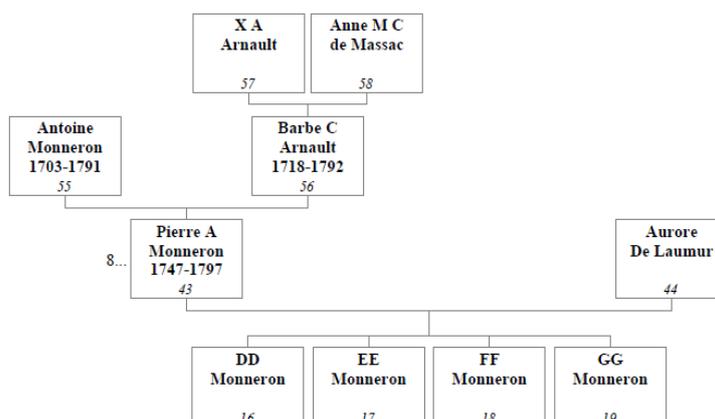

On 13<sup>th</sup> March 1789, Louis Monneron was elected as a supplementary member of Parliament; he was admitted to the National Assembly on the 11<sup>th</sup> November 1790, where he presented a memorial on the French colonies, including Isle de France. In 1790, the inhabitants of Isle de France went to Paris to present Memorial before the National Assembly. These were in contradiction with one another. The inhabitants argued that Louis Monneron had sown doubt about Isle de France no longer being strategically important for the FEIC in the Indian Ocean.<sup>145</sup> According to them, the French East India Company could neither abandon Pondichéry as it was a strategically-located colony:

*" Nous pensons même que cette place doit être regardée comme un poste avancé qui défend nos îles; et qu'elle doit opérer une diversion favorable à nos entreprises à la Côte Malabare et dans le Bengale. Il est donc très politique de conserver Pondichéry, d'achever ses fortifications, de le garnir de troupes en quantité suffisante pour assurer sa défense et pour inquiéter les Anglais".<sup>146,</sup>*

Ile de France represented a perfect stop for the trade activities of Louis Monneron in the Indian Ocean. He was even engaged in slave trading activities. L.M Cullen and P. Buttel (1980)<sup>147</sup> state that on the eve that his fortune was to be confiscated by the British, Louis Monneron gave to his brother Pierre Antoine the responsibility of an expedition to trade on the Mozambican Coast. Pierre Antoine embarked 250 slaves, supposed to make a profit of 20,000 *livres* when sold in Isle de France, but unfortunately was shipwrecked in the Mozambican Canal before reaching Port Louis.

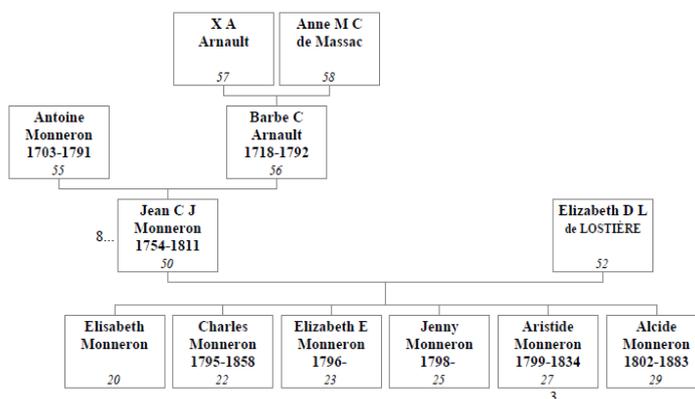

Pierre Antoine Monneron was an *armateur* and merchant. He was born on the 16 January 1747. He came to Isle de France in 1786 where he married Gertrude de Laumur on the 25<sup>th</sup> November of the same year. He was nominated as deputy of the National Assembly in 1790.<sup>148</sup> He died on the Arabian Coast in 1797

6. Pierre Antoine Monneron and Aurore De Laumur

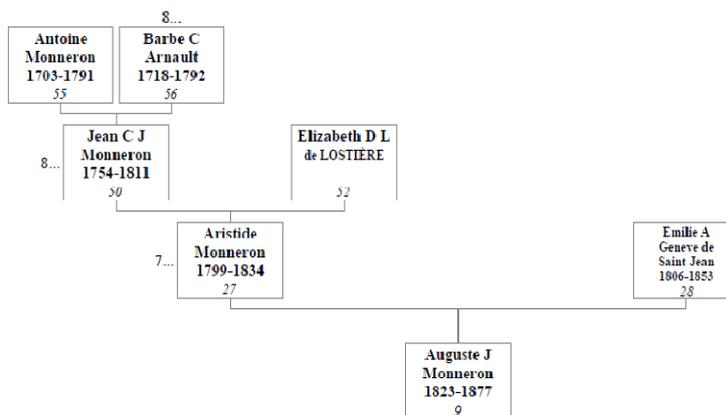

Jean Chrysostome Janvier Monneron was born on 17 September 1754 in Annonay, France. He came to Isle de France on the 24<sup>th</sup> April 1799 on the *Warren*. He married twice, once to Marie Francoise Aimé Mezereon, and then to Elizabeth de Lancon de Lostière on the 2<sup>nd</sup> November 1794 in France. He had six children: Elisabeth Monneron (*no date of birth available*), Charles Monneron born in 1795, Elizabeth Eliza Monneron born in 1796, Jenny Monneron born in 1798, Aristide Monneron (1799-1834), Alcide Monneron (1802-1883).

**7. Jean Chrysostome Janvier Monneron and Elizabeth de LANCON de LOSTIÈRE**

Jean Chrysostome was also a merchant and *armateurs* and member of the General Assembly. He was the owner of 145 acres at Savanne in 1805 and owner of the *Espérance* in Moka from 1719 to 1818. He died in 1811 in Black River District in Mauritius.<sup>149</sup>

**3. Aristide Monneron and Emilie Augustine Geneve de Saint Jean**

Above is the family tree of Aristide Monneron who married Emilie Augustine Genève de Saint Jean, aged fifteen on 18 March 1822 in PortLouis, Mauritius with whom he had one son: Auguste Janvier Monneron in 1823. Emilie died on 18 November 1853, aged 47.

**REPRESENTATION OF CORSAIRS**

Today, while many French families are proud of their corsair ancestry, they are less public about the slave trading involvement of that ancestry: “Si le titre de corsair est loin de déplaire dans nos annales de famille, ce n’est pas sans regret que nous trouvons celui de négrier”.<sup>150</sup> The same could probably be said of many families in Mauritius where some parts of family histories are thought best left hidden or conveniently forgotten.

However, the extent of corsair involvement in the slave trade was not negligible and must be recognized. Much of French maritime activity, and especially, corsair activity, involved, at some time or another, a slave trading component.

Robert Surcouf's participation in the slave trade is a case in point. While he is portrayed as a daring navigator and adventurer in a number of studies about him in Mauritius, his past as slave trader is not often mentioned. He started at the very young age, of 16, when he embarked on the *Aurore* in 1789. Apart from Mauritius, the ship went to Pondichéry and Mozambique, where 600 slaves were purchased for the Caribbean. Back in Ile de France in 1791, he found employment in the *Courrier d'Afrique* which engaged in the slave trade with Mozambique and later on *La Revanche*. Two further slave trading voyages were undertaken on *Le Navigateur*, when 312 slaves were purchased in Mozambique and a further 360 in Madagascar. In 1795, he was given the command of the *Créole* and proceeded on an illegal slave trading mission and was even threatened with prosecution. It is from then on that his 'career' as a corsair began. Roman, however, believes that Surcouf continued slave trading activities; the *Marie Ann* in 1819 went from Senegal to Martinique and in the *Victor*. Between 1815 and 1827, of the 20 expeditions organized by Surcouf, 6 of them, Roman believes, were slave trading voyages.

Although detecting the slave trade was difficult, today it is possible through a detailed study of tonnage, cargo on board, to infer slave trading. When a small boat carries more food than the crew could possibly eat, one can infer that there would be more people, such as slaves, on board. The number of days spent in a particular location, such as on the Malagasy or East African coast, or the trajectory are also possible indications of the slave trading activities of a ship.

The ease by which corsairs could switch to the role of slave traders also implied that their ships could be easily adapted. In Mauritius, the most famous of such vessels was *La Confiance* which had 3 masts, was of 364 tons, armed by a Bordelais, Jacques Conte. After capturing 8 British ships, Jacques Conte, according to Roman, was tempted by the profits and armed her for slave trading. In May 1802, she embarked 500 slaves who were sold in Mauritius. Its next trip was also for slave trading, but this time, it visited India to purchase of textiles, then on to Angola, where 400 slaves were purchased for Surinam.

Moreover, the links between the French traders and merchants in the Mascarenes and those in France must be established in order to understand how trade and commerce were practised. Their role in the colonies and in promoting anti-black attitudes in France needs to be documented further, as well their contribution to role as in the economic and ideological institution of slavery.

## 2. CULTURAL TRANSITIONS IN THE SLAVE TRADE

### 2.1. NUMBERS AND ETHNICITIES

In addition to aggregate numbers, an idea of the proportion of slaves being brought from diverse ethnic and geographic origins is important to understand the cultural background of slaves and their descendants. A rough compilation derived from R. Allen's work shows the following:

Year	Country of origin	Percentage (%)
1670-1769	Madagascar	70% of slaves
	Mozambique/Swahili coast	19%
	South Asia	9%
	West Africa	2%
1770-1810	Mozambique/Swahili coast	60%
	Madagascar	31%
	South Asia	9%
1811-1848	Mozambique/Swahili coast	59%
	Madagascar	38%
	Southeast Asia	3%

It is clear that at different times, different sources of slaves were tapped, thus influencing the cultural composition and cultural evolution of the island. By 1753, in Mauritius the French had begun to categorise the slaves according to their region of origin and their propensity for certain types of work:

- From Guinea -including all slaves from West coast of Africa

- From Mozambique - the whole of the East African coast, Ethiopia, Egypt, from the Cape of Good Hope to Port of Suez
- From Madagascar
- Indians traded on the Malabar coast and east of Cape Cormorin.<sup>151</sup>

This categorisation was to be used continually in Mauritius in surveys of slaves, definition and occupational allocation; it contributed to the emergence of new categories that defined slaves' identities. These categories remained throughout the 19<sup>th</sup> century and continue today to influence Mauritians' perceptions of their origins.

As can be seen, these terms were not only highly subjective at that time, but also by covering very large range of geographical origins, they included people of different linguistic and cultural backgrounds. However, categorisations did not coincide with how people in those regions saw or defined themselves. The task of unravelling the different origins of the diverse people who made up this uniformising category of 'Mozambican', 'Indian', 'Malagasy' etc. has started with the Origins project at the NMCAC and needs to continue, if we are to understand more about the real origins of slaves.

The slave registration returns, produced nearly a century later between 1826 and 1835, show roughly the same categorisations being used. However, new categories were included which reflected changes in Mauritian slave society: 'Créole' i.e., slaves born locally. It is from these registration returns, that one can see the multiple ethnicities present in Mauritius during slavery:

#### Country of origin starting with the most populous:

**Créole de Maurice:** By 1826, Shell has estimated roughly a third of the population was locally born

**Mozambique:** The second largest group including, as in 1765, all those from the Eastern Africa coast and mainland.

**Malgache:** The third largest group among slaves, also comprising all different groups in Madagascar, including a certain number of Mozambicans exported to Madagascar.

The following groups are represented in much smaller numbers:

Créole de Bourbon  
Créole des Seychelles  
Indien / Indienne  
Malay  
Diégo Garcia  
Anjouan  
Guinea  
Yoloff  
Rio de Janeiro  
Malabar  
Créole de Goa  
Créole de la Providence  
Créole de Rodrigues  
Arabe Mozambique  
Créole des Six îles  
Arabe  
Cochin

In a few years, if the collection of data continues on the slave trade in Mauritius and in France, it may be possible to trace the ship by which slaves arrived, even though we may not find the actual place of origin. By combining data from slave registers, an examinations of the real itinerary, information about the sale of slaves obtained from notarial records, we believe a complete picture for some families can be put together.

There appears also to be a correlation between the surname of a slave and the ships trading in slaves.

An example lies in the slaves who arrived in Mauritius in 1793 having embarked from Kilwa, although they did not necessarily come from Kilwa, and possibly from further inland. Through papers relating to onward of *primes* for each slave, detailed accounts were kept, and the owner of the slaves was mentioned. In this case, Bonhomme and Frappier and Co. bought 441 slaves from Kilwa. Years later, the slave registration returns reveal that in 1826, Bonhomme is listed as having 186 slaves. Some of them bear 'marques d'inoculation': this is consistent with the period when they were brought since an epidemic had broken out, and slaves were vaccinated. By 1826 however, there were not only slaves born overseas but a large proportion of locally born slaves, with 90 Creole slaves, 76 slaves from Mozambique or from East Africa. Only 6 slaves were Malagasy, confirming that his cargo was purchased from Kilwa. 57 were women and were to be found mainly in the Creole group.

A *Mozambique* was therefore anyone from Eastern Africa.

### 'MOZAMBIQUE' AND EASTERN AFRICAN

Trade with Mozambique started with Reunion island and continued later with Mauritius.

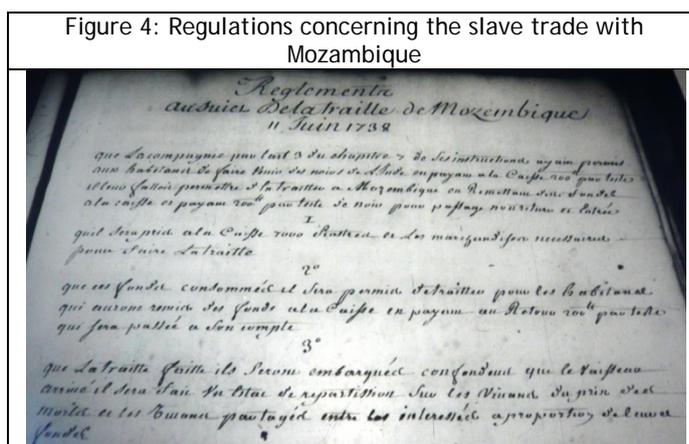

Count Ericeira recommended to the Capitaine-General of Mozambique to provide all facilities for the French slave trade with Mozambique.

In 1721, two French ships went to Mozambique, the *Duchesse de Noailles* and *L'Indien*.

Almost 13 years later, in 1733, the next ship, the *Vierge de Grâce* went to Mozambique. It took 356 slaves on board, but only 147 arrived alive to Reunion. In 1735, Labourdonnais recommended that a trading station should be established on the West Coast of Madagascar to carry out the slave trade with Mozambique and with the Portuguese.

In 1736, the *Légère* and the *Jupiter* traded successfully.

The June 1738 regulations, concerning slaves from Mozambique, made provision for 200 *livres* to cover the passage, food and entry duty:

*La Glorieuse* had difficulty because smallpox having broke out there; it went on to Kerimba but took a few slaves and returned to Mozambique, and then to Mauritius.<sup>152</sup>

In 1739 the *Mozambique* arrived with 360 slaves, of whom 260 had died.<sup>153</sup> In 1746, the *Sumatra* traded in slaves in Mozambique<sup>154</sup> 1,000-2,000 slaves a year for a period of five years from 1735 to 1740.<sup>155</sup>

After the departure of Labourdonnais, trade slumped somewhat. In 1750, *the Princesse* was sent to trade slaves in Madagascar and Mozambique.<sup>156</sup> Between 1750 and 1752, 4 French ships went to Mozambique to trade slaves in exchange for rice and butter.<sup>157</sup> By 1753, more and more slaves were required for Mauritius. Negotiations with Portugal were recommended so that trade in Mozambique could take place and establishments were proposed.<sup>158</sup> The definition of what was a *Mozambique* appears at this time, as "noir Mozambique qui comprendra toute la côte orientale d'Afrique d'Abysinie d'Egypte, depuis le Cap de bonne Espérance jusqu'au port Suez".<sup>159</sup>

We do not know where exactly the Mozambicans were placed, but they generally worked in the port and on plantations, because they were robust; 20 were on the estate of Demoiselle Gillette Robin, at the *habitation Duplessis*.<sup>160</sup> The French went to the ports of Inhambane, Mozambique Island and those of Cabo Delgado.

Although Portuguese laws did not allow foreign ships in Portuguese ports, these laws were circumvented whenever necessary. The Portuguese needed foodstuffs from Isle de France and turned blind eye, if necessary. The French also went to Ibo (Kerimba Island) which was not under Portuguese administration. The French were known in Mozambique as..... and they traded with the Machiefdom, a tribe known traditionally as traders like the Yao further inland.

Due to fact that much of this was illegal, trading, figures are sketchy. It would seem that some 1,300-1,400 slaves a year were brought to the Mascarenes. By 1758, the French controlled the commerce of the whole coast from Mombasa to Kilwa, up to Ibo.<sup>161</sup>

In 1759, Vigoureux was one of the slave traders. He was given a ship the *St. Luc* to trade in Mozambique. He also ordered slaves from other ships, such as the *St. Antoine*. In Article 32 of the same letter, on 6 July, a Portuguese ship arrived in Port Louis, *Jésus Maria Joseph*, with 210 slaves from Mozambique.<sup>162</sup>

Although it has been stated in the secondary literature, stereotypes of slaves started, when the slave trade increased in the 1760s onwards, the evidence from the French National Archives show stereotyping and categorizing of various ethnicities in one group quite early in the slave trade.

Thus 'Mozambican' slaves became trusted as were West African slaves; they were considered trustworthy enough to be recruited for the defence of the island. Women slaves from Mozambique were also appreciated for their reproductive capacity. Statements made at the time smack of breeding attempts: "Nombre trop modique de négresses Mozambique ou Bengalie [...] chaque vaisseau en apporte 12 ou 15 [...] elles peuplent plus et sont moins debauchées".<sup>163</sup>

## SWAHILI COAST

East Africa is considered separately here from 'Mozambique' simply to show that, although the ports were located in what is East Africa today, the actual origins were diverse, as slaves were brought from the hinterland that stretched right into the interior going as far as Malawi and Mozambique. Thus, the journal of the *Espérance* although marking slaves as coming from Zanzibar, lists one *Makonde* slave having died of smallpox.<sup>164</sup>

When the French Government took over Mauritius in 1766, a new era in the slave trade ensued. Eastern Africa was highly sought after by the French. But until the 1750s, there do not appear to have been many slaves shipped out from the Swahili coast.

Morice can be said to have inaugurated the slave trade with East Africa.<sup>165</sup> He negotiated and signed the famous 100 year-old treaty with Sultan bin Ibrahim at Kilwa to supply him with 1,000 slaves a year. According to Vernet, Morice was "un négrier très avisé, tout à la fois excellent diplomate et communicant, co-armateur très attentif à ses intérêts financiers, et ex-chirurgien de marine adepte d'un traitement préventif massif lors d'une épidémie de variole".<sup>166</sup>

The French also wanted to give exclusive rights to the Portuguese to the slave trade in the Mascarenes, on condition that French traders were given similar rights in Portuguese trading posts such as Kerimba, Mozambique and others.<sup>167</sup>

In 1770, the slave trade increased with Eastern Africa and five times more slaves were brought from Mozambique than from Madagascar.

Between 1785 and 1790, approximately 1,500 slaves left for the Mascarenes each year.

In 1793, corsairs raided the Mozambican coast. According to Filliot, the need for new slaves arose because of the increased rate of manumissions.

On 4<sup>th</sup> February 1794, the slave trade was suspended, but corsairs and planters collaborated to circumvent the ban. On 25<sup>th</sup> September 1796, a corsair attacked Inhambane but failed. Early in October, some 100 men, led by French corsairs, attacked the town of Ibo and, two days later, Kerimba island. On 26<sup>th</sup> October, 2 French ships attacked Lorenzo Marques and burnt the fortress. In 1796, the French expelled the Portuguese from Delagoa Bay and competed with the British and Portuguese for the ivory trade.

Napoleonic wars disrupted trade. An annual average of 9,000 slaves in the late 1780s declined to just over 2,300 in 1794.<sup>168</sup>

At the end of 18<sup>th</sup> century, it was a 'free for all' period with corsairs, Americans and Brazilians competing. On 30<sup>th</sup> April 1796, the American ship *Active* came to look for slaves and carrying on board, 2,500 Spanish *pataques* and Bordeaux wine. The Spanish ship *Nossa Senhora da Guia* also came from Buenos Aires bound for Mauritius with 4,000 *pataques* to buy slaves. Portuguese ships, the *Felix de St. Jose* and *Galgo* left Lisbon for Mauritius but was stopped by the British in 1793.

#### 'WEST AFRICA'

In 1728, the *Méduse* went to Ouidah to purchase some 400 slaves. Several other ships made the voyage to West Africa, among which were: the *Vierge de Grâce*, the *Diane*, the *Duc de Noailles* and the *Badine*.

In 1729, 2 other ships went to Ouidah and Senegal but because of the high death rate, this source of slaves was discontinued.

By 1731, the FEIC had a monopoly of the slave trade in Madagascar and thus banned the trade with India and Senegal.

Between 1739-1744, under Governor Labourdonnais, some 100 slaves were brought. In 1750, the *Hercule*, the *Chevalier Main*, *Bristols*, brought 789 slaves, out of the 1090 who embarked. This represented a 30% death rate.

The last ship to bring in slaves from West Africa was possibly the *Duc de Choiseul*.

The location where they lived is found in archival maps of Camp Yoloff and Camp Bambara in Mauritius. No memorial is in place commemorating their presence there in Mauritius,

#### 'INDIA'

1728 witnessed arrival of first Indian slaves in Mauritius under French rule. They were sent to the estate of Philippe Lenoir, Governor of Pondichéry.

Governor Dumas brought back free Indian workers and apprentices, some 13 Bengali slaves and 100 young boys and girls from Pondichéry.

A further 173 slaves were sent to prospective settlers from Pondichéry who hoped to settle in Mauritius.

In 1730, 45 more slaves arrived from Pondichéry; in February 1731, a further 11 and in October 1731, 38 slaves and 35 'coolies' arrived.

In 1732, Teinturier de Gennicourt, habitant de l'île de France, reported that "La compagnie a aussi fourni des noirs de l'Inde 3 à 4 piastres d'achat et 1 piastre de nourriture pour le transport".<sup>169</sup>

In 1735, a "règlement of the Conseil Supérieur Article 12, authorised traders to "faire venir des noirs de l'Inde- paiement de 200 piastres pour chaque à la compagnie pour nourriture et transport".<sup>170</sup>

In 1735, 10 slaves were brought. This figure increased when private individuals were also permitted to bring in slaves from India. Labourdonnais' brother-in-law sent '*trois petits noirs et trois petites négrittes de 8 à 9 ans*'. He introduced 70 more slaves for his personal use.

In 1750, the desire was still there to bring in slaves from India, as well as other areas for the Company.<sup>171</sup>

Apart from Pondichéry and Bengal, Goa was also tapped for slaves. The *Dargenson* was sent to Goa in 1751 by Governor David.<sup>172</sup> Slaves from Goa were still brought in 1762.

In 1760, very few slaves arrived due to bad condition of the FEIC.

Allen has documented several ships arriving with Indian slaves after 1772; for the 18<sup>th</sup> century as a whole, he has estimated that between 19,750 and 23,900 slaves arrived from India. Some examples of vessels are the *Chandernagore*, which arrived with 135 Bengal slaves; *Les Amis Réunis* from Jaggernaupooram with 300 slaves (1792), the *Heureuse Marie* with 7 Bengali slaves (1792).<sup>173</sup> Further research is needed on Asian slaves arriving not only from India, but also from South East Asia. However by the time of the 1847 census, no ex-slave reported having been born in India, thus signifying there were few if any from the latter part of the 18<sup>th</sup> century onwards.

#### 'MADAGASCAR'

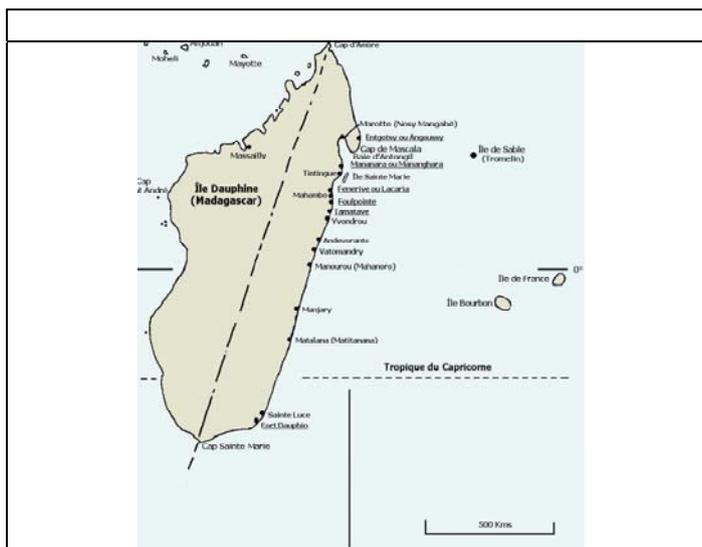

From the French East India Company's point of view, Madagascar was ideal as a source of supply of slaves for the Mascarenes, since it was cheaper than procuring slaves from India or West Africa. It also had the monopoly of trade with Madagascar, except for a brief period between 1742 and 1746, when private traders were allowed to trade. The Company had much difficulty in maintaining this trade, however, according to Le Lan. He notes that the last slave trading voyage of the Company arrived in 1767; the *Walpole*, carried 200 slaves, and not a single slave was for the Company.

According to one inhabitant Teinturier, it was better to procure slaves from Madagascar because "ceux de Madagascar sont meilleurs ouvriers, plus intelligents" (Eng.trans. they were better workers, more intelligent). Les noirs de Guinée ont tendance au marronnage et à la perfidie".<sup>174</sup> However, as the colonists found, proximity with Madagascar tempted Malagasy slaves to maroon more often than Malagasy. It was, therefore, not advisable to send them to the recommended port, as they could easily steal vessels and escape to Madagascar.

In 1729, Lanux recommended that the East coast of Madagascar should be tapped for slaves as the voyage would be shorter and, therefore, there would be less mortality among slaves. He estimated the cost of a slave to be 20 *piastres*.

FEIC: During this period the East coast was divided, according to Le Lan, into various parts: the North with excellent harbours, from Antongil Bay to Tamatave; towards the South, from Tamatave to Saint-Luce where there was no natural harbour, and the South where the Bays of Sainte-Luce, Manaviva and Fort Dauphin were located. The closest and safest to Mauritius was Antongil Bay and later Foulpointe. Their hinterland supplied large numbers of slaves. In 1733, the Company did try to replicate its activities in Senegal by building a permanent trading post in Antongil Bay at Nosy Mangabé, but it failed. From 1750, Foulpointe became more important. According to Le Lan, Gaillard, Valgny, Duverger, Laval occupied the post of Head Trader. Antongil, Tamatave, Fénériver, Mananara, Engontsy et l'île Sainte-Marie were secondary posts. Although Fort Dauphin was the most healthy port, there were few slaves in the hinterland, and so the Company used this port more for other trades in rice and salted meat.

At the end of the 18<sup>th</sup> century, however, Antalaotra slave traders transported slaves. Although the East coast is believed not to have been used, the beginning of the trade with Mozambique may have led to establishment of a trading post to house slaves from Mozambique. Many slaves were brought from East Africa originally and resold to French traders on the East coast of Madagascar.

### 1767-1790

After 1767, ship arrivals to Port Louis from Madagascar tripled and continued right up to 1822. Toussaint's figures of some 20,000 slaves being brought to the Mascarenes from Madagascar has been revised recently by Larson who estimates a much higher figure of 60,000 slaves.

Foulpointe, Fenerive, Mahambo, Titingue, Ste. Marie, Mananara and Antogil Bay became trading posts for the French. Foulpointe became the principal slave-trading port for the French. Foulpointe received a 'Directeur des Traites'. In this capacity, Maudave (1768-1771) was appointed to be followed by Benyowski 1774-1776.

Prices shot up at Foulpointe, in 18 months from 20 *piastres* to 70 *piastres*.

In the 1770s, Central Madagascar became the next source of slaves. By 1777, two-thirds of slaves shipped to the Mascarenes came from the Central Highlands.<sup>175</sup> Some women even led the slave trading caravans into the interior.

### 1803-1810

1807: Traders moved South to Tamatave which became the headquarters of slave trading for the Mascarenes. Illegal trade continued after the abolition of the slave trade, with slaves transiting in the Seychelles from East Africa and Madagascar, before being brought to Mauritius. It is believed now that the figure of 3,500 slaves imported into Mauritius is closer to the reality, from 1800 to 1810, and that over 6,000 came from 1810 to 1820. Allen's figures are, however, much higher.

### BRANDING AND BAPTISM

According to Filliot, slaves in Madagascar were branded at the site of trading itself, or if they had been purchased in the name of the King, they bore the mark of the King. This was usually the letter 'R' for '*Roi*'.

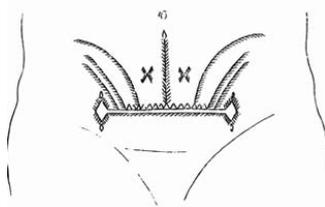

Those being sold to private individuals had the initials of the patronyms of the future owner. In 1770, in Foulpointe, slaves embarking on the '*Normande*' were branded with the following initials:

18 slaves branded 'B' for Chevalier Bruny	9 slaves branded 'T' for Trudon
6 slaves branded 'M' for Michel	9 slaves branded 'V' for Voisin
4 slaves branded 'A' for Amat	20 slaves branded 'G' for Grenier
1 slave branded 'L' for Abbé Lebrun	1 slave branded 'S' for De St Pierre

In addition to branding, slaves in Mauritius were also found to have scarification patterns on them. Preliminary analysis reveals that some appear to be colonial scars, while others were traditional scarification marks. Further research is required on this that would link these scars to particular ethno-linguistic groups.

The slave registration returns of 1826 indicate that many slaves from Eastern Africa were listed as having tattoo marks. According to information obtained from Benigna Zimba, the Makonde were the ones who performed extensive tattooing on their faces and bodies. Makonde were the group that practised scarification rather than other groups in Mozambique.

There are visible common traits between known Makonde tattoos and those found on slaves. According to Lars Krutak, the face and other parts of the body “contained chevrons, angles, zigzag and straight lines with an occasional circle, diamond, dot, or animal figure.” According to him, “after the cuts have been made with the traditional tattoo implements (chipopo), vegetable carbon rubbed into the incisions producing a dark blue color.” This blue colour was also observed on the bodies of slaves in the 1826 slave registration.

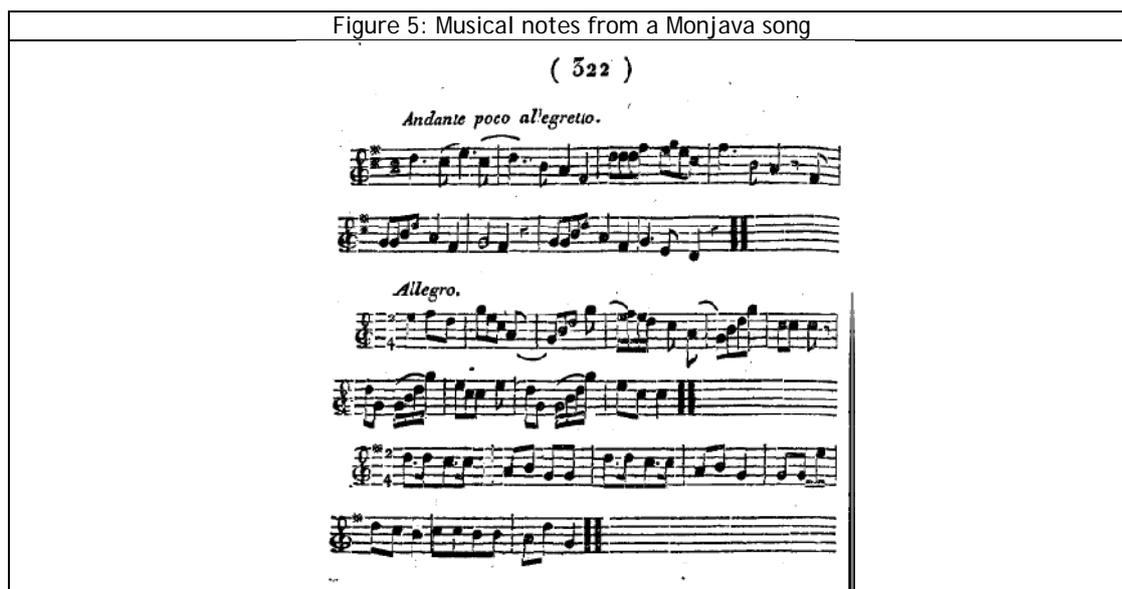

Henry Salt and Epidariste Coin’s descriptions of tattoo marks on different groups need to be compared with the marks found on slaves arriving to Mauritius.

Makua are described as ‘strong athletic race’. At the time of his list, the fashion was to “make a stripe down the forehead along the nose to the chin, and another in a direct angle across from ear to ear, indented in a peculiar way.” They file their teeth to a point “ [...] they are likewise fantastic in the mode of dressing their hair; some shave only one side of the head, others both sides, leaving a kind of crest, extending from the front to the nape of the neck, while a few are content to wear simply a knot on the top of their foreheads.”<sup>176</sup>

We also find out that they are “fond of music and dancing, [...] and have a favourite instrument called the *ambira* formed by a number of thin bars of iron, of different lengths, highly tempered and set in a row in a hollow case of wood.”

Epidariste Colin’s description echoes that of Salt: the preference for Makuhuwa slaves. Tattoos consisted of an oval mark on the temples and a smaller oval between the eyes. The Monjavas could be recognised by the star-shaped tattoos on the body and on the cheeks, as well as 2-3 horizontal marks above the temples. They were less robust than the Makhuwa tribe.

However, they were exhausted by the time they reached the coast and many perished once on board. Colin also noted the love for music and the similarity with the *tsega* found in the Mascarenes. The music was full of sweetness, and he even reproduced some musical notes:

Source: Epidariste Colin, *Travels...*, p.322

Tattoos for Colin represented the 'caste' identity of the different ethnic groups, many of which came to Mauritius. Women of the Sofala group also pierced their upper lip and their tattoos consisted of curved lines from forehead to temples and there were points on the cheeks and body.

Another 'cultural mark' was the baptism of slaves, as they filed into the slave ships prior to embarkation. This was the practice before embarkation in Madagascar and Mozambique, according to researchers in both countries.

Machado added another dimension in his study of the competition between Portuguese and Asian traders on the Mozambican coast. They did not want slaves to be taken by Arabs and Indians because they were not Christian. Neither did they want them taken to non-Christian countries, such as India and Persian Gulf.<sup>177</sup> However, this was quite difficult to control.

Despite this, one also sees in the registration returns, mention of non-Christian slaves.

When we have understood the importance of the French slave trade in the Indian Ocean and the accounting, mechanics and economics of the slave trade, the numbers involved in the Slave Trade will be better assessed. The numbers of slaves contained in all ships that left the African and Malagasy coasts need to be compiled, and an aggregate figure arrived at. How many left the interior and where they came from, how many reached the coast, how many were embarked on board ships, how many died or escaped on the way and how many actually arrived, need to be studied to quantify the full extent of the slave trade.

There are also those slaves transported on Company ships not officially trading in slaves but who 'picked up' slaves en route. It has been difficult to estimate these and further thorough searches are required to bring in information from unlikely sources. Le Lan points to one example when a ship was attacked by Indian pirates. It is only through the report of the attack that we learn that 25 male and 15 female slaves were killed on the *Jupiter*.<sup>178</sup> Another example is the *Le Massiac* which, in 1762, on route to Mauritius captured the British ship *La Betty*. It took as hostage the pilot and 50 slaves out of the 250 on board.<sup>179</sup>

In Mauritius, these figures need to be compared with the official censuses, tax rolls, and Customs Returns Reports of the slave trade to assess the level of discrepancy between the figures and arrive at the real volume of the slave trade. Much of this data has been collected at the TJC for the benefit of historians and statisticians who now need to correlate all this information.

Many Mauritians of African and Malagasy descent regret the fact that they do not know where they come from. It was thus essential to address this issue, and the TJC has done so in its recommendations. The approach has been multidisciplinary but it is not possible to locate exact

origins through archival search, as these yield mainly the port of departure from Africa and Madagascar, and not the origin of the slave. To undertake this study DNA testing of a sample of Mauritians, believed to be of African and Malagasy origin, is required.

Justification for this approach may be sought in the words of one historian of the slave trade, Deveau:

*"S'il est temps d'écrire une histoire mondiale, prenant en compte l'ensemble des peuples (la redondance est parfois nécessaire...), il faut aller la chercher là où, jusqu'ici, l'historien s'est peu aventuré. Familier de la source écrite jusqu'à la virtuosité dans ses analyses, il semble, en revanche, complètement démuni devant d'autres types de sources comme la mémoire orale, ou la mémoire gestuelle que la chorégraphie peut abondamment livrer, pour ne rien dire de l'analyse musicale. C'est pourtant là qu'il faut aller chercher l'histoire des esclaves. Mais avant d'y arriver un immense travail de déculpabilisation reste à faire pour délier les langues qui n'osent pas évoquer un passé considéré comme dévalorisant, une sorte de tache indélébile qui collerait aux gènes familiaux et que l'on s'efforce de dissimuler. D'autre part ce type d'informations complètement déconnectées de leur cadre chronologique demande des méthodes d'analyse qui restent encore largement à mettre au point. Des croisements avec les sources écrites ou les données archéologiques donneront en particulier d'excellents résultats."*

## APPENDICES

## Appendix 1

## OA 57 Series, Mauritius National Archives

1. Le Senau, *La Louise Elisabeth*, 11 juin 1777. Du port de 275 tonneaux, monté de 30 canons et armé de 30 hommes d'équipage.
2. Le Senau, *Le Déodat*, Capitaine Duminy, 30 juin 1777. Du port de 30 tonneaux et armé 35 hommes d'équipages.
3. Le Senau *La Mimy*, 8 juillet 1777. Capitaine Blaudelot, armateur, M. Nally du port de 150 tonneaux, monté 2 canons et armé de 22 hommes d'équipage.
4. Le Brick *L'amphitrite*, 22 juillet 1777. Buffard, Capitaine et Armateur. Du port de 35 tonneaux, monté de 2 canons et armé de 12 hommes d'équipage.
5. La goélette *la Jeannette*, 16 août 1777. Capitaine Jean Colette. Du port de 40 tonneaux, monté de 4 canons et armé de 2 hommes d'équipage.
6. La goélette, *La Luronne*, 22 juillet 1777. Capitaine Lavilléon et armateur S.Marin. Du port de 35 tonneaux et armé de 10 hommes d'équipage.
7. Le Senau, *L'Abysinie*, 13 octobre 1777. Capitaine Jean Baptiste Le Bel et armateur le Sieur Morne. Monté de 6 pierriers et de 25 hommes d'équipage.
8. Le Vaisseau *Le Pierre*, 23 octobre 1777. Capitaine Vielle et Armateur le Sieur Dogué, du port de 50 tonneaux, armé de 12 hommes d'équipage.
9. Le vaisseau *Bardi*, 31 octobre 1777. Capitaine Boudin, Armateur le Sieur Blaise de Molloud. Du port de 250 tonneaux, monté de 6 canons et armé de 30 hommes d'équipage.
10. La Brick du Roy, *Le Bon Conseil*, 22 novembre 1777. Capitaine et Armateur, le Sieur Brauthomme. Du port de 50 tonneaux et armé de 19 hommes d'équipage.
11. Le Brick *Le Luron*, 18 mars 1778. Capitaine François Elie Sciet de la Rougelière, Armateur Sieur Etienne Bologne. Du port de 60 tonneaux, monté de 2 pierriers et armé de 14 hommes d'équipage.
12. Le Brick *Le Pierre*, 30 mars 1778. Capitaine Commandant, Jean Pierre Poirier, Armateur le Sieur Dogué. Du port de 60 tonneaux et armé de 15 hommes d'équipage.
13. Le Brick *Le Luron*, 16 Avril 1778. Capitaine le Sieur Toulon et armateur le Sieur Etienne. Du port de 70 tonneaux, monté de 2 pierriers et armé de 15 hommes d'équipage.
14. La goélette, *l'Aimable Christine*, 15 mai 1778. Commandant le Sieur François Gabriel de Page. Du port de 80 tonneaux, monté de 8 pierriers et armé de 11 hommes d'équipage.
15. Le Brick le *St Pierre*, 9 juin 1778. Capitaine Charles Gassin et Armateur le Sieur Dogué. Du port de 60 tonneaux et armé de 12 hommes d'équipage.
16. Le Vaisseau le *St Pierre*, 11 juin 1778. Commandant le Sieur Jacques François Deschiens de Villefeu. Du port de 250 tonneaux, monté de 4 canons et 16 pierriers. Armé de 30 hommes d'équipage.
17. La goélette la *Jeune Julie*, 1 juillet 1778. Capitaine, Charlemagne Maré de la Rabinais. Du port de 40 tonneaux et armé de 9 hommes d'équipage.
18. Le Brick *L'Heureuse*, 24 juillet 1778, Capitaine le Sieur L'Aiea, Armateur les Sieurs Pelot et Dupont. 6 hommes d'équipage.
19. Le Senau *La Colombe*, 3 août 1778. Capitaine et Armateur, Jean Olivier, du port de 54 tonneaux, monté de 13 canons et armé de 20 hommes d'équipage.
20. La *ville St. Malo*, 10 août 1778. Capitaine Julien Boulbard, Armateur N.Pilot du port de 50 tonneaux, monté de 4 canons mariné et armé de 24 hommes d'équipage.
21. Le Brick *La Confiance*, 11 Aout 1778. Commandant Jean Hugué, Armateur le Sieur C. Aubin du port de 80 tonneaux, monté de 6 canons et armé de 20 hommes d'équipage.
22. Le Senau *l'Auguste*, 12 août 1778. Capitaine le Cos Duquillio, Armateur Le Merer. Du port de 140 tonneaux, monté de 4 canons et armé de 25 hommes d'équipage.
23. Le Vaisseau *Le Vigilant*, 22 août 1778. Capitaine N. Condé, Armateur le Sieur Bricole. Du port de 250 tonneaux, monté de 2 canons et armé de 2 hommes d'équipage.

24. Le Brick La *Marianne*, Le 7 septembre 1778. Capitaine Sébastien Boileau et Armateur le Sieur Thomas Boileau, son frère. Du port de 60 tonneaux et armé de 16 hommes d'équipage.
25. Le *Languedoc*, 30 septembre 1778. Capitaine Le Bonhomme, Armateurs les Sieurs Manu et Rolland. Du port de 150 tonneaux, monté de 2 canons et armé de 25 hommes d'équipage.
26. Le Brick *L'Auguste*, 12 septembre 1778. Capitaine Antoine Alloche, Armateur le Sieur L'Ecroignard. Du port de 50 tonneaux, monté de 2 pierriers et armé de 10 hommes d'équipage.
27. Le Vaisseau, *Père de Famille*, 16 Septembre 1778. Capitaine Jean Michel Boudin du port de 250 tonneaux, monté de 8 canons et armé de 45 hommes d'équipage.
28. Le Senau *Louise Elisabeth*, 27 septembre 1778. Capitaine Yves le Guen, Armateur les Sieurs Pitot Frères et Desvaux de Marigny. Du port de 250 tonneaux, monté de 10 canons et armé de 26 hommes d'équipage.
29. Le Brick *L'Aimable Christine*, 30 septembre 1778. Capitaine Jérôme Galiby, Armateur Laurent Raphail. Du port de 80 tonneaux, monté de 3 pierriers, et armé de 14 hommes d'équipage.
30. Le Brick *L'Auguste*, 13 novembre 1778. Capitaine Joseph Leanec, Armateur l'Ecroignard. Du port de 50 tonneaux, monté de 2 pierriers et armé de 11 hommes d'équipage.
31. Le Brick *St Pierre*, 16 novembre 1778. Capitaine Gambin, Armateur le sieur Dogué. Du port de 50 tonneaux et armé de 8 hommes d'équipage.
32. Le Senau La *Baptistine*, 18 décembre 1778. Capitaine François Dumargazeau, du port de 150 tonneaux, monté de 8 canons et armé de 24 hommes d'équipage.
33. Le Vaisseau La *Marguerite*, 22 janvier 1779. Jean Vincent Morice du port de 180 tonneaux, monté de 8 canons, 10 pierriers et armé de 32 hommes d'équipage.
34. Le Vaisseau Le *Prévost de la Croix*, 7 février 1779. Capitaine Utter, Armateur Oury. Du port de 330 tonneaux, monté de 8 canons, 2 pierriers et armé de 38 hommes d'équipage.
35. Le Senau le *Grand Bourbon*, 22 février 1779. Capitaine Robinot de la Semme, Armateur S. France. Du port de 180 tonneaux, monté de 2 canons et armé de 28 hommes d'équipage.
36. Le Senau *Languedoc*, 26 février 1779. Capitaine Jean Belaret, Armateurs les Sieurs Blancs et Rolland. Du port de 250 tonneaux, monté de 2 canons, 8 pierriers et armé de 13 hommes d'équipage.
37. Le Senau La *Petite Victoire*, 1 mars 1779. Capitaine Motais, Armateur le Sieur Amie. Du port de 140 tonneaux, monté de 4 canons, 2 pierriers et armé de 33 hommes d'équipage.
38. Le Brick *Pluton*, 28 avril 1779. Capitaine François Morice Faure. Du port de 50 tonneaux, monté de 6 canons, 4 pierriers et armé de 11 hommes d'équipage.
39. Le Brick du Roi, *La Bourbonnaise*, 6 juillet 1779. Capitaine le Sieur Norbert Jean François Le Nolais. Du Port de 30 tonneaux et armé de 11 hommes d'équipage.
40. Le Vaisseau La *Caroline*, 11 juillet 1779. Capitaine Jean Jacques Piroite Lejongard. Du port de 250 tonneaux, monté de 8 canons et armé de 40 hommes d'équipage.
41. Le Vaisseau *L'Entreprenant*, 20 juillet 1779. Capitaine Jacques Vilhout, Monté de 2 pierriers t armé de 12 hommes d'équipage
42. Le senau le *Bourbon*, 6 août 1779. Capitaine le Sieur de la Serre. Du port de 250 tonneaux, monté de 2 canons et armé de 30 hommes d'équipage.
43. Le Brick La *Marianne*, 6 août 1779. Capitaine le Sieur Boileau, du port de 60 tonneaux, monté de 4 pierriers et armé de 17 hommes d'équipage.
44. Le Brick Le *Pluton*, 5 août 1779. Capitaine Le Sieur Alexine Jojelme. Du port de 50 tonneaux, monté de 4 canons, 6 pierriers et armé de 14 hommes d'équipage.
45. Le Senau La *Charlotte*, 26 avril 1779. Capitaine et Armateur Charles Gervais Guillaume de la Malle. Du port de 160 tonneaux, monté de 5 canons et armé de 28 hommes d'équipage.
46. Le senau la *Colombe*, 31 avril 1779. Capitaine et propriétaire le Sieur le Roche. Du port de 180 tonneaux, monté de 16 canons et armé de 22 hommes d'équipage.
47. Le Brick le *St Pierre*, 2 septembre 1779. Capitaine le Sieur Borue, du port de 50 tonneaux et armé de 14 hommes d'équipage.
48. Le Vaisseau *Cérès*, 15 août 1779. Capitaine et Armateur le sieur Jacques François Deschiens de Villefeu. Du port de 80 tonneaux et armé de 30 hommes d'équipage.

49. Le Vaisseau Particulier le *Duc de la Vrillière*, 24 septembre 1779. Capitaine le Sieur Pierre de la Batterie. Du port de 500 tonneaux, monté de 12 canons et armé de 84 hommes d'équipage.
50. Le Vaisseau La *Sainte Thérèse*, 16 octobre 1779. Capitaine le Sieur Joseph Pichard du port de 180 tonneaux, monté de 6 canons et armé de 6 pierriers.
51. *L'Entreprenant*, 5 octobre 1779. Capitaine Jean Gilbert, du port de 50 tonneaux et armé de 14 hommes d'équipage.
52. *Le Triton*, le 19 octobre 1779. Capitaine le Sieur Antoine. Du port de 500 tonneaux et armé de 50 hommes d'équipage.
53. Le Senau, *La Baptistine*, 26 octobre 1779. Capitaine Le Sieur Dumargaró. Du port de 150 tonneaux, 6 canons, 2 pierriers et 28 hommes d'équipage.
54. Le Brick *L'Amphitrite*, 6 décembre 1779. Capitaine Commandant Le Sieur Boudin. Du port de 240 tonneaux et 12 hommes d'équipage.
55. Le Vaisseau, *Le Diligent*, 18 décembre 1779. Capitaine Commandant, Le Sieur Gilbert. Armateur Le Sieur Drieux. Du port de 100 tonneaux et 18 hommes d'équipage.
56. Le Vaisseau particulier, *le Père de Famille*, 31 décembre 1779. Capitaine Commandant, Jean Baptiste Ville, Armateur le Sieur Drieux. Du port de 250 tonneaux et 36 hommes d'équipage.
57. Le Senau *La ville St-Malo*, 15 Janvier 1780. Capitaine Commandant Julien Boulbard. 150 tonneaux, 4 canons et 24 hommes d'équipage.
58. Le Senau La *Languedoc*, 4 Février 1780. Capitaine François Marie Faure du Renoir. Armateur Le Sieur B. Rolland. Du port de 150 tonneaux et 25 hommes d'équipage.
59. Le Senau *La Philippine*, 10 février 1780. Capitaine Deschiens de Kerulvay. Du port de 60 tonneaux, 10 canons et 80 hommes d'équipage.
60. La Brick *La Marianne*, 6 mai 1780. Capitaine Alexis Goisslux. Du port de 60 tonneaux, 4 pierriers et 7 hommes d'équipage.
61. Le Senau *Les Deux Amis*, 18 mai 1780. Capitaine et Armateur le Sieur Chauvinot. Du port de 130 tonneaux, 2 canons et 20 hommes d'équipage.
62. Le Vaisseau *La Sainte-Thérèse*, 16 juin 1780. Capitaine Alain de Fey. Du port de 240 tonneaux, 6 canons et 34 hommes d'équipage.
63. Le Vaisseau *La Pintade*, 25 octobre 1782. Capitaine Moulin. Du port de 100 tonneaux, 6 canons et 30 hommes d'équipage.
64. Le Senau *St-Louis*, 31 octobre 1782. Commandant le Sieur Jean Jacques Noel Lenoir. Du port de 195 tonneaux et 22 hommes d'équipage.
65. Le Senau *Charlotte*, octobre 1782. Capitaine Alexis Josselme, Armateurs les frères Josselme et Guelle. Du port de 150 tonneaux, 2 canons et 22 hommes d'équipage.
66. Le Vaisseau *Deux Cousines*, 22 novembre 1782. Capitaine et Armateur Sébastien Boileau. Du port de 75 tonneaux et 15 hommes d'équipage.
67. Le Vaisseau *Neptune Royale*, 26 novembre 1782. Capitaine Le Sieur Jean Béquet. Du port de 100 tonneaux, 4 canons et 35 hommes d'équipage.
68. Le Vaisseau *Betsy*, 4 décembre 1782. Capitaine Claude, Armateur Dubuig. Du port de 450 tonneaux, 8 canons et 5 hommes d'équipage.
69. Le Vaisseau Le *Bèlejaire*, 4 décembre 1782. Capitaine Le Pelletier, du port de 250 tonneaux, 2 canons et 35 hommes d'équipage.
70. Le Vaisseau *Bufon*, 7 décembre 1782. Capitaine Gabriel David Foucault, Armateur Admyrourd. Du port de 800 tonneaux, 24 canons et 100 hommes d'équipage.
71. Le Vaisseau *La Fille Unique*, 14 décembre 1782. Capitaine Chenu, Armateur Le Roux. Du port de 14 canons et 30 hommes d'équipage.
72. Le Vaisseau la *Sainte-Thérèse*, 14 décembre 1782. Capitaine Jean François Jourdan, Armateur Le Grand. Du port de 200 tonneaux et 20 hommes d'équipage.
73. Le Brick *Catherine*, 25 février 1783. Armateur le Sieur Écroignard, du port de 106 tonneaux, 4 canons et 18 hommes d'équipage.

## PREFACE

*Thomas Vernet*

Les trafics d'esclaves dans l'océan Indien ont soulevé beaucoup moins d'intérêt que la traite atlantique, tant du point de vue de la recherche académique que d'un public plus large. Ce déséquilibre est encore persistant de nos jours, la production historiographique sur la traite atlantique demeurant particulièrement abondante. Cependant la traite liée aux Mascareignes n'est pas un sujet d'étude nouveau pour les historiens puisque dès la fin des années 60 des travaux approfondis y sont consacrés, principalement conduits par Auguste Toussaint et Jean-Michel Filliot.

D'autre part, on observe depuis quelques années un intérêt croissant pour les traites dans l'océan Indien, dont la diversité et la complexité ne cessent d'être soulignées. En effet elles ne concernèrent pas seulement des esclaves africains et malgaches, mais également originaires d'Inde, d'Asie du sud-est ou encore d'Asie orientale. En outre, les négriers furent français, portugais, néerlandais ou anglais, mais les réseaux de traite étaient aussi animés par des musulmans africains et arabo-persans, ou divers groupes issus de l'Asie et de l'Afrique. Parallèlement à l'étude de ces divers flux de traite, les diasporas africaines dans le pourtour du bassin de l'océan Indien font également l'objet d'une attention croissante de la part des chercheurs, dans l'archipel des Mascareignes comme dans le golfe Persique ou en Inde - où l'on trouve encore de nos jours de petites communautés d'origine africaine.

Au sujet des Mascareignes, et de l'île Maurice en particulier, il faut souligner que l'esclavage, en tant que pratique sociale, puis ses héritages, ont suscité davantage de travaux que la traite en elle-même, en partie en raison des contextes politiques et des revendications identitaires propres aux sociétés des Mascareignes. Par ailleurs, assez curieusement, la traite illégale (à partir de l'interdiction de la traite par les Britanniques en 1810) semble avoir davantage mobilisé les historiens que la traite légale - on pense en particulier aux travaux d'Hubert Gerbeau sur la Réunion.

Le premier ouvrage qui livre une estimation du trafic négrier en direction de l'Île de France à partir de recherches poussées est la célèbre étude de l'historien mauricien Auguste Toussaint, *La route des Îles*, publiée en 1967. Bien qu'elle repose presque exclusivement sur les archives disponibles à Maurice et, surtout, ne se focalise pas sur la traite, *La route des Îles* demeure toujours un excellent point de départ pour entamer des recherches sur la question, livrant des pistes particulièrement utiles sur les fonds d'archives. Quelques années plus tard, en 1974, Jean-Michel Filliot publie *La traite des esclaves vers les Mascareignes au XVIII<sup>e</sup> siècle*, ouvrage de référence sur la question. Pour livrer ses estimations chiffrées, l'auteur s'appuie sur une impressionnante masse documentaire, issue de très nombreux centres d'archives, principalement en France. Cette synthèse, devenue un classique, est elle aussi incontournable. Elle a néanmoins ses défauts. Ainsi l'auteur n'a pas - ou peu - consulté certaines séries, principalement la série COL C4 des Archives Nationales de France, présentée ci-dessous. Sa connaissance des sociétés d'Afrique orientale et de Madagascar est assez limitée, son usage des fonds d'archives parfois superficiel, et surtout des travaux plus récents ont démontré que la traite vers les Mascareignes était plus importante qu'il ne l'avait évaluée.

A la même époque, dans les années 70, des spécialistes des sociétés africaines s'intéressent à la traite française, en particulier Edward Alpers, qui étudie la traite dans la région de Mozambique et de Kilwa (sud de la Tanzanie). Jusqu'à nos jours, des recherches sur les traites sur le littoral est-africain ou à Madagascar continuent d'être conduites, en petit nombre, mais elles demeurent des travaux éparpillés et n'apportent pas toujours de détails très précis sur la traite liée à l'île de France.

Plus récemment, Richard Allen a livré de nouvelles estimations de la traite en direction des Mascareignes, révisant à la hausse les chiffres de Filliot (R.B. Allen, « The constant demand

of the French : the Mascarene slave trade and the worlds of the Indian Ocean and Atlantic during the eighteenth and nineteenth centuries », *Journal of African History*, 49(1), 2008, pp. 43-72). Pourtant, là encore, bien que très précieuse, son étude ne peut pas être considérée comme définitive car son auteur n'a pas consulté les archives françaises. D'autre part, les chiffres donnés concernent la traite globale vers les Mascareignes, sans distinguer Bourbon et l'Île de France.

Ce très bref aperçu historiographique démontre qu'une étude véritablement exhaustive de la traite légale en direction de l'île Maurice, qui serait en mesure de livrer des estimations très fiables, reste à conduire. La masse d'archives à traiter, et leur extrême dispersion, rendent ce projet difficile à accomplir pour un chercheur travaillant seul. Un tel travail réclamerait une étroite collaboration entre plusieurs spécialistes et des coopérations institutionnelles, susceptibles notamment de dégager des moyens financiers conséquents.

Nous espérons que les jalons posés par la Truth and Justice Commission, éclairés par les recherches passées, encourageront ce type de recherches collectives. Le présent inventaire pourra, nous le croyons, y contribuer.

Les fonds d'archives préservés par les Mauritius National Archives (Coromandel, Petite Rivière) évoquant la traite ont été très bien décrits par les travaux de Toussaint, Filliot, et Allen. Il n'est pas nécessaire de les présenter ici. Nous décrirons par conséquent les principaux fonds situés en France, beaucoup moins connus et moins exploités.

### Présentation des principaux fonds d'archives français mentionnant la traite et l'esclavage associés à l'Île de France (1715-1810)

(Les fonds marqués d'un astérisque ont été consultés ou sondés par Thomas Vernet)

Les fonds d'archives français évoquant, d'une façon ou d'une autre, la colonie de l'Île de France avant la souveraineté britannique sont extrêmement nombreux et dispersés dans toute la France. Heureusement, outre l'étude de Filliot, il existe dorénavant un excellent guide des archives française portant sur la traite et l'esclavage, publié sous la direction de Claire Sibille : *Guide des sources de la traite négrière, de l'esclavage et de leurs abolitions*, Paris, La Documentation Française, 2007. Même lorsqu'il ne rentre pas dans les détails, cet ouvrage fournit d'excellentes pistes de recherche, sa consultation est donc particulièrement recommandée.

Ce guide commet toutefois une très curieuse omission : il oublie de mentionner la série Colonies C4 (*Île de France*) que nous présentons ici, alors qu'il mentionne toutes les autres séries relatives à la correspondance officielles des colonies françaises.

#### Colonies COL C4 *correspondance à l'arrivée, Île de France\**

Référence exacte : FR ANOM / COL C<sup>4</sup>

Lieu de préservation :

- Archives Nationales d'Outre-Mer, Aix-en-Provence (manuscrits originaux)
- Archives Nationales, Paris (microfilms)

Contenu : 153 volumes, 1714-1810

Cette série constitue, de très loin, le plus important fond d'archives portant sur la colonie de l'Île de France depuis sa création jusqu'à la conquête britannique. La traite des esclaves, et plus encore la place de l'esclavage dans la colonie, y sont l'objet de mention innombrables tant les administrateurs et les milieux économiques de la colonie sont concernés par la question de la main-d'œuvre servile. La richesse évidente de ce fond pourrait laisser croire qu'il a été largement exploité par les historiens. Il n'en est rien. A de rares exceptions tels les travaux de Megan Vaughan, très peu de spécialistes se sont attachés à l'utiliser à sa juste valeur, voire à s'y intéresser d'une façon ou d'une autre. On ne peut cependant en être totalement surpris tant les recherches approfondies sur la vie de la colonie durant la période française sont restées - étrangement - peu nombreuses.

Cette lacune peut également s'expliquer par l'absence quasi-totale d'inventaires de la série COL C4, qu'ils soient publiés ou manuscrits<sup>1</sup>. Chacun des 153 volumes contenant plusieurs centaines de folios, on comprendra qu'étudier la série sur un sujet de recherche précis réclame un travail d'investigation considérable.

Ainsi c'est la richesse de ce fond, l'absence d'inventaire, et plus généralement sa méconnaissance, qui nous ont conduits à le privilégier, dans un premier temps, dans le cadre des travaux d'inventaires initiés par la Truth and Justice Commission.

Quel est le contenu de la série COL C4 ? La série inclut toute la correspondance officielle envoyée depuis la colonie de l'Île de France et reçue par le secrétariat d'Etat à la Marine. Elle préserve donc d'abord les lettres et rapports produits les gouverneurs et les intendants de l'Île de France, ainsi que les diverses branches de l'administration locale sous leur autorité. Mais on y trouve également toutes sortes de lettres et de mémoires rédigés par des particuliers, principalement des négociants et des planteurs de l'île. Les sujets abordés sont extrêmement divers et reflètent les diverses compétences de l'administration : finances, diplomatie, affaires militaires, marine, travaux et fortifications, affaires agricoles, hôpitaux, négoce, etc. Ces divers sujets sont parfois regroupés au sein d'un même « dossier » dans chaque volume de la série. Tous sont susceptibles d'évoquer l'esclavage sous un angle ou un autre.

Parmi les types de documents qui évoquent le plus traite et l'esclavage, nous trouvons par exemple : les recensements des « esclaves du roi » (esclaves au service de l'administration et des forces militaires de la colonie), la correspondance portant sur les relations avec la colonie de Mozambique, avec Madagascar, ou avec la côte swahili, les compte-rendu d'expéditions maritimes, les innombrables « mémoires », « projets », ou recensements, décrivant l'état de la colonie et les moyens de la développer, etc. Ainsi administrateurs et élites de la colonie ont le souci constant de sécuriser, de développer, et de diversifier l'apport en main-d'œuvre servile, tant la « soif d'esclaves » semble permanente. Citons également les quelques cas de journaux tenus par des administrateurs, tel celui de René Magon (intendant ?? gouverneur ?? de XXX à XXX), qui évoque les mouvements de navires négriers à une époque pour laquelle nous n'avons aucune archive maritime locale.

L'inventaire de COL C4 que nous publions ici démontre à quel point les mentions de l'esclavage sont fréquentes et éparpillées dans des documents de tous types. Nous percevons ainsi combien l'esclavage occupe les esprits des dirigeants et des négociants de l'île à cette époque.

#### Autres séries des Archives Nationales d'Outre-Mer

Il n'est pas possible de citer ici l'ensemble des séries des Archives Nationales d'Outre-Mer qui mentionnent l'Île de France. Nous invitons donc à consulter *Guide des sources de la traite négrière, de l'esclavage et de leurs abolitions*, qui les répertorie. Ces séries sont généralement disponibles en microfilm sur le site des Archives Nationales de Paris, mais il est préférable de se renseigner au préalable.

Citons néanmoins :

- COL C<sup>2</sup> *correspondance à l'arrivée, Compagnie des Indes et Inde française\** (1649-1835).
- COL C<sup>3</sup> *correspondance à l'arrivée, île Bourbon* (1614-1811), 31 volumes.
- COL C<sup>5A</sup> *correspondance à l'arrivée, Madagascar\** (1642-1789), 9 volumes. Certains volumes livrent de nombreux détails sur la traite entre l'Île de France et Madagascar vers 1767-1789.
- Série B *correspondance au départ* (1666-1816)\* : il s'agit des lettres et instructions adressées aux gouverneurs et officiers des colonies entre la fin du XVIII<sup>e</sup> siècle et les premières années du XIX<sup>e</sup> siècle. Les séries COL B 201 à 215, 224 et 225, 235 à 238, 251 à 253, 264 et 265 concernent l'Île de France et Bourbon.
- DPPC<sup>2</sup> EC, *état civil* : registres d'états civils, dont quelques registres paroissiaux d'esclaves de l'Île de France (exemple : Moka 1770-1810, Port-Louis 1728-1810, etc.).
- DPPC COL G<sup>1</sup>, *recensements* : recensements de l'Île de France, 1776, 1780, 1788-1789. Exemple : COL G<sup>1</sup> 505/07 : « Recensement général des noirs (hommes, femmes, enfants) appartenant à la Compagnies des Indes au 20 avril 1761 ».
- DPPC GR, *greffes* : procédures judiciaires 1778-1810.
- DPPC NOT, *notariat* : notaires de l'Île de France.

### Archives Nationales, Paris

Les Archives Nationales, à Paris, détiennent toute une documentation qui ne se trouve pas aux Archives Nationales d'Outre-Mer. Le nombre de séries intéressantes étant là encore considérable, nous renvoyons à nouveau au *Guide des sources de la traite négrière, de l'esclavage et de leurs abolitions*.

Quelques séries :

- Marine JJ, *service hydrographique\** : cette série, très bien inventoriée, préserve de nombreux journaux de bord originaux, beaucoup d'entre eux sont issus de la Compagnie des Indes. Certains concernent des voyages de traite. On y trouve également des documents divers livrant des renseignements sur les lieux de traite. Exemples :
- 2JJ58 : des voyages à Madagascar et à l'Île de France (1709-1753)
- 3JJ : des voyages à Madagascar et aux Mascareignes,
- 4JJ : nombreux journaux de bord (ou extraits) de la Compagnie des Indes ou voyages dans l'océan Indien en général. Extraits de journaux de bord négriers.

Il faut souligner que les journaux de bord de la Compagnie des Indes seront très prochainement mis en ligne par le service des Archives Nationales.

- Marine B<sup>4</sup>, *campagnes navales* : un transfert d'esclaves entre Pondichéry et l'Île de France en 1773, des traites à Madagascar en 1775-1776, traite à Mozambique.
- Marine C<sup>7</sup>, *dossiers personnels* : sur le naufrage de l'*Utile*, traite à Kilwa, transfert d'esclaves de Pondichéry.
- 100 AP, *Fonds Rostaing* : les premières forges de l'Île de France (Mondésir). On trouve notamment un « état général des esclaves de l'établissement de Mondésir (1772) ».
- MC, *minutier central des Notaires Parisiens* : des documents sur des entreprises commerciales liées à la traite : contrats d'association, d'armement..., etc.

### Autres fonds d'archives en France

Au-delà des archives nationales, les archives départementales et municipales, ainsi que les divers centres d'archives du ministère de la Défense (Service Historique de la Défense), peuvent également s'avérer d'un intérêt considérable pour l'histoire de l'esclavage à Maurice.

Nous présentons ci-dessous une très brève sélection de ces fonds. Cette liste ne se veut en rien exhaustive, elle vise plutôt à encourager des recherches documentaires véritablement abouties et à promouvoir l'étude de l'esclavage durant la période française de l'île Maurice, parent pauvre de l'historiographie.

### Bibliothèque Municipale de Caen

« Papiers du Général Decaen », *ms. in-fol. 177\**.

Charles Mathieu Isidore Decaen, originaire de Caen, officier de l'armée de Napoléon, fut gouverneur ?? [voir son titre exact] de l'Île de France de 1803 ?? à 18 ????. Tous ces papiers furent déposés à la bibliothèque municipale de Caen. Ils sont décrits, de façon plus ou moins détaillée, dans G. Lavalley, *Catalogue des manuscrits de la bibliothèque municipale de Caen*, Caen, 1880, pp. 131-156.

Bien qu'elle recoupe en grande partie la série COL C4, cette documentation est particulièrement riche. Il inclut ainsi des documents originaux que l'on ne trouve pas dans COL C4, par exemple une correspondance diplomatique en arabe envoyée par l'imam de Mascate. Il faut noter que Decaen rassembla des mémoires très divers rédigés avant son arrivée sur l'île, principalement dans les années 1780. Ils décrivent l'état général de l'Île de France, exposent des projets autour de la traite, du négoce ou de l'amélioration de la colonie, et livrent des descriptions de zones de l'océan Indien fréquentées par les Français. Pour la période de l'administration de Decaen, outre la correspondance générale, de nombreux documents mentionnent des recensements d'esclaves, en particulier ceux qui furent achetés par les autorités.

Citons par exemple les documents suivants, particulièrement pertinents :

- volume 44 :
- ff. 259-264 : sur la population
  - f. 338 : recensement de l'an XIV
- f. 340 : un recensement en 1808
- f. 344 : un état des Noirs de l'Etat en l'an XIII
- f. 357 : achat de Noirs par l'Etat de prairial an XII à prairial an XIII
- f. 358 : « Noirs d'artillerie »
- f. 405 : « Etat sommaire des esclaves de l'Etat au 1<sup>er</sup> janvier 1809 ».

- volume 94 :
- ff.1-28 « Bâtiments arrivés à l'Isle de France depuis le 1<sup>er</sup> avril 1806 » (jusqu'au 25 avril 1809)
- ff. 59-117 : « Rapports des bâtiments arrivés à l'île de France depuis le 1<sup>er</sup> avril 1806 ».

Ces deux listes mentionnent des expéditions négrières et permettent de compléter les déclarations d'arrivée que l'on trouve aux Mauritius National Archives.

### Lorient, Service Historique de la Défense - Département Marine

Le port de Lorient, base métropolitaine de la Compagnie des Indes, fut très étroitement lié à l'Île de France au XVIII<sup>e</sup> siècle. Les archives du Service Historique de la Défense y sont riches, elles livrent surtout les armements des navires de la Compagnie, puis des armateurs privés de la ville jusqu'en 1790 (les archives des années postérieures à 1790 ayant été détruites). Le célèbre répertoire de Jean Mettas (*Répertoire des expéditions négrières françaises au XVIII<sup>e</sup> siècle. Tome II : ports autres que Nantes*, Paris, Société Française d'Histoire d'Outre-Mer, 1984) en fait largement usage.

Plus récemment, Jean-Yves Le Lan et Yves Banallec ont dressé, grâce à ce fond, la liste des navires ayant pratiqué la traite au départ de Lorient, avant puis après la suspension de la Compagnie (Y. Banallec et J.Y. Le Lan, « La compagnie des Indes et la traite des Noirs », in N. Dodille (dir.), *Idées et représentations coloniales dans l'océan Indien*, Paris, PUPS, 2009, pp. 33-55 et communication au colloque *Traite, esclavage, et transition vers l'engagement à l'île Maurice et aux Mascareignes, 1715-1848*, TJC/University of Mauritius, avril 2011).

### Bordeaux

Bordeaux fut le principal port lié à la traite dans l'océan Indien après la fin de la Compagnie des Indes. Les travaux d'Eric Saugera sur la traite bordelaise, particulièrement fouillés, sont extrêmement précieux sur la question. Ils livrent d'innombrables pistes de recherche archivistiques sur la période du XVIII<sup>e</sup> siècle mais - fait beaucoup plus rare - également sur la reprise de la traite française qui suivit la paix d'Amiens en 1802. L'Île de France fut concernée de très près par ce mouvement et accueillit en 1802-1803 un nombre importants d'expéditions de traite lancées de métropole. On consultera donc les travaux suivants :

E. Saugera, *Bordeaux, port négrier XVII<sup>e</sup>-XIX<sup>e</sup> siècles*, Paris, Karthala, 1995 (rééd. 2002).

- « Pour une histoire de la traite française sous le Consulat et l'Empire », *Revue Française d'Histoire d'Outre-Mer*, 76, 282-283, 1989, pp. 203-229.

- « Les armements négriers français vers l'océan Indien sous le Consulat », in C. Wanquet et B. Jullien (dir.), *Révolution française et océan Indien [...]*, Saint-Denis et Paris, Université de la Réunion / L'Harmattan, 1996, pp. 103-112.

Voici une brève sélection de quelques fonds utiles présents à Bordeaux :

#### Archives Départementales de la Gironde

On peut trouver en ligne les archives de l'amirauté de Guyenne (série 6B) : passeports et soumission, entrée et sortie des navires: <http://archives.gironde.fr/lecture/6b.asp>

Le *Guide des sources de la traite négrière, de l'esclavage et de leurs abolitions* signale par ailleurs :

- XXXXX(réf)<sup>3</sup> : Journal de traite du *Duc d'Harcourt* 1748-1751 (Bordeaux - Angola - Île de France)
- U négociants *dossier Letellier* : traite de la *Céline* à Kilwa en 1795 (en partie publié dans L. Bergès, *Terres d'esclaves, histoires de la traite, Afrique, Aquitaine, Amérique*, Bordeaux, Archives Départementales de la Gironde, 2009, pp. 179-180).

#### Archives Municipales de Bordeaux

- Fonds Monneron : famille très active dans le commerce et la traite de l'Île de France.

#### Nantes

Bien que Nantes fût de très loin le premier port négrier de France, les armateurs nantais se sont peu intéressés à l'Île de France et à la traite dans l'océan Indien.

#### Archives Départementales de la Loire Atlantique

- Fond Bourcard : divers navires de traite partis de Nantes, correspondance sur la traite à Madagascar et Mozambique.

- Série C : archives de la chambre de commerce de Nantes avant 1790. J.-M. Filliot signale trois dossiers (1716-1788).

#### *Archives Municipales de Nantes*

- Papiers de Coiron, négociant : sur des ventes d'esclaves à l'Île de France, Bourbon, Saint-Domingue, 1790-1822.

#### **Marseille et Toulon**

Marseille arme un nombre assez important de navires négriers vers l'Afrique orientale à partir de 1787, la plupart font escale à Port-Louis et, parfois, y débarquent des esclaves.

On consultera en priorité les travaux de Gilbert Buti :

- « Marseille, port négrier au XVIIIe siècle ? », *Cahiers des Anneaux de la Mémoire*, 11, 2007, pp. 162-178.

- « Commerce honteux pour négociants vertueux à Marseille au XVIIIe siècle ? », *Cahiers de l'histoire et des mémoires de la traite négrière, de l'esclavage et de leurs abolitions*, Le Havre, 2008, pp. 199-220.

On trouve quelques informations sur des armements négriers dans les fonds suivants :

- Service Historique de la Défense - département Marine, Toulon : registres matricules et rôles d'équipage.

- Archives de la Chambre de Commerce de Marseille-Provence : L. XVI, fonds Pierre Honoré Devoulx (1790-1802).

#### **Archives Départementales de la Réunion : Fonds de la Compagnie des Indes**

Ce fond, particulièrement intéressant, est bien décrit dans les ouvrages suivants :

- A. Toussaint, *La route des îles*, pp. 152-156.

- *Guide des sources de la traite négrière, de l'esclavage et de leurs abolitions*, pp. 320-322.

- J.-M. Filliot (p. 236) signale que l'inventaire établi par A. Lougnon est excellent.

Les archives départementales contiennent également une importante collection de périodiques des Mascareignes antérieurs à 1848.

#### **La Rochelle**

Bien que la Rochelle soit le second port négrier français en nombre de voyages, les Rochelais n'ont quasiment pas armé pour l'océan Indien, et en particulier pour la traite.

Les investigations conduites par T. Vernet ont confirmé le nombre extrêmement restreint de voyages.

#### **Archives Municipales de La Rochelle\***

- EEARCHANC 43. (EE Marine, ms. 277), « Navire 'La Créole'. Pièces y relatives établies par Crassous de Médeuil capitaine en 1<sup>er</sup> et armateur » : traite à Kilwa du navire la *Créole*, cap. J. Crassous de Médeuil, 1783.

- EEARCHANC 47 (EE Marine, ms. 281) : papiers du navire négrier le *Pactole* (cap. J. Crassous de Médeuil), naufragé en 1789, puis récit du naufrage du *Don Royal*.

#### **Archives Départementales de la Charente-Maritime\***

Il existe de bons inventaires. Des investigations dans les séries et documents susceptibles de concerner la traite en lien avec l'Île de France n'ont pas relevé d'expéditions.

Il serait cependant nécessaire de parcourir intégralement les archives de l'amirauté de La Rochelle, qui sont en ligne. Mais il est extrêmement peu probable d'y trouver mention de cargaisons d'esclaves dans l'océan Indien :

[http://bd.archivescanadafrance.org/acf/doc.xsp?id=FRAD017\\_000000001\\_d0e50&fmt=tab&from=providers](http://bd.archivescanadafrance.org/acf/doc.xsp?id=FRAD017_000000001_d0e50&fmt=tab&from=providers)

#### **Conclusion**

Cette liste n'est pas exhaustive. Il faut consulter le guide, Filliot, et les divers travaux liés au négoce et au commerce négrier des divers ports français, ainsi que Saugera sur la période du Consulat. La tâche n'est pas finie : ce n'est qu'un bref aperçu ! Nous espérons qu'il encouragera les chercheurs à s'emparer de cette documentation considérable pour faire toute la lumière sur la traite liée à l'Île de France et la pratique de l'esclavage dans la colonie.

COTE	DESCRIPTIF
<b>COL C4-1</b> <b>1714-1732</b> <b>Correspondance</b> <b>générale MM De</b> <b>Nyon, Dumas, de</b> <b>Maupin, Gouverneurs</b>	<ul style="list-style-type: none"> <li>• Lettre de M. de Nyon, gouverneur de l'Île de France à M. de Heauville, lieutenant du Roi dans la même Île et réponses de celui-ci 1722-1723</li> <li>→ Lettre de M. de Nyon du 04 Novembre 1722 <ul style="list-style-type: none"> <li>▪ « Le 11 septembre, le vaisseau Le Ruby- Capitaine le Sieur Grenier a mouillé en rade » : expédition pour la traite des noirs de Madagascar pour laquelle il est parti le 7 Octobre</li> </ul> </li> </ul>
	<ul style="list-style-type: none"> <li>• Lettres de M. de Nyon, gouverneur, du 22 septembre et 4 décembre 1724</li> <li>→ « 50 noirs marron ont déclaré la guerre au Port Louis du nord ouest avec effusion de sang dans la nuit du 27 au 28 avril. »</li> </ul>

<b>COL -C4-28 1771 -29</b>	<ul style="list-style-type: none"> <li>• 3 septembre 1771</li> <li>➔ Traite des noirs sur le vaisseau du Roy</li> <li>• Desroches n'a pas signé une instruction pour la flute du Roy LA Normandie que M Poivre m'adressa pour le Capitaine de recevoir 8000 piastres a bord et d'en acheter des noirs pour le compte des particuliers nommément du Sr Amat qui était des lors parti pour Batavia</li> <li>• -concurrence des particuliers qui font la fraude '...qui ne paient ni frais d'armement, ni les autres charges des vaisseaux équipés aux frais et risques des particuliers'</li> <li>• -le commerce a procuré 7 000 noirs à la Colonie depuis May 1770 jusqu'à May 1771. En cette année si la fraude reprend on en traitera peut être pas 700'</li> </ul>
	➔ Instructions donnes a Fournier – intérieur de l' île
<b>COL -C4-28 1771-28</b>	<ul style="list-style-type: none"> <li>• 3 septembre 1771</li> <li>➔ Abus dans la réception des grains- aujourd'hui on est obligé d'aller à Madagascar acheter du riz des noirs de cette île...</li> <li>➔ je suis qu'il n'y a pas d'esclaves (hommes, femmes ou enfants) qui ne coute 20 sols par jour. On présentera la dessus de tableaux illusoires tant qu'on voudra main mon calcul n'est pas faux et c'est à peu près 1000 écus par jour qu'il en coute. La moitié de cette somme donnerait 1000 ouvriers blancs au service et 3000 bons noirs</li> </ul>
<b>COL -C4-28 1771-31</b>	• 4 septembre 1771

	→ Complot de désobéir les ordres Du Roy
<b>COL -C4-28 1771 - 43</b>	•Octobre Novembre Décembre 1771
	•2 octobre 1771 → petite vérole : ‘elle a commencé à manifester vers le mois de M. Elle n’a point discontinué depuis... et un nombre prodigieux de noirs, même quelques blancs y ont passé, et y passant journellement. Ce n’est pas étonnant puisque pendant le cours de l’année dernière, le commerce particulier a procuré plus de 7000 noirs nouveaux, et je crois qu’il avait pas encore eu d’exemple d’une traite aussi forte...’
<b>COL -C4-28 1771-56</b>	•le 6 Octobre 1771 → Projet d’établissement pour le progrès de l’île: •une ville au centre de l’île favoriserait et protégerait les établissements qui se feraient de proche en proche → N’y ayant pas plus de maîtres dans les villes qu’il y en a aujourd’hui dans une seule...il n’aura pas plus d’esclaves. Je suis même persuadé que l’on verrait pas plus dans la ville militaire officiers de marine emmènent leurs domestiques blancs d’Europe...dans l’état actuel des choses, on ne peut parvenir à se faire servir des blancs parmi une multitude d’esclaves avec lesquels ils ne veulent..ne doivent être confondus.’
<b>COL -C4-28 1771-57-61</b>	•9 octobre 1771 → petite vérole
<b>COL -C4-28 1771-67</b>	•22 novembre 1771 → Deux frégates ...à Port Louis – chaloupe de guerre <i>The Hawke and Leceuf</i>
<b>COL -C4-28 1771-69</b>	•22 novembre 1771 → subsistance et état des grains à Bourbon → le riz tiré de Madagascar pour aller faire la traite au Mozambique
<b>COL -C4-28 1771-70</b>	•22 novembre 1771 → Montée du piastre → La <i>Normande</i> revenue de Madagascar sans un seul bœuf, et seulement avec cent quatre-vingt milliers de Riz. Mais elle a deux cent noirs pour le compte des particuliers’. → Le Commerce a traité 7,000 mille noirs et les bâtiments du Roy moins que je n’avais dit encore peut être aucun. → Le chef de traite du Roy est soupçonné de négliger les intérêts qui lui sont confiés pour faire ses affaires, celles de ses amis et de sa famille’ -Arrivée du <i>Jason</i> et de <i>L’Américaine</i> -Arrivée du navire espagnol <i>Le Tenerife</i> -départ de Desroches
<b>COL -C4-28 1771-74</b>	•23 novembre 1771 → Traite de bœufs Madagascar → Nous n’avons tiré cette année que mille bêtes à corne tout au plus et en supposant que <i>l’Africain</i> , <i>L’Ambulante</i> , et <i>Le Vaillant</i> qui sont encore à Foulpointe nous en rapportent 600. → -le 25 novembre : <i>l’Africain</i> est revenu avec 318 bêtes
<b>COL -C4-28 1771-82</b>	•25 novembre 1771 → Casernes évacués → casernes en palissade et couvertes de pailles – 24 cases pour loger 400 hommes
<b>COL -C4-28 1771-83</b>	•Traite des noirs pour compte des particuliers → L’Intendant lui donna une instruction pour livrer 8000 piastres au Capitaine, qu’il refusa. ..La <i>Normande</i> revenue, ‘elle rapporte seulement 180 milliers de riz, pas un bœuf, et environ 200 esclaves, on dit tout est pour Sr Amat. → Capitaine Sr Rosbo devait traiter des bœufs pour le Roy ..
<b>COL -C4-28 1771-90</b>	•26 novembre 1771 → petite vérole → l’épidémie tend à se dissiper entièrement. Elle s’étend au contraire dans les

	<p>campagnes mais avec la même b�nignit�..</p> <p>→ ..les gens les plus pr�venus sont forc�s de reconnaitre combien il �tait important d'�tablir l'h�pital hors de la ville.</p>
<b>COL -C4-28 1771-91</b>	<p>•26 novembre 1771</p> <p>→ L'Intendant lui reproche deux choses. Ne pas achever les routes de premi�re n�cessit�. Je n'ai que vingt noirs � moi...comme je jouis d'environ deux mois de 12 noirs que le Roy m'accord�</p>
<b>COL -C4-28 1771 -92</b>	<p>•26 novembre 1771</p> <p>→ Reproche de l'Intendant :,...il �tait n�cessaire de d�truire les noirs marrons �tabli dans le milieu de l'Isle, de rassurer les habitants qui y avaient des concessions, d ;encourager la culture dans cette partie important que j'ai place trois compagnies d'infrie . Liste d�taill� des travaux de construction.</p> <p>→ 'les noirs libres et blancs �taient confondus. J'ai s�par� les couleurs, j'ai attaqu� le vice et les crimes et j'ai au moins d�truit le scandale et le d�sordre.'</p>
<b>COL -C4-28 1771 Conseil Sup�rieur Premi�re -61</b>	<p>•8 D�cembre 1771</p> <p>→ M�moire pr�sent�e par L'Abb� Voysin</p>
<b>COL-C4-28 1771 -93</b>	<p>•Etat des d�penses de l'ann�e 1771</p> <p>→ ...on ne verra jamais clair dans les d�penses que lorsque tous les noirs du Roy seront vendus jusqu'au dernier. Le seul bon usage que l'on put faire c'est de former des matelots, mais les abus seront toujours plus grands que les avantages</p>
<b>COL-C4-28 1771 -96</b>	<p>•18 D�cembre 1771</p> <p>→ Concessions retir�es aux environs de la Baye aux Tortues</p> <p>→ Les d�vastations de Jacques Roux pr�s de la Baye aux Tortues jusqu'au de la de la Grande Baye sous le pr�texte de fournir du bois a pour le service du Roy</p> <p>→ Etat de l'environnement a cet endroit : pas une goutte d'eau</p> <p>→ Je viens d'apprendre qu'il a retir� tous les titres des concessions qu'il a pu surprendre aux habitants auxquels nous les avons accord�s au nom du Roy. il a voulu rendre inutiles des titres aussi l�gitimes et aussi respectables tels enfin que sans abus�e de notre pouvoir, nous n'avons plus celui de les annuler – il a, contre les termes expr�s de l'Ordonnance, donne des ordres arbitraires signes de lui seul et destructeurs de ceux que nous avons sign�s en commun.</p> <p>→ ...</p> <p>→ le m�me abus d'autorit� se commettait � l'�gard de quelques pauvres habitants des trois ilots qui sur la foi des Ordonnances des concessions que nous leur avons accord�es jouissaient paisiblement de leurs terrains, y avaient fait des plantations, m�me de caf�. On les leur arrachait contre tout droit pour favoriser les gens riches ou aim�s...</p> <p>→ je les ai r�tablis dans leurs propri�t�s par les ordres dont je joins ici copies..</p> <p>→ un de ces ordres �tait n�cessaire pour arr�ter l'indiscretion des arpenteurs et peut �tre de biens d'autres personnes.</p>
	<p>→ no.2 Copie d'un ordre donn� par M Poivre au Sr Merle arpenteur le 13 novembre 1771 – concernant terrain Grand mange a Trois Ilots</p> <p>→ Copie d'un autre ordre donn� par M Poivre au Sr Merle arpenteur le 21 novembre 1771 – concernant</p> <p>→ Copie d'un Troisi�me ordre donn� par M Poivre au Sr Merle arpenteur sans datte</p> <p>→ Copie de l'ordre donn� par le Chevalier Desrochers au Sr Merle arpenteur le 18 d�cembre 1771</p>
<b>COL-C4-28-98</b>	<p>•18 D�cembre 1771</p> <p>•Mr Desvaux de Marigny</p> <p>•Recommandation de Monseigneur</p>

4. LIST OF FIELDS AND THEIR EXPLANATION .....	157
5. USER MANUAL .....	159

## 1. PURPOSE

In order to arrive at an improved assessment of the volume of the slave trade to Mauritius, and the actual number of slaves having been disembarked in Mauritius, it has been thought necessary to start an inventory of all ship arrivals, using a variety of sources located in several countries. For various reasons, many ships do not list the number of slaves whom they are carrying and, therefore, this information has to be gleaned from other sources and all the 'snippets' of information correlated.

As most sources are to be found for the period 1767 onwards, when the Royal Government took over the island, this period has also been the focus of historians. This information is readily available through the works of Toussaint, Filliot and Allen. It was important, therefore, for the Commission to collate data for lesser-known periods: pre-1767 for the French East Indies Company period and post-1815, which was the period of the illegal slave trade. Also, since many Mauritians were anxious to know 'where slaves landed' for memorial purposes, it was thought necessary to delve into these periods.

It is also necessary to include in the calculations, those ships/persons/slaves destined for Mauritius, but who never arrived. A preliminary study has been undertaken with the assistance of Thomas Vernet who has provided the Commission with all the references relating to the slave trade to Mauritius from the East African coast, from his personal research. This includes, not only those who arrived, but also those who were embarked but never arrived, due to revolt, shipwreck, diseased etc. This information will be inserted in the database. Information is being compiled by Benigna Zimba from Mozambique to supplement this data from Mozambican Archives and, hopefully, in the future from Portuguese Archives.

A simple slave-trade database has been created which lists all ships arriving in Mauritius. This endeavour is similar to that compiled by Toussaint and, later, by Allen where all details of ship voyages are listed. All possible details have been listed about the voyages. The database has so far inputted information from the *Déclaration d'arrivées* found in the Mauritius National Archives, the *Affiches, Annonces et Avis Divers*. To complement this, the *Amirauté*, the *déclarations diverses* and the *registres de congé de navigation* has given additional information on tonnage, ship crews and owners. This was followed by selective searches in France which need to be continued. The Commission has also tapped into the work of numerous associations in France who are compiling data from French Departmental Archives on Mauritius. We have taken into consideration that some of this is the work of amateur historians and that much of the work is not referenced. Great care has been taken to verify the information provided by these associations.<sup>1</sup>

The database will serve the needs of future scholars, individuals and institutions as a reference tool. The database may be added to by scholars doing future searches in notarial deeds, inventories of possessions, Civil Status lists etc. for various studies.

We have taken into consideration changes in the names of ships, changes in tonnage, especially when primes were offered per *tonneau jauge* in 1784.

## 2. ANALYSIS OF DATA

There are many issues to consider, when inputting and analyzing the information compiled, and to be taken into consideration at the start of the study:

---

### Changes in the type of information supplied:

---

It has been observed that the first volumes indicate the number of slaves but cease to do so in subsequent volumes.<sup>2</sup>

---

### Ships from Madagascar are treated as suspect:

Ships from Madagascar needed to be all recorded. Although the number of slaves carried on board were also small, the voyages were frequent and numerous. Most carried beef and cattle, but slaves were often part of this cargo. Thus, all ships from Madagascar were listed, unless it was expressly stated that they were not carrying slaves. Will all these small but frequent voyages amount to a lot? We shall see.

---

### Ships trading during prohibition are treated as suspect:

Furthermore, ships arriving from slave trading areas during periods of prohibition i.e., before 1802 and after 1815, should all be treated as 'suspect', and as possibly carrying slaves but listed, for example, as '200 tortues'. A classic example of this is the *Sans Culotte* which, during the period of prohibition, could not officially carry slaves; thus officially it went to Madagascar to purchase rice:

*"Le traite des noirs étant interdite, nous prîmes des expéditions, pour Madagascar où nous devions charger du riz [...]"*

They did not go to Madagascar and went instead to Mozambique: "[...] nous fîmes dans cette île en très peu de temps et a beau compte une forte belle traite [...] Le 20 mai nous appareillâmes, ayant à bord 340 noirs."<sup>3</sup>

---

### Duplication:

---

When all the ships' lists consulted have been compiled, duplicates will be removed, as often the same ship had different names and so was listed twice. Records will be combined, when it is found that the same ship is listed twice.

---

### Changes in names:

---

The same ship changed names when it was sold. For example, Mesle de Grandclos from St. Malo sold several of his ships to the French Navy or to corsairs: the *Baron Binder* became *Duguay Trouin*, the *Sénégalien* became the *Allègre* and the *Américain* became the *Républicain*.<sup>4</sup>

---

### Confusing terminologies:

---

Some terminologies were confusing or were too general to be useful; i.e., the location African Coast or "Côte d'Afrique" did not indicate whether it was from East Africa or more South-Eastern

---

Africa.

Once this data is compiled, it can be scrutinised by statisticians, and an idea formed of how many came as slaves to Mauritius, and of their value. Added to this compilation will be those who were embarked in their country of origin but who never arrived for various reasons.

This will allow scholars to make the following statistical analysis:

Number of voyages towards slave trading zones of which:

x% of voyages sure to have embarked slaves

x% of voyages for which there is a strong possibility of slaves on board.

If it is not possible to estimate, with greater accuracy, the number of slaves, one can at least find the number of ships that arrived with slaves.

### 3. THE 'VOYAGES DATABASE'

The 'Voyages Database' aims at helping researchers to analyse the slave trade happenings for the period 1715-1848. The database keeps data about the ships involved in the slave trade. Ship data, such as the length, depth, draught are recorded. Information about the different ports where slave trade occurred are also recorded. The database also allows to keep track of the different voyages happening during that period in time. Details of events occurring during the voyage are also recorded, for example, dates of departure, date of arrival, the different stops made along the journey, and any trade happening during those stops. We also keep track of the status of voyages.

The database generates dynamic summary reports such as:

1. The number of voyages during a specific period of time;
2. The number of slaves on board at Port Louis for different years;
3. The number of stops for a particular voyage;
4. The number of voyages undertaken by a specific ship;
5. The number of voyages undertaken by specific year and ship; and
6. The outcome of different voyages (e.g. completed as intended, wrecked, captured by the British).

Many of these reports are accompanied with graphs (line charts, pie charts) which allow the large amount of data to be interpreted through a visual interface. This will enable easy analysis and interpretation of results. Such graphs will also highlight trends during specific periods in time.

The database has been designed in such a way that it provides a user-friendly interface for both data entry and analysis of data. The database is secured and requires user authentication. It also provides different levels of access. It has been developed over a web-based architecture, so that maintenance is easy. The database is deployed using Open Source Software such as Apache, MySQL and PHP.

In order to save on the amount of data entry to be done into the database, the data from the Excel sheets available were imported into MySQL and an interface created to sanitise the data. A PHP script was then written to transfer the relevant voyage records to the voyages database. Ships are given a sequence number, since different ships can have the same name and flag. The script written causes any repeating ship's name to have a sequence number higher than the last encountered one. It will be up to the researchers to determine, based on the voyage details, whether they consider these to be the same ship and make necessary updates.

Subsequent entries into the database will have to be done *via* the user interface forms provided with the system. The system allows for details that can be re-used to be selected from drop-down lists, and these lists can be dynamically populated.

The database has been designed in such a way that it allows flexibility - for example, if a new outcome for ships is encountered, this can be easily added to the system and the reports will reflect the new changes. The design of the database is such that it can be easily upgraded to cater for other periods of time and other types of voyages in the future. The different entities involved in the voyages database are shown in the UML class (fig. 1). Some sample input screen and sample report for the database (figs. 2-7). These are based on sample data entered into the system and do not reflect actual data.

## 4. LIST OF FIELDS AND THEIR EXPLANATION

<b>Name of ship</b>	According to Toussaint, this appears generally accurate, although sometimes names are misspelt. Many are names of females, of places with freemason connotations ( <i>Deux Amis, Trois Frères</i> etc.)
<b>Name of ship master</b>	Mortality being high on board, often the name appearing at beginning of the voyage is different from that at destination, as the person may have died during the voyage
<b>Name of owner</b>	This is obtained from the <i>congés de navigation</i> or private papers.
<b>Type of ship</b>	This is either a <i>bâtiment</i> , a <i>navire</i> or a <i>vaisseau</i> . According to Toussaint, all of these could include large and small ships. However, Toussaint recorded at least 24 different types of ships. There were also privateers (corsairs), semi-privateers and Company ships most of which would be armed.
<b>Nationality</b>	Private merchant ships would rarely be armed.
<b>Port of registry</b>	Many ships were registered in France, but once here, they were commissioned for shorter local trips, such as the slave trade and were involved in the quadrangular trade. So they are also listed as registered in Mauritius. Those built in Mauritius and moving solely between Mauritius and Bourbon are 'Creole' ships but do not sail on other longer routes.
<b>Tonnage</b>	This was generally calculated in French <i>tonneaux</i> , while for foreign ships, it is not possible to state according to Toussaint whether foreign measurements of tonnage were used. The French <i>tonneau de jauge</i> corresponds to 42 cubic feet or 1.44 cubic metres. The British freight ton is 40 cubic feet or 1.132m.
<b>Armament/Artillery</b>	This refers to arms and ammunition carried by ships, usually carried by slaving ships ( <i>négrriers</i> ), corsair ships, Company ships (Indiamen). Information on this is derived from the <i>congés de navigation</i> .
<b>Crew</b>	The crew consisted of roughly one man per 10 <i>tonneaux</i> , according to Toussaint. Therefore, any ship which was not a military or corsair, carrying more than this, would be considered as carrying more than the cargo stated, i.e., slaves.  Crew would often consist of Europeans/Americans, <i>lascars</i> , African slaves etc.
<b>Passengers</b>	Information may not be complete for this as ships were not required to state the number of passengers. However, the <i>Affiches, Annonces et Avis divers, déclarations d'arrivées</i> , would have this information.
<b>Cargo</b>	The part that interests us most is the slave cargo which normally should be recorded by the Customs Department, but no records are found for this for early years. The slave cargo is to be inferred from the destinations and arrivals. Wine, foodstuffs, textiles, domestic products and manufactured goods, in order of priority, would be listed as well as slaves and animals. The provenance of a ship, as well as large amounts of food and water on board, can help us determine whether slaves would have been on board or not.

<b>Destination</b>	Almost all long-distance trading ships came to Isle de France, not Bourbon, which had no facilities for repair and no safe harbour. Even short-distance trading ships came to Mauritius on their way to, or from, Bourbon. It is important to know for our purposes if a ship was in transit ( <i>en relâche</i> ) or if the final destination was Mauritius as this would determine whether the final destination of the slaves was Mauritius or not.
<b>Ship details</b>	This includes ship's name, nationality, type (legal/illegal) or type of boat, date and place of construction, length, width, depth, draught, tonnage, guns and weapons, port of armament, <i>Armateur</i> /owner, Insurer, name of Captain, Crew, No. of crew, Cargo, death of crew, the voyage.
<b>Origin</b>	Means the country of origin or seaport from which the ships came to Port-Louis. This information is not always available in the different sources studied, especially for triangular slave trade voyages, but nevertheless, according to Toussaint, <sup>5</sup> most of the voyages had their starting point in Isle de France.
<b>Date of Sailing</b>	The date of sailing is very often not complete; for example, in some cases, the year might be missing. This information is available in the <i>Amirauté</i> and <i>Police Records</i> .
<b>Ports of Call or Stops</b>	Ports of calls were more present during triangular trade voyages, also known as <i>long cours</i> trade. We can guess that it was for supplying needs. We have many examples of stops throughout the various sources, and we can also examine the ships of different nationalities that came to Isle de France.
<b>Accidents and Incidents</b>	Accidents during voyages vary, from hurricanes, diseases on board and slaves revolts; these cases are available in the <i>Amirauté</i> Records and <i>Sous-Série Colonie C4</i> .
<b>Date of Arrival</b>	We agree with Toussaint's observation that we can never know accurately whether the date of arrival stated in the <i>Amirauté</i> Records is the actual date of arrival of these ships. It is difficult to determine whether the ships have spent one day or more in the port, before the entry was made in the <i>Amirauté</i> Records. Nevertheless, the duration of voyage is available for some ships.
<b>First stop</b>	Fields would include the several stops made by the ship by numbering the stops e.g., stop1: no. of slaves, no. of men, no. of women, no. of boys, no. of girls/stop no. 2 would include similar details thus, stop2, totalslave2, men2, women2, boys2, girls2. The date of return (Port return), date of return (Date return), no. of Men, Women, Girls, Boys.
<b>Observation</b>	Fields are left also for 'observations under'.
<b>Results of voyage</b>	This includes the number of ship again, the principal country behind the trade (country principal), the location of the principal, Circumstances of any interruption, the event, its date, place of interruption of the voyage, wreckage, prize, fire, mutiny, Port of return, date of return and observations.

## 5. USER MANUAL

### Slave Trade Database User Manual

The Slave Trade Database contains details about voyages dealing with slave trade. The Slave Trade Database has been built around Open Source Technologies, namely Apache [2], MySQL [3] and PHP [4].

To deploy the application, MoWeS Portable II [1], has been used and provides for set-up of WAMP on any Windows system. To launch the database, open the contents on the pen-drive provided and double-click on "*TJC-DoubleClickMe*". This will launch the different services (Apache and MySQL) and the application will start, as shown in Figure 1 below.

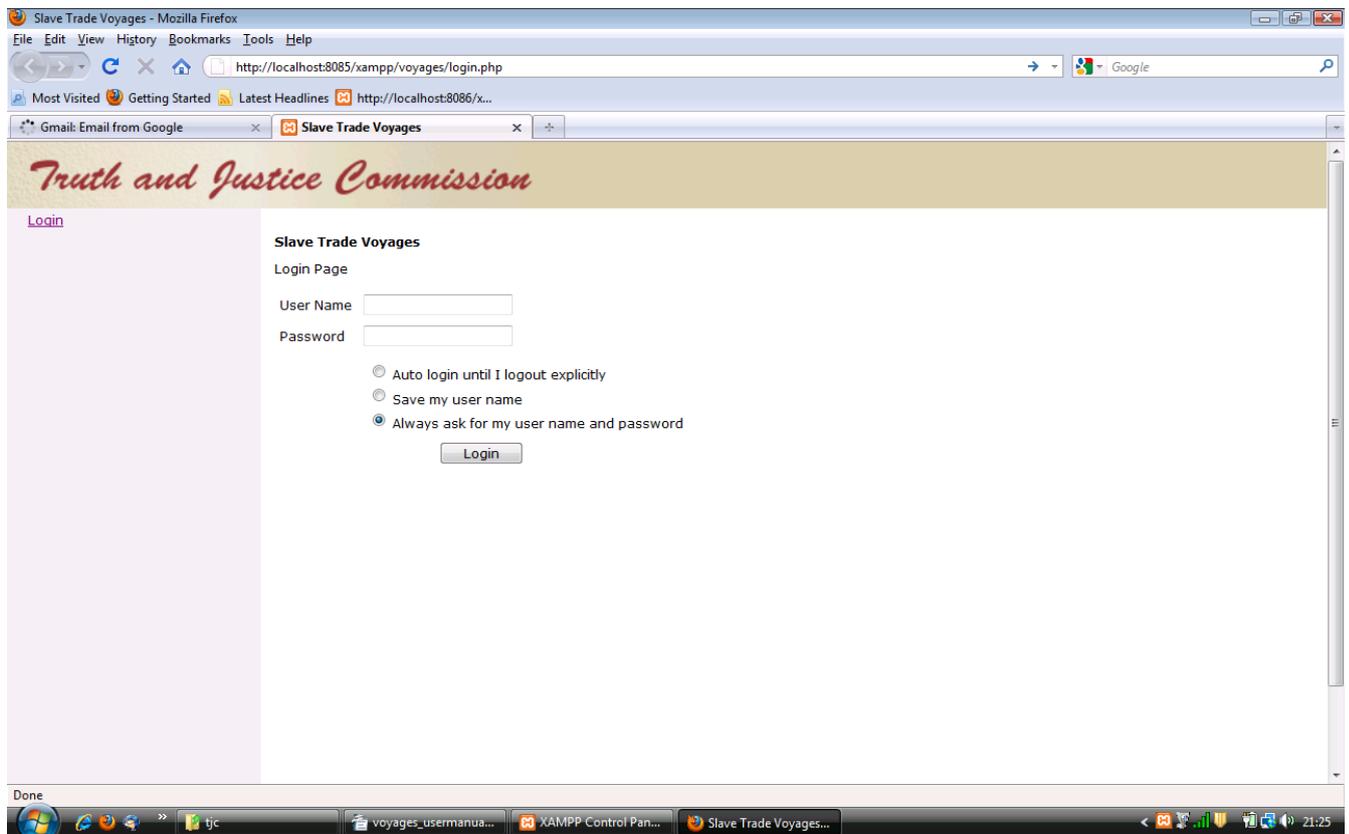

Figure 1: Slave Trade Database Launched

The *User Name* "tjc" and *Password* "tjc" gives full access to the system, as shown in Figure 2.

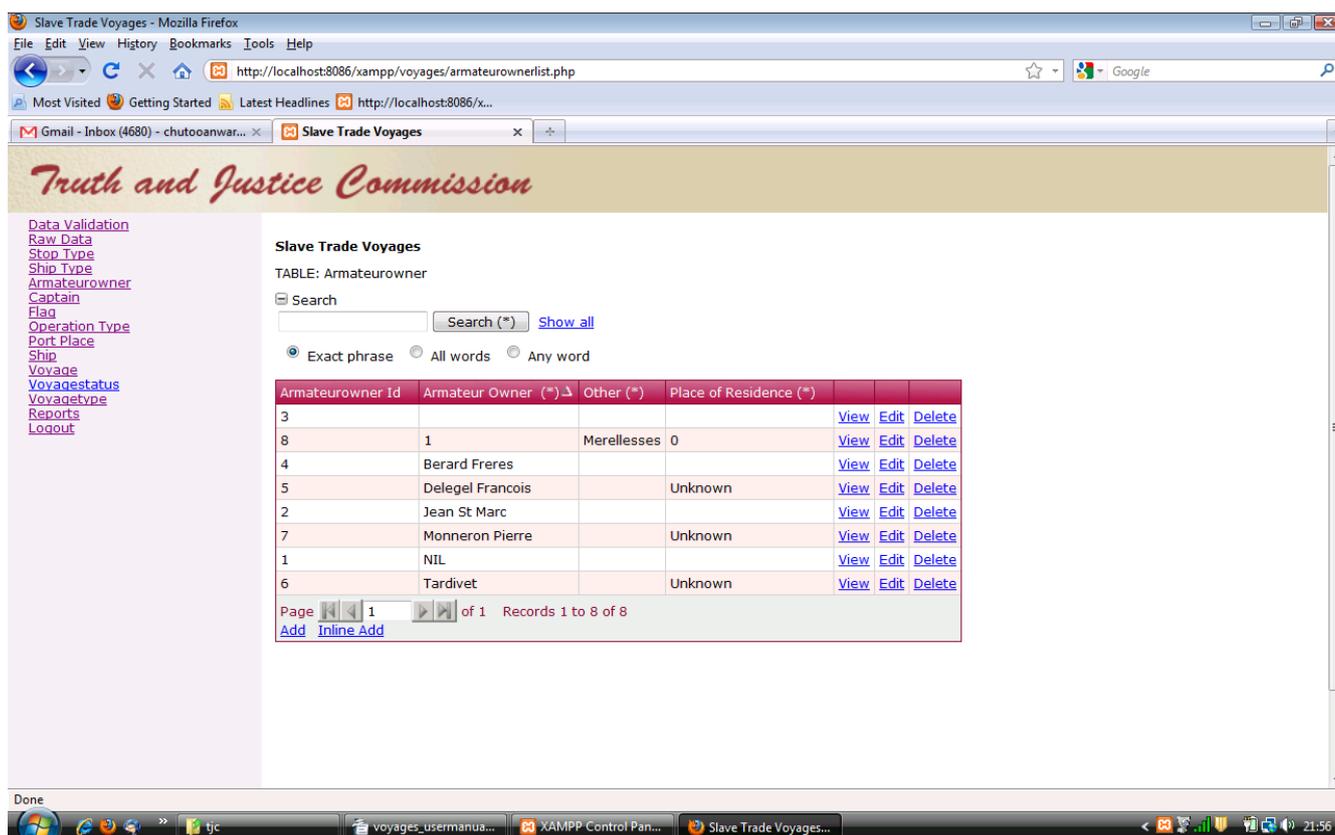

Figure 2: Slave Trade Database

The menu on the left allows the users to navigate to different pages of the system. All the pages, except for report, are modeled in a consistent way: the user is presented with a list of existing entries and he/she can view, edit or delete the entry, while he/she can also add a new entry. The different categories are for example ships, captain, *armateur*/owner ports and voyages. The purpose of each of these is summarized as follows:

1. **StopType**: Defines the different types of stops made by the ship during the voyage (examples could be *traite*, *ravitaillement*)
2. **Ship Type**: Defined the type of ship (examples are *Vaisseau*, *Navire*)
3. **Armateur/Owner**: Define the *Armateur* and owners of the ship for the voyage
4. **Captain**: Defines the captain for the voyage
5. **Flag**: Defines the countries the ships were listed with
6. **Operation Type**: Defines the different types of operation that can happen (armement, désarmement)
7. **Port Place**: Defines the different ports
8. **Ship**: Defines the details of the ship
9. **Voyage Type**: Defines the types of voyages (*négrier*, unknown)
10. **Voyage Status**: Defines the outcome of the voyage (completed as intended etc)
11. **Voyage**: Defines details about the voyage.

The main page for the database is the Voyage link, while the other pages are used so that the different values can be viewed as drop down lists when entering voyage details, as shown in Figure 3 below, where the Type field is showing values entered in the Voyage Type:

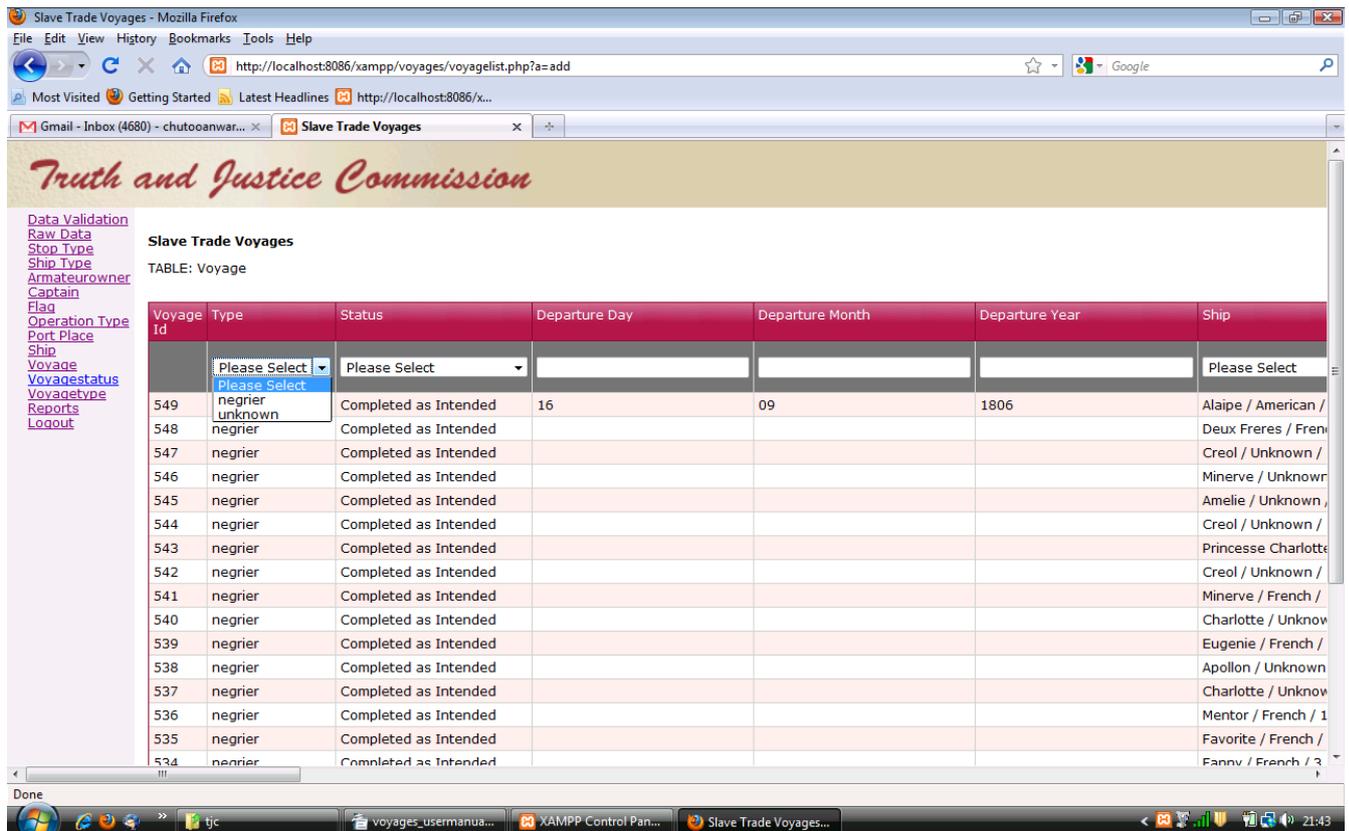

Figure 3: Entering Voyage details

The above mechanism allows the system to be extensible in the future, by allowing new parameters to be entered into the system. The different reports created for the system will be automatically modified accordingly.

Once basic details about a voyage is entered, other parameters like the *VoyageCaptain*, *VoyageArmateurOwner*, *VoyageStops*, *VoyageOperations*, *VoyageTonnages* can be filled in by scrolling to the right of the document and clicking on the relevant links. These options are kept separate from the main entry page, since there can exist more than one of each of them. The model adopted is that of the master-detail pages, where the master can have many related detail records. For example, on clicking on the *VoyageOperations* link for a voyage, the following page is displayed, as shown in Figure 4:

**Slave Trade Voyages**

Master Record: Voyage  
[Back to master page](#)

Voyage Id	Type	Status	Departure Day	Departure Month	Departure Year	Ship	Port Armement	Departure Port/Place	Arrival Day	Arrival Month	Arrival Year	Arrival Port/Place	Total Slaves Embarked	Slaves Onboard At PLouis	Crew	Crew Death	Navigation Time
547	negrier	Completed as Intended				Creol / Unknown / 2	0	0	14	06	1807	Isle de France	18	18	0	0	

TABLE: Voyage Operation

Search   [Show all](#)

Exact phrase  All words  Any word

No records found  
[Add](#) [Inline Add](#)

Figure 4: Page allowing Voyage Operations to be added

On clicking on *Add* or *InlineAdd*, the operations for that voyage can be added.

The raw data link contains all data that had been entered into an Excel sheet and has been imported into the system, although they are not sanitized data.

Different reports have been created to represent the patterns of the voyages. These can be accessed by clicking on the *Reports* link in the menu, and clicking on the drop down list "*Reports*", where the different reports available in the database will be shown. This is illustrated in Figure 5 below.

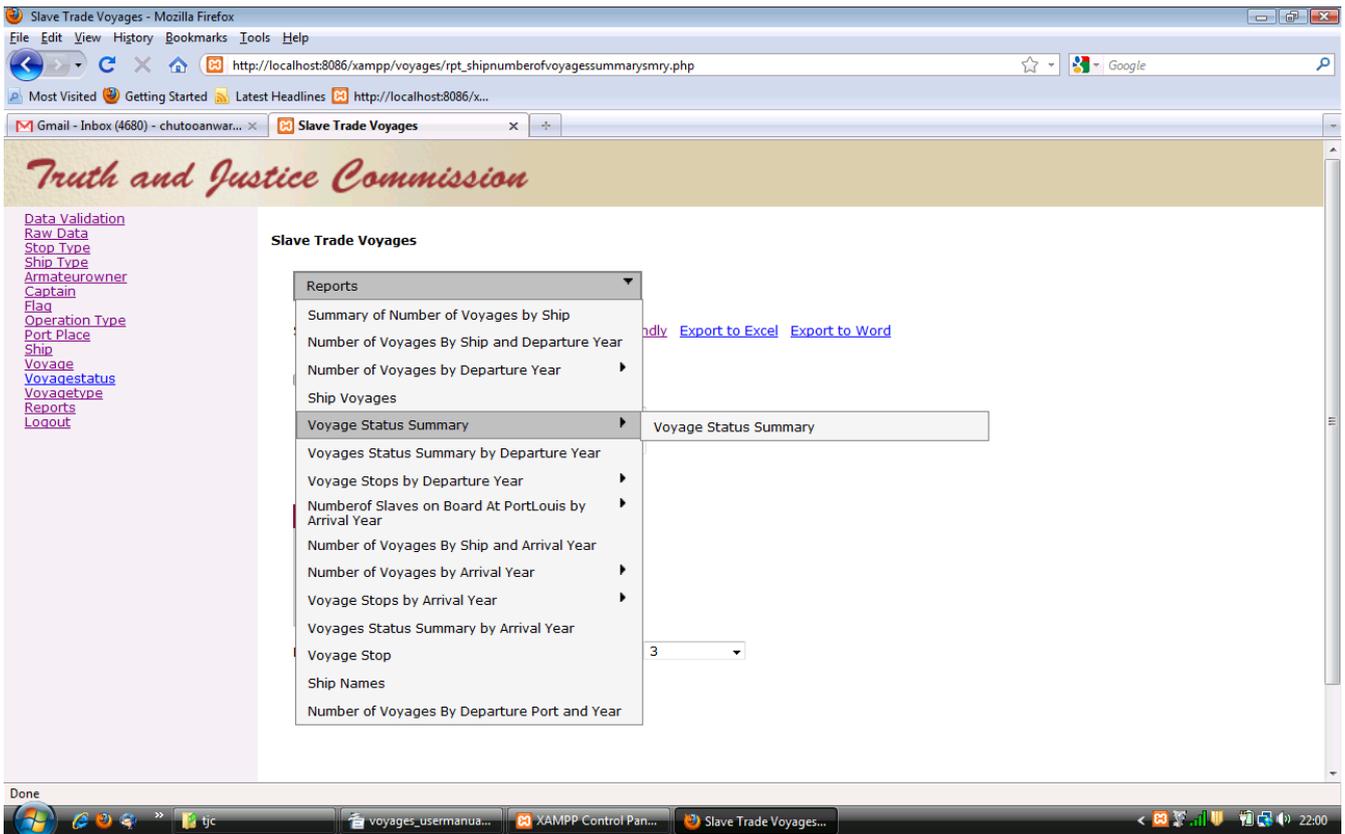

Figure 5: Accessing reports in database

The data accessed *via* the different reports can be exported to Excel, Word or HTML with the menu removed, by clicking on the Export to Excel, Export to Word, Printer Friendly links respectively. This allows the data to be easily extracted from the system. The reports also contain diagrammatic representations of the data (line charts and pie charts), as shown in Figure 6:

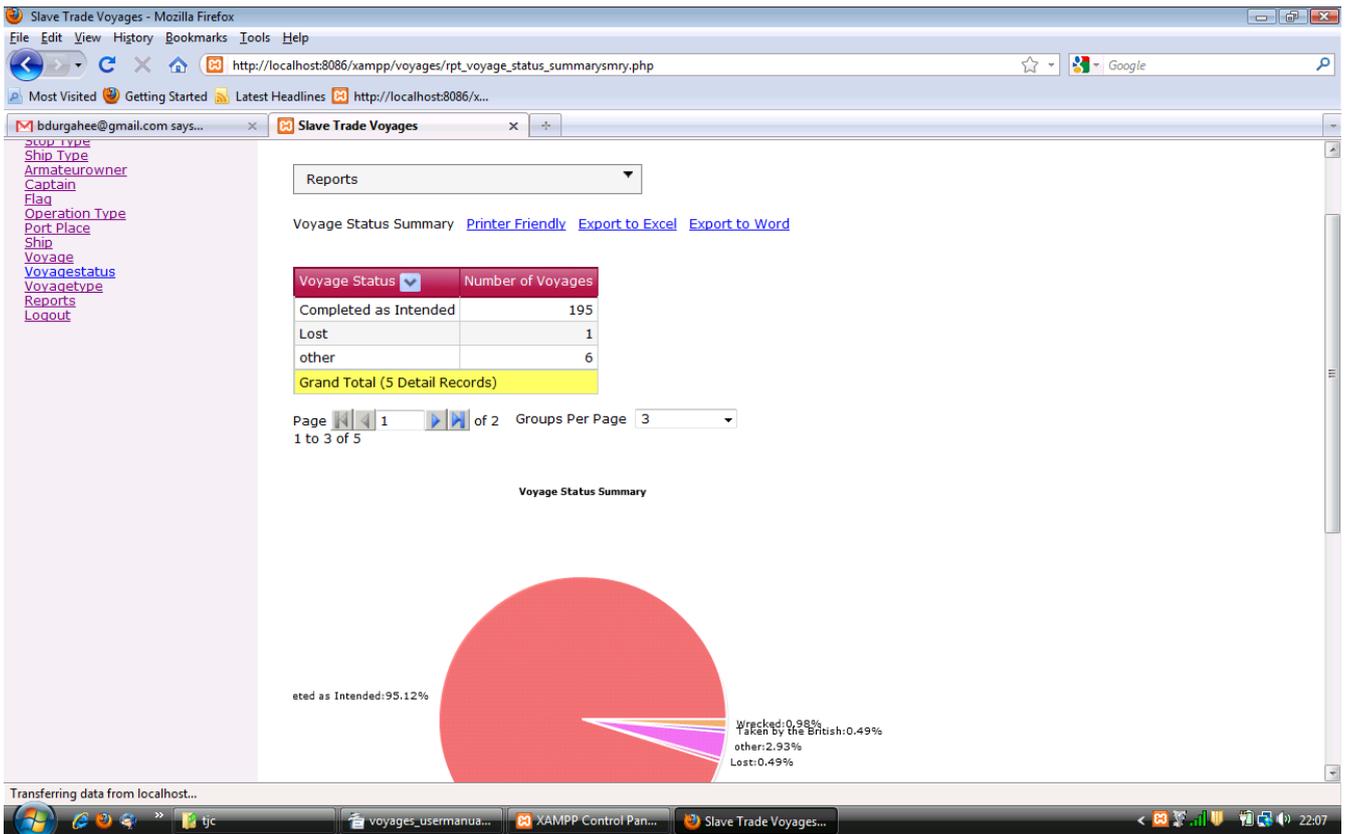

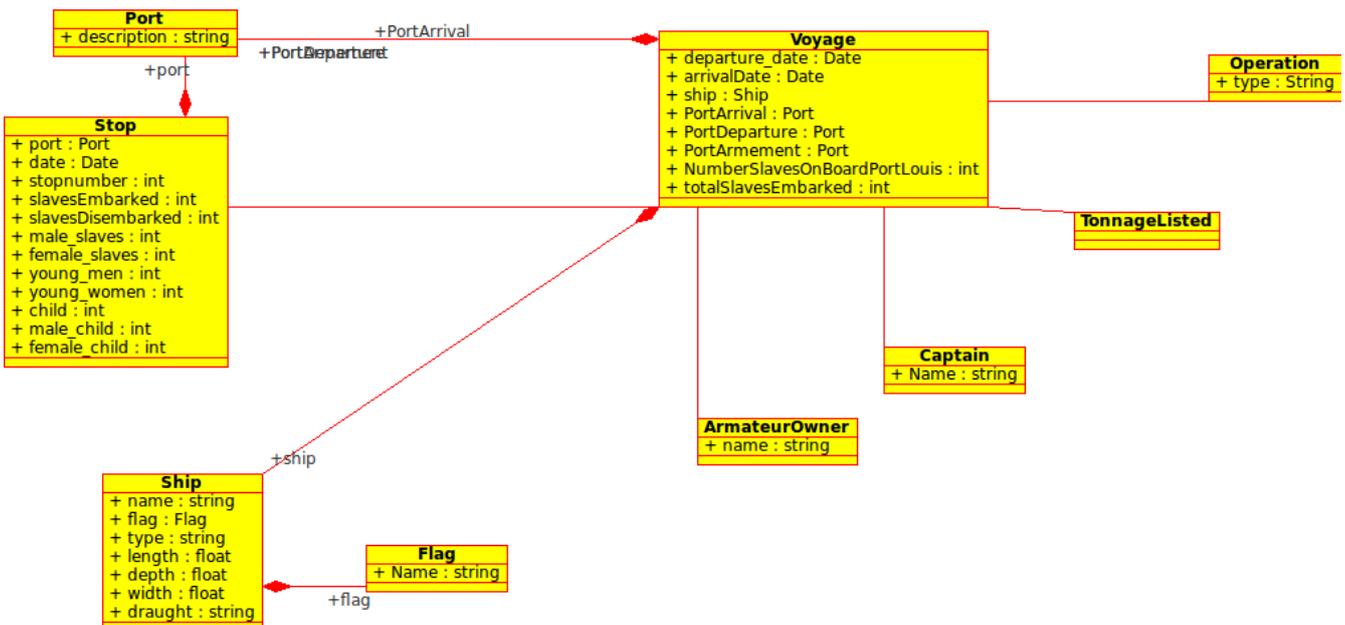

Figure 6: Showing sample Pie Chart

All the reports created in the system are dynamic. That is, they reflect the actual content of the database. If new data is added, the reports will change accordingly.

**Technical notes:**

The overall system can be modelled, using the following class diagrams:

A voyage is composed of the following entities: Ship, PortArmement, PortArrival, PortDeparture, Stops, Armateur/Owner, Captain and the Tonnage listed. The voyage can consist of more than one Captain (following death of the first Captain for example), many stops, and can have different Tonnages as reported from different sources.

- Although the database has been distributed via MoWeS, the different services (Apache, MySQL, PHP) can be installed on a computer and the relevant files restored as appropriate. This can give better performance.
- The port on which the Apache within MoWes is listening is port 8085. If this port is already in use in your system, modify the configuration for Apache to listen to a different port.

## INTRODUCTION

In our Mozambican pre-colonial history, the period between 1790/95 and 1842 is important to slave trade to Mauritius, the Mascarenes and Réunion. Around 1815-20, in the Zambeze Valley the annual export of slaves reached 2,500 to 4,000. The first official Portuguese abolition of slave trade in 1836, did not result in the substantial reduction of these numbers of slaves traded to the ports of the Indian Ocean.

**Main agents involved in the process of capture and internal selling, before slaves embarked in the ports of the exportation.**

- **African Agents:** Yao, Xeiques from Afro-Islamic kingdoms such as Quitangonha, Sancul, Sangage and Angoche), *prazeiros* from the Zambeze Valley, Portuguese colonialists from Inhambane, Nguni groups that dominated in Delagoa Bay and Barra do Limpopo in Gaza.
- **Foreign Agents:** Xeiques from Afro-Islamic territories such Zanzibar, East Africa, Kenya, Somalia, French, Portuguese and Indians.

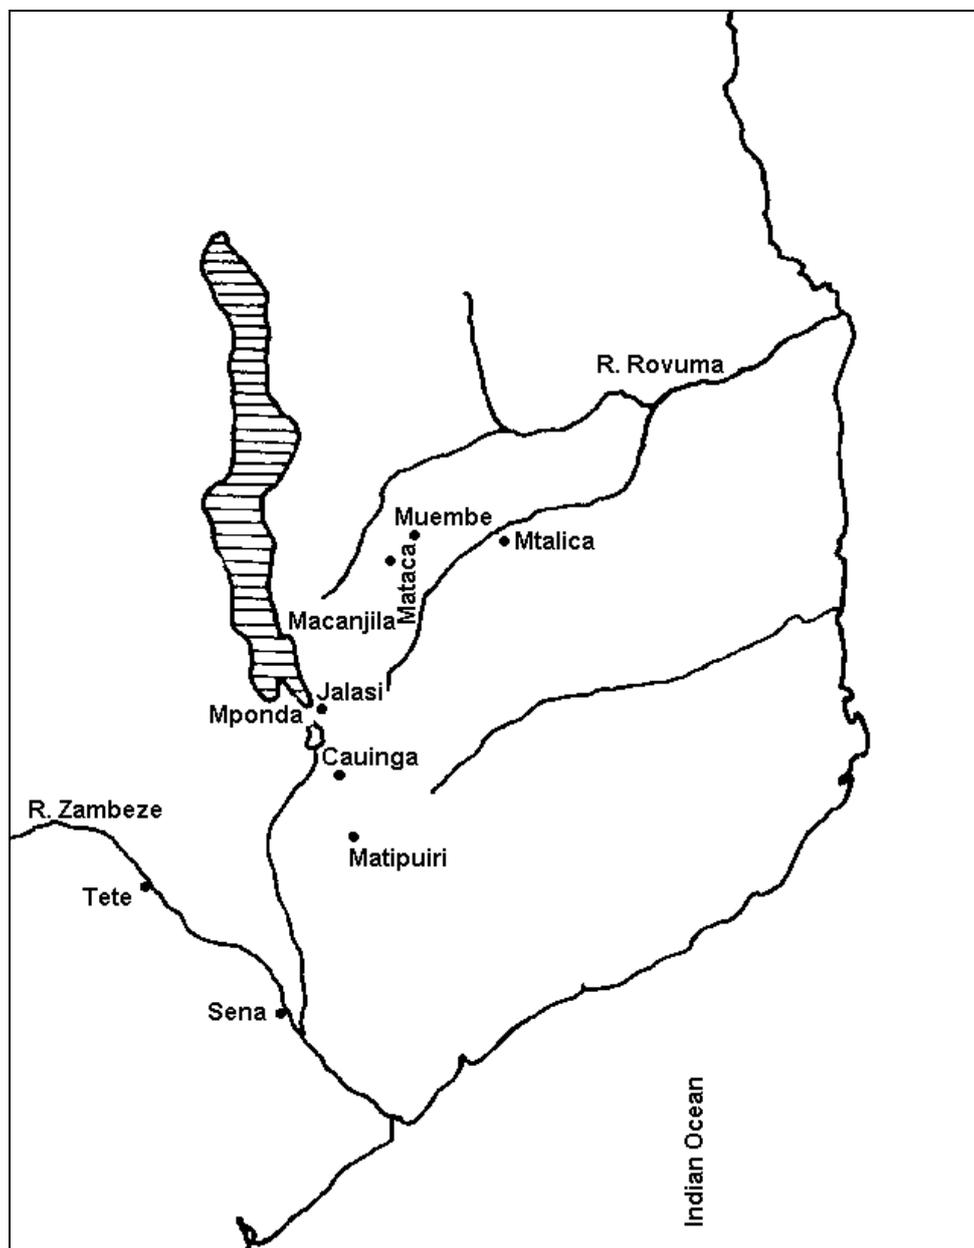

**Main ports for export of slaves:**

- Ilha de Moçambique, Ilha do Ibo, Tingué, Angoche, Quelimane, Sofala, Inhambane, and Delagoa. In other words, exports occurred from practically all over the coast.
- It is always important to distinguish between place of capture and ports of selling. Again, from North to South, in this period, slaves came mainly from:
- Niassa, regions inhabited by the Macua - Lomué, Xeicados of Sancul, Sangage, Quitangonha, and Angoche, Inhambane, Delagoa.

## THE IMPORTANCE OF THE YAO STATES

The importance of the Yao States to the volume of slave exports from Northern Mozambique to the Indian Ocean

Figure 1: The Yao States during the second half of the nineteenth century

Source: *História de Moçambique: Primeiras sociedades sedentárias e impacto dos mercadores (200/300-1886)*, 2nd ed., vol. I (Maputo: Departamento de História da Universidade Eduardo Mondlane, 1988:123).

In Northern Mozambique, Mtaça and Mkanjila were two of the most important African States which played a crucial role in the enslavement of the local population.

The Mtaça State was founded by Mtaça I, Che Nyambi (governed between *ca.* 1850 to 1878-79) was the brother of Aku Azitini (Ms.) and for most of his government Che Mtaça I lived in Muembe,

formerly also known as Nove. Mataca I might have ascended to the power around the 1850s, which is when the Portuguese presence in the Niassa territories, occupied by the Yao, was very weak. It is interesting to note that a "Mataca" Chief/King is always chosen among a council of women of the Mataca family. The women must be the sisters of Mataca main rulers, and so the elected people are actually the nephews of the Mataca.

According to David Livingstone and other sources in 1866, Mataca I lived in Muembe or Mwembe, which is a region that is still located in today's District of Muembe; at that time, about 1000 people inhabited Muembe, the capital of the Mataca State.<sup>1</sup> In the 1860s, Mataca I, Che Nyambi, was a powerful statesman and well-connected to the commercial routes that linked the interior of Niassa with the Indian Ocean.<sup>2</sup> Because of a strong wave of Ngoni invasions, Mataca I moved out of Muembe in 1878-1879 and resided, for a time, on the Eastern side of the Luângua River. He died there in 1878-1879 and he is buried in Mkonde.<sup>3</sup>

The State of Makanjila emerged around 1870-71 and, together with Mataca, was an indispensable source of slave trade to the Islands of the Indian Ocean including Mauritius. Yao Chiefs bearing this name usually belonged to the Phiri clan. They inhabited regions of the Masaniga territory. In 1866, when Livingstone traveled through this region, the Makanjila lived in M'sawize, which is located Eastwards of Mavago.<sup>4</sup>

In the following table, one aspect that should attract our attention is the port where slaves departed to the Indian Ocean. A significant number of slaves were exported from Ilha do Ibo (Northern province of Cabo Delgado) and were part of the slave caravans coming from the Yao States, particularly those under the leadership of Mataca in Makanjila.

During the period between the late 18<sup>th</sup> and first two decades of the 19<sup>th</sup> century, Ilha do Ibo was negatively affected by frequent attacks of the Sakalavas and the Makhuwa resistance against trade and enslavement of the local population. This situation changed from 1820 onwards, when Ilha do Ibo became an important port of slave exports. Until *circa* 1830, Yao merchants traded exclusively with French slave traders. After 1830, the Yao slave trade from Ilha do Ibo extended to the Americas.<sup>5</sup>

Year	Ship	Trip known or port of departure	Observations	Destination
1857	Portuguese Lancha: <i>Azem de Janga</i> .	Ibo - Zanzibar	Some Slaves, 12 members of the crew, 4 passengers, 2 Bathias (1 <i>melitane</i> & the other <i>baizano</i> ).	Zanzibar
1857	Portuguese Lancha: <i>Boa Noticia</i> .	Ibo - Moçambique	Some Slaves, 14 members of the crew e 1 passenger (Baneane)	Moçambique
1857	Bate Portuguese <i>Palmeira</i> .	Ibo - Zanzibar	Merchandise and slaves, 12 members of the crew e 1 passengers Portuguese.	Zanzibar
1857	Portuguese Lancha: <i>Tejara</i> .	Ibo - Zanzibar	Diverse merchandise including slaves, 11 members of the crew.	Zanzibar
1857	Portuguese Lancha: "20 de Novembro".	Ibo - Zanzibar	Left with few slaves 14 members of the crew.	Zanzibar
1857	French <i>Barca: Maris Stelle Aigle</i> .	Bourbon - Ibo - Madagascar.	Left with slaves including 19 members of the crew e 2 French passengers	Madagascar
1857	Pangaio Arabe: <i>Jacimini Parfaite</i> .	Moçambique - Madagascar	Few slaves, 17 members of the crew & 1 French passenger	Madagascar
1857	Pangaio: <i>Dungomora</i> .	Ibo - Zanzibar.	Left with slaves including 20 members of the crew & 4 passengers (Mujojos).	Zanzibar

1857	<i>Patacho Amburguer.</i>	Zanzibar - Ibo - Moçambique.	Diverse merchandise, few slaves, 8 members of the crew, 1 Portuguese passenger and 1 passenger (mujojo).	Moçambique
1750	<i>Pangaio árabe: Fatather.</i>	Madagascar - Ibo.	Captain Abdala Arribado, 40 members of the crew.	Ibo
1857	<i>Lancha Portuguesa: Cosinga Maji.</i>	Ibo - Moçambique.	Left with few slaves, 8 members of the crew e 4 Portuguese passengers.	Moçambique
1857	<i>French Barca: Maris Sletle.</i>	Ibo - Moçambique - Madagascar	It took slaves from Ibo Island to Moçambique, 19 members of the crew, 4 French & Portuguese passengers	Comores
1857	<i>Pangaio árabe: Massa Panga.</i>	Ibo - Zanzibar	17 members of the crew & slaves	Zanzibar
1857	<i>Brieu Frances: Alirendrs.</i>	Ibo - Nocibes	15 members of the crew & slaves	Nocibes
1857	<i>Arabic Pangaio: Ambucange.</i>	Ibo - Madagascar	Taking 1 Captain, Sahide, & 10 members of the crew.	Madagascar
1857	<i>Pangaio: Filmote.</i>	Ibo - Madagascar	14 members of the crew, 1 Captain, Amicu.	Madagascar
1857	<i>Arabic Pangaio: Fatlather.</i>	Ibo - Madagascar - Mauritius.	Left with a few slaves including 21 members of the crew.	Anjo & Mauritius
1857	<i>Arabic Pangaio: Parate.</i>	Ibo - Madagascar	18 members the crew, 1 Captain Assene and 3 passangers <i>Bathias</i> .	Madagascar
1860	<i>Portuguese Lancha: Novidade.</i>	Ibo - Quiloa	Merchandise, 6 members of the crew and 1 passenger	Quiloa
1865	<i>English Lancha. Situation.</i>	Ibo - Cruzeiro	Merchandise and more than 16 slaves.	Cruzeiro

Table 2: Ships traveling from Mozambique on the route to the Mascarenes, 1857 to 1867

Year	Ship	Trip known or port of departure	Observations	Destination
1857	6 Arabic <i>Pangaios</i> .	Mocímboa - Moçambique - Mauritius & Reunion	All <i>Pangaios</i> carried unspecified number of slaves & members of the crew	Mauritius & Reunion
1857	French ship <i>Alphonsino &amp; Nantes</i> .	O'Amira Island (Cabo-Delgado) - Reunion	Loaded exclusively with slaves Members of the crew	Reunion - Seychelles
1857	French Ship: <i>Maris Stelle</i> .	O'Amira (Cabo-Delgado) - Madagascar	Left only with unspecified number of slaves 19 members of the crew	Madagascar
1860	<i>Pangaio Arabe: Jacimini.</i>		It took slaves, varied merchandise, & 17 members of the crew	Madagascar
1853	Ship <i>Amburguer</i> .	Ibo - Moçambique (Island)	The ship took slaves to Moçambique (Island)	Mascarenes
1750	<i>Pangaio árabe: Fatather.</i>	Madagascar - Ibo - Moçambique	Merchandise that included slaves	Mauritius
1857	Ship French: <i>Maris Stelle</i> .	O'Amira (Cabo-Delgado) - Moçambique	It took slaves from O'Amira (Cabo Delgado) to Moçambique (Island), 19 members of the crew, & 4	Comores

			passengers	
1866	Ship French: <i>Alirendrs.</i>	Moçambiqu& Seychelles	Transported slaves brought to Moçambique (Island) by 6 Arabic <i>pangaïos</i>	Seychelles
1867	Arabic <i>Lancha: Fatlather.</i>	O'Amira (Cabo-Delgado) - Madagascar	This lancha left with slaves & 21 members of the crew	Anjo

**Documentary Source:** Fundo do distrito de Cabo Delgado: Movimento do Porto da Island de Ibo, 1857; Vila do Ibo: Comunicado. In: Fundo do distrito de Cabo Delgado: Movimento do Porto da Ilha do Ibo; Fundo do distrito de Cabo Delgado: Movimento do Porto da Ilha de Ibo, 1860; Fundo do distrito de Cabo Delgado: Mov. Port. Ibo, 1853; Fundo do distrito de Cabo Delgado: Movimento do Porto da Ilha do Ibo, 1850; Fundo do distrito de Cabo Delgado: Movimento do Porto da Ilha do Ibo, 1866; Fundo do distrito de Cabo Delgado: Movimento do Porto da Ilha do Ibo, 1867.

The majority of ships that came to do the traffic, were under disguise and had a number of small *pangaïos* (small boats) which used to collect slaves within satellite ports and/or other far away located points of concentration. It is important to note that they first gathered slaves and then transported them to bigger ports, to be transported in big ships.

In the case of French merchants, they always had 6 to 10 *pangaïos* responsible for bringing slaves in small numbers from satellite ports. From these, slaves were then transported in bigger ships towards the Comores, Nocibes, Anjo, Mauritius, Réunion and Seychelles. Local merchants known as *Mujojo* (or *Ajojo*) were responsible for the capture and sale of the slaves transported in *pangaïos*, in small numbers.

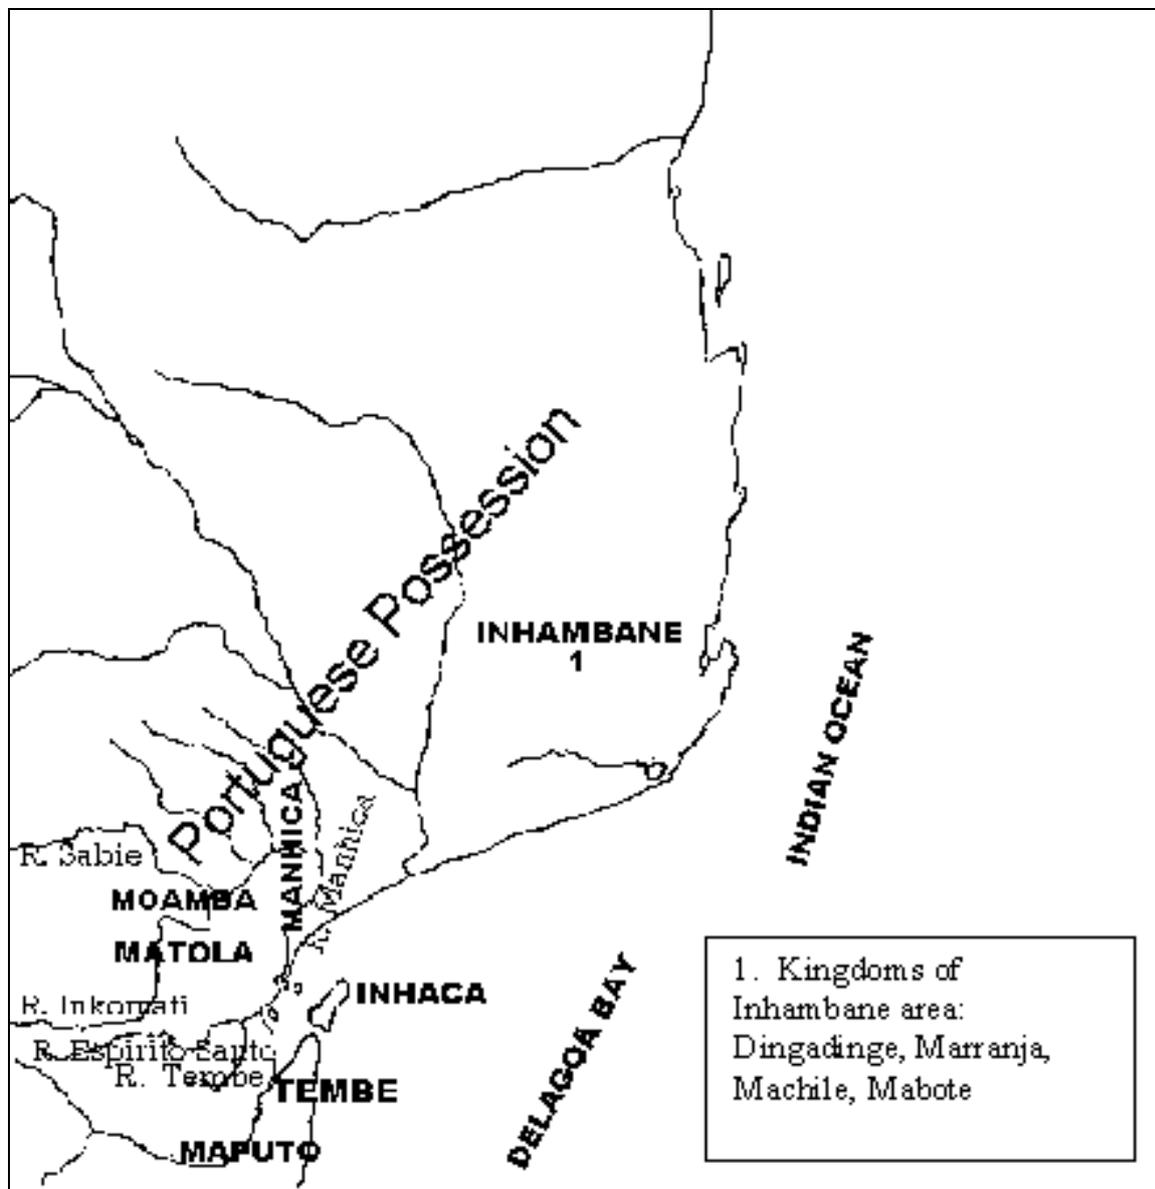

The *Mujojo* were merchants, mainly inhabiting Cabo Delgado, and specialized in the sale of slaves and cloth known as *fazenda* and *fazenda cafreal* (Kaffir cloth). The *Mujojo* also used to steal slaves from one place to another and redirect the trade of slaves according to the needs of the merchants of ships that transported the slaves to the Mascarenes. These Mozambican archival sources do not clarify precisely, why the *Mujojo* often formed part of the passengers in the trips to the Islands. It is also unclear if they returned to Mozambican territory for further transactions.<sup>6</sup>

Another concept that deserves our attention is "Baneane." *Baneane* were Hindu merchants coming originally from Surate and Cambaya, who had settled in Diu and Damao. They first started commercial transactions with Eastern Africa, from the beginning of the 16<sup>th</sup> century.<sup>7</sup>

By all means, and to a certain extent, both *Mujojo* and *Baneane* are definitely part of Mozambicans who are now part of the Mauritius population.

## CONNECTIONS BETWEEN SOUTHERN MOZAMBIQUE AND THE INDIAN OCEAN

Figure 2: Southern Mozambique and Delagoa Bay, c. 1798 to 1823

Documentary source: Benigna Zimba. "Overseas Trade, Regional Politics, and Gender Roles: Southern Mozambique, Ca. 1720 to Ca. 1830." Ph.D. Michigan, 1999, p. 43.

In terms of the population size, although the following sample illustrates the South, the situation in the North was very similar.

Table 3: Approximate Numbers of inhabitants, Southern Mozambique, 1823

Kingdoms	Approximate number of inhabitants
Maputo	Ca. 20,000
Inhaca	10,000
Matola, Moamba, Mpfumu, Mabote, Mamalong, and Maghoy.	Ca. 100,000
Areas extending from the Cape Correntes to the Inhambane	Ca. 100,000
Documentary source: Benigna Zimba. "Overseas Trade, Regional Politics, and Gender Roles [...]" p. 242.	

From the 18<sup>th</sup> through a larger part of the 19<sup>th</sup> century, American and English whaling ships frequently visited Delagoa Bay. This business was not necessarily associated with additional exports out of the Bay, but these ships carried large quantities of tin ware, soap, tobacco, muskets, gunpowder, and other items, to exchange for local products.<sup>8</sup> As in many other places of Africa, agricultural production was the basis of subsistence in these territories. There was active production of rice, which was consumed locally and then transported from Delagoa Bay port to Ilha de Moçambique. Between 1784 and 1838, such territories as Delagoa Bay, Inhaca, Mabote, Manhiça, Mpfumu, Maputo, Moamba, Mamalong, Maghoy, and Tembe produced: rice, various sorts of grains, beans, peas, cabbage, lettuce, onions, Indian corn and maize, oily seeds (*gergelim*, *mafurra*), millet, sweet potatoes, pineapples, pumpkins, plantains, tropical fruits, vegetables, sugar cane, indigo, oranges, lemons, pineapples, bananas, and cocoa tree.<sup>9</sup>

According to the Cape Archives in this period, Asia, Africa, Europe, and America were connected because of shipping from Mauritius and Madagascar through Delagoa Bay, which involved, for example, the English ship *Warrens* that transported 120 tons of oil and elephant seals from Delagoa to London in 1819, and the freighters *Orange Grove* and *Andromache*, which travelled from Delagoa to Simons Bay in 1823. This shipping, mainly between 1819 and 1823-25, was part of the export trade from Mauritius, Madagascar, Table Bay, Cape of Good Hope, Liverpool, Amsterdam, Bordeaux, Portsmouth, Boston, Copenhagen, and London. Before arriving to their final destinations, the ships first travelled around Calcutta, Bombay, and Batavia, which is the reason why Delagoa Bay became one of the intermediate stations of this complex overseas shipment.<sup>10</sup>

## WHAT WERE THE BIRTH NAMES OF SLAVES EXPORTED FROM MOZAMBIQUE?

While tracing the history of slavery and the slave trade, it is difficult to know the slaves' original African names or surnames. This situation applies particularly to the case of slaves exported from Inhambane and Ilha de Moçambique under the Portuguese administration.

Because they travelled abroad already baptized, from the 1760s onwards, Inhambane slaves became known as the best of the Colony, and were sold in large numbers.<sup>11</sup> Through baptism, slaves received European names, which are those in the Registers of Export and Immigration. In a number of cases, baptized slaves did not know their birth names. Despite this situation, we should mention that according to Mozambican tradition, the names of the regions were also very often the same as those of people. In other words, it helps to emphasize that the names in Tables 3, 4, and 5, for example, were certainly the original names of a number of slaves exported specifically from the ports of Inhambane, Delagoa Bay and also Ilha de Moçambique.

Table 4: African proper and geographic names: The kingdom of Inhambane in the 18<sup>th</sup> and early 19<sup>th</sup> centuries

Names of Chiefs, sub-Chiefs, and common people in the Inhambane kingdom	Names of the corresponding territories
Injarra, Beo, Gembe., Mucouana, Baquene, Marranja, Machile, Gembe	Regions inhabited by the Bittonga
Bembe	Munhembe
Chibanga Mullala (name of common person)	Bittonga territory
Munhembe, Inhamposa, Inhamussa	Marranja, Machile, and Bittongas
Muazambo, Manhepe and Tiane	Bittonga territory
Documentary source: Correspondência de Inhambane, 29 de Dezembro de 1760	

## HOW DID THE TRAFFIC OCCUR?

### Examples of Inhambane, Southern Mozambique, 1720s to *cc.* 1830

To a larger extent, the process of capturing slaves occurred first within the system of dependency created by tributary relations and hierarchic structure among the Kings, Chiefs, and other subordinated people. In this first instance, we concentrate on the dynamics and consequences of the complexity of tributary relationships.

Table 5: Tributary relationships: Southern Mozambique, 1727 to *c.* 1830

Year	Name of the Territory	Name of the Ruler(s)	To whom they were tributary
1727	Dingadinge(?)	Kambe, Jan Mosse, Jan Bidieme	Dingadinge
1727	Tembe	Jan Mosse, Jan Bosse, Schambe, Jan Bisse, Mabote,	Tembe
1727	Soewaane(?)	Mahohe, Mawotje, Magombo	Soewaane
1760	Marranja, and Machile (in the Inhambane area)	Beo, Gembe, Mucouana, Baquene, Munhembe, Inhamposa, Muazambo, Manhepe, Tiane and Inhamussa	In 1760, they were temporarily tributary to the Portuguese
1784	Area of Mabote	Mabote	Matumbane and Grão Caixa
<i>ca.</i> 1790 to 1800	Tembe	Joveh, Wangoveh, Mutwal, Mallambaneh, Wancome, Panelleh, Maputo, Machelembey, Corro, Chenandlo, Gomano, Machechewan, and Goumano	Capela or Tembe
<i>ca.</i> 1800	Modai(?)	Modai	Moamba
<i>ca.</i> 1820	Maputo	Maputo	Temporarily tributary to the Vatwah
1823	Inhaca	Inhaca	Maputo
1823	Panyelly (located southwest of the Tembe kingdom)		Independent
1823	Maputo	Maputo	Tembe
<i>ca.</i> 1820 to 1823-24	About 32 unspecified chiefdoms		Tembe
1824	Mabote	Mabote	Maputo and Matola
1824	Matola	Matola	Temporarily tributary to

			Tembe
1824-25	Maputo and Tembe	Maputo and Tembe	Temporarily tributary to the Portuguese
1824-25	Maputo and undefined number of Maputo's tributary chiefdoms		Temporarily tributary to Tembe and the Portuguese
After 1830	Territories around Modai, Moamba, and Mpfumu		Temporarily tributary to Mpfumu and Modai

Documentary source: Benigna Zimba, "Overseas Trade, Regional Politics, and Gender Roles [...]" pp. 129-131.

Merchants gathered slaves gradually. The ship *Kaap* reached Delagoa Bay on 19 April 1722, thus initiating the so-called Dutch period in Southern Mozambique. Dutch shipment to Mozambique occurred as a part of Netherlands shipping to Asia between 1595-1795, which was organized by the so-called *Voorcompagnieën* (Verenigde Oostindische Compagnie or VOC). This enterprise lasted until *circa* 1795, after the company's final outward voyage on 26 December 1794. Dutch hegemony over shipping lasted for a large part of the 18<sup>th</sup> century. More importantly, Dutch merchants encouraged slave trade in the region, particularly in Inhambane and Delagoa Bay. The Dutch used to gather slaves step by step in very small numbers of one, two, to four and five. However, trade occurred daily, so that at the end of one or two months, kingdoms and chiefdoms involved in slave traffic, such as Dingadinge, Kambe, and Jan Mosse, sold a small number of slaves to Dutch merchants.<sup>12</sup> For example, a description at the time, explains how transactions occurred:

*"Friday 26 September: Captain [Chief] Dingadinge sold us slaves and elephant tusks, which we [paid] with some aracc [brandy.] ... Tuesday 30 September: ... we got 2 slaves. ... Wednesday [8] October: Captain Kambe brought us two slaves whom we took on board, and some great corals".*<sup>13</sup>

The hegemony of the Dutch faced Portuguese but, principally, French competition for slave trade.

## THE INVOLVEMENT OF THE MAFUTRES (FRENCH) IN THE SLAVES' EXPORT FROM INHAMBANE TO THE MASCARENES

In Inhambane, French slave-traders were known as *Mafutres*.

From the 1720s to the first decade of the 19<sup>th</sup> century, there was no significant interruption of French slave trade with Eastern Africa. Within the context of the so-called Western Indian Ocean System, between 1721 and 1810, there was no considerable demand for slaves from Portuguese East Africa. Precisely for this reason, the Mozambique slave trade under French merchants, sailing from the Mascarene Islands, Ile de France and Bourbon, became relevant. For example, in 1760, Mozambique's Governor Pedro de Saldanha de Albuquerque granted a license to José Basílio Leitão to sail to Mauritius in order to deliver Frenchmen shipwrecked in the galley *St. Tomé*, and also to sell slaves there.<sup>14</sup>

Luís Correia de Mattos, Inhambane's Governor, wrote on 5 July 1788, an extensive document inculcating Muslim merchants, Portuguese, but, principally, African local merchants to sell slaves to the *Mafutres* (French). Mattos accused Sir Baltasar Manuel Pereira de Lagos of allowing a French ship on the Inhambane shores and negotiated with them for a number of slaves. For Mattos, this was a scandalous example to local Africans, considering that he warned and recommended avoiding the *Mafutres* in Inhambane.<sup>15</sup>

Later on, an eight-point document, dated 4 May 1790 and signed by Manoel Galvão da Silva, formulated conditions what French ships should do about Mozambique slaves. The item number two formulates that French ships were obliged to declare to port's Customs Services all merchandise on board. Ship-owner(s) should follow this procedure upon the freighter's departure.<sup>16</sup> Other similar references are very short texts that state, for instance, "[...] conditions for transporting slaves to the Mauritius" or, "[...] on the French ship, *Coureur*, and slave's

shipment.”<sup>17</sup> Altogether, these documents point to the importance of the French phase of slave trade in Mozambique. In 1796, the French destroyed the Portuguese factory in Lourenço Marques; this event strongly impacted on the ongoing slave trade.<sup>18</sup>

Generally, for the period 1800-1854 there was an active traffic among ports of Mozambique and plantations in the Islands of the Indian Ocean.

### Prices of slaves along the coast of Mozambique

Prices varied in time and space. Sales of female slaves in the division of Tete are an example of prices current in Northern Mozambique during the 18<sup>th</sup> century. José Francisco de Oliveira, a notary working in Tete, elaborated a list of 64 female blacks who, in 1769, were sold to Portuguese slave-owners.<sup>19</sup>

Many of these women were mothers of small babies and young children, but the list has names of old women, too. Female slaves sold with their children were highly valued and in Tete, this pattern continued. For instance,

- (1) *Nhacudiva* and her son cost 05” *maticais* and so did *Vanderubzenhe* with her baby.
- (2) *Pande* and her son cost 05” *maticais* and *one tanga* (piece of cloth).
- (3) *Muera* and her daughter were sold for 05” *maticais* and five *tangas* (piece of cloth).
- (4) On the contrary, women without children, like *Capinda*, *Chinambene*, or *Quemberembe* to mention a few, were sold for prices varying between 03 and 04” *maticais*, and one to two pieces of cloth. An exception to this case is *Chaco*, who without children, costs 05” *maticais*.
- (5) Old women had very little value. Such were the cases of *Macassenhe*, who cost 02” *maticais* and *one tanga*, and *Tassarireona* who was sold for only 1.05” *maticais*.<sup>20</sup>

By 1799, there were clear problems with the prices of slaves. In that year, Francisco Guedes de Carvalho Menezes da Costa was the Governor of Mozambique, when he observed problems with shipping to the French Island of Mauritius.<sup>21</sup> After finishing his mandate, da Costa wrote in 1804 a fifty-page document addressing the relationship between France and Portugal, and the shipment of merchandise, including slaves. His manuscript focused on the “[...] external war between France and Portugal, whereas [...] inside, Portugal dealt with the problems of the [Muslim merchants] ...”<sup>22</sup> Da Costa recalled problems that he faced when he was Governor, lamenting that in 1799, Diogo de Souza was in charge of the exportation of 6 French slave ships to Mauritius. These ships travelled under Portuguese flags, thus bringing no particular benefits to the Colony. Because of this and many other irregularities with the French shipping of slaves out of Mozambique, da Costa suggested new terms of trading between these two countries:

*[...] Slaves transported from Mozambique to the French islands [of the Indian Ocean] should pay proper rights as well as having the necessary authorization so that this export results in profits for the Portuguese Throne [...]*<sup>23</sup>

## HOW MANY SLAVES MIGHT HAVE TRAVELLED TO MAURITIUS?

Based on secondary sources that summarize a significant number of archival sources available mainly in Lisbon, Portugal, we finish this report with a rough idea of human beings who compulsorily left Mozambique for Mauritius.

Year	Ship	Trip known or port of departure	Observations	Destination	Total per year	Documentary Source
1670 - 1769		Mozambique - Mascarenes		Mascarenes	10,677	Alpers <sup>24</sup>

## TRIBAL ORIGINS

Tribal Indians constitute one of the most ignored groups in Mauritian historiography and was thus the first focus of our enquiries on Origins. Reconstruction of this history has been accomplished by a study of archival documents and documents consulted at Civil Status Office and the Mahatma Gandhi Institute consisting of lists of arrival of immigrants, Emigration Agency Certificates and Immigrant Photographs. The difficulty was that as no Indo-Mauritian claim tribal ancestry, detailed family histories could not be undertaken. Few of the people approached wanted to acknowledge their tribal identity, and the reasons for this need to be explored further in future.

The “tribal” origin can be obtained from the PE series of documents, which contain lists of arrival of immigrants and from the PCs set of documents, which consists of emigration agency certificates. Research on the PG series database provided a few photographs for the period 1834 to 1844. These photos were correlated with the description shown in the PE and PC series.

The “tribal” origin can be obtained from the PE series of documents, which contain lists of arrival of immigrants and from the PCs set of documents, which consists of emigration agency certificates. Research on the PG series database provided a few photographs for the period 1834 to 1844. These photos were correlated with the description shown in the PE and PC series.

A word must be said on the sources. For the period 1834 to 1844, when many Tribals arrived in Mauritius, marriage certificates were not available. A sample therefore of 544 tribal immigrants out of the 54,956 immigrants who came between 1835 and 1844 was used. For an even smaller group, the emigration certificates and the marriage certificates are available. Death certificates of the tribes were collected at the Civil Status Office. This task was somewhat eased as

some of the data collected at the MGI Archives had information about their date of death. A number of oral history interviews were also conducted to assess the level of knowledge of Mauritians, memory as to the existence of tribals in Mauritius.

Due to lack of time, the focus has been Indian tribes from the North of India who were the first to come into Mauritius on contract labour. They were referred to as Dhangar or the ‘Hill-Coolie’ and were preferred by the recruiters in the 1830s. However, the proportion arriving in Mauritius began to dwindle and by the end of the nineteenth century, the recruitment of the tribes had stopped. This is because, they were the ones who suffered the most during sea voyages and the mortality rate the highest among them.

(Source: Compiled from IIA PE1-PE15 - arrival of immigrants in Mauritius & and PC 2 - PC 209 - Emigration Agency Certificates)

Of the 543 tribals people studied<sup>1</sup>, 31 came under private control and 512 came under the supervision of Government. They were of the groups termed ‘Munda’, ‘Oraon’, ‘Santal’ and ‘Gond.’ These tribes were all grouped together under the generic term Dhangar. In the registers, many of their names ended with the suffixes ‘ee’, ‘oo’, ‘ram’, i.e., Luckhee, Kalindee, Mungree, Dhanoo,

Bhickoo, Pandoo, Bhuddoo, Boodhoo, Mungooram, Muneeram, Rameeram. These names are deformed from the original names as those registering them were not familiar with these names and did not know how to write the names correctly.

However, it has been found that they were in minority compared to other Indian labourers but still agents preferred them because they were hard worker and willing to labour in the island. From 1845, there was more demand for labour because of a boom in the production of sugar cane. Agents could not rely on the minority and concentrate upon other sources of labour. Hence the early enthusiasm of the “Dhangars” as field hands dried up.

### Origins of Tribal people

The principal region of origins of tribals was Chota Nagpur e.g. the districts of Hazaribagh, Ramghur, Ranchi, Midnapore, Purulia, Jobburpore, Bancoora, Nagpur and Gaya. The regions of Nagpur, Ramghur, Ranchi and Hazaribagh were particularly ‘favoured’ by recruiters between 1843 and 1844 (Fig.1).

The tribes were embarked at Calcutta, Madras and Bombay, after being recruited from these districts. Comparatively more tribes were brought from Calcutta than from Madras and Bombay. It has also been noted that between the years 1843 and 1844, tribals could be found on every ship leaving Calcutta. These ships include the *Northumberland*, *Adelaide*, *Futtle Karim*, *Appolline*, *Nakin*, *Robarts*, *Duke*, *Orient*, *Isabella Watson* and *Bangalore* carried a high proportion of tribals under governmental control.

Figure 3: Port of Embarkation						
Year	1835-1839		1843-1844		TOTAL	
Depot	Number	%	Number	%	Number	%
Calcutta	28	90	508	99	536	98
Madras	3	10	0	0	3	1
Bombay	0	0	4	1	4	1
TOTAL	31	100	512	100	543	100

Source: IIA PE1-PE15 & PC2-PC209

It will be observed that of the 31 tribal people who came under the private importation scheme, 90% of them were embarked at Calcutta, 10% of them were embarked at Madras and none of them from Bombay.

However, under the management of government, 99% of them were embarked at the depot of Calcutta, 1% of them at the depot of Bombay and none from Madras.

99% of the tribals were embarked at Calcutta between the years 1835 and 1844.

The comment written on the PC registers: “not-cooking on board”. Indicates that the tribes were not allowed to cook on board either because they were provided with food or other reason.

In India, they ate meat, fish, turtles, eggs, crabs, and bivalves. They also consumed root crops, tubers, fruits and honey<sup>2</sup> but on board to Mauritius they were provided with only rice, salted fish and water. It may be possible that the change of the diet, as a result of their immigration may have attributed to the increase of mortality among them. This may explain why the death rate among the “Hill-Coolies” or the “Dhangars” was considerably worse than those from the plains.

The gender ratio was unequal (fig. 4). Of the 31 tribals that came were under private control, no women or children arrived. Out of the total of 512 tribals who came between the years 1843 and 1844, 75% (388) were men, followed by 16% (80) women, children 7% (10) and 2% (10) were unknown. This is consistent with existing literature (Hazareesingh K and Bissoondoyal U) where they stated that the idea was to come to Mauritius for a short while and return.

Figure 4: Tribals by category

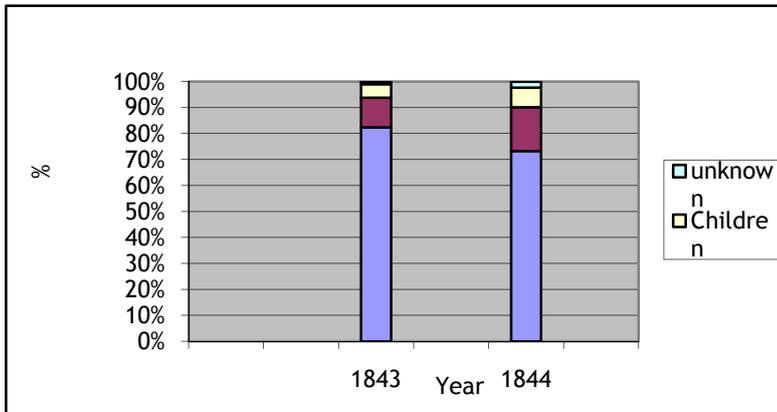

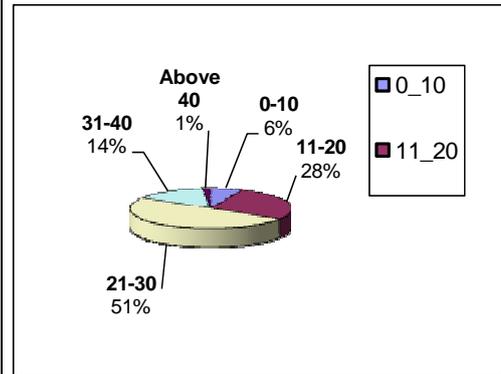

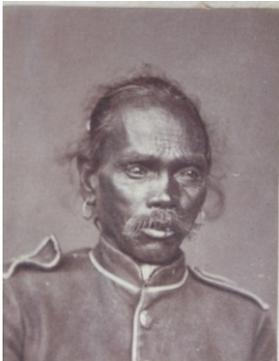

Figure 5: Age groups of Tribals

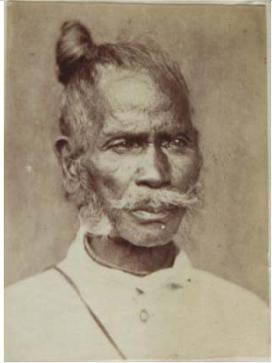

The profile required matched those during the Slave Trade: the desire of planters was for those able to perform hard manual labour. Thus, mainly young males were recruited. Of the 543 tribals, 6% of the tribes were under the age group 0-10 years. 28% were aged between 11-20 years and 51% between 21-30 years. Only 14% were between 31 and 40 years and only 1% were above 40 (fig.3).

**Iconography of tribals from Chota Nagpur**

Shreemutty 41293	Bissonauth 41416
	

The PG series provides photos of tribals. Shreemutty, No. 41293, was photographed on the 3<sup>rd</sup> June 1881 (Height 1m 39). She migrated to Mauritius from Ranchi and was shipped on board the *Appolline* at the age of 24 on the 25<sup>th</sup> of April in 1844. She was accompanied by her husband Nundoo. She was a Dhangar and was described as having good teeth and a scar on her right leg.<sup>3</sup>

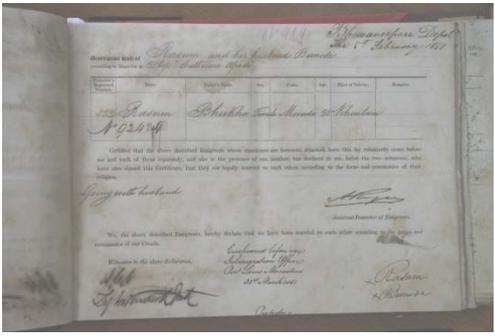

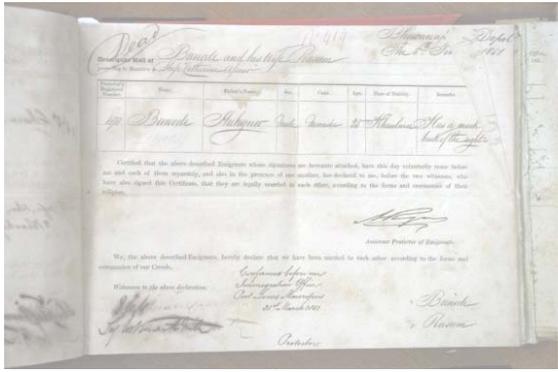

Bissonauth No. 41416, photographed on 27<sup>th</sup> May 1884 was 1 m 57 tall. He was a Dhangar and migrated from Ranchi. He arrived on board the *Nankin* at the age of 14 on the 16<sup>th</sup> of May 1844. He had a long scar on his chin and also a mole above his right elbow. He was employed as a labourer.

Pandoo 40335	
	<p>Pandoo, No. 40335 pictured here on the 22<sup>nd</sup> October 1890 (Height 1m50). He was a “Dhangur” arriving in February 1844 at the age of 25. He migrated from Nagpore aboard “Orient”. He was described as having good teeth, a mark on his forehead and a black mark on the right side of his breast. He was sent to work to Mr. Hunter and Company and was employed as a labourer.</p>
Source : PE 15 and PC 197	

**Mundas**

Mundas constitute another tribal group arriving in Mauritius in the early days of indenture.

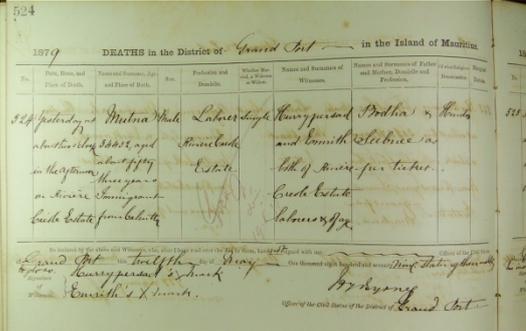

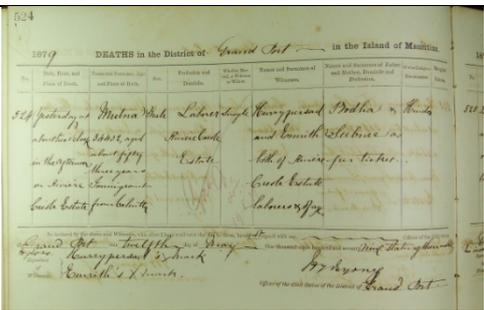

Rusum from Ranchi district, No. 92424 who arrived on board the *Catherine Apcar* certified before the Emigration Office in Calcutta that he was married ‘according to the rites and customs of his religion’, to Bunode. Bunode was described as having a mark on the back of the right shoulder. Both of them were Munda. Both came to Mauritius in 1851.<sup>4</sup>

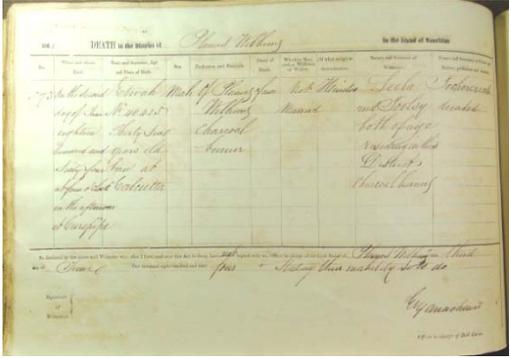

<p><b>Marriage Certificate of Rusum to Bunode</b></p>	<p><b>Marriage Certificate of Rusum to Bunode</b></p>
	

<p>Marriage Certificate of Bissoo and Randhee</p>	<p>Bissoo, No. 92973, was a Munda who emigrated with his wife Randhee, also a Munda from Ranchi in 1851. They were shipped on the <i>Fazel Currim</i>. He had a scar on the back of his left shoulder. His father's name was Gopalah. At the Emigration Depot in Calcutta, they certified they were married. It appears from the certificate that they were accompanied by their two daughters, Roopnah and Deepun. <sup>5</sup></p> <p>(Source of photo MNA:IIA PE 36 and PC 424)</p>
	

**Death Certificates**

Out of the 543 immigrants, only half have been traced: 125 died and some 116 returned. What happened to the other half is unknown as yet. Some may have settled in Mauritius, others may have also died or returned. A brief account of those who died in Mauritius is given here.

<p style="text-align: center;"><b>Death Certificate of Sonatun</b></p>	
	<p>Sonatun, No. 39479, was a Dhargar, who migrated from Hazaribagh in February 1844 aboard <i>Isabella Watson</i>. He arrived at the age of 22. He was described as having good teeth, both ears bored, two large round marks on the left arm. He was sent to Mr A. Joly and was employed as labourer. He died on the 20<sup>th</sup> of May 1863. The cause of death was fever which was prevalent in the 1860s<sup>6</sup></p>
<p>It seems that on his death certificate, Sonatun carried two immigration numbers. When research was carried on the other immigration number i.e., 29261 at the Archives, it was found that Sonatun was registered twice on both PE 14 and PE 15 registers respectively. Both registers gave the same information as mentioned above. It can be presumed that there may have been an error on behalf of the administration at that time.</p>	
<p>Mutna, No. 34432, he was a Munda, who migrated from Ramghur in December 1843 on board the 'Adelaide'. He arrived at the age of 18. He was described as having marks on both arm and on belly. He was sent to work to Mr. Adam and Company and was employed as labourer. He died at Grand Port on the 12<sup>th</sup> May 1879.<sup>7</sup></p>	

	<b>Death Certificate of Etwah</b> <b>Source : Civil Status Office</b>
<p>Etwah, No. 40415, was a Dhangar who migrated from Ranchi in February 1844 aboard <i>Orient</i>. He was described as having good teeth, both arms marked and a mark on the left knee. He was sent to Mr. Hunter and Company and worked as labourer. He came to Mauritius on the same ship with his father, Jhoopah, No. 40411. Etwah died at Plaines Wilhems in June 1864 from fever.<sup>8</sup> It is interesting that his death certificate describes him as a ‘Hindoo’ and no longer as a Dhangar and having been born in Calcutta. Transformations in identity from ‘tribal’ to ‘Hindu’ thus seem to have occurred quite early during indenture. As he was not married and had no children, his real origins and life story are today forgotten.</p>	

Lalchand, No. 3719, was a Dhangar who migrated from Nagpore in April 1843 aboard *Juliana*. He arrived at the age of 24 and worked as Labourer. He died in Port Louis on the 19<sup>th</sup> December 1866 from fever.<sup>9</sup> Lalchand carried the name and the Immigration number of his father.

Doolarsing, No. 34441, was a Munda who migrated from Ramghur in December 1843 aboard ‘Adelaide’. He came to Mauritius at the age of 27. He was sent to Mr Adam and Company and was employed as labourer. He had uneven teeth, a mole left side of the neck, scar on right arms and shoulder. He died at Savanna on the 28<sup>th</sup> of November 1863. The cause of his death was fever. (Source: Civil Status Office)

(Source:Compiled from IIA PE 36 series)

There is evidence of tribal presence in Mauritius as from 1851 also. The principal places of origin of the tribals, as mentioned before (see fig. 7), were Chota Nagpore division and the districts of Ranchi, Hazaribagh, Midnapore, Purulia. These people came aboard *Catherine Apcar*. They arrived on the 30<sup>th</sup> March 1851. Ships like *Mohassur*, *Fazel Currim*, *Hyderabad*, *Bellatine* and *Lucknow* also carried a small proportion of tribals. Aboard ships *Catherine Apcar*, *Hyderabad* and *Futtay Mobarruck*, there were few women and children also. The table above shows that the tribal groups arriving in the country are as follows 'Munda, Santal, Oraon and Khol'

Sandhoo, No. 94044, was a Munda who migrated from Hazaribagh in 1851 aboard *Hyderabad*. She came with her daughter Soumitra, no. 94 071 and the latter was four years. They returned to India on the 28<sup>th</sup> March 1857. <sup>10</sup>

In conclusion, we have seen that the tribal groups arriving to Mauritius included the Munda, Oraon, Santal, Gond and Khol. The majority of them were young males and came chiefly from the Chota Nagpur region. Between the years 1843 and 1844, there were a few women and children also who arrived in Mauritius. The tribals were found on every ship leaving Calcutta. After 1844, there were fewer immigrants from the tribal group. Their heavy mortality on board the ships which took them to the island and to the estate discouraged the recruiters from recruiting them. However, some tribals continued to arrive on the island, throughout the period of indenture.

## THE EARLY HISTORY OF INDENTURE IN MAURITIUS, C.1825-1839

In Mauritius, Indenture is associated with the year 1834, with the abolition of slavery and with Indian labourers. It is little known that Indian labourers were brought in as early as 1825 by Adrien d'Epinay, 10 years before slavery had been abolished. On his estate at Haute-Rive in Rivière-du-Rempart District, it appears they worked side by side with slaves in the sugarcane fields. D'Epinay wanted to show his slaves that free men did not consider it a dishonour to perform manual labour in the cane fields. This could be considered as the first experiment with indentured Indian labour. But few sources are available to study this 'experiment' further.

The next recruitment came in 1828, when a handful of Indian labourers were brought in. One of them, Peerkhan of Calcutta, was employed by Mr. Sampson, and the second one, Ojjar, a Bengali also from Calcutta, was employed by Mr. Latour St-Ygeste.

The following year, the Commercial Agents of Gaillardon & Co., a Mauritian trading company, went to India with the objective of importing cheap Indian labour. They had the firm support of the British Colonial Government of Mauritius. On 21<sup>st</sup> September, the *Albion* dropped anchor in Port Louis harbour with 500 male labourers, 9 females, and one child on board. Over the next four weeks, around 600 additional labourers were brought into the colony in small batches. By mid-October 1829, there were over 1,100 Indian labourers in Mauritius.

These early experiments do not appear to have been successful, as the Indian community in Mauritius convinced these new immigrants that the wages which they were receiving were too low and encouraged them to strike for better pay. The employers themselves did not honour the agreements that they had made, and most of the Indians wanted to terminate their contracts. Within a period of less than a month, a large number of Indians began to desert the sugar plantations and showed increasing signs of insubordination toward their employers. By late October 1829, John Finiss, the Chief of Police, ordered the repatriation of the rebellious Indian labourers. Between the end of October 1829 and May 1830, they were returned to Calcutta and Madras in several small batches.

1830-1834: There was only a trickle of immigrants arriving between 1830 and 1834. In 1830, about 10 labourers were introduced and between 1831 and 1832, another 29 from India by Mr. Bickajee, a wealthy and influential Indo-Mauritian. In January 1832, Mr. Passmore, a wealthy and prominent Mauritian merchant, relaunched the idea of large-scale importation of Indian labour. In Réunion island, between 1826 and 1830, around 3,012 Indian workers from the French colonies of Pondichéry and Karikal had been introduced.

1833: Another 29 labourers were introduced. Although the overwhelming majority of these very first indentured Indian labourers came from Calcutta, some were also from Madras. For example, one labourer, called Mootoosamy, was employed by Mr. d'Arifat and another one called Ramsamy was employed by Mr Langlois.

1834: 4<sup>th</sup> August 1834, the newspaper *La Balance* announced the arrival on 1<sup>st</sup> August of the *Sarah* in Port Louis, with 29 Indian cultivators. The arrival of these labourers served as a prelude to the start of large-scale Indian immigration with the coming of the *Atlas* on 2<sup>nd</sup> November.

On 10<sup>th</sup> September 1834, 36 'Hill Coolies' of the Dhangar caste (originally from the hills of Bihar in Eastern India who were then living in Calcutta) signed a five-year labour contract with George Charles Arbuthnot of Hunter-Arbuthnot & Company, a major British trading company in Mauritius, in the presence of C. McFarlan, at the Calcutta Police Head Office. Once the labourers agreed to the terms and conditions, they placed their thumb mark on the contract, and on a separate list, which contained the names of the 36 labourers, they placed an 'X' next to their names. Their *sirdar* (overseer) was Soorooop who was assisted by Subaram. In all, there were 30 males and 6 females among Arbuthnot's labourers. Some of their names are Callachaund, Dookhun, Bhomarah,

Bhoodhoo, Lungon, and Bhudhram. Their labour contract was written in Bengali. The salary for the males was 5 Rupees per month, while for female labourers, four Rupees per month. The sirdar's salary was 10 Rupees per month and the assistant sirdar around 8 Rupees per month. They all received six months' pay in advance before boarding the *Atlas*. One rupee was deducted by Hunter Arbuthnot & Company to pay for the return passage to India. They had paid for the immigrants' journey from Calcutta to Port Louis. They were also to be provided with food, clothing, lodging and medical care. The ship also carried a large cargo of rice. On the 3<sup>rd</sup> November, Monday morning, Arbuthnot wrote to Governor Nicolay, requesting that: 'they be allowed to land 36 Hill Coolies from the ship *Atlas*, whom they intend to employ on their Estate, under guarantee that they shall not become a charge on the Colony'. Permission was granted. These first Indian labourers were, according to Brenda Howell, 'the pioneers of a migration which was eventually to transform the character of Mauritian life and industry.' Between November 1834 and April 1839, during the first wave of Indian immigration, around 25,468 Indians were introduced, amongst whom were around 23,281 males, 727 females and 175 children. Almost 15,000 came from Calcutta and Bombay and over 9,000 from Madras and modern-day Andhra Pradesh. More than half of these first Indian immigrants belonged to rural tribes known as the Oraons, the Mundas, Bhumijes, and the Santals.

In May 1839, immigration from India was suspended, only to be renewed in January 1842, when it became 'state controlled' and 'State sponsored' by the British Governments of India and Mauritius. A Protector of Immigrants was also appointed in Mauritius.

## RECONSIDERING ‘CRIME’ IN PORT LOUIS: AFRICAN APPRENTICES AND INDIAN LABOURERS

The period from 1835 and 1839 are crucial periods in Mauritian history and deserve a reconsideration as ex-slaves and the first indentured labourers have been viewed rather negatively in official colonial reports. Historians have also tended to focus on events in the rural areas and less on what was going on in Port Louis. Yet Port Louis was a place which welcomed people from all sorts of backgrounds as well those escaping from something and wishing to blend into the incredible mix that constituted the town of Port Louis. Among these, were those who escaped from their employers and estates and hoped for a better life in town. When caught, both apprentices and indentured labourers found themselves imprisoned in the same place, the *Bagne* and were treated as ‘criminals’.

Today, we urge a reconsideration of the way in which they were portrayed and instead to view their acts, individual and collective, as ‘acts of resistance’ or ‘non-cooperation’ against the social and economic conditions of slavery, apprenticeship system and early indenture. These acts included ‘clandestine’ activities such as theft, robbery, gambling, and black-racketeering.

In the 1830s’ the *Bagne* Prison and, to a lesser extent, the Prisons of the Court of Justice became suddenly overcrowded.<sup>11</sup> In 1836, there were 23 cases of theft, 1 case of arson, and 1 murder in Port Louis and 56 apprentices were imprisoned for these crimes. The following year, for the first time, Indian labourers were convicted for various crimes such as theft, arson, and murder. By 1838, there were 68 cases of theft, 3 case of arson, and 13 murders in Port Louis and 92 apprentices and 10 Indian labourers were convicted and imprisoned. During the following year, there were 82 cases of theft, 4 cases of arson, and 13 homicides in Port Louis and 91 apprentices and 38 Indians were imprisoned.<sup>12</sup> The rise in crimes by Indians was reported on in June and July 1838 by *Le Cernéen*, so much so, it became a major source of concern for the Colonial Authorities,<sup>13</sup> as this coincided with the ending of the apprenticeship system and the introduction of more indentured labourers. Overcrowding in prisons resulted.<sup>14</sup>

### THE INDIANS

In the last week of February 1836, Captain Weir, the Special Magistrate for Port Louis, reported to George F. Dick, the Colonial Secretary, that ever since the beginning of the previous month, there had been a gradual influx of Indian labourers into the colony’s capital from the sugar-producing rural Districts. The majority of these Indian workers had been introduced into the colony only a few months before and they were arrested as vagrants near Government House and the Casernes Centrales. Furthermore, in the month of February alone, 84 Indians were caught and incarcerated at the *Bagne* which was already crowded.<sup>15</sup> Immediately, the following day, Governor Nicolay, clearly recognizing the urgency of the situation, ordered some of the Indian vagrants to be moved from the *Bagne* Prison to a makeshift prison in the Magazine or the same large building which served as a warehouse for the storage of goods which were taken off ships anchored in Port Louis harbour. During the last week of that same month, W.W. West, an English sugar planter and owner of the Vale Estate in the District of Pamplemousses, wrote a lengthy letter to the Colonial Secretary in which he made a number of interesting observations. He explained that he employed more than 50 Indian labourers and that over the past several months, it became a common practice for them to escape from his sugar estate to order to go to Port Louis.<sup>16</sup>

To deter Indians from leaving their estates, the Prison Committee suggested that no distinction must be made when it came to the punishment being inflicted on prisoners of the *Bagne*. Both maroon apprentices and vagrant Indians were to be punished in the same manner.

One of these punishments included the task of cleaning and repairing of the streets of Port Louis. But this did not work.<sup>17</sup> Between 1836 and 1837, the monthly average of Indians who were imprisoned in the *Bagne* increased from 48 to 148 or almost tripled. In general, the population of the *Bagne* may be described as a floating population because each month, hundreds of apprentices

and Indian labourers were incarcerated for a period of either a few days or a few weeks. In addition, during this brief period, the floating population of this large colonial prison increased sharply from 5,221 to 9,090 or by 40%.

The effect of having prisoners who were not real criminals led to the prison resembling a Depot rather than a prison *per se*. This 'floating population' had thus transformed a lieu of incarceration into a building where people moved within it relatively freely: 'The establishment therefore partakes more of the character of a 'Depot' than that of a regular place of incarceration.'<sup>18</sup>

Why did Indian labourers leave plantations when they were fed, clothed, housed and paid for their work? If official reports are to be believed, there were very few complaints from the labourers. One reason was the double-cut system reported as early as 1838 by James Backhouse and Thomas Hugon.<sup>19</sup> When they came to Port Louis to complain, as the slaves before them, 'they were lodged in the *Bagne*, till their masters were summoned.'<sup>20</sup> Backhouse was also afraid that unless there were controls, 'there was a danger that it might ultimately grow into another species of slavery'.<sup>21</sup> Hugon provided another explanation in 1839:

*"By the too rigid discipline of most plantations, the Indian labourer is subjected, without the smallest advantage to the master [...] the obligation of the Indian labourer in being provided with a 'billet de passe' to venture beyond the boundary of the estate during out of working hours, is a 'tracasserie', to which the Indian has never been used in his own country, it is an abrogation of personal liberty, to which he would never consent and which he has not subscribed to by merely engaging to services of the ex-apprentices who were exempted from it. The subjection of the Indian to it can never be defended on several estates, the system has been given up...I am told however the abandonment of the system has extended since the Emancipation of the apprentices to so many estates that it could hardly be said to exist at present [...]"<sup>22</sup>*

He, too was afraid that indenture might also be likened to slavery: 'So sensitive are these men that the least semblance of an assimilation to the preceding condition of the servile class should be carefully avoided and the stocks on the estate ought to be quietly removed as being a great eyesore to freemen.'<sup>23</sup>

Furthermore, being tied to one employer was not 'free labour' and the labourers were keenly aware of this:

*"They [the Indian labourers] object as freemen to the false position in which they have been placed, by being bound down to one master. It is no severe reproach to the man who has possessed slaves to say that, he has 'despotic habits' which he had to change entirely when he comes into contact with freemen, here the first check to those habits has been the recent Emancipation of the apprentices. The productive existence, of this colony, depending entirely on the resort of Indian, or other foreign labourers, this measure must be considered in that respect, to have been very opportune and in the future and general interests of the island [...]"<sup>24</sup>*

Thus, the plantation owner could not, and would not, change overnight. In Port Louis, by contrast, their work was recognized; they found work as dockworkers, carters, boatmen, domestic servants, messengers, and a handful as masons and carpenters. Some even took over work performed previously by apprentices and ex-slaves.<sup>25</sup> Indian carters were particularly highly paid as reported in February 1839, by *Le Mauricien*, 7 Rix Dollars per month by some employers, while ex-slaves earned 4 Rix dollars. *Le Mauricien* warned that raising the wage would encourage ex-apprentices to ask for higher wages.<sup>26</sup>

## THE APPRENTICES

If apprenticeship was meant to teach slaves a profession and they were paid, why did apprentices maroon? In the *Bagne* they joined their fellow slaves who had been imprisoned there before abolition of slavery.<sup>27</sup> The presence of so many maroon apprentices is clear evidence that many slaves did not want to remain as apprentices after abolition. Thousands ran away from the estates but many were promptly hunted and arrested in maroon apprentices hunts, reminiscent of slave maroon hunts.<sup>28</sup> But there was another reason: like the slaves, many had lodged complaints with the Special Magistrates against their former owners and were being kept in protective custody at the *Bagne* until the Special Magistrates of Port Louis investigated their cases.

By the end of 1836, Backhouse reported that there were 139 apprentices imprisoned there, and by 1837, 172. Many were still there up to the last day of the abolition of apprenticeship.<sup>29</sup>

But the rise in the 'crime' rate could also be interpreted in another way: as an enslaved people expressing their newly-found freedom. The Acting Governor of Mauritius explained it as 'arising not unnaturally from the sudden change in the condition of an uninstructed population'.<sup>30</sup> According to the Colonial Office, this was the opposite of what had occurred in the Caribbean.<sup>31</sup>

This increased activity of ex-apprentices and Indians was also of an economic nature. The Chief Commissary, John Finiss, reported that smuggling, theft, and gambling were rampant in Port Louis and almost 20,000 Rix Dollars was changing hands every day among the apprentices.<sup>32</sup> An informal economy had emerged in Port Louis, undetected up to then by authorities. Adding to this was the more legitimate aspects as the Commissioners of Eastern Inquiry reported, Government slaves had been employed as 'caulkers, divers, and boatmen attached to the Port Department',<sup>33</sup> and just before abolition, there were 929 urban slaves working in the wharfs and in the shipping activities of Port Louis harbour.<sup>34</sup>

Legitimate and not so legitimate business merged, and in 1838, Finiss reported that during the 1830s, many of these slaves/apprentices were suspected of stealing merchandise being landed at the docks in Port Louis. The colony's Police Chief wrote: 'The individuals employed on the wharfs, and in the boats for shipping, are for the most part of bad character and connected with a considerable number of persons of the same class, who aid them in removing their plunder, establishing themselves in the neighbourhood of the Bazaar and wharfs, near which, there are a number of small lodgings, where they easily deposit their plunder, which I think might be materially checked by the 'Bazaar Post' and the 'Marine Police'.<sup>35</sup>

To counter this increase in illegal activities, in April 1836, Finiss proposed to set up a secret service. He explained:

*"Since I have been at the head of the police. I have never ceased to represent the necessity of a secret police for the detention of robbers and thieves etc. Constituted as society is here, no known agent of police can succeed and even though in many cases rewards have been offered, and to a considerable amount, in only one instance did they produce any discovery, and that was accidental."*

Six individuals would be recruited and trained to become police agents and report on the illegal activities in Port Louis. Two agents would undertake undercover surveillance in the Western Suburb or Camp des Malabars, two in the Eastern Suburb or Camp des Noirs, and two in the centre of Port Louis. Those working in the Western and Eastern suburbs would be paid 10 Pounds Sterling each per month and those working in the city centre 15 Pounds Sterling. They would also be entitled to 'gratuity to be paid on any particular discovery or execution'. A vital part of this plan was that each of these police agents/informants would not be known either to one another or to members of the Police Department, except to the Police Chief himself. Finiss explained that the police agents who would be appointed would be familiar with the district where there would be posted. In addition, they would have to gather information from all the public areas in their respective districts especially the public canteens, bazaars, and residential areas. They would be required to provide a written daily report and briefing to Finiss in person. The Chief of Police would note all the information in a secret diary.<sup>36</sup>

Finiss was hesitantly provided with a budget for only one year, of £50 per month and not exceeding £600 per annum for his secret police experiment.<sup>37</sup> Exactly a year later, the Chief of Police reported that between July 1836 and May 1837, just over £141 had been spent; he had hired a group of trustworthy individuals who supplied him with regular information about the clandestine activities in their respective districts. However in September, they were discovered due to their own carelessness by those individuals they were spying on and who were involved in various illegal activities. After that month, these agents became useless and resigned. But, others had been recruited and he had arrested the notorious criminal, Bouchy, who was now in prison as well as the most notorious thieves of Port Louis. He nevertheless, expected domestic thefts in the isolated parts of the town and its suburbs to continue and even increase, 'as emancipation advances'.<sup>38</sup>

Thefts increased partly because this money was used to pay for the purchase of freedom of family and close relatives.<sup>39</sup> This was also reported in July 1838, in *Le Cernéen*: in an article entitled 'Progression des vols après l'abolition de l'esclavage à Port Louis': 'Certains (les apprentis) avaient eu l'audace de déclarer publiquement qu'ils s'étaient servis de fausses clés pour se procurer de l'argent pour le rachat de leur liberté selon une clause de l'acte de l'abolition de 1833'.<sup>40</sup> It also shows that ex-slaves, despite their illiteracy, were fully aware of manumission laws and of impending freedom.<sup>41</sup> More symbolically, however, is the desire not to be freed by someone else, but to *free themselves*. Finiss stated:

*"There is also a feeling amongst the apprentices in Port Louis that it will be a dishonor to them if they do not effect their own emancipation before the period of general freedom arrives, there is consequently a great increase in domestic thefts and robberies which will increase rather than diminish."*<sup>42</sup>

Finiss' statement indirectly helps us to understand why those who could not purchase their freedom, preferred to run away and run risk of being arrested and imprisoned. Pride, not submissive behaviour, as it often portrayed in public discourse in contemporary Mauritius, characterized slave behaviour. This short study of apprentice and indentured behaviour in a crucial moment in Mauritian history, the 1830s, helps to show that oppressed people in Mauritius have never bowed their heads and accepted their fate silently. They showed many innovative ways to overcome their servitude and fight the system. We are only at the beginning for our search to understand the consciousness of the oppressed in Mauritius.

## IMPACT OF VAGRANCY LAWS ON LABOUR MOBILITY

This problem continued to prevail even till 1890s and its gravity could be gauged by the fact that out of 209,001 complaints filed against Indian labourers between 1860 and 1885, about 72% accounted for illegal absence and desertion. Planters' response was obvious, - rather than recognising these frequent occurrences of absence and desertion as labourers' vent of protest against the inconsiderate working conditions and repressive disciplinary structure of plantations and their naïve attempts to move out of contractual bindings of indenture; illegal absence and desertion were termed as habit of Indian labourers who were blamed as habitual idlers not wanting to work. And therefore, instead of addressing the grievances of immigrant labourers through reforms and relaxing the harsh legal provisions of indenture, planters resorted to repression - several punitive laws were initiated to discipline errant labourers for illegal absence and desertion, the notable ones being the Ordinance 21 of 1843, Ordinance 22 of 1847, and Ordinance 7 of 1849 which entrusted to the police and planters enormous powers to punish labourers in case they tried to break away the shackles of indenture. Absence and desertion were declared criminal offences and the concept of vagrancy as a criminal category was introduced to deal with the immigrant labourers who had deserted the plantations. All the labourers found outside the plantation were convicted for vagrancy.

Authorities blurred the critical difference between desertion and vagrancy, and defaulters for both offences were put on trial for the offence of vagrancy. This fundamental oversight continued till the 1890s, even when the initial vehemence to 'hunt' vagrants decelerated to a great extent because of the shift in the priorities of planters and Colonial Authorities. In 1893, J.W.P. Muir-Mackenzie<sup>43</sup> reported this gaffe and recommended that a deserter should be dealt with under the provisions of Labour Ordinance dealing with the offence of desertion, and not under a general vagrancy law. He was also very critical of treating free labourers as criminals - 'an Indian labourer is not to be exposed to bullying by the rank and file of the Police, and treated as a suspected criminal merely because he may prefer free labour.'<sup>44</sup>

Initially, planters tried to meet the loss of labour with introduction of new labour as well, in addition to forcing the existing labourers to reengage. But the introduction of huge number of labourers from India in the 1840s and 1850s, and a subsequent increase in Old Immigrants changed the demographic order of the island. Planters got a readily available stock to bring into the terms of indenture. They cajoled existing labourers to continue with contractual service through legal barricades on their mobility. This proved to be more cost-effective than introducing new labourers. Planters had adopted the strategy to re-introduce the Old Immigrants into the plantation through Vagrancy Laws, despite the fact that they were trying to sustain themselves through alternative vocations such as gardeners, carters, dock labourers or hawkers.

The 1860s were the period of economic crisis and depression for the sugar economy of Mauritius, primarily due to the changing composition of world sugar market and a sharp decline in the price of sugar on the export market. It also marked a decline in the arrival of new immigrants from India. Instead of adopting more productive structural changes in the system of production - which they eventually did in late 1870s onwards through *Métayage* and *Morcellement*, the Mauritian Government and plantation lobby adopted a one-dimensional response by criticising the instability of labour market responsible for the crisis and responded by coercive strategies of labour control.

Free labourers were blamed for the volatility of the labour market and crisis situation, and harsh legal provisions were made to push free labourers to enter into contractual service. The most compelling among such legal initiatives was Ordinance 31 of 1867. Under the new Ordinance, the Old Immigrants had to carry the ticket all the time and any immigrant found without such a ticket was labelled and prosecuted as a vagrant. In addition to this ticket, which was required since 1847, they were now required to obtain a pass from the Police also. And the time assigned to obtain both these passes was one week - what happened in most of the instances was that they were arrested while on the way to obtaining these passes or during their search of an alternative job, and either

restored to the previous employer or sent to the vagrant depots and employed on public works with mere allowances hardly sufficient to sustain themselves.

The deliberations over possible ways of handling vagrants also strengthen the proposition that the official intent for Vagrancy Legislations and arrests of Old Immigrants as vagrants was to curb their mobility rather than to convict them as criminals or get rid of them. Despite rendering the Old Immigrants responsible for all the crimes and disorder in the island, neither the planters nor the Government were willing to lose them by deporting them, though the Vagrancy Laws provided for the deportation of 'incurable vagrants'. By the 1850s, the arrests for vagrancy became so massive that the prisons were overcrowded many times more than the planned capacity to house convicts. Taking a serious note of 'fearful conditions' of vagrants, the Port Louis Prison Committee recommended for deportation of all Indian vagrants in 1851.<sup>45</sup> The Governor, however, rejected this outright. For the Government, this would have entailed a loss of labour as the vagrants were employed in public works.<sup>46</sup> Apart from overcrowding in prisons with the increase of vagrants, the authorities were also worried about the 'moral pestilence' of the vagrants because of possible contacts with 'hardened criminals' in prison. Despite labelling vagrants as criminals, the authorities were apprehensive that close contact with real criminals would pollute the mindset of vagrants and spoil their value as labourers. To accommodate an increasing number of vagrants and, most of all, to separate the vagrants from hardcore criminals, a separate Vagrant Depot was established in 1864 at Grande Rivière. This Vagrant Depot was modelled to function like the English-Work Houses aimed at instilling docility and a sense of duty among the errant Old Immigrants by a strict disciplinary regime. The Inspector General of Police, Major Anson, recommended the establishment of a separate Vagrant Depot to separate Indian vagrants from ordinary criminals on the grounds that:

*"By thus separating the Indian immigrants from the ordinary criminal classes, a treatment suitable to the circumstances of their race can be applied, whilst their isolation will materially facilitate the claiming of labourers by their employers and the restoration, on the expiration of their sentences, to the estates to which they may have been indentured."<sup>47</sup>*

This passage from his recommendations exemplifies, in no uncertain terms, the quintessential rationale of the entire anti-vagrancy drive - to curtail labour mobility, after the expiry of indenture and to restore the Old Immigrants to plantations. The Police Commission also noted that after the stipulated punishments, almost all the vagrants entered into contractual labour for one year, and in many cases for two or three years.<sup>48</sup>

Reflecting upon the Vagrancy Legislations in Mauritius, an official from the Indian Government made the following observations in 1873:

*"On the whole then, the tendency of Mauritius legislation has been, I think, towards reducing the Indian labourers to a more complete state of dependence upon the planter and towards driving him into indentures, a free labour market being both directly and indirectly discouraged."<sup>49</sup>*

About ten years later, even Ashley Eden, a member of Indian Civil Services who was very instrumental in the suppression of Santals uprising in India, made a note that 'the tendency of the colony was to treat as vagrants all Indians who did not choose to labour on the estates.'<sup>50</sup>

The influence of slavery on Vagrancy Laws indicates clearly in that in a period of economic crisis, planters initiated a criminal category of pre-emancipation labour regime and by using such legal instruments as ticket of status, police pass, certificates of employment, etc. they tried to regulate the occupational and geographical mobility of Indian labourers. Anti-Vagrancy Legislations were used across all the locations of Indian indentured immigration to curtail mobility, but the severity of punishment was most severe in Mauritius.<sup>51</sup> The intention was to ensure the availability of labour and to have a hold over the economic independence and wage-bargaining power of Indian labourers. Fulfilling the legal requirements to acquire the status of a bonafide free labourer was so complicated, time-consuming, expensive and, above all, so manipulated and ill-interpreted that labourers were compelled, and often chose, to re-engage with the same employer, on a similarly repressive contractual obligations, or at times at even lower wages.<sup>52</sup>

From a colonial viewpoint, Indian immigrant labourers had only three places in Mauritius to live in - at work, in hospital or in gaol, since the Labour Laws virtually left no scope for them to be found anywhere else.

# AN OVERVIEW OF LABOUR LAWS RELATING TO ILLEGAL ABSENCE AND VAGRANCY

## 1. LABOUR LAWS REGULATING ILLEGAL ABSENCE AND VAGRANCY

Major General Hay, the Acting Governor of Mauritius, wrote to the Colonial Secretary in 1854 about vagrancy among Indian immigrants in Mauritius:

*“an evil (vagrancy) which, in addition to the loss it entails on the employer of labour, is fraught with moral and social mischief, and is, as I believe, the source and basis of much of the crime of the island [...] removal of this monstrous evil would require the Government to continue its most strenuous efforts to do so.”*<sup>53</sup>

Since the beginning of indenture, planters had been cautious about the availability of labour because plantations were high investment ventures and the introduction of immigrant labourers added to their costs. Runaway labourers thus meant permanent loss of ‘capital’ and hence, stringent labour regulations were supported. The main focus of legislative attention was to control the loss of labour - illegal absence, temporary desertion, and vagrancy. In definitional terms of laws, illegal absence and desertion involved a breach of contract because these were associated with the labourers under indenture, while vagrancy was associated with the free labourers who had completed their contractual obligations. However, vagrancy was defined in very loose terms, primarily to include the desertion and labourers’ refusal to work under within confines as criminal offences because vagrancy was considered to be a more serious crime and as a threat, not only to the plantation system, but to the society as whole.

From the late 1840s, the problem surfaced of how to deal with immigrant labourers who had completed their ‘industrial residence’ but did not want to continue on the same plantations with the same working conditions. After completing five years of industrial residence, many immigrant labourers decided to explore alternative options, which did not go down well with planters who wanted them to continue working on estates. According to colonial perceptions these Old Immigrants did not want to continue working on the plantations because they were ‘habitual idlers’ and because of their ‘unsettled habits’ and ‘erratic character’.<sup>54</sup>

By the 1850s, desertion and vagrancy became one of the primary concerns of the plantation lobby and the Colonial Authorities. In 1845, it was reported that about 6% of the total Indian labourers in Mauritius were deserters and another 11% were illegally absent.<sup>55</sup> They argued in favour of suppressing such conduct with stringent legal initiatives.

The first legal initiative of the Colonial Government to control desertion and runaway was contained in the **Order in Council of 7<sup>th</sup> September 1838** which provided for such punishments as: idle and disorderly persons condemned to imprisonment with hard labour for 14 days; a rogue and vagabond for 28 days, and an incorrigible rogue for a period not exceeding 6 months.<sup>56</sup>

**Ordinance 21 of 1843** prohibited Indian immigrants from working in shops or docks without prior approval so that they could not desert the plantation and take up another post.

**Ordinance 42 of 1844** defined the ‘idler’ as a person without the means to support himself and his family and as a burden. In order to curb the tendency of desertion and idleness among the Indian indentured labourers, this Ordinance made such penal provisions as: all such persons were to be convicted by the Stipendiary Magistrate and sentenced to hard work on public works like highways and streets for a period not exceeding one month. This Ordinance reiterated the same punitive provisions as provided in the Order of Council in 1838.

**Ordinance 22 of 1847** was introduced in order to clearly identify the immigrants who had completed their contracts and those still under indenture through a ticket system as proof of status. All the Old Immigrants had to carry a ticket. It also fixed the territorial limits for the Indian labourers and in the event of their crossing these geographical boundaries, it provided for arrest and criminal prosecution without a warrant. Any Old Immigrant who failed to produce this ticket, or was not able to satisfy the authorities about his occupation or was found outside the boundaries, was liable to punishment as a vagrant.

**Ordinance No. 16 of 1852** defined a vagrant as a person ‘who have no fixed domicile, or any means of subsistence, and who, being able to labour, do not habitually work at any trade or profession’, and provided for imprisonment and hard labour as punitive measures for vagrancy. It

also introduced the concept of ‘vagrant hunts’ which were no less punitive and violent than the ‘maroon hunts’ during slavery. During the period of vagrant hunts, which were organised very frequently with the support of planters, police and authorities could enter any premises to ascertain the status of inhabitants. They swept across large areas, and any Indians found outside the plantations, on whatever pretext, was arrested as vagrant.

**Ordinance 4 of 1864 (Article 16)** did away with the distinction between desertion and vagrancy, while the punishment for both the offences had been different before in terms of quantum. Vagrancy was always punished severely. This Ordinance made it possible for an indentured worker, found guilty of desertion of an estate for a couple of days, to be condemned to imprisonment of six to nine months.<sup>57</sup>

In the 1860s, several other legislations were passed to control vagrancy. Legislative measures reached their apogee with the promulgation of **Ordinance 31 of 1867**. An average of 12% of the total Indian population was arrested for alleged vagrancy in the 1850s and the early 1860s. The authorities wanted more overarching and stringent legislation to detect and discipline ‘vagrants’. The Protector of Immigrants, appointed to safeguard immigrants’ interests, expressed frustration with the failure of existing laws in diminishing vagrancy.<sup>58</sup>

Epidemics, which afflicted the island in the 1850s and the 1860s, led to the deaths of more than 11% of the Indian population. The most affected area was the town of Port Louis where one third of the population perished because of the malaria outbreak. Official estimates were that mortality rates were higher in the ‘Indian villages’ and Port Louis which were also inhabited by the Old Immigrants. This led to a very strongly prejudiced view in official circles that these outbreaks were outcomes of the unhygienic habits of Indian labouring classes particularly of Old Immigrants. Governor Barkly, in his report to the Secretary of State, affirmed that the high mortality was primarily caused by the ‘agglomeration of people of dirty habits in wretched and overcrowded huts - constructed without the slightest regard to sanitation and grouped together often in most unsuitable localities.’<sup>59</sup>

Ordinance 31 of 1867, or commonly referred to as the Labour Law of 1867, surpassed all the previous legislations in severity and intolerance against Old Immigrants. It was validated by the highest levels of Government in Mauritius and the need to maintain hygienic standards in the island. It gave enormous powers to the Police and planters to apprehend labourers. This Ordinance was the most comprehensive legislation to regulate the occupational and personal spheres of Indian immigrant labourers in Mauritius, and it remained in practice till the end of century, albeit with certain modifications, despite being the subject of the numerous condemnations as extremely repressive.

In order to understand how the Labour Law of 1867 was instrumental in regulating the geographic and occupational mobility of Indian immigrant labourers in Mauritius, the clauses most relevant need to be examined:

- i. The Protector of Immigrants shall, upon proof of him of any immigrant having duly completed his industrial residence, register such immigrant as an old immigrant, giving him a ticket as such, with his portrait thereon[...] (Article: XXXIX)
- ii. Introduction of Pass System: Every Old immigrant not under engagement by written contract of service, shall be bound to appear at the Central Station of Police for the district in which he is resident, and to justify to the Inspector of police.., his designation as Old immigrant upon production of his ticket and further to declare to the said officer his place of abode, and occupation, employment, or other means of subsistence. The said officer shall thereupon deliver to such immigrant a pass.

Every immigrant on completing his industrial residence and receiving an Old Immigrant’s Ticket, and every old immigrant on the expiry of his written contract, shall, within eight days, appear before the said officer of police of the district in which he resides or has taken his abode, and shall make declaration as above. (Article: XLIII)

- iii. Any old immigrant not being engaged under written contract of service.., who shall fail, on demand of any Magistrate, or of the Police, to produce his pass, or a certificate of

engagement duly signed by a Stipendiary Magistrate, shall be liable to be detained and forwarded to the Immigration Depot, and if it shall appear that he is not following any bona fide employment, whether on his own account or in the service of a third party, and that he has no visible means of subsistence, he shall be deemed to be taken as a vagrant. (Article: XLVI)

- iv. Any Immigrant found in a district where he has no residence, or in a house or premises, and being unable to give a satisfactory reason for his being in such district, house, or premises, as the case may be, may be arrested by any officer or constable of police, without warrant[...](Article: XLVIII)
- v. If any labourer desert from his employer's service, it shall be lawful for such employer, or any servant of such employer acting with his authority and on his behalf, without a warrant and without the assistance of police to apprehend such labourer in any public place where he may be found[...](Article: LI)<sup>60</sup>

The Labour Law of 1867 gave enormous powers to the employers and the Police who did not require any warrant to enter any premises; they could arrest any person on the pretext of his being a vagrant and keep him in prison till the time it would take for an investigation. In addition to these, the Vagrancy Ordinance of 1867 made it compulsory to obtain a new ticket on each instance when there was a change of residence, as well as permits of discharge and on engagement for each employment.

A careful reading of these clauses of the Labour Law highlights certain features which were particularly articulated to curb the freedom and mobility of Old Immigrants - photographs had to be affixed to tickets (making them more costly); the need for an additional identification document and location in form of Police Pass, and confining these Old immigrants to fixed locations was also initiated.

The most significant change was the extension the right to challenge the status and to apprehend Old Immigrants, to ordinary people and planters' agents, a right which was more than often abused by planters' agents to exert their control over the labourers. The Procureur Général's statements, justifying these stern measures, were a most reflective articulation of colonial prejudices and contempt of the Indian immigrants, and implied doubts in the ability of free Indian labouring classes to sustain themselves by pursuing an independent occupation:

*"There are a great number of immigrants who are without tickets, being either deserters from service, or parties who have lost their tickets and being without papers of any kind,...These parties lead a precarious existence; when provisions are cheap, they live upon the bounty of their friends, in the time of scarcity, they are destitute, and in the time of epidemic, as recent experience has shown, when they are sick, they are turned out dead,...]Many of them turn to a life of plunder, robbing or pilfering at night and sleeping in the canes or in their comrades' house by day.*

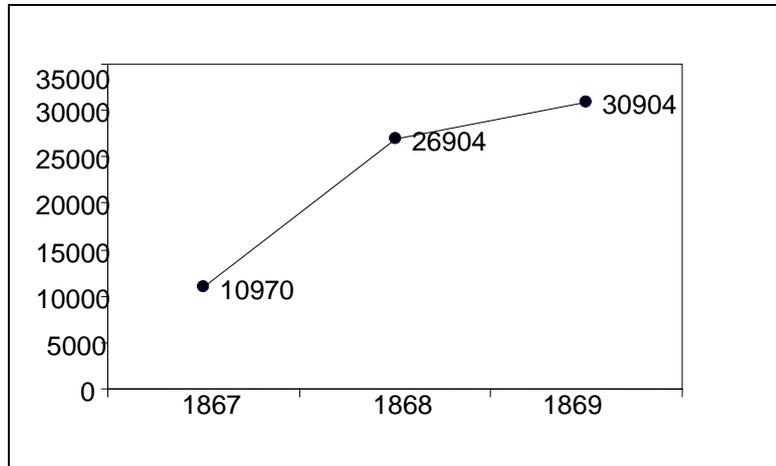

*There is also another class who are equally if not more dangerous to society: they are Old Immigrants who have no visible means of subsistence. They pass themselves off as gardeners, and half a dozen of them squat upon a small piece of ground, perhaps ¼ of an acre, which they rent, and they nominally live upon the produce of this ground but they are well known to the police as thieves and vagabonds.*

*It is from these classes that the perpetrators of gang robberies so prevalent of late years, are recruited. The Police Returns upon this subject, in answer to a series of questions framed by myself show the magnitude of the evil[...]*

*It is a well known fact that Indians will never work if they can live a life of idleness and I am confident that this system will soon convince the vagabond class that they can no longer unmolestedly lead a life of idleness and that they will in consequence be driven to seek for honest employment. "<sup>61</sup>*

Promulgation of this Act and its enthusiastic pursuit by disciplinary agencies had the obvious outcome and the numbers of arrests of so-called vagrants multiplied by three times in the next two years, as after the enactment of Ordinance 31 in 1867 - from 10,970 in 1867, these increased to 26,904 the following year (fig 40).

Figure 7: Arrests for Vagrancy, 1867-1869

Throughout the decade of the 1860s, Government indeed dealt with vagrants very zealously and as the following table shows, between 1861 and 1871, an average 11.5 to 17.2 per cent of the total male Indian population in Mauritius was arrested on charges of vagrancy.

Figure 8 : Arrests of Indians for Vagrancy, 1861-71

Year	Total Arrests	% of Total Male Indian Population
1861	23371	15.7
1862	16668	11.0
1863	-	-
1864	18834	12.5
1865	18382	11.4
1866	19416	12.0
1867	16884	11.5
1868	22357	15.8
1869	23916	17.2
1870	16880	12.0
1871	12096	8.5

Source: ARPI, 1861 - 1872, Kuczynski, R.R., Demographic Survey, pp. 780-785

Opposition to these laws came from the Indian Government An official from the Indian Government made the following observations in 1873:

*“On the whole then, the tendency of Mauritius legislation has been, I think, towards reducing the Indian labourers to a more complete state of dependence upon the planter and towards driving him into indentures, a free labour market being both directly and indirectly discouraged.”<sup>62</sup>*

At more or or less the same time, the Royal Commission, in its report of 1875 in Mauritius, also noted that the Vagrancy Laws amounted to nothing less than unbridled harassment of the Indian population.<sup>63</sup> It also confirmed many of the grievances highlighted in the petition of Old Immigrants, especially regarding the attempt to restrict labour mobility, and took a strong stance against the Protector of Immigrants and the Inspector General of Police for their failure to protect the interests of the Immigrants in Mauritius.

The Royal Commission recommended a complete reform of the Immigration Office in Mauritius and a regular and thorough inspection of sugar estates. The Secretary of State endorsed most of the findings and recommendations of the Royal Commission and instructed the Governor of Mauritius to revoke most of the harsh provisions of the Ordinance of 1867.<sup>64</sup>

**Ordinance 12 of 1878** abolished the harsher aspects of the 1867 laws and provided for a more efficient system of checks for errant planters, especially Article 284 which empowered the Governor to take action against the bad planters who were misusing the provisions of the Labour Ordinance. Punitive actions for vagrancy continued.

**Ordinance 12 of 1922** finally repealed the penal clause in the regulation of labour.

## 2. THE ISSUE OF WAGES

From very beginning of the system in 1834, Indian immigrants were employed on fixed wages and stipulated rations to work on plantations. This was to be increased every year according to the Government of India, through **Act XXXII of 1837 (of the Government of India)** and accepted by the Government of Mauritius.<sup>65</sup>

Initially, however, there were rampant violations of contractual obligations on the payment of wages and for the first time, the **Order in Council of 7<sup>th</sup> September 1838** provided for the strict obligation of the payment of wages and provided the opportunity to the indentured labourers to seek redress by making a complaint to the Court of Stipendiary Magistrate who had the power to order the full payment of arrears due to the labourer or terminate the contract.

**Ordinance 15 of 1852 (Article 10)** made the withholding of payments a punishable offence, and the employer had to pay £10 compensation to the complainant, if the charges of non-payment of wages were proved. **Article 11** of the same Ordinance provided that if the arrears were due for more than 3 months, this amounted to breach a of contract and the indentured labourer had the right to claim the end of contract.<sup>66</sup> This Ordinance also provided for the seizure of the property of the employer to pay the arrears of wages due to the labourers.

**Ordinance 31 of 1867**, one of the first comprehensive and overarching Labour Laws repealed all the Labour Ordinances till then, extended it to all labourers including domestic servants, and handicraftsmen or even overseers of labour of any origin if their monthly wages were below £4.<sup>67</sup>

**Ordinance 12 of 1878** authorised the Protector of Immigrants or any Inspector of Immigrants to represent the labourers in the matter of the dissolution of the contract, if the labourer's wages were not paid for three consecutive months.<sup>68</sup>

**Labour Ordinance 12 of 1922** reduced the time to one month. If the labourers' wages were not paid for one month, he was entitled to the dissolution of the contract, by making an appeal in the Court of Stipendiary Magistrate. Even if the labourer did not make a complaint, and wages were not paid for three consecutive months, the Protector had the right to request the dissolution of the contract on the ground that the interests of labourers were protected in the said contract.

Figure 9: Complaints by Indian Labourers against their Employers, 1878 - 1898

Year	Complaints for Non-Payment of Wages (cases entered)	Total Complaints
1878	816	1672
1879	503	823

<b>Total</b>	<b>7235</b>	<b>10126</b>

(Source: ARPI for years 1878-99)

The planters' habitual defence was the absence of liquidity. But an overdue of wages had more to do with the attitude of planters than an actual crisis of funds. Planters always avoided the wage payments on some pretext or other and a minor fault on the part of labourers provided them with an opportunity to forfeit all the accumulated wages of errant labourers. In addition, the non-payment of wages often pushed labourers into a debt trap of money lenders, and this eventually pushed the Immigrants to extend their contracts, as desired by the planters.

### Double Cut

All the Labour Laws stipulated the wage and ration levels and employers were strictly prohibited from employing any indentured labourer below the stipulated rates. However, the Labour Laws provided also for employers paying less than what was legally stipulated through the 'double cut' or deduction of two days of wages for an absence of each day. This was primarily introduced to control illegal absence and habitual idling among the indentured labourers. This was practised by the planters as early as 1839<sup>69</sup> and obtained legislative endorsement in **Ordinance 22 of 1847**.<sup>70</sup> The planters' explicit authority in applying this 'double cut' without any reference to protective authorities such as Stipendiary Magistrates, was established by **Ordinance 16 of 1862**.<sup>71</sup> Rampant misuse ensued. In 1874, the former Assistant Protector of Immigrants in Mauritius, Robert Mitchell reported that 'double cut' reduced the wage bills by one third on good estates and one half on bad estates to what should have been actually paid to the labourers.<sup>72</sup> The Royal Commission also condemned it, describing it as a 'monstrous system'.<sup>73</sup>

The 'double cut' system remained in effect even with the supposedly pro-labour **Ordinance 12 of 1878**, though it tried to put some control on planters' use of this provision by making the approval of a Stipendiary Magistrate mandatory, as well as stipulating compulsory reporting to the Protector.<sup>74</sup> This 'monstrous evil' was abolished only through **Ordinance 13 of 1908**.<sup>75</sup>

By the mid 1860s, it was becoming apparent that the overall system of maintaining labourers on estates was not cost-effective. The decade of the 1870s witnessed a period of improvements in some facilities provided to indentured labourers on the plantations - housing, medical, food and other provisions which added hugely to the costs of labour. In order to cut the costs, planters now shifted to employing labourers on short-term contracts, and that too through contracts, rather than engaging them directly on the estates. Under this arrangement, planters were not obliged to maintain labourers for the non-working part of their lives and had to pay wages only for the work performed. This strategy helped them to cut the costs of labour to a great extent.

### 3. CHANGING STRATEGY, 1870S ONWARDS

We shall now briefly describe the planters' strategy of labour control and certain crucial shifts in 1870s onwards. We shall argue that strategies of labour control should not be seen as monolithic, static responses from the masters, but we shall put them in a larger context of the needs of production system, interests of the capitalist classes and changing dynamics of labour-master relationship. Planters responded to the crisis of the sugar economy and its sinking prospects in the 1860s by forcing labourers to continue to work on plantations under contractual bindings and anti-vagrancy legislations facilitated planters' attempts to effectively curtail the prospects of labour mobility or give any scope for labourers' bargaining to increase wages. This strategy helped

the planters in coping with the demands of the industry at that time, but by the mid-1860s it was also becoming apparent that the overall costs of maintaining labourers on estates was not very cost-effective. The 1870s were also a period of certain improvements in facilities provided to the indentured labourers on plantations - housing, medical, food and other provisions which immensely added to the costs of labour. In order to cut costs, planters now shifted to employing labourers on short-term contracts, and that too through contracts, rather than engaging them directly to the estates. Under this arrangement, planters were not obliged to maintain labourers for the non-working part of their VRS and had to pay wages only for the work performed. This strategy helped them to cut the costs of labour to a great extent. But the most striking shift in the realm of labour relations took place in form of *Métayage* and *Morcellement*<sup>76</sup>. Finding the large scale cultivation economically unviable, planters decided to lease the plantation part to the old immigrants and concentrate on production of sugar by consolidating it and making it more cost-effective. In a severe financial crisis, because of the sinking fortunes of Mauritian sugar in the wake of global competition, planters had no financial resources to invest in the improvement of plantation, and this moved them to separate the plantation of sugar cane from the making of sugar. They transferred cultivation part to the Indian population through the *Métayage* and *Morcellement* processes. It was a decisive shift towards a crucial reversal of the earlier policy of regulation of labour mobility to a phase of labour relations where mobility of labourers was promoted, and they were encouraged to move out of plantation and either buy or lease small plots of lands to grow sugar cane. As scholars like Raj Virahsawmy, Richard Allen and M. D. North-Coombes have argued, this strategic change in labour relations had very enduring consequences for the Indian labour Diaspora in Mauritius, and it facilitated the growth of a new class *petits planteurs* in the social order of Mauritius which, in course of time, played decisive role in the future course of the Mauritian political economy and social-cultural space.

#### 4. LEGAL RECOURSE FOR PROTECTION

Despite the proviso for redressal, agencies like the Protector of Immigrants and the Stipendiary Magistrates, Indian labourers seldom received any reparation for their ordeal because, rather than protecting the interests of these labourers and saving them from harassment at the hands of planters or Police, these officials mostly remained indifferent or commended the need of a strict legislative mechanism to put labourers' VRS in order.<sup>77</sup> During the indenture period, the overall system of legal/judicial recourse was tilted in favour of planters, an indication of which can be traced from what Geoghegan reported in 1873, after examining the cases brought by employers against labourers and vice versa. His report shows that planters won 91% of cases brought by them, while Indian labourers won only 38% cases.<sup>78</sup>

This one area of the colonial legal structure in Mauritius needs a more detailed investigation.

#### 5. CONCLUSION

What this report proposes to look into is how the term 'vagrancy' acquired new meanings in the context of an Indentured Labour regime and the multiplicity of ways in which it was conceptualised and appropriated as a ploy to regulate the geographical and occupational mobility of labour. We have also tried to ascertain that the real intention of anti-vagrancy legislation was not the prevention of crime among the old immigrants,<sup>79</sup> as it was often promulgated by the colonial authorities, but to restrict their mobility away from the estates, even after the completion of indenture, and therefore to ensure their availability for work on plantations by placing stringent legal constraints on old immigrants' efforts to move beyond the confines of plantations and the contractual obligations of indenture, so as to pursue a vocation of their choice.

We have also tried to show that despite strictly determined scales of wages and punitive provisions for non-payment of wages in the Labour Laws, planters resorted to every possible trick to avoid paying wages right up to the beginning of 20<sup>th</sup> century, which severely curtailed the mobility of indentured labourers.

Another point we have tried to emphasise in this Report is that the Labour Laws, during the indentured period, should not be studied as static and monolithic legal proclamations. But these Laws should be evaluated by situating them within a larger context of multiple strategies adopted

by planters and the colonial authorities, in response to the requirements and challenges which the plantation economies had to face in the changing global contexts and the restructuring of commodity productions under the Imperial Order.

## INTRODUCTION

*Colonial perspectives:* According to the Colonial Officials, the relatively low proportion of women immigrants in indentured immigrant population on the plantations led to unstable sexual relationships and affected order on plantations through social instability, sexual promiscuity, high crime rates. This volatility of men-women relationships fostered immoral ways of living, abduction and exploitation of women immigrants. This led to violent clashes between the immigrant labourers and even the murders of wives or men involved in the relationships.<sup>80</sup> Murders of wives by the husbands occurred mostly because of distrust, jealousy or betrayal by the women partners which was considered 'rampant' in Mauritius, although it was often termed an 'epidemic' in the colonial lexicon. As late as in 1880s, among the Indian population, 21 wives were murdered by the husbands.<sup>81</sup> Indenture in this respect undermined the institution of marriage.

The Royal Commission noted that the custom of polyandry was an accepted custom in Mauritius and often a group of immigrant men would keep one woman in their housing unit who would cook their food and satisfy them physically. The most disturbing effect of this custom, according to the Royal Commission, was that it led to much quarrelling among the immigrants, and sometimes even murders. This prejudiced view of Colonial Authorities, based on Victorian notions of social order and moral standards, has been shared by the majority of scholars of indentured Diasporas of the old type who study indentured emigration in terms of the continuation of slavery. These scholars argue that 'the disproportion between men and women was the main factor in shaping the life of the coolie lines'<sup>82</sup> and 'Indian social life in Mauritius presented a disquieting spectacle.'<sup>83</sup>

Since the relative scarcity of women was related to disorder on the plantations, for the purpose of maintaining order on the plantations and encourage a structured/stable settlement in some kind of family pattern, the Colonial Authorities adopted a double-pronged strategy: first, they tried to increase the numbers of immigrant women by legally fixed quotas and second, they put a close guard and legislative regulation over the marriages among the immigrant indentured community.

In addition to this real crisis on the plantations, the regulation of marriages among the immigrant population was also rooted in the larger orientalist project of civilizing the 'barbaric Orient' by the British Empire and building new societies in the newly-acquired colonial territories. The underlying rationale behind this was the notion of cultural ascendancy which perceived Indian culture and social practices as anomalous, resulting in the moral degradation, particularly in the immigrant set up.

To address the concerns over the disproportion of sexes among the Indian communities on the plantations and also to stabilise the labouring population in Mauritius (for the other labour importing colonies as well) Colonial Authorities fixed the quota of women mandated who could be taken along with the male emigrants, encouraged the family emigration from India. A bounty of £2 was paid to those immigrants who came with 'legitimate' wives. However, this led to another forms of disorder whereby widespread instances were reported of selling of daughters or wives, using marriage ties to bring women to Mauritius and then selling them off to make extra profits by the sirdars and returnees. In 1860s, 'many sirdars and overseers brought two and sometimes three women with them' as their wives who were, as the Protector reported, sold or transferred to other men to make money.<sup>84</sup> Abuse of indentured women also occurred by the plantation owner and managers leading to numerous offspring who today still be identified through their mixed Asian and European origins. Many of these form part of the Coloured population who form the subject of subsequent chapter.

## REGULATION OF INDIAN MARRIAGES

In the initial periods of indentured emigration, the Colonial Authorities had been lenient concerning cohabitation among Indian immigrants. Their primary concern was to secure the supply of labour on plantations, and since women were not employed in Mauritius, they cared the least for them. A Royal Commission reported that before 1853, no law existed in Mauritius specifically providing for celebration and recognition of Indian marriages.<sup>85</sup> However by 1850s, with the large influx of Indian immigrants and a sizeable number of Indian labourers in the colony, the Colonial Authorities had to ratify marriage legislations. In 1853, provisions were made under **Ordinance 21 of 1853** to recognise the marriages solemnised between the members of the Indian immigrant community

according to the Civil Code, and the immigrants who wanted to marry had to produce a 'Certificate of non-marriage' to check for polygamy or abduction of already married women.<sup>86</sup>

In 1856, regulations were introduced under **Ordinance 3 of 1856** to recognise marriages between the immigrants who embarked from Indian ports as married couples. Immigrants who were already married and arrived with their wives from India, had their marriages recognised as valid in Mauritius, only if they had been already declared before the Protector at the port of embarkation in India. Any intending emigrant, who was married in India and wanted to come to Mauritius with his wife and children (if any), had to declare that he was lawfully married to such a woman according to the forms and ceremonies of their religion, and that the children (if any) accompanying them were the lawful issue of such marriages. This declaration was signed by two witnesses in front of the emigration agent and upon his satisfaction, then the Protector at the port of embarkation issued a certificate of marriage. Copies of some of these are to be found in the MGI Archives. Upon their arrival in Mauritius, these married couples had to present themselves in front of the Protector of Immigrants and declare that they were married. After the verification of identities, the Protector issued to them a certificate. Thus, Indian marriages celebrated in India acquired legitimacy in Mauritius only when they were registered and recognised by the Protector and when a certificate was issued to the married couples on payment of 2s.<sup>87</sup>

One consequence of indenture, because of the relative scarcity of women and their crucial importance in performing the domestic chores at the plantations, was that the usual custom whereby husbands' families obtained a dowry from their wives' families, was reversed in the diasporic setting, and often the grooms paid a premium to the wife's father or relatives. In one report, an immigrant *Doyal* of Flacq, paid a huge sum of \$137 to get married to *Bagmanea*. This practice of paying the bride's price was not limited to any particular section of the Indian immigrants, and another immigrant *Virapatim*, of South Indian origin, paid several hundred rupees to get married to *Taylamen*.<sup>88</sup> However, we need to be extra cautious in celebrating these instances of bride-price as 'women empowerment' and 'source of additional income for the Indian women',<sup>89</sup> as scholars of diaspora with feminist convictions attempt to assert today. Sources underline that these were often forced sales of women,<sup>90</sup> and considering the fact that the money was often paid to the father or relatives of the brides who, on many occasions, 'sold' their daughters or female relatives, colonial descriptions of women's subjugation appear to be more tenable than those of the revisionist scholars of diasporic women.

Controlling the illegal emigration of women disguised as wives by the sirdars and returnees and then their subsequent sale in the colony remained a primary preoccupation of the Colonial Authorities' marriage related legislations. The other underlying assumption of the administrators' attempts was that by making the registration and declaration compulsory, they would be able to make the matrimonial alliances in the immigrant community more stable, and thus curb sexual immorality. Therefore, the registration and declaration of marriages which was the main thrust of the marriage Ordinance, continued and was reinforced in the form of a double registration in the Marriage Ordinance 17 of 1871. All the immigrants arriving with their wives and children had to declare and obtain certificates for their marriages twice - once at the port of embarkation where the Protector had to verify their claims of being married, and then again upon their arrival in Mauritius where the Protector would give them the certificate, without which their marriages were not legally valid and children legitimate.<sup>91</sup> Considering the ignorance of emigrants and the general aversion among them for the cumbersome registration process, the Government of India made conscious efforts to emphasise the significance of the registration of marriages before embarkation. A. O. Hume, who was Secretary of the Revenue, Agriculture and Commerce Department which administered the indentured emigration, made a special request to the Judicial Secretary of Bengal government to inform intending emigrants that, unless they registered marriages before departure from India and obtained a certificate from the Protector, their marriages would not be held as valid in Mauritius.<sup>92</sup> Any immigrant, who wanted to get married in Mauritius, had to obtain a certificate from the Protector in Mauritius to testify that he had arrived unmarried in Mauritius.<sup>93</sup>

The next legislative intervention came in the form of **Ordinance 26 of 1890** which made certain modifications to the marriage registration process. Now the Protector in Mauritius had to certify the identity of the married couples arriving in the immigration depot and issue the certificates before these couples left the depot.<sup>94</sup>

Another consequence of their migration to Mauritius was the non-respect of their traditions: the Indian Government expressed concern and anxiety for the Indian population living in Mauritius, particularly the manner in which most of the cohabitation among Indians were declared as immoral and illegal by the state. It reported to the Secretary of State for the Colonies that because of existing Marriage Laws, most of the Indian children in the colony were illegitimate, even if their parents had been married under native rites.<sup>95</sup> The Indian Government pressed the Colonial Office to influence the Government of Mauritius into adopting the Marriage Ordinance of Trinidad which recognised marriages performed according to religious rites.<sup>96</sup> Although the Colonial Office deferred the implementation of Trinidad Marriage Ordinance in Mauritius, it expressed its concern about the Mauritian Government, and a Committee was appointed to enquire into the procedures connected the Indian marriages in Mauritius, under J. B. Kyshe, the Registrar General in March 1882. This committee accepted the insistence of Government of India to be consulted regarding the matter of Marriage Laws. The Protector of Immigrants proposed to set up his office for the registration of marriages, but it was rejected by the Procureur Général and the said committee failed to intervene in making the marriage procedures more convenient for the Indian population.<sup>97</sup>

The Indian Government was particularly concerned about the relatively very few numbers of registered (legally recognised) marriages. In 1866, the Protector of Immigrants had reported only 112 marriages in 1866 and 166 marriages in 1867.<sup>98</sup> By 1872, the situation had not improved.

J. W. P. Muir Mackenzie, deputed by the Government of India to enquire into the conditions of the Indian population in Mauritius in 1893, reported that the majority of Indians cohabiting were not listed in the registers. However, they were not bothered about that and as a result, a large number of perfectly moral and orderly unions, regarded as marriages by parties and the social system they belonged to, were rejected by the authorities in Mauritius. It is worth noting that Muir-Mackenzie was concerned that ‘an unmerited stigma is cast on the morality of the Indians, and injury results to their self-respect and moral character.’ He found the compulsory civil marriage registration to be an unworkable and unsuitable institution and called for an urgent alteration in the Marriage Laws of Mauritius because the recognition of marriages in Mauritius should not be more difficult for Indians than in their own country.<sup>99</sup>

The consistent pressure from the Indian Government continued well into the 20<sup>th</sup> century. Despite being born in Mauritius, a large segment of the Indian population was considered illegitimate as the alliances of their parents were not recognised. This was not a very comforting situation for the social and political stability of the colony. The Colonial Office was well aware of the ridiculousness of declaring the majority of the population as illegitimate. The Indian community in Mauritius was also gradually becoming conscious of their plight, and attempts were being made to articulate their concerns. In his representation to the Royal Commission of 1909, Manilal Doctor demanded the recognition of marriages performed among the Indian communities according to their religious rites.<sup>100</sup>

In 1912, the Government of Mauritius passed the most elaborate ordinance regarding the registration of marriages among the Indian population. This was ‘The Civil Status (Indian Marriages) Amendment Ordinance, 1912’. Primarily aimed at making better provision for the registration of

Indian marriages, this Ordinance recognised the validity of marriages solemnised according to the religious traditions of immigrants and conducted by the Indian priests (both Hindu and Muslims) who were appointed by the Governor for the celebration of marriages in a district or territory specified by the Governor. Colonial Authorities were perturbed by the disinterest of the immigrant community in having their marriages registered, and therefore, to make the registration of marriages more convenient for the immigrant community, all the designated priests were given a register and a schedule of certificate in which they were to register all the marriages celebrated by them and then forward each case to the Civil Status Officer within a week who would then enter the details in the Register of Marriages.<sup>101</sup> The Ordinance made it lawful ‘for any priest without previous publication and without any other formality required by Ordinance 26 of 1890 to solemnise marriage between Mohamedans or Hindu of the same religion as such priest, and such marriage shall, subject to the provisions of this ordinance, be valid as if it had been celebrated by an officer of the Civil Status.’<sup>102</sup>

This Ordinance was a breakthrough in the regulation of marriages in the Indian community in Mauritius, as for the first time it recognised the area for the religious belonging of the immigrant population and entrusted to a religious mediator from their own community the performing and certifying of an act of marriage which was previously limited to the Civil Status Officer from the ranks of the Colonial Authorities. This Ordinance also had significant implications for the immigrant community. Under this Ordinance, persons getting married, if they met other conditions relating to minimum age, same religion and non-marriage, would marry according to their religious rites and have it registered by a designated priest. This law thus eased many procedural complications, and immigrants could now register their marriages and live as ‘legally approved’ married couples.

The immediate effect was the rise in Indian marriages. The Census of 1921 recorded religious marriages for the first time (Table 11).

Table 11: Marital Status of Indian Community 1921, 1931

Year \ Marital Status	Civilly	Religiously	Concubinage
1921	17,083 Male 17,674 Female	13,976 Male 14,244 Female	22,279 Male 22,624 Female
1931	24,088 Male 23,660 Female	7,803 Male 7,824 Female	17,029 Male 18,146 Female

(Source: Census of Mauritius and Its Dependencies 1921, 1931)

For the year 1931, returns are combined for Indo-Mauritians and Other Indians, as there were fewer Indians not born on the island.

Ridley, in his report on the conditions of Indian Population in Mauritius in 1941, mentions that among the Indian population in Mauritius, 17% were married civilly, 6% religiously and 12% lived in concubinage.<sup>103</sup>

## WIFE RESTORATION

Another consequence of indenture and of the scarcity of women on the plantations was the resulting instability of marriages. There were reports of wives being enticed away by other immigrants and women moving out of the matrimonial alliances for more attractive options. The Royal Commission noted that Indian immigrants filed 68 complaints in the year 1871-72 about wives being enticed away or harboured. Archival records show that this was one of the primary concerns of the male population in Mauritius who requested the authorities to restore their wives. Such occurrences of the breaking of alliances also hampered the prospects of family emigration from India as husbands were apprehensive about their wives being kidnapped or lured away, once they came to Mauritius.<sup>104</sup>

The very first exclusive Ordinance relating to Indian marriages in 1856 made specific provisions to address this. All the District Magistrates were given the legal power to look into the complaints about enticing away or harbouring wives, and any person found guilty was to pay a £50 fine or face

imprisonment with hard labour for a period not exceeding six months.<sup>105</sup> Ordinance 12 of 1870 even extended the purview of the Law to non-Indian wives of Indian immigrants whilst making the fine Rs 500; it was to be imposed along with imprisonment.<sup>106</sup> However, legal redress was available only if the husband and wife were married according to Civil Law. In the 1850s, since most alliances among Indians were not legally recognised, the protection was meaningless and husbands had recourse to extra-judicial methods: quarrelling, physical assault and in extreme situations, even murders.

Feminist scholars of indenture have asserted the common paternalist nature of the male Indian immigrants and colonial authorities and interpreted this gesture as a desperate attempt to restore control over women and maintain power to decide their partners.<sup>107</sup> There is no denial of the fact that the Indian male psyche was not at all comfortable with Indian women taking decisions about leaving a relationship and/or choosing another partner. The reaction was often extremely violent. The question remains whether the women were making informed decisions or whether they were 'lured' or tricked? Further research is needed. While relationships between Indian men and women are explored totally and official reports abound concerning wife murders, male suicides, unacknowledged by the academic community and by colonial officials at the time, were the abuse of power on the part of all those in the upper hierarchy on the plantation and sexual abuse in the academic scholarships as well as by colonial officials. Within the descendant today, it is widely spoken of but concrete examples are still spoken about in hushed tones, offspring being quire present in Mauritian society. Elsewhere as in Fiji, such stories have become famous.<sup>108</sup>

## **AGE OF MARRIAGE**

Early marriage was common in India despite British attempts to regulate it. In Mauritius, the need to regulate the age of marriages was felt. The 1856 ordinance fixed the marriageable age of men and women at 18 and 15 years respectively and any person getting married before this age had to obtain permission of the Governor.<sup>109</sup> Ordinance 28 of 1912, while fixing the marriageable age as 21 years for intending husbands and 18 years for the intending wives, also gave space for child marriages by allowing the marriages to be celebrated between the couples below the prescribed age if the parents had given their consent to it.<sup>110</sup>

## **PATTERN OF MARRIAGES**

The patterns of marriages among the Indian immigrants can be traced from the certificates of marriages at the Mahatma Gandhi Institute and Civil Status Office and from the several reports on the condition of Indian immigrants in Mauritius. All the reports as well as existing writings like Marina Carter's work show that the most of the marriages among the immigrants were intra-regional - North Indians, Tamils, Telugus, and Marathas getting their partners from the same regional communities - with few instances of inter-regional marriages as well. The other important pattern was that the majority of marriages were performed with the bride and groom being from the same religious community. As already mentioned, the occurrence of remarriages and widow marriages was also very common.<sup>111</sup>

In Indian society, the most prominent site of the working of the caste values was marriage. At this level also, owing to the relative shortage of women, immigrants had to be flexible in terms of their traditional belief in endogamy. But immigrants tried their best to observe the sanctioned deviations in their marriages and in most cases, marriages were of the kind described as hypergamy, in which men from high castes married women from lower castes, a practice which was approved in India also.<sup>112</sup> In the absence of the options of choosing their marital partners from within the same caste, the other criterion adopted by the immigrant community in Mauritius was that of common regional and linguistic origins. This emerged as the most decisive factor in forming the matrimonial alliances, especially among the Tamil and Telugu immigrants.<sup>113</sup>

One positive consequence of indenture was the change in obstacles to marriage. Widow remarriage, could be ascribed to the relative scarcity of the women<sup>114</sup> and not as a critical social-cultural reform taking place in the indentured labouring community. In Mauritius, unlike the societal restrictions in India which prohibited the remarriages of widows, the circumstances were more conducive, and widows re-married, some more than once.<sup>115</sup> This can be understood by examining practices in India: because of the traditional marriage practices in India, leading to a huge age gap

between spouses, there was a higher proportion of widows. Many widows suffered from social stigma and often from greedy family members who stole their property. They were an easy prey for the recruiters and agents who were desperately looking for women emigrants to meet the desired quota. Thus, among single women who migrated to Mauritius, there was a significant proportion of widows wishing to forge new matrimonial alliances even in the emigration depots.<sup>116</sup>

## DEPOT MARRIAGES

Before their actual departures, intending emigrants had to stay at the emigration depots at the ports of embarkation in India for long periods of time to complete several formalities, so that required numbers could be counted. Apart from mostly single men and some married couples, there were a considerable number of single women, as well who were mobilised by the recruiters to meet the required quota of women for the emigration. As Hugh Tinker has pointed out, despite separate boarding arrangements and strict segregation of sexes, there were enough opportunities available for the immigrants of both sexes to interact. Such relationships served everyone's interests - for male immigrants found a partner in a land where Indian women were scarce, while women felt a sense of security during the voyage to the unknown. For the Colonial Authorities, it offered the promise of stability. Considering those pragmatic advantages, the authorities approved these alliances and certificates of marriage were issued to immigrants, despite the fact that most of these marriages were not in conformity with the social-religious rites.<sup>117</sup>

However, individual experiences of marriage are highly revealing and allow us to reconstruct in greater detail the social life of indentured immigrants. Marriage patterns among Indentured Immigrants in the early years of immigration are particularly interesting, since they allow us to see the impact of migration on the social life of immigrants. We can understand how far they were able to maintain the social organisation which they had brought with them. It was only possible to undertake a limited study for the purposes of the work of the Commission, but this shows that the process of uncovering the full extent of our history must continue.

The marriage patterns among indentured immigrants in Mauritius in two periods were studied. The first was between the years 1850 and 1860, representing the early years of indenture, and the second in the 1880s representing the years when indentured immigration had slowed down.

### 1850- 1860

Between these years, approximately 43,183 women arrived in Mauritius from India under the Indenture system. These women were needed in the colony for purposes of marriage according to most historians as due to the scarcity of women, there was a significant change in the attitude of the Indentured Immigrants. Although marriage was a central feature of their lives, they would discard many of the characteristics of 'typical' Indian culture, norms, customs, values and adapted to the local situation. Concepts of marriage not common in India were accepted by the Indians. Caste, religion, age, widowhood, single life, arranged or religious marriages were no more an issue for these immigrants.

## MARRIAGE PROCEDURES

In this particular period, the information available in the marriage certificates differed completely. Earlier, the acts were handwritten, in French and with limited information. Around 1856, the format of the certificates had changed to a printed version, in English. Perhaps it was one of the changes which were implemented by the English Administration, when they took over the colony from the French Administration.

There were several administrative processes around registered marriages, certificates of non-marriage, publications of marriages, marriage fees, orphan marriages and witnesses. Under **Ordinance No 21 of 1853**, the information available on the married certificates in the 1850- 1860 period varied slightly. Until the year 1854, all the information available on a marriage certificate was handwritten and in French, but as from 1855, all the certificates were printed and in English. These amendments were probably due to the change from French to British administration.

This is evidenced by the study of marriages of some 500 individuals through documents such as marriage certificates, certificates of non-marriage, notices of marriage, documents concerning the collection of marriage fees, orphan marriages and witnesses. Most of these procedures, as stated earlier, were not understood by Indian immigrants who were used to celebrating marriages in their traditional manner. A sample of 100 out of the 500 marriage certificates were selected for more intensive study in order to gain a deeper understanding of the impact of indenture on marriage patterns in this period. This study also shed light on the types of marriages such as inter-religious, inter-ethnic and inter-caste marriages.

### Certificate of Non-Marriage

According to the Marriage Laws, every immigrant who wanted to get married had to produce a Certificate of non-marriage before The Civil Status Officer. This Certificate was available from the Protector's Office. If they failed to prove that they were free from any existing contractual obligations, the marriage would not be registered. This was clearly stated in the **Article 8(3) of Ordinance No 21 of 1853**:

*"An Immigrant shall produce a certificate of the Protector of Immigrants in this colony, stating their names, ages, castes, places of birth and number of their ticket. The said certificate shall mention that to the best of the knowledge and belief of the protector, the person named in such certificate is not married. A Fee of one shilling shall be paid for each certificate."*

### Orphan Marriage

Usually the orphans especially girls, were under the safeguard of the Protector of Immigrants. If the orphans wanted to get married, they needed the written consent from her guardian. Otherwise, the marriage would not take place. Usually, a marriage certificate was produced before the Civil Officer.

### Publication of marriage

Another important feature was the publication of the proposed civil marriage two consecutive weeks prior to the proposed date of marriage at the Civil Status Office within the district where the marriage would take place. According to prevailing local laws, anyone could object to the marriage, if it was published. As it was clearly mentioned in the **Article 10 of Ordinance No 21 of 1853**:

*"The Publication of marriages shall be posted up on a board hung in a conspicuous manner near and out of the office of the officers and bearing for title in apparent and legible characters the words "PUBLICATION OF MARRIAGES".*

### Marriage Fees

Following the **Ordinance No 21 of 1853**, most indentured immigrants could not afford a civil marriage. The fees were too costly for them, around £ 2-8-0:

	£	s	d
Certificat de Publication.....	0	2	0
Acte de mariage.....	0	6	0
Certificat du Protecteur des Immigrants.....	1	0	0
Certificat du Protecteur des Immigrants.....	1	0	0
<b>Total Fees.....</b>	<b>2</b>	<b>8</b>	<b>0</b>

### Witnesses

How were the witnesses chosen? Could they be strangers met at the Civil Status Office? Were they people readily available at the CSO to be witnesses?

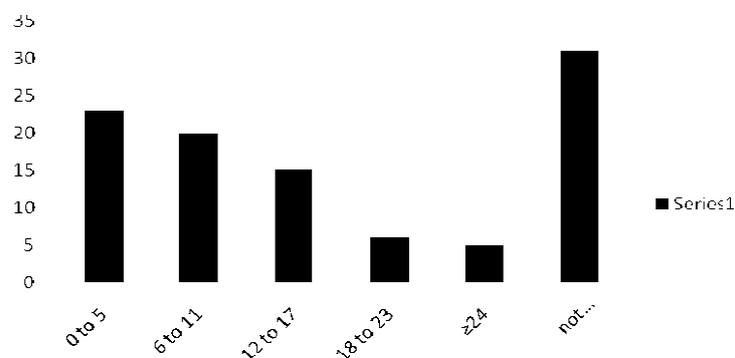

These civil marriages were considered to be more of an administrative duty for immigrants. The local administration did not consider that these complex procedures were not understood by illiterate immigrants and for many, this may have been the *raison d'être* which prevented more Indian immigrants from being legally married. Throughout this period, there was a low ratio of registered Indian marriages compared to marriages of Coloured or ex-apprentices.

### AGE DIFFERENCE

Given the scarcity of women, it was not unusual for the age difference of the couple to be more than 24 years. As the age of consent in India was 12 years, many immigrants followed traditions and married their children off at an early age to ensure their future, or for property and financial stability of the other family. Usually, when an immigrant was married at an early age, she would have her children very early too. In this way, the next generation came early too.

It is possible that the large increase in the Indian population was due to the pattern of early marriages. This needs to be further explored by demographers.

Figure 18: Age profile of marriage partners

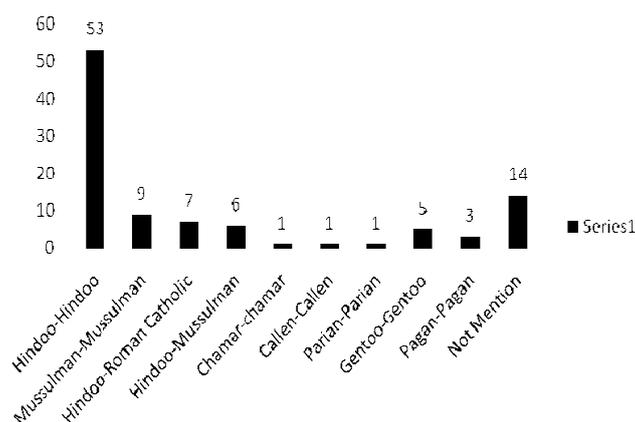

Source: Compiled from Marriage Certificates 1850-1860

### INTER-RELIGIOUS AND INTER-CASTE MARRIAGE

When they reached the depot, Indian immigrants had begun to develop a different lifestyle that would be forced upon them by circumstances. One of those adaptations was in the area of marriage. Many opted for inter-religious marriages. But a study of these early marriage patterns shows that on the whole, if they could, immigrants maintained existing religious and caste criteria.

Figure 19: Percentage of inter-religious and inter-caste marriages

Source: Compiled from Marriage Certificates 1850-1860

Many historians have attributed the reason for inter-ethnic marriages to the scarcity of Indian women. But this may not be the only reason. Many Indian immigrants married Coloured or ex-apprentice women to improve their material conditions. In *Slaves, Freedmen and Indentured Labourers in Colonial Mauritius*, Richard Allen has shown how ex-apprentices had bought land and property. Another group to purchase land at this time were new women immigrants residing in the colony. There were a wide range of single women who would purchase land during, and after, the *Petit Morcellement* (Tables 20 and 21). Indeed, it can be observed that the percentage of Indian women purchasing land was very low compared to ex-apprentices or ‘*Gens de couleur*’.

**Social Characteristics of persons purchasing land during and after the *Petit Morcellement* (1839-1859)**

Purchaser	1839-1842	1843-1848	1849-1859

## CONCLUSION

The Marriage Laws in Mauritius were essentially based on the premise that indigenous customs of the Indian immigrants were immoral and against the basic principles of civilised cohabitation, and therefore that they could pose a serious threat to the plantation order, if not regulated. Marriage Laws in Mauritius were modelled on British/ European patterns of 'civil' marriages which involved complicated concerns regarding inheritance, succession and property rights, and not merely union of a man and a woman. The main purpose of the emphasis on registration of alliances was to make these alliances 'legal' and to create a new social order on plantations. Unfortunately, because of the technical complexities, as well as expenses involved in the process of declaration of marriages before a Magistrate, most of the immigrants could not afford to follow this registration process, and therefore their marriages, though solemnised according to religious rituals, were invalid according to the Law, and their children were technically illegitimate. Therefore, instead of making things simple and legally sound, for the majority of the population, these marriage Ordinances made things more complicated and a dehumanising experience for a considerable time in the history of indenture. Many of their children were denied inheritances and admissions to schools because they could not prove their legitimate parentage, merely because their parents' marriages has not been registered.

In one respect, indenture and strict controls on mobility brought a certain measure of 'cultural and social stability'. Since movement on an estate was restricted, it led immigrants to mix with one another, irrespective of backgrounds, rear their children together, sit under the same tree to sing, talk, perform rituals etc. Their children played together as the women washed clothes in the same river. Despite harsh conditions, this type of 'cocooned' life was experienced on plantations.

New social institutions were thus created on plantations through indentured contracts. This constitutes one of the social consequences of indenture.

According to Brij Lal, as far as women are concerned, 'Indenture promoted a new egalitarian ethos and a freer society, which respected individual initiatives. Women were employed on the plantations as individuals in their own right. Control over their own hard-earned income gave them a measure of power and economic and social independence.'<sup>118</sup>

If sugar under slavery was bitter, sugar under indenture was bittersweet.

## CHILDREN OF INDENTURE IN MAURITIUS

### INTRODUCTION

Child labour in Mauritius was present in Mauritius since the early establishment of the island. During the period of the slave trade, children were also a commodity to be bought and sold. During the period of indentured immigration, many children accompanied their parents to Mauritius and some came as orphans. Officially, they did not come to work but many ended up doing estate labour or in domestic service.

At the beginning of indenture, many children were left on their own and wandered about with nothing to do. Later their own families made them work to earn a wage. The notion of 'childhood', as we know it today, was inexistent. A 'child' was officially according to the Blue Book of 1870 a person below 10 years of age. On the estate, many of these children were involved in minor field tasks such as picking up sugarcane stalks which falling off carts and bringing them to the sugar factory (Figure 61).

Figure 20: Wages of children					
Age of labourer on day of engagement	1 <sup>st</sup> Yr- Shilling per month	2 <sup>nd</sup> Yr- Shilling per month	3 <sup>rd</sup> Yr- Shilling per month	4 <sup>th</sup> Yr- Shilling per month	5 <sup>th</sup> Yr- Shilling per month

Source: MNA:B2/ Blue Book/1860					

This is a clear indication that children started working at a very early age. This tradition was carried on with the descendants as evidenced from interviews carried out of persons in their 70s and 80s today. Many of those interviewed stated that they were unable to attend school or play simply because they had to work. Those interviews showed that in general, those persons were only 10 to 13 years old. Those interviews showed that in general those persons were only 10 to 13 years old.<sup>119</sup> Those children, together with their parents, had to bring regular revenue to the family. It also happened that sometimes children did not receive money as a compensation for the work they did. Instead, they received rations which were as valuable as money back then.

This shows that whatever the religion, ethnic group, whenever someone was poor, they tried to help families to alleviate the economic crisis which mostly each and every family faced during the early 1900s. Those children, together with their parents, had to bring in a regular revenue to the family. It also happened that sometimes children did not receive money as a compensation for the work they carried out. Instead they received rations which was at that time, as valuable as money.

The role and place children occupied within the Mauritian society and the way of considering them varied considerably. In institutions such as the Government Orphan Asylum and the Reformatory, they were given what could be described as 'correct' treatment: food, lodgings, moral instruction and they were taught a trade. There, they were prepared to become industrious in a society which valued labour. Indian children tended to be viewed as persons who would take over from their parents in field labour and domestic work. Thus, education would change the mentality of children and it is not surprising that many resisted such education for their children. Many plantation owners were antagonistic. They 'considered knowledge as a dangerous thing'.<sup>120</sup> The fear that education might lead to rebellion was as real as it had been during slavery.

Children in the 19<sup>th</sup> century could be considered as 'little adults'. Many worked long hours but received meagre salaries and could not enjoy their childhood. The child was no more than 'a person above ten years of age'.<sup>121</sup> It was only in 1908 that an Ordinance controlling child labour was passed. It specified that 'no written contract shall be passed with any minor under 13 years of age. Any minor of the age of thirteen and upwards up to sixteen shall be free to engage under written contract of service for one year only with the consent previously obtained of the parents or guardian'.<sup>122</sup> There was a 'Laissez aller'. This Ordinance shows that despite the fact the legal age for working by law was acceptable to be thirteen years of age, someone of that age was still too young to work. It was only towards the end of indenture that the situation began to change.

Indian parents' approach to childhood needs also to be considered. Children were considered as 'objects' by their parents. For example, many Indian parents of the female children seemed to look forward to the time when the girls would arrive, at the age of puberty with a view to sell them to any Indian who may offer the highest price for their possession'.<sup>123</sup> The words 'sell' and 'possession' indicate that those children were considered as objects by their own parents. Many of them did not give much affection to those children, especially girls who were considered as a burden. Children were also seen as sources of revenue because many looked forward to that moment when they would be able to sell their daughters.

## ORPHANS

Orphan children were particularly vulnerable sections of society under indenture, and a case study of the Orphan Asylum has been presented here to highlight the plight of orphan children in Mauritius in the 19<sup>th</sup> century.

The Government Orphan Asylum is an institution established during the second half of the nineteenth Century, more precisely in 1859. It was situated at the Powder Mills at Pamplémousses. However, it was interesting to note that such an institution was not unique to Mauritius for it existed in other colonies such as British Guyana. One of the reasons for its establishment was that those colonies, including Mauritius, faced a different crisis to the economic one. But the chief object of its establishment was that many of those children did not have a home because their parents had passed away. They were left parentless either when they were still on board, or when they landed in Mauritius. Once those children landed and before the Government Orphan Asylum was finally established, those children were distributed as domestic servants or were simply destitute. In cases where children were too young to work, they were sent to families willing to take care of them 'on condition that' when old enough to work, the children would become domestics and remain as such for a stipulated number of years'.<sup>124</sup> With all these matters in mind, the Government considered that it would be important to set up a place where children would be taken care of 'to become useful members to the community'.<sup>125</sup>

Many of the residents of the Government Orphan Asylum were not real orphans since many had families, but whose situation was too precarious to afford keeping their children at home. Most of these families could be classified as 'single parent' families. Due to poverty, many of those children, girls specially, were married at a very early age. Otherwise, as soon as those parents felt that they could cater for their children, they claimed the guardianship back from the Government Orphan Asylum. For example, the children Natamoney, Ponnedy and Vurdarajooloo were given back to their father Balkistnen No. 376828.<sup>126</sup> In other cases, children whose parents experienced economic difficulties could not ask for their guardianship again. A good example was that a petitioner who claimed that he 'was a widower and could not look after the child and wants her therefore to get married as soon as possible'. This was a way of alleviating the burden of poverty which existed already and which could accentuate the problem of poverty even further.

When the institution opened its doors on the 15<sup>th</sup> September 1859, Reverend Ansoorge and his wife, two missionaries, were in charge of the Government Orphan Asylum. An interesting point to add is that children from different ethnic groups were received into the establishment; namely African, Indians, Europeans, as well as Creoles of African and Indian descent (Fig.62). The majority of orphans, however, were of Indian origin.

Children's Origins	Males	Females	Total
Indian immigrant	98	44	142
Europeans	1	4	4
Africans	28	5	33
Mauritian of Indian or African extraction	37	19	56
Total	164	71	235
Creoles of African origin	10	1	11
Total	174	78	252

Source: MNA: B6/Blue Book/1864

During their stay at the Government Orphan Asylum, those children received the basic necessities for a better standard of living. One of the various duties handled by the institution was educating those children freely or in cases of sickness, providing medical treatment to them. They were taken to the hospital which was found on the premises of the Government Orphan Asylum itself. Being a 'home' for those children, they also received rations which were improved regularly because the institution made sure that those children were fed properly so that they enjoyed a healthy. Nonetheless, despite all the efforts made to control any outbreak of diseases or viruses, children were contaminated very often. For example, in 1875, 25 children at the hospital suffered from 'wounds, 7 with fever, 4 with dysentery [...]'.<sup>127</sup>

The Government Orphan Asylum laid emphasis on education which involved religious instruction as well. The GOA offered 'Christian education',<sup>128</sup> and many of those children, of Indian origin, who were more familiar with Christianity, asked to be baptized. But the Reverend in charge of the GOA agreed to do so only when he judged that those children had 'received enough religious instruction to understand their request...'.<sup>129</sup> Furthermore, education at the institution implied the preparation of those orphans for their lives at a time they would leave the GOA; they received tuition in English, Tamil or Hindoostanee, Arithmetic and Geography'.<sup>130</sup> In addition, just like today, those children had to sit for exams and those who performed well were rewarded. In order to encourage students, a prize-giving ceremony was organized. On that day, children participated in Tamil and Nagri singing competitions. They were also marked on their reading and writing skills on the same day.

The various means of assessing those children changed sometimes. In exceptional cases, as in 1874 and 1875, it was impossible to compare the capabilities of the students because 'the mode of judging the proficiency of each child was not exactly the same'.<sup>131</sup> Firstly, in 1874 as such, 'it was necessary for each pupil in the lower standards to obtain ten marks out of a total of fifteen; and for pupils in the fifth and sixth standards to obtain fifteen marks out of a total of twenty five'.<sup>132</sup> Those who performed well at school had better job prospects ahead, but one interesting fact is that those who were once students were at the GOA were in turn employed as teachers at the institution or 'those ex students of the GOA, now employed as teacher over there will be transferred to the reformatory as teachers or instructors with a salary'.<sup>133</sup> Furthermore, all the boys and girls were 'apprenticed to useful trades and occupations'.<sup>134</sup> The tasks were assigned by gender (Table 4). All the boys were trained in manual work. They could exhibit their work in workshops which were found at the GOA and some of their products were sold. On the other hand, girls performed well in cooking, ironing and sewing. In both cases, the students were efficient.

Number of boys trained	Trades
8	Blacksmiths
7	Carpenters
1	Cartwright
3	Compositors
6	Assistant schoolmasters
2	Photographers
1	Basket maker

Source: MNA: B2 Blue Book, 1864

From the same table, it can be observed that although the majority of boys were trained for manual jobs, some were also trained into more high-status jobs, such as photographers or assistant schoolmasters. This was because when the orphans left the GOA, they were placed ‘under contracts of apprenticeship for 3 years’.<sup>135</sup> In other words, they were trained at the GOA first and then they ‘worked’ on a contractual basis with professionals to develop their skills. But those boys had to be fit enough to work to be ‘good tradesman who will not take an apprentice unless he is well advanced’. It also happened that in some cases the boys were not fit for ‘any special trade’. In such cases, they were given domestic employment.

Furthermore, rules and regulations also applied to the children at the institution and those who did not respect them were punished severely. In cases where children were involved in grave offences like indecent behaviour, they were flogged and then expelled. Timothy, for example, found guilty of extremely indecent conduct, was flogged.<sup>136</sup> Conversely, girls were treated differently. They were punished but not as severely as boys. A special mention was made to notify that ‘no special punishment be in future inflicted on girls’ but nothing has been found regarding the punishments inflicted to those girls before that preventive measure was implemented.

During the indentured period marriage was considered as an outlet for girls. At the Government Orphan Asylum, it was no different. When the girls were grown up, they were allowed to get married with the Reverend’s permission. In cases where the girls were still young, immature and unfit for marriage, despite the fact that they sought permission to get married, they were not allowed to do so. In exceptional times, some children still insisted on getting married and a dispensation of age was provided. But it was done only when the Reverend considered that the girls were mature and that the marriage would benefit them. This was done in other institution like the Beau-Bassin Asylum which proceeded in the same way. For example, ‘the girl ‘Jhoyee Soobrayen, who was living abandoned in Port Louis and is now at the Beau-Bassin Asylum, received an offer of marriage which would be in her interest to accept [...]’.<sup>137</sup>

Eventually the number of children at the Government Asylum decreased considerably, compared the year when it was opened. The change in the number of residents could be observed after a short time. For instance, it decreased over two years; in 1864, there were 337 children and in 1866, there were only 252 children. The situation worsened in 1870 where the number of children dropped again. The protector of Immigrants declared that ‘[...] the institution will in a few years have scarcely any children left, because the yearly drain by those discharged has not been filled up by the number admitted.’<sup>138</sup> This led to a series of measures which were beneficial to the children as soon as the Government Orphan Asylum ceased its activities. It involved the transfer of those children to other orphanages. Some of the main institutions who took care of the rest were: ‘Marie Réparatrice’, ‘Filles de Marie’, ‘Couvent du Bon Secours’ and the ‘Barkly Asylum Orphanage’. The criteria for admitting orphans in those institutions varied widely and were not similar to those of the GOA. For example, most of those institutions preferred girls, even though boys were welcome. Not only were there distinctions made between admission for boys and girls, but in places like ‘Marie Réparatrice’, only Indian children were admitted. The table below shows the criteria of admission into each institution.

Figure 23: Criteria for admission to Orphan Asylum

Institution	Criteria for admission	Cost of each child per month
Marie Réparatrice	Indian children only	10 shillings
Barkly Orphan Asylum	Children from every ethnic group	-
Filles de Marie	-	12 shillings
Reverend P. Ansonge	Hindustani-Tamil speaking children	12 shillings
Protestant Benevolent Institution	No Indian children	-

## 1.0 INTRODUCTION

China is better seen today through her Diaspora all across the world. The Chinese men and women, distinctive figures in the regions where they settled, played an important role in the development of commerce and participated in the creation of entire Chinese communities outside China, thereby transforming a part of their host country into a “little China”. The history of the Chinese in Mauritius remains widely unknown to a Mauritian audience, and even the Sino-Mauritians (descendants of Chinese immigrants), are not aware of their ancestors’ contributions, except only their contributions to the commerce guild. In order to understand the reasons behind the successive flow of Chinese immigrants and how they settled and adapted themselves in Mauritius, it is important to look back at the migration history of China and the history of the Chinese in Mauritius, addressing mainly the 19<sup>th</sup> and 20<sup>th</sup> centuries’ historiography of the Chinese in Mauritius. This would portray the community which played (still maps) an important role in the development of the country. We will also look at the present situation of the Chinese in Mauritius, taking a glance at the observations of the Sino-Mauritians on their own community. Interviews and meetings with Sino-Mauritians help us to understand the feelings and perception of these people and their past and contemporary history. The experience of this community began in China itself and impacted on the development of Mauritius.

## 2.0 CHINESE MIGRATION; THE ROUTE TO MAURITIUS

The migration process from China can be understood by 6 inter-relating factors which gave an opportunity to the Chinese to look for new horizons: the development of China’s maritime trade and commerce, the interactions with South east Asia, the Growth of the Chinese population, the expansion of military power in Western countries, the impact of Europe on China and Southeast Asia and finally the disruption of China’s domestic order.<sup>139</sup> These elements promoted and triggered the desire to migrate among those who wanted to seek a better and more secure future. However, for migration to be possible in the 19<sup>th</sup> and 20<sup>th</sup> centuries, the Chinese had gone through a long perilous journey before being able to found Diasporas across the world. The first coming of the Chinese to Mauritius remains unknown to Mauritians; so we shall begin by addressing the different reasons that triggered Chinese immigration to Mauritius and why their history has been overlooked.

### CHINA IN THE 19<sup>TH</sup> CENTURY

For long decades, emigration in China was forbidden by Law. It was not until China was ruled by the Ming dynasty (1368 to 1644) that emigration began through maritime trade. As Kuhn (2008) explains, “From the time of the Ming dynasty, ruled by the Emperor Yongle (1405-1431), seven vast maritime expeditions were commissioned to the Southeast Asian waters and to the Western part of the Indian Ocean as far as the Persian Gulf.”<sup>140</sup> There were potential trade markets outside China, but having to face internal attacks from the Mongols, the Government decided not to pursue maritime trade. Furthermore, private maritime trade was also prohibited as the Court of the Ming Dynasty feared that free contact with foreigners could let to plots against the dynasty.<sup>141</sup> Even so, the pressure for overseas trade gained such momentum that the Government could no longer turn a blind eye to the phenomenon, and in 1567, maritime interests overcame the trade ban. By the 1550s, ports in Macao and Manila were opened up, which facilitated trade with such foreign nations as the Portuguese, Spaniard and Dutch.<sup>142</sup>

Under the Qing Dynasty (1644 to 1911), ruled by the Manchus, trade at the start was again banned. It was only until 1727 that the ban was lifted, when the government felt that the country had secured its stability. Trade outside the Chinese borders gained momentum once more: “The expansion of Chinese shipping into the European colonies of the Southeast Asia was the precondition for Chinese emigration.”<sup>143</sup> The increasing market drew numerous Chinese rattan-sailed junks from the Southeast coast into the Southeast Asian trade routes. “As south China commercial interest expanded, merchant junks began to carry passengers into colonial port cities such as Manila and Batavia (Jakarta). Thus, these merchants bridgeheads became the routes through which Chinese migrants of all classes could find work and opportunity outside their crowded homeland.”<sup>144</sup> The economical and political decline of the country during the Qing Dynasty also favoured an increasing willingness to migrate among the Chinese. The Qing Dynasty however, near the end of its rule, brought disgrace to its subjects, worsening their living conditions. It was a period of economic crisis led by corruption, rebellion and natural disasters. The Chinese were also

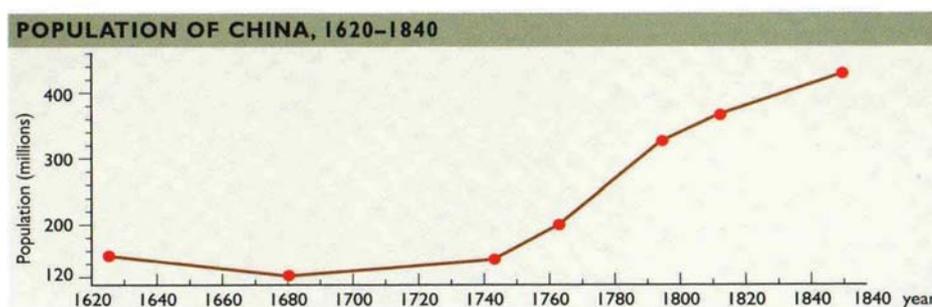

unable to circumscribe an opium chaos. The second half of the 19<sup>th</sup> century was a period of utter chaos for China. The country had to face the two shameful Anglo Chinese wars against the opium trade and at the same time, deal with the worst Civil War ever in its history; the Taiping Rebellion.

### The Opium War and instability inside China

From 1839 to 1842 occurred the first Anglo-Chinese War for opium. The British introduced opium massively as a drug<sup>145</sup> whereas, before, in China, opium was being used as a medicinal ingredient; its recreational use was limited, and strict laws regulated its use.<sup>146</sup> The drug was widespread in Chinese society and the Qing Government attempted to end the opium trade, but its hard work was hampered by corrupted local officials. The Chinese Government made illegal the consumption of this drug, and British traffickers continued illegally to introduce the addictive drug within China's borders. The situation worsened and reached its peak with the outbreak of the First Opium War between the British and the Chinese which eventually ended with the defeat of the Chinese. From 1856 to 1860, the Second War for Opium took place, which again resulted in a Chinese defeat. This Second War coincided with the Treaty of Nanking, which is known to mark the end of the first Opium War. At the same time, in 1850 and 1864, the Qing Government had to face the Taiping<sup>147</sup> Rebellion, where soldiers seized of Nanjing.<sup>148</sup> These were the worst civil wars ever in the history of China where approximately 20 million people died. The dynasty, failing to confront internal and external challenges, abdicated in February 1912. Henceforth, China was heading towards becoming a Republic.

## CHINA IN THE 20<sup>TH</sup> CENTURY

Figure 24: The increasing population in China from 1620 to 1840.

(Source: Lynn Pann, *The Encyclopedia of the Chinese Overseas, Second Edition*, p. 53, taken from the Gernet, 1982)

The 20<sup>th</sup> century defines Modern China, starting with the revolutionary period. Soon after the end of the dynasty, there were hopes that the establishment of a Republic would lead a new era for China; a China that would be prosperous and gain the respect of foreign powers. This hope was eventually dashed with successive political instability and corruption. In 1949, “the people’s liberation army of Mao Zedong defeated Chiang Kai-shek’s Nationalists”.<sup>149</sup> This heralded the start of Communist Party in China. “As the Chinese communist party’s grip on the Chinese mainland tightened over the next few years, hundreds of thousands more people headed south for British Colony of Hong Kong.”<sup>150</sup>

In between the periods of chaos, the population of China increased more rapidly than the country could sustain. In the 17<sup>th</sup> century, the population reached more than 100 million, and despite the “foreign invasion, civil war, outbreaks of rebellions, natural calamities and epidemics”<sup>151</sup> between 1620 and 1670, which had cut down half of the population, the population had tripled through the 1800s. By 1850, it was noted that the population had reached 430 millions.<sup>152</sup> As a result, the amount of food and land available for the population declined rapidly: “With acreage per capita

growing scarcer in relation to population, migration became one of the several strategies for family survival. Those who went abroad promoted and sustained China's foreign trade by establishing a continuous presence in South East Asia as essential coadjutors of western colonialists and revenue-hungry local monarchs."<sup>153</sup>

### 2.3 MIGRATION: PLACE AND PRESENCE OF THE CHINESE IN THE INDIAN OCEAN

The migration pattern of the Chinese can be characterized as tropical, coastal and urban. In fact, the Chinese tend to be more concentrated in tropical regions; "about 97% of them lived in the areas between the Tropic of Cancer and the Tropic of Capricorn. This is due to economic opportunities available in the Southeast Asia and the Caribbean because of European exploitation and investment in these areas during the 19<sup>th</sup> century."<sup>154</sup> The proximity of China and Southeast Asia and the climatic similarity of the Tropics to the South China provinces may have contributed to the concentration of Chinese in those areas. Furthermore, the restriction imposed on Chinese immigrants in countries such as Australia, Canada, New Zealand, USA and South Africa, limited the Chinese immigrant's choice. The tendency for Chinese immigrants to move towards the South may be due to the historical fact that invasion was from the North, and migration towards the South. This was probably natural to some ethnic communities such as the Hakka people, a group who trekked historically from the North towards the Southeast coast. The North in the minds of the Chinese often signified danger and the South prosperity: "The Southeast Asia along the shore of the Gulf of Siam, the west coast of Malaya and the western part of the North coast of Java is the largest concentrations of Chinese. In the Caribbean, they found mostly in Cuba, Jamaica and Trinidad. In Africa, the Chinese population is far more numerous on the islands of Mauritius and Madagascar than on the continent itself."<sup>155</sup>

### 3.0 THE BUILDING OF A COMMUNITY: THE CHINESE ARRIVE IN MAURITIUS

#### 3.1 First Presence of the Chinese in Mauritius

The first people to visit the Mascareignes Islands “may well have been the Malaysians or Chinese sailors who were criss-crossing the Indian Ocean long before Europeans arrived on the scene.”<sup>156</sup> In 1402, a map world of Chu’an chin “plots several islands east of Africa and “between 1405 and 1433, a series of naval expeditions brought the Chinese to eastern Africa and their presence has been confirmed by archaeological excavations.”<sup>157</sup> However, the Chinese at that time were only explorers, not colonisers.

The first to settle in Mauritius were the Dutch in 1638. They expanded sugar cultivation to Mauritius and brought labour from Bavatia. Batavia was founded by the Dutch in 1619 and its population was mostly composed of Chinese immigrants, traders and victims of kidnapping. An account of “Francois Leguat who visited Batavia in 1697,” described his encounter with the Chinese people as being “as white as French-men”, hardworking and talented in commerce.”<sup>158</sup> Thus, it was not unlikely that the Dutch should introduced slaves from Malaysia and China, Bengal, the Malabar Coast or Extreme Orient to Mauritius.<sup>159</sup> However, “since the Dutch abandoned Mauritius around 1710, there are no known descendants on the island from this period.”<sup>160</sup> In the 18<sup>th</sup> and 19<sup>th</sup> centuries, colonized by the French and the British, Mauritius became a colony deeply depending on the slave labor for its plantation workforce.

#### 3.2 Chinese Slaves and Freed Chinese

The presence of Chinese as slaves in the history of the country is specific to a short period of time and a small group of individuals. During their research, various scholars such as Huguette Ly-Tio-Fane-Pineo (1985) and James Ng and Marina Carter (2009), came across documents attesting the presence of Chinese slaves at Isle de France. And for some of these, they have been able to trace their history after emancipation. Indeed, James Ng, during his research, found “in 1761 two natives of Macao listed among the register of the government slaves; while; in 1792 a 60 year old male Chinese slave was recorded as having died in Flacq. Another, Jean Benoit, born on the Isle de France of Chinese parents, is reported as having died in the same region, in 1791.”<sup>161</sup>

Likewise, Huguette Ly-Tio-Fane-Pineo, during her investigations, has found the existence of two Chinese by the name of Gratia and Pauline who were brought from Canton and enfranchised by their owner, Louis Vigoureux, in 1745 at the end of his life. The latter gave Gratia the sum of 500 *piastres* and 2 slaves and to the child that Pauline was carrying a yearly pension until adulthood.<sup>162</sup> Later, “the census of 1776, lists a Gratia Vigoureux as residing in Port-Louis at the “Rempart”. She is described as 40 years’ old, a seamstress and the owner of 3 slaves.” Like Gratia and Pauline, “one male Chinese slave was enfranchised. Hyacinth Ambroise described in the 1780 census as a 26 year old Chinese from Macao was the freed slave of Jean Michel Dumont.” He married Marie Jeanne, a Creole of 15 years in Flacq on 2 Fructidor of Year III of the Revolution, at the age of 40.<sup>163</sup> On Reunion Island (Bourbon), one also knows of the presence of Chinese slaves. The existence of two baptized Chinese women was noted; Denise married in 1760 and Marie Josephe, wife of Francois Ranga in 1765.<sup>164</sup> The manumission of Chinese slaves obviously created a free Chinese community in the Isle de France.<sup>165</sup> However, and somehow, the free Chinese community which existed during the French period “had disappeared, through death and through absorption of descendants into the Creole population.”<sup>166</sup>

Apart from the few Chinese slaves identified, the presence of some other 300 Chinese slaves over a short span of time was also noted. In 1760, Le Comte D’Estaing captured 300 Chinese in the West Indies and brought them to Mauritius. Juste as J.P. Coen<sup>167</sup>, le Comte D’Estaing wanted to put to practice the ideas of a permanent Chinese settlement as existed in the colonies of the West Indies, in Mauritius. According to Wong Kee Ham (1996), this highlights that the Mascareignes Islands were in need of people to enhance the value and maintain small shops and business. The Chinese were reputed to run these types of activities, but in Mauritius, they were supposed to engage in other alien activities. The victims refused all the propositions of the officials to work in the maintenance of the gardens, or to cultivate a parcel of land granted to them, or to work with local planters. They claimed their right to return back to their natal country in a petition to the Governor Desforges, and the latter granted their request.<sup>168</sup>

The failure of Europeans Official to successfully maintain the Chinese people in Mauritius may be explained by what Wong Kee Ham (1996), has observed as the inability of Europeans to understand the Chinese economical and social diversity. Indeed, in the colonies of the West Indies, from where the Europeans from Bourbon imported sugar, the Chinese had largely contributed to the establishment of the plantation of sugar cane.<sup>169</sup> The Europeans were confused about Chinese merchants and coolies. They wanted to radically “transform” those 300 Chinese merchants into 300 Chinese coolies but did not succeed.

### 3.3 Chinese Coolies

There were several attempts during the British period to import Chinese labourers to the island. Unfortunately, many of them were unsuccessful. In July 1811, Governor Farquhar asked the Governor of Java, Sir Stanford Raffles, to send Chinese labourers. When the Chinese arrived in Mauritius, Governor Farquhar found himself faced with a “parcel of vicious and vagabond Chinese artisans and outcasts,”<sup>170</sup> instead of the hardworking men he expected. The parcel was eventually sent back. Around 1828, another attempt was made to recruit Chinese labourers. The scheme, established by the late William Gordon, who ascertained that Chinese could be hired without difficulty as indentured agricultural servants, was put into practice. A number of labourers were recruited from Penang and Singapore, but when they arrived in Mauritius, they were not satisfied with the terms and conditions of their contracts. They eventually abandoned their work and became vagrants. It was noted that in August 1829, 400 Chinese were brought and they were described by Captain R. Vickers as being “inferior workers and turbulent, despite being given daily rations, clothing and 6 Spanish dollars monthly.”<sup>171</sup> Their attitude towards the planters was also described as most disrespectful. The labourers would exhibit “immediately on their landing, a disposition to impose on their employers,” and the planters “had no power to compel the labourers to perform their agreement (...).”<sup>172</sup>

An increasing flow of Chinese immigrants occurred from 1840 to 1844, when emigration was temporarily suspended in India, and the Government turned towards the Chinese as a source of labour despite its past negative experiences with the latter. During that period, 8000 of Chinese landed in Mauritius, 3000 between December 1840 and July 1843 and 5000 up to 1844. The Chinese were then “seen as the saviours of the sugar economy,”<sup>173</sup> but cases of bad attitude and/or ill-treatment were still very present. James Ng and Marina Carter (2009) remarked that in a few cases, they found that the Chinese were very little seen as victims but rather instigators of the disorder<sup>174</sup>, for example, the case of 18 Chinese working on the Queen Victoria Estate. The latter complained of ill-treatment on the part of an Indian “Sirdar” and a Creole overseer but were sanctioned to 8 days in prison and a salary deduction as it was reported that the Chinese behaved in a threatening manner. The behavior of the Chinese also made cohabitation an issue. An Estate manager in 1841 responded to a complaint made by the Chinese: “They are the worst introduction made into the Colony; they are very insubordinate, passionate and so lazy that the Indians have reproached them for their idleness which has given rise to several disputes between them.”<sup>175</sup> In December 1843, “Ajee, a Chinese carpenter employed by Bestel in Plaines Wilhems complained of assault by a group of Indians.”<sup>176</sup>

The hardship of the work meant that the Chinese did not remain long in that area. Some became vagrants; many were sent back to their country of origin, and others still left Mauritius for other countries such as Reunion Island and/or went to urban areas to perform skilled work where wages were higher. The resignation of the Chinese is possibly due to the drop of wages for Estate labourers, the lifting of suspension of emigration from India and also the fact that Chinese labourers had a background of artisanship, craftsmanship and urban work<sup>177</sup>.

### 3.4 Chinese Presence in Commerce and Free Chinese Immigrants

Ly-Tio-Fane-Pineo (1985) stated that the foundations for a permanent Chinese settlement in Western Indian Ocean were laid by Robert Townsend Farquhar, the first British Governor of Mauritius. He truly believed that Chinese immigrants would greatly contribute to the development of the country. In parallel with the importation of Chinese labour, came free Chinese migrants. The arrival of this type of migrant coincided with a boom in the economic expansion of Mauritius for the next century.

It all started, when Hayme, a Chinese who settled in Mauritius petitioned in 1821 to recruit Chinese at his own expenses; he received the full support of the Governor Farquhar. The latter gave him “the assurances that the immigrants he would bring back would be welcomed to the government.”<sup>178</sup> By 1826, Hayme returned back with 5 associates: Whampoo, Hankee, Nghien, Hakkim and Ahim. The men Hayme brought in Mauritius were clearly merchants and traders.<sup>179</sup> During the war in the 19<sup>th</sup> century, the Nanking Treaty 1842, small traders were ruined by the Traid organisation. These traders either had to associate with the “Traid” or move to Canton to work in Port activities. Knowing that his men were not coolies but business men and that a labourer was the lowest social class, Hayme made sure to restrict community activities to retail trading since working as a labourer would “lower the social placement of the community.”<sup>180</sup> A list of 26 Chinese in the Faubourg de l’Est in the year 1828 shows the activities of the Chinese. Of the 26, 10 of them were “colporteurs”, 12 were merchants, 2 dressmakers and one waterman (batelier) and carpenter.<sup>181</sup>

Source: Ly-Tio-Fane Pineo. H , *Chinese Diaspora in Western Indian Ocean, 1985*, p. 112.

James Ng (2001) presented an interesting analysis of Chinese commerce in Mauritius for the years 1833 to 1846, a period which is said to be the start of Chinese commerce in Mauritius. The immigrants came with the intention of doing commerce. They would request a permit of two to six months, which allowed them enough time to sell their merchandise bought along to Mauritius. James Ng also referred to a category of Chinese immigrants as “*les voyageurs de commerce*”. This category of individuals’ tasks was to make sure that the goods ordered from Asia reached their destination and were in good condition. Once their job was accomplished, they would, most of the time, be employed by merchants and worked as “commis” until the expiring date of their stay in Mauritius. At the end of their residential permit, some would extend their permits while others would either continue working for big merchants such as Hayme, who employed them or be self-employed.<sup>182</sup>

Chinese businessmen such as Hayme and Ahine were very autonomous and resourceful.<sup>183</sup> They engaged in activities that were exclusively done by the Whites. They would import goods in large quantities together with some Chinese labour. Their shops were never out of stock and their prices would defy any competition.<sup>184</sup> Furthermore, the social transformation which occurred in Mauritius from the 1830s with the liberation of slaves and the arrival of indentured labourers, offered more trade prospects to the Chinese. The Chinese set up their businesses at strategic points and received a type of clientele who “were not readily accepted by the Europeans.” In Port-Louis, they settled between “le camp des noirs” and “le Camps des Malabar”<sup>185</sup> and traded between these two local communities.

Their commerce expanded through rural, as well as urban areas. By the 20<sup>th</sup> century the Chinese population was geographically well distributed. “The network of village and estate shops was so extensive that small groups of Chinese were presented in almost every hamlet on Mauritius.”<sup>186</sup> They would engage in various activities but retail trading remained the most prominent (table 4).

(Source: Carter. M & Ng Foong Kwong J, *Abacus and Mah Jong: Sino-Mauritian Settlement and Economic Consolidation*, p. 99.)

The economic rise of the Chinese created a certain phobia and jealousy among the White population. On the 27 October 1843, a petition was signed by most traders of European origins about the suspicious provision of goods by the Chinese. The petition did not get through, as it was said to be un-founded. However, some Chinese entered into other illegal, or rather as a journalist of *Radical* (Newspaper) described them - ingenious activities. The system of retailing introduced by the Chinese demonstrated their ability to do business with other people and adapt themselves to the local way of living.

« (Ingéniosité chinoise) L'Assistant surintendant des revenus Hitié fit un raid dernièrement dans une boutique de Chinois de la capitale et n'y découvrit d'abord rien. Puis, en examinant la mesure en étain dont se servent les Chinois pour vendre du rhum à leurs clients, mesure qui a nom Topette dans la langue créole, M. Hitié s'aperçut que le céleste avait trouvé un moyen ingénieux d'augmenter ses revenus tout en faisant du bien à ceux qui venaient boire chez lui. Le boutiquier avait fixé de la cire à cacheter, trois pièces de cinq sous au fond de sa topette, ce qui lui faisait économiser du rhum et empêcher ses clients de s'enivrer. Ce philanthrope, faisait ainsi comme le disions tout à l'heure du bien à sa bourse et ses clients. Chose assez difficile, problème considère comme insoluble mais facilement résolu par l'ingénieur compère. Or M. Hitié ne considéra pas la chose d'un œil aussi bienveillant. Car les points de vue différent selon la profession et ce trait d'ingéniosité d'un Chinois qui nous ravit parce qu'il nous fournit un écho intéressant, très intéressant même, eut le don d'exaspéré le policier qui veille de chez M. Hitié, comme la garde veillait autrefois, à la barrière du Louvre sans réussir, cependant, à empêcher la mort d'entrer. Le céleste fut traduit en cour et condamné à Rs.20 d'amende par M. Magistrat Le Gras hier. »<sup>187</sup>

The success and ability of the Chinese doing business may lie reside in their inner-selves but it mostly rests on their unique family, community and kinship ties.

### 3.5 Community and Clans

Chinese traders have been discussed by many authors during their visits to Mauritius throughout the 19<sup>th</sup> and 20<sup>th</sup> centuries. Jacques Gerard Milbert (1806) depicted the Chinese as being very reserved almost individualistic and driven to melancholy.

*«Les Chinois que j'ai eu l'occasion de voir à l'île de France m'ont paru réservés et peu communicatifs. Ils sont libres, ne fréquentent pas les esclaves et recherchent la compagnie des blancs. Ils passent dans les cafés à fumer leur pipe tout le temps qui n'est pas réclamé par les affaires. Ils sont naturellement enclins à la mélancolie.»<sup>188</sup>*

A century later, Hervé de Rauville (1908), gave a pretty similar description of the Chinese, as that of Milbert, in his travel log entitled «Ile de France contemporaine». The author portrayed the Chinese as being very reclusive and having their own authority and rules. In other words, the community formed a state within a state.

*«Les Chinois dédaignent l'étranger et s'en méfient; partout où ils sont, ils s'isolent des autres races avec lesquelles ils n'entretiennent que des relations commerciales. A Maurice, ils forment un Etat dans un Etat et ils ont construit à Port Louis une pagode qui leur sert en même temps de lieu de culte, de palais de justice, de salle de jeux et de bourse. Ils ont leur organisation judiciaire spéciale non reconnue par la loi mais à l'autorité de laquelle ils se soumettent lors d'un commun accord.»<sup>189</sup>*

Others books emphasized the blooming business of the Chinese. Sir Cécilcourt Antelme (1886), a member of the «Conseil Législatif» stated: «Partout où vous avez un passage de créoles, vous êtes également certain de rencontrer une boutique chinoise.»<sup>190</sup>

The Mauritius Royal Commission of 1909 described the Chinese residents in the island as followed:

*"The Chinese residents in Mauritius are for the most part small shopkeepers, and in the country districts they almost monopolise this trade. They are in nearly all cases immigrants, and so far, have not mixed much with other races of the island."<sup>191</sup>*

The portrait above gives a clear sense of a Chinese community in the colony. The Chinese lived within themselves, were very much their own masters and were recognized for their skills in doing business. The Chinese community's relationship with other communities depended mainly on business.

There were different strategies which the Chinese had established to help their fellow countrymen. The "cycle" was a form of credit organization where a group of people would contribute a fixed amount monthly which would be lent to the person offering the highest interest or to each person, in turn, according to the participant's names had been drawn. The "cycle" is used to help an individual who wanted to open a shop at the beginning of their careers.<sup>192</sup> Furthermore, Chinese shops in Port-Louis would help to accommodate Chinese a retailer coming from rural areas who had come to Port-Louis to purchase their goods. Having purchased their goods, he would stay at a "Kou-on", a place where he could keep his purchase and spend the night before returning to his shop. People having the same patronym would usually stay together and over time, each clan would have their own "Kou-on."<sup>193</sup> The chief representing the Chinese community known as the "Kapitan", was a very important element among the Chinese community. He represented the community in front of the Governor and ensured that his fellow-men were being provided with necessary facilities. The contribution of the clans was vital in the construction of the Chinese community;

*«Les associations claniques ont servi à focaliser l'énergie de cette communauté à l'ordre des pagodes. Ces associations (kwongs) sont basées sur le principe de clan/patronyme et ayant une fonction vitale, s'occupant des besoins de cette communauté en matière d'emploi, de maladie, de décès, de services religieux et rassemblements. Ces associations fonctionnaient grâce aux cotisations des volontaires et ont pu survivre car elles étaient attachées à une pagode»... «Ces pagodes, berceaux de la culture millénaire chinoise transmettant les valeurs du confucianisme, du taoïsme et du bouddhisme, constituent des jalons de notre implantation à Maurice. De même que le patrimoine du pays tout entier.»<sup>194</sup>*

The Chinese community appeared to be a well-knit and homogenous community. Nevertheless, like many Asian groups, behind lie ethnic division; each of them had different customs, spoken

languages and ways of living. The majority of the Chinese came from the province of Kwangtung whose capital is Canton, and others came from the province of Fukien and Hainam Island. Within each province lie different ethnic groups and different clans. The people who came from Kwantung are divided into two groups. The Nam-Shun originated from Nam Hoi and Shuntack, and the Hakkas originated from Cahin Chu, also known as Keh-Long. “The Hakkas are considered as people of mixed blood and are called “Macayah.”<sup>195</sup>

Before the arrival of the Hakka in Mauritius, the Cantonese and the Fukienese were the only one withholding political and cultural power. The death of Afan Tank Wen, the second leader after Hayme in June 1900 provided the opportunity to the Hakkas to challenge the hegemony established by the Cantonese. Each group wanted to fight to gain leadership over Cohan Tai pagoda, the religious and political headquarters of the community. The fight for power and leadership among the different ethnic groups caused great disturbance in the public peace. The battle led to the arbitration of the Supreme Court which issued a decree on the 21<sup>st</sup> June, 1906. It was decided that 15 members of different ethnic groups would manage the pagoda; 5 of whom shall always be from the Canton tribe, 5 of the Hakka tribe and 5 of the Fukien tribe. According to Ly-Tio-Fane Pineo (1985), the sharing of power had caused a “break with the tradition which vested absolute authority in an elected leader” and “destroyed the delicate mechanism by which unity within the community was maintained; it also curtailed the leader’s prestige in conducting his negotiations with the government.”<sup>196</sup> The fierce division and competition among the community itself had led to its gradual loss of the Chinese power in Mauritius.

## 4.0 THE FORGOTTEN PEOPLE: SINO-MAURITIANS AND THEIR DECLINE

### 4.1 Socio-Economic Success v/s Decline of the Chinese Community

The division into ethnic groups, competition between the different clans for political power marked the beginning of a profound change in the community’s functioning. The change had other consequences for the way the Chinese people live, causing them to lose more and more their culture - their “Chineseness”, and adopt a more “European” way of life. These changes are very visible and members of the Chinese community are rather desperate about the situation as their fellow countrymen turn a blind eye on their millennium of culture and traditions and emigrate to other countries for better economical prospects. The despair was not often voiced out, but the words of Philip Li Ching Hum resume the fears of the community; “*I find that the Chinese are losing their culture, it breaks our hearts*”<sup>197</sup>. Furthermore, they associate their community’s decline with the economical and social development of the community;

*“...unfortunately today, what do we find, the Chinese community is disappearing. Formally we were 30,000, today it is 18,000. It is because of what? Because of brain drain. There is no meritocracy; they feel that...what’s the use of investing in Pound Sterling, in Euros, Dollars, US Dollars in university studies and come back with meek salary of Mauritian devalued money. So they prefer to stay abroad. It is said that outside Mauritius, you have more Sino-Mauritians than inside today.”*<sup>198</sup>

The actual situation is the result of years and years of the community enduring sufferings, while trying to create a better future for the younger generations. However, in doing so, the Chinese have also “prevented” the younger generations from knowing the harsh living conditions which their ancestors had to bear; « *Au delà de la cinquantaine, les gens se souviennent de la misère et du long chemin parcouru, mais la jeune génération ne s’y retrouve pas.* »<sup>199</sup> However, those who remember these sufferings have preserved and transmitted to their children their culture, especially their strong attachment to their ancestors’ country of origin: “*We were fortunately not cut off from our roots in the Mei Xian. There still exists a tradition which specifies that when a boy is born in Mauritius, he should be also registered in the region of his ancestors. We are also aware of where our parents and grandparents lived and grew up.*”<sup>200</sup> These links were at the basis of the Chinese culture. The recognition and respect of the young for the older generations have not changed: “*They have prolonged the road for us, pouring their sweat and their tears, the least we can do now is to pay tribute to them. They contributed to what made Mauritius what it is today.*”<sup>201</sup>

## 4.2 Negotiating New Identities in the wake of Colonisation and Christianisation

However, not all members of the younger generations are really aware of the importance of their ancestors' contribution to what Mauritius is today, and they are even less aware of the sufferings they endured since they first came to the Island. During colonial times, especially with the first and second wave of immigration, the Chinese were victimised or oppressed by the colonial regime. The oppression was articulated covertly in many aspects of the functioning of the colony. Behind the apparent economic success of the Chinese in Mauritius, resides injustice to faced with which they were forced to silence their fear of losing what they had or fear that they would not be allowed to have any social mobility.

Ever since their arrival in the Colony of Mauritius, they started experiencing an inhumane treatment: *"They were treated as aliens, they were given a certificate; a blue card on which day they landed in Mauritius, and very often their name are not well pronounced. The British took pleasure in giving them name just like the general population; they were given all types of names."*<sup>202</sup> Many Chinese immigrants, on arriving to Mauritius, declared themselves only by giving their surnames. Thus, all the meanings belonged to a name; ancestral and clan attachments and other meanings were changed.

The new generations born in Mauritius also bears traces of the colonial influences on their naming pattern. The Chinese, looking for social mobility, needed to be accepted by the rest of the population. They needed to gain access to education and other facilities for that to happen. In almost every facet of their lives, they had to "forget" their ancestral culture and adopt the norms of the colonial powers.

*"Whenever they had to open a shop, they must seek the blessing of the oligarchy. This where we found the Chinese, most of them were Christianised. Some of you will not agree with me when I say that most of the Chinese were not converted "à leur propre gré". Indirectly (...) was imposed on them. Because the doors of Lorette, the doors of Priest running colleges. If you don't bear the name, the Christian name, you will not gain access to such colleges."*<sup>203</sup>

*"Many Chinese converted because they have to get access to education; otherwise, they will be condemned to stay in the shop. From generation to generation, they will be the same shopkeeper; there will be no social mobility. That's why they have, in spite they have been converted, they still retain their Chineseness, they still retain their soul."*<sup>204</sup>

## 4.3 COLONIAL DOMINATION POWER; THE CASE OF THE SHOPKEEPERS

The willingness to change even their identity was influenced by the need to escape the form of "slavish" life they lived, through education. Behind the doors of the lucrative Chinese shops hid unspoken sufferings. In the colonial times, all those other than the Europeans and their descendants were victims of their domination and the Chinese felt they were prejudiced against in the same way as any member of the other communities. Most of them suffered the dominations of the sugar magnate.

*"We suffer the same faith, we suffer the same destiny, we get the same destiny. The liberated slaves, indentured labour and the free immigrants shared the same common destiny. When the wipe of colonialism is slashed, no one was spared. Even the Chinese shopkeeper, he has to bear. Do you know what injustices the Chinese suffered when they run a shop? ...you can't collect your money at the end of the year, the sugar magnate; you have to provide them with gifts. You must provide them with "cadeau l'année". The contribution of the shopkeepers cannot be under estimated. They have introduced the system of credit- "carnet la boutik" to feed the descendants of slaves and indentured labourers"*<sup>205</sup>

*"The shopkeeper is a sort of adviser, banker, moral support to them. So they shared the same faith. The Chinese shopkeepers, they work day and night to feed the hungry population. It is not true to say that the Chinese has been privileged. It is not true because, they also, they were looked down upon by the colonial powers...today if we have seen the disappearance of the Chinese shops in the villages, it is because they have considered it a sort/form of slavery. Life in the shop is a sort of slavery, day and night, he has to feed the whole village. He is the first to wake up and the last to go to bed."*<sup>206</sup>

These Chinese shops have greatly contributed in the development of rural areas and their contribution cannot be underestimated;

*“As a Minority in Mauritius, the contribution of the Chinese Community has often been overlooked. It nevertheless brought enormous changes in terms of knowledge of the land, innovative ideas, leadership and enhanced our local cultural and religious diversity.”<sup>207</sup>*

Till now, these shops are among the most visible monuments of our cultural heritage. Their involvement in the wider community was very important; they provided the basic necessities of poor villages, helped in their development and contributed to a “modern Mauritius”. They were completely integrated in the local context at the risk of losing their own culture and becoming a “true” Mauritian:

*« S’il y a une valeur culturelle Chinoise qui se perd à Maurice selon lui, c’est la « la langue des ancêtres...ce n’est pas négatif à 100% car cela veut dire que les Mauriciens Chinois vivent plus comme des Mauriciens que comme des Chinois. »<sup>208</sup>*

## 5.0 CONCLUSION

The contribution of the Chinese, in the mindset of more than one, was seen as that outcast to the economic development of the country. Their apparent economic success shadows came from labour, callous living conditions and dominations they had to suffer for almost two centuries during their presence in Mauritius. The new generations of Sino-Mauritians have been spared all these sufferings, at the cost of “forgetting” their roots and culture. The contribution of this community resides far beyond the field of economic development; they nurtured relationships both within and outside their communities and contributed to the well-being of every Mauritian. They lived within every community of the island, irrespective of ethnic barriers, bringing their milestone to the development of the country by innovative ways of helping people and developing business.

However, while looking forward to the younger generations moving up the social ladder, the community has been faced with relegating their past sufferings and conditions to a loss of memory. To some extent the community preserves only the legendary hardworking capacities of the Chinese people. History itself has played a role in this parody depiction of this community which has often been limited to hard labour or to distinctive figure of the Chinese and their astonishing economic development through over the last two centuries. These people fled their countries to form new communities all across the world. Most of them would not return to China after the Communist take-over and found no other solution but to stay and secure their future in their adopted countries.

Today, after an incredible economic success, the Chinese seem to face their decline due to various factors. Many young Sino-Mauritians are looking for better prospects elsewhere in the world; turning a blind eye to what their parents and grandparents had built through will power and hard work. There is an outcry of the community that they should be given due recognition of their contribution to the overall development of the country; a recognition for their history and past sufferings by all Mauritians in the hopes that they may revive the community, by attracting younger generations to stay and build their future in this country to which they now belong.

## 7.0 INTERVIEWEES' PROFILE

### 7.1 Interviewee One Mr. Poon Yow Tse

Name of interviewee: POON YOW TSE Poon Yune Liong

Place of Birth: Mauritius

Date of Birth: 2/11/1928

Nationality: Mauritian

Current occupation: free lance journalist

Age: 82 years old

Date of interview: Wednesday 29<sup>th</sup> December 2010

Interviewer: Christelle Miao Foh and Mr. André Li.

---

#### Observations

At two o'clock in the afternoon this Wednesday 29<sup>th</sup> December 2010, I waited for Mr. André Li the field guide near the Nam Sum Society building, rue Arsenal Port Louis. Then, we drove towards the end limits of the Chinatown to meet the Informant Mr. Poon Yow Tse. We stopped in front what appeared to be an old wooden house, painted in a sky blue color. The house though extremely beautiful seems to be in a state of "délabrement". As we passed through the front gate, there was the basic old fashioned toilet and the rudimentary bathroom to the right. We entered the house through the kitchen and ended straight at the end in what appeared to be Mr. Poon's study room. It was filled with books covered with newspapers to preserve the books. I could not take my eyes off the structure of the wooden house. It was an authentic colonial house. When I peeked through the room, it saddened me to see how abandoned it was. There was dust everywhere and the rooms were not properly maintained.

Mr. Poon was in his study and his eldest son, Jeremy, was by his side. Mr. André made the introduction and explained the purpose of the interview. Mr. Poon seems very thrilled and has no objection to it. However, he did not want me to record his voice and wanted to do an old fashioned way interview. Mr. André Li explained that it would be easier for me to write the report later and that what he would be saying won't go to the public. Mr. Poon then allowed me to record the interview with much hesitation.

Mr. Poon's eldest son Jeremy asked me who was in charged of the project and before I could reply, he asked me if it was Vijaya Teelock and said that she was one of his teachers at MGI School. Curiously, during the interview, he did not interfere in the conversation nor added any extra detailed even when his father was talking about his<sup>209</sup> private life. He would sit silently and immobile for the one-hour interview.

The interview went on well and after that, Mr. Poon asked for my name, after I made him signed the consent form. We talked for a few minutes outside the recording interview and I noticed that the conversation was very easy going and open-hearted than that of the recording interview.

#### The summary of the life history of Mr. POON YOW TSE

Mr. POON YOW TSE Poon Yune Liong was born on the 21<sup>st</sup> December 1928 in Mauritius. He went back to China at the age of 16, to continue his studies there. He finished his high school and went to the university in Pecking. His studies finished, he came back to Mauritius to work. Mr. Poon is known to be a public figure, since he is a journalist and writes article for the various Chinese gazettes.

#### Mr. Poon's parents

Mr. Poon's father was born in China and came to Mauritius in 1922. He came to Mauritius because in China there was extreme poverty: *"... ti telman miser, pa ti pe gagn so lavi e se grass a enn kamarad ki f'inn deza vinn moris"* One of his friends who lived in the same village helped him to migrate to Mauritius. When he arrived in Mauritius, his father stayed at la rue Rémy Ollier and worked as a hairdresser. He rented an emplacement on la rue royale *"loue enn ti salon de kwafer kot lari royal vizavi Lai Tong"*

Mr. Poon's parents were already married when his father came to Mauritius. His father came first and then his mother. His mother remained a housewife, taking care of their 3 children; 2 daughters and 1 son (Mr. Poon).

#### **Mr. Poon's grandparents**

He never saw his grandparents and doesn't know anything about them. He only saw the familial tomb where his grandparents were buried in when he went to China.

#### **Mr. Poon's educational path**

He did most of his schooling at the Chinese middle-school found in Port Louis. After his Junior Year in Mauritius, his father sent him to China to continue his Senior Year (form 4, 5 and 6) in China. He was 17 years old by then. He did 3 years in the Senior Year and 3 years at the University where he studied Languages; Chinese and French.

In the Chinese middle school of Mauritius, he studied in Hakka dialect. His teachers were mainly Chinese and when it was time for French and English lessons, a Creole teacher would do the lessons. One episode that he remembered during his time in the Chinese middle-school was that during war time - China against Japan, teachers and students contributed to send money to China. "It was an act of patriotism" he said with much fervor. During the 6 years he studied in China, he did not have any trouble adapting himself to their lifestyle. The reason why his father sent him to China was to let him discover his roots and not to forget his origins "*pou pa blie mo rasinn. Mo rasinn se touzour lasin*"

His two sisters did not go to school. His father was stubborn and old fashion-minded, he did want them to go to school "*tifi rest lakaz*"

#### **Mr. Poon's career/ working experience**

He came back to Mauritius at the age of 23. He worked in his old school, the Chinese middle-school as a teacher. He was teaching Mandarin and Hakka. And was paid around 200 rupees a month. Afterwards, he worked for an industry *The International Fashion Limited* which was managed by people from Hong Kong. They needed a person to translate from Chinese to Creole. At that time, Mr. Poon says that many young Chinese didn't know how to speak Mandarin or Hakka. His monthly salary as a translator was 3, 000 rupees.

He got a job at Chinese Daily Mirror a few years later and ever since he has been a journalist. We would write articles concerning mainly amendments to Commerce laws because this would be the main interest of the Chinese community since many of them have businesses.

#### **Mr. Poon's personal life and family**

He first met his wife when he was teaching. His wife was still a student but at that time, they were still friends. A few years later, they met by chance and fell in love. They didn't do a traditional wedding. They announced their union in the local Chinese newspaper and flew straight to China for their honeymoon. Together they had 3 sons. All of them do professional work such as engineer and IT. One of his sons migrated to Canada and the others often travel for work purposes.

#### **Mr. Poon's identity**

Mr. Poon has a very strong connection with China. He says that his heart will always turn toward his roots.

**7.2 Interviewee 2 Mr. Wan Sin Cheung****Name of interviewee:** WAN SIN CHEUNG**Date of Birth:** 1/12/1912**Place of Birth:** Mexian, China**Current occupation:** Retired**Nationality:** Chinese till 1962 and Mauritian onwards.**Age:** 99 years old**Date of interview:** Tuesday 28<sup>th</sup> December 2010**Interviewer:** Christelle Miao Foh and Mr. André Li.

---

**Observations**

At two o'clock in the afternoon this Tuesday 28<sup>th</sup> December 2010, I met Mr. André Li the field guide near the Atrium at Rose Hill bus station. He was accompanied by a man and a woman whom he presented as the daughter and the son in-law of the interviewee. Near a shop, the woman opened a glass door that led to a narrow staircase. At the end of the stairs, we entered directly into what appeared to be a very large living room. The woman asked us to sit on red sofas while she called her father.

During that time, I was very anxious as it was my first time doing a formal interview with someone within my community. I was nervous as I knew what the psychology of Chinese community towards strangers was and I was afraid of their reaction. The Chinese people tend to be very suspicious when strangers enter their private life and they tend to be on the defensive side. On the other hand, I was hoping that they would open up but deep inside, I knew that I had a certain limits that should not cross or else, the interviewee would retreat himself.

A few minutes later, the woman came into the living room accompanied by her father Mr. Wan Sin Cheung. He appears to be a very healthy man which contradicts his 98 years. When Mr. André Li did the presentation and the purpose of our coming here, Mr. Wan seemed very confused for having so much attention. He kept asking what was the purpose of asking him questions and what was I going to do with these information. His daughter told him that I was working for a company who writes stories about people. Then, she told me and André, that it is better that we say it in the simplest way because her father would not understand what The Truth and Justice Commission is about. Then she told her father that I wanted to know his experience in coming to Mauritius and that again I was going to write a story about it. Mr. Wan looked at me for a second and I saw his eyes softened and he was more relaxed and agreed to be interviewed non-anonymously.

The interviewed lasted about 35 minutes and what seems amazing is that Mr. Wan at 98 years old can still speak properly and have a very good memory. He also kept all his official documents such as passports, naturalisation certificate and receipts of payment of naturalization and boat ticket to China neatly through all these years. The interview was conducted in Chinese dialect; Hakka and Creole.

During the interview, I noticed that I couldn't ask too much detail about the construction of business. While asking about this subject, I sensed a bit of tension from the interviewee daughter and son-in-law. It is perhaps that there must have been some family matters around the business or may be that, they simply did not feel at ease to talk about it freely.

After the interview, we talked a bit longer and Mr. Wan Sin Cheung was much more at ease to a point that he started showing us pictures and documents. He made us visit his house and showed us which part he constructed first and how. The presence of Mr. André Li helped a lot too, because they both started chatting about people they knew in common and also, Mr. André Li speaks Hakka fluently which had helped me a lot before, during and after the interview.

**The summary of the life history of Mr. Wan Sin Cheung**

Mr. Wan Sin Cheung was born the 1<sup>st</sup> December 1912 in Mexian, China and is the son of Mr. Wun Tey Nian a trader and Mrs. Tia Song Moy, housewife. Like many Chinese immigrants, he bears only a surname on his identification card. He came to Mauritius in 1926 at the age of 14 with his cousin who was already established in Mauritius.

### **Mr. Wan's parents**

Mr. Wan Sin Cheung is the son of Mr. Wun Tey Nian a trader. Mr. Wan Sin Cheung's father came to Mauritius as a trader and he had a shop at La Bute. The shop he owned was selling cloth. After a few years, his father went back to China and died there. His father died long before Mr. Wan Sin Cheung went to Mauritius. His father had 4 brothers and one sister.

Mr. Wan Sin Cheung's mother, Mrs. Tia Song Moy is a housewife. She came to Mauritius at the age of 70 years old as her son paid for her trip. She died 12 years later at 82 years old.

### **Mr. Wan's childhood in China**

He went to school till Standard Four and had to walk to school with homemade shoes, made by his mother. He was been taught in Hakka. He left school at 13. He had a big house with 3 rooms and he shared his bedrooms with his brothers and sister. Mr. Wan Sin Cheung said that he had a good life in China because his father was a wealthy man "... *dan sa lepok la mo papa ti ena cash, na pa ti pass miser*"

### **Trip of Mr. Wan Sin Cheung to Mauritius in 1926**

It took about 40 days to travel from China to Mauritius. Mr. Wan Sin Cheung first took a boat from Mexian to Hong Kong. He stayed in Hong Kong for about 10 to 15 days. Then he took another boat from Hong Kong to Mauritius with a transit through Singapore. He was not sad to leave China because he had many of his cousins were in Mauritius.

### **1<sup>st</sup> day in Mauritius**

The first thing he recall when he arrived in Mauritius was that the Town (which I presumed was Port Louis) was sad "*partout kas kasse, trist, trist*". He went to stay in a shop called Ah-Piang the first day.

### **Mr. Wan's working experience**

He worked in Ah-Piang shop first for 6 to 7 years. His salary was 12 to 15 rupees per month which included lodging and food. He was being paid every month but did not have his money in hand; instead it was written in a book. After 7 years in Mauritius, he went back to China to visit his family and also because he did not quite like Mauritius. In china, he worked in a wine factory.

He came back to Mauritius after some time. He came back because his father had a share in the shop and he had to take the share of his father. By his 30s, he came to live in Rose-Hill; he learnt the job of a shoemaker. He learnt it with a Creole. He learnt how to design and cut out the design. He was distributing shoes in Port-Louis, rue Deforges. He remembered that arriving at the bus stop in Port-Louis, he had to pay Rs. 1 to child who nearby to help him carry his shoes to rue Deforges. He was making 1 rupee profit on low-quality shoe and 2 rupees on good-quality shoe but it was very rare.

### **Learning Creole**

He learnt Creole while working in the shop. He would write the words in Creole with Chinese characters.

### **Mr. Wan's personal life and family**

He married at about 35 years of age. It was an arranged marriage. He decided to get married because he was getting old. He married at the Cathedral; guests would give them 3 rupees as a gift for their wedding. Before he married, he was baptized. His wife told him that he had to be baptize or else the wedding will not be held.

He had 7 children; 4 sons and 3 daughters with his wife. He has one son in Canada and the rest are still in Mauritius.

# LIBERATED AFRICANS IN COLONIAL MAURITIUS

## ‘FREE’ AFRICANS IN MAURITIUS AFTER SLAVERY

One of the most common stereotype in Mauritian history is of the African slave and Indian indentured labourer. It is important however that Mauritians know that Africans and Malagasies were also brought as labour after abolition of slavery. Their archives are found in the ‘Indian Immigration Archives’ found at the MGI. This history deserves to be better known by Mauritians, as many members of the Creole community originated from them, as the case studies show.

### 1.1 Who were the Liberated Africans?

*‘The Apprentices are those Negroes who have been rescued from slave-ships since the abolition of the Slave Trade’* Captain Richard Vicars (British Military Officer who supervised the Government Slaves and Apprentices during the 1820s)<sup>210</sup>

Almost a generation before the abolition of British colonial slavery, the Imperial Government of Great Britain passed *The Act for the Abolition of the Slave Trade* in 1807 which outlawed the importation of slaves into its slave colonies and set down the first regulations for captured slaves on the high seas. In March 1808, an Order-in-Council was passed by King George III, which stipulated that Africans or negroes who were seized on slave ships by the British Royal Navy would be forfeited to the British Crown as ‘prize negroes’. The Mozambicans, other East Africans, Malagasies and some Comorians who were captured on these slave vessels by the naval forces of Great Britain, were also called ‘Liberated Africans’, ‘Government Apprentices’, ‘Government Blacks’, ‘African Recaptives’ and ‘Prize Slaves’.

#### Origins

The ‘Liberated Africans’ came mainly from Mozambique, other parts of East Africa, Madagascar and the Comoro Islands. Around 30% came from Mozambique and the coastal areas and Great Lakes region of East Africa. Among the Mozambicans, the Liberated Africans came from the powerful and large tribes such as the Yao, Makua, Maravi, Lomwe and Nginodo. Around 69% were Malagasies and around 1% were Comorians. They came mainly from Central, Eastern and North-Western Madagascar which included important and large tribes such as the Merina, Sakalavas, the Betsimiarakas and natives of the East Coast of the ‘Grande Ile’. The Comorians came from tribes who lived on the four main islands of the Archipelago of the Comoros, namely Grande Comore, Mayotte, Moheli and Anjouan.

#### Ports of embarkation

Between 1811 and 1827, the Liberated Africans or ‘captured slaves’ were embarked at Mozambique Island, Ibo, Angoche, Sofala and Quelimane on the Mozambican coast. The other East African ports were Zanzibar, Kilwa, Mombasa, Mafia, Pemba and Malindi. On the Malagasy coast, the ports of embarkation were Tamatave, Mahajunga, Foule Pointe, Fort Dauphin, Sainte Marie, Antongil Bay and Diego Suarez. From the Comoro Islands, the Liberated Africans were embarked at ports located on Grande Comore, Mayotte, Moheli and Anjouan.

They were transported by the French and Portuguese and other European slave traders in fast-sailing brigs and schooners from the East Coast of Africa, Madagascar and the Comoro Islands to their respective destinations including Mauritius. It was extremely rare for Arab dhows to sail all the way to the Mascarenes Islands with their slave cargoes. There were many European slave traders who introduced Mozambican and East African slaves through Madagascar and the Seychelles.

### **Mortality during the voyage**

*“Relentless as was the cruelty of these men [slave traders] towards the negro on his passage, and reckless as they were of the mortality which the crowded hatches occasioned....If a leak arose, no compunctions of conscience prevented the throwing overboard of the live slaves to lighten the vessel, which added to the mortality originating with their capture, augmented by the journey to the shore, the number of deaths from suffocation on the passage, the cause we have previously specified, and the slaughter of the helpless and infirm to support themselves immediately on their disembarkation....”<sup>211</sup>*

All of the Liberated Africans who were rescued from the slave ships in the South-West Indian Ocean and eventually landed in Mauritius experienced the full horror and trauma of the slave voyage. Between 1811 and 1827, the mortality rate on slave vessels, sailing from the East African, Malagasy and Comorian ports to Mauritius, was estimated as ranging between 7% and 20%. During the 1810s and 1820s, the slave trade cost the lives of thousands of African, Malagasy and Comorian slaves who were illegally introduced into Mauritius and the lives of dozens of Liberated Africans who were captured and landed in Port Louis.

In December 1826, P. Salter, the Acting Collector of Customs, submitted a *Return of Negroes Apprenticed at Mauritius and Its Dependencies* to the Commissioners of Eastern Enquiry. This document clearly showed that between 1813 and 1826, out of 2,998 Prize Negroes landed in Mauritius, around 291 died even before being apprenticed. There were 2,390 males and 608 females or a ratio of almost 4 to 1. During that entire period, more than 9% of the Liberated Africans died within less than a month after landing and before becoming Government apprentices. Many died as a result of diseases such as dysentery, cholera, and the small pox, as well as from severe cases of malnutrition and dehydration which prevailed on the slave vessels sailing between Madagascar and East Africa to Mauritius and its dependencies.

### **The testimony of Captain Charles Letord (Dorval)**

Between December 1826 and November 1827, Captain Charles Letord or Dorval testified before the Commission of Eastern Enquiry. Several months earlier in London, in May 1826, Dorval had also testified before the parliamentary *Select Committee on the Mauritius Slave Trade* of the Honourable Charles Buxton.

Captain Dorval, who commanded *Le Coureur*, the slaving vessel involved in illegal slave trading, was considered to be one of the most notorious slave traders in the Indian Ocean. He described the state of the slave vessels which were always extremely overcrowded, with diseases being rampant and the high mortality rate. Slaves were provided with small quantities of rice, maize and salt fish, hardly enough food to survive. They were chained in pairs and were almost never brought on the ship's deck for fresh air. Many of these slaves, including the Liberated Africans, reached Mauritius physically and psychologically exhausted and afflicted with disease.

Between 1811 and 1821, Charles Letord claimed to have made several voyages between Mauritius and East Africa and Madagascar and to have introduced thousands of slaves illegally into the colony. According to Richard Allen, between 1811 and 1827, between 50,000 and 65,000 slaves were illegally introduced into Mauritius. During the same period, 2,998 Liberated Africans were landed in the colony, which represents between 4 to 6% of the total number of slaves illegally landed in British Mauritius.

### **The British Vice-Admiralty and the seizure and condemnations of slaving vessels**

Slaving vessels and slaves captured by British Navy in the South-West Indian Ocean were sent to be condemned at the Vice-Admiralty Courts of Mauritius and the Cape Colony. Between 1808 and 1827,

around 65 vessels and 5008 Prize Negroes were condemned. Around 29 slave vessels were condemned and 2,010 Liberated Africans landed at the Cape Colony during the same period, while in Mauritius, around 36 slave vessels and 2,998 Prize Negroes were condemned at the local Vice-Admiralty Court. There were also about 53 slave seizures with the capture of 540 newly-landed slaves at different locations on the Mauritian coast.

The number of slaves seized on land represent about 18% of all the Liberated Africans landed in Mauritius. The overwhelming majority or 82% of them were captured on the high seas and brought to Mauritius by the Royal Navy. They had to serve a period of indenture which lasted 14 years and in the process, they became known as 'Government Apprentices' or Liberated Africans. The slave traders who were prosecuted by the British Vice-Admiralty Court had to pay a total of £124,000 for fine-breaking imperial anti-slave trade regulations.

### **Landing of Liberated Africans**

The seized Liberated Africans landed between 1811 and 1827 at the Customs House. The first batch brought to Mauritius, under the British administration, had been on board a large Arab dhow *Othmany*, captured in late April 1811 by the Royal Navy off the coast of East Africa, sailing in the direction of the Mascarenes Islands. By mid-May, the Arab ship and 120 African slaves landed in Port Louis and were handed over to the Collector of Customs. They were employed as servants in the Police Department.

The Liberated Africans were landed, registered, and underwent a medical examination at the Customs House. They were placed under the authority of the Collector of Customs and the Customs Department and became the 'wards' of the British Government'. They were housed at the *Bagne* for several days and weeks in order to allow them time to recover from the ordeal of the slave voyage and to acclimatize themselves to the local climate. Those who were sick were sent to the Labourdonnais or Military Hospital. With the demand for labour in Mauritius, they were either employed in Government Departments or assigned to private employers through the means of an indenture contract.

In 1827, the last Liberated Africans, 12 of them, were brought to Mauritius.<sup>212</sup>

### **The indenture contracts of the Liberated Africans**

*"The Apprentices are those Negroes who have been rescued from slave-ships since the abolition of the Slave Trade, and are bound by the Collector of Customs for the period of fourteen, and latterly for seven years to private individuals, who, by the indentures they sign, engage to teach them a trade or occupation by which they may earn a livelihood."* (Cpt. Richard Vicars, *op. cit.*)

According to the Royal Order-in-Council of March 1808, the Liberated Africans had to be apprenticed for a period of 14 years, so that they might receive instructions from the masters or employers to whom they would be assigned. The purpose of this indenture was to supposedly to 'train' the Liberated Africans or Prize Negroes in a specific job, so that they would be able to support themselves in the future and eventually become free and productive members of colonial society as skilled or semi-skilled artisans/workers.

Before a private employer assumed charge of a Liberated African, he or she was required to enter into contractual obligations or an 'indenture agreement', a process known as 'articling', with the Collector of Customs, who acted on behalf of the Liberated African and the local British Colonial Government. The employer was bound to furnish the apprentice or the Liberated African with sufficient food, clothing, medical assistance and to instruct him or her in a trade or 'other useful employment.' The apprentice also had to be baptized and be instructed in the Christian religion. In reality, there was no formal articling process for Liberated Africans who were employed in the Departments of the local British Colonial Government. During his indentureship, the apprentice had to obey honestly and obediently his master, as well as learn the trade which he was being taught. The indenture agreement was signed by four individuals, the Collector of Customs, the apprentice, the employer and a witness.

### **Distribution of the Liberated Africans**

By 1839, they were divided into three groups: the first group of around 1,979 Africans and the majority were employed privately by 660 mostly British Colonial and Military Officials, British residents and some Franco-Mauritian planters (Charles Telfair had 91 Liberated Africans). The second group was employed in the Offices of the local British administration and the third were enlisted in the land and sea forces. Governor Farquhar and the members of his inner circle hired 560 apprentices, or just over 23% of them. By 1827, there were 1,798 Liberated Africans still serving their masters and working in Government Departments.<sup>213</sup>

Figure 28: Details of 14 Liberated Africans on 14-year Indenture Contract

(Source: Compiled from MNA/Z7/E/Volume 4, Indenture of Apprentices for 1815)

A survey of indenture agreements for the period between the 1810s and the 1830s show that male Liberated Africans were apprenticed as masons, carpenters, blacksmiths, house servants, stone cutters, horse handlers, porters, gardeners and carters. Female apprentices were apprenticed as seamstresses, cooks, washerwomen, maids, and gardeners. Unlike slaves, these were skilled trades through which the Government apprentices could earn wages.<sup>214</sup> The following statement by the Commissioners of Enquiry (1826) describe fully the economic contribution of the Liberated Africans and what the Government and employers owed them:

*"...the ordinary rate of colonial hire for the labour of a negro in one year, and considering the number of years these negroes have laboured, the severity of that labour, and the profits of the sugar plantations for some years past, a compensation might justly be due to the negro for past service rather than any claim of indemnification be asserted by the master for his present release."*

(Extract from Report of the Commissioners of Eastern Enquiry upon the Slave Trade at Mauritius (June 1829))

Government apprentices were paid very low wages. In September 1828, the local British Colonial Government officially established monthly wage rates for the Liberated Africans and set up an 'Apprentice Fund'. At the end of each year, the apprentices were paid 75% of the money from this Fund, while 25% would be kept in the fund, in theory, to cover the cost of their maintenance which was not always carried out.

In July 1836, Cunningham, while reporting on the state of the Apprentice Fund, observed that 'From this account, it will appear that above £16,000 has been earned in this colony since 1827 by government apprentices, during renewed periods of service, and while still under the care of the Collector of Customs and that over £12,000 has actually been paid to the apprentices...'

During that same year, the total amount of money in the Apprentice Fund was £4,288 and by 1838, it had more than doubled, to £8,712. These facts clearly show to what extent apprentice

labour was valuable in Mauritius during the slavery era. After all, it was a precious commodity which was coveted by the local British Colonial Officials and, to a lesser extent, by the slave-owners.

Figure 29: An account of money paid into the Colonial Treasury on account of the Government Apprentice Fund 1836

Date	By whom paid	Sums	Totals
1830 Jan 25	Col Draper	£ 79.8.6	
1830 June 18	Col Draper	96.13

### High mortality among the Liberated Africans

Between 1813 and 1827, out of the 2,998 landed in Mauritius, around 9% died before being apprenticed. 59 of the 206 Liberated Africans who were employed by the local British Government also died while in service. This represents a death rate of more than 28%. Among those hired to Colonel Lindsay, around 61% perished; for those hired to Colonel Draper, the death rate was 50%; for Reverend Jones of the London Missionary Society, it was 43%; for Charles Telfair the death rate was 39% and for Governor Farquhar, it was 39%. In general, between 1813 and 1827, around 965 Liberated Africans died, with some missing or unaccounted for. This means that during that period, 32% or almost one-third of all the Liberated Africans died. In 1830, Captain Vicars, who had been in charge of the Government Apprentices for several years during the 1820s, confirmed that the death rate among the Liberated Africans was much higher than those among the Mauritian slave population. He stated that it was common for them to be overworked and treated worse than slaves. Three years earlier, P. Salter, the Acting Collector of Customs commented that 'it is to be observed that many of the inhabitants do not in their declarations distinguish between slaves and Prize Negroes.'

## CASE STUDIES

### 1. Celestine Hecate

Celestine was a Liberated African of Malagasy origin who landed in Mauritius in 1817 from a captured slave ship by the British Royal Navy. She was apprenticed for 14 long years as a maid to an unnamed colonist who resided in the Plaines Wilhems District and by July 1831, her period of forced servitude came to an end. In October 1830, Auguste Naissin, a young Liberated African male, and Celestine made a request with the Collector of Customs to be married which was granted. The two Liberated Africans had shared an intimate relationship for many years during the 1820s and the early 1830s and through which they had four children. Unfortunately, the marriage never took place and they separated for unspecified reasons. By 1833, Augustin Naissin had passed away and the personal papers of Celestine were still in his custody.

In July 1833, Celestine showed up at the office of Mr. Icery, the Chief Commissary of Police of Plaines Wilhems; she requested for her papers to be retrieved from the Late Augustin Naissin. A few days later, her papers were obtained and given to her. During the first week of August 1833, Celestine went to see Mr. Chignard, the Clerk to the Guardian of the Government Apprentices, who worked in the Customs House in Port Louis under the supervision of the Collector of Customs. She submitted her papers, along with a letter from Mr. Icery outlining her story, and she also argued that her apprenticeship had come to an end in 1831. Mr. Chignard wrote a letter addressed to Mr.

George C. Cunningham, the Collector of Customs, which contained her bio-data and other relevant documents.

Shortly after, the Collector of Customs sent a letter to the Colonial Secretary in which he recommended to Governor William Nicolay that Celestine be granted her 'Act of Freedom'. After analysing her bio-data, the letters from Chignard and Icery, George Cunningham described Celestine as being 'of good character and capable of earning the livelihood for herself and four children.' A few days later, Governor Nicolay gave his assent and the Collector of Customs issued an 'Act of Freedom' for Celestine. In August 1833, the same month that the British Parliament passed the Slavery Abolition Act, Celestine Hecate was able to secure her freedom and began her new life as a legally free person with her children.<sup>215</sup> There are several important stories from the records of the Office of the Collector of Customs, like the one of Celestine Hecate, a time-expired Liberated African woman.

The experience of Celestine highlights her struggle to secure her freedom, to be able to earn enough to support herself and her children and to carve out a place for herself in a highly-stratified, complex, male-dominated and racist colonial society in Mauritius during the last years of slavery. While some of the circumstances in the life of Celestine Hecate and her children were unfortunate, she was a proud person who did not wait on the local colonial system to secure her freedom. She took the initiative of getting the process started, worked the system to her advantage. Her actions, as well as those of several Liberated Africans during the 1820s and the 1830s, which are being illustrated, clearly show that they were capable of human agency.

## 2. The Liberated Africans on Charles Telfair's Bel Ombre Sugar Estate

Charles Telfair was a British planter, slave-owner, who formed part of Governor Farquhar's inner circle. He employed the greatest number of Government apprentices in 19<sup>th</sup>-century Mauritius during the slavery era. Therefore, it is not surprising that in March 1827, the Commissioners of the Eastern Inquiry Commission requested P. Salter, the Acting Collector of Customs, to draw up a detailed list of all Prize Negroes or Liberated Africans who were apprentices to Telfair. It showed that a total of 91 Liberated Africans, or 78 males and 13 females, had been apprenticed to the British planter ever since 1814.<sup>216</sup>

Barely three years after arriving in Mauritius, Telfair had only one male apprentice, namely Henry Chaloupe. In 1818, when he purchased Bel Ombre estate, along with his business associates, there were 40 apprentices, 35 males and 5 females in his service. However, during the course of the same year, 14 apprentices died, 12 males and 2 females. Furthermore, with the exception of Henry Chaloupe, a time-expired Liberated African of Malagasy origin, Damihiti, a male apprentice, who was indentured in October 1814, was the longest serving Liberated African who was assigned to Telfair. By October 1828, Damihiti's apprenticeship was scheduled to come to an end and he continued to work for Telfair just like Henry Chaloupe.

Telfair had accepted apprentices whose masters had rejected them, passed away and left the colony. Many of his government apprentices were Prize Negroes who were sent to him within a month after having been captured on slave ships and had landed in Mauritius. In August 1816, six Prize Negroes, Koutouvoula, Yadalou, Stchamlibé, Ramême, Diamarra, and Routorizaff, from the captured slave vessel *Creole* were assigned to him. During the following month, five Liberated Africans, Scezoure, Ferevanani, Mandimbe, Moica, and Songale, who were seized on the slave ship the *Gustave* were sent as apprentices to Bel Ombre.<sup>217</sup>

Between 1827 and 1836, there were several Liberated Africans who still working on the properties of Charles Telfair. In September 1833, the Collector of Customs informed the Colonial Secretary:

*"I have received an apprenticeship from Mr. Chs Telfair, requesting that the four apprentices 'Simons, Simon' 'Pierre par Berand', 'Virgine Hecbezar' with her three children Babit Constant & Celine & Clementine Sauyez' with her three children, 'Joseph, Jean Charles & Anne Marie', may on account of this good conduct receive this entire freedom.*

*The apprenticeship of the 'Simons, Simon' expired 4<sup>th</sup> February 1831, that of Pierre par on this 4<sup>th</sup> October 1829, that of Virgine on the 12<sup>th</sup> October 1829 & that of*

*Clementine on the 1<sup>st</sup> May 1831, and as it is stated that they are capable of earning an honest livelihood without becoming a burthen to the Community, I humbly submit that Mr. Telfair's request be granted.*"<sup>218</sup>

In 1832, the Collector of Customs made several requests to Charles Telfair to pay up the arrears which were owed to the Apprentice Fund for the wages of several semi-skilled and skilled artisans Liberated Africans who worked for him. In January 1833, Colonel Draper, the Acting Collector of Customs, asked Governor Nicolay to instruct Mr. Laborde, the Government Advocate, to lodge a case in court against Mr. Telfair in order to collect more than 940 £ in arrears which were still owed to the Apprentice Fund.<sup>219</sup>

### 3. The Story of Henry Chaloupe

Henry Chaloupe was a Liberated African of Malagasy origin. On 6<sup>th</sup> June 1810, he was captured together with 2 Malagasy slaves on the vessel the *Amazon* by a ship of the British Royal Navy and soon after, he landed on the island of Bourbon.<sup>220</sup> On 3<sup>rd</sup> January 1811, he was apprenticed to Charles Telfair in Réunion Island.<sup>221</sup> He did not know how to read and write and knew only the language of his country specifically the language spoke by the Merina in Central Madagascar. Chaloupe was educated for several months by Abbé Colin, the Chief Catholic Priest of Bourbon. He able to learn to read and write and do basic Maths. He was baptized and became a Christian and was taught to read the Bible. During the final weeks of 1811, he was brought to Mauritius and worked at the residence of Charles Telfair as his personal servant in Port Louis.

In 1814, he was sent to work on Bois Chéri Sugar Estate where he saved enough money to purchase the freedom of Françoise, a Malagasy slave woman. She also became a Christian and got married to Henry and soon after, gave him a daughter. Françoise was also employed as a housemaid by Telfair. Unfortunately, she passed away in 1818 and barely a year later, Henry Chaloupe purchased the freedom of Arsenne, another Malagasy slave woman, who became a Christian and got married to him. In 1829, Henry was still married to her and they had several children. The first child of Henry was also baptized as a Christian and was educated at Bel Ombre Sugar Estate.

In 1819, Chaloupe was moved from the estate of Bois Chéri to Bel Ombre Sugar Estate which had recently been purchased by Telfair and some of his close associates. Telfair employed him as an 'économé' or a junior administrator and gave him a pay increase. Henry was again relocated to Beau Manguier Sugar Estate where by the late 1820s, he became 'chef sucrier', in charge of sugar production and supervised a large number of slaves. He also owned his own house as well as a slave. He earned a salary of around £60 per year and enjoyed other privileges. On 3<sup>rd</sup> January 1825, his 14-year period of apprenticeship came to an end and Telfair requested the Collector of Customs to give him his Act of Freedom. However, four years later, in 1829, Henry Chaloupe was still working for Charles Telfair as the head of sugar production at Beau Manguier. It becomes evident that out of all the Liberated Africans who were landed and apprenticed in Mauritius, Henry Chaloupe's story is the most successful account of a Liberated African who achieved social mobility and social integration in early 19<sup>th</sup>-century Mauritius during the slavery era.

### 3. The Case-Study of Céleste Madeline

In August 1838, Céleste Madeline, a Malagasy woman, showed up at the office of the Collector of Customs and claimed that she was a time-expired Government apprentice who was illegally being held in servitude by Mr. Vilbro, a French trader in Port Louis. Furthermore, Céleste claimed that she had been brought as a child slave to Mauritius in 1817, as a Liberated African, because her ship the *Joséphine* was captured off the coast of Madagascar by a British naval cruiser and its slave cargo was landed at Port Louis. She also claimed that she was ill-treated by Mr. Vilbro and his wife and she wanted to obtain her freedom through legal means.

The following day, Céleste returned with four time-expired apprentices of Malagasy origin, Marianne Rassal, Sophie Malabar, Pelagie Zebangh, and Saundar Essanhat who were able to confirm her story. After all, these four individuals testified that they had first met her on the slave ship called *Joséphine* more than 21 years before. However, Céleste Madeline was then called Artzam, a Malagasy of Hova origin. After hearing these testimonies, Cunningham also became convinced that Céleste Madeline was Artzam.

Without losing a moment, the Collector examined his records and found that Artzam was in fact a child of 11 years who had been listed as being one of the slaves on the *Joséphine*. In addition, the record stated that the slave child called Artzam was dead. However, Cunningham also reported: 'The age and marks borne by this woman [Céleste] appear to correspond with those of the record...'. It became increasingly evident that Céleste was Artzam and that she had lived in Mauritius in a state of servitude for more than 21 years. While her case was being examined, she was allowed to stay at the *Bagne* in Port Louis. Barely a week after her first visit to the office of the Collector of Customs, Céleste also informed Mr. Cunningham that Vilbro still held her son, Adolphe, who was 9 years old and she feared for his well-being.

On behalf of this unfortunate time-expired Government apprentice, the Collector of Customs was able to secure custody of Adolphe and reunite him with his mother at the *Bagne*. In addition, more than three months later, thanks again to the intervention of Mr. Cunningham and also of Mr. Chignard, the Clerk of the Customs Office, Céleste was able to obtain her freedom and that of her son. It was also discovered that only a few weeks after being landed, she was apprenticed to Mr. Vilbro who, in 1818, declared to the Collector of Customs that she was dead. Unfortunately Vilbro's claim was never investigated. The case of Céleste is a rare one in which a Mauritian Liberated African woman was able to obtain her freedom, secure custody of her son, get justice for her suffering, and even receive a financial compensation from her former master.<sup>222</sup>

#### 4. The Liberated African Maroons

Between January 1820 and November 1826, around 1,357 Liberated Africans marooned. There were 1,085 males (or 80%) and 272 females (or 20%).<sup>223</sup> In 1820, 138 Government apprentices, 109 males and 29 females, escaped from their masters and mistresses and by 1825, this figure rose to 256 on 221 males and 35 females. However, in 1826, due to sharp decline in the number of Government apprentices, between January and November of that same year, only 162 ran away. In all, during this period, 862 or 64 % all the Prize Negroes who ran away were captured, while 36% remained uncaught. In all, there were 679 males and 183 female maroon apprentices who remained at large, with the males representing almost 79% and the females 21%. In 1820, 67 Liberated Africans were captured by the anti-maroon detachments, and this figure increased four years later to 195 only to decline sharply to 90 in 1826. Thus, there was a correlation between the decline in the number of Liberated Africans who marooned and those who remained uncaught.

Many of the maroon Liberated Africans who were caught in Port Louis and in the rural districts were sent to the *Bagne*. According to the *Bagne Book*, between 1828 and 1833, annually a few dozen Prize Negroes were incarcerated there until their masters came to fetch them, such as in the case of Maurice. He was a Liberated African in the service of Mr. Campbell who was sent to the *Bagne* on 29<sup>th</sup> January 1834. Maurice was claimed the same day by his employer.<sup>224</sup>

The Liberated Africans represented one of the African and Malagasy groups in Mauritius that were not 'creolised' or enslaved. How far, and for how long, they were able to retain their African and Malagasy identities remains to be further researched. The public did not distinguish between slaves and Liberated Africans. John Finiss, the Chief Commissary of Police, wrote: 'Many of the inhabitants do not in their declarations distinguish between slaves and Prize Negroes.'<sup>225</sup> Employers as well saw them as nothing more than a source of cheap labour, just like their slaves, which had to be exploited to the maximum in a colony which was always plagued by labour shortages. The Commissioners of Eastern Enquiry took a special interest in the condition of the Liberated Africans and in their report, the Commissioners concluded that the Prize Negroes were treated no better and, in some cases, even worse off than the slaves.<sup>226</sup> Barker has concluded that 'It is not impossible that the planters concerned treated this casual labour force more harshly than the slaves they actually owned. What is certain is that in the Farquhar years they were operating free from any external humanitarian supervision or control.'<sup>227</sup> Maroonage was the only escape from this new form of servitude called apprenticeship.

During the late 1820s and early 1830s, there were 9 Liberated Africans, 7 Malagasies and 2 Mozambicans, who were reported as having marooned in Moka District. One among them was L'Amour, a young male Liberated African in the service of Charles Telfair. He was reported as having marooned on 25<sup>th</sup> December 1828. There is evidence from the archival record that he was recaptured and returned to Telfair.<sup>228</sup>

**Figure 30: Details of 9 Maroon Government Apprentices  
in Moka District 1828 - 1831**

### 5. The Story of Fritz, the Liberated African Maroon Leader

*"This man struck terror among the residents in the district of Savanne to such an extent that it became impossible to allow a black slave to go on an errand without an armed guard. Vandalism and criminal acts have decreased sharply with the arrest of this notorious government apprentice."*

(Observations of M. Virieux, Procureur-General, at the trial of Fritz and his companions at the Supreme Court in Port Louis in December 1825.)<sup>229</sup>

On 21 June 1825, Fritz, a 30-year-old maroon Government apprentice of Mozambican origin, was captured along with four other maroons by Edouard Vinay, a Police Officer, and a special maroon catching unit on Telfair's Bel Ombre Sugar Estate. Fritz was a former apprentice of Désiré Carosin and the leader of a small, but notorious, maroon band in the District of Savanne. He had been a maroon for more than two years and was always armed with a big stick and knife. His five followers were Lazare, a slave who belonged to Charles Telfair, Cotte, Jérôme and Hector, and Edmond.

Between January 1824 and June 1825, Fritz and his gang operated mostly in the Western part of the Savanne District, notably near Bel Ombre Sugar Estate, Baron d'Unienville's estate, Ruisseau des Créoles, and Montagne des Signaux de la Savanne. They were responsible for a number of thefts and numerous nocturnal raids on several sugar estates. Their diet consisted of beef, 'tandrac', eels, shrimps etc. According to local Colonial Officials, during one and a half years, they spread terror among the residents in the Western part of the Savanne District.<sup>230</sup>

In April 1825, in order to capture Fritz and his gang, a special maroon-catching task force was set up by Governor Sir Lowry Cole. It consisted of Edouard Vinay, a Police Officer, and Sieur François Le Cordier, leader of a maroon-catching unit in the Savanne, and ten free black maroon catchers. For a period of two months, they searched for Fritz and his followers, until they were finally captured in June of the same year at Bel Ombre. When cornered by the maroon catchers, Fritz put up a very stiff resistance which caused one of the members of the detachment to shoot him, while his followers surrendered without a fight. During his lengthy trial, Fritz and his men were incarcerated at the Civil Prisons on Government Street next to the Courts of Justice in Port Louis. He was accused of murdering a slave of Mr. Carosin, attempting to kill three other slaves, the kidnapping and the rape of a young female slave, armed resistance during his arrest, theft with violence, carrying out raids on plantations, and cattle theft.

In December 1825, Fritz and his former followers were condemned to death. On 14<sup>th</sup> January 1826, his testament was recorded by the Chief Clerk of the Supreme Court in the presence of *Procureur*

*Général* Virieux and a French Catholic priest. He confessed that he was guilty of most of the charges brought against him, except for the one count of murder and the three counts of attempted murder. Two days later, Fritz and his followers were executed in the yard of the Civil Prisons next to the present-day Supreme Court. In fact, Fritz, the Liberated African, was the last great maroon leader in colonial Mauritius.<sup>231</sup>

## CONCLUSION

In August 1827, P. Salter, the Acting Collector of Customs, reported that there were only 1,783 Liberated Africans still serving their masters/mistresses and working in Government Departments. Only a few Liberated Africans had completed their indenture contracts. The overwhelming majority of the Liberated Africans were still in a state of servitude less than a decade before the abolition of slavery in Mauritius.<sup>232</sup> In 1829, in their report on the slave trade to Mauritius, the Commissioners of the Eastern Inquiry Commission observed: 'That the majority of the negroes who are captured in slave ships would be desirous of returning to their country is probable.'<sup>233</sup>

According to the Return on Liberated Africans which was submitted by P.Salter, the Acting Collector of Customs, 5 Liberated Africans, 3 males and 2 females had completed their 14-year period of indenture, were given their Acts of Freedom and returned to their countries of origin. At the same time, between 1820 and 1827, there were 34 British colonial and military officials and some Franco-Mauritian planters who took around 60 Liberated Africans, who served them, to different overseas destinations such as England, India and the Cape Colony with the permission of the Collector of Customs.<sup>234</sup>

Figure 31

### Liberated Africans and their Employers who left British Mauritius between 1820 and 1827

Number	Name of Master/Mistress	Observations
1	Mr. Baron D'Unienville	Accompanied his master to England.
2	Col. G. A. Barry, Chief Secretary to the British Government	One male accompanied his master to England.
3	Mr. E. Byam	Two males accompanied his master to England.
4	Colonel Conyers of the 8 <sup>th</sup> Regiment	One male accompanied his master to England.
5	Colonel Dalrymple	One male accompanied his master to England.
6	Colonel Dumaresq	Accompanied his master to New South Wales.
7	His Excellency Sir Robert T. Farquhar, Governor of British Mauritius and its Dependencies	Two males accompanied Sir R. Farquhar to England; another one sent to Madagascar to teach the use of the plough. The fourth one unaccounted for and supposed to have been stolen.
8	British Government	The ten men unaccounted for were on board the colonial brig <i>Wizard</i> or <i>H.M.S Menai</i> on a voyage to Zanzibar and did not return since that time.
9	Countess of Holmer	Accompanied his mistress to England.
10	Mr. J. Lautier	Five males accompanied their masters to India as sailors on the Schooner <i>Courrier</i>

In February 1839, the Collector of Customs, Cunningham mentioned:

*"In 1828, in consequence of the letters of the Colonial Secretary dated the 19<sup>th</sup> March of that year [1828] and 12<sup>th</sup> of the preceding April [1827], a practice of renewing or prolonging the indentures of condemned had been adopted here."*

It is evident that between April 1827 and September 1828, the local British Colonial Government, under Governor Sir Lowry Cole, took new measures such as prolonging the indenture of the Government apprentices by seven years, established new monthly wage rates for them, and set up an 'Apprentice Fund.'<sup>33235</sup> In June 1833, the Collector of Customs informed the Governor that there were 1,388 apprentices with 367 children of apprentices who had passed away who were still under his authority.<sup>236</sup> This meant that between 1827 and 1833, or over a period of six years, there was a decrease from 1,783 to only 1,388 Liberated Africans still under contract or under the responsibility of the Customs Department.

However, between 1833 and 1839, there were dozens of Liberated Africans who had already completed their period of indenture. As a result, their employers, either private employers or the Heads of Government Departments, requested the Collector of Customs to give them their Acts of Freedom. They were seen as having successfully completed their training, and as capable of earning a living; they were practicing Christians, and some were even married and had children. In several instances, there were small groups of Government apprentices whom the employers were requested to free.

For his part, the Collector of Customs agreed most of the time with the requests and recommended the names of the Liberated Africans to the Governor through the Colonial Secretary. The Collector had to certify that the Government apprentices were fit for freedom. Then, it was up to the Governor to give his approval, which he usually did, and it was only then that the Liberated African was given his or her 'Act of Freedom' by the Collector of Customs. It is important to note that some of those who received their freedom were Liberated African women who had several children.<sup>237</sup>

In August 1833, there were several Liberated African women, such as Celine Rassoire and her six children, Sammah Chamouniah and her seven children, and Caroline Sampianada and her five children who obtained their freedom. They showed up at the Customs Department and asked to be freed because they were time-expired Liberated Africans or Government apprentices. Within several days, after obtaining Governor Nicolay's approval, George Cunningham, the Collector of Customs, gave them their 'Acts of Freedom' and noted that they were 'of good character, industrious and capable of earning a livelihood for themselves and their children'. These case-studies remind us of the story of Celestine Hecate who managed to secure her Act of Freedom during the course of the same month.

During the course of the same month, the marriages of several Liberated Africans, who were completing their period of indenture, were celebrated with the approval of the Governor and Collector of Customs. Thus, Phillis got married to Susannah, Lindor to Betsey, Alexander to Saminah, Azor to Celine, Bell to Caroline and Noah to Salam. It should also be noted that the indenture contracts of many of these Liberated Africans came to an end in 1829 and 1830. Unfortunately, they had to wait 3 to 4 more years before they obtained their Acts of Freedom from the Collector of Customs, and these time-expired Liberated Africans were still being allocated to other employers and Government Departments by the Customs Department. In August 1833, Collector Cunningham submitted the names of several time-expired Liberated Africans who had waited several years for their 'Acts of Freedom' to be issued to them such as:

*"Original apprenticeship expired 1<sup>st</sup> Nov. 1829*

*Bell Cooralal*

*Azor Corpusira*

*Gheadere Eative*

*Pommade Napoomah*

*Jolicour Onamacoal*

*Original apprenticeship expired 12 Oct. 1829*

*Lafleur Rasar (female)*

*Celine Rapoire with her children Eliya, Anatole, Paul, Thome, Julien and Clarlotte*

*Saminah Chamouniab with her children Eugène, Marie, Augustin, Henry Hyandrier, Adolphe and Hphonsere*

*Original apprenticeship expired 23<sup>rd</sup> Dec. 1830*

*Noal Routte*

*Peter Routouzaffe*

*Jamer Ramasse*

*Adam Riendarffe*

*Job Lieyezaffe*

*Alexander Shudde*

*Milord Aadallah*

*Original apprenticeship expired 22<sup>nd</sup> Sept. 1830*

*Claroline Sampianave with her children Maria, Rose, Sylvestre, Marie Janne, James and Babelle*<sup>36</sup>

Gradually, during the 1830s, there were several Liberated African men and women who had completed their indenture contracts and were able to earn a living as skilled and semi-skilled workers. At the same time as they were securing their freedom and that of their children, they got married and secured their family ties. As the records of the Office of the Customs Department clearly revealed, some of the time-expired Liberated African men and women had become productive members, of society, and they managed to carve out a place for themselves in mid-19<sup>th</sup> century Mauritian colonial society.

## 1. BEGINNINGS AND DEVELOPMENTS TILL 1870S

In the colonial lexicon, planters, as well as the colonial authorities, depicted the Indian immigrant labourers as being ‘from the lowest and most ignorant classes of their countrymen who at present appear to be beyond the reach of the civilising and humanising influences of religion and education’.<sup>238</sup> Despite this awareness about the lack of education among the immigrants, the need to provide education to the labourers and their children did not fit into the scheme of things for planters, neither did it have the attention from the administrators in the first few decades because, for Mauritian authorities, Indian indentured labourers were primarily ‘transient sojourners’ who had come to Mauritius as labourers to work on plantations and would eventually return to their homelands. Therefore, there was no logic or requirement to provide them education. The more fundamental reason for this slackness towards providing education was the inherent logic of capitalist production system which does not permit any investment for which there was no material return. Since performing menial labour in the cane fields did not require any specific knowledge, there was no motivation for planters to invest resources in making arrangements for education of immigrant labourers or their children. Even the missionaries, who were considered to be very active in providing education to the underprivileged classes, somehow did not get involved in the ‘mission’ of educating the Indian immigrants. Superintendent of Schools, R. H. Walsh noted this inaction of missionaries in 1859 for which he put blame on ignorance of missionaries in languages spoken by the Indian immigrants,

*“[...] I am not aware of any efforts having been made on behalf of the Roman Catholic Church for the instruction of the Indians. None of their clergy in Mauritius, I am informed, are acquainted with any of the Indian languages [...]”*<sup>239</sup>

Despite this general lackadaisical attitude, colonial authorities at times put across the idea of educating the children of labouring classes, although there were no efforts towards its realisation, and it remained at the levels of rhetoric and individual opinion. Immediately after the commencement of indentured immigration from India, when the deplorable conditions of Indian immigrants attracted severe condemnation for the system from all quarters, Governor Nicolay proposed to establish a government controlled education system to spread education, especially among the children of labourers,

*“On the subject of Public Schools, I have lately laid before you some propositions [...] and if they should be adopted, I trust that there will at length be established throughout the colony a general system of schools, under the Control of Government, an object which I consider to be essential to the successful spread of education, specially among the children of labouring classes.”*<sup>240</sup>

Nicolay made this proposition in 1839; yet no efforts were made to provide education to the children of Indian immigrants till the 1850s. The first proposal for a comprehensive education system came from Bishop Chapman who visited Mauritius from Ceylon in 1850. He proposed that an annual grant-in-aid be provided by the Government and there should be an increase in the number of Protestant clergy, ‘especially [...] for planning and assisting in the instruction of the immigrant population’<sup>241</sup> The matter of providing education to the Indian immigrants caught the attention of the Mauritian Government with the arrival of Higginson as Governor in January 1851. When the Committee of the Mauritius Church Association proposed to set up a school in Port-Louis for elementary education in English and Tamil and to train teachers to teach in schools to be opened, with the help of Reverend Hardy who was engaged in providing education to the children of labouring classes in South India, Higginson opined that the proposal should not be neglected, and he was in favour of trying it out. Subsequently, with a grant of £ 200, an experimental school was started for the children of Indian immigrants in the Savanne district. An Indian school teacher was appointed to run this school and the medium was the vernacular. This experiment was not a success and had to be abandoned after few months because educating their children was not on the minds of the immigrant labourers and very few children came to attend.<sup>242</sup> However, another observer ascribes the possible reasons for the lack of attendance to the inability of Indian teachers who ‘had no experience in education’.<sup>243</sup>

Despite this failure of his initial experiment, Higginson was not deterred and in 1854, came the famous Minute of Higginson on education which was the foremost document on the education of Indian immigrants in Mauritius, covering almost all its aspects. In this Minute he announced that,

*“Time has arrived, when some systematic attempts should be made, to extend the blessings of at least the rudiments of Education and of Moral training to the children of our labouring classes - and the success of which would unquestionably prove alike beneficial to themselves, to their employers, and to the community at large.”*<sup>244</sup>

Higginson was trying to set up an educational system for the immigrants but he was aware of the ‘obstacles’ in making it a reality, which he attributed primarily to the background of the ‘uncivilised’ immigrants and their scattered pattern of settlement in Mauritius:

*“When we call to mind the class of men from which our Indian immigrants are chiefly recruited - the social position which they occupy here - their transitory residence - their ignorance of the English language and the different dialects spoken by them - their apprehensions of proselytism so easily alarmed - the surface over which they are scattered - and the absence of those civilising influences which, under a less exceptional state of Society, might be exercised over them - it will be obvious to all, that the obstacles to be overcome by the Government in maturing and introducing any general or comprehensive system for importing even the most elementary introduction to the Indian population are no light of ordinary character.”*<sup>245</sup>

He was well aware of the fact that reluctance would emanate from both the concerned parties - labourers as well as the planters. Since most of the children of immigrant labourers began to work on the plantations at an early age, a situation which not only contributed to the earning of their families, but also provided a relatively cheap labour to the planters (children were being paid less wages than adults), the reluctance would obviously come from both the parties, since sending the children to school would mean the sacrifice of immediate gains.<sup>246</sup> Despite these apprehensions, he was optimistic that the Government, which possessed the power and the means for moral and social advancement, would be able to succeed in setting up a popular education system for the immigrant population of the island.

For Higginson, the solution lay in making the education compulsory but without resorting to coercion. The main points of Higginson’s proposal to the Council were:

1. Schools should be opened in the most convenient localities for the use of one, two, or more Estates as the case may be;
2. As the medium of education, mother tongue could not be excluded and therefore education should be given in English and one vernacular language;
3. The teacher’s salary and school books should be defrayed from a fund to be raised by a trifling deduction from the labourers’ wages;
4. Planters were to provide ‘gratuitously suitable accommodation for the schools and for the residence of teachers’;
5. To meet the requirements of qualified teachers, initially some teachers were to be introduced from India but later a Normal School would be set up in Port-Louis at Government expenses to train teachers, proficient in English and Indian languages.<sup>247</sup>

The bottom line of Higginson’s proposal was the setting up of exclusive Indian Schools and financing it through a cut from the wages of immigrants. C. Kalla finds this proposal inadequate and ‘a feeler to gauge the reactions of the *sugarocrats*’ because ‘it did not make any mention of the curriculum or of religious instruction’, and ‘no mention was made of evaluation in the form of inspection.’<sup>248</sup> There had been no initiative for the education of Indian immigrants’ children by the time Higginson verbalised his proposals for the education of immigrant population, and the larger strategic concern for him was that whether the immigrants’ children should be included in the existing system of

schooling or a separate system in their familiar media needed be started; and if a new system was to be started what would be the logistic arrangements? The larger issue Higginson had to deal with was to choose a system and medium of schooling, and once these choices had been made, the curriculum and evaluation would have been obviously set forth by the administrators.

Higginson's proposal was submitted to a Special Committee of the Council of Government, which deferred the matter for more than a year before finally submitting its comments in May 1855. While agreeing with Higginson's concern for the need of education for the children of immigrants, the special committee dissented on the issue of separate Indian schools in the vernacular medium because it opined that an exclusive education system would not only prevent the assimilation of Indian immigrants with the Creole population and a permanent, cohesive settlement of the immigrants in Mauritius, but would be a sign of a discrimination against the Creole population. Reflecting the dominance of planters in the Special Committee, it wanted education to be more functional for the sugar industry rather than training people for other vocations - curriculum should be designed to train the labourers for 'the cultivation of the soil and ruder mechanical arts'.<sup>249</sup> The Report of Special Committee signalled the planters' obvious agenda behind supporting the education of the children of immigrant labourers in unambiguous terms - they wanted their dictates to be obeyed in deciding the essentials of the education system and use it as a means to further the interests of the sugar industry.

Upon receiving the Report of the Special Committee, the Colonial Office gave its authorization to Governor Higginson to go ahead with his proposal of compulsory education but with a cautious note about not infringing upon the 'prejudices' of the coolies.<sup>250</sup> Despite the disagreement of the Special Committee, Governor Higginson reiterated his preference for setting up separate schools for the children of immigrant population with vernacular medium of instructions. He proposed to augment the number of schools in each locality where a sufficient number of children could be found and on his initiative, two Indian schools were started in Port-Louis.<sup>251</sup> To explicate the reasons for his choice, he noted in the minute dated 12<sup>th</sup> November 1856,

*"Indian parents prefer their children being instructed in language spoken and best understood by themselves...they can very rarely be induced to send their children to the Government Schools at present constituted; whilst they do not manifest the same reluctance to send them to the few Indian Schools that have yet been attempted".*<sup>252</sup>

He intended to introduce the compulsory education because 'education can not be forced except by making it compulsory' and had the Compulsory Education Ordinance approved by the Council in 1857. This Ordinance made it compulsory for all the boys between six to ten years to attend the school if they resided within 1 ½ miles of the school. There was a £ 5 fine for restricting children from going to school<sup>253</sup> but unfortunately the medium of instruction, against the wishes of Higginson, was decided as French, which eventually earned the antagonism of the Indian Government. The Compulsory Education Ordinance could not ultimately take off because of the disapproval of the Government of India which objected to imposing compulsory education on the Indian population in the French medium on the grounds that it did not include their mother tongue and would lead to *creolisation* of Indian population.<sup>254</sup> According to Hugh Tinker, a noted scholar of the indenture system, this disapproval from Indian government came because of the treatment it expected for the Indian labour Diaspora in their adopted lands. Tinker argues that the Indian Government wanted the immigrants not to be assimilated, but to be treated as 'separate and unequal',<sup>255</sup> and therefore, it objected to the French as the medium of education because it would lead to the assimilation of the Indian Community with the Creole population. Whatever the logical push had been behind this objection, the Indian Government stalled the first attempts to introduce compulsory education for the Indian immigrants in Mauritius by this detrimental step, and it took more than two decades to recover from this and set forth a comprehensive education system for the Indian immigrants' children. The inadequate conditions of education among the immigrant population can be discerned from the relatively miniscule number of Indian children attending schools in the 1860s when the size of Indian labour Diaspora was more than two hundred thousands:

Table 1: Number of Children from Indian Community in Government Schools

<i>Year</i>	<i>Number of Children</i>

The next spurt in the development of education came in the post-Royal Commission era but, before going into that, we shall discuss the underlying motives of colonial administrators and planters efforts for promoting the education among Indian immigrants. By the middle of 1850s, the Indian labour Diaspora had acquired a numerically prominent presence in Mauritius with a sizeable number of young children and the colonial authorities began to call for rescuing these children from ‘stalid ignorance’<sup>256</sup> and ‘elevate their moral and social conditions’<sup>257</sup>. But did these benevolent civilisational intentions really induce the administrators like Higginson to take so keen an interest in promoting education or there were more matter-of-fact reasons behind it? Racial stereotyping of the Indian immigrants continued to be reflected in Higginson’s minutes on education where he traced the absence of civilising influences among them. The colonial authorities, as well as planters, portrayed these ignorant immigrants as undisciplined, destitute and a potential source of disorder and crime in the society, and they found educating these uncivilised characters to be only way out because education was supposed to make the Indian children ‘docile and useful subjects’.<sup>258</sup> Higginson echoed the same tune,

*“Knowledge is the surest guarantee of social order - as ignorance is the chief source of crime and immorality”.*<sup>259</sup>

There was a very strong pejorative undertone in the purpose of educating the children of immigrants. They were being educated, not for their overall growth, but to learn their obligations and limitations as servants. This was the rationale of the moral training programme of the Indian Reformatory School, which was set up in 1860 to restore vagrant children of immigrant population. The moral training programme was to teach these ‘vagrant children’

*“[...] the first principles of religion, the moral obligation of servants towards their masters [...] and those portions of the law relating to servants and masters, and of the criminal code with which it would be most useful for them to be acquainted”.*<sup>260</sup>

Those revelations of the colonial promoters of education make it clear that their innate motive for promoting education among the Indian immigrants was essentially based on the racist binary division of civilised/ barbaric where illiterate immigrant labourers were seen as barbaric and possible threats to the ‘civilised order of plantations’. Therefore, they were to be educated to dissuade them from turning towards the anti social disruptive ways of life. And it was not at all aimed at improving their general conditions by genuinely educating them.

After Higginson’s initial efforts, only occasional exertions were made during the 1860s and early 1870s. In 1866, ten new schools were opened<sup>261</sup>, but the problem of finding trained teachers in vernacular media again came in the way of extending the education system. A Superintendent of Government Schools noted, in his report for 1867, that ‘the greatest difficulty is experienced in finding men qualified to teach the Indian dialects, especially those which are spoken in Bengal’. His suggestion to solve this crisis was to set up a Normal School to train teachers for other schools, while the Protector opined that inviting teachers from India would be more pragmatic,

*“the object would be best attained by introducing school masters from India. While these would probably be better qualified to teach, they would also, through the influence of caste, be more likely to enlist the sympathies of the classes whence the children have to be attracted”.*<sup>262</sup>

This administrative uncertainty over the separation of schools for the different communities in Mauritius and the medium of education for the children of Indian Diaspora continued to encumber

the spread of education among the Indian immigrant community. Geoghegan reported in 1870s that 'education does not appear to be much attended to.'<sup>263</sup>

However, one significant attainment in the field of education during this period was the setting up of Grant-in-Aid school system which aimed at providing financial assistance to the non-Government schools. In later years, this system opened up the possibilities of setting up schools on the plantations because it reduced the financial burden on planters in running schools for the children of labourers which they were most hesitant to do, for its 'non-productive' implications. Adolphe de Plevitz, who was trying to secure a fair treatment for the immigrant labourers while maintaining a school on his estate for the children of Indian immigrants, was very much concerned with their education as well because he envisaged education as a vehicle of socio-economic emancipation and strongly believed that education would give the children the opportunity of improving themselves so as to be able to cope in their adult life in Mauritius.<sup>264</sup> He raised the issue of inadequate educational arrangements for the immigrant labourers on estates in the press and before the Royal Commission. He underlined the lackadaisical attitude of the Colonial Government which had not taken a single legislative initiative to promote education among the children of immigrant labourers and a lack of qualified teachers for the Indian schools.<sup>265</sup> The derisory arrangements of education for the children of Indian labour Diaspora were validated by the Royal Commission also. Royal Commissioners reported that 'the education was deplorably low among all classes of Indian population' and out of nearly 40,000 Indian population between the age of five and fourteen years, not more than one thousand were attending schools, and even among this infinitesimal number of school going children, the proportion of girls was negligible.<sup>266</sup> In spite of expressing serious concerns over the deplorable condition of education for the immigrant children, Royal Commission did not make any concrete suggestions for the setting up of a comprehensive education system. At the level of a vague suggestion, it recommended for 'some system of compulsory education' for the children up to ten years of age.<sup>267</sup>

## 2. DEVELOPMENT OF INDIAN EDUCATION, DEBATES ON THE MEDIUM OF INSTRUCTION AND LANGUAGES TAUGHT

The steady development of 'Indian education' in Mauritius began only after the arrival of Arthur Phayre as Governor in 1874. Phayre's concerns were similar to Higginson - saving the Indian children from growing up as destitute.<sup>268</sup> However, he was clearer in his priorities and more in command of the situation than Higginson had been, and therefore he could attain certain landmarks in establishing an educational system for the children of Indian diaspora. The need for educating the children of immigrants was realised by colonial officials who witnessed the permanency in their settlement patterns. Those officials could visualise the growing prominence of Indian Diaspora in the economic realm of the island because of the large scale land acquisitions by the diasporic community. The Procureur Général suggested for government intervention in the education for immigrants, because he could envisage them as 'the future Lords and Masters of the land in Mauritius'.<sup>269</sup> In Phayre's opinion, English education was not of much use for the children of immigrant community, and he proposed languages spoken by the immigrants as the medium of education. In Phayre's scheme of education in vernacular medium, the Superintendent of Schools, Browne, noted his disagreement and proposed a two language system - English as the main language, and Tamil or Hindi as secondary language. He reiterated the scarcity of qualified teachers as the main obstacle for adopting the vernacular medium as the primary language of education. However, Phayre remained unperturbed and firmly decided to go ahead with his proposal of setting up of separate schools for immigrants' children in their own languages, especially Hindi and Tamil.

The medium of instruction for the Indian population remained one of the principal concerns in the domain of education throughout the colonial period and its consequences continue to sway the education system of post-colonial Mauritius. The Government of India consistently opposed adopting French and Creole as media of instruction for the children of Indian immigrants out of apprehension of their 'creolisation'.<sup>270</sup> The Government of Mauritius was not in favour of including Indian vernacular languages. The main argument for insisting on creole was the familiarity of Indian children (the majority of whom were born in Mauritius) with the Creole patois, and they were supposed to live their lives in Mauritius. Another reason for the opposition was the high expenditure in obtaining teachers from India to teach in vernacular mediums.

However, contrary to general perceptions, the Indian community was averse to sending their children to schools because their children were not taught in their native medium, there is one report which argues the other way. Muir Mackenzie reports that:

*“there is no evidence [...] that the Indian refrains from sending his child to school because the vernacular is not taught there”.*<sup>271</sup>

The main problem, according to Muir Mackenzie, was the teaching of two foreign languages - English and French, and therefore he recommended learning one language - preferably English but ultimately this was to be decided by the parents. For him the language mattered least as long as the children could be taught with practical knowledge, and therefore he argued for treating the language question according to the practical efficiency.

*“[...] it seems obvious that education in two languages must be of less practical use to the Indian than education in one [...] Indian will suffer in the ciphering and other practical subjects by being obliged to devote a considerable portion of his time to the acquisition of the second language”.*<sup>272</sup>

Similar concerns regarding the learning of multiple languages and its detrimental effects on general education levels of the Indian community was noted by Manilal Doctor in his deposition to the Royal Commission of 1909. He argued for English as the main language of learning at secondary level, and that second language had be optional between French or an Indian language.<sup>273</sup>

## 2.1 SCHOOLS IN INDIAN LANGUAGES

On Phayre’s insistence, the Education Committee finally assented to open the schools in immigrants’ languages on an experimental basis. To start with, three schools were opened in the Grand Port area under the supervision of Reverend Wright, which were later increased to five. These schools were in *Beau Vallon* (Hindi), *Plaisance* (Hindi), *St. Hubert* (Hindi), *Mare Chicose* (Hindi, Tamil and Marathi) and *Riche en Eau* (Hindi). Phayre’s ardent preference for vernacular schools over the Government schools led to consistent incongruity between the Governor (Phayre) and the Council of Government which was dominated by the representatives of the planters’ interests. Therefore, when Phayre left Mauritius, the fate of vernacular schools tumbled. New Governor, George Bowen, appointed an Education Committee to examine the working and efficacy of the vernacular schools. The Committee found the working of these schools highly satisfactory and well organised and creditable proficiency among the students, yet it recommended for the closure of these experimental schools. The main contention of the Committee for the discontinuation of these schools was related to the medium of instruction. The Committee opined that vernacular learning would be of no use to the immigrants, and that English education would be better for them. Further, the Committee found the expenditure on importing teachers from India uncalled for.<sup>274</sup> Upon the recommendations of this Committee, Governor Bowen decided to change the nature of these schools. Some were relocated, English was included as the medium of instruction, and these were rechristened as Anglo-Vernacular Schools after their administrative control was handed over to the School Department. At first glance, this emphasis on English appeared to be very progressive, since inculcate progressive values in the children of immigrants’, but the essential motivation of the administrative authorities for the education of immigrants’ children remained the same to make them capable of calculating their wages. This attitude exemplifies the discriminatory attitude of the colonial administrators who wanted the Indian immigrants to be labourers forever. The Protector for example, noted in his Report for 1881, ‘all that need to be taught is to be able to read and write and to master thoroughly the principles of addition and subtraction in order that they may be able to calculate their wages due to them and may be able to jot up their accounts’.<sup>275</sup>

## 3. DEVELOPMENTS AFTER ROYAL COMMISSION 1875

Considering the apprehensions of the Indian community, Colonial authorities in Mauritius were very careful about education being provided and propagated by the Church. Phayre ignored pressure from the missionaries to promote Church education so the children of Indian community could be induced to convert to Christianity, and his observations on ‘secular instruction’ were very

progressive and very much ahead of his times, and they remain an illustration of the State should not indulge in promoting religious education,

*“The pupils will for the most part, be children of Hindus or Mohamedans. It is not the duty of Government to provide for the conversion of these people. It would be wrong to do so without the consent of their parents or guardians; and a Government cannot, in my opinion, ever be sure of the voluntary consent of hundreds or thousands to the instruction of their children in a religion other than their own. The noble work of instructing these children in the truths of Christianity, may probably be left to the clergy of the Churches in the Colony, to be accomplished elsewhere than in school.”<sup>276</sup>*

This might have some disadvantages for the spread of education among the Indian community if we compare it with similar experiences of spread of education in India, particularly in the tribal regions, but in overall terms, it should be regretted because it saved the immigrant from a several essentials of their identity which were very critical for their surviving negotiations in an alien land and social-cultural setting, religion being one of them.

In 1883, a committee was set up under the Protector of Immigrants which recommended the creation of new primary schools under Government control, converting the Anglo-Vernacular schools into Second Grade schools and English as medium of instruction. Being the Protector of Immigrants, Trotter had first-hand experience of the appalling economic conditions of Indian immigrants and therefore, he made the most crucial recommendation of this committee - free education for the children of immigrants - for the first time in the history of education which had far-reaching consequences in the development of Education. Another set of important proposals were put forward by the Committee on Education in 1887. Taking a radical departure from the existing discourse, this Committee recommended the prohibition of employment of children between the ages of 7 and 12 until they had attended the 4<sup>th</sup> standard education. Another recommendation was making the education free for children upto age 12 years.<sup>277</sup> However, both these proposals, which would have possibly transformed the situation of education among the Indian community, were not implemented for practical reasons - the value of children's' work for their families and financial burden on the state.

The next major official development in the education of immigrants' children took place in 1891 when half-time schools were proposed. These schools were proposed to improve the crucial earning potential of the young children for their families. These schools would hold two sessions of three hours each, in the morning and afternoon; so that the value of children's contribution in the family income would not entirely lost. Children who worked in the morning would attend afternoon session, and those who worked in the evening, would attend the morning session. In the curriculum of these schools, children had the option to substitute English or French for one vernacular language, and the teachers in these schools were required to speak vernacular languages.<sup>278</sup> These schools were to be included under the 'grant-in-aid' schools and receive funds from the Government.

These provisions were reiterated again in the 1902 Code of Education. At long last, a tentatively organised and most importantly free education system was brought into being by 1910. Protector of Immigrants, J. F. Trotter, spoke before the Sanderson Committee stating that 'free but not compulsory education should be given to all, and there ought to be a school near every estate.' However he also admitted the limited reach of the education, that it was accessed only by the better class of the Indians.<sup>279</sup>

By 1880, there were 42 Government schools and 54 Grant-in-Aid schools in Mauritius, which increased to 47 and 57 schools in 1882,<sup>280</sup> and this rising trend in the number of schools continued thereafter. Yet the number of educated immigrants continued to remain at a low level. The situation did not show much improvement even till the end of first decade of 20<sup>th</sup> century.

The Sanderson Committee, in its report, made similar observations underlining the poor state of education among the children of Indian community in 1910. The Sanderson Committee observed in its report that only about 7000 children of Indian parents were in the schools when the number of Indian children of school age was between 50,000 to 60,000. The solution for the problem, according to the Committee, was in starting schools on the estates, which was not being implemented due to the financial pressure.<sup>281</sup>

In a memorial<sup>282</sup> submitted to the Royal Commission of 1909, A. De Boucherville made the following observation on behalf of 'Action Libérale' committee, which reveals the deplorable state of education among the Indian diaspora:

*"In fact the bulk of Indo-Mauritian population do not attend any school. They are not allowed, to idle away their time. They are educated by labour, either being employed in field work - each estate having a numerous young 'chokras' (boys) - or made to assist their parents in their various pursuits and trades; or again, trained as domestic servants or cooks. These remarks apply exclusively to boys, as the girls stay at home, and married at an early age."*<sup>283</sup>

This memorial was also very critical of the existing educational system which made people suffer because 'education consists in cramming of a purely literary knowledge, instead of preparing skilled workmen, artisans, and agriculturists':

*"On the whole, there is an opening but for few belonging to the upper working or to the middle class, and the mass of the boys of the lowest classes are not prepared to earn their daily bread, and to become useful members of society. They leave school with a smattering of English, an imperfect knowledge of French, and the first notions of arithmetic; and however poor is the acquisition, it is sufficient to make them believe that it would be *infra dignitatem* to make use of a hoe or a tool. Moreover, their physical strength has not been developed, and the lighter manual work would be hard to them."*<sup>284</sup>

The following table of the figures of Indian children attending schools as per Census reports of 1901 and 1911, also corroborates the above observation regarding the low educational levels among the Indian diaspora in a very persuasive manner:

Table 2: Number of Children Attending Schools in 1901 and 1911

Schools/Population	1901(259086)*	1911(257697)*			
	Male	Female	Male	Female	
Government	European, White, Mixed and Coloured	3929	2560	2356	1652
	Indian	2773	595	2289	357
Aided	European, White, Mixed and Coloured	2226	1944	2162	1968
	Indian	1257	382	1376	410
Private	European, White, Mixed and Coloured	737	809	498	663
	Indian	233	92	278	129
Royal College	European, White, Mixed and Coloured	389	-	279	-
	Indian	19	-	38	-
At Home	European, White, Mixed and Coloured	68	105	76	147
	Indian	33	09	22	22

\* The figures within brackets is the total Indian population in the respective year.

^ for 1911 another category of 'not specified' schools had been listed and 730 ( 449M+281F) children from the General population and 498 (420M+78F) children from immigrant community were attending these schools.

#### 4. REASONS FOR APATHY TOWARDS EDUCATION AMONG THE INDIAN IMMIGRANTS

The demand for education from the Indian Diaspora did not come until the turn of the century. As a matter of fact, the Indian immigrants opposed the educational initiatives for their children till quite late, and this has been ascribed by the colonial authorities as well as by many scholars as the factor responsible for the restricted growth of education among the Indian Diaspora, despite the serious efforts made by the administrators. We have already examined the validity of the colonial claims for promoting education among the immigrant children. Therefore in this section we shall discuss only the possible reasons behind the immigrants' reluctance to send their children to the schools. Primary education was dominated by the Christian missionaries, and the curriculum for the children had obvious focus on the religious values of Christianity, which made it suspect in the eyes of the Indian immigrants. They feared that their children would be proselytised to convert into Christianity in these schools, and this apprehension prevented many of them in sending their children to schools.

The other major obstacle was the medium of instruction, which was a major issue of contention among the administrators as well. Barring a few years under Phayre's term, the medium of instruction remained predominantly Creole and English till the late 1880s and children had to learn multiple languages. The very first lessons in an alien language created a widespread lack of interest among the children as well as in their parents who could not visualise the 'far-reaching' benefits of English and French education as pronounced by the administrators. The completely alien medium of instruction further dissuaded the already apathetic diasporic community for whom the knowledge permeating through an alien medium was regarded as offensive to their value system, and which would make their children misfits in the community.

The Memorandum submitted by the Action Libérale Committee has underlined probably the most pragmatic reason behind the low attendance, and the reluctance from Indian parents in sending their children to schools. This Memorandum is very significant in terms of stressing the concerns of the immigrant population and the limitations of the existing educational system in addressing those concerns, which resulted in lower attendance at school. Since the majority of the immigrant population was from the labouring classes without much resources at their disposal, their expectations were quite practical - having education should help in raising their income and finding alternative employment. However since the avenues were very limited, and they were not being trained in vocational skills, they were not very forthcoming about sending their children to schools. They preferred to have their children do the odd jobs on the plantations and add to the family income.<sup>285</sup>

Similar concerns regarding education leading to unemployment were expressed by the Protector J.F. Trotter in his submission before the Royal Commission of 1909. He even found it would eventually lead to disorder and the degeneration of the people. Therefore, he recommended reducing the expenditure on education, and rather the creation of employment opportunities for the people already educated, instead of educating more.<sup>286</sup>

These views of Trotter were shared by Manilal Doctor who also conceded to the fact that with some education, the youths would find it degrading to do manual work and eventually get into bad company and commit crimes.<sup>287</sup> However, this should not lead us to the conclusion that Manilal Doctor was against education for the children immigrant labourers *per se*. Basically his criticism was targeted at the particular kind of education which was provided for the Indians in Mauritius and in the same deposition he demanded for more schools for the children of Indian immigrants closer to the estates or on estates because of difficulties they were facing in traveling long distances (5 or 6 miles) to attend school. He also criticised learning two foreign languages, English and French, and demanded that apart from English which should be the principal language, students should be allowed to choose between French and an Indian language.<sup>288</sup>

Further, in Mauritius, education was always fee-paying till the 1880s, which worked as another very crucial deterrent to the spread of education. The colonial administrators always opined that education should always be paid for by the beneficiaries because only then would its importance be realised. Instead of furthering its importance, the system of paying for education actually made it a premium service which became unattainable for the Indentured labourers who were

living in extreme hardship and for whom it was very difficult to spare resources for the education of their children.

#### 4.1 Economic Potential of the Children and Lack of Education

The other important economic factor, but which had been propagated the most in the colonial authorities' blame game, for the absence of children of Diaspora was their productivity potential for an economically distressed community. From a very early age, the children of indentured labourers began to lend a helping hand to their families in plantation work by taking up work that was not so physically demanding. The work of children on the plantations, which was encouraged by the planters as well because it provided them relatively cheap labour, contributed significantly to the incomes of immigrant families and reduced the financial strain. Colonial authorities and planters were also responsible for institutionalising child labour, and therefore deprive children of educational opportunities. Education was not made compulsory and in fact, child labour was never institutionalised and approved in the labour regime. Children who were over 9 years of age were allowed to work and were paid 5 s wages and after four years of work. At the age of 13 only, their wages were increased to 8 s, which was the rate of wages for an adult of 18 years- above.<sup>289</sup> This tempted parent to engage their children at a much early age, ever before reaching the age of 18 years. Also the labourers above the 12 years were provided full rations. This was well-defined institutionalisation and a blatant approval of child labour which deprived children of the opportunities to get education.

But this logic was at work only till the 1870s, and in the post - 1870 phase when the Indian immigrants gradually amassed modest amount of wealth, they made every possible effort to secure the best possible education for their children. In fact, the lackadaisical attitude of the colonial authorities who never made education compulsory in a clear manner, the insensitive response and refusal of support from the planters and the imposition of an alien medium of instruction deterred the spread of education more than the economic pressure of the immigrant community.

### 5. CHANGING ATTITUDES, DEMAND FOR EDUCATION

With the changing economic fortunes of the Indian labour diaspora, their attitude towards the education of their children also began to change. Despite acquiring considerable economic resources, they still felt handicapped because of their ignorance and they gradually focused on the education of their children, which they were now in a position to pay for. Indian children were educated in the traditional knowledge through *Baithakas* and *Madrasas*. In fact, *Baithakas* contributed very significantly not only to inculcating the initial education in the children but were also vital in the emergence of community consciousness among the immigrants. The first demand from the Indian immigrants for their participation in education, as traced by C. Kalla, came from the Muslim community towards the end of 1880s when a petition signed by more than 7,000 members of the Indian community was submitted to the Governor.<sup>290</sup> This sectarian classification of this petition by Kalla was falling in line with the distorted explanation offered by the colonial administrators to reject the petition, and it does not carry much weight as Kalla himself mentions that the petition was signed by members of diasporic community across the religious affiliations. The possible lead was taken by a group of Muslim merchants who were emerging as economically influential class among the Diaspora. At the turn of the century, the attitude of the Indian immigrants witnessed a gradual positive change in favour of educating their children, as Governor Jerningham reported to the Secretary of State, 'The half-time schools are rapidly becoming full time second grade schools, a proof that Indian parents are anxious to give to their children the full benefit of a whole day's education'.<sup>291</sup> This affirmative outcome of this changed attitude soon began to be reflected in the increased representation of Indian community in different 'white collar' vocations like clerks and some even went to European countries after being educated at the prestigious Royal College, as a report observed in 1906:

*"Many of their children are educated in the Government Schools, and have become clerks in Government and mercantile houses. Several have obtained the laureateship at the Royal College, and taken up liberal professions in Europe."*<sup>292</sup>

The diasporic community not only became more attentive towards having the basic education but also turned gradually sought access to more specialised and highly professional education like

Medicine and Law. In a petition to the Governor, members of Indian community tried to focus his attention on the confusion created from the discrepancies in the compatibility of Secondary Education between the Mauritian and Indian Education System and demanded special facilities for the diasporic Indians for their entry into Indian universities, especially in law and medical education.<sup>293</sup>

## 6. COMPARISONS WITH GENERAL POPULATION IN MAURITIUS

On the basis of the majority presence of the Indian diaspora in professional services, particularly civil services which require certain level of formal education, there has been a general observation (at least in the scholarly world outside Mauritius, and if people in Mauritius do not perceive it that way, it may be corrected) that the Indian community had been privileged in the access to education and had achieved high levels of education. However, if we look carefully at the empirical evidence available, the outcome is just the contrary, at least till 1930s. All the reports, Census returns and other sources of information point out, without any ambiguity, that the proportion of education was much higher in the other segments of population listed as General population (unfortunately it is a very broad category grouping together all the non-Indian people of the island and resulting in room for speculation about the proportionate access of education to different communities like descendants of slaves and the European population) compared to the Indian community in Mauritius.

According to Muir Mackenzie, in his Report presented in 1893, for the non-Indian children between the age of 5 to 15 years, out of the total 25,724, those children who attended schools were 13,400 or 52% of the total numbers. For the Indian population, the total number of children was 58,645 out of which only 3,700 were attending schools amounting for less than 7% of the total children of school-going age.<sup>294</sup> The following table compiled from the Census returns illustrate this trend in no uncertain terms:

Table 3: Number of School going Children 1901, 1911, 1931

<i>Year</i>	<i>Community</i>	<i>Indian including Indo-Mauritian and Other Indians (Female)</i>	<i>General Population</i>
1901		5,393	12,767
1911		5,420	10,531
1931*		14,793	14,194 (Gen Pop) 873 (Chinese)

Source: Census Reports 1901, 1911, 1931

\* From the 1931 Census, the Chinese Community was enumerated separately

In proportional terms, the figures were even more disquieting. According to the 1911 Census, the total number of children between 5 to 19 years was 89,544 among the Indian community, while only 5,420 or 6% children were attending. For 1931, the total number of school-going children from Indian community might have surpassed the total number of children from the General Population, the proportion remains much less. For the General Population, the proportion of school-going children was 26% and for the Indian population, it was still around 11% of the total children of the school-going age.<sup>295</sup>

Another important marker to show lower levels of education among the Indian community was their ability to read and write off. However this should be analysed with certain caution because it counted the ability to read and write English and French. In 1911 returns, 41.9% of the general population was listed as being able to read and write while only 1.7% of the Indian population was able to read and write. In 1931 returns, 40% male and 36% female from general population were able to read and write while only 5% for Indian male and 1% of Indian female had the ability to read and write.<sup>296</sup>

## 7. COMPARISONS WITH OTHER INDENTURED DESTINATIONS

While mentioning the development of education among the children of Indentured labourers in Mauritius, it may be worth bringing in some figures from other colonies which were importing the indentured labourers from India in order to bring in the comparative perspectives which will help to underline the general administrative apathy and low levels of education among the children of Indian immigrants in Mauritius. Surgeon Major Comin reported that in Trinidad about 19% of the total children were going to the school and in Demerara it was 20% of the total number of children among the immigrant community. For the Mauritius, as reported by Muir Mackenzie in 1893, only about 7% were going to school.<sup>297</sup>

An almost similar story appears in an official report presented to the Government of India in 1915. James McNeill and Chiman Lal made a detailed enquiry about the conditions of Indian immigrants in Trinidad, British Guiana, Jamaica, Fiji and Surinam.<sup>298</sup> For Trinidad there were schools within one to miles away from every estate.<sup>299</sup> In British Guiana, schools were very close to estates and in fact, the majority of estates had schools on site. Of the total children of school-going age about  $\frac{1}{3}$  were attending schools.<sup>300</sup> For Jamaica, also, about more than  $\frac{1}{3}$  of children among the Indian community were going to school.<sup>301</sup> The level of education was remarkably high among the Indian immigrant population in the Dutch colony of Surinam where more than  $\frac{1}{2}$  of the total children of school-going age were attending schools.<sup>302</sup> Only for Fiji did they report that education among the children of Indians was not satisfactory, and that few were attending schools. According to this report, the primary reason for such higher levels of education among the children of Indian population in these colonies were primarily the encouragement of the colonial governments and the estate owners.

Now let us look at the figures for school-going children among the Indian community in Mauritius. According to the Annual Report of the colony for year 1908, only 7,000 children of Indian parents were going to school when the total number of children of school going age was between 50,000 to 60,000 which means that only about 12-14% children were attending schools even at the beginning of 20<sup>th</sup> century.<sup>303</sup> In the case of Mauritius, schools were not very close to the estates, often five six miles away,<sup>304</sup> which made it very difficult for the children to walk such long distances (there was no other means of transport available to that class at that time) just to attend school. Moreover, there was general disapproval among the planters towards the education of the children of labouring population, since it would lead to their exposure to other vocations and would make it difficult to obtain labour for the plantation work.<sup>305</sup>

## 8. CLASS ANALYSIS OF THE ACCESS TO EDUCATION IN THE INDIAN COMMUNITY

It is worth exploring who the children were who had the access to education and those who were making it to the elite educational institutions like Royal College and, by the turn of 20<sup>th</sup> century, even to the overseas destinations. Owing to the limitations of time and resources, we do not have much empirical evidence and would just make some observations on this based on two markers which indicate, and not thoroughly substantiate, towards a trend of the class belonging of these children and young students. Most of the reports underline a class privilege in access to education. J. F. Trotter, Protector of Immigrants, emphasised to the Sanderson Committee that only the better class of Indians liked to educate their children.<sup>306</sup> Manilal Doctor, in his deposition to the Royal Commission, argued the fact that education was beyond the reach of poor parents, even if there were scholarships. All the scholarships for Higher Education were awarded on the basis of qualifying examinations which needed extra learning; therefore, only the children of prosperous Indians would qualify for these scholarships, as their parents could afford private tuition for their children; and even if a poor parent wants to send his child to Higher Education establishments, it is most unlikely that the child would win a scholarship for that.<sup>307</sup>

Provisions for child employment also had its detrimental impact on the access of education for the children of poor parents. For those parents, sending their children to schools was basically the loss of opportunity and resources. Since there were not many opportunities available beyond the plantation sector and the education system was not linked with vocational training for other jobs, even those who benefited from education were not finding employment.

# THE END OF THE INDENTURED LABOUR SYSTEM IN MAURITIUS

The question has often been asked: When did indentured immigration officially come to an end? This question can be answered in two ways: When did indenture come to an end legally? When did Indian labour immigration into Mauritius really end? The reason is that many labourers continued to arrive, even though the system of indenture had officially ended and these new non-indentured endured the same hardships as the indentured. Just as employers in the 1830s found it hard to adjust to 'free' indentured labourers as opposed to having slaves, they found it equally hard to distinguish between what was a 'free Indian' and an Indian who had come under the 'indentured' system. A life history of one family is also provided here as an example, but there are many others who also deserve to be known.

## THE ROYAL COMMISSION OF 1909 AND THE SANDERSON PARLIAMENTARY COMMITTEE

In 1909, the Council of Government of Mauritius requested for a Royal Commission of Inquiry in order to secure a loan for the revival of the local economy. The Royal Commissioners discovered that there were still widespread abuses in the sugar industry such as the double cut system, the non-payment of wages of the indentured workers and mistreatment.

A careful reading of the report of Commissioner Swettenham and his fellow Commissioners to the Colonial Office shows that they felt that the importation of indentured immigrants to Mauritius from India should be permanently abolished. In 1910, as a direct result of the Commission's findings, the Earl of Crewe, the then Secretary of State for the Colonies, appointed a Special Committee consisting of members of the British Parliament, under the chairmanship of Lord Sanderson.

The Committee investigated the social and economic conditions of indentured workers who were sent from British India to work in the various overseas European colonies. During the course of the same year, the Sanderson Committee Report was published and it recommended that the exportation of indentured labour to British Mauritius cease. It partially based its recommendations upon the fact that between 1900 and 1909, there was a gradual decline in the number of new indentured immigrants who were being brought to Mauritius.

## THE LAST INDENTURED WORKERS

The *Mauritius Almanac of 1913* provides important statistics on the last decades of the indentured labour system in the colony. Between 1906 and 1910, more than 1,700 indentured labourers arrived in Mauritius, while more than 3,400 of them left. There were thus twice as many indentured immigrants leaving rather than arriving. In addition, during the 1910s, thousands of former Indian sugarcane workers left Mauritius for India or for other sugar colonies such as Natal, Guyana and Fiji.

Between 1923 and 1924, around 1,395 labourers landed in Port Louis harbour and in May 1924, the last batch of indentured workers set foot on Mauritian soil. Most of these labourers came from the United Provinces and they had already worked in other British territories such as British Guyana, Trinidad and Natal in South Africa. By December 1924, more than half of these Indian workers were not satisfied with their working conditions and opted to return to India.

## MAHARAJ SINGH'S REPORT

In January 1925, Kunwar Maharaj Singh was sent by the British Government of India to Mauritius. As Hugh Tinker remarked, it was the first time an Indian official had been sent to study other Indians: '*At last an Indian official of standing had been deputed to examine the situation of overseas Indians*'. Maharaj Singh's objective was to investigate the social and economic conditions

of the Indian immigrants settled in Mauritius. The key question which he needed to answer was: Whether the colony still needed to import additional Indian labourers for the local sugar industry?

On 27<sup>th</sup> February 1925, Maharaj Singh submitted his report to the British Government of India. He stated that the Indian labourers and their descendants had achieved a lot in terms of social and economic progress and the indenture system should be terminated. A few weeks later, the British Colonial Authorities in India accepted his recommendation and indentured workers were no longer sent to Mauritius.

## TABLE OF CONTENTS

EXECUTIVE SUMMARY.....	287
Chapter 1 THE INTERNATIONAL CONTEXT .....	289
1.1 Introduction.....	289
1.2 Emergence of European Colonialism.....	289
1.3 The Dutch in Mauritius.....	290
1.4 French Colonialism .....	291
1.5 British Colonialism.....	291
1.6 Concluding Remarks .....	292
Chapter 2: THE FRENCH COLONIAL PERIOD.....	294
2.1 <i>The Economic evolution of Ile de France</i> .....	294
2.1.1 The First Years 1721 - 1735 .....	294
2.1.2 Mahé de Labourdonnais and after .....	294
2.1.3 The Business and Social Environment at Ile de France and the Lure of Easy Money. ....	296
2.1.4 The Need for Capital.....	297
2.1.5 The British Blockade and the Decline and Fall of the Ile de France .....	297
2.2 <i>The Emergence of the Coloured Population</i> .....	298
2.3 <i>Labour Systems</i> .....	298
2.3.1 Slave Labour .....	298
2.3.2 Indentured Labour .....	299
2.3.3 Other Forms of Labour .....	299
2.4 <i>Concluding Remarks</i> .....	300
Chapter 3 BRITISH COLONIAL PERIOD AND SLAVERY (1810 - 1839).....	301
3.1 <i>Introduction</i> .....	301
3.2 <i>The Economics of Slavery in the period 1810-1839</i> .....	301
3.2.1 Emergence of a monocrop economy - the Sugar Industry in 1810 - 1839.....	301
3.2.2 Value of Slave Labour (1823-1835) .....	303
3.2.2.2 Methodological Framework.....	304
3.2.2.3 Data Set and Data Representativeness .....	305
3.2.2.4 Data Analysis.....	306
3.2.2.6 Findings.....	310
3.3 <i>Labour Systems</i> .....	314
3.3.1 Introduction .....	314
3.3.2 Labour of the enslaved peoples .....	314
3.3.3 Convict Labour .....	315
3.3.4 Indentured labour .....	316
3.3.5 The Labour of the Recaptives or the liberated slaves .....	317
3.4 <i>Banking, Finance and the Economy</i> .....	317
3.4.1 The Economy in 1810-1839: An Overview.....	317
3.4.2 Bank of Mauritius - 1813 .....	320
3.4.3 Petition for a new bank: 1826 .....	321
3.4.4 The Mauritius Bank - 1832.....	321
3.4.5 The Mauritius Commercial Bank - 1838 .....	322
3.5 <i>The Economics and Politics of Abolition of slavery</i> .....	323
3.5.1 Introduction .....	323
3.5.2 The Act for the Abolition of Slavery .....	323
3.5.3 The Economics of Abolition .....	324
3.6 <i>The aftermath of emancipation and the arrival of indentured labour</i> .....	325
3.6.1 Why did the enslaved people leave the plantations on Emancipation?.....	325
3.6.2 The new economic system and indentured labour. ....	327
3.7 <i>Concluding Remarks</i> .....	327
Chapter 4 THE BRITISH COLONIAL PERIOD AND INDENTURED LABOUR SYSTEM .....	328
4.1 <i>The Organisation and Structure of the Mauritian Society and the Advent of Sugar</i> .....	328

4.1.1	The early form of organisation of sugar property .....	328
4.1.2	The emergence of the sugar oligarchy .....	328
4.1.3	Slavery and Maroonage .....	329
4.1.4	The Rise and Fall of the Former Apprentices .....	331
4.2	<i>Indian Indentured Immigration</i> .....	332
4.2.1	The Early Influx of Indian Indentured Immigrants .....	332
4.2.2	The suspension of Indian Immigration. The Government subsidisation of immigration .....	333
4.2.3	The role of the Colonial State.....	334

## EXECUTIVE SUMMARY

This project on the Economics of Colonialism, Slavery, Indenture and their consequences on Contemporary Mauritius covers the salient features of the complementary dual processes of economic development and under development of Mauritius from the periods of colonisation of the three European Colonial Powers, Holland, France and Britain, until today. Particular care was taken to be able to implement the mandate and, in particular the objects, of the Truth and Justice Commission as defined in Section 3(1) of the Act. A political economy approach was adopted so that due consideration may be given to the contribution of those who matter most: the enslaved peoples, indentured labour and their descendants.

Slavery and the indentured labour system in Mauritius were developed and sustained by Colonial Powers: the Dutch, the French and the British. Profit brought the first colonisers to Mauritius and has dominated life ever since.<sup>1</sup> There has been a striking continuity underlying the process of colonisation by each of the colonial powers: on the one hand, the development of specific economic and social structures and, on the other hand, economic exploitation and social oppression and exclusion. A rigid class and racial hierarchy was established.

A turning point was reached in the 1830s with the legal abolition of slavery and the importation of indentured labour from British India. Not only the trauma of slavery, but also the harsh conditions of apprenticeship and of abolition contributed to the leaving of sugar estates by ex-enslaved people. They were paid very low wages based on those of indentured labour and they lost the housing facilities and the land which they had been cultivating for decades. They could not reconcile their newly-acquired 'legal' freedom with their loss of basic necessities like land and housing. They were excluded from the new Capitalist System, and most of them earned a meagre living by fishing with primitive equipment and by working as stevedores, drivers and artisans. Many were somewhat permanently unemployed, forming a lumpen proletariat living on the margin of the plantation (sugar) economy.<sup>2</sup>

Moreover, the subservience of the economy to the British Colonial Empire with (amongst others) its free trade policy and adoption of the cheap labour policy and the frequent economic depressions in the international economy and in Mauritius led to a growing lumpenproletariat, together with unemployed ex-indentured labourers. Under such circumstances, other sectors of the economy would progressively come under the fold of very cheap labour, excluding those used to working for somewhat higher wages. Unemployment and poverty were very much prevalent by the last third of the nineteenth century and in the major part of the twentieth century.

The plantocracy kept on pressing for the importation of indentured labour to sustain its cheap labour policy, creating further unemployment and poverty. And the Colonial State caused further impoverishment of the labouring classes and the poor by levying heavy taxes on them. And the Royal Commission of Enquiry of 1909 essentially recommended measures in favour of the plantocracy, with hardly any for the labouring classes and the poor.

By then, the internal dynamics of the economic system, through the need to modernise the Sugar Industry to face international competition, created the conditions for the parcellisation of land. In the process, those excluded from the plantation economy did not, and could hardly, become buyers. On the other hand, those mainly from the ex-indentured labourers, the job contractors, the *sirdars*, the traders, the middlemen would become small landowners. A new social class of small and medium planters was born and a new business community and elite was in the making. The emergence of this new social class did not fundamentally have a major impact on the prevailing large lumpenproletariat and generally on the poor. The overall social structure would prevail, except with this new transformation: the plantocracy and the Colonial State would continue to be the supreme powers.

Another major turning point in the historical development of Mauritius was the unparalleled resistance of the labouring classes (especially in the 1930s and 1940s) to the oppressive and

exploitative system: the strikes and marches of the labourers and small planters of 1937, the strike of the dockers and labourers of 1938 and the strikes and marches of the labourers in 1943. Preceding these events, the Mauritius Labour Party was founded in 1936 by Dr. Maurice Curé, assisted soon afterwards by Emmanuel Anquetil. The Colonial State would react with a mix of approaches: repression, divide and rule tactics and accommodation.

On the societal level, a new bourgeoisie/elite emerged. Experts were sent by the British Imperial Government to study the economic and social state of affairs and to make recommendations: Meade, Titmuss and Balogh. The Colonial Power in the end controlled the situation and created conditions, with the help of the elite and the business community, to grant Independence to Mauritius. But, the perennial problems of unemployment and poverty were still prevalent. Social exclusion had become a permanent feature of Mauritius; economic power was still concentrated in the hands of the sugar oligarchy, whilst the new bourgeoisie stepped to the shoes of the Colonial Power and made its way slowly into the world of business. An entrenched economic and social system developed and nurtured over more than two centuries, prevailed.

During the post-Independence period, major changes took place: economic diversification, development of educational facilities like free secondary education and the setting up of public universities, expansion and improvement of the public health system as well as the private one, development of wide-ranging social security system. Moreover, fundamental changes to the economic and social structure did not materialise. Whilst economic power remains concentrated in a small minority, including the new and the old bourgeoisie, political power is controlled by the new bourgeoisie.

Depending on the prevalence of economic boom or depression, the labouring classes face alternate conditions of relative well-being or very hard times. Unemployment and poverty, admittedly on smaller scale than in the 1960s, are prevalent, so much so that social exclusion has not been eradicated. On the contrary, with ultra liberal economic policies and the international economic crisis, inequality is on the increase; factory closures are more frequent and poverty and social exclusion are still entrenched in Mauritian society.

Colonialism, together with slavery and indentured labour, has had consequences of a systemic nature. The policies of the post-Independence era have, only to a limited extent, succeeded in mitigating these consequences. But still, cheap labour policy has been adhered to; in new sectors, like BPO, and in new privatised services, like cleaning, working conditions are awful and, in the latter case, very low wages (about Rs. 3500) prevail. No doubt, improvements have been made in the economic and social fields. But the old capitalist system, reformed to a certain extent, still prevails with its obvious limitations like acute material disparity between the social classes, social exclusion, corruption and poverty.

## CHAPTER 1 THE INTERNATIONAL CONTEXT

### 1.1 Introduction

According to the latest records, Mauritius did not have any indigenous population. Mauritius, as an entity, was created by European Colonial Powers in their quest for trade with, and for investment in, Asia. However, prior to their arrival and presence, there was much trade in the Indian Ocean involving the Arabs, the Asians (Indian, Malays etc.). To our knowledge, Mauritius did not acquire any major importance for the trading countries involved.

It was when the route around the Cape of Good Hope to the East Coast of Africa and to Asia was opened up for Europe that the somewhat isolated and uninhabited islands, like Mauritius, in the Indian Ocean became important as they were initially used as transit places by the ships from Europe trading with Asia.

The need for trade is the emerging industrial bourgeoisie is the emerging industrial bourgeoisie between Europe and Asia, amongst others, was consolidated with the development of the Industrial Revolution, and the emergence of Capitalism in Europe. In fact, International Trade expanded exponentially.

### 1.2 Emergence of European Colonialism

In the 16<sup>th</sup> and 17<sup>th</sup> centuries, major transformations took place in International Trade, with geographical discoveries by European nations, initially led by Holland, Portugal and Spain. Further changes were taking place in various countries in the mode of agricultural production leading to the Agrarian Revolution in Britain. The latter was, in turn, followed by the Industrial Revolution. All these processes contributed to the emergence of Capitalism, a new economic system born from traditional feudal agricultural societies in Europe.

<sup>3</sup>On the one hand, markets for industrial produce from European countries were expanding and, on the other hand, plantation economic systems and plantation societies were being developed to produce goods for European countries: tobacco and coffee for consumption, cotton and indigo for the development of the textile industry, and sugar for consumption on a massive scale both domestically and industrially.

The economies of the new colonies in America, in the West Indies and in Asia were emphatically given an export orientation to satisfy the demand and the needs of European countries. To achieve this, the prevailing economic system in the colonies was sometimes destroyed and made subservient to the needs of the Colonial Powers; the cost of production was minimized with coerced labour and, later, with abundant, cheap labour, amongst other things. Ruthless oppression of the indigenous populations, and different forms of indentured white labour were initially used, leading to the near extermination of the local people, as in the case of the Amerindians. Ultimately, the enslavement of mainly African peoples and, to a lesser extent, of the Asian peoples, would turn out to be the means to ensure a regular source of abundant coerced labour and later of cheap contractual labour.

Commercial outlets and commercial supremacy led to industrial supremacy and *vice versa*. The various European Colonial Powers then engaged in an intense competition for markets for their industrial produce, for labour and land for their export-oriented industries in the colonies, and for the control of sea routes to reach their destinations. This intense intercolonial rivalry led to centuries of colonial wars among the main Colonial Powers: Spain, Portugal, Holland, Britain and France.

Whilst the initial major thrust of colonial expansion took place in America and in the Caribbean Islands in the 16<sup>th</sup> and 17<sup>th</sup> centuries, by the 18<sup>th</sup> and 19<sup>th</sup> centuries, Asia and the Indian Ocean became of major importance for the Colonial Powers. The somewhat isolated islands of the Indian Ocean acquired strategic importance for them. Mauritius, Réunion Island, the Seychelles, Rodrigues, the Chagos Archipelago, Tromelin, the Comoro Islands, etc. were colonized. On the

other hand, East Africa and Madagascar, together with some Asian Countries, like India and the Malay Peninsula, provided sources of slave labour.

### 1.3 The Dutch in Mauritius

The first settlers in Mauritius were the Dutch during the four periods of the 17<sup>th</sup> century in 1598-1638 and in 1658-64. During the 16<sup>th</sup> and 17<sup>th</sup> centuries, there was intense rivalry between Spain and Portugal on the one hand, and Holland on the other hand, leading to wars between Holland and the other two countries. In particular, Holland was competed with Portugal with respect to trade with Asia, with India, China, Japan, Indonesia, etc. The trade for spices, among other things, was of major importance; by then the intense rivalry among the emerging mercantilist European Powers had already started in the Indian Ocean. The Dutch initially controlled the trade in pepper, cloves and nutmeg and defended the Moluccas Islands against any threatening European power.

Initially, there were small Dutch trading Companies, but after a few years, the Dutch State found that such companies were not very effective. Thus, it took the initiative to ensure that out of these small companies, a strong monopolistic trading company emerged, so as to be able to compete more effectively with the Portuguese in their trade with Asia. In 1602, the Dutch East India Company was thus established, so that the Dutch would control trade with Asia; P.J. Moree, writes: "A strong monopolistic commercial organization was considered to be the most effective weapon against the enemy in Asia, the Portuguese."<sup>4</sup>

The Dutch felt the need for a permanent refreshment station for the Dutch East India Company ships, because of the length of the voyages. Mauritius, with its good harbouring facilities and an abundance of fruit and birds, turned out to be appropriate for the Dutch.

They would set the tone for the way Mauritius would be used thereafter by other European Colonial Powers. Firstly, Mauritius would provide the ships with food, water and with a resting and recuperative place to the sailors and passengers of ships during their long voyages between Holland and Asia.

Secondly, the Dutch would start the process of deforestation by felling ebony trees and shipping them both to the Dutch possessions in Asia, and to Europe. The export orientation given to the 'development' of Mauritius became there and then the underlying thread connecting all Colonial Powers settling and controlling in Mauritius.

To provide supplies to the ships, and given the prevalence of very fertile land, the Dutch started, to some extent, the development of agriculture: rice, fruit trees, vegetables, sugar cane, and indigo. The Dutch also brought in cattle and poultry.

For all the tasks mentioned above, there was a need for hardworking manual workers: woodcutters and labourers in particular. Whilst the Dutch brought some workers with them, they resorted to the slave trade with Madagascar and brought slaves to Mauritius. Additionally, trade with Madagascar in cattle, rice and beans was carried out.

Thus, the Dutch would start a set of historical processes which would dominate the history of Mauritius: the introduction of the sugar cane, the production of a liquor, arrack, from sugar cane, using slaves from Madagascar as labour, developing trade between Madagascar and Mauritius, using Mauritius as a 'key' of the Indian Ocean, in Holland's rivalry with Portugal for trade with Asia, and using Mauritius as a port of call for its ships.

Finally, in spite of itself, Dutch settlement equally set the tone for the emergence of resistance to slavery by the slaves. The slaves marooned and moved into the forests, ready to attack the Dutch settlements, whenever necessary. So much so, that when the Dutch left Mauritius, there were some slaves in the interior: the first Mauritians and the first freedom fighters were born.

#### 1.4 French Colonialism

The international wars in the Americas and the Caribbean Islands and the wars among the European Powers had a bearing on intercolonial rivalry and the wars in the Indian Ocean, the details of which are not dealt here, due to lack of space.

The spice trade with Asia attracted French colonialism to that region; the French wanted to develop trade with Java, and the Malay Peninsula, but the presence of the Dutch prevented them from doing so. Moreover, just like the Dutch, the French needed at least a port of call in the Indian Ocean to allow its ships to reach Asia more easily and to be able to have some control of the corresponding sea routes. They initially settled in Bourbon Island, and later in Mauritius or Ile de France in 1721, not long after the departure of the Dutch. They also tried to settle in Madagascar, in the 17<sup>th</sup> century, but resistance from indigenous people of that country made them leave.

Moreover, by the 18<sup>th</sup> and 19<sup>th</sup> centuries, the French would be the main European power involved in the slave trade in the Western part of the Indian Ocean and in India in order to provide slave labour to the emerging plantation economies of Bourbon and Mauritius.

But, with the weakening of, first the Portuguese, and then the Dutch, the Anglo-French rivalry for colonisation of India and of Asia and for the control of the Indian Ocean and the corresponding sea routes would be the dominating issue of the second half of the 18<sup>th</sup> century and early 19<sup>th</sup> century. Moreover, that rivalry was prevalent in Europe, as well as in the Americas, as reflected in the War of the Austrian Succession (1740-48), the American Revolutionary War (1778-83) and the Napoleonic Wars (1803-15). The latter would lead to the defeat of the French both in India and in the Indian Ocean, with France losing both Bourbon and Mauritius. With the Treaty of Paris of 1814, Bourbon would be handed back to France, whilst the Capitulation Treaty between the French and the British with regard to Mauritius would become effective as from 1810.

By 1815, the 'hegemony' of British Colonialism in the Indian Ocean and in India became a reality and lasted into the 20<sup>th</sup> century.

#### 1.5 British Colonialism

Mauritius was a 'unique' British colony in several ways. To understand the rationale underlying this uniqueness, we shall briefly examine the phases through which British Colonialism went and the particular characteristics of the Anglo-French rivalry, especially in the Indian Ocean.

By the 16<sup>th</sup> century, Britain undertook the colonization of North America. Initially, mercantilist Britain was interested in trade. By the mid 16<sup>th</sup> century, British businessmen were among the first slave traders in the era of colonial slavery. Sir John Hawkins, who was a ship owner and entrepreneur, carried a cargo of enslaved Africans from the West African Coast to be sold in the Spanish Colony of Haiti, known then as Hispaniola. By the early 17<sup>th</sup> century, the trade was enhanced, with the colonisation, first of Newfoundland, then of Virginia, New Britain and the Caribbean Islands etc.

The colonists or new settlers brought with them European indentured labour to work on the plantations or to practise their badly-needed specialized craftsmanship (carpenter, tinsmith, etc.). These workers had a contract of between four and ten years and were paid wages. The driving force of the emerging industrial bourgeoisie in Britain towards colonising North America was the pursuit of profit; Lawrence James wrote: "The pursuit of profit remained the most powerful driving force behind Britain's bid for North American colonies."<sup>5</sup> At that time, the settlers were accompanied by priests who would reassure the colonists that "God intended that the land, usurped by unreasonable people (i.e. the natives), be redeemed by British settlement."<sup>6</sup>

Intercolonial rivalry was rife in the Americas: in particular, Anglo-Spanish and Anglo-French. In the Caribbean Islands, the Spanish colonists were somewhat easily defeated by the relatively new British colonists. Furthermore, Virginia, in North America, would become a major plantation economy/society with the production of tobacco. Prior to a massive tobacco production at that time, tobacco was still a luxury in Europe, but thereafter, smoking became a commonly-accepted habit by the population at large throughout Europe. Britain imported Virginian tobacco on a

massive scale, and with a market for it in Europe, it re-exported much of the tobacco to European countries.

Labour supply was a major issue. The Amerindians could never be roped into the colonists' plan. Indentured white workers and convict labour from Britain, Ireland and Scotland were imported. In North America, very cold winters, on the one hand, and the prevalence of malaria, on the other, made matters worse. In the Caribbean Islands, very quickly, the British business community found out that indentured British labourers were not capable of satisfying the demand for sugar cane cultivation in the tropics. In particular, the planters, driven on by profit as a motive, wanted to maximize their investment in labour and wanted to recoup their costs of the transport of labour as quickly as possible, by making the labourers work very hard. The news of such a state of affairs filtered through to prospective workers back to Britain, so much so that labour shortage became somewhat permanent by the mid 17<sup>th</sup> century. For some time, convict labour from Britain provided short-term relief, but this measure was not sustainable.

Then, the solution to what appeared as the insoluble problem of labour shortage was found: coerced African unpaid slave labour! Gradually, the enslaved African peoples would replace European indentured white labour.

Various Colonial European Powers created colonial plantation economies/ societies producing one or two commodities like sugar, cotton, tobacco, coffee etc., with coerced, unwaged African enslaved people as labour. All those plantation economies were very much labour intensive; thus, millions of African enslaved people to be used as unwaged labour were transported to the Americas and the Caribbean. It was the triumph of the 'most powerful driving force' of colonization, that of the pursuit of profit.

The British plantocracy was enriched; the British Colonial State increased its revenue very significantly through various duties and taxes; the colonies became, in turn, a market for goods manufactured in Britain, thus stimulating the industrial development in Britain.

But thereafter occurred the American War of Independence; there was an alliance between the Americans and the French, while France was defeated in Canada. British Colonialism would adapt to the new situation, as mentioned below. At the same time, by 1776, Adam Smith's book *The Wealth of Nations* was published. Up to a point, it would influence the thinking of the political elite in Britain and that of the British Government, especially with respect to slave labour and free trade.

The defeat of British Colonialism in the American War of Independence created the conditions necessary for a second wave of British Colonialism: Asia, (esp. India and China), Australia and hence, the Indian Ocean and the Cape of Good Hope became the new targets for expansionism, trade and investments. The sea routes to the East acquired major significance and Mauritius, of major strategic importance for the Colonial Powers. Intercolonial rivalry and, in particular, Anglo-French rivalry dominated the struggle for the control of sea routes to India, Asia and Australia. Hence the Anglo-French wars for the control of the Indian Ocean. In fact, intercolonial rivalry took on almost planetary proportions.

The third wave of British Colonialism reflected changes happening in the industrial and financial developments of the European Colonial Powers. Raw materials, labour and land became more and more important, leading to a scramble for Africa.

## 1.6 Concluding Remarks

The development of Capitalism in Britain and in Europe produced an offshoot Colonialism, initially driven by Mercantilism, then by industrial and financial capitalism.

Slave labour and indentured labour are labour systems developed and nurtured by the various European Colonial Powers. Plantation economies and societies would emerge where the economies of the colonies, and, in particular, of colonized islands like Mauritius would be tailor-made to satisfy the sustained pursuit of profit, the accumulation of capital and in the process, satisfy the demands/needs of the commodity markets of the European Colonial Powers.

Any thorough study of slavery, i.e., the system of coerced labour of enslaved peoples, can only be done in the context of the study of Colonialism and its ramifications. The coerced unwaged labour of the enslaved people, with its initial very high death-rate, ensured the 'optimal' minimization of the costs of the production of the planters and various related companies from Europe and, as a consequence, the maximization of profits. Moreover, following the resistance of the enslaved people, the publication of Adam Smith's *Wealth of Nations* in 1776, the defeat of Britain in the American War of Independence, and the interests of the East India Company in India and Asia, slave trade and, later slavery, would be abolished in most of the British Empire, much later, in 1835.

But the plantocracy needed labour and, where necessary, it looked elsewhere for cheap labour. Thus, cheap indentured labour on a massive scale progressively replaced the labour of the enslaved people to secure, if not to perpetuate, the maximisation of profits and capital accumulation, and all the related financial/business interests of the Colonial Powers and, sometimes of new emerging interests from among the colonized peoples.

What should not be overlooked is that the various economic and labour systems were developed to satisfy the needs of emerging classes of people and the States in Europe: initially, a mercantile bourgeoisie, then an industrial and financial bourgeoisie from the Colonial Powers, and, obviously, of the plantocracy in the island-colonies. Thus, Auguste Toussaint wrote:

*"The mercantile bourgeoisie had had its day; at the end of the 18<sup>th</sup> century, it began to be replaced in Britain by a new bourgeoisie, born of the Industrial Revolution."*<sup>7</sup>

Slave labour came from Africa and Asia, especially India and the Malay peninsula. As for indentured labour in the 19<sup>th</sup> century, Britain made good use of the reservoirs of cheap labour in its new colonies/semi-colonies: India and China. Auguste Toussaint would emphatically point out that, following the abolition of slavery:

*"The solution then was to turn to those vast reservoirs of cheap labour, India and China."*<sup>8</sup>

Thus for Mauritius, to understand the slave system and indenture labour system, the role played by French and British Colonialisms is of paramount importance.

## CHAPTER 2: THE FRENCH COLONIAL PERIOD

### 2.1 The Economic evolution of Ile de France

#### 2.1.1 The First Years 1721 - 1735

Ile de France was governed by the French *Compagnie des Indes Orientales* from 1721 to 1767. The first few years were particularly difficult and the French colony hardly took off. The *Compagnie des Indes Orientales* had a monopoly of trade, and this created conditions for fraudulent trade both in goods (especially foodstuffs) and in slaves. In 1725, there were 213 people in Ile de France, including 34 slaves<sup>9</sup>.

Moreover, by 1726, there were land grants: the upper classes (i.e. *l'état major de l'île*) obtained 312 *arpents* known as 'grande concession', whilst soldiers and workers obtained 156<sup>10</sup> known as 'petite concession'. The owners had to pay various taxes to the Government; this level of taxation and scarcity of labour caused many soldiers and workers to leave Ile de France. Whilst Ile de France and Ile Bourbon were governed as one political entity, there was an uneasy relationship between the two. Some *colons* in Ile Bourbon came to Ile de France; agriculture took off in Ile Bourbon, but not quite in Ile de France. There was an obvious need for labour, and slaves were brought from Madagascar. And by 1735, according to Labourdonnais, there was a population of 838, including 648 slaves.<sup>11</sup>

#### 2.1.2 Mahé de Labourdonnais and after

When Mahé de Labourdonnais met the Directors of the French East India Company in 1734, he convinced them of the need to find a safe harbour to break the strenuous long voyages between the Spice Islands (the Moluccas), India and Europe. There was a need for a place where travellers and crews could rest and restore their health, where ships could be refitted and repaired and fresh supplies of food and water could be obtained for the continuation of the journey. In his mind, Ile de France, of which France had claimed possession in September 1715, given its strategic position in the Indian Ocean, was the best location for what he had in mind. It was thus the intention of Mahé de Labourdonnais to develop Ile de France as a port of call, a stop-over and a transit station between Europe and Asia.

In particular, Port Louis was developed as a harbour which, in turn, provided for ship-building and ship repairs. Buildings for the governmental administration, hospitals and infrastructures in relation to water supply were developed. On the economic front, he developed agriculture, including the Sugar Industry, to some extent.

To be able to carry out these policies, Labourdonnais brought in labour, both free skilled labour from India and slaves from Africa, Madagascar and India. Some aspects of conditions of the enslaved people and other section of the labouring class are dealt with in Section 2.3.

The slave population grew steadily in size during the 18<sup>th</sup> century, from 2,533 in 1746, to 15,027 in 1767, to 33,832 in 1787, to 60,646 in 1806, to reach 63,821 by 1810, prior to the British conquest.<sup>12</sup> Their occupations consisted of agricultural labourers, household servants, fishermen, artisans, dock workers and sailors. The enslaved people faced a harsh regime. So much so, that the engineer Charpentier-Cossigny in 1753 wrote that "the company was hiring slaves, then starving them to death".<sup>13</sup> Just like Labourdonnais before him, Charpentier-Cossigny provided some form of apprenticeship to slave labour. According to him, "for every skilled slave in an 'atelier', there were another ten or so manual labourers performing the essential backbreaking tasks of breaking and carrying stones, digging trenches, loading and unloading ships, building roads". This 'vast army' of Government slaves included many women.<sup>14</sup>

On the other hand, most slaves were owned by small-scale owners. And by 1778, it was reported that many owners had effectively 'abandoned' their slaves.<sup>15</sup> With small-scale owners, it was also

easier for the slaves to escape. Whilst many of them managed to earn a living, others were in a state of poverty and destitution.

Moreover, by 1767, the French Crown took control of Ile de France and Ile de Bourdon, after having bought the two islands from a bankrupt *Compagnie des Indes* in 1764 for the sum of 7.6 millions *livres*.<sup>16</sup> Pierre Poivre, as the first 'Intendant', encouraged large scale production of cash crops like cotton, indigo and spices, but his attempt to transform Ile de France into a plantation economy failed.<sup>17</sup>

However, with the new administration, various major changes were carried out, which would create the right conditions for the development of international trade, to a very remarkable extent. By 1769, the *Compagnie des Indes* lost the monopoly of Asian trade and Port Louis was designated as a free port open to all nationals in 1787.<sup>18</sup>

In the 1780s, France was the largest trading power in Europe (and the world).<sup>19</sup> The total value of French long-distance trade with Africa, Asia, America and re-exports to the rest of Europe was equal to £25 million. The total value of British long-distance trade was only £20 million. The growth of French trade from the 1710s had been faster than the growth of British trade. The main support to long-distance trade, the plantation system, was larger and more efficient in the French colonies than in the British ones. Based on Daudin's work, it can be said that the 18<sup>th</sup> century was the golden age of the French ascendancy and prosperity in international trade. An essential ascendancy of long-distance trade and the most profitable aspect of such trade was the slave trade. The purpose here is to situate Labourdonnais' visit to the headquarters of the French East India Company in that wider ascendancy and the search for a convenient location for the establishment of a base for the development of French trade in the Indian Ocean. We must also bear in mind, in that connection, the recurrent rivalry between Britain and France for the control of India, and the need for France to establish a strong foothold in the Indian Ocean in order to consolidate its presence in the subcontinent.

The reference to French long-distance trade in the 18<sup>th</sup> century aims to situate the growing importance of Port Louis as a centre of *entrepôt* trade. The importance of commercial activities and the lack of interest of the Isle de France colonists in agriculture were due to the lure of easy money. According to J. F. Dupon<sup>20</sup>, the growth of speculative transactions thwarted the establishment, at the Ile de France, of relatively permanent estates and plantations. Unlike at Ile Bourbon, this never became a feature of French settlement. There were then substantial incentives for the colonists to engage in commercial transactions. The manipulation of bills of exchange could generate profits of 25% to 35%, compared to yields of 5% to 6% for successful planters.

Besides, at a time when France was often at war with Britain, privateering was a great spur to commercial activities and local merchants derived much profit from their investment in these activities. The heyday of Ile de France in the 18<sup>th</sup> century came with the designation of Port Louis as a free port in 1787. Visitors to Port Louis in those days described the harbour "crowded with ships of numerous nations, the commercial sector lined with shops filled with provisions and merchandise from every quarter and with colonial produce and the adjoining streets plying their trade with a general appearance of abundance and prosperity."<sup>21</sup>

The embryonic state of domestic activities and the absence of domestic infrastructures contrasted with the flurry of trade in Port Louis. Before the British occupation, there was not a single street in Port Louis that was convenient for a carriage and scarcely any for a cart. People travelled on foot or on horses and the upper classes used *palanquins* which were manned by slaves.

In the 18<sup>th</sup> century, Ile de France was an important transit place and *entrepôt* and a convenient stop-over on the long and arduous journey between Europe and Asia. This was reflected in the large variety of goods that were traded here, but also in the crowds of people who thronged the waterfront.

The trading environment between Ile de France and France was such that sailors and adventurers of all sorts, renegades or discharged soldiers, but also merchants and traders thronged the alleys and lanes of Port Louis.

Mauritius was then considered as a Mini-State.<sup>22</sup> A Mini-State has been defined as a State in which the exposure to foreign activities is so important that economic events are largely beyond its control. Goods which are produced tend to be exported; goods which are consumed locally tend to be imported, and the commodities which are both produced and consumed in the country tend to be services. Besides, a significant proportion of the services are used by foreigners in a Mini-State like Mauritius where external activities and services account for a substantial part of economic transactions.

Right from the start, the strategic position and the importance of external trade were determining factors in the settling and development of Mauritius. In many small States, economic activities pertain essentially to foreign trade and the domestic sector is confined to an ancillary or supporting role, providing goods and services to local workers in public services, transport, trade and distribution and maintenance and repairs of infrastructures and equipment. These services would not exist, were it not for the market provided by exports or by workers whose income is derived from exports.

In Mini-States, the domestic sector is thus a mere appendix of export activities, is largely dependent on them and cannot be planned exogenously. This statement gives an indication of the importance of external events-institutional, political and economic and external trade in these states and underlines the extent of their exposure to external shocks on which they have no control. Such is the situation which prevails in these countries which have to adjust and adapt continuously to the exigencies which derive from their small size or insularity and remoteness. This may also help us to form an idea of the difficulties which confronted the French administrators and colonists, when they undertook the task of creating a colony in such a remote location as that of Ile de France in the 18<sup>th</sup> century. Such were also the responsibilities and commitments which Labourdonnais had taken, following his meeting with the Directors of the French East India Company in 1734. After his arrival at Ile de France on the 4<sup>th</sup> June 1735, Labourdonnais lost no time in setting about this task with zeal and determination. Unfortunately, a good deal of his time and the island's resources, scanty as they were at that time, were spent on refuting the accusations levelled against him and on a failed struggle against Britain in India.

Meanwhile, the bankruptcy of the *Compagnie des Indes* aggravated the situation of the Mascareignes and the plight of the inhabitants. It was only after the retrocession to the French Crown in 1767, that order was restored in the administration of the islands, and the engineer Tromelin was commissioned in 1772 to clear Port Louis harbour of several wrecks with which it was cluttered.

Port Louis harbour was the centre of intense maritime activity during the second half of the 18<sup>th</sup> century, after the island was reclaimed by the French Crown and Port Louis had become a free port. The new administrations transformed the place. The town was enlarged and embellished. In the rural districts, agriculture was stimulated. New development works were undertaken. More settlers were brought from France. According to Toussaint, Ile de France underwent a regeneration.

In 1769, 785 ships of all types berthed at Port Louis; there came 176 in 1783, 203 in 1789, 266 in 1791 and 347 in 1803. The number of arrivals declined sharply during the Napoleonic Wars: 177 ships arrived in 1806, 76 in 1809 and 25 only in 1810.<sup>23</sup>

The merchants of Ile de France invested large amounts in equipping vessels and crews for privateering expeditions and generally acquired substantial wealth from these activities, in spite of the high risks involved in such enterprises. Among the merchants, as A. Toussaint wrote, there was "l'attrait du gain et l'argent facile", i.e. the attraction of quick profits and easy money.<sup>24</sup>

### 2.1.3 The Business and Social Environment at Ile de France and the Lure of Easy Money.

Success at first, and then failure, such was the lot of the majority of people who went to the Mascarenes in the 18<sup>th</sup> century in search of wealth. Bar a few exceptions, those who went to India or the Mascarenes did not go there to colonise the country; they went there to get rich and go back as soon as possible.<sup>25</sup> For them, Ile de France was just a transit place and a source of personal enrichment. A frenzy for easy money characterised the trading and business environment.

According to Daudin, the 18<sup>th</sup> century was the “era of international trade in which France had a prominent place”.

The average life expectancy was then barely fifty years, especially in the colonies, which Toussaint has described as a race against time. In that context, trade gives rise rapidly to speculation. Anglo-French rivalry in the Indian Ocean, the lack of appropriate legislation, an abundance of paper money, the absence of banks, all those factors promoted speculation and led to recurrent periods of scarcity, or prosperity.

Although speculation reached its peak during the French Revolution, it was present from the very beginning of colonization. There was much speculation during the last years of the *Compagnie des Indes* and some spectacular bankruptcies under the new administration.

At the beginning of the Revolution, the shortage of specie caused further bankruptcies among traders and ship-owners until the arrival of Decaen. In 1807, the tightening of the British blockade and the prevailing scarcity led to more bankruptcies. The traders were then the ruling class on the island and those with the largest share of the wealth. Under the previous administration there were barely 200,000 *piastres* in circulation, and there is no indication that there was an increase in specie under Decaen. On the other hand, there was a large increase of “paper money (credit notes) to compensate the shortage of metallic currency”.

#### 2.1.4 The Need for Capital

Besides the need for an abundant labour supply, another critical factor was the availability of capital. According to Allen, the foundations of Mauritian domestic capital formation were laid during last third of the 18<sup>th</sup> century, when the island flourished as a commercial *entrepôt* that attracted shipping from as far away as Northern Europe and the United States. According to the same source, the greatest spur to this activity was the island’s status as a base, from which French privateers preyed on British, and allied, shipping during the wars of American Independence, of the French Revolutionary and Napoleonic eras. The total value of the prizes is difficult to ascertain but large sums were involved. One Port Louis merchant house reported that the value of British and allied shipping, lost to locally based privateers between 1778 and mid-1781, totalled 24,000,000 *livres*. Other contemporary estimates put the value of captured Anglo-Indian shipping between 1793 and mid-1804 at £2,500,000; Auguste Toussaint estimated the value of prizes taken between 1803 and 1810 at almost 50,000,000 *francs*. The extent to which any of these monies found their way into the island’s agricultural sector cannot be determined with any precision, but increasing numbers of local merchants and seamen did invest in local properties over time. And given the blockade, some investment was directed to agriculture, especially to the production of foodstuffs. Moreover, following the rebellion of the enslaved peoples of the Dominican Republic, the demand for sugar in France and Europe increased significantly. In Ile de France, there was investment in the sugar industry by the end of the 18<sup>th</sup> century until around 1806. Sixty sugar mills were in operation at that time and sugar exports by 1806 were around 4000 metric tons. M. Vaughan expresses a similar view when she wrote:

*“Furthermore, increased French commercial interest in the island combined with the profits of privateering and the collapse of sugar production in St. Domingue, were helping to finance the island’s nascent sugar industry. Finally the island seemed to have arrived at a situation in which commerce was financing agricultural production.”*<sup>26</sup>

#### 2.1.5 The British Blockade and the Decline and Fall of the Ile de France

As from 1806, the British Navy began the blockade of French trade in the Indian Ocean. The British blockade disrupted considerably the flow of maritime traffic to the island and seriously eroded the prominence of Ile de France in commercial activities and *entrepôt* trade and brought a sharp decline in the fortunes of local merchants and a series of bankruptcies. During the last years of Ile de France, there was a scarcity of specie in the colony and many businessmen were heavily indebted.

In order to counter the British blockade and ensure the maintenance of minimum supplies to the local population, the French Authorities at Ile de France reinforced the privateering activities in

the region, with the participation and support of leading local merchants and businessmen. These privateers preyed on British ships plying the Indian route. The excitement, with which news of some major “prises” were greeted in the island, underlines the dire situation of the local population during the last years of the Ile de France.

When Britain conquered Ile de France in December 1810, it inherited a colony which had been ravaged by war and deprivation. Mauritius had been neglected by the French who used the island’s resources to supply their ships during the war against Britain in India and generally left the inhabitants to fend for themselves. The finances were in a deplorable state following the British blockade of the island. Most of the colonists were heavily indebted. While it had prospered as a naval base and a trading port under the French, Mauritius became initially an outpost of minor importance to Britain. The absence of financial institutions, the lack of financial rigour and the reckless speculation, which characterized the last years of Ile de France, left deep scars on local financiers. It was the unenviable task of Governor Farquhar and his new British administration to bring some order in this chaotic situation.

## 2.2 The Emergence of the Coloured Population

As in colonial slave societies, there emerged in Ile de France an intermediate social class or social group between the slave masters and the enslaved people.

The demography of the Coloured Population represented certain special features. It was very small at the beginning, with only 587 in 1767. But by 1806, there were 7,154 Coloured people, whilst there were 6,798 Whites and 60,646 Slaves. The economic role of the Coloured was felt only in the last quarter of the 18<sup>th</sup> century. They had different types of occupations;<sup>27</sup> they were: interpreters, Government functionaries, seamen, and skilled artisans, such as blacksmiths, carpenters, masons and tailors.

Furthermore, the Coloured People progressively accumulated some capital. The means to achieve this accumulation were through grants and the purchase of public land. Between 1748 and 1810, there were 410 such grants and sales.<sup>28</sup> Other means were through bequeaths and donations. Moreover, the property acquired was rather limited. In 1788, the Coloured People owned only 3.5 % of land, and by 1806, only 7.1 % of all inventoried land was theirs. By 1809, they were farming about 9 percent of all cultivated land.

Another source of revenue and capital for the Coloured People was through the purchase and sale of slaves and for their renting as well. According to the 1776 Census, the Coloured People owned 623 slaves; by 1809, they owned at least 8,163.<sup>29</sup>

The Coloured Population thus had a special relationship with the other social groups or classes in French Colonial Society. Their economic role was rather limited and was made worse during the period of Decaën who restored certain regressive legislation on landownership by the Coloured Population.

## 2.3 Labour Systems

### 2.3.1 Slave Labour

The predominant form of labour during the French colonial period was the labour of enslaved peoples who were brought mainly from Madagascar, East Africa, Mozambique and India. The enslaved peoples were chattel labour, considered as the private property of their owners. The *Code Noir* was proclaimed on the 18<sup>th</sup> September 1724 in the form of *Lettres Patentes*.

Certain features of the 54 articles which constitute the *Code Noir* are highlighted. In its preamble, it is stipulated that:

*“[...] que l’Ile Bourbon est considérablement établie par le grand nombre de nos sujets, lesquels se servent d’esclaves nègres pour la culture des terres; que L’Ile de France qui est proche de la dite Ile de Bourbon commence aussi à s’établir [...]”*

A clear allusion to the exploit economically the enslaved people is included. The *Code Noir* was meant to ensure that the enslaved people remained as coerced, unwaged labour and to ensure their labour power could be reproduced to sustain the slave system. Thus, they did not have the right to own property, as Article 21 stipulated:

*“Déclarons les esclaves ne pouvoir rien avoir qui ne soit à leurs maîtres, et tout ce qui leur vient par leur industrie, [...]”*

Furthermore, they did not have the right to carry out commercial activities, unless allowed to do so by their masters. The punishment for any claimed offences/crimes were characteristic of the barbarism of old times. Having defined the enslaved people, as per Article 39, as:

*“Voulons que les esclaves soient réputés meubles et comme tels qu’ils entrent dans la communauté, [...]”*

The *Code Noir* further confirmed that status by explicitly specifying the slaves’ inability to receive any donation/heritage from the Whites, as per Article 51:

*“[...] déclarons cependant, les dits affranchis ensemble de nègre libre, incapables de recevoir de Blancs aucune donation entre vifs à cause de mort ou autrement, [...]”*

This oppression led to resistance by the enslaved people through maroonage. Governor Labourdonnais led a most violent campaign in his attempt to defeat the maroon community, training some slaves and dogs to carry out this campaign. Yet by 1797, there were 49,000 slaves out of a population of 59,000.

### 2.3.2 Indentured Labour

For colonies to survive, there was a need for labour across the world. Whilst slave labour was the predominant form of labour, there were also indentured workers from both France and India. From 1727 to 1740, 237 French workers as ‘engagés’ were brought from France.<sup>30</sup> From India, skilled workers were brought to build Port Louis harbour and to carry out various construction projects.

### 2.3.3 Other Forms of Labour

As trade between French colonial Power with China developed, there was a tendency for the French to bring Chinese labour by force, or otherwise, to Ile de France to cater for different types of occupations, just as they used their ‘comptoirs’ in India to transport Indian slaves and skilled workers to Ile de France.

As early as 1761, during the rule of the French East India Company, 300 Chinese with wives and children from Amboyna, were kidnapped by Admiral d’Estaing and brought forcibly to Ile de France.<sup>31</sup> They were forced to work as agricultural workers and were tied by rigid laws ‘prevailing in the island’; but they resisted and the Government had to accede to their request for repatriation.

Later in 1783, during the rule of the French Royal Government, with the policy of free trade, ships of different nationalities traded with Ile de France, which also involved the transportation of labour. L. Dermigny mentioned that more than three thousand Chinese were transported by English, French and Danish ships to Ile de France.<sup>32</sup> In particular, in a vessel belonging to M. d’Arifat, he transported 132 men, including shoemakers, blacksmiths, tailors and carpenters.

## 2.4 Concluding Remarks

French occupation of Ile de France followed the path defined by Dutch Colonialism. Ile de France was used as stop-over in carrying out trade with a resourceful Asia, especially China and India. Moreover, there was intense colonial rivalry, because British colonialism was equally competing for trade and investment in India, China and other parts of Asia. The intermittent colonial wars resulted in the defeat of the French by the British, thus creating the conditions for Mauritius to undergo a long spell of the dominant colonial power of the time. The impact on labour, demography and the economy of Mauritius was considerable and has had consequences to this day.

French colonialism depended on slave labour as the dominant form of labour, looking eagerly for skilled labour in India, China and France. That labour started clearing the forests, developing sugar cultivation and contributing to the development of Port Louis and Mauritius in general. Even today, due recognition is not given to this contribution.

However, just like the Dutch, the French would cause environmental degradation, albeit probably to a lesser extent. There was a demand for wood in India, especially in Calcutta. Fire was used to clear the land, and this had a very negative impact on the environment. As cited by Dr. Teelock, “under Company administration, deforestation had also occurred at an alarming rate.”<sup>33</sup> Admittedly, Pierre Poivre would try to control the situation.

Mauritius was set to follow the pattern of ‘development/underdevelopment’ imposed by both the Dutch and French colonialism: trade, profits and capital accumulation, economic exploitation of labour and environmental degradation.

## CHAPTER 3 BRITISH COLONIAL PERIOD AND SLAVERY (1810 - 1839)

### 3.1 Introduction

The acute Anglo-French rivalry during the 18<sup>th</sup> century culminated with the utter defeat of French Colonisation in India, in the Indian Ocean and elsewhere during the Napoleonic Wars. In the Indian Ocean, Britain conquered Ile Bourbon (later Réunion) and Ile de France, to be renamed Mauritius. The strategic importance of Mauritius, with its very good harbouring facilities at Port Louis, was given due recognition; with the Treaty of Paris of 1814, Réunion was handed back to France, whilst Britain kept Mauritius.

The defeat of the French was incorporated in a Capitulation Treaty signed and ratified on the 3<sup>rd</sup> December, 1810. Three articles of the Treaty are particularly relevant to the future development, whether political, economic and social, of the colony of Mauritius:

Article VII: That the properties of the inhabitants, whatever they may be, shall be respected.

Article VIII: That the inhabitants shall retain their religion, laws and customs.

Additional Article I: The public functionaries of the French Government shall be authorized to remain within the colony for a reasonable time in order to settle and arrange the public accounts with the inhabitants of the colony.

The blockade of Mauritius and of France by the British Navy during the period 1804-1810 had made it impossible for any meaningful level of trade to be effective for the traders community in Mauritius. The production of sugar and arrack went down drastically, and a shift to agricultural production for subsistence took place. The environment was not favourable for trade agriculture and business in general; on the contrary, speculation for commodities and spices was rife.

### 3.2 The Economics of Slavery in the period 1810-1839

#### 3.2.1 Emergence of a monocrop economy - the Sugar Industry in 1810 - 1839

At the time of the conquest of Mauritius by the British, the new Governor, Robert Farquhar, was in favour of keeping Port Louis as a free port. Moreover, the prevalence of the British Navigation Laws imposed some restrictions on trade; thus, all trade with France was carried on in British vessels, and there was an eight percent duty on goods imported from Bourbon.

During the latter part of French rule, Port Louis was a free port and trade flourished so much that a class of merchants and traders was thriving. Moreover, as from 1806, the blockade by the British Navy, in the context of Napoleonic Wars, brought economic stagnation and even famine to Isle de France.

The uncertainties of the new situation under British rule, with regard to trade on the one hand, and the access to the British market for its sugar, once Mauritius became a Crown colony, on the other hand, created the right conditions for a sugar expansion. It should be borne in mind that, during French rule, following the loss of Saint-Domingue by France, there was an increasing demand for sugar in France and Europe. By the turn of the 19<sup>th</sup> century, sugar production received a major boost: by 1806, there were 60 sugar mills, with a production of 6000 tons of sugar<sup>34</sup>. Arrack production also increased considerably. During the Napoleonic Wars, the neutral countries, such as US, bought sugar from Isle de France and sold it to France and Europe.

Corsairs and privateers also contributed in that trade. Moreover, the British blockade did have an impact in the end, reducing sugar production to only about 400 tons in 1810, albeit with 60 factories in operation.

Following the British conquest, a shift towards sugar cane cultivation and sugar production built on relatively recent past developments; this shift was further enhanced by the participation of some

British officials and investors in the process. The shift, therefore, developed somewhat in earnest. Planters started to invest more, not only in land, but also in the improvement of sugar milling equipment. Thus, in 1819, Charles Telfair introduced horizontal rollers in replacement of vertical cane crushers at Bel Ombre. This new technology made the crushing process easier and more efficient, so that more cane juice was obtained. Furthermore, in 1822, a steam engine was installed for mill drive at Belle Mare factory by Adrien D'Epinay. The steam engine made cane crushing more efficient in areas where water power was not available. This, until then, had to depend on animal or wind power, or even slave power for driving the mill. The number of sugar factories then increased rather dramatically from 60 in 1810 to 157 in 1823<sup>35</sup>. Sugar production progressively increased substantially as from 1815. The land area under cultivation equally increased substantially as from 1815, until well into the 20<sup>th</sup> century.

The rate of commercial sugar extracted from cane increased from 5 % in the period 1811-1820 to 6.00 % in 1821-1830<sup>3</sup>. And it is of interest to note that, already in 1806, 4,040 hectares of land were under sugar cane cultivation, whilst this became 3,636 hectares in 1812-1820 and increased dramatically to 10,504 hectares for the period 1821-1830<sup>36</sup>.

Moreover, planters were not happy with the prices they had to pay to Britain for their sugar, as they had to pay an additional 10 shilling duty, compared to the planters in the British Caribbean. The planters pressed the British Government to equalize duties on Mauritian sugar, and in this, they had the support of Governor R. Farquhar<sup>37</sup>. They sent memorials to the British Government in 1821 and 1823. In 1825, the Trade Bill was passed, and its impact on sugar production in Mauritius, on the economy and society of Mauritius would be far reaching, and beyond anyone's expectations. The area of land under sugar cane cultivation, and the production of sugar, grew at a very impressive rate as highlighted in the table below.

Year	Area
1812-1820	9,000
1821-1830	26,000
1831-1840	40,000
1841-1850	59,500
1851-1860	110,000
1861-1870	124,000

Source: The Mauritius Chamber of Agriculture, 1853-1953.

The area under cane cultivation increased by around 50 % in 1831-1840, when compared to 1821-1830. Between 1841-1850, and 1851-1860, the area almost doubled to reach 110,000 *arpents*.

The implications were, and are, very serious for Natural Resource Management; so much so that whilst in 1826, forests were two-thirds of Mauritius, by 1872 the area of Mauritius covered in forests was less than one-sixth<sup>38</sup>. The impact on water supply would soon be felt.

Similarly, there were big leaps in sugar production, as highlighted in Table 3.2.

Year	Production
1815	1,252
1824	12,167
1825	10,869
1826	21,244
1830	33,936
1840	41,024
1850	55,468
1860	130,375
Source: The Mauritius Chamber of Agriculture, 1853-1953.	

Between 1825 and 1826, sugar production doubled and further increased by more than 50 % by 1830 (33,963 metric tons) to reach 130,375 metric tons in 1860.

This economic transformation could only take place if, on top of the availability of the British market, certain conditions could be met; there had to be a compliant labour force in sufficient numbers, sufficient capital, appropriate development of infrastructures, close collaboration between the State and the economic forces and the mastery of scientific developments in sugar manufacture, in the development of appropriate canes and in the cultivation practices at the level of field-work.

In the context of the acquisition of the appropriate scientific culture, it is appropriate to note that the interest in Sugar Botany developed by the end of the 18<sup>th</sup> century, when there was a surge in sugar cane cultivation.

This interest was enhanced by the establishment of the Royal Society of Arts and Sciences in 1829 by Charles Telfair, with the support of the Colonial Government; the latter provided financial support.

Having emphasized so far the implicit role of the plantocracy in developing sugar cane cultivation and sugar production, we should now consider the direct contribution of a key partner in the creation of wealth: labour. Thereafter, we shall consider the contribution of investors in bringing the capital necessary and the role of the Colonial State.

### 3.2.2 Value of Slave Labour (1823-1835)

#### 3.2.2.1 Introduction

The aim of this section is to investigate the characteristics of slave labour based on occupation, gender and age, and model the determinants of slave prices between 1823 and 1835. We construct a unique data set from Notarial Acts on public slave auctions in Mauritius involving 5,580 slaves during that period. Firstly, we model price variation in relation to the slaves' specific characteristics. Secondly, we estimate whether slave prices vary much in relation to the sugar cane harvest season. Thirdly, we compute an estimated value of slave labour, using slave prices between 1823 and 1835. We take into account how the probability of the abolition of slavery may have impacted on slave prices, and hence on the value of slave labour. This may indicate whether slave-owners would alter slave prices or not in the event that slavery were abolished or might think that they would be compensated. Our results reveal significant variations in slave prices across occupation, age and gender, such that young males who are skilled are more likely to fetch higher prices. We note a gender disparity in slave prices where males are priced higher than females. In

comparison, the prices of older and unskilled slaves are also much lower. Lastly, we note that the value of slave labour varies significantly with sugar production and the price of sugar. It was observed that a rise in the price of sugar led to a two-fold increase in the value of slave labour.

### 3.2.2.2 Methodological Framework

The foundation for measuring the value of slave labour is the application of a political-economic model of asset-pricing<sup>39</sup> in which we assume that the value of slave labor is determined by traditional economic factors and public expectations about the long-term viability of slavery. The key intuition is that slave-owners as rational economic agents should react to changes in their subjective assessments of the probability of abolition: if the probability of abolition declined, then the expected value of slaves as assets should increase, and the price of slaves should also rise.

The standard model of asset-pricing is based on present value calculation. The asset-pricing model asserts that the value of any slave depends on the discounted present value of the annual net income, plus any capital appreciation (depreciation) expected over the life of the slave. The most obvious return from owning a slave was the income gained each year from the slave as a productive labourer. This includes the following:

- i. The physical output produced by the slave (that is the marginal physical product of the slave);
- ii. The value of the slave's output (that is the price of the output times the marginal physical product); and
- iii. The cost of maintaining the slave including food, shelter and any tools which were necessary for the slave to be a productive worker.

Two observations are pertinent at this point. First, note that it is the expected stream of income over the lifetime of the slave that is relevant to the calculation of the slave's market value. Second, so long as the anticipated annual value of output of the slave at least covered the expected maintenance costs over his or her lifetime, the price of the slave will be positive. This was the minimal condition for slavery to be 'profitable'. The annual production of the slave on the farm was the most obvious source of income from the investment in a slave, but there was another source of return to slave assets. The slave-holder would benefit from any appreciation in the price of slaves owned and also any natural increase in the number of slaves. The asset-pricing model predicates a world where slave-ownership brings financial returns to the slave-holder and where the price of a slave reflects those returns over time.<sup>40</sup>

The model<sup>41</sup> captures the potential sources of variation in the present value of slave-ownership that one would expect to observe. The easiest, in economic terms, are the 'price of output' and 'marginal product of labour' variables. If the price of sugar, or the productivity of slaves working in sugar, rises, then the price of slaves is expected to rise also. The time rate of discount represents the opportunity cost of the labour tied up in labour assets.

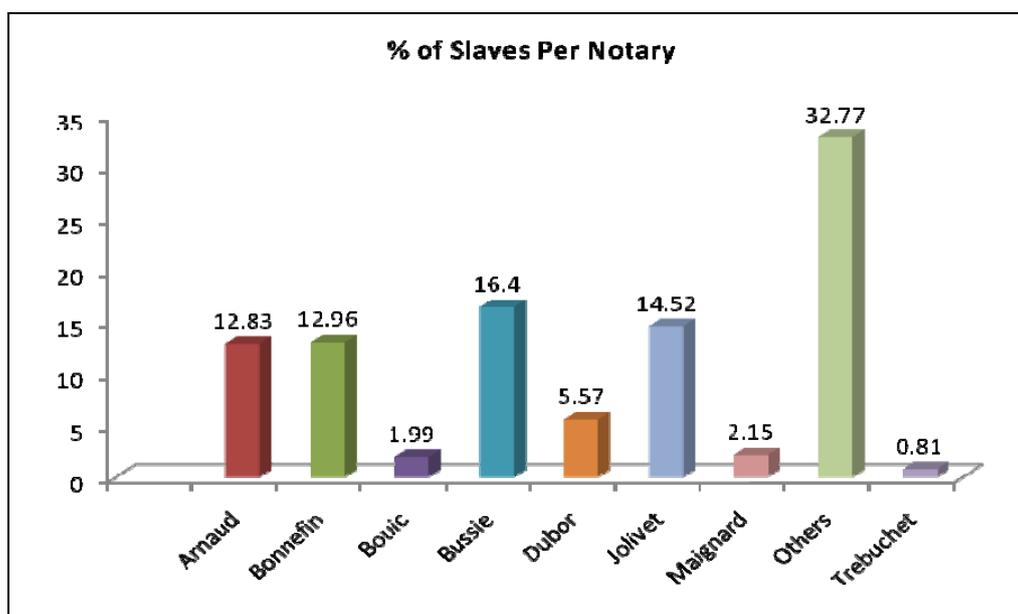

The interesting feature of the model is the impact on asset-prices of the probability that slavery will be abolished. Even a small risk of abolition had to be taken extremely seriously because it affected the value of the entire future income stream. If individuals changed their expectations, even slightly, about the persistence of the slave regime, the amount they would pay for their slave would also shift. A rational individual would then buy a slave if the expected present value of slave-labour exceeded the price at which slaves could be purchased at auction. In terms of the model, the price of emancipation would be greater under the British rule than before, with the near abolition of slavery. This, in turn, would imply that, *ceteris paribus*, expected present value of the slave also increased. On the other hand, if abolition seemed unlikely, then the price of emancipation would have remained essentially constant over time with, *ceteris paribus*, there would be no change in the expected present value of the slave.

### 3.2.2.3 Data Set and Data Representativeness

#### Data Set

The main source of information was the Notarial Acts in the General Inventory of Notaries which are located at the Mauritius Archives in Coromandel, Mauritius. Data was collected over the period 1823 to 1835 from all Notaries. Data on all variables used in our analysis were available only for 8 Notaries namely: Arnaud, Bonnefin, Bouic, Bussie, Dubor, Jolivet, Maignard, Trebuchet, as well as some others not specified in the Notarial Acts. The Acts document the sale of 5,580 slaves during auctions over this period. In addition to the selling price (in *piastres* or *livres tournois*), most records either stated the slave's gender explicitly, or that information can be inferred from the transaction's phrasing. Moreover, the slave's age, ethnicity, occupation and the auction date were reported. Figure 3.1 below shows the distribution of slaves across the main Notaries.

Figure 3.1 % of Slaves per notary

To assess its representativeness, our sample is compared to the slave population which is the 1826 census<sup>42</sup>.

Table 3 Comparing Slave 1826 Population and 1825-1835 Notarial Acts

	1826 census		Notarial Acts (1825-1835)	
	Number	%	Number	%
All Sample				
Male	33,330	62.24	4,327	77.57
Female	20,222	37.76	1,251	22.43
Total	53,552	100	5,578	100

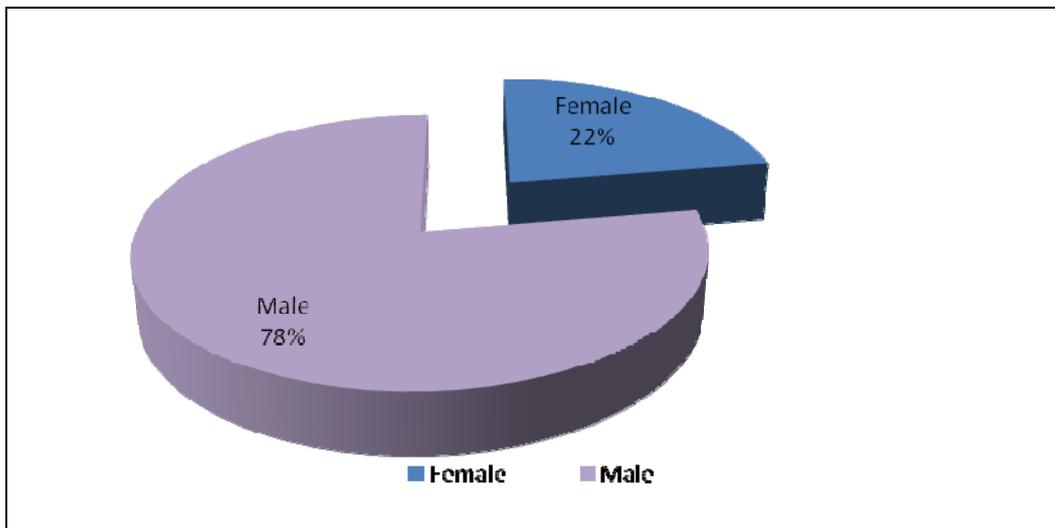

Our sample differs somewhat from the 1826 Census for the male-female ratio. We find that 62.2 per cent of the slaves are male in the census but this percentage is 77.6 in our sample. Males are therefore over-represented in the Notarial Acts<sup>43</sup>. However, our sample has the same age and ethnic characteristics as those of the slave population. We can conclude therefore that our sample is representative of the entire slave population during the period of study.

### 3.2.2.4 Data Analysis

#### (i) Characteristics of our sample of slaves

We analyse the distribution of the 5580 slaves in our sample from 1823 to 1835 by gender, ethnicity, occupation and age. Figure 3.2 below shows gender differences on our data, where 78 per cent of slaves are male and the rest, 22 per cent are female.

Figure 3.2: Distribution of Slaves by Sex

The larger share of slaves were the locally born, that is, 'Créole de Maurice' group with 41 per cent, followed by Mozambiques 33 per cent and 19 per cent Malgaches (see Figure 3.3 below). The large number of natives may possibly be the result of the ban of slave imports enforced by the British. There are reasons to believe that many planters would declare their slaves to be native to conceal the then prevailing illegal slave trade. Slaves from Madagascar and Mozambique are nearly equally represented while a small percentage consists of Indians (5 per cent). On average the ethnic distribution of slaves in this sample is a good representation of the slave population.

Figure 3.3: Distribution of Slaves

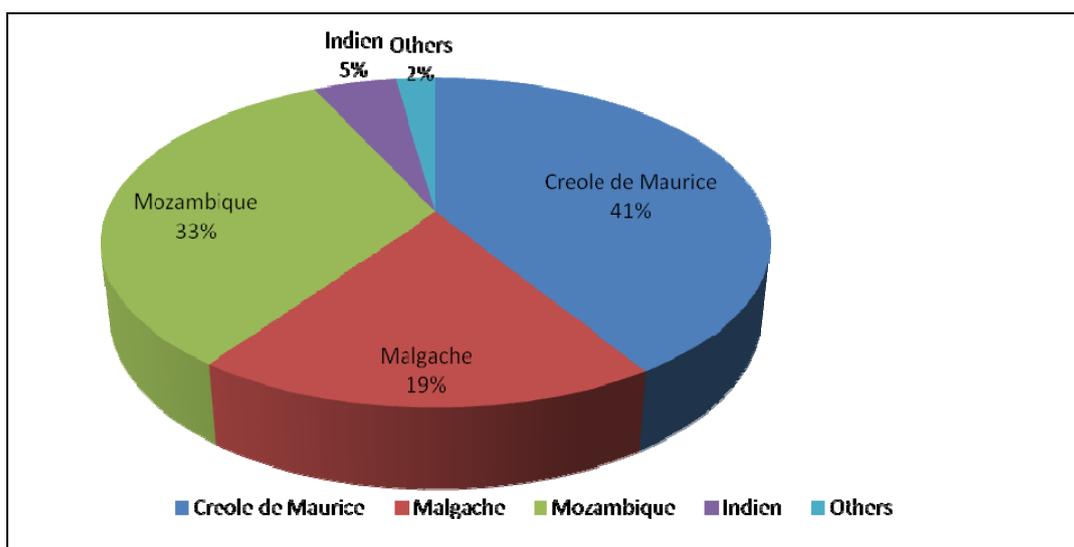

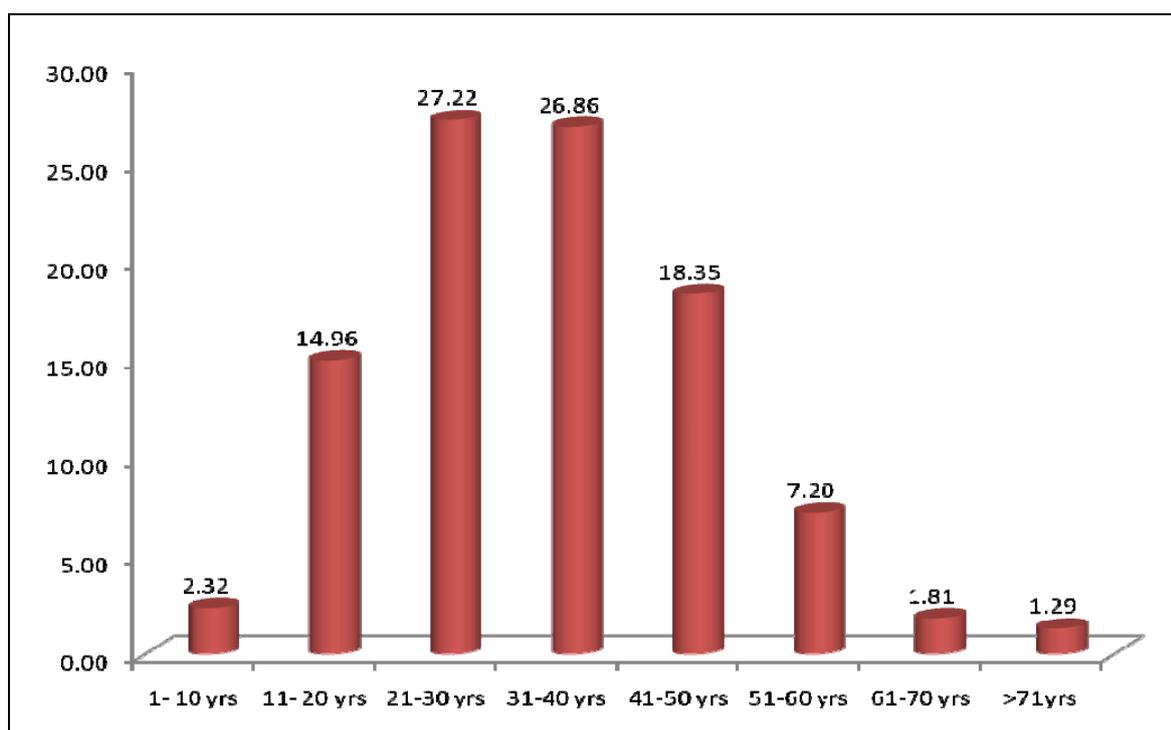

Figure 3.4: Age Profile of Slaves

From Figure 3.4 above, we note that 27.2 per cent of the slaves are within the age group 21-30 years, while 26.9 per cent are between 31-40 years. 18.4 per cent are aged 41-50 years, while around 15 per cent are between 11-20 years and 7 per cent are within the age category of 51-60 years. In addition, we note that the age-price profile which is the familiar bell-curved pattern identified in other slave economies.<sup>44</sup> We observe a higher average price of slaves of 308.56 *piastres* in the age group of 21-30 years, followed by 283.72 *piastres* for those slaves in the age group of 31-40 years. Those in the age category of 11-20 years also fetched higher prices averaging 273.77 *piastres*. The maximum price for children age below 10 years is 1,100 which is above the maximum values for the other age categories. In fact, this may well confirm the existence of an outlier in our data. As age rises, prices of slaves drop, as shown by Table 3.4 below.

(ii) Price Profile of Slaves

Variable	Obs	Mean	Std. Dev.	Min	Max
<b>Age</b>					
1- 10 yrs	129	183	134	30	1100
11- 20 yrs	833	274	137	50	1010
21-30 yrs	1516	309	146	25	1040
31-40 yrs	1496	284	148	25	1000
41-50 yrs	1022	200	122	20	1000
51-60 yrs	401	120	92	10	800
61-70 yrs	101	88	65	10	301
>71yrs	72	63	77	10	300

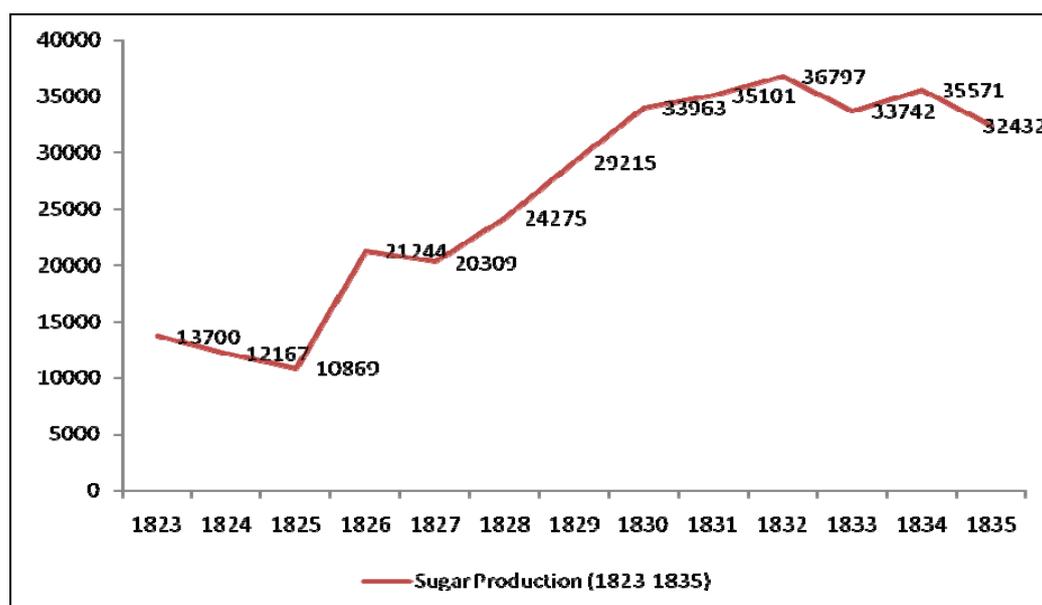

We find that male prices are higher than female prices. A male slave, irrespective of age, origin and occupation, fetched on average a price of 263.76 *piastres* relative to 227.19 *piastres* for a female slave. Further from Table 3.5 below, prices also differ across different origins. Créoles de

Maurice fetched a higher price of 283.73 *piastres* compared to the Malgaches and Mozambiques with respective prices of 261.95 *piastres* and 231.51 *piastres*. The ‘Indian’ slaves fetched the lowest price of around 150 *piastres*. In fact, non-native slaves were sold at a lower price. Creole slaves had the advantage of being better adapted to conditions in Mauritius and less subject to illness and marronage. In some way, ‘Indian’ slaves were ‘smaller’ people and were perceived to be less productive than their ‘African’ counterparts, while the ‘Creoles’ were perceived to be more adapted to local conditions.

Variable	Obs	Mean	Std. Dev.	Min	Max
Origin					
Créole de Maurice	2250	284	150	20	1100
Malagasy	1043	262	155	10	1000
Mozambique	1813	232	141	10	1000
Indian	264	150	94	10	600

From Figure 3.5, we show the trend in sugar production from 1823 to 1835, with a peak in 1826 and a continued upward trend till 1831, with fluctuations and an ultimate decline in 1835. The trend in sugar production over this time span is likely to be closely linked with slave prices and also anticipation about the abolition of slavery in 1835.

Figure 3.5: Sugar output from 1823-1835

Overall, we conclude that gender, ethnicity, occupation, age and sugar output appear to determine the price level of Mauritian slaves. Descriptive statistics, however, do not identify the individual effects of prices on each characteristic, as potential correlations across factors are not taken into account. For this purpose, we resort to multivariate econometric analysis.

### 3.2.2.5 Methodology

We investigate the characteristics of slave labour based on occupation, gender and age and model the determinants of slave prices between 1825 and 1835. We construct a unique data set from Notarial Acts on public slave auctions in Mauritius, involving 5,580 slaves during that period.

The microeconomic model of slave prices allows us, firstly to capture price variations in relation to slave’s characteristics and also sugar production in Mauritius. Second, we estimate whether slave

prices vary much in relation to the sugar cane harvest season. The model considers that slave prices may be sensitive to changes in the value of the goods (that is sugar) that they produced. This occurred because slave-owners expected to be able to expropriate the earnings from their slaves' labour for a longer period of time. Third, we test whether there was a change in attitudes about slavery over time. We specifically account for whether there was a change in expectations among planters about the long-run viability about slavery, and account for the "regime shift" during the periods 1810 and mid-1830s in the process that determined slave prices.

The Mincerian pricing model is applied to capture price variation in relation to the slaves' specific characteristics. The Mincerian equation is particularly appropriate when supply can sensibly be considered as price inelastic. Hence, following standard practice,<sup>45</sup> we regress log of slave prices on the slave's attributes and the slave's human capital, as well as the sugar output during that period. Moreover, we introduce timing variables and time-varying parameters to capture dynamic and seasonal effects.

The econometric model is as follows:

$$\begin{aligned} \ln Price_{it} = & \lambda_0 + \lambda_1 Age_{it} + \lambda_2 Age_{it}^2 + \lambda_3 Sex_{it} + \lambda_4 Invalid + \lambda_5 CDM_{it} + \lambda_6 Mozambique_{it} \\ & + \lambda_7 Malgache_{it} + \lambda_8 Occupation_t + \lambda_9 \ln SugarOutput_t + \lambda_{10} Quarter_t + \lambda_{11} Time_t + \varepsilon_t \end{aligned} \quad (6)$$

where  $\ln Price_{it}$  is the recorded price,  $i$  denotes the slave identity,  $t$  is the time period and  $\varepsilon_t$  is the white noise error term. The explanatory variables are as follows:

- i. Slave's Attributes
  - a) Age is age of slave at time of sale;
  - b)  $Age^2$  captures the concave link between price and age;
  - c) Sex equals 1 if male; 0 if female;
  - d) Invalid equals 1 if invalid; 0 otherwise;
  - e) CDM equals 1 if 'Créole de Maurice'; 0 otherwise;
  - f) Mozambique equals 1 if of Mozambique origin; 0 otherwise; and
  - g) Malgache equals 1 if of Malagasy origin; 0 otherwise
- ii. Occupation
- iii. We include different types of occupation, namely pioche (labourer), manoeuvre (trainee mason), cuisinier (cook), maçon (mason), gardien (watchman), commandeur (overseer), charpentier (carpenter), charretier (carter), blanchisseur (laundress), calfat (caulker- factory work), cloutier (nail maker-factory work), cordonnier (shoe maker), forgeron (blacksmith), gardien de troupeaux (cattle keeper), matelot (sailor), menuisier, natteuse (mat maker), palfrenier (stable boy), pêcheur (fisherman), scieur (sawyer), and sucrier (sugar maker), among others.

The occupations were also split into factory work, field work and domestic/household work.

iv. Sugar Output:

$\ln SugarOutput$  is the log value of total production of sugar from 1823 to 1835.

v. Time of Sale:

- a) Quarter includes dummies for four Quarters in which the slaves were sold.  $Quarter_t$  equals 1 if slave was sold in  $t^{th}$  quarter; 0 otherwise where  $t = 1, 2, 3$ .
- b) Time is time dummies and equals 1 if slave is sold in a given year; 0 otherwise, where time dummies = 1823-1835

### 3.2.2.6 Findings

#### (i) Slave prices

Our results reveal significant variations in slave prices across age. Appendix 2 presents the first set of findings. First, we find a concave relationship between age and price, i.e. a term containing the square of age. A similar result was obtained for the US.<sup>46</sup> We note that on average, slave's highest prices were fetched in the age group of 21 to 30 years. A similar result was obtained<sup>47</sup> for Mauritius on a smaller sample size, where slaves at the age of 23 fetched the highest prices. Second, a male slave fetched a premium of 12.5 per cent. This estimate is larger than the 9 per cent figure by Kotlikoff, (1979) for Southern US and Newland and Segunda, (1996)<sup>48</sup> for Peru, but smaller than the premium of 25 per cent estimated by Chenny, St-Amour and Vencatachellum (2003)<sup>49</sup> for Mauritius. In fact, there was a strong demand for male slave labour which probably resulted from the demand for physical force in sugar cane plantations. Indeed, this is confirmed by very lower prices for handicapped or invalid slaves, a figure which is close to that found by Newland and Segunda (1996)<sup>50</sup> for Peru.

Third, the ethnicity dummy variable which differentiates between Malagasy, Créole de Maurice, Mozambique and others confirm the presence of a premium of 19.6 per cent for Créole de Maurice. For Cuba, it was found that non-native slaves were sold at a lower price. Native slave had the advantage of being better adapted to conditions in Mauritius and less subject to illness and marronage. 'Indian' slaves were 'smaller' people and deemed capable of lower physical effort<sup>51</sup> than their 'African' counterparts, while the 'Créoles' were perceived to be more adapted to local conditions. Mozambiques and Malgaches were considered slaves who could perform very difficult tasks.

Fourth, with respect to occupation, we find that Calfat (Caulker), Cloutier (Nail Maker), Matelot (Sailor), Scieur (Sawyer), Forgeron (Blacksmith), Commandeur (Overseer) were more likely to fetch higher prices. The premium ranges from 27.6 per cent to 45.8 per cent. These occupations necessitated particular skills. In fact, in Table 5 below, we present our second set of findings where we group the different types of occupations into three broad categories namely: factory work, household work and field work. The results reveal that factory workers fetched a higher premium of 29.8 per cent, compared to field workers, and domestic workers fetch higher prices of the order of 16.8 per cent relative to field workers. These premia are lower than those found for the US and for Peru.<sup>52</sup> Nonetheless, human capital was valued positively by slave-owners despite Mauritius being an agricultural economy. Two reasons may explain this. First, Mauritius had an important rental market for slaves, regardless of occupation; urban slaves could be rented out to plantation owners, especially during the sugar cane harvest season. Therefore, as for other slaves, skilled slaves were also mobile across occupations. Moreover, the demand for skilled slaves reflects the isolation of the island from metropolises. Long journeys from Europe and the Indian Ocean implied that Mauritius had to develop local production of houses, clothing and shoes, among others, rather than relying exclusively on manufactured imports from Colonial Powers. The flexibility and local demand for output produced by skilled slaves explain their positive price premium.

Fifth, sugar production has a positive and significant effect on the prices of slaves. This result no longer holds true, once we include time dummies. This can be explained by the fact that the time dummies may also capture the change in sugar production over time, as slave trade arose mainly because of sugar production and the expansion of the plantation economy. Sixth, the time at which the sale took place is also important. A price increase of 13 per cent is found if the sale occurred in the fourth quarter. This indicates a strong seasonal component with peak prices coinciding with the sugar cane harvest<sup>53</sup>.

Lastly, time dummies are included to capture any variation in prices over time. We observe that, in the initial years of our sample, that is from 1824 to 1826, there was a negative and significant time effect on slave prices. However, as from 1827, slave prices show an upward trend. This can be explained by a peak year in slave demand and was probably a delayed consequence of the 1825 British equalisation of import duties.<sup>54</sup> Indeed, between 1825 and 1827, Mauritian sugar production nearly doubled from 10,869 to 20,309 metric tons.<sup>55</sup> Mauritian slave price increases are also consistent with price increases found elsewhere<sup>56</sup>, namely for the Atlantic Coast of Africa, where

real slave prices increased by 41 per cent between 1821-1825 and 1826-30. The cost of adjusting production to increase sugar exports could explain the two-year lag.

However, prices of slaves declined from 1831 onwards (as per Appendix 2) and 1832 (as per Appendix 3). Indeed, an expected abolition of slavery reduces an investment's time horizon used in calculating the net discounted expected value of owning a slave and, consequently, the maximum price a slave buyer is willing to pay. Slave-buyers, in 1827 till 1830, did not anticipate the 1835 abolition, despite the enforcement of the 1807 slave trade ban by the British in Mauritius after its conquest.<sup>57</sup> However, after 1830, the threat of abolition caused a decline in slave prices in the small island plantation economy.

(ii) Value of slave Labour

From the above, market prices for slaves reflect their substantial economic value. The prices for slave reflected two economic factors, namely the characteristics of the slave and the conditions of slavery such as age, sex, physical condition and skill level. A rational individual would then buy a slave, if the expected present value of slave-labour exceeded the price at which slaves can be purchased at auction.

We use data on sugar production, sugar prices and number of slaves from 1823-1835. Table 3.6 below presents the data used in the computation of the net present value of slave labour in Mauritius.

Year	Sugar Production(tonne)	Average Price of Sugar (£ per tonne)	Number of Slaves
1823	13,700	32.5	66,000
1826	21,244	33.6	63,000
1830	33,963	27.0	63,281
1835	32,432	37.4	61,652

Source: Computed

We first use equation (2) above to calculate the net present value of slave labour. Second, we estimate equation (5) which is an elaborated model of value of slave labour, taking into consideration the risk of the abolition of slavery. Even a small risk of abolition needs to be considered as this will affect the value of the entire future income stream. The possibility of slave revolts in groups, or escapes, either of which were likely to make the slave unavailable for service, would affect the value of slave labour. If an individual changed his expectations, even slightly, about the persistence of the slave regime, the amount he would pay for the slave would also shift.

The fact that slavery was profitable is obvious (Wahl, 1996).<sup>58</sup> Slavery brought in a new dimension to sugar plantations around the world, and in particular, for the Mauritian sugar industry. Investment in slaves generated high rates of return to planters. To estimate equation (2), one must decide on the appropriate interest rate. This decision is unexpectedly easy. It is quite clear that no interest rate below 3 percent makes any economic sense (Simon and Neal, 1971).<sup>59</sup> The rate of return on slaves was about 10 percent which was comparable to returns on other assets (Wahl, 1996).<sup>60</sup> Further, the  $U_t$  term in equation (2) is defined as upkeep costs in time  $t$ . In fact, upkeep costs were very minimal and would not affect our estimate. In addition, no account is taken here of any indirect economic damage to slaves and their off-springs due to the cultural and physical impoverishment of slavery, because any such account is extraordinarily speculative. Nor is any accounting made for mental and physical suffering due to slavery and its aftermath. We further assume that the useful life of the slaves vary from 10 to 20 years (Grynaviski and Munger, 2003).<sup>61</sup>

Our computation results are described in Table 7.

Table 7 Computation of Value of Slave Labour (Useful Life of the Slave - 10 years)			
	Discount Rate - 10% £	Discount Rate -7% £	Discount Rate - 3% £
1823-1825	12.22	16.12	23.59
1826-1830	35.40	46.68	68.32
1831-1835	23.63	31.15	45.60
Source: Computed			

Computation of Value of Slave Labour (Useful Life of the Slave - 20 years)			
	Discount Rate - 10% £	Discount Rate -7% £	Discount Rate - 3% £
1823-1825	4.71	8.19	17.56
1826-1830	13.65	23.73	50.84
1831-1835	9.11	15.84	33.93
Source: Computed			

We use different discount rates for simulation purposes to capture the variation in the value of slave labour over the different periods. We note that during 1823-1825, the average value of slave labour (whose expected useful life is 10 years) was in the range of £12 to £24 (around \$60 to \$120) under the different discount rates. From 1826 to 1830, which was the peak period for sugar production and sugar prices, the average value of labour nearly tripled in the range of £35 to £68. In fact, the correlation between sugar production and value of slave labour is very significant as a change in sugar output is translated into an almost two-fold change in the average value of slave labour. This 2:1 relationship is further confirmed with our above analysis on slave prices based on the Mincerian framework. The output elasticity from Tables 4 and 5 which is in the range of 0.163 to 0.175 further confirms this robust relationship between sugar output and value of slave labour. We further compute the average value of slave labour for those workers whose expected useful life is assumed to be 20 years. The value falls over the years with the age of the slave. A similar link is noted between age and price of slave in the auction sale.

#### Value of Slave Labour with the Risk of the Abolition of Slavery

Suppose the probability of escape is actually 0.001 in any given year and that the probability of emancipation is 0.001 and assume that the slave is expected to have a useful life of 10 to 20 years (similar simulation made by Grynaviski and Munger, 2003)<sup>62</sup>, the value of slave labour will change. The computation is presented in Tables 9 and 10 below.

Table 8 Computation of Value of Slave Labour (Useful Life of the Slave - 10 years)				
	Probability of Abolition	Discount Rate - 10% - £	Discount Rate -7% -£	Discount Rate - 3% -£
1823-1825	0.980	11.98	15.80	23.13
1826-1830	0.980	34.70	45.75	66.97
1831-1835	0.980	23.16	30.53	44.69
Source: Computed				

Table 9 Computation of Value of Slave Labour (Useful Life of the Slave - 20 years)

	Probability of Abolition	Discount Rate - 10%- £	Discount Rate -7%- £	Discount Rate - 3%- £
1823-1825	0.961	4.53	7.87	16.87
1826-1830	0.961	13.11	22.80	48.84
1831-1835	0.961	8.75	15.21	32.60
Source: Computed				

From the above, a low probability of abolition and emancipation would not affect the value of labour significantly. However, it may have been the case that, prior to the middle 1830s, it was widely believed that slavery would eventually not come to an end. After the mid-1830s, if our interpretation of the history is correct, there was little doubt that the slave regime would persist indefinitely. In terms of the model,  $P_{em}$  would be greater in the late 1820s. This, in turn, would imply that, *ceteris paribus*, the expected present value would increase. On the other hand, if abolition seemed unlikely, then  $P_{em}$  would have remained essentially constant over time with, *ceteris paribus*, no change in the expected present value.

#### Aggregate Value of Slave Labour vs. Aggregate Value of Sugar Output

From Table 10 below, we note that aggregate value of slave labour is much more than the value of sugar output. From 1826 to 1830, it can be observed that the total value of slave labour is twice as much as total value of sugar output in the economy. It is to be noted that any possible change in the value of the pound sterling during the period under study has not been taken into account.

Table 10 Computation of Aggregate Value of Slave Labour	Discount Rate - 7% (Useful Life 10 years)	Aggregate Value of Slave Labour	Discount Rate -7% (Useful Life 20 years)	Aggregate Value Of Slave Labour
1823-1825	£ 16.12	£1,039,740	£ 8.19	£528,255
1826-1830	£ 46.68	£2,947,399	£ 23.73	£1,498,324
1831-1835	£ 31.15	£1,945,832	£ 15.84	£989,469

#### 3.2.2.7 Concluding Remarks

This section had analysed the characteristics and price variation of slave labour in Mauritius from 1823 to 1835. We have constructed a unique data set from Notarial Acts on public slave auctions in Mauritius involving 5,580 slaves during that period. The microeconomic model of slave prices has allowed us firstly to capture price variation in relation to slave's characteristics and also sugar production in Mauritius. Second, we have estimated whether slave prices varied much in relation

to the sugar cane harvest season. The model has considered that slave prices may have been sensitive to changes in the value of the goods (i.e. sugar) that they produced. This occurred because slave owners expected to be able to expropriate the earnings from their slaves' labour for a longer period of time. Third, we tested whether there was a change in attitudes about slavery over time.

Our findings reveal that there is a concave age-price profile and a significant price bias in favour of male slaves relative to their female counterparts. In fact, the strong demand for male slave labour which probably resulted from the demand for physical force in sugar cane plantations led to this gender price disparity. Furthermore, handicapped or invalid slaves were likely to fetch lower prices. The ethnicity dummy variable also shows that non-native slaves were sold at a lower price. Creole slaves had the advantage of being better adapted to conditions in Mauritius and less subject to illness and maroonage and were subsequently sold at a relatively higher price. With respect to occupation, we find that Calfat (Caulker), Cloutier (Nail Maker), Matelot (Sailor), Scieur (Sawyer), Forgeron (Blacksmith), Commandeur (Overseer) were more likely to fetch higher prices. These occupations necessitated particular skills; the result is thus in line with the human capital theory. This is further confirmed by the fact that factory workers and domestic workers fetched a higher premium.

In addition, sugar production has a positive and significant effect on prices of slaves. This result no longer holds true once we include time dummies. This can be explained by the fact that the time dummies may also capture the change in sugar production over time as the slave trade arose mainly because of sugar production and the expansion of the plantation economy. Lastly, the time at which the sale took place was also important. A price increase of 13% is found if the sale occurred in the fourth quarter. This indicates a strong seasonal component, with peak prices coinciding with the sugar cane harvest. Time dummies were also included to capture any variation in prices over time. We observe that in the initial years of our sample, that is from 1824 to 1826, there was a negative and significant time effect on slave prices. However, as from 1827, slave prices showed an upward trend. This can be explained by a peak year in slave demand and is probably a delayed consequence of the 1825 British equalisation of import duties.<sup>63</sup> Indeed, between 1825 and 1827, Mauritian sugar production nearly doubled from 10,869 to 20,309 metric tons.<sup>64</sup> However, prices of slaves declined as from 1831. Indeed, an expected abolition of slavery, after 1830, caused a decline in slave prices in the small plantation economy.

### 3.3 Labour Systems

#### 3.3.1 Introduction

As in the period of French colonization, colonies cannot survive without labour, and in particular without coercible, unwaged labour in the period of British colonisation from 1810 to 1839.

Moreover, there were several 'types' of labour: free labour (including that from the French period), unwaged coercible labour of the enslaved peoples of Africa, Madagascar and India, and the equally unwaged coercible labour of the convicts from British India. And lastly, in an attempt to compensate for a lack of labour on sugar estates following Emancipation, the last type of labour introduced was indentured labour, mainly from India. The unwaged coercible labour of the enslaved peoples was the driving force in wealth creation during the dramatic transformation in sugar production in this period.

#### 3.3.2 Labour of the enslaved peoples

The institution of slavery ensured that there was, on the one hand, a compliant, unwaged coercible labour to carry out all tasks required by labourers, factory workers, domestic servants and various skilled workers. On the other hand, there was a repressive legal apparatus, the *Code Noir* amongst others, to make sure that labour was indeed 'compliant'. Furthermore, the *Code Noir* dealt with various social matters such as the family of enslaved peoples which prevented consolidation of the community of the enslaved peoples.

We are not going to deal with all these issues as research has covered them to a certain extent elsewhere. In her work 'Bitter Sugar, Sugar and Slavery in 19<sup>th</sup>-Century Mauritius', Dr. Teelock has

clearly demonstrated that the expansion of the Sugar Industry was solely responsible for unrelentingly causing much suffering to the enslaved peoples working on sugar estates through overwork, severe treatment and punishment, bad food supply and an 'unrelenting discipline'.

We shall, instead, highlight the fact that slavery was a system that involved the most extreme form of economic exploitation. The propaganda, value systems, belief systems and sometimes ignorance of the plantocracy, of the Colonial Society, in general, have permeated the psychology and thinking of people in even the 21<sup>st</sup> century; it is believed, in some quarters, that the labour of enslaved peoples can be conveniently ignored. Everything has been achieved by the colonists and their capital!

In section 3.2.2, we have estimated the value of the labour of enslaved peoples during the period 1823-1835, since it is agreed that the plantation economy then developed in Mauritius and, of course, slavery was 'officially abolished' on the 1<sup>st</sup> February, 1835.

### 3.3.3 Convict Labour

With Mauritius becoming a Crown Colony in 1815, the Sugar Industry had a major boost as Mauritius had access to the British market. Moreover, the dominant form of labour was that of the enslaved peoples; with the abolition of the slave trade, there was an urgent need for labour, although admittedly illegal slave trade flourished until around 1827, with some estimating that up to 30,000 enslaved individuals were illegally transported to Mauritius.

The first Governor of Mauritius, Robert Farquhar, was very much aware of the utility of Indian convicts in public works projects and in private enterprise, since he was Lieutenant Governor of Penang, an established destination for Indian convicts. Usually, in Mauritius slaves were used in public works. Further, the planters had to provide the Government with a certain number of slaves as "*Corvée*" labour every year.

There was thus a major issue of labour supply and Governor Farquhar found in the importation of Indian convict labour an opportunity to increase the workforce and, at the same time, to reduce labour costs. Convict labour needed only some rations for upkeep, as prisoners were already housed in prisons and there was no need to cater for further housing. As Clare Anderson wrote: "Convicts were cheap, controllable and easily replaced".<sup>65</sup> Their labour played a most important role "in building the communications necessary for the development of the sugar industry which was to place Mauritius at the centre of global trading networks."<sup>66</sup>

Thus, from 1815 to 1837, there would be a regular supply of mainly Indian convicts from Bombay and Bengal, and some from Ceylon; there were about 1500 of them in all. In 1815, there were 316 convicts of which the number increased progressively to 735 in 1818; thereafter, the number stabilised at around 600, but by 1834, it reached a peak of 986. In 1837, in the year when transportation of convicts took place for the last time, there were 730; this number would progressively decrease through deaths.

With time, the convicts were becoming old and invariably less productive. Furthermore, by 1834, the importation of indentured labourers from India started. It was felt that the convicts might have a negative influence on the newly-arrived indentured labourers. Thus in 1839, it was decided that there would be no more transportation of convicts. In fact, in 1847, a committee of Enquiry was set up to enquire into "the most advantageous mode of disposing of the labor of the Indian convicts [...]."<sup>67</sup> After having classified the convicts as effective, half-effective and invalid, the Committee reached the conclusion that:

- (i) "The cost of the maintenance of each effective labourer, after allowing for the ineffective, is as great as that of hired labourers"; and
- (ii) "Free" labourers from India, introduced expressly for the purpose of working on public work contracts, would be as cheap and effective as convict labour.

The major importance of convicts in the expansion of the Sugar Industry labour is highlighted by the fact that, in 1837 and in 1839, there were requests to reinstitute convict labour, because considerable savings would be made through their use in repairing roads and bridges which were

deteriorating. With the expansion of the Sugar Industry, the network became of vital importance for the transportation of sugar cane and sugar. As in the case of the ex-slaves, the convicts would be done away with, once an alternative source of cheaper labour had been found: indentured labour.

### 3.3.4 Indentured labour

With the abolition of the Slave Trade in 1807 in the British Empire, there would progressively be a problem of labour availability to sustain the various plantation economies in the Caribbean and in the Indian Ocean. In the Caribbean, with the increasing occurrence of slave rebellions, the matter was still worse.

With that in mind, Robert Farquhar, who had experience in the Moluccas Islands and experience as Governor of Penang as from 1802, had witnessed the presence of Chinese immigrants and, in particular, of Chinese labour in these British possessions. In 1807, he wrote to the British Government a document entitled 'Suggestions arising from the abolition of African Slave trade for supplying the demands of the West Indian colonies with agricultural labourers', whereby he proposed "a plan for the introduction of Chinese labourers, already so successfully employed in the British settlements in the Eastern seas, into the British colonies in the West Indies".<sup>68</sup> But the plan was not accepted because it was claimed that there were practical problems in its implementation. Moreover, this episode indicated already that the abolition of the slave trade was creating serious labour problems for the various plantation economies/societies in the British Empire. There is no doubt that, with the proposed abolition of slavery, the labour problem would become very acute, indeed. Certainly, for Mauritius, the planters were exploring, well before the enacting of the corresponding Legislation, alternatives ways to supply labour. The issue was on the agenda of the British Government. In 1827, A. D'Epinay was possibly the first planter who recruited and employed contractual Indian labourers. H. Ly Tio Fane-Pineo, in her work *Lured away - The life history of Indian Cane Workers in Mauritius* and R. Quenette in his book *La fin d'une Légende* referred to this.

In 1829, there were attempts to recruit indentured labour by planters from Singapore and India, without the involvement of the Government. On their arrival in Port Louis, they were sent straightaway to the sugar estates of the planters who recruited them. According to H. Ly Tio Fane Pineo, the labourers felt cheated because they had a meager salary and were assimilated to slaves. The labourers protested openly against their working conditions and left the cane fields. The Government had no alternative but to repatriate these labourers; moreover, the planters had to cover the costs involved.

Following this experiment, the planters sought and obtained the participation of the Government in the recruitment of indentured labourers from British India; the contracts would be signed before a Magistrate by the parties concerned. That would ensure that especially the indentured labourers would abide by the terms of the contract and, in particular, that the labourers did not change the sugar estate owner who engaged them in the first instance.

In the end, British planters, Arbuthnot and Hunter, recruited 36 'Hill coolies' who landed in Mauritius on the 2<sup>nd</sup> November, 1834. And by 1842, there were 26,090 indentured labourers from British India, with 25,076 males and 1,014 females. This recruitment was made possible because the Arbuthnots were merchants and industrialists in British India. As owners of an indigo factory, the Arbuthnots in India identified the 'right' type of prospective 'Hill coolies'. Further, this business of labour recruitment would develop both in British India and in Mauritius, with many companies and businessmen involved. The British Empire already made use of that reservoir of cheap labour in Asia; this new development would create conditions for the British Empire to make enormous profits in this new lucrative business across the oceans.

### 3.3.5 The Labour of the Recaptives or the liberated slaves

Following the abolition of the slave trade in the British Empire in 1807, the British Government sent its Navy to seize enslaved peoples on board French and other ships. Those slaves were referred to as 'liberated Africans', a misnomer as they were far from free. In effect, they were given to private employers or a Government Officer as apprentices or indentured labour for a period of up to fourteen years. In some cases, in spite of a somewhat liberal Legislation, these new apprentices were very harshly treated, no better than the slaves. Hence, historians are now using the term 'recaptive' Africans to describe this category of slaves/apprentices

During the period 1811 to the early 1840s, given the rapid expansion of the Sugar Industry and given the abolition of slavery and the uncertainties associated with the importation of indentured labour, these 'recaptive' Africans would play a most important part in helping to mitigate the unavailability of a sufficient labour force, somewhat like the Indian convicts. Moreover, the carrying over of 'recaptive' Africans was kept going until the late 1860s, when it was felt that the source of indentured labour from British India was reliable and provided much cheaper labour than the 'recaptive' Africans.

In 1811, the first group of 'recaptive' Africans, captured in an Arab vessel in May off the coast of East Africa, was brought to Mauritius.<sup>69</sup> The Colonial Authorities entrusted to the Collector of Customs the responsibility of 'taking care' of the 'recaptive' Africans and of allocating them to employers/Government Officials. This first group was handed over as menial workers to the Police Department.

During the period 1813-1827, according to the Collector of Customs 1827 list of 'recaptive' Africans, 2998 of them were transported to Mauritius. Many were very young, aged less than fifteen years old. The Collector of Customs gave preferential treatment to the Governor and Government Officials, so that about 500 of the African 'recaptives' were allocated to them. The three who received the most were: Governor R. Farquhar with 47, the wealthy planter/Government Official Charles Telfair with 91, and Charles Stoker, District Commander with 45.

Furthermore, during that same period, 206 of the 'recaptive' Africans were employed as labourers and manual workers within the Local Government, and 224 were in the armed forces. By late 1820s, the Colonial Government decided to extend the contract of the Government's 'recaptives' by seven years. It turned out that the Government was able to secure a pool of cheap labour from among the 'recaptives' at a time when the demand for labour was increasing. As it has been mentioned before, in 1829 there were failed attempts to recruit Chinese and Indian indentured labour from Singapore and India.

Moreover, the 'recaptive' Africans had a very mixed experience although, by Law/Regulations, they were supposed to have better working conditions than the enslaved population at large. There was a high death-rate on the one hand; on the other hand, a high percentage of them marooned. For example, between 1820 and 1826, 1085 males and 272 females marooned, but about 64% of them were re-captured.<sup>70</sup> This may explain why certain observers of that time have described the so called 'benevolent' attitudes/policies of British Colonial Authorities to the 'recaptive' Africans as a disguised slave trade and a pool of cheap labour readily available, as and when required.

## 3.4 Banking, Finance and the Economy

### 3.4.1 The Economy in 1810-1839: An Overview

The period prior to the British conquest of Mauritius was characterized by Anglo-French Colonial Wars and, in particular, the Napoleonic Wars. Trade suffered a lot; speculation was rife; industrial production went down, and uncertainties did much harm to trade and business in general. Following the British conquest in 1810, the British Navigation Acts initially impeded trade, especially with the ban on foreign ships, in spite of a declared policy of free trade by Governor Farquhar.

The Merchant Class was flourishing before the British blockade, as from 1806. But the immediate post-war period impacted negatively on trade and business in general for that class. Shipbuilding

went down because, on the one hand, there was a decrease in demand for ships and, on the other hand, there was stiff competition from shipyards in India and New South Wales. Furthermore, there was a great fire of 1816 which destroyed about half of the warehouses and buildings of the Merchant Class, followed by some destructive tropical cyclones.

According to A. d’Epinay,<sup>71</sup> “[...] pas un navire ne quitte l’île sans emporter plusieurs des riches familles en Europe [...]. Comme tous ces colons émigrants sont précisément ceux qui ont réalisé de la fortune, il en résulte que la Colonie devient de plus en plus pauvre.” There is no doubt that some of these emigrants were possibly leaving because they could not live under British rule. Moreover, the capital exodus resulting from movements of the wealthy would be a recurring feature in the 19<sup>th</sup> century Mauritius.

What was the response of the new British Colonial Government in Mauritius? Very early on, Governor Farquhar encouraged the setting up of the Bank of Mauritius in 1813 and later founded a *Société Agricole* with the objective of encouraging the development of the Sugar Industry. Further, in response to the requests for assistance from the Merchant Class after the fire, the Government took two measures. Firstly, a first loan of 100,000 dollars, followed by a second loan of 200,000 dollars were granted to the newly-created Bank of Mauritius; and secondly the Government passed, as a temporary and exceptional measure, the suspension of the Navigation Acts. As a consequence, Mauritius became a free port which would favour both external trade and agricultural production, with French ships being allowed to come to Port (see-table below).

Year	No. of British Ships	No. of Foreign Ships (of which French ships)	Total
1816	237	109 (84)	346
1817	272	148 (101)	420
1818	214	139 (105)	353
1819	234	128 (105)	362
1820	232	69 (56)	297

Source: Mauritius Almanachs

The impetus to trade was obvious, given that the French ships also stopped over at Réunion Island (ex-Bourbon Island). Equally, in the aftermath of the defeat of Napoleon in 1815, France felt the need to import sugar. Thus, as from 1816, Mauritius benefited from the temporary suspension of the Navigation Acts by exporting sugar to France, the more so since import tariffs in France were lower than in Britain, and French ships were coming to Port Louis. Thus agricultural production benefited too. But this trade came to an end in 1820, following lobbies from Réunion Island.

Meanwhile, the plantocracy lobbied the Colonial Government intensely in Mauritius and the Imperial Government in London to do away with the preferential tariffs on sugar imports into Britain in favor of the British West Indies. And, in 1820, Britain granted freedom of trade, so that Port Louis became a free port. In 1821, the British West Indies lobby in Britain succeeded in fighting back by arguing that Mauritius could not benefit simultaneously from free trade and preferential tariffs for its sugar.

In Mauritius, there were debates between the Merchant Class and the Planters Class. It should be noted, however, that with the expansion of the Sugar Industry, the Merchant Class (of French *colons*) would progressively invest in the very profitable new business. The Planter Class was led by A. d’Epinay who resolutely defended the interests of the expanding Sugar Industry, emphasizing that Mauritius should rely more on sugar production and should lobby for preferential import tariffs to Britain rather than for a waiver from the Navigation Acts. Meanwhile, sugar production received a boost from 1820 to 1825 thanks to exports to France and to the waiver from the Navigation Acts.

Nevertheless, the preferential tariffs for the British West Indies, together with the freight differential, represented a major disadvantage *vis-à-vis* the British West Indies, which proved to be

powerful competitors within the British Empire. The planters in Mauritius found support through the Sir R.T. Farquhar, ex-Governor, and other supporters of free trade in the House of Common, like Mr. Huskisson, then President of the Board of Trade. The Mauritius Trade Bill came to British Parliament on 21 March 1825. In the debates, Mr. Huskisson, in presenting the resolution, said:

*“This island is cultivated in the same manner as the West-India islands. I know of no advantage it has over them; whilst its greater distance, by increasing the expense of freight, and its frequent exposure to hurricanes would seem to place it under some natural disadvantages [...] I do not now apprehend that any serious prejudice can accrue to the West-India planter, as the quantity of sugar grown in that island is not considerable.”<sup>72</sup>*

The last comment would turn out not to be the case in the future, as sugar production increased exponentially over the next four decades in Mauritius. For his part, Sir R. Farquhar had this to say, amongst other thing:

*“Being thus frustrated in their speculation as to the free trade, they naturally became an agricultural colony, and in consequence of the successive hurricanes which destroyed the cotton and clove plantation, sugar was the only produce which enabled them to provide for their own subsistence, or to pay their taxes [...] Bourbon being severed, by the Treaty of Paris, from Mauritius, enjoyed all her ancient advantages [...] Mauritius was placed in this anomalous situation, since her connexion with Britain, that she was sacrificed to European policy; and, as to her trade, depressed, under some reference to our India system.”*

Sir R. Farquhar used some of the arguments of the plantocracy in Mauritius, with regard to the comparison with Bourbon and with regard to the impact of hurricanes on the destruction of cotton and clove plantations. Moreover, Sir R. Farquhar also placed the plight of Mauritius in the context of overall British Imperial policy. At the time of the British conquest, Mauritius was under the *aegis* of the East India Company, hence this influence on ‘our India system’. Indeed, Mauritius was conquered because of its strategic importance to the British Empire; for the same reason, and to some extent in defence of free trade, there would be an equalization of tariffs on the imports of sugar into Britain for all the colonies of the Empire.

The impact of the tariff equalization was enormous: the rapid expansion of the Sugar Industry, the flow of capital from British credit houses and merchant companies and the resulting investment in machinery and new technology. The Planter Class, conscious of the fierce competition for sugar in the British Empire and on the world market, was ready to attract British capital by mortgaging its sugar estates. A. d’Epinay wrote in his memo to Lord Goderich:

*“Une quantité considérable de machines fut en peu de temps achetée de la Métropole, plus de 150 machines à vapeur destinées aux sucreries, avec une bonne quantité de machines de tous genres, roués, alembic, générateurs, etc., furent importés dans la colonie. La dépense totale pour ces achats des machines importées à L’île Maurice pendant les années 1826, 1827, 1828 et 1829 s’évaluent à £ 140,058 qui, d’après Monsieur Huskisson, dépasse de beaucoup les achats des colons des autres colonies avec les marchands de la Métropole. Toutes les plantations furent hypothéquées afin de subvenir aux frais de construction de différentes manufactures et peu des colons sont parvenus à s’acquitter.”<sup>73</sup>*

In addition, there would be a fair number of British traders and businessmen who moved to Mauritius, becoming involved in various economic activities: internal trade, shipping, buying sugar estates, etc. They would join the Merchant Class of French *colons* and of Coloured People. It is of importance to note that there was already a Merchant Class of Indian origin, mainly South Indian, since the days of French colonialism; by the beginning of the 19<sup>th</sup> century, and during that same century, there would be another flow of Indian merchants from Gujarat and Bombay. They were involved in internal trade and external trade, especially trade with India. Some of these two strands of traders would be able to accumulate sufficient capital to become major owners of immovable properties, in particular, of sugar estates as well as money lenders.<sup>74</sup>

Similarly, as early as the 18<sup>th</sup> century, there were a few Chinese inhabitants in Mauritius; with the encouragement of Governor R. Farquhar, Chinese immigrants came to Mauritius, with some becoming traders, whilst others would have such occupations as marine carpenters, sailors and artisans.

### 3.4.2 Bank of Mauritius - 1813

During the period of French colonialism, there was no bank operating in Isle de France. It was only with the British conquest that Banking Laws were introduced and the first Bank was set up with capital from private individuals and with the active support of the Governor Sir Robert Townsend Farquhar. It is to be noted that Sir Robert Farquhar, through a proclamation dated 17<sup>th</sup> September, 1813, tried to institute a 'sort of Government Bank,' but he very quickly gave up the idea.

On the 2<sup>nd</sup> December, 1813, a proclamation was issued whereby the new Bank of Mauritius was set up on the principle of a Chartered Bank. That same proclamation contained equally the new Banking Laws.

The initial capital was \$200,000; 200 shares of 1000 dollars each were issued. It was essentially an association of private individuals. It seemed that the Bank initially won over the confidence of the merchants, business in general and the public.

Moreover, the fire of 1816 was so devastating that many persons doing business in Port Louis suffered heavy losses. As a consequence of this, access to credit was severely affected. Thus the Bank called for assistance from the Government in October 1816. In its response, whilst the Government was favorable to various requests made, it made it clear that the Bank and the Government should be independent and that, in particular, it could not accede to the request that "*Government should guarantee the Bank paper in circulation.*"<sup>75</sup>

Moreover, the Government agreed to the following:

- i. The Government would receive "Bank paper into the public chest".
- ii. A loan to the Bank of 100,000 dollars.
- iii. An increase in the capital of the Bank by 100,000 dollars was allowed through the issuing new shares worth 100 dollars each.

Further, the Government recommended that:

- a) "*the object of the Government being to facilitate as much as possible the means of circulation among the merchants, recommends that no individual or mercantile house should in future have a credit exceeding 20,000 dollars at the bank and that no old debtor to that amount should have any new credit.*"
- b) "*a company Inspector shall be named by the Government, to be present, as a check upon the proceedings, at all the sittings of the Actionnaires*".

Also, the Government bought the 164 unsold new Bank shares and 8 original Bank shares which amounted to 24,400 dollars. Thus, Government had a direct stake in the Bank, on top of the loan of 100,000 dollars; this explained recommendation (b) mentioned above. In spite of all these measures, the Merchant Class was complaining of difficulties in acceding to credit from the Bank, and in May 1818, the Government granted a further loan of 200,000 dollars at a rate of interest of 6%.

As regards recommendation (a) the Government was concerned that a few individuals or companies were having access to a greater share of credit facilities.

Another problem facing the Bank and the economy was the shortage of specie. Moreover, in 1825, the Bank was closed due to bankruptcy and went into liquidation. It is to be noted that among the Directors of the Bank, there were certain well-known merchants: Gaillardon, Charles Pitot, Séries.

### 3.4.3 Petition for a new bank: 1826

Following the collapse of the Bank of Mauritius, and the equalization of tariffs on sugar imports in Britain, there was an attempt to set up a new bank in 1826. A petition was sent to the Governor to that effect, giving full details of prospective shareholders, initial capital and of its constitution. The need to provide a more solid foundation to the new bank by mobilizing ‘considerable capital’ and by being able to have sufficient specie, whenever necessary, was felt; the petitioners proposed to look for capital abroad.

The petitioners had a provisional committee constituted by the following personalities: Charles Pitot, J. Wiehe, Maure, Séries, G. Rougier Lagane, Gaillardon, J. Davy Junior, J. Delort and P. d’Epinay. The petitioners looked for capital from abroad; and the credit house, Cuttenden, Mackillogh & Co, based in Calcutta, agreed to contribute 100,000 *piastres* to the initial capital and to provide credit facilities of 300,000 *piastres*.

It was then proposed that the traders in Mauritius, mainly the French *colons*, would contribute 200,000 *piastres* to the initial capital, with each share priced at 1000 *piastres*. Thus the total initial capital would have been 300,000 *piastres*.

But the Acting Governor, General Hall, rejected the proposal in a letter dated 13 February 1827.<sup>76</sup> Nevertheless, the planters would persevere and would come up with a new proposal in 1832.

### 3.4.4 The Mauritius Bank - 1832

The attempt to set up a bank with the help of British capital would succeed in 1832. A. d’Epinay and his brother P. d’Epinay were the personalities who developed the necessary rapport with the British Financial houses Reid Irving & Co., Barclay Brothers & Co., and Fairlie Bonham, who would contribute significantly to the starting capital of 500,000 dollars (i.e. £ 100,000).<sup>77</sup> The contribution of the British investors was as follows (in dollars):

Reid Irving & Co.	85,000
Barclay Brothers & Co.	50,000
Fairly Bonham & Co.	50,000
A. W. Blanc	5,000
E. Robinson	5,000
Col. Johnston	5,000
	200,000
Source: The Charter of Mauritius Bank MNA	

The 300,000 dollars left were to be obtained by subscription in the colony of Mauritius. As the prevailing Banking Laws allowed for the Bank to start its operations once three-fifths of the starting capital has been raised, effectively, once 100,000 dollars were subscribed to in Mauritius, The Mauritius Bank started its operations. It appears that the remaining two-fifths of the capital were hardly subscribed to. Thus, the British investors would have contributed about sixty percent of the equity of the Bank.

Adrien d’Epinay would be the Attorney of the Bank and would be appointed Director as well. There was a Board of nine Directors, three of them would be British. The first three British Directors were: Andrew Laing, James Alexander Pierson, William Thompson, who could be replaced, when necessary, by respectively Charles Telfair, Edward Chopman and Henry Passmore. It is of interest to note the name of Charles Telfair who played an important role as a planter, a businessman and Government Official as from the British conquest. Among the first Directors in Mauritius, were Gaillardon, R. Laganne, Henry Adam, d’Epinay; later on, C. Wiehe would join them.

The Bank had to face the perennial issue of specie/metallic currency (mentioned early on) which was aggravated with the emancipation of slaves and the arrival of Indian indentures labourers. It is true that the labourers, who were paid in metallic currency, tended to save them by hoarding and brought them to India, whenever they returned. Further, with the influx of Indian labourers, consumption increased, causing an increase in imports which were paid in metallic currency. Moreover, there were other factors which contributed to the drain on the metallic currency: the

unfavorable balance of trade with India, Madagascar and Bourbon, Government policy of limiting expenditure and the holding back the excess revenue. In 1841, in a letter to Governor Sir Lionel Smith, G. Robinson, President of the Mauritius Bank complained:<sup>78</sup>

*“Your Excellency is doubtless aware of the high rate of wages paid to all classes of the labouring population, a rate, I may be allowed to observe, far beyond what is necessary for their wants, or even for their lavish indulgence: the fact, however, is undoubted, and the consequences of it are that a very large sum of money is monthly abstracted from the circulation of the colony, hoarded by the Indian labourers and those of other countries, until the time may arrive when they leave the colony enriched by their highly paid labour.”*

And yet, the labourers were being paid miserable wages. Both the British and French business communities jointly wanted very, very cheap labour. Similarly, as early as 1832, the Directors of the Bank wrote a letter to Governor Sir Charles Colville, opposing some amelioration policies in favour of the enslaved people. The Directors included: Gaillardon, A. d’Epinay, Andrew Laing, Pierson, W. Thompson, R. Laganne.

Faced with the scarcity of specie, the Mauritius Bank and the Mauritius Commercial jointly wrote a petition on 27 June 1842, requesting Government to undertake to furnish Indian labourers (who wished to return) with Bills on Calcutta and Madras, to accept demand for a local currency and to pass a law prohibiting the export of specie. The Government rejected the demands, but agreed to make monthly advances to both banks of £ 1200 for four months, to be paid back £800 monthly with interests.

The issue of the need for a local currency would be raised again during the 19<sup>th</sup> century. Further, through the Mauritius Bank, there was flow of capital back to Britain, especially to Reid Irving & Co. By 1847, with the economic crisis in London, Reid Irving & Co would collapse and so would the Mauritius Bank.

It must be highlighted that the Mauritius Bank did all it could to oppose the setting up of the Mauritius Commercial Bank in 1838; thereafter, there would be intense rivalry between the two banks. On the local front, in the polemics between *Le Mauricien* (which supported the Mauritius Commercial Bank) and *Le Cernéen* (the newspaper of A. d’Epinay), the point was made that the Mauritius Bank was charging a set of commissions to its customers, thus making credit very expensive.

#### 3.4.5 The Mauritius Commercial Bank - 1838

Just like the Mauritius Bank in 1832, the driving force behind the creation of the Mauritius Commercial Bank was the British business community, in particular the traders based in Port Louis or London trading houses with an office in Mauritius. The main company was Blyth, Brothers and Company. The latter played a most important part in winning support for the bank from both the Colonial Government and the Imperial Government in London.

The planters and traders in Mauritius found strategic partners in the British business community, just as the Mauritius Bank had done earlier on.

The starting capital was meant to be 500,000 *piastres*; with 3/5 of that amount, i.e. 300,000 *piastres*, the Bank started its operations on September 1838, as allowed by the Banking Regulations. Out of 198 individuals/group of individuals who bought the shares, about ¾ were mainly the French *colons*, and the rest were from the British business community; there were also a few Coloured and two Indians who brought shares. Moreover, about fifty percent of the shareholders bought less than five shares; thus they did not have voting rights, not owning the minimum of 5 shares.

A fair percentage (about 25%) of shareholders was planters or planters/traders. For example, Paul Froberville received financial compensation of £9020 in 1837 for 282 slaves; he was a big planter to possess so many slaves. Similarly, such British shareholders as Hunter, Chapman, Arbuthnot, were planters or planters/traders.

### 3.5 The Economics and Politics of Abolition of slavery

#### 3.5.1 Introduction

To understand the various issues concerning abolition of slavery, and the way people would react to them, it is important to recapitulate the social forces in Mauritius involved at that time. There was the British Colonial State in Mauritius and the British Imperial Government; the Planters Community were predominantly French, with some British planters. Moreover, there was an important presence of the British traders or financiers either through a company in Mauritius, representing their interests or through an office set up in Mauritius, and they provided credit to the planters to such an extent that around three quarters of the sugar estates were effectively owned by them in the early 1830s;<sup>79</sup> there was the labour of the numerous enslaved people, and finally the Free Coloured People.

The process leading to the abolition of slavery on the 1<sup>st</sup> February, 1835, had been dealt with thoroughly by various authors. We mention here certain salient features. Two events of the French period are of relevance: firstly, the victory of the enslaved people of Saint-Domingue against French colonialism and, secondly, the arrival of two delegates from France, Baco and Burnel, in Isle de France, to implement the French Revolution's decision to abolish slavery in the French Empire. The French plantocracy was worried that the slaves in Ile de France might emulate the events of St. Domingue. After all, they were dead against the abolition of slavery and they succeeded in getting Baco and Burnel sent back. After the British conquest, the plantocracy carried out an illegal slave trade, succeeding to bring into Mauritius about 30,000 slaves according to the Commission of Enquiry of Colebrook and Blair, and this with the connivance of British Governors and British Officials. Thereafter, they opposed the amelioration policies in favour of the slaves to such an extent that the whole programme turned out to be a failure. Yet again, they succeeded in initially getting Jeremie, sent by the British Government to implement the policy of abolition, returned after forty days of economic standstill. They sent on two champions, a lawyer, Mr. A. d'Epinay, to represent and defend their interests in 1830 and 1833 in relation mainly to the abolition of slavery and their representation in governmental decision-making.

#### 3.5.2 The Act for the Abolition of Slavery

On the 28<sup>th</sup> August 1833, the House of Commons in Britain approved "An Act for the Abolition of slavery throughout the British colonies; for promoting the Industry of the manumitted slaves, and for compensating the persons hitherto entitled to the services of such slaves."

The title of the Act is very misleading from one aspect in particular; this twenty-three page Act states on the last page, as per clause LXIV, the following:

*"And be it further enacted, that nothing in this Act contained doth or shall extend to any of the Territories in the possession of the East India Company, or to the Island of Ceylon, or to the Island of Saint Helena."*

This clause clearly contradicts the title which refers to abolition "throughout the British colonies". The non-abolition of slavery in India (one Territory in the possession of the East India Company) may have had a bearing on the development of the situation in Mauritius. Slavery in India would be abolished in 1843.

By this time, since the mid 1830s Indian indentured labourers were imported to Mauritius from a reservoir of very cheap labour in British India. Already, the policies of British Colonialism in India on land had caused an increase in landless peasants. With the maintenance of slavery in India, there is no doubt that, to some extent at least, this had contributed to the depression of wages of the Indian labour force; in turn, the prospective indentured labourers would be in a position to accept very low wages.

Thus, the following question arises: By so doing, did the British Imperial Government, possibly indirectly, contribute to the refusal of planters to pay decent wages to the emancipated enslaved people and hence to contribute to the latter's leaving the plantations 'en masse'?

Moreover, it is interesting to note that there were many debates and lobbies from the West Indian planters/slaves-owners before the Act was passed. The initial idea was not to pay any compensation to the slave-owners but to have a long period of apprenticeship; the latter which provided unwaged labour to the slave-owners would have helped to pay for the costs of emancipation. Thus, the enslaved peoples themselves were to finance their emancipation! Thereafter, in February 1833, the British Government came up with a proposition of £15 million loan and twelve years' apprenticeship<sup>13</sup>. The lobby of the West Indian planters/slave-owners and British financial houses led to the Government changing the loan to a gift and then to increase the gift to £20 million. It was then that the period of apprenticeship was reduced to six years for praedial slaves. It appears that there was concern about the implementation of the Act in so far as the various conditions attached to it are concerned. In fact, at a House of Commons sitting in June 1835, Mr. F. Buxton moved

*"That a select Committee be appointed to inquire whether the conditions on which the £20, 000, 000 £ were granted for the Abolition of Slavery have been complied with."*<sup>80</sup>

Moreover, after debates and the speech of Sir George Grey, Mr. F. Buxton withdrew his motion.<sup>81</sup>

However, the implementation of the Act in Mauritius justified the apprehension of Mr. Buxton. An Order in Council of September 17, 1834 defined the ways and means by which the apprenticeship system was governed. As Moses D. E. Nwulia wrote,

*"The Order in Council imposed heavy penalties on the apprentices for non-performance or ill-performance of their duties, whether the duties were obligatory or contractual.*

*Compared to the penalties imposed on the apprentices, the masters suffered only slight penalties for not fulfilling their responsibilities towards their apprentices."*<sup>82</sup>

The plantocracy wanted to sustain the expansion of the Sugar Industry and the Colonial State in Mauritius supported their efforts, irrespective of the impact on apprentices. The Order in Council turned out to be worse still at the level of implementation. So much so, that Lord Glenelg, the Secretary of State for the Colonies, wrote a despatch to Governor Nicolay, asking him to call to the attention of the Special Magistrates "the frequency of punishments generally and particularly to those of a corporal nature which are stated to be far beyond the proportion in the West Indies of a merely similar extent of population."<sup>83</sup> Thus, in many ways, apprenticeship in Mauritius was similar to slavery, without the whipping, in most cases!

Furthermore, through the issue of the illegal importation of slaves during the 1810s and early 1820s, was raised during debates at House of Commons and those of Lords, it was found by Lord Glenelg that:

*"Their Lordships must all feel that the difficulties which surrounded the identification of any individual negro who had been illegally imported into Mauritius were all but insurmountable."*<sup>16</sup> During the debates, Lord Brougham said "that if we pay 500, 000 livres or 600, 000 livres in respect of illegally imported slaves, or in other words, for felony and piracy, it would be one of the most hateful operations ever perpetuated in the financial concerns of this country."<sup>84</sup>

### 3.5.3 The Economics of Abolition

The British Imperial Government agreed to pay £20 million in compensation to the slave-owners throughout the British Empire. The plantocracy in Mauritius, both British and French, together with the British credit houses obtained £2.1 million. The plantocracy sent a representative, Mr. A. d'Epinay, to Britain to defend their interests: firstly, to obtain financial compensation and secondly, for the British Government not to impose any penalty on the illegally imported slaves. However, it was difficult for Mr. d'Epinay to meet the Colonial Secretary or Officials of his Office, the representatives of credit houses, like Reid & Irving and Barclay & Co. made representations on his behalf and succeeded in organizing some meetings for Mr. d'Epinay to have with the Colonial

Office. It is to be noted that Reid & Irving and Barclay were those who contributed a major proportion of equity of the Mauritius Bank whose Director was Mr. A. d'Epinay.

On the other hand, the British Business Community in Mauritius expressed its concern to the Governor Sir C. Colville as far back as 1832 on Amelioration Policies for slaves and later on against the visit of Jeremie. In a letter to Sir Charles Colville, dated 3 April 1832, they requested a meeting between a delegation consisting of Mr. Hunter, Welbs, W. Thompson, J. Blyth and Sampson, to meet the Governor with respect to the Order in Council of 2<sup>nd</sup> November 1831, on the amelioration of conditions for slaves. They highlighted in their letter that the security of immense capital from Britain and of their investment in the Sugar Industry.<sup>85</sup> Later on, on 15 June 1832, they wrote another letter implicitly supporting the 'agitation' against Mr. Jeremie's visit.<sup>86</sup> The convergence of interests between the French plantocracy and the British Business Community would manifest itself with the setting up of the Mauritius Commercial Bank in 1838, after the launching of the Mauritius Bank in 1832.

Following the payment of the compensation in the Caribbean Islands, there was the setting up of the 'Colonial Bank' in 1836, a bank which would become the Barclays Bank. There is no doubt that some compensation money went into the equity of the Bank. In Mauritius, twenty-two out of the twenty-four major trading houses contributed to the initial capital of the Mauritius Commercial Bank.<sup>87</sup> Moreover, during the public debates in connection with the setting up of the Mauritius Commercial Bank, it was revealed that compensation money was involved. Thus, a letter addressed to the Editor of *Le Mauricien* of 28 February 1838, contained the following:

*"Quant à la Banque actuelle, créée pour des opérations de finance sur notre indemnité, et pour liquider les propriétaires obérés, elle a atteint également son but, avec l'applaudissement de tout le monde [...]"*

It is to be borne in mind that compensation money was paid during the years 1836 and 1837, until December 1837 and the Mauritius Commercial Bank was opened on the 1<sup>st</sup> September 1838.

The payment of the compensation money, followed by an increase in the price of sugar, had definitely a positive impact on the economy. There was much capital injected in the economy; consumption went up so that imports increased from £916,529 in 1836 to £1,035,783 in 1837, whilst exports was £831,050 in 1837 compared to £903,457 in 1836. Most probably, there might have been some investment in the Sugar Industry.

### 3.6 The aftermath of emancipation and the arrival of indentured labour

#### 3.6.1 Why did the enslaved people leave the plantations on Emancipation?

For quite some time, it has been claimed that, in both Mauritius and the Caribbean Islands, the emancipated enslaved people chose to leave the plantation as a consequence of the inhuman treatment and of the economic exploitation which they suffered during the days of slavery. Whilst this was possibly an issue influencing the movement of some the ex-enslaved peoples away from the plantations, the situation appears to have been somewhat different for the ex-enslaved peoples in general.

As there has been some valuable research in the Caribbean Islands on the issue based on evidence given before the Select Committee of the House of Commons on the West India Colonies in 1842, we shall briefly review the findings of that research which enables us to put in context the movement of the emancipated enslaved peoples from the plantations in Mauritius. According to Douglas Hall,

*"By 1842 the immediate reactions of both planters and ex-slaves to the emancipation had occurred, and although some measure of stability had been achieved in labour relations there was general complaint on the part of employers of the scarcity, the unreliability and the high price of estate labour."<sup>88</sup>*

The evidence provided by the Select Committee came from the planters, not from the emancipated enslaved peoples; in spite of the in-built bias, the evidence would point to a different picture. In

fact, in British Guiana, the withdrawal of the emancipated enslaved peoples reflected far more positive reactions to prevailing rates of wages and local market prices and their desire to preserve their freedom.

Thus, almost all the ex-slaves remained on the estates of the planter Henry Barkly in British Guiana.<sup>89</sup>

Further, the emancipated enslaved peoples perceived their freedom in terms of retaining their rights to free housing and to cultivating plots of land allocated to them during the days of slavery for years. The abolition of slavery could only mean a betterment of their living conditions, together with reasonable wages. Instead, they were being asked to surrender these rights in the name of freedom! Effectively, the planter H. Barkly of British Guinea, in response to a question from Mr. G. Berkeley, a Member of the Select Committee, had the following to say:

*“Berkeley: In British Guinea have you known a belief to exist among negroes, that when they were made free the Queen gave them their houses and land.*

*Barkly: I believe that was a very general belief at first. I was told by the negroes on Highbury estate, when I went there, that it was all nonsense that the Queen made them free without giving them a free house and land, and they called upon me to carry out that proposition, by giving up the houses and grounds.”<sup>90</sup>*

Similarly in Jamaica, the evidence indicated that whenever labour was not coerced by imposing rent and was being paid regularly reasonable wages, there was the availability of continuous labour on the sugar estates.

In Mauritius, there was no Select Committee to investigate the conditions of the emancipated enslaved peoples, and research is lacking on that aspect. Moreover, the gargantuan appetite for fat profits by the planters, and the British credit houses, together with the active support of the Colonial State, drove them to look for alternative sources of labour, and especially very cheap labour. They found it in British India, where access to the vast reservoir of cheap labour and its relative proximity (and hence low transportation costs) would make it possible for them not to pay reasonable wages to the emancipated enslaved peoples or to give them access to free housing and land which they enjoyed for so many years. They would, thus, be able to compete more successfully with the West Indian planters, to expand further the Sugar Industry and to have a major share of the British market.

In fact, since during the Apprenticeship Period, apprentices were paid very low wages for their ‘extra service’ because there was already indentured labour since 1834 and the wages were based on the prevailing wage rates of indentured labour.

The following article from *Le Mauricien* of 12 February 1838 is very revealing indeed:

*“Il est impossible de ne pas conclure de là que notre position offre encore d’immenses avantages parce que la même raison qui fait que le travail libre sera ruineux pour la Jamaïque, nous empêche de souffrir du nouvel ordre des choses; c’est-à-dire que s’il est exact de porter les salaires d’un laboureur aux Antilles à 22 piastres 50 c. par mois, il ne le sera pas moins de ne les compter qu’à 5 piastres. Chez nous on a mieux procédé. Il est vrai que nous avons un terme de comparaison: les gages des laboureurs indiens. C’est sur ces gages que l’on a basé le prix de l’extra-service actuel et la transition s’opérera naturellement sur la plupart des propriétés. Nous pouvons donc en conclure que la position du maître vis-à-vis ses apprentis n’éprouvera pas un changement assez notable pour détruire l’équilibre actuel [...] Ceci nous explique une demande qui a été faite dernièrement par le Gouverneur aux Juges spéciaux de la colonie, au sujet du prix de l’extra-service. La métropole trouvait le salaire de l’extra-service un peu mesquin: nous comprenons son scrupule si elle avait les états de la Jamaïque sous les yeux.”<sup>91</sup>*

Thus, the *planteurs* in Mauritius were paying the apprentice labourers less than one-quarter of the wages paid in Jamaica! Even the Imperial Government found the wages for extra-service as

'mesquin', i.e. as petty. But the Imperial Government, having itself allowed the continuation of slavery in India, did not take any measures to remedy the situation. Thus, the Imperial Government, the Colonial Government of Mauritius, the French plantocracy and the British traders/financiers converge consciously in implementing a policy which knowingly would do much harm to the emancipated enslaved peoples. The latter would be excluded from the mainstream economy, deprived of any wages and of any land and housing in an increasingly monetised capitalist economy. The subsistence economy, to which the apprentices were used, was threatened by the capitalist economy. Their marginalisation and exclusion would be accelerated with the massive importation of indentured labour.

### 3.6.2 The new economic system and indentured labour.

Colonial plantation slavery was the worst form of exploitation, particularly economic exploitation, prevailing during the last five centuries. No wages, an oppressive social system, the destruction of the family, the denial of the humanity of the enslaved peoples, cultural extermination.

Indentured labour was imported in the context of the transformation of the economic system from a semi-feudal into a progressively capitalist economy. The conditions of indentured labour were, in many aspects, similar to those of slavery. A new system of economic exploitation was being instituted, the driving force being the profit maximisation and capital accumulation of the French *colons* and the British traders/financiers with active support of the British Colonial State and Imperial Government. Nevertheless, whilst there was continuity in terms of exploitation, the system was not 'a new system of slavery' as proposed by Hugh Tinker. With wages, and free housing and other facilities (just like slave labour), some *sirdars* and indentured labourers would be able to save and buy land later on, thus creating a Planter Class. That was impossible under slavery.

But, British colonialism created the fragmentation of labour by depressing wages; with the abolition of slavery, the British Colonial State would support the French *planteurs* in their use of the economic weapon to bring about this fragmentation. And this, on top of the prevailing oppressive Legislation on labour, cultural rights, family rights, social relations!

The exclusion of the ex-apprentices from the mainstream economy and the fragmentation of labour would have an impact even on modern Mauritius. Admittedly, in the history of Mauritius, political leadership has now and then used that historical state of affairs in defence of their interests.

### 3.7 Concluding Remarks

The period 1810-1839 in the history of Mauritius saw the creation of a monocrop economy, with the destruction of the cultivation of other crops. The driving force for fat profits and capital accumulation created conditions for a perpetual quest for coerced unwaged labour and later coerced waged labour.

Moreover, the Capitulation Treaty not only created conditions for the continuation of slavery until 1835, but created conditions for extensive corruption of the State apparatus. With illegal slave trade, the British Government was in connivance with the French *planteurs*; the civil servants, whether British or French, were generally biased in favour of the planters/slave-owners.

The value of slave labour for the period 1823-1835, gives an idea of the intensity of the prevailing system of economic exploitation. The viciousness of the system was crowned with a compensation of £2.1 million for slave-owners at the time of the abolition of slavery. And a new system of exploitation in the form of indenture labour would follow and be sustained during the 19<sup>th</sup> century.

## CHAPTER 4 THE BRITISH COLONIAL PERIOD AND INDENTURED LABOUR SYSTEM

### 4.1 The Organisation and Structure of the Mauritian Society and the Advent of Sugar

#### 4.1.1 The early form of organisation of sugar property.

According to 1832 Census of slaves, out of some 2,605 estates in Mauritius, 1,424 of them, which contained some 8,370 slaves, were not agricultural. 38,594 slaves lived on some 1,036 agricultural estates, of whom around 26,000 lived and worked in as slave-and sugar-related environment. The rural environment was characterised by a few large estates surrounded by a large number of smaller estates, some growing sugar cane, others not, but all linked to the larger sugar estates for jobs and services. The poorer French colonists looked forward to the owners of the larger estates to provide leadership or to obtain the protection which they needed in the rural districts where the colonists lived in “a state of continual disquietude and hostility from runaway slaves”.

The development of sugar cane plantations gave rise to a large number of establishments. Sugar cane was grown on numerous estates which were of different sizes. On account of the investment required and expenses involved, sugar cane could only be profitable on large sugar estates. Generally, estates with a large supply of slave labour concentrated on sugar cane cultivation which was the most labour-intensive crop. Sugar cane cultivation and slave-ownership went hand in hand. In 1830, only 74,839 of 272,022 inventoried *arpents* of land were under cultivation. There was still, at that time, a considerable amount of undeveloped land.

The advent of sugar cane resulted in the disappearance of small landowners and led to the creation of large sugar estates. Landownership soon came under the control of a handful of people. As from 1825, with the equalisation of tariffs and the resulting opening of the British market for sugar from Mauritius and the rapid growth of the industry, British companies began to show a growing interest in the island. They lent money to Mauritian sugar manufacturers on very advantageous terms to cultivate the plantations and purchase machinery for the mills. Some of those companies established themselves in Mauritius and opened branches in Port Louis. The arrival of British merchant firms revived trading activities on the island. Trade grew steadily especially as from 1830.

The most significant change in 19<sup>th</sup> century Mauritius was the dramatic expansion of the sugar industry and its gradual encroachment upon the society and economy. This period witnessed the transformation of Mauritius from a trading emporium to a sugar plantation economy. The advent of British rule was to drastically transform the economic, social and political life of Mauritius and upset its socio-economic and racial hierarchy.

Economic and social status, measured in terms of slave and landownership, became more important in differentiating between the colonists, and contributed to growing disparities between them. More importantly, it influenced the attitude and relations between slaves and their owners in this “extremely dramatic” transition and insertion into a sugar plantation economy. The slaves then constituted the bulk of the population. In 1826, there were 42,621 male and 26,455 women slaves. By 1835, when slavery was abolished, the slave population was estimated to be at 66,613.

In the early decades of British rule, the issues of slavery, slave trade and the amelioration of the conditions of the slaves were at the forefront of political upheaval and tension in Mauritius.

#### 4.1.2 The emergence of the sugar oligarchy

Interaction of slavery and sugar can be grasped fully, only with an analysis of the emergence of the sugar planters as an active force in local politics, in high finance and the judiciary. The investiture of quasi-military and political power in the hands of the social and economic elite contributed to the emergence of the sugar industry oligarchy, which took advantage of the new conditions created by the establishment of British rule and the expansion of the sugar plantation economy to consolidate its hold over the Mauritian society.

At the core of the opposition to the measures promulgated by the British Government for the improvement of the conditions of the slaves, there was the *Comité Colonial*. The *Comité*, which was created in 1827, was an outgrowth of the caucus which has campaigned successfully in the 1820s for the abolition of the discriminatory tariffs on Mauritian sugar imports in Britain. Besides their close connection with the sugar industry, members of the *Comité Colonial* they were also involved in trading and other activities.

With a large resident planter class owning much of the sugar industry, there was no serious intention on the part of the Colonial Authorities to challenge the entrenched, local economic interests. By 1832, control of the oligarchy over the political, economic and social life of the island had reached a point where they felt strong enough to confront British rule head on, with the use of physical force, if necessary. It was estimated that some 5,000 men formed part of those “resistance” associations.

Their leader was d’Epinay who had, by then, gained considerable influence and ascendancy over the local population. The weaving of the web of economic, political and social interests took place principally on the rural districts. Another group involved in the interplay of politics, family connections and race in the rural districts were the Civil Commissaries and their assistants, who took over from the District Commandants who had been reinstated by Farquhar in 1816.

In 1827, an Ordinance in Council was introduced to improve the conditions of slaves in Mauritius. This Ordinance appointed a Protector of Slaves. The Protector dealt with all criminal cases and, as guardian of the slaves, he heard their complaints and brought them before the Tribunals. The Ordinance limited the corporal punishment inflicted on slaves and regulated the size of the tasks on the plantations. A novel provision was the establishment of a government Savings Bank under the authority of the Protector for the preservation of slave property. The Slave was empowered to purchase his own freedom and that of his descendants, if he could prove the funds to be his own or hold a certificate testifying to his good conduct for the past five years.<sup>92</sup>

For the sugar oligarchy, the amelioration measures decreed by the British Government were the first step toward the emancipation of the slaves, hence their opposition to these measures. The expansion of the Sugar Industry and preoccupation over the supply of labour retarded attempts by the Governor and the Colonial Establishment to enforce these measures. The Bar and Bench were instrumental in obstructing the implementation of the Amelioration measures. It took five years for the implementation of the Amelioration orders in Mauritius. The influence of the Bar and Bench was also considered to be a prime cause of the colonist rebellion of 1832 over the appointment of Jeremie as Attorney General, in the place of Prosper d’Epinay, Adrien d’Epinay’s brother.<sup>93</sup>

The opposition of the sugar oligarchy to the Amelioration measures were centred around the appointment of the Protector of Slaves who bore the brunt of their attack. The creation of the post of Protector of Slaves caused much outrage and turmoil in the island. The colonists were of the opinion that this measure would give the slaves, with the backing of the British Government, a powerful instrument to challenge the right of their masters over them. Besides they feared that this would aggravate the problem of absenteeism on estates at a time when maroonage was still a serious and endemic problem, as it would provide slaves with an excuse to leave the estate to present their grievances before the Protector. By the early 1830s, the feverish debate surrounding the Amelioration laws and problems of communication in a rumour prone society accentuated the apprehension and nervousness of the colonists and fuelled a state of ferment in the colony. In 1831, Goderich the British Under-Secretary of State expressed his concern that Governor Colville had not bothered to report on the disturbed state of the colony.

#### 4.1.3 Slavery and Maroonage

In the reports and accounts of the structure and organisation of the early sugar plantation society in Mauritius, relatively little is said about the conditions and way of life of the slaves. Yet, they constituted the bulk of the population and in 1820, outnumbering the white population by the ratio of 10:1. Most of the slaves were confined to the estates. In 1832, 56% of the slaves lived on the estates and were thus isolated from the members of the ‘free population’. In spite of the constraints and restrictions placed on them, they influenced the island society in several ways.

Slaves were of diverse ethnic origins and background. But with the ‘Creolisation’ of the slave population, it is most likely that there was an amalgamation of different cultures from the early days of slavery. Further, slaves developed a network of relations and a way of life of their own that was independent from that of their owners.

The conditions of slaves differed from estate to estate and region to region. The common factor that bound them together in the struggle against the harshness of their condition was the constant pressure and coercion which was applied on them in the execution of their tasks and the hardships which they endured at work and in their life on the estate. Slave-owners who were often strapped financially sought to maximise the amount of work which they could extract from their slaves. The policies pursued by their owners in the treatment of their slaves resulted in high death rates among the slave population and contributed to their short stressful life.

Slaves did not take lightly to the conditions of their life on the estates. According to Teelock, Mauritian slaves, like those of other plantation colonies, had to endure harsh living and working conditions as well as the constant threat of physical and psychological abuse. In a typology of power systems, Teelock argues that “plantation despotism ranged at the very end of one extreme where violence was a “prima ratio” and the smallest infractions were often punished with the severest violence”<sup>94</sup>

Coercion and harsh treatment led to retaliation on the part of the slaves. The threat, posed by runaway slaves or maroons, fostered in the island a state of continued anxiety and hostility. As was the case elsewhere, the Mauritian response to maroon activity was harsh repression. In the 18th century, regular maroon hunts were organised by the authorities and colonists. Baron Grant noted in 1730 that fugitive slaves were treated like wild animals and shot ‘whenever the opportunity affords’. Some sixty years later, the fugitives continued to be shot at will; local detachments of police killed 102 fugitives between 1790 and 1812 a manifestation of colonial of paranoia and racism in its most violent and abhorrent form.

The level of maroon activity increased sharply following the cession of the island to Britain. 5,200 declarations of maroonage were made to the Colonial Authorities between 1810 and 1826, an average annual desertion rate of 11.2% to 11.7%. The rate of maroonage coincided with the plantation work cycle. There was an increase of desertions at the time of the more arduous field operations.

The colonists’ aversion to maroonage had two main causes: On the one hand the threat to personal security and property posed by maroon slaves who remained “active and resourceful protagonists”. A second strong motive of resentment on the part of the colonists was that maroonage deprived them of valuable labour which was an indispensable element for the profitability of their operations.

In these circumstances, the colonists, led by d’Epinay and the *Comité Colonial* mounted a strong opposition to the anti-slavery lobbying in the British political circles and the British Press. The idea of losing control over their slaves dug deep into the hearts of the colonists and their perception of property. Proposed Amelioration Laws sent further shock waves throughout the island. The colonists were also aroused by reports of the Anti-Slavery Society in favour of the emancipation of slaves in British colonies without compensation. News were received at the time by several commercial firms in Mauritius that the British Government had decided the immediate emancipation of slaves introduced after 1814 without compensation. This order was later rescinded following representation made in London by d’Epinay.

The problem of maroonage continued during emancipation and aggravated the labour crisis faced by the rapidly expanding sugar industry. The impact of shortage of servile hands was compounded by the sugar industry’s shaky financial conditions which included tapping costly alternative sources of labour. In these circumstances the threat of maroonage provided many slaves with a powerful weapon to renegotiate and alleviate the harsh conditions under which they lived and worked. Between 1835 and 1837, an average of 7.7% of the apprentices was apprehended every year for desertion.

Some of the slaves, once they were emancipated, abandoned field work and left the estates. They were granted squatting facilities by the Government. Some drifted to Port Louis and others settled

on the coast where they eked out a precarious livelihood from the sea. Their place in the island economy was taken by indentured labourers from India.

#### 4.1.4 The Rise and Fall of the Former Apprentices

Mauritian historians have given a good account of the “Grand morcellement” of the 1880s but much less it’s known or reported about what Allen calls the “Petit morcellement” of 1839-1859. The “Petit morcellement” refers to the subdivision of established estates following emancipation.

The “Petit morcellement” arose from the general desire of the former slaves to acquire land and thus to affirm their emancipation from their former servile status. The process, which began in earnest in 1839-40, accelerated rapidly in 1841 and 1842 when the number of sales of estate land seemed to have reached its peak. The “Petit morcellement” may be seen as an outgrowth of the turmoil of the post emancipation situation. It remained an important aspect of colonial life until 1846. Most of the estates comprised at the time large areas of uncleared and unused land. In 1830, only 74,839 of 272, 022 inventoried *arpents* were under cultivation.

The most pressing problem of Mauritian planters was the need to deal with the loss of a substantial portion of their labour force. It was against a backdrop of a severe, and possibly long-term, labour shortage that estate owners began to contemplate the subdivision and sale of part of their property. It was also an attempt on the part of the authorities to bring some order in a seemingly chaotic situation. After 1835, there was a precipitous decline in the size of the apprentice and ex-apprentice population. In 1836, at least 1,015 freed men, or nearly one-fifth of one district’s apprentice population had abandoned their homes and former masters within several weeks of acquiring their freedom. Large numbers of ex-apprentices occupied land after their emancipation often near the estates where their presence was perceived as a threat to public order and to the estates’ economic viability.

The socio-economic realities of post-emancipation Mauritius included a financially strapped sugar industry and the existence of a large and well-established Population of Colour. As an early solution to the labour crisis faded in 1840, estate owners moved to protect their interests. Hence, their attempts to bring back the ex-apprentices and tie them to the land through the “Petit morcellement”.

According to Allen there is also a need to examine the post-emancipation situation in Mauritius in terms other than those of labour supply and/or labour relations. The Mauritian authorities strongly understood that access and control of adequate amounts of capital were of equal if not greater importance to the supply of labour for the survival of the plantation regime. On a number of occasions, the authorities expressed their concern about the financial distress experienced by some planters. (Governor Gomm to the Colonial Secretary 1843; Gomm to Stanley in 1846).

There, is thus, a need to examine the “Petit morcellement” in the light of the financial problems that many planters had to face at the time. There was a strong speculative element in early *morcellement* activity. The financial incentives to subdivide an estate could be considerable. The subdivision of estate land yielded returns of 100-200 percent on the original investment for both large and small land owners. The involvement of the Coloured Population in the “Petit morcellement” became especially pronounced after 1842, precisely at a time when the sugar industry’s problems would have made tapping into the substantial financial resources held by some members of the Coloured Population an alluring option for many planters.

The labour and liquidity crisis of the 1830s and 1840s promoted, not only the parcelling of estates, but also the rise of a class of ex-apprentice gardeners and farmers. There were, in that connection, diverging opinions in official quarters at the time on the activities and contribution of the former apprentices in the island’s social and economic development. The standard view in many circles was that these individuals remained “ignorant, lazy and given to hedonism”. On the other hand, Governor Gomm, in 1846, expressed the opinion that the former apprentices had become “a thriving and improving class of the colonial population”. Some independent observers were equally impressed by the social and economic promotion of the former apprentices. The ex-apprentices small holders could be counted among the 30,000 Persons of Colour forming a middle class and fast rising in wealth and consequence.<sup>95</sup>

Yet within the space of just a few years, the seemingly halcyon days of the mid-1840s had vanished. According to Dr. Mouat, a missionary, in 1852, many of the freedmen who had squatted on small plots of land, lived in a state bordering on misery and starvation. A decade later in 1864, some observers despaired about the future of the ex-apprentice population. For Governor Barkly in 1866, “a large proportion of the former apprentices had never been tempted by high wages or the ambition of raising their children in the social scale. They added little in proportion to their numbers to the exportable produce and wealth of the colony.”<sup>96</sup>

## 4.2 Indian Indentured Immigration

### 4.2.1 The Early Influx of Indian Indentured Immigrants

The importation of Indian labourers in Mauritius began in earnest in 1834, with the introduction of 36 hill labourers and 39 labourers from Bombay by Arbuthnot. These labourers came to Mauritius on private five-year contracts. They had to pay for their return passage in case they chose to go back to India. In 1835, 1,160 men, 61 women and 33 children were brought in. Between 1836 and 1839, despite Governor Nicolay’s ban on further introduction of indentured labourers in the island, 22,615 men, 776 women and 192 children were brought. In the view of the Colonial Authorities and the planters, this early private introduction of Indian labourers on a five-year contract of service worked very well. The Colonial Secretary stated, in 1836, that the experiment, so far as it had been tried, met with great success. The planters praised the character and general disposition of the Indians whom they found to be far more efficient and intelligent at agricultural work than the Africans, despite the fact that a great number of the labourers who were brought in were very raw labourers. In 1836, a gang of fifty comprised only two or three who had ever handled a hoe. But the planters were generally so satisfied with those early immigrants that they declared that they would not keep a single apprentice on their estates, if they had the choice.

From 1836 to 1839, according to the Annual Reports of the Protector of Immigrants, 25,468 Indian indentured labourers were brought to Mauritius at a cost of nearly £280,000. This substantial immigration was, in all likelihood, funded with compensation money received by the planters after emancipation or loans based on compensation. Of all Britain’s sugar colonies, Mauritius was the one which weathered the problems of emancipation most successfully. Before 1834, Jamaica had produced twice as much sugar and British Guyana 75 per cent more sugar than Mauritius. Twenty years later, Mauritius had become Britain’s premier sugar colony: its sugar production was more than twice that of British Guiana and was nearly five times greater than that of Jamaica. Following emancipation, the compensation payments and the increased liquidity which this created made possible increased investment in sugar cane plantations and the number of sugar mills rose from 167 in 1833 to 203 in 1838.

The demand for labour created by this expansion was accentuated by the rising proportion of sugar factories converting to steam, the number of steam mills soaring from 69 to 130 during the same period. This expansion in capacity and the increased capitalization of sugar estates required a corresponding increase in production and an enhancement of the cultivated area to make such investments worthwhile. Between 1841 and 1860, the sugar cane acreage increased from 59,500 *arpents* to 110,000 *arpents* and sugar production rose from 41,024 tonnes in 1840 to 130,375 in 1860.

The key issue for the British Administration was “whether such large immigration of Indian labourers would not produce an oversupply of labour, thereby reducing the wages of the existing labour force or depriving them of their livelihood resulting in the creation of a nation of paupers”<sup>97</sup>. With the prospect of an unlimited supply of labour from British India, the chief reason would be removed on the part of the proprietors to induce the former slaves to settle down as regular labourers on fair terms. The planters, for their part, argued that the additional labour was required to provide the necessary man-power for the expansion of the Sugar Industry. As it turned out, some of the former slaves wanted to discard all the links with their former servile status and conditions and the sugar planters did little to retain them.

#### 4.2.2 The suspension of Indian Immigration. The Government subsidisation of immigration

Indian labourers in Mauritius were paid five rupees a month and were given rations. It was estimated at that time that an indentured labourer costs the estate Rs. 10 to Rs. 11 per month (inclusive of the cost of rations). Between 1834 and 1838, planters in the island spent £200,000 for the private introduction of Indian labourers. In 1839, the Apprentice System was repealed. In that same year, India suspended emigration to Mauritius following a public outcry in both Britain and British India over reports of the exploitation to which these early immigrants were subjected and abuses in the recruitment and transportation of labour, which raised in British public opinion the spectre of a new slave trade. As a result from 1840 to 1843, scarcely any new canes could be planted, heavy field work on estates was abandoned and sugar production dropped from 42,000 tonnes in 1840 to 27,500 tonnes in 1842.<sup>98</sup>

The planters reacted quickly in defence of the indenture system and to safeguard their investment. According to M. Carter, they had the support of some influential personalities from British India who stressed the destitution of indentured labourers in their own 'overstocked country' and upheld the notion that all parties would benefit from the indenture system. With the resumption of immigration in 1843, most of the sugar estates had to be extensively restored at any expense. Those estates did not return to full production until 1845.

In 1843, Government began subsidizing immigration from an annual fund of £25,000. In 1843, 30,000 Indian labourers were brought to Mauritius and by September 1844, 74,000 Indians - 67,112 of them male labourers had been brought in.<sup>99</sup>

This 'bounty' system coincided with the Government control of immigration. The subsidization stimulated the demand for indentured labourers. But in the face of a threat to the island's social balance and the island's capacity to accommodate such a large influx of population, Gomm, who succeeded Lionel Smith as Governor in 1842, favoured the Government control of Immigration. He strongly opposed the sugar planters' vision of an unlimited supply of labour. This led to frequent clashes in the Government Council between the Governor and the planters' representatives, who were supported by a 'small coterie' of British commercial agents and by the planter controlled press.<sup>100</sup>

On the other hand, in spite of his concern about the excessive importation of indentured labour and disputes with the sugar producers, Gomm had, it would seem, a very favourable opinion of the state of the colony and the sugar industry. He wrote to the Colonial Secretary in 1845 that "he might confidently affirm that no spot on earth presents a more cheering prospect of abundance than the surface of Mauritius". Financial considerations may also account for Gomm's attempt to restrict indentured immigration to Mauritius. In 1847 he lamented to the Colonial Secretary on "the never-sated vortex of immigration expenditure to the neglect of public works".<sup>101</sup>

In furtherance of the policy of the Government control of Immigration, Gomm, in 1844, introduced the contingent system which provided for an annual quota of 9,000 immigrants. Under these new arrangements, engagements could only be contracted at the Immigrant Depot, 48 hours after arrival in Mauritius. On estates, one-year contracts replaced the former five-year terms. These regulations were intended to safeguard as much as possible, the freedom of choice of the immigrant contracting an engagement in a new country during his period of "industrial residence" in the island.<sup>102</sup>

In practice, the scheme was a failure. The engagements at the Depot led to violent competition between estate *sirdars* bidding against each other for labourers. Wages were bid upwards by the fierce competition between planters to re-engage workers as their annual contract expired. No consistent policy for allotting immigrants ever seems to have been formulated or implemented, and many planters took advantage of loopholes in the regulations, competing openly against each other for new immigrants, raiding each other's estates for labourers and eventually dispatching their own agents to India to recruit workers.<sup>103</sup>

The result of this situation was a considerable disorganization of the labour supply on estates. The one year contract of service produced a high turnover of labour; absenteeism on estates reached a high figure. An official committee in 1846 published statistics which give an idea of the unsettled condition of labour on estates. The Committee reported that there were, at that time, 52,000

immigrant labourers in the colony of whom 35,000 were employed in agriculture: desertion, absenteeism and sickness further depleted the number of workers and the effective number of hands on estates was only 25,000. This figure was only slightly larger than the number of slaves employed on estates before emancipation, whilst between 1830 and 1846, the Mauritian sugar crop had increased by 47 percent.<sup>104</sup>

Certain events at the time brought important changes in British policy in support of the planters. During the mid 1840s, when an economic and financial crisis precipitated by the British Sugar Duties Bill threatened bankruptcy and ruin for the sugar plantations, the sugar planters won the support of British Parliamentarians and other influential circles in their favour. To plead their case, planters used the free trade issue which forced them into competition with sugar producers using slave labour, to demand compensation, not in monetary, but in manpower terms.

A bargain was thus made between the free traders and sugar producers. When he presented the Sugar Trade Bill in Parliament, Lord Russell, the Colonial Secretary, in order to conciliate the colonial lobby, promised them 'abundant immigration' and 'cheaper labour'. Thus, the planter lobby succeeded in their opposition to Gomm's argument for the control of indentured immigration.

Following the financial crisis of 1847, which bankrupted several British firms in Mauritius, instructions were given from London to granting urgent concession to the planting community in Mauritius. Acting on these instructions, Governor Anderson, who succeeded Gomm, introduced several political and economic reforms. These comprised an increase in the representation of planters in the Government Council, an increase in the annual intake of labourers and an increase in the contract length of service from one year to three years. In 1849, three-year contracts were legalized and as a result labour supply conditions on estates improved markedly.

#### 4.2.3 The role of the Colonial State

The Colonial State played a crucial and largely successful role in the years following the abolition of slavery. According to S Mintz, the political battle between the Metropolitan capitalist classes who favoured free trade and the colonial planters was partly eased by access to external but politically accessible labour pools.

The State regulated, not only the recruitment, importation, allocation and employment of labour, but it was also responsible for the financing of immigration.<sup>105</sup> Part of the cost of introducing labourers at public expense was recovered from the planters to whom labourers were allocated, the balance being drawn from general revenue. The incidence of taxation was then highly regressive. According to North-Coombes, when public Finances were healthy, fiscal concessions were readily extended to sugar growers. He argued that while tax relief was granted to the planter, the burden of taxation was carried by the poorer consumers in the Colony. Between 1843 and 1851, indemnities paid to private introducers of immigrants were financed by a duty on the sale of colonial rum. In 1851, the reduction in the export duty on sugar was partly offset by increasing the duty on rum.<sup>106</sup>

In 1852, the Government of India finally acceded to a long-standing request of Mauritian planters that a free return passage should in future be granted only in special circumstances. This measure, it was believed would create a resident agricultural labour force and eliminate the unsettled condition of labour on estates. In 1852, estates were also allowed to recruit immigrants in excess of their official quota. The following year (1853) private recruiters from individual estates were licensed to operate in India. From an annual contingent of 9,000 labourers, Immigration leapt to more than 10,000 annually in 1852-54; it reached over 20,000 yearly in the late 1850s.

In 1854, the cost of introducing 18,500 male and female labourers was £101,000 instead of £60,000 provided for in the estimates. To meet the increased charges, export duty on sugar was increased from 3d to 8d per 100lbs. Within a decade of Gomm's departure, sugar planters were thus at liberty to import a virtually unlimited supply of labourers in Mauritius. The protective machinery put in place by Gomm to defend the interest of immigrants was then at its most ineffective.

The Colonial Government was crucially aware of the economic importance of Indian immigration which was described as the sheer anchor of colonial prosperity.

*“It has asserted in official quarters that in times of increased competition on the world market, the state had the duty to help maintain the profitability of sugar cultivation and manufacture. There was moreover an obligation imposed both on the imperial and local government to support to their utmost ability, during this crisis, the struggling sugar growers [...] to aid the efforts and to diminish the cost of production; for in this lies the solution to the problem.”<sup>107</sup>*

These sentiments were repeated in their Annual Reports by Higginson’s successors, Stevenson and Barkly. In 1858, Stevenson described Indian immigration as “the generator of agricultural prosperity”. Barkly, eight years later, observed that the island’s commercial, as well as agricultural, interest had been maintained and enhanced by the introduction of Indian immigrants. The removal of previous restrictions on recruitment brought 174,000 new immigrants to Mauritius between 1852 and 1860. Employers paid the full cost of immigration. Finally in 1852, five-year contracts were reestablished for agricultural labour on estates.

For forty years, the island’s authorities presided over the importation of a work-force that was so large that, by 1871, Indians constituted 68 per cent of the Mauritian population. Regular large intakes of immigrants were justified by sugar planters on the basis of the loss of time-expired labour and the high absenteeism among indentured workers. As a result, in the course of the first four decades of indentures, the Local Government obtained the consent of the Metropolitan authorities to a series of concessions and measures which tended to increase the supply of Indian workers in Mauritius, whilst seeking to restrict the workers’ right to leave the estate to seek more lucrative employment elsewhere.

Under the indenture system, Indian immigrants in Mauritius were isolated for a time from the rest of the society in which they had been implanted. This may account for the absence of major racial friction in the 1840s and 1850s so long as the large majority of immigrants in the island were still serving their five years of industrial residence on estates. The special regulations which governed the relations between slaves and the free population in the island persisted to some extent under the indentures.

The Ordinance of 1827 had laid down the rights and duties of the slaves *vis-à-vis* the rest of the population. The Law catered for the slaves as a distinct group in the island’s community. The same spirit prevailed under the indentures and inspired Ordinance No. 16 of 1855 which led to the introduction of laws regulating the movement of Old Immigrants.

#### 4.2.4 The 1860s: Labour and Sanitary Problems

##### 4.2.4.1 The Old Immigrant Problem

As from 1842, Labour Legislation was enacted which was directed specifically against Indian Immigrants. The net effect of such Legislation was to subject immigrants to a number of restrictions and penalties from which non-Indians were exempt.<sup>108</sup>

According to Allen, the 1860s were a turning point in the history of the Mauritius Sugar Industry which saw an extensive restructuring of the Industry with the parcelling out of large tracts of land on some estates and the merging of other estates into larger financially more viable units. In the throes of a severe agricultural crisis in the 1880s, sugar estates were under pressure owing to the low sugar prices, scarcity of capital and adverse internal circumstances. That period saw the substantial acquisition of sugar property by Indians and the emergence of Indian cane farmers who would play an important role in the future development of the Mauritian Sugar Industry.<sup>109</sup>

The 1860s saw a dramatic decline in the number of New Immigrants in indentured service and a corresponding increase in the number of Old Immigrants working under contract on estates. In 1861, New Immigrants accounted for almost 40 per cent of all contractual workers. Within a decade, they made up only 15 per cent of the sugar estate work force. By the mid 1870s, the composition of the industry’s work force underwent further changes as Indo Mauritians (i.e. Mauritian-born Indians) became an ever-larger component of both Indian population as a whole and the sugar industry labour force.

For some thirty years, the segregation of the Indian labourers on estates remained virtually unchanged the social organization of the island's community. But when a large proportion of immigrants, after completing their period, left the estates, there began a process of evolution which brought in time a profound change in the structure of the island's community and determined to a larger extent the future development of the Sugar Industry.

#### 4.2.4.2 Insalubrious conditions and overcrowding

After 1865, the Sugar Industry faced difficult times. Beet competition on the world sugar market brought down prices of colonial sugar. In 1866, a severe drought in the North of Mauritius led to the abandonment of several estates, twenty estates were sequestered and had to be sold. As a result, a large number of labourers lost their employment. In January 1867, a Government circular to the Stipendiary Magistrates referred to the large number of immigrants whose engagements had recently been broken. In such cases, it was the duty of the Magistrates to see that the immigrants understood their right to have it explained to them that rice was likely to continue to be dear and work was to remain scarce for some time to come.<sup>110</sup>

At the end of their contracts, the Indians crowded into Port Louis. Insalubrity and overcrowding were major problems in Port Louis. There was, at that time no sewerage system or adequate drainage. In 1852, the British 'sugarocrats' newspaper, the *Planters and Merchants Gazette* described the filthy state of Port Louis with its open and stagnant drains and heaps of animal excretion. The utter want of scavenging sources was decried and the paper alluded to the nightly abomination that tainted the air to a degree sufficient to start a plague.<sup>111</sup>

This description of the physical and social environment of the areas where many of the labouring classes lived contrasted with the description of the conditions in the central part of Port Louis, where merchants and traders and people of the liberal professions resided. The planters and merchants lived in the 'White Town' which received all the amenities. They were separated from the rest of the inhabitants by spatial, economic and ethnic divisions.

Many new residents in Port Louis were ex-apprentices and labourers who had completed their contracts. As they were non-agricultural workers, who had rescinded their connection with the Sugar Industry, they were regarded by the authorities as unproductive labour and were left largely to their own devices.

Overcrowding was also a major problem. In 1859, for a population of 54,403 there were in Port Louis 3,541 houses, an average of 15.9 inhabitants per dwelling. Huts on the outskirts of the town sometimes lodged up to 30 persons for the night.<sup>112</sup>

On the sugar estates according to North-Coombes, "Indians lived in filthy and overcrowded camps. Their huts were poorly constructed, the 'cases' low and narrow having more the aspect of pigsties than of human habitations". By way of shelters, they provided no protection against the cyclonic gales which struck the island during the summer months. During the cyclone of March 1868, scarcely a dependency or hut in the various camps was left standing. Eighty-seven people were killed and 20,188 huts blown down or carried away by the storm. The water supply was generally defective. For washing or drinking, camp dwellers had to resort to polluted rivers and canals into which the effluent of sugar mills was disgorged. In this squalid environment, epidemic diseases thrived. The sanitary problems of the rural districts were on a larger scale in Port Louis where an apathetic Municipal Corporation proved incapable or unwilling to cater for the needs of a rapidly increasing urban population.<sup>113</sup>

In the early part of 1867, malaria broke out. The fever caused havoc in Mauritius and decimated the population of Port Louis and low-level Northern Districts. In Port Louis itself, out of a total population of about 80,000, 14,387 deaths were recorded in the first six months of 1867. The total death toll of the whole island rose to 25,824 in the first half 1867.

The malaria epidemic was the worst 'natural' calamity which Mauritius had ever experienced, causing the death of about 30,000 people within a year, with about 18,000 in the town of Port Louis. The epidemic reached its peak in May and June 1867. It carried off whole classes of people, forcing an exodus from the low-lying districts and paralyzing the services leaving gloom and

desolation in its path. There was a large displacement of the population, as people fled the low-lying disease-infested coastal regions for the upper more salubrious Central Districts of the island.

The difficulties of 1864 to 1868 reversed the brisk demand for labour which had prevailed during the preceding decade. Sugar cane cultivation was restricted on several estates; on others, it was given up altogether.

Recruitment of labour in British India dropped to a trickle after 1866. The agricultural labour in Mauritius soon consisted of a majority of Old Immigrants - the arrivals of 1850 to 1865 who were free to settle in the country and occupy themselves as they wished; these Old Immigrants now made up nine-tenths of the agricultural labour-force.

#### 4.2.4.3 The Labour Law of 1867

From the Sugar Industry's point of view the problem created by the Old Immigrants contained one main element: how to persuade immigrants to re-engage on estates once they had completed their period of industrial residence. From the Government's point of view, the problem was the smooth and successful integration of a large immigrant class into the existing structure of the island's society. The Labour Law of 1867 tried to deal with both aspects of the problem.

Governor Barkly wrote that this Ordinance, by continuing to hold the Old Immigrants under the same obligation of accounting for their place of residence and means of livelihood, as vested upon those who had not served five years in the colony, afforded a basis for many salutary reforms and were universally looked upon as a commencement of a new era of social improvement. According to him, hitherto from fear lest immigration would be stopped, in case the slightest restriction were imposed, the Old Immigrants had been allowed to live precisely as they wished and there could be no doubt that not only an increase of crime, but also a deterioration of the sanitary state of the island were mainly due to the licence this permitted. In his observations on the new Labour Law, Barkly echoed the views of the Secretary of State.

In a dispatch in June 1868, the Secretary of State outlined what was, in his view, the main cause of the fever in Port Louis:

*"The improper construction and overcrowding of the dwellings", particularity of "Indians in Port Louis" was first on the list of the main causes of the fever in Port Louis. He felt that the movement of Indian Labourers to Port Louis was the real cause of all the problems. They were an "uneducated uncontrolled class and were the principal sore of Mauritius."*<sup>114</sup>

However, in another dispatch, one month later in July 1868, the Secretary of State modified this opinion for he gave instructions to Barkly for the proper drainage in the capital and the establishment of proper habitation for the Indian population.

The opinion of the British Authorities about the causes of the epidemic was endorsed by the local press generally:

*"We do not think that there would be any large demand for fresh labour if the Government were to adopt stringent legislative measures to face the thousands of Old Immigrants to earn their livelihood in place of continuing to permit them to agglomerate with their more industrious comrades to the danger of public security and public health [...]. Something must be done, not to force idlers to work, not to coerce Old Immigrants into engagements on estates, but to induce them to accept regular employment [...]"*<sup>115</sup>

A general registration of Old Immigrants in the island was decreed under the Ordinance (Arts 43-49) and a 'pass system' introduced. Passes were required of Old Immigrants, not employed on estates. To obtain a pass, the old immigrant declared "his place of abode and occupation, employment or other means of subsistence". Under the Pass Laws, many restrictions were placed on the movement of Indians in the island; any change of address from one District to another had to be officially acknowledged on the pass. Those caught without their passes or other means of showing that they had visible means of subsistence were liable to be detained as vagrants.<sup>116</sup>

The ordinance of 1867 brought all Old Immigrants, not living on estates, under the control of the police. These harsh and repressive measures must, however, be seen in the context of the lack of organization and distress, which followed the outbreak of malaria in 1867; they may be explained to some extent, but hardly justified, as a means of controlling “those loose roving bands” who moved from place to place in search of work and crowded into the towns and villages all over the island.

The result of these measures was to drive back Indians to the estates, the proportion of Indians living on estates rising from 48 per cent of the total Indian population in 1867 to 58 per cent in 1870. Yet, in spite of the stringent enforcement of the new Labour Law, the number of labourers working on estates does not show any increase over that period.

#### 4.3 Banking and Finance

##### 4.3.1 Early Sources of Finance

The admission of sugar from Mauritius in Britain on an equal basis with West Indian Sugar in 1825 opened for the local industry great market prospects. When the 10% discriminatory duty was removed on imports of sugar from Mauritius, the price paid for the island sugar soared on the London market. In 1823, Mauritius sugar sold with difficulty for 26/- per/cwt; in 1827, the best grades of sugar from Mauritius fetched 58/-per/cwt. The equalization of duties brought a six-fold increase in sugar exports from Mauritius to Britain. Henceforth, the Sugar Industry became the mainstay of the Mauritian economy.

The expansion of sugar in Mauritius occurred within an extremely meager physical and financial infrastructure. For most planters, capital to invest in new machinery, land or additional labour was sorely lacking. It was estimated, in 1828, that an estate of 560.8 *arpents* with a mill and 125 slaves cost \$31,250, a price that few could afford.<sup>117</sup> A large part of the increase in sugar production had been undertaken and sustained on borrowed capital. Most estate-owners had sunk all their funds in the acquisition or expansion of their estate which left them with little capital to defray the running costs of the estate. The reliance upon personalized forms of industrial organization made many planters dependent on short-term credit for their operating expenses.

The chronic shortage of working capital and the fragility of estate finances led to a situation in which loans were raised by planters from sugar brokers or ‘bailleurs de fonds’ to cover their operating expenses. These loans were guaranteed by the standing crop but the crop proceeds depended on the vagaries of the weather and fluctuations in the price of sugar. The ‘bailleurs de fonds’ were usually local merchants or produce brokers who possessed substantial liquid capital resources of their own and good credit with the local banks. They provided planters with short-term credit and acted often as the town agent for the estate providing it with supplies and money and selling the crop.

The Industry’s development depended, to a large extent, on the structure of estate ownership and the system of crop finance. Throughout the 19<sup>th</sup> century, the Mauritian sugar industry consisted largely of individual or family-owned estates, and the structure of ownership remained highly personalized even after more advanced forms of industrial organization such as limited liability companies, began to be introduced during the 1880s. This reliance upon personalized forms of industrial organization limited the financial resources available to planters and made them dependent on short-term credit for their operating expenses even in boom times. The fragility of estate finances and the chronic undercapitalization of the Sugar Industry were a source of constant concern to the British Government and local planters. Following the example of Farquhar, successive Governors endeavoured to increase the financial resources available to the planters to promote sugar cultivation.

In a Review of the state of the Mauritian economy between the 1810s and the mid 1930s, Richard Allen assembled data from the *Blue Books* and Parliamentary Papers on the value of sugar exports, the balance of trade, the flow of species and ‘per capita’ value of imports from 1812-1814 to 1930-1934. In the absence of official data for the early years, and much discrepancy between the official records of sugar exports, where such records exist, and the figures compiled by Allen, these estimates should only be regarded as a relative indication for export values. Still, in the absence of

more accurate data, they provide an interesting insight into the changes in the Sugar Industry's finances and the island's economic performance over a span of 120 years.<sup>118</sup>

These figures give an indication of the net inflow of specie in Mauritius as from 1840. Between 1840 and 1847, the bulk of these funds came from large London merchants, who were the consignees of the island sugar crop as mentioned above. The abolition of the preferential West Indian tariff in 1825 led to a sharp rise in the price of Mauritian sugar in London. This attracted substantial British capital into the Industry.

The expansion of sugar production also relied, in a large measure, on the supply of Indian indentured labour. Field-work and manufacturing operations were then very rudimentary and relied heavily on manual labour. Under the prevailing buoyant demand for sugar on the British market, the volume of sugar exports from Mauritius depended on the acreage under sugarcane and the supply of labour. Cane acreage in Mauritius increased from 27,800 *arpents* in 1825 to 57,000 *arpents* in 1830, the number of factories increased from 157 in 1823 to 202 in 1833 and sugar output from 10,780 tonnes in 1825 to 33,960 tonnes in 1830.<sup>119</sup>

This raises the question of the sources of finance for the expansion of the Industry which was beyond the capacity of most planters. The figures mentioned above give an idea of the sums required in order to finance the expansion of the Sugar Industry. The bulk of these funds in the 1830s came from domestic sources and were provided by local businessmen who had made their wealth previously from commercial operations. Many of them owned substantial assets. In order to take advantage of the sugar boom, following the passing of the Mauritius Trade Bill, they diverted substantial amounts of funds from commercial operations, which were now in decline, into the creation or acquisition of sugar estates.

#### 4.3.2 Interbank Rivalry and the 1848 Crash

In January 1832, the Mauritius Bank had been established by British financiers and local planters led by d'Épinay, an outcome of his representations in London in 1831, in which he obtained the authorization of the British Government for the creation of a Bank in Mauritius. That Bank was, in a way, the colonists Bank, with d'Épinay as President.

On the 31st January 1838, a petition from the leading merchants of the island was sent to Governor Nicolay, requesting the establishment of a second bank. The petitioners asserted that the Mauritius Bank was too much under the influence of people who were not involved in commerce. The bank refused to take deposits to keep current accounts for its customers and to provide other services which were current in banking. The petitioners also complained about the rate of interest charged by the Bank on loans. The petition was signed by 27 Directors of British and Mauritian commercial firms.<sup>120</sup>

The proposal for the establishment of a second bank was opposed from the start by d'Épinay and other Directors of the Mauritius Bank. D'Épinay, in *Le Cernéen*, attacked the project in fairly virulent terms, while the project obtained the strong support of *Le Mauricien* and its editor, Eugène Leclézio. The controversy became increasingly harsh when *Le Mauricien* blamed d'Épinay's party for its openly hostile attitude towards the British Government at a time when the Colony was smarting under the decision of Britain to emancipate the slaves and the fear of the civil strife and disturbances which might ensue.<sup>121</sup>

Governor Colville gave his assent to the demands of the petitioners and the Mauritius Commercial Bank (MCB) began to operate on the 1st September 1838, when it made an initial issue of bank notes for \$300,000. With the opening of the MCB, the rivalry between the two banks became more intense. It took the form 'interalia' of several issues of bank notes and grants of credit by both banks. The MCB made two further note issues in 1838 for a total amount of US \$400,000. Other note issues amounting to US \$200,000 were made in 1839 and US \$200,000 in 1840. Such profuse issues of bank notes led to a flight of specie and a scarcity of currency in the island. The MCB took certain measures in an attempt to stem the flight of specie. These measures were ineffective. In the buoyant conditions of the 1830s and 1840s, planters borrowed large sums from both banks which obliged with frequent issues of notes and credit. There developed a precarious situation which required injections of additional funds from London to safeguard the solvency of the banks and of the Colony.

In 1848, four of the five London houses which financed a large part of the island's sugar crop were bankrupt. These houses provided the working capital of a large number of estates on the security of the product of these estates which was consigned to them in London. The failure of those great "millionaires"<sup>122</sup> caused dismay in the island and for a time paralysed trade causing the ruin of thousands in an unfortunate and misgoverned colony". Sugar property in the island became, for a time, practically valueless. The governor was authorized to make advances to planters not exceeding £150,000. According to Governor Anderson, the crash of 1848 sent the Mauritian economy into a considerable depression. The crash caused the failure of the Mauritius Bank, one of the two commercial banks then operating in Mauritius. Both banks had the privilege of note issue. In 1848, the Government issued a new paper currency, denominated in rupees, which was managed by the Mauritius Commercial Bank.

Several parties blamed the failure of the British firms connected with the island and the distress of the industry "on the almost universal error of compromising two to three times the needful amount of capital on the price of a sugar plantation". The weight of mortgage debt borne by estates arose, in large part, from the established practice in Mauritius of lending money to the sugar estates on the security of the standing crop "just as money is invested in Britain in saving banks and railway shares". The crash of 1848, however, had also other more fundamental causes.

The following extract is taken from the Report of Select Committee on sugar and coffee planting (1848):

*"From 1848 to the present time, the vacillation of parliament, the change of the legislation and the departure from what was understood to be the system to be adopted during the time that we lent out our money and sent out our machinery and carried on these works, has been such as to bring these enormous losses upon thus".<sup>123</sup>*

There was besides, in the case of Mauritius, the growing unilateral trade with British India and the heavy annual disbursements on the importation of indentured labour and the purchase of rice and other staples. A symptom of the imbalance in the island's trade with British India was the drain of Indian rupees which, at the official rate of 1/10 to the rupee, were hoarded or held at a premium and ultimately left the island in speculative transactions. The Colony was said to be approaching a state of barter in the course of which sugar may bring rice to a few people but would not provide wages.

There was also the growing burden of taxes over the past few years. There were reports of taxes going up by nine per cent, and establishment charges showed a corresponding increase. Besides the parties paying the Government dues with rupees had to submit to an eight per cent discount the rupees in the island, being officially rated at  $\frac{1}{10}$ , whereas it was really worth 2.<sup>124</sup>

### 4.3.3 The Heyday of Sugar

#### 4.3.3.1 High Prosperity in the 1850s

The crash of 1848 resulted in the write-off of the debt of several estates. But a substantial part of the capital invested in the Industry was not wasted where these investments had been used to purchase more powerful factory plant and to finance improved agricultural practices. The local French planters would become 'effective' owners of the sugar estates and factories, by buying at relatively low prices in many cases.

In 1848, although the principal British merchants connected with the island were bankrupt, the estates were generally in good working condition, complete with machinery and buildings. Output which had fallen to 34,286 tonnes in 1839 reached 61,247 tonnes in 1846 and 63,339 tonnes in 1849. After 1849, the Industry entered into a new period of rapid expansion and the output of sugar in the island rose to 150,480 tonnes in 1862.

Between 1852 and 1854, 17,859 *arpents* of land were put to cane and the total acreage under cane in 1865 was around 137,955 *arpents*. In 1858, there were 288 factories in Mauritius, the largest number of factories ever to operate in the island. Between 1850 and 1865, a total of 186,100 Indian labourers were brought in, with an average annual intake of over 11,600 male labourers.

The one-year engagements were replaced by three-year and ultimately five-year terms. These measures brought down the cost of labour and led to the spread of cane cultivation throughout the island.

The 1850s and first half of the 1860s have commonly been regarded as the heyday of the Mauritian Sugar Industry. The increasing value of sugar exports, large specie inflows and the growth in the value of imports per head, as well as the increasingly favourable balance of trade, confirm that this era was one of substantial economic growth and increasing economic prosperity in the Colony.<sup>125</sup>

Sugar production reached its peak in Mauritius in the 19<sup>th</sup> century between 1850 and 1860. It was accompanied by a revival of the maritime trade between Port Louis and the main ports of the Indian Ocean and Europe. The increase in maritime traffic was due to the growing importance of industrial and commercial activities. It was facilitated by the Repeal of the Navigation laws by Britain in 1851. The elimination of these restrictions on trade opened the port to foreign vessels. It gave a considerable boost to the movement of ships and restored the prosperity of Port Louis. The port became once more the hub of maritime trade in the region. In 1850, 470 ships berthed at Port Louis and 136,000 tonnes of goods were handled. Eight years later in 1858, 825 ships berthed at Port Louis, which was the highest number of arrivals in the 19<sup>th</sup> century and the volume of freight handled reached 308,000 tonnes.

While there came only around fifty foreign vessels yearly since 1842, there arrived three times as much annually in the decade which followed the Repeal of the Navigation Laws. The competition of foreign vessels did not, in any way, diminish the number of British ships calling at Mauritius which on the contrary came in larger numbers.<sup>126</sup>

There was also the discovery of gold in Australia in 1851. The contacts taken by the Mauritius Commercial Bank in Australia at that time may have been instrumental in the opening of the Australian market for Mauritian's sugar and for Australian imports of the European commodities which transited in Mauritius before the opening of the Suez Canal.

Port Louis became once again the hub of trading activities in the southern Indian Ocean and the focus of the economic and social life of the Colony. A large part of these activities was connected with the importation of indentured labourers. Besides, a regular sea link was established with Europe.

#### 4.3.3.2 Improvements in Communication - The Construction of Railways

The spread of cane acreage and the setting up of factories inland posed a difficult communication problem. In the 1850s, a large part of the island's production was shipped to Port Louis from various coastal stations in Flacq, Rivière du Rempart, Pamplemousses and Savanne. The creation of new estates inland increased substantially the cost of building and equipping a factory and the cost of transport of sugar to Port Louis.

In 1856, the Chamber of Agriculture lobbied the Secretary of State for the construction of a railway in the island. The Longridge Report endorsed the recommendation to develop a railway network; it recommended that a loan could be granted provided the machinery was bought from Britain. Works on the Eastern and Northern railway lines began in 1862 and were completed in 1864 and the Central and Southern lines were opened to traffic in 1865.<sup>127</sup> The transport of sugar to Port Louis was thus greatly facilitated. Between 1880 and 1910, up to 100,000 tonnes of sugar were carried by rail annually. The total current revenues and expenditures of the Railway Department between 1901 and 1910 showed that the operation of the railways in Mauritius was generally quite profitable. The cost of building the Northern and Midland lines amounted to £1,066,795 and were paid by loans from the British Government. Additional expenditure of £477,058 was met by contributions from the General Revenue in 1862-67 and a loan of £100,000 from the Treasury. But the introduction of lorries and road transport after 1920, put an end eventually to the profitability of the railways.

The commercial activities progressed well. As the number of indentured immigrants increased in the 1850s and early 1860s, so did the volume of trade and traffic between the Indian ports and Mauritius. In 1850, 53 ships plied between the North Indian ports, from which most of the immigrants and cargoes came to Port Louis. In 1855, 93 vessels sailed on that route, 83 in 1860 and

90 in 1865. The transport of indentured labourers and the provision of their basic needs in food and clothing constituted the bulk of the transactions between British India and Mauritius. From the 1860s, exports of sugar to British India opened new prospects for bi-lateral trade and by the turn of the century more than half of the trade of the colony was carried out with the subcontinent.

The increased production and export of sugar led to substantial developments in the port area financed largely by foreign capital. According to Kalla, the attraction of capital to Mauritius for major development projects should be seen in the wider context of Industrial Colonialism. The European Industrial Revolution led to increasing demand for raw materials and food for their expanding factories and work force. The organization of production and space by the European powers in their colonies followed. In the case of Port Louis a flaring of activities took place in the harbour and port area. Three major docks were built during that period: The Mauritius Dry Docks were inaugurated in July 1857, the Stevenson Dry Docks in April 1859, and the Albion Dry Docks in April 1860.

The golden age of the Mauritius Sugar Industry in the 19<sup>th</sup> century resulted in a high rate of investment both within the industry and in the island in general. The failure of the London sugar brokers in 1848 had cut off British sources of finance. The capital now required to sustain the development of the Industry had to be raised to a large extent on the local market. In this period of sanguine expansion, there developed a situation of credit stringency. Prevailing interest rates even for short-term loans were prohibitive (12-25%). These very high interest rates “which doubled the amount of debt in three years”, made it virtually impossible for planters to refund the principal of their debts.<sup>128</sup>

#### 4.3.4 Signs of Decline

The hope during the early 1850s that a reviving economy would attract new British capital was disappointed, and for the rest of the 19<sup>th</sup> century, Mauritius was not the object of substantial British investment. Signs of long-term difficulties began to appear during the second half of the 1860s, when the amount of specie entering the colony declined precipitously, a development which leveled the beginning of a growing capital scarcity problem. By the mid-1880s, signs of decline were discernible in other indices of economic performance such as the value of sugar exports, the balance of trade and the value of imports<sup>129</sup>. The falling world price of sugar, the higher cost of imported staples and several natural catastrophies in the 1860s were heavy blows for an economy, virtually exclusively dependent upon the resources of a single industry.

Planters responded to the developing economic crisis by a process of retrenchment, less frequent calls for the importation of labourers, the rationalisation of manufacturing operations and the improvement of operations to increase efficiency and cut costs. Between 1863 and 1903, the number of factories declined by 70 per cent, from 255 to 80. Share cropping became increasingly common during the 1880s, and by the late 1890s, one-fourth of the island’s sugar estates were engaged in this practice. At the same time, many estate owners began to subdivide their holdings and sell off small plots of land to Indian labourers.

From the second half of the 1860s, Mauritius once again faced very difficult times: a financial crisis in 1865, a severe drought in 1866 and the outbreak of malaria in 1867 created havoc in the island and resulted in a serious deterioration of the Sugar Industry’s finances. In 1866, 20 estates were sequestered as a result of the drought, and nearly all had to be sold. The outbreak of malaria in the following year led to the abandonment of several other estates and the closure of a large number of factories and brought confusion in the Industry. Seven years later, in 1874, the sugar crop was damaged by a severe cyclone. This created serious problems for financing the next crop. In 1875, there was a great pressure on the banks, owing to the scarcity of foreign bills of exchange and the high discount on local bills. At one stage, the local market was reported to be entirely bare of foreign bills.

The Oriental Bank set things moving on the issue of convertibility, when the Bank tried to raise £35,000 in sterling against an equivalent amount of Government notes. The Bank had to remit £75,000 to Britain for which amount no bills of exchange could be obtained. Under the urgent pressure of the Local Authorities and to forestall a run on the Treasury, the British Government

decreed in 1876 that the Indian rupee, a silver currency, would be the sole legal tender in Mauritius.<sup>130</sup>

This measure laid the foundations for the future prosperity of the Sugar Industry. The adoption of the rupee currency in Mauritius stimulated the bi-lateral trade with British India and secured for the Mauritian sugar industry a large and comparatively sheltered market at a time when the effect of the continental beet sugar bounties were increasingly felt in Britain and other European markets. Mauritius was drawn increasingly into the Indian financial and economic orbit.

The fall in the silver exchange rate gave Mauritian sugar, a rupee commodity, a large measure of indirect protection on the Indian market. In 1895-96, for example, following a sudden improvement in the rupee-sterling rate of exchange, British India imported 40,000 tonnes of beet sugar to the detriment of the island's product. Besides, a common currency sheltered the island's trade with India from the commercial losses and speculations which generally result from fluctuating exchange rates. Trade bills were negotiated at low and stable exchange rates, specie flowed freely in and out of Mauritius in the course of trade and the credit of Mauritius on the Bombay market remained high.<sup>131</sup>

The shipments of sugar from Mauritius to Bombay came to be concentrated in the hands of Indian firms which also supplied a large part of the island's requirements; this gave the Industry the benefit of comparatively low freight rate on sugar shipments to British India. Moreover, the lower trade margin on which the Indian firms operated ensured to the local producers the highest possible price for their sugar under the prevailing conditions.<sup>132</sup>

#### 4.3.5 The Chronic Shortage of Capital and Recurrent Financial Problems

##### 4.3.5.1 Shortage of Capital

In spite of the relative prosperity after 1890, the Sugar Industry's finances were often strained: these short-lived crises were mostly the result of the vulnerability of the Industry, and of the island, generally due to a shortfall in crop proceeds, the result of natural calamities - hurricanes, drought, epidemics or a drop in the price of sugar.

Whenever there is a difficulty, the market is very tight. In 1885 for example, following the 1884 crash on the world sugar market, Sir William Newton pleaded for restraint from the mortgagees in exercising their rights to tide over the temporary difficulties, and preserve the productive forces of the Industry.

One of the reasons behind the Government loan of Rs 6 million in 1892, after the disastrous cyclone of that year, was to allay the fear that, unless capital was introduced to stimulate commerce and agriculture, the following year might see a dearth of money in the island and leave a large population without employment.<sup>133</sup> On this, and other, occasions, assistance from the banks and local financiers were not sufficient to tide over the effect of the shortfall in crop proceeds.

On two other occasions, in 1898 and 1908, a small crop followed by a rise in the price of rice and other staples resulted in a deficit of 500 thousand and 700 thousand rupees respectively on crop operations. Several estates found themselves in difficulty. To help the Sugar Industry and business, the Mauritius Commercial Bank lent large sums to brokers and planters in the form of advances on dock warrants. On both occasions the Bank had to appeal to Government for assistance, and the currency commissioners were authorized to lend over one million rupees to the Bank. These loans were soon repaid when, after the next crop, money flowed back to Mauritius.<sup>134</sup>

The fundamental weakness of the financial structure of the island may be explained by the fact that the whole community lived on a year-to-year basis from the proceeds of the crop. It must be borne in mind that there were in Mauritius few accumulated fortunes; capital is almost exclusively domiciled in Europe and, as compared to Indian traders in India.<sup>135</sup>

The Royal Commissioners of 1909 referred to the scarcity of capital reserves in the island. They reported, that a fundamental disease of the Sugar Industry was, that a large proportion of the capital was in the hands of people who did not have enough capital to work it satisfactorily. The Commissioners also stated that there was, at that time, little prospect of a large introduction of

British capital or a substantial accumulation of local capital. The French Law of Succession, in force in the island, operated against the accumulation of capital. The Commissioners considered that it was a misfortune that no large banking company doing business in other parts of the East, had a branch in Mauritius. They believed that such an institution could meet an increased demand for accommodation or whether a period of depression in a way that the two existing banks, with their necessarily limited resources, could hardly be expected to do.<sup>136</sup> (confusing- please re-consider)

Moreover substantial remittances to Mauritians residing abroad further depleted the island's capital reserves: "We export a large part of the money from our production to [...] many people who spend such revenue elsewhere".

#### 4.3.5.2 The Sugar Estate Companies

The pressure of competition caused, in time, a profound change in the economic organization of the Industry. Whereas previously most estates had belonged to individual proprietors, several estates now became the property of public companies.

*"After having operated to date as individual properties under private ownership, the sugar estate takes the form of a corporate organization constituted by means of shares and through a particular evolution of affairs, we are confronted simultaneously with a subdivision of ownership of individual estates and the amalgamation of estates under common management. If the change in the system of ownership which is already so widespread were to become the norm the 180 to 200 individual sugar estates which now exist in Mauritius could be combined into 60 to 80 sugar estates companies; and it is to be expected that the outcome would be quite considerable. Already we notice an increase in the market value of sugar property together with greater facilities to secure such amount".<sup>137</sup>*

One of the factors, which brought about this fundamental change in the organization of the Industry, was the involvement of estates with finance companies. In 1897, several estates in the island were reported to be very deeply encumbered. When these estates became too involved financially, they were taken over by the finance companies in settlement of their debt: "A great many [estates] are mortgaged to the Oriental Bank; others have passed into the hands of companies that have kept them up. The Mauritius Estates Company and the Oriental Bank Estates Company have very large estates which had to be taken over...". In 1895, the Oriental Bank Estates Company owned or managed eight estates and was financially interested in several others. The Mauritius Estates and Assets Company had considerable sugar property in four Districts of the island. The Anglo-Ceylon Company owned six estates, amongst the largest in the island. The Credit Foncier of Mauritius, likewise, owned a number of large estates.

In 1909, there were in the island some 141 estates of over 40 hectares; of these 13 belonged to three British Companies, 24 to Mauritian Companies, the rest were owned by private companies and individuals, mostly resident in Mauritius.<sup>138</sup>

#### 4.4 *Métayage* and Morcellement

During the 1880s, sugar prices began a secular decline. Indebtedness increased and numerous estates were divided into small parcels and sold to Indian cultivators, many of whom fifteen to twenty years before had been indentured labourers. The number of factories tumbled from a peak of 288 in 1850 to 104 in 1892 and 66 in 1908. The parcelling out and sale of estates proceeded most rapidly between 1880 and 1900; it was checked in 1902.

After 1880, under the pressure of falling sugar prices and increasing competition for labour, some planters handed over part of their estates to their workers in the hope of binding them to the estates. Under the '*métayage*' system (tenant farming), the tenant farmers cultivated their land with sugarcane which was taken to the estate factory to be crushed. The '*métayage*' system gave way to "morcellement". Large portions of marginal or sub-marginal land were divided into small plots and sold to Indians, mostly for cash but also on deferred terms of payment. Between 1886, and 1895, there were 69 "morcellement" of estates in the island. A large number of Indians,

several of them part-time labourers on estates, thus occupied land, which estates could no longer work profitably and brought them back into production.

In 1907, Highlands Estate, with 2,975 acres under cane, was actually cultivating only 206 acres and had leased 2,419 acres to Indian small planters; on Reunion estate, planters cultivated over one third of the estate land. By 1907, Indian cane farmers owned 30 per cent of cane acreage in Mauritius, and produced 22½ per cent of the cane crop. According to Allen, the parcelling out of estates was a device by sugar estates, which were squeezed financially to appropriate the substantial sums owned by Indians in Mauritius. According to him, there is reason to believe that the Indian immigrants investment in property became increasingly important to the Sugar Industry's financial well-being as Mauritius economic crises deepened after the mid-1880s.

The extensive parcelling out of estate land, which began around 1875, heralded an important change in the organization of the Sugar Industry. Since 1858, the reduction in the number of factories allowed for important economies of scale. But the merging of factories required heavy investments and the sale of marginal land provided much-needed funds.

Allen asserts that the "Grand morcellement of the 1860s" and associated developments cannot be understood, without examining the various ways and means by which Indian immigrants capitalized upon the opportunities during the latter part of the 19<sup>th</sup> century. Allen also refers, in that connection, to the lack of adequate financial resources and reports of impoverished and destituted men in the Coloured Population.

The average sum owned by a Mauritian (i.e. non-Indian agricultural labourer) between 1851 and 1855 varied from £5 to slightly more than £8 a year, while that of Indian labourers ranged from £18 to £21 per year. The disparity was even more marked in the amounts standing to the credit of agricultural labourers at the end of the year. Mauritians averaged £303, compared to £11,399 for their Indian counter parts. The amount is even more impressive, when compared to the value of the deposits standing to the credit of artisans and mechanics (£4,542) and domestic servants (£7,327).

Many of the early sales of land to Indian immigrants in the 1840s during the 'Petit morcellement' were made by Creoles. The Creole landowners had often sunk all their capital in the acquisition of the land and did not have, or could not raise, enough working capital to cultivate it. As a result, many of these plots remained uncultivated many years after their purchase. The early 1880s, by contrast, saw the subdivision of an increasing number of sugar estates and other properties.

The beginning of the 'Grand morcellement' dates from around 1875. The parcelling out of estate land gained momentum during the 1880s and 1890s. By 1895, the scale was such that the Governor, Sir Charles Bruce characterized the increasing pace as 'inevitable'. He also noted that the Colony's sugar factories were being improved to handle the cane-produced by the growing number of small planters. He estimated, in 1896, that at least one-fourth of the year's sugar crop had been produced by small planters.<sup>139</sup>

'Morcellements' and the use of labour contractors reduced the planters' dependence on wage labour and enabled them to concentrate on the manufacturing side of the industry. The consolidation of estates which followed was an inevitable consequence of the high overhead costs of sugar production. According to Carter, the transfer of field-work on estates to job contractors was beneficial to planters in the short run; in the long-run, however, the development of Indian villages which it fostered provided a more direct challenge to the traditional sugar estate.<sup>140</sup>

In the same vein North-Coombes has argued that the initial acceptance and the subsequent opposition of the Colonial Establishment and ruling class to the use of an Indian peasantry and urban *petite bourgeoisie* can be explained by the fact that these activities would not only constitute competition for land but also the withdrawal of labour from the sugar sector.

The main advantages of the existence of the smaller planter class to the controlling interests of the Sugar Industry were a flexible source of low-cost cane supply and a reserve army of labour which could be drawn upon on a seasonal, or casual, basis to meet the changing labour requirements of sugar production. The small cane-planters thus served both the cane supply and the labour needs of the Industry.

## 4.5 Wages Rates in the Sugar Industry (1835-1909)

### 4.5.1 Shifting from Slave Labour to Indentured Labour

In 1807, the shipping of slaves to British colonies was forbidden and in 1808, slave trade was prohibited. When in 1810, the British took over the island, slave trade became illegal. In 1834, British abolished slavery. It was phased out on the island under a transition period known as 'apprenticeship'. However, in Mauritius and elsewhere, the sugar plantation economy, since its inception, had depended, for its success and profitability, on plentiful, cheap, coercible and disciplined labour force. Slave labour had, for centuries, been the backbone of plantation colonies.

To meet the increased demand for labourers required for the growth of the capitalist production system, a new labour regime was inaugurated in which labour began to flow from regions where people were unemployed, or displaced from agriculture or cottage industries, towards regions of heightened industrial or agricultural activity.<sup>141</sup> One of the most important, among such flows of labourers was the immigration of Indian labourers to work on labour intensive plantation settlements like Mauritius. Immigrants were tied to a contract of service, often entered into at the source of origin itself, for a fixed tenure and type of work to be performed, and they were legally compelled to observe the terms and conditions of the contracts.

Between 1820 and early 1830s, under the British period, Indian contractual workers were introduced by individual planters. In 1835, indentured labour system was introduced. In subsequent decades, hundreds of thousands of workers arrived from India. Mauritius was the first British Colony to embark on the 'Great Experiment' of importing an indentured labour workforce from the sub-continent. Since the Proclamation of the Abolition of Slavery in 1833, there was the urgent need to replace the local labourers liberated from slavery by an indentured workforce. This workforce, later on, became a majority population group. 453,063 indentured labourers were brought in Mauritius under the indenture Agreement. Labourers from the Indian Peninsula disembarked in Mauritius as from 1842 and originated from Colombo, Cochin, Pondicherry, Madras and Calcutta. These experimental importations of local planters were an evident means of overcoming the acute shortage of labour arising in the colony.

By 1850, there were 48,112 immigrants engaged by the sugar planters, their aggregate wages being £ 28,683, 7sh. and the average wages was 11 shg 11 d.<sup>142</sup> According to the contract of service, they were to receive 5 Rupees as wages every month; the daily ration was to be 2 pounds of rice, 1/2 pound of dhol and an adequate quantity of salt, ghee, oil and mustard. The immigrant was also to be supplied with one *dhoti* (loincloth), one blanket, one sheet and two caps. So that they might not become a burden on public funds on the termination of their contract, the employers had also to give an undertaking that the immigrants would be entitled to a free return passage to India at the end of their service. Later, the free return passage was abolished. In addition to these, they were also provided with free housing on the estates and free medical attendance.

### 4.5.2 Wage Payments, Absences and Double-Cut

In the colonial perception, this was bliss for the Indian labourers because in India, these labourers hardly earned more than two rupees a month and that too without any additional allowance which they received in Mauritius. There was a general consensus that the wages offered in Mauritius were enormously high compared to wages in India and, therefore, the Indian labourers work as wage labourers and better were their conditions by immigrating to Mauritius. At the very beginning of the system in 1834, Indian immigrants were employed on five rupees a month to work on plantations, and it was anticipated by the administrators that this would increase with time and the rising fortunes of the sugar economy. But, unfortunately, this increase never took place, and the figure of wages paid to the immigrant labourers remained the same for more than eighty years, and the increases remained occasional and short-lived. It even decreased on several occasions with the sinking fortunes of sugar economy.

Table 12 shows that the wages paid to immigrant labourers remained the same from the beginning till the end of the indenture system. But this is only in absolute terms, and if we consider the inflationary effects and calculate the real value of wages in relative terms, the immigrants actually received wages on diminishing rates.

Year	Average Monthly Wages (Rupees/Month)
1834	5
1848	5-7
1873	4-7
1881	5-7.42
1892	5-7.5
1898	4.54-5.44
1909	6
1915	5-6
<b>Source: Mishra (2010)<sup>143</sup></b>	

The planters used every possible trick to resist any increase in wages. The first such trick was to reduce the bargaining opportunities of the immigrants by importing surplus labourers and binding them to the same contractual obligations for as long as possible. In employing immigrant labourers under the same conditions, planters always insisted on longer contracts, in which they ultimately succeeded, and imposed severe restrictions on their mobility so that the labourers had no respite but to engage with the same estate on whatever wages it offered. When the intending immigrant was recruited, he was told he would receive wages of six months in advance in India itself. But from this advance payment, a considerable sum was spent even before the embarkation as payments to the recruiter by way of remuneration for recruiting the emigrant, to the other people involved in the process of embarkation and buying utensils and other essentials for the voyage. And thus the immigrants arrived in Mauritius with six months wages already paid to them, which implies that for the next six months, they would not receive any wages except the food.

There was also a big gap between the stipulated wages and what the labourers actually received. The two main deductions put into practice by the planters were monthly deductions for return passage and the notorious 'double cut' of wages. One rupee or one-fifth of the total monthly wages was deducted by the planters as a security for good conduct and to meet the passage expenses in case of their premature repatriation in the event of any misconduct. This accumulated deductions were to be refunded to the labourers upon the completion of the stipulated contracts. In practice, it was never returned to the labourers who were forced to re-indenture several times. The second, but the most widely applied, deduction by the planters which has earned an unsavoury reputation in the narratives of labour control in Mauritius was 'double cut' or deduction of two days of wages for an absence of each day, whatever the reasons might be for such absence.

This was practised by the planters as early as in 1839<sup>144</sup> and finally got the legislative endorsement in Ordinance 22 of 1847. Planters misused this provision both for the non-payment of wages, and also to curb labour mobility. The quantum of 'double cuts' was so high that in 1874 'double cut' reduced the wage bills by one-third on good estates and one-half on bad estates to what should have been actually paid to the labourers.<sup>145</sup> The 'double cut' was imposed by the planters for reasons other than unlawful absence of labourers (these reasons were most often meaningless in nature like absence because of imprisonment, or attending court proceedings). This was described by the Royal Commissioners as a 'monstrous system'.<sup>146</sup> Despite this persuasive condemnation, the provision of 'double cut' remained in force even in the supposedly pro-labour legislation of 1878, and it was abolished only in 1908 'when indentured immigration was in its last gasp'.<sup>147</sup>

On some estates planters even enforced deduction of four days' wages for absence of each day. In addition to these two universal deductions, planters made deductions from labourers' wages for their absence due to sickness, idleness, drunkenness, cutting of grass, losing tools, collecting firewood and on countless other similar unreasonable grounds, according to the planter's fancy. Planters used every possible excuse to defer the payment of wages in cash to the labourers. On innumerable occasions, irregular payments and heavy overdue amounts of wages were reported, despite the strict legislative provisions for weekly or monthly payments of wages throughout the indenture period.<sup>148</sup>

The Royal Commission reported that between 1856 and 1870, more than thirty estates had arrears for more than three months on an average per year. Planters' usual defence was the liquidity crunch. Sugar production was credit-based, in which planters take credit for production and repay

only when the final produce was sold in the market which, undoubtedly, provided limited liquidity at the disposal of planters. However, the overdue of wage payment had more to do with the attitude of the planters than the actual crisis of funds.<sup>149</sup> Planters were always avoiding the wage payments on some pretext or the other and a minor fault, on the part of labourers, provided them with the opportunity to forfeit all the accumulated wages of errant labourers. In addition, the non-payment of wages often pushed the labourers into a debt trap to money lenders who were usually *sirdars* loyal to the planters, and it was expected that it would force the immigrants to extend their contracts. Non-payment of wages was the most often quoted grievance of indentured labourers, and it accounted for the largest proportion in the complaints lodged by the indentured labourers.

Table 13 shows that complaints for non-payment of wages accounted for the largest part of the total complaints of Indian labourers against their employers. Despite this prominence, the redressal mechanism available for labourers to reclaim their wages often proved deficient in ensuring the payment of wages and arrears. On the majority of occasions, Magistrates and Courts connived with the planters and the labourers, who were mostly illiterate, found it very difficult to establish their dues because the wage registers were not properly maintained, and ultimately the claims of labourers were dismissed. In some cases, even when the instances of non-payment of wages were established, the legal procedures were notoriously slow and the Stipendiary Magistrates, who were entrusted to secure the payment of wages, had difficulty in obtaining the dues for labourers and convicting the defaulters. All these innate constraints of the wage payment made the stipulated wages into a longing which immigrant labourers could never attain.

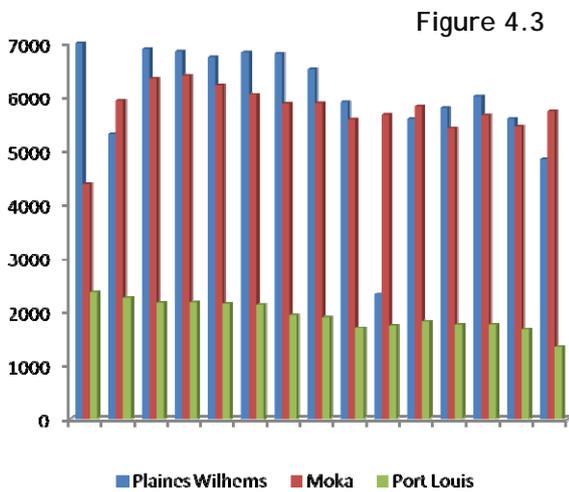

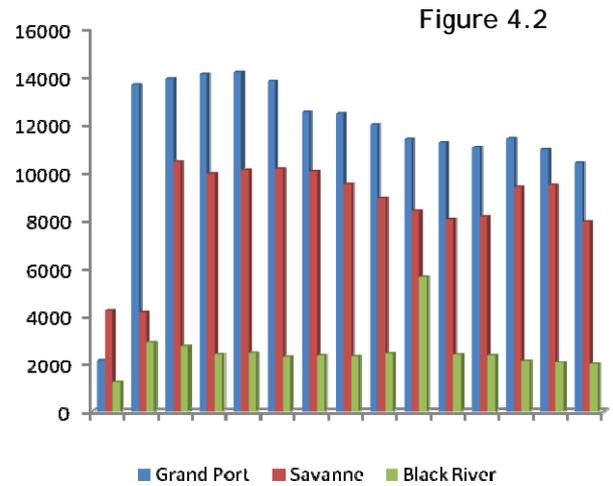

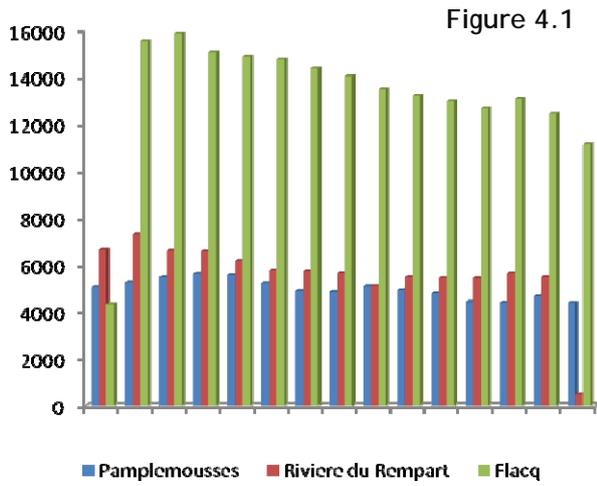

Table 13 Complaints by Indian Immigrants against Their Employees, 1878-1898

Year	Complaints for Non-Payment of Wages (Cases Entered)	Total Complaints
1878	816	1672
1879	503	823
1880	558	822
1881	1107	1378
1882	291	418
1883	323	671
1884	373	492
1885	494	589

#### 4.5.2 Wage Payments and Wage Disparity on Sugar Estates: Empirical Evidence

Data was collected from the Protector of Immigrants from 1878 to 1888. Information on average monthly number of *sirdars* and labourers per estate and District, average contract wage for *sirdars*, per centage deductions from wages based on the number of days lost in terms of sickness, imprisonment, illegal absences were made available. Data was also collected on the average number of days spent in prison, number of sick days or illegal absence. The data was used to focus on the working environment of *sirdars* and labourers in Mauritius from 1878 to 1888.

Figures 4.1 - 4.3 above show the number of *sirdars* working in the different Districts of Mauritius from December 1878 to June 1888. The highest number of *sirdars* is in the District of Flacq followed by Grand Port and Moka. There is low variation in the number of *sirdars* on the sugar estates across a particular District implying low mobility of workers across sugar estates and Districts

Figures 4.4 - 4.6 above show the number of labourers working in the different Districts of Mauritius from December 1878 to June 1888. The highest number of labourers is to be in the District of Flacq followed by Grand Port and the Plain Wilhems. We find a similar trend in the distribution of labourers as to sirdars in the above charts. The size of the sugar estates are often linked to the number of labourers and sirdars working on the plantations. The close link between the population of labourers and *sirdars* can be seen above.

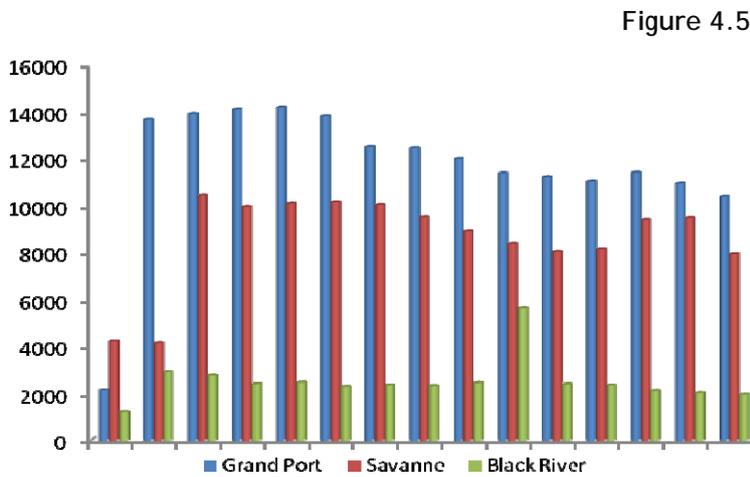

Figure 4.5

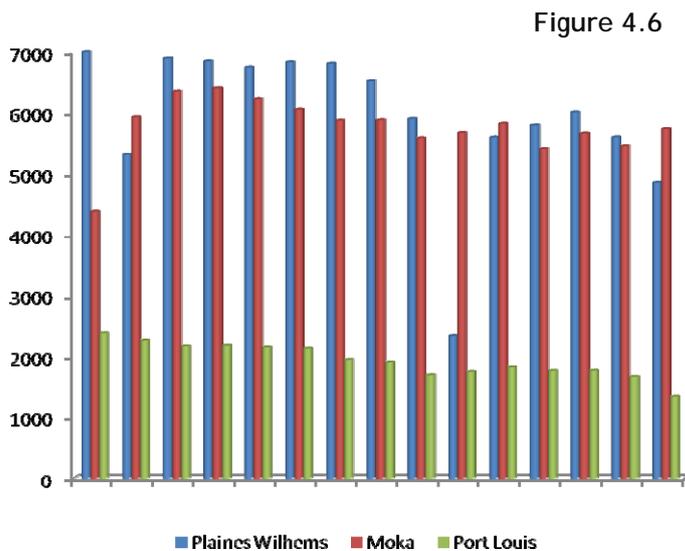

Figure 4.6

The second part of our analysis focuses on the average wages paid to *sirdars* and labourers over the period of study. Since there is not much variation in average wages for both groups over the years, we concentrate on the starting year that is December 1879 and the last year of our study which is June 1888. From Table 14, we note that the monthly mean wage of the *sirdar* is on average three times as much as that of the labourer. In addition, average deductions seem to be more pronounced for labourers than *sirdars*. In fact the average deductions were due to sickness, illegal absences, desertions, prison sentences among others which were more prevalent for labourers.

Table 14 Average number of male *sirdars*, labourers, wages contracted for, deductions and wages paid for the six months ending December 1879

Region	Monthly Average Number of Workers		Average Wages Contracted For		Average Deductions		Average Wages Paid	
	<i>Sirdars</i>	Labourers	<i>Sirdars</i>	Labourers	<i>Sirdars</i>	Labourers	<i>Sirdars</i>	Labourers

Total	2904	70475	16.26	7.08	0.64	1.38	15.61	5.70

From Table 15, though we may note a slight decline in wages for both *sirdars* and labourers in June 1888 across most Districts, the fall in wages has been greater for labourers. Overall, *sirdars* were still earning three times more and in some Districts like Flacq, Grand Port and Black River, the disparity in wages was even four to five times more for *sirdars*.

From the above, we might not capture the variation in the size of sugar estates in the different Districts. By analysing the data by Districts, we may ignore important differences across estates in the different areas. As such, we analyse the data for the starting period December 1879 and the end of the period of study that is June 1888. The analysis is shown in Tables 16 and 17. We concentrate on those sugar states with the highest number of labourers (as a measure of size) in the different districts of Mauritius. In December 1879, we note that the sugar estates with the largest number of labourers were located in the Southern and Eastern parts of the island. For instance, Gros Bois, L'Etoile, Queen Victoria, Chamouny and Rose-Belle are those with the largest number of labourers. However, we did not find any significant relationship between number of labourers on the sugar estates and the wage rates paid to these workers.

Table 16 Size of Sugar Estate and Average Wage Paid to *Sirdars* and Labourers in December 1879

30	Flacq	Belle Vue (Allendy)	22.83	558.50	16.48	7.47	0.40	1.34	16.08	6.12

The highest average wage rate was Rs. 7.47 for Belle-Vue Sugar estate in Flacq which is last in Table 17 in terms of employment of labourers. Our regression analysis also shows no positive significant link between size of the sugar estates and average wage paid to labourers. A similar result is obtained in June 1888 as shown by Table 17. We note that sugar estates in the Districts of Plaines Wilhems, Grand Port, Flacq and Moka namely Fressanges, Highlands, Gros Bois, La Lucie and

Agrement employed the largest number of labourers. The highest average wage paid to labourers in this period was around Rs. 6.43 on Riche-en-Eau sugar estate. Again our regression results, as well as figures from Table 17, do not reveal a positive correlation between the size of the sugar estate and average wage paid to labourers. This means that the average wage paid to labourers does not increase as the size of sugar estate increases. Across sugar estates, we also note that *sirdars* were earning more than labourers and the disparity was more pronounced. Their wage premium was in the ratio of 4:1 and even more on many estates. We also observe that there has been a decline in wages across all sugar estates from December 1879 to June 1888 and the fall apply to both the remuneration of *sirdars* and labourers.

## 4.6 Other aspects of indenture

### 4.6.1 The arrival of traders from India

The transport and presence of indentured labourers on a large scale had a major impact on trade and shipping between Mauritius and British India as from 1840s. British, Mauritian and Indian Traders were involved. The demand for textile products and foodstuffs from India increased considerably as the number of indentured labourers from India increased substantially in the 1840s up to the 1860s. On the other hand, the uncertainty of the international sugar market and the British policy of Free Trade created conditions for the export of sugar to British India. Trade between Mauritius and British India was significantly two-directional for a major part of the second half of the 19<sup>th</sup> century. Moreover, following the First World War of 1914-18, Mauritian exports of sugar to India would fall dramatically, with Britain becoming over again the main market for Mauritius.

The transport of indentured labourers constituted another major aspect in the commercial transactions between Mauritius and British India during mainly the second half of the nineteenth century. To satisfy this demand for goods and for the transport of indentured labourers, major developments in shipping would take place, involving British, Mauritian and Indian Companies. Imports from India increased from 30% (of total imports) in 1865 to 50% in 1900; similarly, exports to India increased more dramatically from 11% (of total exports) in 1865 to 53% in 1900.<sup>150</sup>

In the latter case, sugar became a major item by the end of the nineteenth century. The exports to India included a fair degree of re-exports of goods from France, Australia and the neighbouring region, whilst goods from India as well were re-exported to Réunion, Madagascar and the Comoro Islands.<sup>151</sup>

Many Indian firms, especially from Gujarat, invested in the trade between Mauritius and India. The Table 18 gives an indication of their participation therein.<sup>152</sup>

Year	No of Ships from India	Ships Chartered by Indian Firms	
		No	%
1850	73	29	39.7
1860	118	31	26.3
1870	82	29	35.4
1880	78	45	57.7
1890	43	23	53.5
1900	29	12	41.4

As early as 1850, 40% of ships from India were chartered by Indian firms reaching nearly 60% by 1880. The Indian commercial houses involved established branches in Port Louis and some of the traders would go back to India after some time, whilst others would settle in Mauritius. Those going back would do so for various reasons such as retirement, death or business losses, repatriating profits and capital. In fact, many firms “ended in bankruptcy, real or contrived”, according to A. Jahangeer Chojoo.

The Indian traders expanded their business interests in Mauritius. They lent money to those buying land, taking mortgages on the land. They would participate equally in parcellisation of land or provide finance to those involved in land parcellisation.<sup>153</sup> Further, as their business developed, they became big financiers, investing in the sugar industry. For example, Jackaria possessed the largest sugar estate of more than 6,000 *arpents* by 1908; another would become a sugar factory owner<sup>154</sup>. Moreover, they provided finance to the sugar industry and acted as agents for the exports of sugar to India. They played a most important role in that context; Sir Philippe Raffray wrote:

*“The Mauritius planters were afraid they would soon find themselves competing with one another as in the past. They had still fresh in their memory the daily queuing of their respective brokers in the offices of the Indian merchants of Port-Louis, each having to up a few cents on the price offered by his competitor.”<sup>155</sup>*

Moreover, they would not sustain their investment in the Sugar Industry; as traders, they were more interested in speculation and some would make losses in the Sugar Industry during the depression of 1930s.

In parallel, there was a community of small traders of Indian origin who settled in Mauritius and who developed both in towns and villages.

#### 4.6.2 Social Stratification of Indian Immigrants

In the nineteenth century, the Indian immigrants consisted of traders and free passengers, whilst the indentured labourers would constitute the major component of Indians to settle permanently in Mauritius. Since the very beginning of their settlement, there was a certain degree of social stratification. With land parcellisation and the development of the economy, this social stratification would be given a new boost.

Prior to the land parcellisation, a commercial *bourgeoisie* had already settled, together with a growing middle class consisting of job contractors, *sirdars*, traders, middle-men, money lenders, intellectuals, then a class of planters (overlapping to some extent with the middle class). The labouring class would consist of small planters/labourers, landless labourers, gardeners and other manual workers on sugar estates. Whilst the different social classes would adapt, or try to adapt, to the existing colonial society, the agricultural labourers would be facing acute economic exploitation and social exclusion on the sugar estates, leading to their resistance in the form of the well-known protest of 1871, amongst others.

The social stratification is of importance in understanding the role played by the different social classes in the 20<sup>th</sup> century. For example, within the cooperative movement, and on the sugar plantations where class conflicts between small planters/labourers and the new Indian sugar magnates would take place and finally on the role of the new intelligentsia, especially in the struggles of the labouring classes and on the political front in general.

#### 4.7 Forests, the Environment and the Sugar Industry

The expansion of the Sugar Industry had a major impact on the lands, on the forests and on the natural environment. The need for land and for fuel to satisfy the expansion of the sugar industry had led to the felling of trees and the general destruction of forests. This destruction was particularly pronounced in the 1850s and 1860s.

By 1871, the Governor, Sir Arthur Gordon, was aware of the critical situation and “tried to stop more forests from being cut down, and to grow trees along rivers and streams as well as on mountains”.<sup>156</sup> In August 1880, in a comprehensive report ‘Report on the Forests of Mauritius, Their Present Condition and Future Management’, R. Thompson highlighted that “the want of fuel hitherto has not been much felt in the colony, owing simply to the extensive felling operations which have been going on during the past thirty years in the indigenous forests of the island [...]”<sup>157</sup> The Sugar Industry needed land not only for sugar cane cultivation, but wood (hence forests) for fuel to be used in the manufacture of sugar. The evolution of the area of land under sugar cane cultivation is revealing, as per Table 19.<sup>158</sup>

Year	Land Area ( <i>Arpents</i> )
1821 - 1830	26,000
1831 - 1840	40,000
1841 - 1850	59,500
1851 - 1860	110,000
1861 - 1870	124,000
1871 - 1880	123,000

The area of land under cane cultivation more than doubled between 1850 and 1870 from 59,500 *arpents* to 124,000 *arpents*. Similarly, sugar production more than doubled from 55,468 metric tons in 1850 to 126,980 metric tonnes in 1869. The demand for fuel obviously increased significantly.

The impact of deforestation is multidimensional; it affects the natural environment, agriculture and the health of the population at large. The soil is affected in such a manner that it encourages further deforestation by the sugar planters. In Mauritius, the soil is shallow, and when only reclaimed from forests, it carries a layer of humus of from two to six inches (i.e. 5 to 15 cms) in depth. The presence of this humus makes the soil extremely fertile and is especially suited for the cultivation of sugar cane. When exposed to sunrays and hot air, this humus decomposes and becomes dry and powdery and is no longer suitable for sugar cane cultivation. The sugar planter then abandoned it and used land which was still under forest; hence further deforestation took place.<sup>159</sup>

The destruction of forests had a major impact on water supply. According to R. Thompson,

*“[...] it is evident that unless measures are adopted for preventing the rapid disappearance of the private forests, even such as they are the perennial springs - which feed the rivers - will likewise disappear; or the quantity of water which they now yield will become much lessened. It is notorious everywhere on the island, that with the disappearance of forests, the perennial springs have either completely disappeared, or are considerably diminished in volume; rivers and streams which formerly ran dry, are now, during the drier months of the year, mere stagnant pools, if not altogether dried up.”*

Forests and forest soil conserve the rainfall by holding the moisture in ‘mechanical suspension’, preventing loss of it by evaporation, but giving it off in even quantities to the springs which go to feed the rivers.

Further, compact forests and belts of trees (for example by the side of rivers) act as screens to protect trees generally, and in particular, orchards and sugar cane plantations against the violent action of winds prevailing during cyclones. The question which arises is to what extent deforestation has contributed to the loss of or damage to sugar canes during the passage of cyclones over the island. Thus in 1866/67, 1868/69, 1874/75, 1879/80, the reduction in sugar production as a result of the passage of cyclones was respectively 19.5%, 33.9%, 39.3% and 28.8%.<sup>160</sup> The impact of these cyclones, in a rather short span of time, is considered to have contributed to some extent to the problems of the Sugar Industry at that time. And again in 1892/93, the reduction in sugar production was 42.5%; as a result, the Chamber of Agriculture asked for and obtained substantial loan from the Colonial Government.

Deforestation has an impact on the health of the population. The rivers and streams which have become stagnant pools during the drier months of the year provide a breeding ground for mosquitoes and various insects which are carriers of diseases. And this might have contributed to the spread of diseases.

Finally, the demand for wood, whether for fuel or for construction of buildings on the part of the population at large, created conditions for the private forest-owners to earn more revenue. The

forest-owners leased the forest lands to firewood-sellers, charcoal burners and timber merchants.<sup>161</sup> And R. Thompson added that “the charcoal burners are undoubtedly the most destructive agents, next to the sugar planter, in the work of demolition now going on with the fullest activity”.

For all the above reasons, R. Thompson made several recommendations, of which the key one is the purchase of about 30,000 or 35,000 acres of private forests. He gave two further reasons to justify that recommendation:

- i. *“The whole of the central ridge of the table land of the island, and which is the great watershed in which all the larger rivers take their rise, requires to be permanently retained under forests.”*
- ii. *“Protection is what is the most needed for the forests of Mauritius, and that protection it is not possible they can ever get so long as they remain at the will and mercy of private owners.”*

The second key recommendation made was that: “the Mountain Reserve Lines, to maintain Mountain Reserves at all, must be lowered”. It was understood that the Colonial Government would compensate financially forest-owners for the 30,000 or 35,000 acres to be bought. Moreover, for the lowering of Mountain Reserve Lines, Thompson recommended that this could be done either by purchase of the land involved or by proclamation under existing law. There was an old French Law which made provision for these reserve lines and which was interpreted strictly. Thereafter, amendments made under Ordinance No. 13 of 1875 (which governs forest property whether public or private) are such that these mountain reserves are no longer such but in name.<sup>162</sup>

The third and last key recommendation worth mentioning was the need to survey and demarcate the Crown Lands. It was then believed that more than 13,219 *arpents* of land were in a state of doubt and uncertainty as to legal ownership.

There was another report by F. Gleadow<sup>163</sup> on the management of forests and on advising Government on the purchase of lands for forestation to the value of Rs 1,500,000. Firstly, it is of importance to note that, according to F. Gleadow, the sum of Rs 2.9 million rupees was spent to buy about 25,000 *arpents*, most of which were recommended by R. Thompson. Secondly, the Report mentioned “the corruption of subordinates need not be insisted on. It is the natural corollary of the want of supervision”. According to Barnwell and Toussaint<sup>164</sup> there was widespread corruption with regards to the management of forests. Important planters, some of whom were members of the Council of Government cut down trees on Government lands near their estates. Further, according to Gleadow, Government surveyors drew false boundaries for Government lands, thus giving away Government land to estate owners. The latter rewarded these same Government surveyors with large bribes.

#### 4.8 Concluding Remarks

After the political turbulence in the 1830s in relation to the abolition of slavery, there would emerge a close collaboration between the Colonial State and the plantocracy during the nineteenth century with respect to economic policies and Labour Legislation. There were major differences at the political level, especially with the setting up of the Royal Commission to enquire into the treatment of immigrants in Mauritius in 1872 and later in the 1880s following the recommendation of R. Thompson to lower the mountain reserve lines.

The British Imperial Government adopted a Free Trade policy, pushing down the price of sugar, the plantocracy adopted a cheap labour policy and, to do so, flooded Mauritius with indentured labourers so as to be able to depress wages. Yet, in the late 1840s, when, for a short spell of time, indentured labourers could bargain for wages and secure rather higher wage rates, the plantocracy succeeded in winning over the colonial estate to introduce legislation from 1847 to 1867 to increase immigration of indentured labour and to have greater control on the immigrant population. This time, the economic weapon of bringing wages down concerned the Old Immigrants and further consisted in bringing repressive legislation against them.

The major social transformation resulting from the parcellisation of land would not affect the fate of the labouring classes, both on and off the sugar estates. Land parcellisation and *métayage* ensured that the expanding sugar factories were being run as efficiently as possible with sufficient supplies of sugar cane.

With repeated crises in the Sugar Industry, the pillar of the economy, the exclusion of the descendants of ex-apprentices was being consolidated. Poverty and unemployment were on the increase; this would be confirmed by the Royal Commission in its Report of 1909.

## CHAPTER 5 BRITISH COLONIALISM IN THE 20TH CENTURY

### 5.1 The Beginning of the 20<sup>th</sup> century - The International Sugar Market

During the 19<sup>th</sup> century, there were intense debates in Britain between those defending free trade and those for protective tariffs. As the first Industrial Power in the world and as the most advanced economic country, free trade would benefit Britain in its broad interests in trade and finance. In particular, by 1846, the Anti-Corn Law League was able to bring the Government of the day to repeal the Corn Laws, that is trade in barley, wheat, oats etc. were open to foreign competition. Later in the same year, the Sugar Duties Act of 1846 was passed, thus doing away with preferential tariffs for colonial sugar and 'non-slave' sugar. The free traders, in alliance with the Agro-Industry (involved in the production of jam, marmalade, confectionery), was defending "a cheap breakfast table" for the British population and cheap raw material for the Agro-Industry.

However, following the economic crisis of 1847, there was a brief revival of some imperial preference for colonial sugar, but by 1874, all sugar tariffs were dismantled. Mauritius then went through some very tough times as from the 1880s till the 1940s. On top of low sugar prices, stiff international competition demanded that costs of production should be reduced. German subsidies depressed world prices which applied to transactions in all markets. Competition from Java and from even Germany and Austria in the main markets of Mauritius required a significant lowering of costs of production. This meant capital investment in the modernisation of factories and improvement in terms of sugar-cane cultivation. In the latter case, very cheap labour was of great help to the plantocracy. In the former case, there was the 'grand morcellement' referred to in Chapter 4, whereby the plantocracy mobilised funds by selling land to indentured labourers. Further, there was the merger of factories which had already started since the 1860s; this process is typical of the Capitalist System, as highlighted at the Mauritius Sugar Industry Conference of 1927 through the following statement:

*"In relation to the reduction in the number and the increase in the size of factories, it is to be remarked that this tendency is a manifestation of the natural law of development whereby smaller and less efficient units tend to become absorbed by the larger and more powerful units."*<sup>165</sup>

In fact, the family-owned sugar estates and factories of the nineteenth century would progressively merge to form ever bigger sugar companies.

Moreover, in 1870s, there was a depression in Europe, with prices of commodities in general going down.<sup>166</sup> But the main threat to sugar would come from the producers of beet sugar in Europe. Wheat from the US and Russia was invading Europe as a result of free trade, and the European farmers found in beet root production a convenient way to face this threat. Germany would emerge with a very 'low cost of production' thanks to various types of subsidies, in spite of free trade. In fact, British free trade accommodated slave-produced sugar as well as sugar subsidised by other exchequers. The cost of delivery of beet sugar from Germany to Britain would be somewhat less than that of cane sugar from the British colonies. Further, the factory performance of Germany would be much better than that of Mauritius for both factory output and sugar recovery.

Britain, the great Colonial Power would give due consideration first to its own economic interest rather than to its colonies; free trade meant cheap essential commodities for her and she did not apply countervailing duties against beet sugar bounties from Germany. The Caribbean Islands particularly found themselves in a very difficult situation; Mauritius managed to adapt to the situation thanks to the new destinations with India, Australia and South Africa, as these three countries provided markets for Mauritian sugar. Mauritian sugar exports to Britain decreased from 70,000 tons in 1870-74 to 14,000 tons in 1895-1899, and to 17,000 tons in 1900-1904. On the other hand, Germany and Austria-Hungary supplied Britain with 4 % of its sugar in 1870-74, and then 58 % in the early years of 1900 and 70 % just before World War I.

Moreover, Mauritius exports to British India were made sustainable, when the Government of British India imposed countervailing duties on beet sugar to protect its traditional suppliers including Mauritius, which the Imperial Government previously chose not to do. The pattern of sugar exports from Mauritius at the end of the 19<sup>th</sup> century is given in Table 20, showing clearly the decrease of exports to Britain and the considerable increase to India. But the Caribbean Islands did not enjoy the relationship/proximity which Mauritius had with British India; and a Royal Commission Enquiry was appointed in 1896 in the Caribbean Islands.

Period	Destinations					Total
	Britain	Australia	India	South Africa	France	
60/61-62/63	66400	27300	2600	5400	17300	121
75/76-77/78	42600	38600	18200	3800		112
78/79-80/81	15100	47400	35400	7300		114
81/82-83/84	13200	54300	32300	9900		115
87/88-89	14500	31300	64700	8800		128
93-95	9300	16300	77000	14700		128

## 5.2 Economic Crisis and The Royal Commission of 1909

### 5.2.1 Background

In addition to the low price of sugar and the uncertainties of the international sugar market, there were some other events which accentuated the economic depression at the turn of the twentieth century in Mauritius: the severe cyclones of 1892, the bubonic plague of 1899, the surra disease of 1902, the increase in prices of basic foodstuffs like rice and *dhol*. In 1907, the Mauritius Chamber of Agriculture asked the Colonial Government a loan of £600,000 to help sugar planters in improving the machinery of their factories and requested the Government to borrow £100,000 (1 £ = Rs. 15) for purchasing land in the context of its programme. The Secretary of State for the colonies did not agree with such a loan and suggested that there should be a Commission to investigate the condition and resources of the Colony. The *Action Libérale*, a political organisation /party, and other social/political forces campaigned for the setting up of such a Commission. In the end, the Royal Commission to inquire into the condition and resources of the Colony of Mauritius was set up in May 1909.

### 5.2.2 The Overall Economic and Financial Situation

The intensity of the monocrop economy of Mauritius was such that the cultivation of other food crops was marginalised and industrial diversification was almost inexistent. Any meaningful industrialisation that did take place was linked to the Sugar Industry: the cultivation of aloë to produce bags and the setting up of mechanical workshop to service the sugar factories. The country was heavily dependent on imports for its basic foodstuffs and all items of consumption; its exports consisted almost exclusively of sugar and its by-products like molasses and rum. In fact, the latter constituted more than 95 % of total exports. Whenever sugar prices were low for more than one or two consecutive years, there resulted an unfavourable balance of trade and a Government deficit.

This situation of Mauritius was somewhat typical of a colony which had been the victim of an extreme international division of labour and of international specialisation. As Jean Houbert wrote, "the colonial structure of international specialisation discouraged the diversification of economic growth."<sup>168</sup> Mauritius was on the periphery of the fast developing capitalist economic system on which it did not have any influence, let alone any control. Even the Royal Commission in its report had this to say:

*"[...] this excessive concentration of its resources upon one industry exposes it to serious difficulties and even dangers. It makes the colony entirely dependent upon the world price of sugar, over which it has no control."*<sup>169</sup>

Obviously, external trade played an important role and there was a prominent merchant class in Mauritius.

### 5.2.3 The Financial System and The Sugar Industry

Given the dependence of the economy on the Sugar Industry, the financial system in force in the Sugar Industry had a major bearing on the financial system prevailing in the country. First, it should be noted that most of the sugar estates were generally somewhat heavily mortgaged, with interest from 7 to 9 per cent. Further, all of them had Government loans. So much so, that the total debt of 55 (out of 66) estates possessing factories was about Rs. 12,000,000, with nearly one-third due to the Government.<sup>170</sup>

In addition to the interests mentioned above, most of sugar estate owners did not have sufficient working capital and, therefore, they needed borrowed money to run their estates. That is where their financial agent or 'bailleur de fonds' or broker came into play. The functions of the 'bailleur de fonds' / broker are clearly described in the Report of the Royal Commission:

*"By the end of the hurricane season, i.e. in April, they have exhausted the funds derived from the last crop and have to apply to a financial agent for assistance. This agent is called in Mauritius a bailleur de fonds. He is often a local merchant or produce broker, he has generally a substantial amount of liquid capital of his own as well as good credit at one or other of the two local banks, and when, as usually happens, the total amount of the money required for the estates which he is financing exceeds his own available resources, he borrows the balance from the bank, giving his own name and that of the estate owner as security. The planter submits to the bailleur de fonds a kind of budget for the coming year showing what he expects to have to pay for interest and other fixed charges, wages of employees and labourers, manure, rice and other stores, and in many cases for household and personal expenditure-in fact for all his anticipated outgoings during the year. He gives the bailleur de fonds the selling of the sugar produced on the estate and the right to demand, if necessary, a mortgage on the estate for any balance which may remain owing at the close of the year's transactions. The bailleur de fonds then becomes practically the business manager of the estate. He supplies the owner monthly with the funds required for fixed charges, wages, &c., he buys and pays for the manure, rice, and stores required for the estate, and, as the sugar is produced, he sells it and credits the owner with the amount realised. On all his outgoings in respect of the estate he debits the owner with the interest at the agreed rate, and on the other side of the account credits him with the interest at the same rate on the sums received for the sale of produce. At the end of the year the account is made up and the owner receives whatever balance there may be owing to him, or, if the balance is a debit one, gives the bailleur de fonds security for the amount."*

With this system, and given that estate owners tended not to develop a reserve fund for difficult times, they were almost invariably indebted. Moreover, it should be noted that some of them, including three English companies owning thirteen sugar estates, did not depend on the services of the broker. The estate owner had to pay interest and other commissions for the services of the 'bailleurs de fonds' as a financial manager and business manager; they tended to be around at least 14 per cent of the crop depending on the financial situation of each case.

There were risks and advantages of such a system: sometimes the broker might be a merchant or may be involved in running a sugar estate, so that conflicts of interest arose. On the other hand, by acting as a business manager for several sugar estates, the broker could purchase stores at lower prices. Further, some brokers ended up being estate owners, given that these estates became insolvent. Effectively, from brokers, two English companies became sugar estate owners.<sup>171</sup>

But, in the end, this financial system linking the broker with the Estate Manager, both as Financial Manager and town agent, turned out to be rather vicious. If the broker was dealing with a single year's loss on a single estate only, the broker might hesitate before committing himself further. But, in a year of low sugar prices and when he would be dealing with several estates, he would find himself in a tight corner; his liabilities would tempt him to provide further credit in the hope of an improved situation by the next crop-year. Thus the system encouraged further borrowing. And this risk was made worse, given the specific social reality of small Mauritius, as so aptly written by J.D. Elliot and N.G. Loughane:

*"In the small white community of Mauritius, closely bound together by the ties of inter-marriage and of long-standing family friendships, the influence of public opinion makes for lenient and sympathetic treatment of debtors whose insolvency is concealed and assisted by further credit often beyond the creditor's capacity to allow without endangering his own security."*<sup>172</sup>

But this financial system together with the associated social system mentioned above could well make matters worse, when it spilled over to the banking system. At that time, there were two banks in Mauritius: The English Bank of Mauritius and the Mauritius Commercial Bank. In dealing with the Sugar Industry, the latter found that its risk management was rather flawed. On two occasions, in 1898 and 1908, the Bank had had to apply to the Colonial Government for assistance. According to the Royal Commission of 1909,

*"In each case, the Government made the bank a temporary loan of Rs. 1,000,000 on good security and thus enabled it to avoid disaster."*

In the case of 1908, according to Hon. P.E de Chazal,

*"The last crisis we went through was due especially to the failure of two big brokers, Messrs Antelme and Régnard, which was the cause of large losses to our banks and to a good many traders and private individuals, causing discredit all round. The credit of the Mauritius Commercial Bank was entirely stopped with the Bank of India and Lloyd's Bank in London...The scare was great, the depositors having withdrawn large sums of money from the bank."*<sup>173</sup>

Moreover, the Government's action to save the Mauritius Commercial Bank was in breach of currency laws, but it received legislative sanction thereafter. And the Mauritius Commercial Bank survived as it paid the loan with interest within 3 ½ months.

Finally, capital exodus seemed to persist, if only as a result of foreign ownership of some sugar estates; moreover, with the deaths or the departure of some wealthy people, there was an exodus of capital of Rs. 20 millions. Yet there was a request for loan to the Colony.

#### 5.2.4 Landownership by the turn of 20<sup>th</sup> century

Some indication of the approximate distribution of ownership of sugar estates, according to size and different social groups is obtained from the documents submitted by the Receiver General to the Royal Commission of 1909<sup>174</sup>.

According to these documents, at that time, there were 143 sugar estates with an overall acreage of nearly 80,825 hectares (200,000 *arpents*). Of these, 66 had a sugar factory and 77 did not have one. All the land forming part of the sugar estates were not under the cultivation of sugar, and a small percentage (10.3%) was under cultivation of other crops. As information on the cultivation of land by small planters on and off the sugar estates was not provided, it is not possible to consider the extent of sugar cane cultivation from the documents.

The breakdown of the acreage of the 143 estates is given in Table 21.

Acreage (Hectares)	Owners		
	No.	%	Cumulative %
0 - 40	1	0.7%	0.7%
41 - 81	13	9.1%	9.8%
82 - 121	10	7.0%	16.8%
122 - 161	4	2.8%	19.6%
162 - 202	10	7.0%	26.6%
203 - 404	28	19.6%	46.2%
405 - 808	35	24.5%	70.6%
809 - 1212	25	17.5%	88.1%
1213 - 1617	13	9.1%	97.2%
1618 - 2020	1	0.7%	97.9%
2021 - 2425	1	0.7%	98.6%
2426 - 2829	2	1.4%	100.0%
Total	143	100.0%	

The main features of the distribution of the estate land by acreage are: 26.6% of estate owners owned less than 202 hectares (500 *arpents*), 19.6% owned between 202 and 404 hectares (500 - 1000 *arpents*), whilst 51% owned between 404 and 1617 hectares (1000 - 4000 *arpents*). Only 4 estates had acreage above 1617 hectares (4000 *arpents*).

As far as ownership is concerned, the main groups were: the French/British settlers, Indian (both from abroad and in Mauritius), a mix of residents and non-residents, of whom the latter seemed to be most likely to be of French origin (based from their names), British (from abroad), and French (from abroad). Among the Indians, there are three who were traders, one of whom was based in Bombay and another one based in Pondicherry. Table 22 sums up the analysis of estates by acreage and “social categories”, as defined above, and as presented by the documents.

Acreage (hectares)	French/ British Colonist	British	French	Indian			Resident & Non Resident	Total
				Traders/ From Abroad	Other	Total		
0 - 40	1	0	0			0	0	1
41 - 81	9	0	0		5	5	0	14
82 - 121	8	0	0		2	2	0	10
122 - 161	4	0	0			0	0	4
162- 202	8	0	0		2	2	0	10
203 - 404	21	2	0	2	3	3	1	27
405 - 808	22	3	0	1		3	7	35
809 - 1212	14	5	4			0	2	25
1213 - 1616	10	2	0			0	1	13
1617 - 2020	1	0	0			0	0	1
2021 - 2425	0	1	0			0	0	1
2426 - 2829	1	0	0	1		1	0	2
Total	99	13	4	4	12	16	11	143

Thus, as expected, French/British settlers (they were residents) numbered 99 out of 143 of the owners, which represents 69.2%. Then the “Indians”, British, French and the category “Residents and Non-Residents” constituted respectively 11.2%, 9.1%, 2.8% and 7.7% of the owners.

Moreover, in terms of acreage of land owned, the British would have a relatively larger share of 15.8% than their percentage of ownership indicated. Table 23 gives the details.

Category	Hectares ( <i>Arpents</i> )	%
French/British Colon	51230 (126766)	63.6
English	12722 (31480)	15.8
French	3993 (9881)	4.9
Indians - Traders/From Abroad	3566 (8824)	4.4
Indians - Others	1676 (4147)	2.1
Resident/Non-Resident	7403 (18319)	9.2
Total	80590 (199417)	100.0

A feature of interest of the above table is that whilst the four Indians (traders and Indians from abroad) owned estates with an acreage of 3566 hectares (8824 *arpents*), the other twelve Indians, most probably emerging from among the indentured labourers, owned estates with an acreage of 1676 hectares (4,147 *arpents*) which is less than half of that owned by former Indians.

### 5.2.5 The Small Planters

As discussed in Chapter 4, the class of small planters developed from among the *sirdars*, the former indentured labourers, the middlemen and free immigrants when the sugar estate owners divided up their lands and mobilised funds to allow them to improve the manufacture of sugar. The small planters generally had problems of access to credit and of having a good price for their canes at the factory. In many cases, the small planters borrowed from the estate owner to whom he had to send

his canes; they equally borrowed from middlemen, predominantly Indian, who would charge high rates of interest and from shopkeepers.

The whole process of *morcellement* or parcellisation of land by estate owners and the purchase of the land by the new small planters can be illustrated by the following example<sup>175</sup> which reveals the problems faced by the emerging small planter class.

In 1900 and in 1901, there was a case of parcellisation of 283.2 hectares (700 acres) of land worth Rs. 180,000 by a planter, the Honourable L.G. Antelme. Thus the average price was Rs. 257 per acre (0.404 hectare). The purchase price ranged from Rs. 100 to Rs. 1,000 per acre, to be paid in five yearly instalments with interests at the rate of 8 percent per annum. Further, the landowner made an advance of Rs. 30 per acre to each buyer for 'faisance valoir', i.e. to cover the operational costs.

Firstly, a plot of 103 hectares (254 acres) was parcellised and was bought by 103 small planters, giving on average of 2.5 acres (1.01 hectares) per buyer. And the small planters fully paid the purchase price.

Secondly, another plot of 91 hectares (226 acres) was bought by 183 small planters, giving an average of 1.2 acres (0.47 hectares) per buyer. By 1909, the small planters had not completed their payment for the land. The two sales together gave an average of 1.7 acres (0.69 hectares) per small planter.

Finally, for the last portion of 89.4 hectares (221 acres) left out of the original 283.2 hectares (700 acres), the small planters could not pay for their plots of land. They abandoned the land and went away. They had paid only part of the purchase, and left, after having paid back the advance of Rs. 30 per acre to the landowner. But, the small planters left because the landowner stopped providing the advances for *faisance valoir* since 1907, and he claimed he had no available capital to do so. According to him, those who had not paid up half the purchase price of their plot of land abandoned them. The average of 1.7 acres (0.69 hectares) per small planter can be used to estimate that about 130 planters were involved in the purchase of the remaining 89.4 hectares (221 acres) and who later abandoned their lands. Thus from this case, about 30 % of the new small planters abandoned the land. More research is required to ascertain whether this was a representative sample. It appears that the small planters had not paid the full purchase price, even after more than five years, and many lacked the necessary capital for the operational costs of cultivating the land. As a result, they became dependent on the landowner for any required finance.

Some small planters resorted to middlemen who claimed exorbitant rates of interest. There was one case who borrowed Rs. 395 from a middleman and after two years, he had to pay Rs. 1,984 which represented capital and interests. In Paragraph 75 of the *Report of the Royal Commission 1909*, the authors highlighted that "they may adopt the cheaper but more dangerous method of a conditional sale of their land, or they may borrow from Indian or Chinese money-lenders at native rates of interest, which may be anything up to 60 or even 120 percent per annum."

The need for access to credit was cruelly felt by the small planters. Whilst some succeeded in mobilising their savings, etc., others could not and lost both land and money in the process.

#### 5.2.6 Labour and Poverty

The impact of the economic depression would be very severe on the labouring classes, whether urban or rural.

In particular, with a view to collecting maximum revenues through import duties and excise duties, the Colonial Government had a policy of preferential treatment for the rich at the expense of the labouring class and the poor. For example, the import duty on tea was 60 cents per kilo, whilst that on coffee was Rs. 8 per 100 kilos, i.e. 8 cents per kilo. And, of course, tea was consumed by the labouring classes rather than coffee. Similarly, the excise duty on rum was Rs. 1.67 per litre, whilst spirits had the same level of import duty. The average total revenue for the three years 1905-08 was Rs. 9,780,055 of which the main sources were:

Item	Revenue (Rs.)*
Customs	3,357,908
Licenses-professional, hawkers etc.	603,412
Excise duty on rum	1,169,464
Taxes on vehicles and animals	106,462
Stamp duties	135,696
Registration of deeds on transfers of property, incl. succession duties	106,812
Port, harbour and lighthouse dues	262,735
Post Office	144,924
Government Railways	2,325,959
Interest	883,643

Thus, the labouring classes and the poor who were the main consumers of rum contributed Rs. 1,169,464 to Government revenue, the third biggest contribution after customs duties and the revenue from Government railways. The poor were funding, to a great extent, the economic crisis which was not at all of their making. There was no income tax and the revenue for registration of deeds on transfer of property and succession duties amounted to a mere Rs 106,812. The Commissioners was impressed by the revenue accruing from the excise duty on rum. They wrote:

*“The excise duty on rum for home consumption is Rs. 1.67 per litre of 23<sup>o</sup> Cartier and varies with the strength. Next to import duties and railway receipts, it is the most productive source of revenue. It fluctuates a good deal in yield, however, owing mainly due to the action of rings of distillers. In 1907-8 it provided only Rs. 923,724 as compared with Rs. 1,242,444 in the previous year.”*

On top of that, during 1908, the import duty on rice brought Rs. 367,187 to the Colonial Government, which amounted to about 10 % of total import duties. And the Commission added, as per paragraph 143,

*“[...] but the rest of the well-to-do community, such as business and professional men and persons living on their own means, pay little in compassion with their taxable capacity.”*

Yet, labour was very plentiful, cheap and efficient, the abundance of which contributed to minimising the cost of production of sugar. Hon. P.E de Chazal clearly pointed out that “..., but as a whole the Indian immigrant is introduced to keep down the price of labour.”<sup>176</sup> Since the period preceding abolition of slavery, the policy of the plantocracy was to bring down and keep down the price of labour, and this with support of the Colonial State more often than not. To the question from a commissioner “Do you pay indentured coolie a much lower wage than the free coolie?”, Hon. P.E. de Chazal answered “Yes, because they came under an engagement.”

The low wages in the Sugar Industry seemed to have an impact on the level of wages in the country; when the labourer moved out of the plantation, he would tend to accept lower wages than others and tended to compete more favourably on the labour market.

The use of indentured labour as an economic weapon to keep wages low was yet again confirmed by Hon. E.C. Fraser, Senior Partner of Ireland, Fraser and company, in his deposition. When he was told that there was sufficient “stock of labour” and that the natural increase of the population would keep him going, he even suggested that:

*“If some arrangement were made when we wanted coolies, so that we could get one of the West Indian Islands, or some other Government, to recruit for us, that would be sufficient.”<sup>177</sup>*

Yet, the Commissioners were fully aware that more immigration would mean more unemployment and more poverty. The estate owners wanted at all cost an abundant supply of cheap labour during crop time; the consequences for available labour prevailing outside the plantation were irrelevant

to him, even if that meant more unemployment and more poverty during the inter-crop period. In a sense, it can be said that the estate owners did not mind the 'creation of poverty', if that were the consequence of availability of abundant cheap labour.

The following questions and answers between the Commissioners and Hon. E.C. Fraser are very revealing:

*"Question: If you have a surplus population unemployed, you would naturally have a large number of applicants for Poor Law relief, and if you import all you want at a time you are hard pressed for labour and keep them here, you are liable to that?"*

*Hon. Fraser: Yes, but I do not see that you can help it.*

*Question: You would prefer the expense of Poor Law to stopping immigration?*

*Hon. Fraser: I am afraid to say that there is a great deal of money spent on the relief of the poor, but I do not see that we can get over it; not at present at any rate."*

Further, in that state of economic depression, public works were decreased substantially and the general level of economic activity went down, so that unemployment and poverty were on the increase. So much so that about 18 % of the population of slave descendants and Indian immigrants was being given Government relief. The marginalised groups felt mostly the full brunt of the depression.

#### 5.2.7 The Recommendations of the Royal Commission

In various depositions of witnesses, the point was made repeatedly that there were malpractices at the level of the banking system and in the judiciary and proposals for remedial action were made. There were other proposals that recommended the setting up of large central sugar factories. The proposal for the creation of an Agricultural Bank was emphatically made. The Sugar Industry was still in favour of maintaining Indian immigration so as to bring down the price of labour.

Overall, the Commission did not include these proposals in its recommendations. Moreover, on top of the recommendations to reduce Government expenditure and to increase Government revenue, the Commission made certain key recommendations which would have a major impact for the future. They were:

1. The establishment of a separate Department of Scientific Agriculture to assist the Sugar Industry and also the development of other products.
2. To introduce and encourage the system of cooperative credit banks among small planters.
3. To report upon the practicability of irrigation on a large or small scale.
4. To review the French Law of Succession and the Company Law.
5. The Colonial Government should borrow a sum of £400,000 i.e., Rs. 6,000,000 to fund three projects:
  - i. £285,000, i.e., Rs. 4,215,000 for the rehabilitation of Government railways;
  - ii. £100,000, i.e., Rs. 1,500,000 to planters at six or seven per cent for the improvement of cultivation, factory machinery or mechanical traction and for a remunerative irrigation scheme;
  - iii. £15,000, i.e., Rs. 225,000 for assistance to small planters through the machinery of a cooperative central bank.
6. To increase Government revenue, amongst others,
  - i. an income tax of 2% was to be imposed, and

- ii. the reduction of the Governor's salary from Rs. 75,000 to Rs. 50,000.

Thereafter, some of the recommendations were implemented, but not the imposition of the income tax. Moreover, no recommendation for labour *per se* was made. The Royal Commission did not even try to mitigate the plentiful cheap labour policy. On the contrary, they expressed appreciation of the fiscal squeezing of labour and the poor through excessively high excise duty on rum and an unfavourable fiscal policy. Nor did they recommend any help to the small planters who lost their limited capital (draught animals) as a consequence of surra epidemic. In a sense, the Royal Commission dealt with some of the symptoms, and not the cause of the crisis. They did not refer to the British Free Trade policy and its consequences. They mentioned British investment in Ceylon and Malaysia, but failed to mention that they were in tea and rubber respectively, not in sugar production. On the other hand, they started to subtly sow the seeds of division when they referred to the "indolent character of the coloured Creoles."

### 5.3 Sugar Industry, Banking and Finance

#### 5.3.1 The International Economic Crisis

##### 5.3.1.1 The Lean Years. Record Sugar Prices, 1919-1920

The sugar market may be divided into two periods: 1916 to 1924 were years of higher prices with record ones in 1919 and 1920. After 1925, there started a rapid downward decline in price. The price of sugar increased from 11/7 per 50 kg in 1914 to 58 in 1920; it fell from 12/8 in 1926 to 4/9 per cent in 1935/36. This sharp drop in price in the late 1930s resulted from a profound disequilibrium in the world sugar market. The depressed economic conditions brought the sugar industries in the Caribbean Islands and Mauritius to near collapse.

The state of imbalance on the world sugar market arose from conditions particular to the trade; it was the direct result of the revived competition between beet and cane sugar after the First World War. During the war, the European Beet Industry had suffered extensive damage and the cane sugar producers expanded their output to compensate the resulting shortages on the world sugar market. Several former importers of beet sugar went over to cane. Britain the largest pre-war market for European beet sugar imported mainly cane sugar after the war. In 1913-14, cane supplied 53 per cent of the world sugar crop; in 1917-18, cane accounted for 78 per cent of world sugar; after the revival of the continental beet industry, the cane share of world sugar declined to 60 per cent. But the revival of the beet industry occurred at a time when the cane sugar industry itself was rapidly expanding, especially in Cuba.

The revival of the beet industry formed part of the policy of self-sufficiency and economic protectionism which gained favour in Europe after the First World War. The simultaneous increase in the production of cane and beet sugar soon outstripped consumption. This produced a heavy pile-up of world stocks which were dumped on near-saturated markets and precipitated the disintegration of the world sugar market. The price of sugar in the 1930s was brought down to seriously low levels.

The British sugar colonies were hard hit by the post-war collapse of the world sugar market. After 1919, they were granted some protection in London by means of preferential tariffs. But as the system of colonial sugar preference was based on the world price, it only provided partial protection to the British colonial producers against the rapid drop in the price in the price of sugar. As from 1928, Mauritius was deprived of the possibility of producing higher value added and marketable white sugar and was compelled to sell lower value added raw sugar to British refiners. In fact, the Imperial Government decided to impose higher customs duties on refined/ plantation sugar than on raw sugar. Within two years, Mauritius had to relinquish its industrial plant and its capacity to tap more remunerative markets. The net price to sugar producers in Mauritius, inclusive of preference, fell from Rs. 19.22 per 100 kgs in 1927 to Rs. 10.99 in 1936. The mean price for 1933 to 1938 was Rs. 11.81 per 100 kgs. Sugar production in Mauritius between 1919 and 1935 fluctuated between 200,000 and 250,000 tonnes, but after 1935, a series of bumper crops brought the Mauritian sugar output to 319,695 tonnes in 1938. The contribution of higher crops and gains in productivity, arising from factory improvements in the 1920s mitigated the impact of the depression years for many producers but not for the smaller ones.

The tendency in the 1930s was to put the blame for the crippling burden of debt borne by the industry during the “lean years”, on what was described as the reckless speculation of 1920, which, it was alleged, squandered a large part of the industry’s profits. The Financial Commissioners of 1931 wrote that a considerable part of the 1920 boom-year profits appeared to have been wasted in purely private expenditure and some of it to have found investment outside the Colony, leaving the estates no better off to face the “lean years”.

It may be argued, however, that the “reckless speculation” of 1920 was, in fact, little more than the normal reaction of sanguine estate owners and businessmen in the absence of a well-organized capital market in the face of a sudden unprecedented and short-lived boom. In their report the Economic Commission of 1947 referred to the fallacy of the concept of “the industry being burdened with debt”. Financing the purchase of estates with borrowed money is a long-standing custom in Mauritius. Far from being a problem, it is a feature common to a great majority of

enterprise in those parts which have adopted the joint-stock and limited liability principles. These loan creditors may be looked upon as preferred proprietors, such debt in UK would be secured by debentures and preference shares. The loans in Mauritius carried a right to a fixed interest charge.”<sup>178</sup>

It was the cumulative deficits on successive crops, rather than the overall amount of debt as such, which put such a strain on the industry's finances in the 1930s.

### 5.3.1.2 Cumulative Deficits on Crop Operations

Once the boom had subsided, the unsettled conditions on the labour market and the post-war increase in the cost of several requirements of production, including the price paid for planters' canes, prevented the industry from cutting down its costs fast enough to offset the sharp drop in sugar prices.

In 1926, the industry obtained a loan of Rs. 6mn from the Colonial Government, in 1927 it obtained a loan of 200,000 pounds sterling from the British Government and Rs. 3mn from the Colonial Government. Other loans were granted in 1930 and 1931. In 1930, the Government lent Rs. 3mn to the Sugar Industry from the Colony's Development Funds, to prevent several estates from going bankrupt, and in 1931, after a severe cyclone, another loan of 500,000 pounds sterling was granted by the British Government to make good the loss on property and crop. By 1931, the Sugar Industry was carrying deadweight of five successive loans amounting to Rs. 20mn, on which it could not repay either the principal or interest.

In 1929, Sir Francis Watts was sent by the British Government to inquire into the conditions of the Sugar Industry in Mauritius. In his report, he said that the cost of production of sugar in the island was below that of all producers, except Java and possibly Cuba. Yet, at the 1929 prices, the industry incurred a net loss of approximately 1 pound sterling per ton. The cost of producing sugar excluding all interest on mortgages and allowance for depreciation was 13 pounds 1 shilling and 2 pence per ton. In 1929, the London price was 12 pounds 2 shillings and 10 pence (including preference).<sup>179</sup>

Two years later, the Financial Commissioners reported that, through a drastic reduction in wages and salaries, made possible by the drop in the price of rice and other staples, the Industry had succeeded in keeping the loss on crop operations at the 1929 figure.

Because of the very low sugar prices, any shortfall in the crop from cyclones, droughts and other causes resulted in a substantial loss which increased the burden of previous losses borne by the industry. In 1930, the overall loss on the crop was Rs. 2 mn. The 1931 cyclone destroyed 30 per cent of the crop, with a net loss Rs. 6mn. In 1934, a drought cut the crop by 28 per cent and the Industry lost another Rs. 7mn.

As mentioned before, the Industry was assisted in 1930 and 1931 by loans from the Colonial Development Fund and the British Government. These loans forestalled a complete breakdown in the strained financial conditions of the Industry, but did not, for that matter, improve the financial situation of the sugar estates or restore the shattered confidence of local businesses.<sup>180</sup>

The Financial Commission of 1931 advocated an extensive capital reconstruction of encumbered estates.

*“All estates must be prepared to face the fundamental fact that they are carrying too heavy a load of capital; the profit now all goes in interest charges ... capital reconstruction of encumbered estates will effect an equitable distribution of the loss amongst the various interests concerned [...]”*<sup>181</sup>

The imposed capital reconstruction, with considerable losses to all the parties concerned, would have been virtually impossible in the conditions of 1931. Large-scale capital readjustments of estates depended primarily on the restoration of a certain balance between costs and prices inside the Industry. It was with this in mind that the Chamber of Agriculture made repeated requests for a guarantee by Britain, in one form or another, of a stable minimum price over a certain number of years.

In the year following, the adoption of the Jones Costigan Act in the US (see 5.3.1.4), the Secretary of the Mauritius Chamber of Agriculture, Mr. Galea, wrote in 1935, that the Mauritius Sugar Industry would only be able to surmount the present crisis if the price of sugar was stabilized by the British Government around Rs. 7 per 50 kgs. As a matter of fact, the increased preference granted in 1932 on colonial sugar was largely neutralized by the continued drop in the world sugar price. As a result, the benefits to colonial producers were discounted in the proportion of 70, 78 and 75 per cent for the crop's of 1932/33, 1933/34 and 1934/35 respectively.<sup>182</sup>

### 5.3.1.3 Distress of the Sugar Industry

During the 1930s, a large number of estates found it impossible to provide for their current requirements without overdrawing, from year to year, on their accounts with the brokers. On the other hand, the brokers, with large sums already committed in several estates, had an interest in their continued cultivation and were willing to advance the required capital to keep these estates solvent.

The financial burden of keeping the industry going came to be borne in large part by the brokers and merchants. In 1935, it was estimated that the Sugar Industry owed Rs. 10mn to commercial firms in the island. An authoritative person stated that the brokers would be most willing to forego all interests, if they could recover the principal of their loans.

The drop in sugar prices in the thirties strained the system of industrial credit to breaking point. Debt generated more debt, and lending and borrowing, more lending and more borrowing until the Sugar Industry was on the verge of collapse under the sheer weight of accumulated arrears of debt.

### 5.3.1.4 The USA initiative and the Jones-Costigan Act of 1934<sup>183</sup>

By the turn of the 20<sup>th</sup> century, the United States of America had already caught up with Britain as an industrial and economic power. This new balance of forces internationally had a major impact, amongst other things, on the international market and the price for sugar, especially following the defeat of Germany in the First World War.

Already, after Britain's decision to buy beet sugar from Germany at the beginning of the twentieth century, there were moves in the British Caribbean Islands to develop closer ties with the US, and, implicitly, this would have taken place at the expense of Britain. There was concern in Britain but, cynically, Britain used this state of affairs in its favour during the negotiations leading to the Brussels Convention of 1902, and winning an agreement for the imposition of countervailing duties against subsidised sugar. Britain did, however, not use that facility in its dealings with Germany.

In 1935, in the USA, the Jones-Costigan Act was passed; the USA Government could then bring together some countries under its influence, whereby it had a preferential price for sugar. These countries included Cuba, the Philippines, Puerto Rico and Haiti. In spite of all the severe problems of unemployment, poverty and labour protests and disturbances, Britain did not react to bring together its sugar exporting colonies in a preferential trade area to the same extent and, hence, to be able to have more substantial preferential tariffs and secure markets.

It would be only by late 1940s, after the relative weakening of its economic power, that initiatives would be taken by Britain to create some meaningful preferential agreement for sugar. In 1949, a delegation from Mauritius was sent to London to start preliminary discussions; it included for the first time two representatives of the 'small' planters, A. Osman and H. Vaghjee. These discussions were followed by further rounds of discussions and, in 1951, another delegation, comprising amongst others R. Balgobin, would be sent by Mauritius. And by 1951, the Commonwealth Sugar Agreement was signed.

Britain delayed as much as possible the process leading to the Agreement, at the expense of its sugar-exporting colonies, in spite of the initiative of USA in the 1930s. Moreover, for the first time, the Colonial State included representation of Indian planters' community in the delegation participating in the various rounds of discussions which led to the Commonwealth Sugar Agreement. It seems that this event heralded a new era in the strategic alliance between vested interests linked to the Sugar Industry i.e. the new 'big' Indian planter community and the plantocracy.

### 5.3.2 Post-War Developments -The Surge of Sugar

#### 5.3.2.1 The Sugar Industry: Internal Development

The improvements in the financial and economic conditions of the Sugar Industry, from 1946 onwards, restored the industry's profitability and boosted the prospects of sugar. After several dismal years, conditions were buoyant once again and a general atmosphere of optimism prevailed in business circles, and in the island generally. Substantial sums were invested in the rehabilitation of estates, and the use of modern equipment made it possible for large additional tracts to be brought under cane. Besides the improvements in field and factory operations, the increase in output also resulted from the development of new cane varieties, particularly the M134/32, the wonder cane of the 1950s.<sup>184</sup>

As from 1946, an unprecedented series of record sugar crops, which lasted until 1959, brought the production of sugar in 1959 to a peak of 580,372 tons, about twice the tonnage produced in 1946 (290,958 tons). These record outputs coincided with a substantial increase in the price paid to producers. The improvements in the financial and economic conditions of the Sugar Industry restored the sector's profitability and boosted future prospects.

The cane acreage increased from 56,265 hectares (139,226 *arpents*) in 1945 to 70,441 hectares (174,303 *arpents*) in 1952. The improvements in fieldwork improved the efficiency of agricultural operations and led to substantial increases in cane tonnage and sugar output. In 1950-52, Mauritius produced close to 3 kgs of sugar per *arpent*, compared to the best pre-war performance of 2.54 kgs.

According to the Mauritius Economic Commission of 1947-48, these 'remarkable' increases in yield of sugarcane in Mauritius compared favourably with the performance in other cane sugar-producing countries. The efficiency of operations on estates brought down the cost of production and made Mauritius one of the most efficient producers of cane sugar in the world.

#### 5.3.2.2 The International Sugar Agreement and Commonwealth Sugar Agreement

As mentioned above, the improvements in field and factory operations coincided with substantial increases in the price of sugar. The net price nearly doubled from Rs. 24.96 per 100 kgs in 1946 to Rs. 48.05 in 1956. One important element behind the increase in price were the new arrangements that had been made after the war for regulating world sugar production and stabilizing the price paid to producers at export.<sup>185</sup>

A sugar conference was held in London in July 1953, which was attended by representatives of 46 States. A new International Sugar Agreement (ISA) came into force on 1<sup>st</sup> January 1954 for a period of five years. A fundamental objective of the ISA was to ensure supplies of sugar to importing countries and markets to exporting countries at equitable and stable prices.

Concurrently, negotiations were held between exporting and importing countries of the Commonwealth. During the war, the British Government had purchased all the Commonwealth sugar. This arrangement was maintained after the war and in 1948, the British Government decided to extend the arrangement until the end of 1952. The price which was based on market conditions and other factors, was negotiated every year between the different parties. Thereupon, the colonial sugar producers and Dominion Governments insisted that the UK should continue to buy Commonwealth sugars after 1952 under a long-term Agreement. The Commonwealth Sugar Agreement (CSA) was signed on 21 December 1951 for a period of eight years, renewable by the consent of the parties every year.<sup>186</sup>

Between 1946 and 1953, the price paid by Britain on sugar imports from the Commonwealth was determined by the British Government in consultation with the Commonwealth producers. As from 1953, the conditions of sale of Commonwealth sugar on the British market were negotiated annually by the representatives of the producers and the British Government under the terms of the Commonwealth Sugar Agreement.

Under the Agreement, the UK purchased every year a fixed quantity of their total export quota. This was known as the Negotiated Price Quota. Under the CSA, the export quota for Mauritius was 470,000 long tons, the same as under the ISA. The Negotiated Price Quota for Mauritius was 335,000 long tons. It was increased to 351,000 long tons as long as the New Zealand Government undertook to purchase its sugar requirements from the Commonwealth producers. The price was fixed every year by the parties so as to constitute a reasonably remunerative price for the producers. This arrangement benefitted the more efficient, i.e., lowest cost producers. As mentioned before, Mauritius was then among the most efficient producers of sugar in the Commonwealth.<sup>187</sup>

The policy of price determination, by means of negotiations between representatives of producers and consumers, with the overall objective of ensuring a remunerative price to producers, led to a growing divergence between the CSA and the world price. This led inevitably to growing distortions in the allocation of resources, to overproduction and an accumulation of stocks. Instead of being determined by the “free play of market forces”, prices were decided according to the relative bargaining power of the negotiating parties. This induced Colonial sugar producers to regroup in order to increase their influence in the negotiations with Britain.

Now, to revert to the situation in the Mauritius Sugar Industry in the 1950s, reference was made above to the series of record sugar crops produced by Mauritius between 1953 and 1959, which brought the island’s sugar output to 580,372 tons in 1959. Those record performances were achieved by an increase in the acreage under cane, very favourable climatic conditions and continuous improvements in field and factory operations. The course of events in Mauritius was strongly influenced, at that time, by two major issues: the explosive growth of the population and constitutional changes. The very rapid population growth, which followed the eradication of Malaria in Mauritius, weighed heavily on and clouded, economic growth prospects and compelled the Government to take urgent measures to restrain the runaway demographic situation.

In spite of high fertility rates, the population growth in Mauritius was checked by very high death rates due mainly to the prevalence of Malaria, which often exceeded the birth rates. Between 1901 and 1940, the crude birth rate averaged 35.6/00 and the crude death rate 33.1/00, the rate of natural increase of the population was 2.3/00, with large annual fluctuations in both birth and death rates. There was thus little change in population size during that period.

There were dramatic developments in the island’s demography after the war. Between the 1944 and 1952 population censuses, the annual rate of population growth shot up to an annual average of 2.26 per cent. The successful control of diseases and the eradication of Malaria led to a sharp drop of 32 per cent in the death rate in a single year, from 29.5/00 in 1946 to 20.1/00 in 1947. This very rapid decline in mortality was accompanied by an unprecedented rise in fertility. In 1950, the birth rate in Mauritius reached the highest ever level of 49.7/00, close to the world biometric record. The rate of population growth culminated at 3.12 per cent during the 1952-62 inter-censal period. The population grew by over 60 per cent in 18 years, from 419,000 in 1944 to 682,000 in 1962 and was projected to reach three million by the end of 20<sup>th</sup> century, if fertility rates remained at the same high level and mortality rates declined further as a result of progress in medicine and public health.

With the very narrow limits of Mauritius in terms of land and natural resources, the threat of overpopulation clouded the island’s future prospects and the very real danger of a Malthusian nightmare scenario dominated Government policy in the 1960s and 1970s.<sup>188</sup>

During the 1950s, the economic growth of Mauritius depended essentially on the expansion of the sugar output. As mentioned above, 1959 marked the peak of Mauritius post-war prosperity based on sugar. 1959 was also a major land-mark in the Island’s political development with the promulgation of general elections based on universal suffrage.

As happened elsewhere, economic prosperity activated the process of political development. In a fairly short span of twenty years, 1948 to 1968, Mauritius evolved from the archaic status of a Crown Colony governed from Whitehall to that of a Sovereign State. The demographic explosion, on the one hand, and political emancipation on the other, led to a fundamental restructuring of the Mauritian economy characterized by a rapid growth of public expenditure and the diversification of the economy.

### 5.3.3 The Prelude to Independence

The future of the Sugar Industry was a major stake in the negotiations between the British Government and the Mauritian representatives which led the way to Independence. Britain, hard pressed financially, was anxious to divest itself of its colonies and curtail its role in the post-war international order. This change of policy was reflected *inter alia* in the decisions of the British Government to disengage its forces to the East of Suez and to broker, in that connection, a power-sharing agreement with the United States (US) Government.

Private negotiations were going on at the time between the British Government and local authorities which led eventually to the excision of the Chagos Archipelago from Mauritius. It appears that this was a condition set down by the British Government, for it to agree to the demands of the Mauritius Labour party and its allies for Independence for Mauritius.

While they wanted to curtail their international commitments, the British Authorities were eager to ensure that after Independence, Mauritius would not become a burden to the British Exchequer. In 1960, the British Government sent a team led by Professor Meade to Mauritius to assess the economic situation. Another team, led by Professor Titmuss, studied the demographic situation and the problem of overpopulation. In his report, Meade stressed the limits set to the development of Mauritius, owing to the island's small size and peripheral location and sugar monoculture. The urgency of the need for change was given additional impetus by the demographic explosion in the 1960s which followed the eradication of Malaria. The Meade report had a strong influence on the Government strategy and action in the years which preceded and followed the country's Independence in 1968. A recurrent theme was the need for economic diversification.<sup>189</sup>

Conscious of the wide exposure and vulnerability of Mauritius to the conditions in overseas markets and conscious also of the need to safeguard the Sugar Industry, the Government embarked on a full-scale economic diplomacy to expand Mauritius trading network, to diversify its export markets and build or strengthen relations with other friendly nations in the international sphere. The message conveyed by the Meade mission for an urgent restructuring of the Mauritian economy clearly emerged from a scrutiny of the contents of the report.

Economic diversification became the 'leitmotif' of both the Mauritian Government and the Business Sector in the 1960s. Sir Seewoosagar Ramgoolam took an active part in the negotiations with the British and French Authorities which led to the admission of Mauritius as a member of the Yaounde Convention in 1971. Substantial privileges ensured for the island, a preferential access for non-sugar products, in general.

The fundamental aim of the Government economic policy was to break out of sugar monoculture by means of a diversification of the Mauritian economy, hence the quest for new products and new markets. In the 1960s, this led to the formulation of an industrialisation policy through the establishment of industries that cater for the local market. Meade, for his part, had serious doubts about a strategy of industrialisation based on import substitution in the case of Mauritius on account of the small size of the domestic market and the lack of expertise outside the Sugar Industry. On the other hand, in his Report, Meade referred to the possibility of the establishment in Mauritius of "export platforms" which would draw on the abundant local labour force to produce commodities for export. But the small size of the domestic market, the island's peripheral location and the absence of raw materials set strict limits to the range of commodities which could be produced profitably in Mauritius. In the 1960s, the Government introduced measures to foster the development of industries catering for the local market through the issue of development certificates and restrictions on imports for certain pioneering ventures in industrialisation. But these measures fell far short of the Government objectives.<sup>190</sup>

As mentioned earlier, in its Report on the financial and economic situation of Mauritius, the Royal Commission of 1909 had written that there were few accumulated fortunes in Mauritius. Traditionally, a substantial part of the profits of the Sugar Industry was invested in Europe and South Africa, in the case of white estate owners and their affiliates, and in India, in the case of planters and merchants of Indian origin.

In the 1950s, the private capital outflow averaged about six million rupees, equivalent to almost 10 per cent of gross domestic capital formation. In 1964, the Government imposed a tax on the private transfer of capital overseas in order to restrain the drain on the island's financial resources.

The precarious financial situation of Mauritius at the time of Independence was further aggravated by the segmentation of the island's financial market. In 1967, Meade wrote:

*“Racial differences presented an important obstacle to economic development. This introduces an element of inflexibility which is particularly disadvantageous to development in a small economy. To confine each business jigsaw to the prices that can be fitted together within a single racial group of limited size, artificially increases the difficulty of building new concerns.”<sup>191</sup>*

The high concentration of land and resources in the Sugar Industry and the segmentation of the financial market produced inefficiencies in the allocation of resources and a lopsided pattern of development. In addition to the economic factors which can explain the predominance of the Sugar Industry in the island economy, there were also political and institutional factors at work which strengthened the hold of the Sugar Industry on the country's affairs. During colonial times, the plantocracy played a prominent role in the formulation of Government policy through its representatives on the Government Council. There was then an effective partnership in the administration of the island between the colonial establishment and the industry's representatives. The presidents of the Chamber of Agriculture were regularly consulted by the Governor on important matters and their opinion and advice were communicated to the Secretary of State in London.

Political and institutional factors have played a determinant part in the consolidation of the hegemony of the Sugar Industry in Mauritius. Reference has been made elsewhere to the informal partnership between the Sugar Industry and the Colonial Establishment in the administration of the island. This state of affairs lasted throughout the 19<sup>th</sup> century until the constitutional changes and political emancipation which followed the end of the Second World War.

Until the late 1950s and early 1960s, the small but powerful Franco-Mauritian White elite held sway at the top of Mauritian hierarchy. Sugar, the crop and the industry, dominated the economic and political power-lines in the country. It was the economic, rather than the cultural and political, position of the White Franco-Mauritians that ensured their dominance of the Mauritian society. Even when they lost control of the Legislative in 1948, they continued through the Chamber of Agriculture to exercise substantial power, which occurred between 1936 and 1967. They watched, with growing concern, the emergence of the Indo-Mauritian community from its secular isolation on the fringes of the Mauritian society, to a prominent place at the centre of affairs in the country and this development.

The Franco-Mauritians remained a strong interest group throughout the island's history. The Sugar Industry was their power base. The decline of the Sugar Industry in the 1960s weakened their ascendancy over the island's affairs. When their political power, dwindled their economic power declined considerably. In the new Constitution of Mauritius, which was promulgated in 1948 and with the extension of the franchise culminating, ten years later, in universal suffrage, we can trace the early ominous signs of the irreversible decline of the Sugar Industry and the Franco-Mauritian community in local affairs.<sup>192</sup>

The access to power of a new class of politicians, the representatives of the lower-income and working-class sections of the population brought fundamental changes in Government policy and the administration of public affairs in Mauritius. With these changes, there followed inevitably a change in the relations between the Government and the Sugar Industry. One of the symptoms of the new order of things in the country was the encroachment of the Government over what was previously considered to be the private preserve of the Sugar Industry. This was reflected, *inter alia*, in the scope and attributions of the official enquiries into the problems of the Sugar Industry.

One and a half centuries of virtual sugarcane monoculture have created a powerful organisation which is rooted in the Mauritian social and economic system. Yet, the seemingly impregnable hegemony of sugar in Mauritius is now irrevocably, it seems, on the local industrial scene and in the

political sphere by a new class of politicians intent on doing away with the remnants of the old order.

### 5.3.4 The Diversification of the Economy

#### 5.3.4.1 Land Settlement Scheme

There were attempts in the 1930s and the 1940s to diversify production; the impact of the Second World War contributed partly to that endeavour.

In 1947, the Colonial Government appointed Mr. J. Bett as a Land Settlement Officer with the following terms of reference:<sup>193</sup>

- i. To investigate the possibilities of Land Settlement in Mauritius;
- ii. To inaugurate such scheme as to be approved;
- iii. To set up the first settlements;
- iv. To train up officers to maintain the scheme after the departure of the Land Settlement Officer.

It must be noted that, already in 1944, there was a Land Settlement Committee which prepared a Report on Land Settlement; this report was most useful to Mr. J. Bett and the project was part of an attempt to increase food production. The Cooperative Societies were consulted in the process by Mr. Bett. At that time, sugar production dominated the economy and the lives of the people of Mauritius. Then, agricultural production was distributed as follows:<sup>194</sup>

Table 24 Agricultural Production

Crop	Hectares ( <i>Arpents</i> )	% Island Area	% Cultivated Area	% Exports
Sugarcane	57386 (142,000)	32	78	96
Foodcrops	8083 (20,000)	4.5	11	NIL
Fibre	8083 (20,000)	4.5	11	NIL

In its preliminary findings, Mr. J. Bett wrote:

*“Applicants to be selected for small holdings, particularly on the initial schemes, must have experience, capital and qualities to ensure their success so that they may be an example to other applicants who became tenants on subsequent schemes.*

*[...] the provision of a career on the land under reasonably attractive condition should act as a brake on the ‘drift to town’ movement.*

*[...] The setting up of a useful and contented food producing community on the land is of permanent importance in the Island’s social and economic structure and it is the purpose of a Land Settlement Scheme to put into operation such an organised plan.”*

Applying the brakes to the ‘drift to town’ movement became another objective of the scheme.

Mr. Bett identified the following regions/localities to implement the scheme: (i) Rose-Belle, (ii) Crown Land Dick and Wooton and other Crown Lands, near Curepipe, (iii) Hermitage (iv) Chamarel, (v) Coastal areas with reasonable rainfall - Belle-Mare, Volmar, Trou D’eau Douce, Petit Sable, Grand Sable, St. Felix and, (vi) Areas at a moderate elevation, with a moderate rainfall: Trianon, Moka (Mon Désert), Long Mountain, Crève Coeur, Sebastopol.

These regions constituted about 4047 hectares (10,000 acres), part of which would need to be acquired compulsorily.

The recommendations of the report included the following:<sup>195</sup>

- i. A total number of 500 equipped holdings would be established during a ten-year period. The holdings would consist of 100 dairy, 200 mixed, 100 poultry and 100 market garden.
- ii. It would be desirable to have buildings, stock and crop insured.
- iii. The development of a co-operative small holding scheme would provide a useful second stage for applicants who had successfully completed their period of training.
- iv. Training facilities for applicants should be run by the Department of Agriculture.
- v. Loan repayments by holders should be over a period of ten years. Interest payments should be as low as possible, 2 %-3 %.
- vi. A large part of the capital expenditure for land would require to be put into a special land fund in order to be available for the purchase of land in large portions, if this was necessary. A sum of Rs. 2,000,000 should be ear-marked for this purpose.

This project represented the first serious attempt by the State to diversify the economy, albeit to a somewhat limited extent. Given the requirements of the applicants, the small planter community would be the main beneficiaries.

It is of interest to note that some of success stories in the production of food crops in Mauritius emanate from the chosen regions at that time; for example Belle-Mare and Trou d'Eau Douce further a fair number of them have been under some form of co-operative organisation from the very beginning.

#### 5.3.4.2 The 1960s

In 1960, the Meade Commission referred to “the terrifying prospects of overpopulation” and the need for urgent measures to tackle the runaway demography by means of a national programme of population control. It also referred to the strict limits imposed by the sugar cane monoculture on economic growth and job prospects in Mauritius.<sup>196</sup>

In order to deal with these problems, Meade advocated the diversification of the economy by the creation of new industries and an increase in job opportunities through the stabilization of wages. The most controversial measure, envisaged by Meade, was the imposition of a 5% duty on sugar exports with the aim of restraining sugar production in the island. The export duty became, henceforth, a highly contentious and recurrent issue in the relations between the Government and the sugar producers.<sup>197</sup>

The objective of the policy of economic diversification, advocated by Meade, was twofold: to provide productive employment for the growing labour force, and to prevent a serious deterioration in the island's balance of payments. As the Sugar Industry had virtually reached its natural limits, any further increase in employment would have to be found outside the Industry. This was no easy task. It would require a high rate of saving to secure the resources required for capital formation. It would also require finding new profitable investment outlets within the narrow confines of the Mauritian economy, and given the virtually total absence of entrepreneurship and technical know-how outside the industry.

Following the recommendations of the Meade Report, the Mauritian Government introduced, in 1964, a series of measures to foster the establishment of import substitution industries in the island. These measures contained a number of incentives in order to attract new industries: Import duty concessions or complete exemption in respect of raw materials plant and machinery, income tax relief and generous tax allowances on industrial buildings, plant and machinery. After the introduction of those measures, some 70 industrial companies began to operate manufacturing, manufacturing a whole range of products. Between them, those industries led to the creation of approximately 1200 jobs by 1970. This was seriously inadequate to keep pace with the rapidly-growing labour force nor could it prevent a decline in real per capita GDP and deterioration in the public finances and the balance of payments. To develop industrial production at the required rate, Mauritius would need to find foreign outlets for a large part of its manufacturing products.

As indicated above, serious constraints stressed were underlined by Meade, which hampered industrial diversification in Mauritius. On the other hand, in his report, Meade referred to the

possibility of the establishment in Mauritius of “export platforms”, which would draw on the abundant local labour free to produce commodities for export. The possibility of establishing an export processing zone in Mauritius was first mentioned publicly in November 1969, by Professor Lim Fat, who was the Head of the School of Industrial Technology at the University of Mauritius, after a visit to Taiwan and Puerto Rico. In his address, Prof. Lim Fat referred to the industrial free zones as “a topic which [...] can trigger off serious industrial investment in Mauritius.” An additional appeal of Taiwan and Puerto Rico to Mauritian businessmen and industrialists was that both countries showed important similarities with Mauritius. They were large sugar producers which had established dynamic industrial sectors based on the export of manufactured products. There were also the examples of Hong Kong and Singapore which had developed a thriving industrial export economy. By taking full advantage of their strategic position as “relay economies”, they were at the forefront of newly-industrialised countries.

The possibility of the establishment of an export processing zone in Mauritius was of immediate appeal to the authorities and to the business community. The White Paper on the 1971-80 Development Strategy and the 1971-75 Development Plan elaborated at some length the need to create the appropriate institutional and infrastructural conditions “for a substantial and quick break - through in export markets”. Starting from a very small manufacturing sector employing altogether an estimated 18,400 persons in 1969, the authorities envisaged an increase of 42,000<sup>198</sup> jobs in that sector by 1980. Of that number 25,000 jobs were to be created in export manufacturing activities.<sup>199</sup> José Poncini pioneered the export industry through cut diamond activities.

Economic issues loomed large among the preconditions for the achievement of Independence, as evidenced by the number of delegations which visited Mauritius in the 1960s. Among the problems and constraints which confronted the local authorities in the task of creating a viable economy, was the island’s extreme dependence on cane sugar. It was then generally agreed that the economic development of Mauritius required a diversification of the economy. Independence from Britain and the need for a fundamental reorientation of the economy induced the local authorities to look for new trading partners. The establishment of closer links with the European Economic Commission (EEC) provided a natural alternative for development for Mauritius, with its strong francophone heritage. Added to this was growing concern that the entry of Britain into the EEC would threaten the privileges enjoyed by Mauritian Sugar on the British market, under the Commonwealth Sugar Agreement. In 1970, Mauritius ratified the Yaounde Convention. It was thus the first Commonwealth country to establish formal economic and trade relations with the European Community, two years before Britain joined the EEC.<sup>200</sup>

The adherence of Mauritius to the Yaounde Convention opened up important trading opportunities for the nascent non-sugar export sector, and it provided a strong stimulus for the development of export processing industrialization in Mauritius. To Hong Kong industrialists and businessmen, it appeared that the facilities, given to Mauritian products in the EEC markets, provided a way of circumventing the restrictions imposed on their exports to the European Community. Henceforth, the necessary conditions existed for the establishment in the island of an important export manufacturing industry in which multinational companies of the Far East (Hong Kong and, to lesser extent, Taiwan) were to play a predominant role.<sup>201</sup>

#### 5.4 The Development of the Co-operative Movement

Following the recommendations of the Royal Commission of 1909, the Colonial Government appointed Mr. S. Wilberforce, from the Indian Civil Service, equipped with the experience in setting up of Cooperative Credit Societies in India, to “investigate the possibilities of establishing cooperative banks in Mauritius.”<sup>202</sup>

Mr. Wilberforce recommended that:

- i. Cooperative banks with share capital, in opposition to the Raiffeissen principle, should be introduced;
- ii. The liability of the members should be unlimited;
- iii. Profits should be placed in a reserve fund, but that fund can be used in the ordinary business of the Bank;
- iv. Some financial assistance would initially be given by the State to get the co-operative movement off the ground;
- v. Shares should be of small denomination, Rs. 10 in particular, so that their acquisition by the poorest might be possible;
- vi. Limits on the dividends and on the number of shares which one member may hold were defined.

It is to be noted the S. Wilberforce remarked that: “Raiffeissen objected to shares on the ground that poor people wanted to borrow and could not spend on shares, that shares encouraged a vicious desire for dividends [...]”<sup>203</sup> Further, Wilberforce wondered about the interest of the wealthy people from among the planters’ community in these cooperative banks. He found that: “It is doubtful if any rich Indians-whose interest are mainly opposed to the movement-will assist the banks...Moreover few wealthy Indians will become members.”<sup>204</sup>

There was some concern that, with the social stratification among the Indian immigrant population, a conflict of interest of the wealthy against the poor small planters might jeopardise the emerging cooperative movement. Unfortunately, history would prove this concern to be a very valid one indeed.

Moreover, some other principles were important to ensure the success of the cooperative banks: it had to be ensured that the loans would be used in productive sector (i.e. in cane production); the cooperative movement should not become dependent on the State, and education in cooperation for the members of the cooperative bank is fundamental to the success of the project.

As the prosperity of the cooperative banks would obviously depend on the prosperity of its members, the French Law of Succession, criticised by the Royal Commission, acted as a hindrance to the prosperity of the members (and hence of the cooperative bank) through the subdivision of any plot of land for succession purposes. S. Wilberforce made a gender-biased proposal, consonant with the demands of the Indians before the Royal Commission of 1909:

*“In the first place, I would suggest that among Indian female succession should be abolished in the presence, at any rate, of direct male issue. The interests of widows and married daughters are apt to conflict with those of a son, and their exclusion would lessen sub-division and disputes.”*

The threats and obstacles facing the emerging Cooperative Credit Societies, as the proposed cooperative banks were known, would soon prevail. As early as in 1914 some money lenders were proposing to lend money at reduced rates in localities with newly-established Cooperative Credit Societies, with the obvious objective of killing the societies as competitors.<sup>205</sup> By 1915, the threat of the wealthy shareholders materialised, as some of them took the maximum allowable number of shares. Then they got at least double the amount invested by them as loans from the Cooperative Credit Society, thus depriving the poorer shareholders of the chance of taking loans.<sup>206</sup> The conflict between, on the one hand, the sense of solidarity and cooperation characteristic of Cooperative

Societies and on the other hand, the values of selfishness of the capitalist world recurred again and again in the historical development of the cooperative movement.<sup>207</sup>

By October 1915, Mr. L. Jaigopal, of the Indian Civil Service, the Registrar of the Cooperative Credit Societies, left prior to the termination of its scheduled three-year contract, due to “difficulties in connection with administration”.<sup>208</sup> In his Annual Reports of 1914 and 1915, he made a critical evaluation of cooperative societies, indicating, amongst others, threats and obstacles facing the societies.

Whilst there were problems facing the cooperative movement, there were, however, an increasing number of the Cooperative Credit Societies over the years, with 29 such societies which had a total membership of 2,350, representing an average membership of 81 per society. There were progressively more societies charging interests less than the initially targeted 12 %; the range of such interests varied between 6 % to 10 %.

Moreover, by 1932, the amount of overdue loans had reached the sum of Rs. 160,561, representing 60 % of the total outstanding loans from 62 % of the borrowers. This state of affairs was the result of bad management and malpractices prevailing in some Cooperative Credit Societies, as well as inefficient legislation. The main defect at the level of management was “the granting of loans by committees to their friends and relatives with excessive liberality and for non-productive purposes and taking inadequate security.”<sup>209</sup>

In the 1930s, new legislation and improvement in the inspection of the societies brought a consolidation of the cooperative movement. However, all cooperative societies were restricted predominantly to only one area of economic activity: credit for the cultivation of sugar cane and, as a consequence, almost exclusively restricted to the community of Indian Small Planters. Thus, in line with the recommendations of the Royal Commission of 1909, the Cooperative Credit Societies were meant to assist in the end the Sugar Industry.

In 1945, Mr. W.K.H. Campbell, Cooperative Adviser to the Government of Mauritius, found that:

*“The societies, so far in existence, are not only confined to credit and to one community but also to one particular occupation only, namely sugar cultivation, and to those who own or occupy land suitable for this purpose.”*<sup>210</sup>

Another issue of importance was the exaggerated role of the State in the running of the Cooperative Credit Societies which, according to Campbell, was “cooperatively speaking, entirely wrong”:

*“Any cooperative possibilities in any century must depend on the energy, initiative, honesty and mutual trust of the people themselves.”*

There were threats not only from middlemen/money lenders and wealthy members of the credit society, but also from the less wealthy and educated classes in Mauritius. Campbell found out from the residents in Mauritius that:

*“Moreover there is probably rankling in their (i.e. the people’s) minds the memory of some particular occasion on which they have been swindled by some individual member of these classes, and, without much dispassionate consideration, they indulge in sweeping generalisations that they are all blackguards.”*

This issue seemed to have been important since the early days of the cooperative movement, especially given that the small planters were themselves illiterate. And it plagued the movement throughout its lifetime. In the 1930s, there was a case of criminal action against the secretary of a cooperative society who was found not guilty, having been given the benefit of the doubt.

Mr. Campbell was very critical of the capitalist middlemen in shoe production and in the marketing of milk. He proposed that the cooperative movement should move out of merely cane cultivation and deal with a wide range of economic activities: consumer stores, marketing of milk, shoemaking, transport, fishing, building better living societies, etc. and he proposed that

cooperation should no longer be a by-product of the Department of Agriculture, of which the Director is the Registrar of Cooperative Societies.

Effectively in 1945, the Cooperative Societies Ordinance No. 15 was enacted and came into operation on 1 October 1946, whereby registration was extended to all types of cooperative societies.

By 1947, a new Department of Cooperation was created with a full-time Registrar at the head and various major developments would take place in the years to follow. In 1948, the Mauritius Central Cooperative Bank Ltd (MCCB) was set up. In 1950, the Mauritius Cooperative Agricultural Federation was registered with the objective of promoting the agricultural interests of its affiliated societies. In 1951, the Mauritius Cooperative Union Ltd. was registered whose main objectives, amongst others, included the supervision of cooperative societies and the promotion of cooperative education. These institutions, known as secondary societies, provided the necessary high-level institutional network nationally for all Cooperative Credit Societies.

A wide range of Cooperative Credit Societies was set up in the 1950s and 1960s prior to the Independence of Mauritius in 1968. By 1968, the number of societies and corresponding members were as follows:<sup>211</sup>

Mauritius		
I. Secondary Societies	No. of Societies	No. of Members
Mauritius Central Cooperative Bank	1	226
Mauritius Agric C. Federation	1	167
Mauritius Cooperative Union	1	213
Tea Marketing Federation	1	3
	4	609

## II Primary Societies

There were 296 primary societies with 32,295 members in marketing societies for tea and fishing, then in transport, thrift, schools, consumers, printing, housing, better living, farming and industrial shoemakers.

Rodrigues:

In Rodrigues, there were 30 cooperative societies with 3,520 members.

Moreover, by the 1960s the annual reports did not contain any critical evaluation of problems facing the cooperative societies, whether of the aspects of management, of malpractices etc. This lack of critical evaluation does not help to assess the extent to which the cooperative movement and cooperative spirit and values were indeed prevalent among those who matter most: the people directly or indirectly involved.

In fact, following Campbell's remarks, it is appropriate to note that the small planters did not constitute a homogenous group. The big ones provided the stratum from which emerged the middlemen, job contractors and money-lenders/usurers. This wealthy minority controlled the Cooperative Credit Societies, preventing the real empowerment of the poor planters.<sup>212</sup>

## 5.5 The Labour Struggles of 1930s and 1940s

### 5.5.1 The Labouring Classes and the Depression

For the labouring classes, history tends to repeat itself. In the crisis at the turn of the twentieth century, the labouring classes were made to contribute very unfairly, when compared to the capitalist class and middle class, to Government revenue. In the lean years of the economic depression of the 1930s, yet again they would be made to contribute heavily to Government revenue as well as to the Sugar Industry.

The discriminatory taxation policy against the labouring classes was such that about 12 % of the total family income from those classes was paid in different forms of taxation: house tax, wage rate, excise duty on rum and tobacco, custom duty on tea and cotton cloth etc. In their report on the 'Financial Situation of Mauritius' of 1931, I.D. Elliott and N.G. Longhane wrote:

*"It is surprising, therefore, to see that it is against this class that so much of the fiscal system of Mauritius is directed, that it is this class alone which can be said to be heavily taxed in comparison with other countries."*<sup>213</sup>

By considering some typical examples, the same authors showed that the professional and wealthier classes would respectively pay about 8.6 % and 5.1 % of their incomes as taxes. Taxation in Mauritius, at that time, was in inverse order of capacity to pay.

The Colonial State by squeezing maximum revenue possible out of the labouring classes, was effectively contributing to their impoverishment. So much so, that Elliot and Loughlane wrote:

*"The extent to which the colony's budget is made to depend upon the rum-drinking habits of the poorest classes of the population cannot but be regarded as a very serious blot upon its financial system. There is no suggestion that the tax is imposed in the interests of temperance. It is wholly a revenue tax, operating as a surcharge on the income of the poor."*

The alcohol consumption together with physical exhaustion among the labouring classes was causing serious problems to their health; equally there was much concern on its impact to the labourers' productivity. In 1930, P de Sornay wrote :

*"Quoi qu'il en soit: l'ouvrier ne peut plus fournir la somme de travail que fournissaient leurs pères. L'indisposition qui autrefois passait presque inaperçue invalide aujourd'hui le travailleur pendant plusieurs jours."*<sup>214</sup>

Further, the labouring classes, especially the agricultural labourers, would have their wages reduced drastically as highlighted in the table below.

District	Arithmetic Mean of Monthly Earnings (Rs)		
	1927	1931	% Decrease
Port Louis	21.36	19.25	9.9
Pamplemousses	16.27	12.18	25.1
Rivière du Rempart	15.68	12.95	17.4
Flacq	13.04	9.45	27.5
Grand Port	11.13	10.76	3.3
Savanne	10.79	7.71	28.6
Plaines Wilhems	11.12	10.10	9.2
Black River	13.62	11.00	19.2
Moka	9.68	7.66	20.9

Mauritius	13.63	11.23	17.6
-----------	-------	-------	------

For Mauritius as a whole, the reduction was 17.6 %, with drastic reductions for Savanne, Flacq and Pamplemousses being respectively 28.6 %, 27.5 % and 25.1 %.

Moreover, some sugar estates were making profits over the years, whilst others operating at losses were partly badly managed at the time of the boom year of 1921, when sugar prices rose to £90 a ton: buying estates at high prices and extending sugar cane cultivation to not very productive land.<sup>216</sup>

Further Elliott and Loughlane noted that:

*“A considerable part of the profits is said to have disappeared in purely private expenditure and some of it to have found investment outside the colony.”*

And Malcolm de Chazal wrote that remittances sent abroad should be taxed.<sup>217</sup>

In such economic depression, yet again the labouring classes were squeezed by the Sugar Industry whilst many estate owners could even contemplate capital exodus.

### 5.5.2 The Struggle of the Labouring classes

The sustained impoverishment of the labouring classes during the 1930s on the one hand, and the emergence of the Labour Party with its public meetings, on the other hand, created conditions for any fire to spread if there were a spark somewhere. Effectively, the 15 % decrease in the prices of the Uba cane variety by the Sans Souci and Rich Fund estates in the District of Flacq, triggered off protest, processions/strikes, marches, and generally agitation for better wages and against unemployment. This agitation started on 3<sup>rd</sup> August 1937 and progressively spread to the North and the South of Mauritius. Initially, the labourers and small planters were involved; thereafter, other categories of workers, such as estate servants and dockers, became involved. And, at the Union-Flacq Sugar Estate, owned by the Gujadhur family, new sugar magnates of Indian origin, shots were fired by the estate management and four labourers/ small planters were killed and several others were wounded. During the autopsy, two were found to have been shot from behind.

The Colonial State obviously reacted by sending in the Police; more importantly, a Commission of Enquiry into the unrest on sugar estates was set up on the 18<sup>th</sup> August 1937 under the chairmanship of C.A. Hooper. The events of 1937 are landmarks in the History of Mauritius, and in particular, in the History of the Labour Movement. The report of the Commission of Enquiry, referred to as Hooper’s Report, would equally bring an entirely new dimension in the way that industrial relations would be dealt with by the Colonial State, and invariably, by the employers, including the sugar oligarchy.

The main grievances of the small planter were:<sup>218</sup>

- i. Obligation to send their canes to one mill-owner;
- ii. They had to sell their canes through cane dealers, not directly to the mill-owners;
- iii. The planters were not satisfied with their share of sugar obtained from the mill owners for their canes.

On the other hand, the agricultural labourers’ grievances were:<sup>219</sup>

- i. Low wages;
- ii. They were recruited and paid by the job contractor, who they claimed did not give them their due.

Finally, Dr. M. Curé, the founder of the Mauritius Labour Party, made several requests through public meetings, memorandum and to the Commission:<sup>220</sup>

- i. The creation of a Cooperative Sugar Factory;

- ii. Increase in wages of Labourers;
- iii. The enforcement of the Ordinance on Minimum Wages of 1934;
- iv. Creation of Labour Department, with an British Director;
- v. Revision of the constitution of Council of Government with a view to obtaining proper representation of labouring classes;
- vi. The introduction of old age pensions;
- vii. Amendment to the Workmen's Compensation Ordinance of 1931.
- viii. Various measures in favour of Labour; repeal of Labour Ordinance of 1922, inspection of Labour, regulation of the work of women and children on sugar estates etc.

The Commission of Enquiry made certain key recommendations:

- i. The establishment of a Department of Labour and Social Welfare;
- ii. Pay of Casual labourers to be increased and to be made by the estate;
- iii. Establishment of Trade Unions;
- iv. Institutions of old age pensions and sickness insurance schemes;
- v. Setting up of conciliation Boards composed of employers and employees;
- vi. Setting up of a Committee of Experts and a Standing Committee of Small Planters.

Moreover, it ignored Dr. M. Curé's suggestion for the creation of a cooperative sugar factory which could have created a major breakthrough in the hegemonistic control of milling by the sugar magnates.

The labouring classes would have noticed that both the plantocracy and the Colonial State did not find it proper to take initiatives to tackle various problems like low wages, poverty etc. It was only through their struggles and loss of lives that there was a major response from the Colonial State. Similarly, in 1871, were it not for the resistance of the indentured labourers, as expressed in a petition with the help of A. De Plevitz and R. Modaliar to the Governor, most probably no changes would have taken place.

The struggles of the labouring classes proceeded further in the years to come. Thus, in September 1938, there were a strike by the dockers, claiming for an increase in wages and better worker conditions. The strike soon began to spread to other sectors, especially to the labourers on the Sugar Estate at Trianon. The Colonial State reacted by very repressive measures: Dr. Curé and Pandit Sahadeo were placed under house arrest, E. Anquetil, a trade unionist and a close collaborator of Dr. Curé, was deported to Rodrigues. The Colonial Government further decided to use direct repressive measures against the strikers: three hundred were arrested and 'black legs' were used to break the strike.<sup>221</sup> In fact, Governor Sir Bede Clifford asked the Mauritius Sugar Syndicate to recruit appropriate labourers on the sugar estates to step into the shoes of the dockers. He asked Mr Jules Leclezio, of Mauritius Sugar Syndicate "to arrange for the sugar syndicate to get into immediate touch with a selected number of estates to collect all the suitable labour required for unloading the trains and loading the lighters and to arrange with the representatives of the Railways to have these men transferred immediately by rail to the camp which was being provided for them at Quay D."<sup>222</sup> According to R. Quenette, the operation was a success and the Governor succeeded in its policy of 'divide and rule' to be used again in the future, when dealing with labour.

During the years that followed, there were various industrial disputes, especially by agricultural labourers, relating to mainly wages and shortage of foodstuffs. In the year 1943, there were many stoppages at work in the North by agricultural labourers from January to April with little result.<sup>223</sup> As from July, things got worse. There were strikes and cane fields were set on fire; in the end Police fired at a crowd at Belle Vue Harel Sugar Estate, killing three persons, one man, one woman

and an adolescent aged twelve. There was another Commission of Enquiry into these disturbances, chaired by S. Moody.

### 5.6 The Response of the Colonial State and the new Labour System

The Colonial State reacted by means of a mix of approaches. There was repression of the workers and of the leaders; there was firing against demonstrators. Thereafter, there were measures, taken following the recommendations of the Commission of Enquiry which revealed an astute approach to control the situation in general, and to control labour in particular. The fundamental issues of unemployment, low wages, poverty and basic rights of labouring classes would not be properly addressed.

The appropriate legislation was enacted to provide for repressive measures by the State whenever there arose any industrial conflicts. 'The Public Emergency Powers Ordinance, 1938' was passed. Thereafter, other relevant legislation was passed, following the recommendation of the Hooper's Report. In particular, in 1938, the 'Industrial Association Ordinance' and the 'Workman Compensation Ordinance' were enacted. The former Ordinance introduced restrictions on the right to strike by the labouring classes. But the State decided not to have a Trade Unions Ordinance, instead there was the 'Industrial Association Ordinance'. In 1938, the Labour Department was created. All these legislations were to incorporate in law proposals of Dr. M. Curé, Leader of the Mauritian Labour Party. Thereafter, in 1943 and 1944, other legislations dealing with the establishment of the Court of Arbitration and of the Labour Advisory Board were enacted. The latter functioned as 'minimum Wage Board'.<sup>224</sup>

In the debates at the Council of Government on the 'Public Emergency Powers', the Governor said:

*"We do not expect that such disturbances will arise again in Mauritius because we have taken every conceivable measure that they should not happen."*

Yet in 1938, there were dockers' strikes and in 1943, there were strikes of agricultural labourers and related disturbances in the North which lasted for about eight months. The Colonial Government had simply avoided to address the basic issues of wages, unemployment, poverty and basic dignity and rights of the labouring classes. Instead, it developed institutions to control the labouring classes and to keep them quiet. Moreover, the Colonial Office advised the Governor to make some nominations at the Council of Government "to provide a useful antidote to the purely political agitations of Curé and his friends."<sup>225</sup> And in 1939, Mr. A. Osman and S. Seerbookun were nominated respectively as representatives of the small planters and the labourers.

Moody's Report conveyed clearly the problems relating the new Labour Department and the employers, on the one hand, and the labouring classes, on the other hand. Thus, the Commissioners wrote:

*"The labouring population as a whole seem to have little faith in the labour department. We formed the impression from what we heard that many officers of this Department make the assumption, largely unconsciously, that the main object of their activities is to keep labour quiet at any price."<sup>226</sup>*

Most probably, the labour inspectors had internalised the repressive legislation and the repressive control of the Labour leaders such as E. Anquetil and Dr. M. Curé as meaning effectively that Labour should be kept quiet and under control. The Colonial State was obviously trying to nip in the bud the influence of the Labour Party on the labouring classes and its role in defending their interests. In that context, E. Anquetil refused employment as a paid official of the Labour Department.<sup>227</sup> With regard to the employers, Moody's Report highlighted the fact that they were concerned mainly with the abundance of cheap labour, as had been the case so far. The Commissioners had this to say:

*"Some employers failed to appreciate the labourers' claim to a higher standard of living, their new sense of non-economic values and their rising demand for leisure and better conditions of employment, but on the contrary, still believed in cheap labour of low standard and forgot the human side of the problems of industry."*

The Labour leaders, E. Anquetil and Dr. M. Curé apart, there emerged other Labour leaders and Trade Unions among Sugar Industry labourers: H. Ramanarain, S. Jugdambi were two such leaders. In 1947, labourers' unions merged to form the Mauritius Amalgamated Labourers' Association, M.A.L.A., which became the Plantation Workers Union in 1959. This Trade Union succeeded in influencing the Government to bring legislation and to take decisions in favour of the labourers during the 1950s. Some of these are:

- i. Maternity Leave to women labourers;
- ii. A pension to retired employees of the Sugar Industry;
- iii. General welfare of the employees of the Sugar Industry.<sup>228</sup>

It is appropriate to note that another Trade Union of labourers was formed in 1948, the Mauritius Agricultural Workers Union by the newly-elected member of the Legislative Council, Dr. S. Ramgoolam, together with S. Balgobin and L. Badry.<sup>229</sup> According to C. Bhagirutty, that Trade Union was 'competing' against the M.A.L.A.

During the 1960s, in spite of the comments of Messrs. Balogh and Bennett (see Section 5.7), the Plantation Workers Union succeeded in influencing the Colonial Government to bring new legislation to make the Sugar Industry to:

- i. Provide permanent work to-day labourers who had been present for 80 % during crop season.
- ii. Provide for a severance allowance equivalent to fifteen days of wages per year of service, in case an employee was made redundant.<sup>230</sup>

#### 5.7 The Aftermath of the Industrial Strikes and Disturbances

The Colonial State's twin policy of repression of workers and their leaders on the one hand, and of control of the labouring classes through Legislation and through the setting up of the Labour Department and other institutions, on the other hand, would eventually triumph.

Wages in the Sugar Industry remained almost constant in real terms until the late 1950s. Meanwhile, there were major political developments leading ultimately to Independence in 1968; the struggles of the labouring classes seemed to have been somewhat marginalised in the process. The Imperial Government had sent experts, like Meade and Titmuss, to study the economic prospects and the social aspects of Mauritius, preceding the country's forthcoming Independence. By 1962, there was a Commission of Inquiry (on the Sugar Industry with terms of reference relating to the same old problems:

- i. Small Planters: access to credit, apportionment of sugar accruing to planters and millers and related problems;
- ii. Labourers: wages and salaries.

The Commissioners were T. Balogh and C.J.M. Bennett. It turned out that a fair number of recommendations made by the previous Commissions of Enquiry were not being implemented.

The mind-set of the employers was found by Balogh and Bennett to be still the same as that prevailing decades, if not centuries before. They wrote:<sup>231</sup>

*"There did seem to us to be an impression, probably by now hereditary, that the big industrial units in the industry are simply not interested in either the small man or his problems."*

Simultaneously, the labourer might then still be frightened to approach an overseer or manager on a sugar estate. Thus, as Moody *et al.* wrote, things were kept quiet. The relative ineffectiveness of the Trade Unions in looking after the interests of their members was obvious to the Commissioners. They found out that:

*“It is obvious that if the unions had been effective none of these complaints would have come before us...it has been suggested to us...that leaders neglect their members in order to pursue their personal ambition.”<sup>232</sup>*

Thus, not just the Labour Department, but also the Trade Union Leadership would help to keep things quiet. Meanwhile, the Commissioners “were both deeply impressed by the existence of misery and hardship among a considerable section of the labour force”, and hence, the Commission wrote:

*“On the basis of need we have no doubt that there is a substantial case for an upward revision of earning...”*

As far as small planters were concerned, there had been some improvements compared with the situation of the 1930s; various institutions were set up, e.g. The Sugar Millers and Planters’ Central Arbitration and Control Board. Nevertheless, the fundamental problems of apportionment of sugar between planters and millers were still unsolved. The Commissioners proposed a marginal increase to 68 % of the sugar to the small planters. One of the recommendations of Balogh and Benett was the setting up of a Sugar Authority, which would be taken up again in the Report by Avramovic in 1984. By the 1980s, the Mauritius Sugar Authority was set up.

## 5.8 Concluding Remarks

This chapter has clearly demonstrated that, just as in the 1870s, the driving force for some improvement in the living conditions and wages of the labouring classes was the struggle of the same labouring classes.

Not only did the plantocracy still look for “cheap labour of low standard”, but during the first half of the century, the Colonial State contributed to the further impoverishment of labouring classes, through a taxation system which made these same labouring classes contribute more than other social classes in terms of the proportion of their wages and salaries.

The Colonial State clearly demonstrated their support to the plantocracy, whilst it applied repressive measures against the labouring classes and their leaders. Moreover, Imperial Britain adopted a Free Trade Policy which depressed the price of sugar, causing untold suffering to its sugar-producing colonies and, in particular, to the labouring classes. Although the US, through the Jones-Costigan Act of 1934, provided support to producers in its sphere of influence (in the US itself, Cuba, Philippines, etc.), it was only in 1951, that Britain already a weakening Imperial power, introduced the Commonwealth Sugar Agreement.

Following in the footsteps of Dutch and French Colonialism, British Colonialism proceeded with slavery until 1835 and then introduce indentured labour. These two systems were born out of the needs of Colonialism and of Imperial Britain in the context of colonisation. Corresponding social and economic structures were developed: the bourgeoisie, a small minority of *ex-colonists*, owning land and other means of production at one extreme, and at other extreme, cheap abundant and efficient labour. An intermediate social class of so called ‘Coloured Population’ initially and later, an intermediate/middle class of traders, middlemen, professionals, small planters, emerged. The labouring classes and the poor were like commodities whose price (i.e. wages) were kept low; and generally, there was social exclusion. That exclusion was worse for those of the labouring classes and the poor who were not part of the mainstream Capitalist Sugar Economy. Colonialism ensured this continuity in its structures, with the formal end of slavery, and indentured labour was carried over into the twentieth century.

When there was resistance to that state of affairs, as in the 1930s and the 1940s, the Colonial State used ‘divide and rule’ tactics towards the labouring classes, in addition to its repressive policy.

On the eve of Independence, the monocrop economy still dominated the economic, social and political life of Mauritius. The repression by the Colonial State at the time of intense labour struggles would nip a certain type of leadership in the bud. Meanwhile, an alternative leadership emerged. Further, the Trade Unions were not be happy with their leadership, as highlighted by the Balogh Report.

Moreover, the continual policy of cheap labour consolidated the exclusion of those found outside the Sugar Industry, given that it had an impact on the labour market.

For the first thirty years of its life, the Cooperative Movement was heavily constrained by the need to supply canes to the Sugar Industry; whilst the Cooperative Credit Societies were certainly of great help to the small planters, the initial State help and intervention became a rather permanent feature of the Cooperative Movement. Further, with the emergence of a new intelligentsia and a new business class (middle-men, planters, traders etc.) among the Indian immigrants, the leadership of the Cooperative Movement did not develop the fundamental cooperative principles and values of cooperation. The value and belief systems of the new Capitalist System tended to predominate, posing serious threats to the Cooperative movement. The possibility of the genuine empowerment of the small planters community was quashed.

On the economic front, the economy grew from the very beginning, as part of the overall Colonial Empire, the centre of which was Europe. An extreme international specialisation within the Colonial Empire had produced a vulnerable, fragile economy.<sup>233</sup> With political independence, there was nevertheless economic dependence. The consistent policy of cheap labour, the reaping off of the wealth created during decades and centuries by the Imperial Britain, the Colonial State and the plantocracy, the resulting pressure of social problems, like unemployment and poverty, were the relevant issues.

This was the state of affairs at the eve of Independence, in spite of the massive political mobilisation on the issue of Independence.

## CHAPTER 6 POST-INDEPENDENCE MAURITIUS

### 6.0 Introduction

On the eve of Independence, Mauritius had the colonial heritage of a vulnerable, fragile economy produced by an extreme international specialisation within the British Colonial Empire.

In this last but one Chapter, our research indicates that whilst there have been major achievements on overall economic development, the share and the role of the labouring classes have not been given due consideration. The economic and social structures inherited from the past were not fundamentally challenged. Further economic strategies, which carried on with cheap labour policy, were implemented.

Labour is still considered as a commodity, and there is still a long way for it to be able to have its basic rights and dignity fully recognised.

As a result, gross income inequality, social exclusion and poverty (though on a smaller scale) prevail to this day.

### 6.1 Economic Diversification

#### 6.1.1 The Growth of Export Manufacturing

After the meagre results obtained by industrialization measures, based on import substitution, and as a result of an insightful Report by Professor E. Lim Fat, following his visit to Taiwan and Puerto Rico in November 1969, the possibility of establishing an Export Processing Zone in Mauritius was of immediate appeal to the authorities and the Business Community. The Government produced a White Paper on the 1971-1980 Development Strategy and the 1971-1975 Development Plan, which elaborated on the need to create the appropriate institutional and infrastructural conditions “for a substantial and quick breakthrough in export markets”. Starting from a very small manufacturing sector, which employed altogether an estimated 18,400 persons in 1969, the authorities envisaged an increase of 42,000 jobs in that sector by 1980. Of that number, 25,000 jobs were created in that sector. The results far surpassed all expectations. There was a large increase in jobs and a levelling of the island labour force, especially among women who left their former domestic occupations and flocked in large numbers to take advantage of the opportunities offered by the nascent Export Processing Zone.<sup>234</sup>

It is commonly assumed that investment in export manufacturing in developing countries is done almost exclusively by foreign (multinational) enterprises, but such an assumption is not substantiated, as the necessary data to support this assertion are seldom produced. There, the first question investigated in the study of the clothing export industry is. “How did Mauritius in such a short time span, 1970 to 1987, develop a thriving export manufacturing industry?” This question relates *inter alia*, to the sources of investment and technical and managerial know-how, the structure of ownership and the network of international connections. In 1989, the ownership structure of currently operating businesses was studied, since their incorporation, as well as the sources of equity and share of foreign investors. This involved a detailed study of 180 individual businesses. The information obtained through the study provided some useful insights into the sources of investment and the extent to which local entrepreneurship and capital interacted with foreign investment in the setting up and development of the Mauritius Export Processing Zone.<sup>235</sup>

According to a World Bank Report (World Bank, 1982), foreign investment played a major role in providing seed capital, and a large share of the equity capital in the MEPZ belonged to foreign investors. The contribution of foreign (multinational) companies was not confined to the provision of capital. They also provided the technical know-how through the presence of foreign technicians and/or licensing agreements and markets for the new companies established in the MEPZ.

The development of the MEPZ, however, has not been one of regular sustained growth. Between 1970 and 1997/98, and beyond, the MEPZ has gone through four distinct phases:

- i. An early phase of rapid growth between 1970 and 1976, when the number of export enterprises rose from four (in 1970) to 84 in 1976, employment increased from 640 to 17,000, and the total equity capital amounted to Rs. 105.5mn. Domestic sources provided Rs. 44.9mn or approximately 42.5 per cent of the equity. Foreign investors subscribed the balance, led by Hong Kong investors with Rs. 35.5 mn or 33 per cent of the capital.
- ii. The second phase of the development of the MEPZ covers the period 1977 to 1982, which experienced a substantial decline in the rate of growth of the sector, due to a number of factors. By the end of 1982, there were 122 enterprises operating in the MEPZ, 37 more than in 1976 and a number of closures.
- iii. The third phase, 1983 to 1987, saw a spectacular revival of export manufacturing. The number of enterprises increased from 198 in December 1984, to 408 in 1987; the value of exports increased from Rs. 2,150 million in 1984 to Rs. 6,700 mn in 1987, and employment which stood at 37,600 in December 1984, reached around 90,000 in December 1987, including an increasing number of expatriate workers. These spectacular results have made the EPZ the leading sector in the island, in terms of export earnings and employment. By 1988, the sector's net output exceeded that of the Sugar Industry.
- iv. We can note a fourth phase which began in the 1990s, characterised by a shrinkage of the clothing export sector and a decline in employment, with the closing of numerous businesses including some large foreign firms which had been operating in the MEPZ for a very long time. These firms employed numerous workers on a simple basic, Cut-Make-Trim (CMT) operations. With the changes in the international trading environment and the rise in the cost of labour, these CMT operations have left Mauritius and relocated elsewhere.

Turning now to the Mauritian enterprises operating in the MEPZ, it has been referred earlier to a large proportion of local equity capital in the MEPZ. Local investments amounted to Rs. 87.2 mn in 1970-83 and Rs. 76.1 mn in 1983-85 (in respect of enterprises covered in the Study, which were still active in December 1986/ March 1987), or 47.1 percent and 31.5 percent respectively, of the total equity investment during those two periods. The large percentage of local equity is characteristic of the MEPZ, which differs in this respect from the situation in Export Processing Zones in other countries.

In another Study,<sup>236</sup> the contribution of the Sugar Industry and the share of the main local groups in MEPZ equity was calculated. Total investment by sugar companies during the period 1970 to December 1984, in respect of operating enterprises in December 1984, is estimated at Rs. 36.9 mn or 42.9 percent of local equity capital - Rs. 86 mn and 18.9 percent of the estimated total equity capital of Rs. 195 mn. This only takes into account investment by sugar companies. It does not include investment by other firms in which sugar companies have a substantial share. If these firms are included, it is estimated that investment in MEPZ enterprises, originating directly or indirectly from the Sugar Industry, would amount to approximately 50 percent of the local equity capital.

#### 6.1.2 Tourism

The bulk of the windfall from the 1972-75 sugar boom accrued to the private sector. In the mid 1970s, as mentioned before, there were pervasive controls on exports of financial assets and taxes on the export of capital; quantitative restrictions on imports were fairly tight and there were strict regulations relating to import deposit schemes. Furthermore, no stock market existed and ratings on interest rates were set by the Bank of Mauritius, with different rates for priority and other sectors. Against this backdrop, an analysis of the individual sector trends shows that the investment boom did not relate to investment in sugar, but to investment in the nascent EPZ and more importantly to private residential constructions and residential construction for the Tourist Industry.<sup>237</sup> Indeed, there was a large increase in tourist accommodation as the hotels expanded and improved their facilities. The data show also that, based on past experience in relation to sugar, both the Government and the local entrepreneurs correctly perceived the sugar boom to be temporary. The entrepreneurs shunned investment in the sugar sector, hampered by taxes and regulations, and put their windfall savings into the EPZ and Tourism.

Moreover, Tourism developed into a major pillar of economic development in Mauritius by the early 1980s. The Mauritian Government took advantage of its tropical island appeal, sandy beaches, blue lagoons, good climate, security and absence of tropical diseases to promote Mauritius as an exclusive destination.<sup>238</sup> Mauritius has tended to promote a high echelon clientele rather than mass tourism; however, the financial crisis led to a change in its client base.<sup>239</sup>

The number of tourist arrivals, as well as the number of hotels, kept on increasing over the years. The table below gives an overview of the trend in some key statistics linked with the Tourist Industry.

Year	Number			Tourism Receipts (Rs. Mn)
	Hotels	Rooms	Tourist arrivals	
1975	34	1,499	74,597	135
1980	43	2,201	115,080	325
1985	55	2,630	148,860	845
1990	75	4,603	291,550	3,630
1995	95	5,977	422,463	7,472
2000	95	8,657	656,453	14,234
2005	99	10,497	761,063	25,704
2008	102	11,488	930,456	41,213
2009	102 <sup>1</sup>	11,456	871,356	35,693
2010	112 <sup>2</sup>	12,075	934,827	39,456
2011*			980,000*	42,500*

<sup>1</sup> Excluding seven hotels not operational because of renovation works.  
<sup>2</sup> Excluding seven hotels not operational because of renovation works.  
\* Forecast.

The number of tourist arrivals increased throughout the years ever since 1975, except in 1980, 1982 and 2009 where a fall of 10.3 %, 2.7 %, 6.4 % was respectively noted. The recent fall in 2009 is attributed to the international financial crisis which caused a global slowdown in the economic activity, which led to a drop in demand in the Tourist worldwide. This affected many people around the world and the unemployment rates peaked in several countries, especially in the US and Europe. Since most of the tourists visiting Mauritius came from European countries, the global recession affected the Tourist Industry in the year 2009. However, the Industry rapidly took off and the number of tourist arrivals during the year 2010 reached 934,827, representing an increase of 7.3% compared to 871,356 in 2009. The number of hotels was 34 in 1974, and it increased to 112 in 2010. This can certainly be attributed to the increase in the number of tourist arrivals. In order to cater for the increasing number of tourists, the room capacity increased by four-fold in 2000 reaching 8,657 compared to 1975, where the room capacity was 1499. In 2010, the room capacity increased to 12,075, which represents an increase of 39 % compared to 2000.

Tourism receipts increased drastically throughout the years from Rs. 135 million in 1975, reaching Rs. 14,234 million in 2000. Gross tourism receipts amounted to Rs. 39,456 million in 2010. Based on information on tourist arrivals and information from different stakeholders, the forecast for tourist arrival in 2011 is 980,000, which represents an increase of 4.8 % from 2010 figures.<sup>241</sup> Furthermore, according to the Bank of Mauritius, the receipts from the Tourism Industry would be approximately Rs. 42,500 million, which represents an increase of 7.7 % compared to the receipts of 2010.<sup>242</sup> This is an indeed good performance in view of existing conditions.

Tourists coming to Mauritius are mainly from European countries, with France being our main market. France has accounted for 31.6 % of tourists arrivals in 2009, followed by Reunion Island (12.0 %) and UK (11.7 %). In 2009, South Africa, Germany and Italy had a share of 8.5 %, 6.5 % and 5.9 % respectively. It should also be noted that arrivals from India represented a share of tourist arrivals that increased from 2.6 % in 2000 to 4.5 % in 2009. This can be explained by the intensive promotional campaigns that have taken place in the main cities of India.

Employment in the Tourist Industry stands at 27,161 in 2010, with restaurants, hotels and travel and tourism accounting for 2464, 20847 and 3,850 respectively. Employment in the sector has increased in 2007 and 2008 by 2.9 % and 8.3 % respectively. However, in 2009 the number of people employed fell by 6.1 % in 2009, and this can mainly be attributed to the economic crisis where hotels, tour operators, etc. were forced to keep down costs to be competitive. In 2010, employment in the sector slightly increased from 27,002 to 27,161 representing an increase of 0.6 %.

Establishments	2006	2007	2008	2009	2010
Restaurants	1805	2012	2251	2431	2464
Hotels	19536	20233	22314	20478	20847
Travel and Tourism	4457	4296	4188	4093	3850
Total	25798	26541	28753	27002	27161

The Tourist Industry is facing some problems regarding manpower since several cruise operators are now offering jobs to qualified personnel of the Industry. These people are leaving the local hotels and opting for jobs on cruises as the package seems more appealing. Thus, this is a matter of concern for hotels around the island. In order to retain the employees, they will certainly have to pay higher salaries and offer better working conditions.

According to the report 'Travel and Tourism Economic Impact Mauritius 2011', the direct contribution of Travel and Tourism to GDP is expected to be Rs. 46.1 bn. representing 14.4 % of total GDP. By 2021, the Industry is expected to rise by 6.5 % to Rs. 86.6 bn. representing 18.2 % of GDP, in 2011 constant prices. Direct employment in Travel and Tourism is expected to be 77,000 (13.6 % of total employment) and when including jobs indirectly supported by the Industry the figure is expected to be 168,000 (29.8 % of total employment) in 2021.

The Government has an ambitious plan to increase the number of tourist arrivals to 2 million by 2015; accordingly, a new marketing strategy is in place, exploring new markets like Russia and China.

A series of Government policies tend to restrict total or specific type of capacity.<sup>243</sup> Many luxurious hotels are available and some of them rank among the best in the world, providing an excellent service.

Several threats face the Mauritian Tourism Industry, namely the higher oil prices, the economic slowdown in European countries. The intense competition in the international Tourism Industry has become a matter of concern for policy makers and investors in this industry.

### 6.1.3 Financial Services and Information Communication Technology

On top of the three pillars of the economy, two other pillars have contributed to economic diversification: Financial Services and Information/Communication Technology (including Business Process Outsourcing)

Since 1988, offshore banking was introduced and led the way to the development of Mauritius into an international financial centre. There are more than 20,000 registered companies in the offshore sector. Among the recent developments in the sector, Mauritius has benefited from high inflow of Foreign Direct Investment in India. About 80 % to 90 % of Foreign Direct Investment into India flows through Mauritius in private equity, hedge funds and mutual funds.<sup>244</sup>

On the other hand, since 2001, the Information/ Communication Technology sector has developed at a fast rate. Much investment has gone into that sector and two ‘intelligent’ cyber towers, comparable to the best in Europe, have been set up. The intention is to transform Mauritius into a ‘cyber island’, which will attract companies from around the world to set up its operations like facilitating e-commerce and establishing call centres.

## 6.2 The Sugar Boom of 1972 and its aftermath

Mauritius is almost unique among Sub-Saharan African countries in terms of its economic performance over the last two decades. Confronted by a series of financial and economic crises, which brought the island on the verge of bankruptcy in 1979, which followed an unprecedented Sugar Boom in 1972-75, Mauritius has unequivocally undergone a successful stabilization and structural adjustment programme in the 1980s, diversified its economic and export base and embarked on a path of rapid and sustained growth in real GDP and real GDP *per capita*. Moreover, all this has been achieved in a relatively short space of time, between the late 1970s and mid 1980s. The speed and extent of adjustment imply a high degree of flexibility and responsiveness to economic stimuli which, is unusual in the Sub-Saharan African context. In 1972-75, Mauritius experienced a major (positive) trade shock due to a combination of record sugar output and boom prices. Through a fairly detailed study of the relevant data, the study by D. Greenaway and R. Lamusse<sup>245</sup> shows how a relatively short boom affected the financial and economic context of this highly-open monocrop economy and the responses of both public and private sector economic agents to this very significant externally-generated windfall. According to the methodology which was used in the work, the result of the computations show that in 1972-73 the windfall gain was worth 6-8 % of GDP (in constant 1972 prices). It peaked in 1974 at 28 % of GDP and, despite a production short-fall in 1975, owing to a cyclone, it still amounted to 19 % of GDP. This is clearly a very significant windfall. If the windfall is converted into a permanent income using a discount rate of 8 %, this being after a tax-rate of return realized by large sugar estates at that time, the windfall has a present value of 5 % of GDP. Even if other adjustments are brought in so as to refine further the calculation, whether the magnitude of the shock is calculated in current prices or present value terms, the 1972-75 sugar boom caused a major upheaval of the economy on Private Sector Savings, Private Sector Investment and the Government Budget.

The post-Independence trade policy regime in Mauritius was characterized by pervasive import control and a relatively high level of import restrictions. Nominal tariffs were relatively high, with a fairly wide dispersion and effective tariffs were even higher. A range of hidden tariffs were in place and there were relatively high export taxes on sugar. In addition, there was extensive reliance on quantitative restrictions. Besides, there was a tight control on public expenditure and overseas remittances in an attempt to reverse the increasing deficits in the public accounts and the Balance of Payments. These measures, however, were of no avail and could not ward off the 1979 fiscal crisis when, with barely two weeks of foreign exchange reserves, the Government was compelled to have a recourse to the IMF and the World Bank for emergency loans to prevent Mauritius from defaulting on its foreign trade and capital commitments. It was only with the new credits attached to the IMF Stabilisation and World Bank Structural Adjustment programmes and the implementation of the measures contained in these programmes, that the situation was brought under control.

## 6.3 The Sugar Industry - Signs of Decline - From Sugar Industry to Cane Industry

In the early 1980s, the Sugar Industry was still the leading sector of the Mauritian economy. The Sugar Industry and sugar-related by-products (spirits and molasses) accounted for about two-thirds of total commodity exports. In 1989-1991, taxes on the Sugar Industry amounted to around 6 per cent of total Government revenue and agricultural operations, predominantly the sugarcane crop and sugar manufacture, produced 22 per cent of GNP and employed 40 per cent of the labour force. Besides, the performance and profitability of the Sugar Industry had a major impact on the Mauritian economy. It was estimated at that time that if the Sugar Industry’s output declined by one-third, this would knock out 21 per cent of the goods based exchange revenue and bring a 7 per cent reduction in national income. The drop in income would be even more severe if we include secondary activities linked to the Sugar industry operations.<sup>246</sup>

In the 1982 General Elections, the Labour Party, which had managed the country since Independence, was routed and a new reformist group of politicians came to power, who were intent on bringing changes in the social and political set-up.

In the context of the ferment of ideas and desire for change, following the 1982 elections, there was a change of attitude and policy by the Government in its dealings with the Sugar Industry. In contrast to its earlier passive attitude in disputes between main stakeholders-the sugar estates, small planters and the labour force - the Government henceforth assumed a more direct role in the Sugar Industry's affairs.

In the face of a serious deterioration in the Industry's financial situation, the Government, in 1983, appointed a Commission of Inquiry to do an analysis of the financial problems of the Sugar Industry and the measures to be taken to redress the situation. There was disagreement between the Chairman of the Commission, Dr. Avramovic, and two other members, Prof. Manrakhan and Mr. Sithanen, with regard to the views and recommendations in the Chairman's Report, and Prof. Manrakhan and Mr. Sithanen submitted a dissenting report.<sup>247</sup> According to Dr. Avramovic, the Sugar Industry was in a state of "financial distress". Avramovic advocated, *inter alia*, the abolition of the sugar export duty on account of its perverse effects on the Sugar Industry. For Manrakhan and Sithanen, the fundamental problem of the Sugar Industry was not financial but one of labour relations.

The Chamber of Agriculture submitted its comments on both reports. It concurred with the findings of Avramovic about the financial plight of the Sugar Industry and deadweight of the export duty on the Industry's finances but opposed the creation of a Sugar Authority as recommended by Avramovic.

The Minister of Agriculture considered that neither of these reports could serve as a basis for the restructuring of the Sugar Industry and submitted a Policy Statement to the National Assembly on the restructuring of the Sugar Industry.

The policy statement was seen by the Government as a blue-print for the future of the Sugar Industry. The Statement identified the main issues which would determine the future of the Industry, the objectives to be assigned to the Industry, the financial parameters within which the Industry should operate in future, the Industry's ownership and management and the degree of Government control over its operations. The Policy Statement augured a radical change in the attitude of the Government towards the Sugar Industry. With the publication of the Policy Statement, Government asserted its right to participate in the formulation of measures with regard to the Industry's future. The Government would, henceforth, act as a "privileged partner" in the management of the Sugar Industry's affairs.

The concretization of the changes in the Government policy with regard to the Sugar Industry was embodied in the 1985-1990 Action Plan, published by the Sugar Authority in February 1985.<sup>248</sup> The Policy Statement and Action Plan contained a number of recommendations which would form the basis of future far-reaching changes in the operation of the Sugar Industry. These changes included the closure of several factories, a "thorough study" on the centralization and modernization of sugar factories, the separation of milling and planting activities and a wider share ownership of the Industry to include participation by Government, the planters and workers. Looking back on the outcome of these recommendations, we can argue that the insight shown by those involved in planning the future of the Sugar Industry had a determinant influence over the evolution of the Sugar Industry during the following two decades.

#### The Sugar Industry at a crossroad

In November 1991, the Chamber of Agriculture published a 100-page report on the Sugar Industry based on a substantial appraisal of the current situation of the Industry and future prospects. The Report addressed a number of problems relating to the prospect of reform of the EU Common Agricultural Policy and the GATT trade negotiations, stagnation or decreasing revenue, the declining productivity of labour increasing costs, mechanization of field operations and the milling sector. A Joint Public and Private Sector Committee studied the Report and made recommendations to the Government. These recommendations contained measures aimed at improving factory efficiency and agricultural production and yields through a rebate of export duty in specific areas.

Although these findings and recommendations did not contain anything fundamentally new and striking, they reaffirmed the urgency of a solution to the Industry's problems and the direct involvement of the Government in the Sugar Industry's affairs. It was also an acknowledgement by all the parties concerned that every major policy-decision pertaining to the Sugar Industry was a matter of national importance.

#### 1994: An Eventful Year

1994 was an eventful year for the Mauritian agricultural sector and the Sugar Industry. With regard to the Sugar Industry there was a major shift in Government policy. In the 1994 Budget Speech, the Minister of Finance announced a number of far-reaching measures. According to the Chamber of Agriculture in its Annual Report "the contentious and long running issue of the export duty on sugar had now been effectively laid to rest bringing in its wake new relationship between the government and the sugar industry".<sup>249</sup>

In June 1994, a Memorandum of Agreement was signed between the Government, the Mauritian Sugar Producers' Association (MSPA) and the Rose-Belle Sugar Estate which belongs to the Government and which is not a member of MSPA. In its Annual Report, the Chamber of Agriculture referred to "new spirit which now prevails between the government and the sugar industry in the face of a common threats and challenges". Another notable event was a Package Deal between the MSPA and six (Trade) Unions over pay and working conditions, extending from 1<sup>st</sup> July 1994 to 31 December 1997, which was hailed by the Sugar Industry as a breakthrough in industrial relations. In the field of energy generation from *bagasse*, another major development was the signing of a Memorandum of Understanding between the CEB and the Union St Aubin Sugar Estate.

#### The Loss of Cane Land

The closure of several factories since 1990 and the acceleration of the process of centralization of milling operations have brought a substantial reduction in the size of the cane acreage in Mauritius. In 1990, there were 19 sugar factories operating in Mauritius. By 2007, 11 factories had ceased to operate and the number of factories was down to 8. The efficiency of a sugar factory is a vital element in the outcome of the cane sugar crop. The closure of several factories over the last two decades has accelerated the shrinkage of the cane acreage in the island. Between 1990 and 2007, the acreage under cane has been reduced by 13,350 hectares (33034.1 *arpents*).<sup>250</sup>

The loss of cane land has been particularly high among small planters. They cultivate tiny plots of less than one *arpent* and their holdings are often fragmented into minuscule and scattered parcels which increase the cost of cultivation. Besides, on account of the fairly frequent occurrence of adverse climatic conditions and lack of good husbandry, their yields have deteriorated over the years and many small planters are cultivating sub-marginal plots on which the yield is only a fraction of that obtained by sugar estates and large planters. Due to the absence of adequate records, their title of ownership is also often problematic. Moreover, much of the land is not irrigated or rocky. With the meagre yields which they obtain in return for all the exertion and resources which they devote to cultivating their plots, small planters are particularly prone to be attracted by the alluring opportunities and high prices offered by promoters in the tourism industry and the lucrative property market.

#### Clouds on the Sugar Horizon<sup>251</sup>

As the 20<sup>th</sup> century drew to a close, developments in the world sugar market conveyed indications of future drastic changes in the European Union (EU) Sugar Policy. There were much apprehension and alarm among the Mauritian authorities and the Sugar Industry at the news of impending major changes in the EU sugar regime.

In fact, since 1975, Mauritius has benefited from the EU sugar regime. Compared to other African Caribbean Pacific (ACP) countries, the small island economy benefited from the biggest annual sugar quota of 507,000 tonnes (representing 37 per cent) under the ACP-EU Sugar Protocol.<sup>252</sup> It enjoyed the high-price EU market where the guaranteed price of sugar was almost three times that of the world market price. Net sugar revenues were estimated at €4 billion over the last thirty years. The stability and predictability procured by the sugar protocol provided the necessary impetus for economic growth. Revenues from sugar were used to transform the economy from a

mono-crop stage to a five-pillar-based economy, with manufacturing, tourism, sugar, financial services and information and communication technology sectors. However, with the EU price reduction of 5 per cent in 2006 and a total of 36 per cent in 2009, the overall economic weight of the sector has fallen<sup>253</sup> (Rojid *et al.*, 2009). The sugar sector's contribution to GDP is now comparatively small, around 2.2 per cent of GDP in 2009. The 36 per cent price reduction meant considerable losses to the Sugar Industries of the 18 African Caribbean Pacific (ACP) Sugar Protocol Signatory States (SPSS), as well as to their fragile socio-economic fabric which depended a lot on the sugar sector. Accordingly, measures had to be designed and funds had to be found to ensure adaptation. It is in this context that Accompanying Measures must be viewed as support to the ACP countries, details of which are given in section 6.5.

Forewarned about the threat of a sharp cut in the EU price for ACP sugar exports, the Mauritian Government and the representatives of the Sugar Industry took some fundamental measures to adapt to the new situation. In April 2006, the Government, after consultation with the Sugar Industry and with the approval of the European Commission, published the Multi Annual Adaptation Strategy (MAAS) and the Action Plan 2006 - 2010. The Adaptation Strategy aims at an extensive reform of the sugar sector with the following main objectives: the re-engineering of the Sugar Industry to a sugar cane cluster, the establishment of a competitive and sustainable sugar sector, the fulfillment of Mauritius trade commitments. The MAAS emphasizes the multi-functional role of the Sugar Industry and its impact on other sectors of the Mauritian economy. Other measures were promulgated by the Government which aims at safeguarding the future viability of the Sugar Industry:

- a. Ensuring the cost competitiveness of the milling sector through mill centralization;
- b. The right sizing of the labour force and the creation of a more flexible workforce;
- c. The mechanization of field operations to improve the cost competitiveness of field work and increase sugar cane yields.

Accordingly, a certain number of measures were incorporated in the sugar reform in December 2007, after a deal was concluded between Government and the Mauritius Sugar Producers Association (MSPA). The measures referred to the transfer of some 2000 A (*arpents*) by the MSPA membership to Government for agricultural and social housing purposes over the duration of the deal; a package for *métayers*; the enhancement of equity participation by employees and small and medium planters in the various components of the sugar cane cluster; an independent study on the Independent Power Producers (IPPs); the maintenance of the sugar apportionment ratio for the ten-year duration of the deal; the liberalisation of the price of imported sugar sold on the local market so as to eliminate losses incurred on the sale of imported sugar; and the inclusion of interest charges in the costs that could be recouped in respect of the VRS, the ERS and the Blue Print.

The MAAS is made up of projects and articulated along components and subcomponents destined to respond to the new market environment and address the constraints of the Sugar Industry. The first element resides in cost reduction. This is achieved *via* the closure of seven out of the existing eleven factories whereby three of the remaining four would each produce more than 100,000 tonnes of sugar; the right-sizing of human resources in production entities to reduce the level of labour costs, both in absolute and relative terms; recourse to seasonal labour; the substantial reduction of overhead costs at operational, administrative and institutional levels; the reduction of the level of indebtedness of sugar producers and the derivation of full benefits from economies of scale at all levels, namely corporate sector and small and medium planters. Secondly, another aspect rests on generating additional revenue which is achievable through the sales of a higher proportion of value-added direct consumption sugars that is moving from the current 15 per cent of total sales to 50 per cent or more through a bold, innovative and aggressive marketing strategy; the elimination of the loss incurred by producers on sugar sold on the domestic market; the reduction of the cost of the institutions servicing the Sugar Industry by 50 per cent; the rise in sugar output through the cultivation of high-sucrose cane varieties and higher earnings secured through the optimization of by-products.

In effect, the third aspect of the MAAS focuses on the optimal use of by-products through firstly an increase in electricity production from *bagasses* from 300 to 600 GWh and total electricity production from *bagasse*/coal from 750 GWh to 1700 GWh and also the production of 30 M litres of ethanol from molasses so as to allow a 20/80 ethanol/gasoline blend. Since there is a need to

reduce our dependence on fossil fuel, essentially with rising oil prices, the ethanol/gasoline mix and the production of ethanol from cane juice may be beneficial. Fourthly, the need to foster research to obtain and commercially use higher-fibre cane and even fuel canes. The fifth aspect of the MAAS discusses the 'pro-poor dimension'. The issues deal with the provision of attractive cash and in kind compensation for employees accepting the voluntary termination of their contract of employment in the context of factory closures or rightsizing of factory entities. The package includes the possibility to benefit from early entitlements to the retirement pension; the provision of re-skilling opportunities and loan opportunities to these employees. In addition, significant incentives and assistance to small planters are made available to enable them to regroup into larger units and thereby increase their yields and lower their costs of production. Support is also given to planters operating in economically and environmentally-difficult areas. The provision of a decent compensation package to employees working in service providing institutions that will be right sized is also made available. Employees having voluntarily terminated their contract of employment can also be part of the empowerment and welfare schemes being set up by Government.

The seventh aspect relates to additional measures implemented to address the problems posed by the current indebtedness of sugar factories. The last element of the MAAS is to create synergies among the different stakeholders and foster cane cultivation agreements between millers and planters to ensure an adequate supply of canes to the former and remove the sugar loss constraints faced by the latter. This will enhance participation in equity. The eight specific measures of the strategy are essentially meant to regroup small planters, sustain difficult areas under sugarcane cultivation, move out of sugar cane, centralisation, right-sizing of the labour force, increase contribution to national electricity production, shift to ethanol production and optimise the use of sugarcane lands. Among these eight measures, we will focus on the 'pro-poor dimension' aspect of the MAAS which is related to the right sizing of the labour force *via* the implementation of the VRS, which in reality has given way to a completely different picture.

The cancellation of the Sugar Protocol in 2009 and the sharp 36% reduction in the EU prices between 2006 and 2009 have compelled an urgent realignment of production costs in the Sugar Industry with the price fixed by the EU. The implementation of the measures prescribed by the MAAS and the Action Plan has led to a large retrenchment of the Sugar Industry labour force. For this purpose, the Government and the Sugar Industry finally agreed on a set of conditions and a compensatory package for the loss of employment in order to achieve the required reduction in the labour force whilst preserving industrial peace. This led to the establishment of the Voluntary Retirement Scheme (VRS). The VRS is in line with the right-sizing of the labour force and a reduction in the labour costs in the Sugar Industry. It offers a package to all employees of the Sugar Industry, wishing for an early retirement. Priority is given to those aged 50 and above. The package includes compensation in terms of cash payment, as well as land entitlement (about 300m<sup>2</sup>), exemption from income tax in respect of the cash and land compensation payable and housing loans at preferential rates. To date, around 15,000 people have benefited from the scheme.

Moreover, a major shortcoming of MAAS has been the rather disturbing overlooking of the issue of water rights; sugar factories used to have special water rights, but with their closure, there was the need to look into the issue, given especially the prevailing problem of accessibility to water. Further, the implementation of MAAS has had some significant problems. In the case of *métayers*, some of them from the South were unhappy that the case of possible buying of their land was not given sufficient consideration by the authorities. As far as labourers were concerned, a rather large number of those who have taken the Voluntary Retirement Scheme II were still not given their plots of land of seven perches by 2011. There are claims that the Government Departments concerned are taking much time to process the dossier.

#### 6.4 The Sugar Sector at a Glance

In 2003, exports to the EU and the US under preferential arrangements amounted to some 540,000 tonnes, whereas some 8,000 tonnes of special sugars were sold to 23 world market destinations. Domestic consumption of sugar was about 40,000 tonnes per year. The bulk of the exports were under the Sugar Protocol with 507,000 tonnes and some 20,000 tonnes under the Special

Preferential Sugar Agreement, while sales to the US under the Global Import Quota represent some 12,000 tonnes. The share of sugar production in the Mauritian economy has, over the years and in relative terms, dwindled to about 3.5 per cent of the GDP in 2003 (from 25 per cent in the 1970s). Sugar production represented about 19 per cent of foreign exchange earnings. However, the high prices offered by the EU sugar regime were unsustainable in the long term. In June 2005, the European Commission published legislative proposals to reform the Common Market Organisation for Sugar, which call for severe reductions in EU sugar prices and an end to the current system of national quotas (OECD, 2004).

The reforms impacted severely on ACP sugar supplying states, including Mauritius, and inevitably lead to the destruction of century - old traditions of sugar production with devastating socio-economic consequences. Under the new EU sugar regime, which lasts from 1 July 2006 to 30 September 2015, the EU reference price for both raw and white sugars encountered a staged cut up to 36 per cent by October 2009. The reform has led to the closure of most sugar factories and to date, only 4 sugar factories are operating on the island. The economic and social consequences are thus considerable. As the biggest quota holder under the Sugar Protocol, Mauritius is the most affected country. Proceeds from the export of sugar amounted to some €225 million per year on average, which helped Mauritius to meet a very high proportion of its food import bill. Between 1975 and 2000, the cumulative benefits to the country from *quasi*-transfers from European consumers amounted to about €2.6 billion, or 6.1 per cent of GDP. Mauritius will lose up to €895 million during the nine years of the implementation of the new sugar regime and suffers from a direct permanent loss of €95 million annually. The reduction in prices in the EU implies a shortfall in export earnings of €782 million over the period 2006-2015. The effective loss to the economy is, in fact, much higher when the social and environmental multiplier effects of the Sugar Industry are accounted for.

In 2009, the sugar sector earnings amount to Rs 8,490 million and the number of people employed in the sector is around 31,827. Employment in the sugar sector as a share of total employment is only 6.1 per cent (see Table 29). Sugar cane production has also been falling over the years from around 4.8 million tonnes in 2006 to 4.4 million tonnes in 2010. In fact, the production of sugar cane went down by 6.5 per cent from 4,667,234 tonnes in 2009 to 4,365,852 tonnes in 2010. This is mostly explained by a reduction of 2.7 per cent in the area harvested from 60,380 hectares (149,440.5 *arpents*) in 2009 to 58,755 hectares (145,418.6 *arpents*) in 2010 and a drop of 4.0 per cent in the yield of sugar cane per hectare from 77.3 tonnes to 74.3 tonnes. The production of sugar, consequently, went down by 3.2 per cent from 467,234 tonnes in 2009 to 452,473 tonnes in 2010. Compared to 10.02 per cent in 2009, the average extraction rate was 10.37 per cent in 2010, representing an increase of 3.5 per cent.

Table 29 Sugar Sector at a Glance

	2006	2009
GDP <i>per capita</i> PPP (US\$)	10,443	12,261
Sugar sector as % of GDP	3.7	2.2

\*\*\* Valid only for the sugar corporate sector (i.e. excluding small and medium planters).

<sup>e</sup> Estimated and based on 2004 data; <sup>P</sup> provisional.

A more detailed picture of sugarcane production and cane yield by ownership can be seen in Table 30. We note that cane yield, as well as production of sugar cane, have declined significantly for *métayers* from 2009 to 2010, accounting for around 13 per cent and 12.4 per cent, respectively. A similar picture is depicted for estates in terms of cane production and also harvested areas.

Table 30 Production by Ownership: 2009 and 2010

Ownership	2009 <sup>1</sup>			2010 <sup>2</sup>		
	Area Harvested (Hectares)	Cane Produced (tonnes)	Yield	Area Harvested (Hectares)	Cane Produced (tonnes)	Yield
Estate	29,500	2,527,270	85.67	28,833	2,366,594	82.08

## 6.5 The Mid-Term Review of the MAAS

With the changing global environment and the EU sugar reforms, the Mauritian Government devised the MAAS in the form of a ten-year, 2006-2015, Action Plan.<sup>254</sup> The objective of the MAAS was to ensure the commercial viability and sustainability of the sugar sector for it to continue fulfilling its multi-functional role in the Mauritian economy. This objective could only be met through five major broad initiatives. Firstly, the transformation of the Sugar Industry into a sugar cane cluster, which means that the Industry moves from an essentially raw sugar producer to a situation where it produces several types of sugar that is raw, special, industrial and white; electricity from *bagasse*/coal using state of the art technology and ethanol using molasses. Secondly, the establishment of a competitive, viable and sustainable sector. Thirdly, the fulfilment of the trade commitments of the country. Fourthly, the reduction of the dependency on the import of fossil fuels generally and on oil in particular. Fifthly, the continuation of the multifunctional role of sugar and the support to national environment and social objectives.

As per the MAAS, measures had to be designed and funds found to ensure adaptation. It is in this context that Accompanying Measures must be viewed as support to the ACP countries. The EU allocated € 40 M for 2006 as an interim measure for ACP States and then € 1244 M as Accompanying Measures for the period 2007-2013, the allocation for Mauritius for the period 2007-2010 is some € 128 M. The latter figure is equivalent to 19% of the total for the 2007-2010 time-span. Eligibility for Accompanying Measures was conditional upon the submission of a Multi-Annual Adaptation Strategy which was done in April 2006. As from that date, Mauritius has had an excellent performance in terms of the fulfilment of the conditions stemming from the indicators and the near totality of funds has been disbursed.<sup>255</sup> It is understood that Mauritius's performance is among the best among the ACP, if not the best. Inadequate performance leads to loss of funds which are subsequently reallocated to performing countries. Such a performance reflects positively on the relations of Mauritius with other lenders who have, over the past few years, decided to coordinate their action in respect of borrowing countries.

However, the market environment has changed significantly from the time the MAAS was envisioned. In 2006, in spite of several signals from the EU and the WTO, the complete phasing out of the Sugar Protocol (SP) and, in particular, of its triple guarantees of price, access and duration was neither to the fore, nor was it raised in the ongoing negotiations between the ACP and the EU in Brussels. Accordingly, this element was not factored in the MAAS.

Whilst the MAAS anticipated the major price decrease, it did not envision the phasing out of the quantity and duration guarantees. With the phasing out of the Sugar Protocol (SP), the Sugar Sector will have to operate in a fiercer market environment, with the following new features: There are no price, quantity and duration guarantees in contrast to those which existed under the Sugar Protocol and instead, there is a reference price which is set to determine future market price. Further, in the new sugar arrangements, Least Developed Countries (LDC) has precedence over the non-LDC ACP countries. Third, the "*double-trigger*" volume safeguards introduced in the Interim EPA arrangements renders the intra-region, intra non-LDC ACP and non-LDC ACP/LDC competition a fiercer one. With the erosion of the guarantee of individual country access, Mauritius has to safeguard a regional non-LDC quota, together with Zimbabwe, and, at the same time, protect its own individual access quantity against an ambitious Zimbabwe.

With fierce competition, there is a need to improve export performance, and export performance is conditional upon production, and this brings to the fore the need to expand production wherever there is scope and to limit production loss wherever possible.

The new market, set up in the EU, and the Long-Term Partnership Agreement (LTPA) with Sudzucker, open a vast array of opportunities for value addition in the Sugar Industry, now and in later years. One such item is branding which is expected to generate substantial additional revenue. However, branding and the acceptance of brands take time, and efforts are expected to materialise as from 2014/15 onwards. The LTPA implied a sea change in the production pattern, having to shift from the export of raw sugar as a commodity to that of white sugar a direct consumption product having to strictly comply with stringent food norms. In this regard, two refineries have been constructed and will operate fully as from 2010/11. The MAAS considered that

only 50% of sugars would be marketed as value added ones; in fact, 100% of exports would be in the form of value-added sugars.

As per the Mid-Term Review of the MAAS, in terms of production, the 520 000 t. of sugar envisioned as an average production in the MAAS appear to be unattainable. In fact, an average production of 450 000 t. over the next five years seems more realistic. It is noted that the first crop estimate, for the 2010 crop stands at 450 000 t. The figure of 450 000 t. takes into account, firstly, a climatic regime more akin to the 2006 -2009 period; secondly, the movement of land away from agriculture, for example the 2000 *arpents* under the 5 December 2007 deal, infrastructural needs of the country and the 920 hectares (2276.5 *arpents*) of the Highlands Project; thirdly, the removal of 1500 hectares (3,711.7 *arpents*) of land found in Irrigation zones; fourthly, land abandonment by small planters; and fifthly, a moderate derocking/regrouping scheme. It was suggested that an aggressive plan at the level of the small and medium planter sector would undoubtedly result in a higher average production closer to 480 000 t. The shift from 520 000 t. to 450 000 t. means a drop of 13.5%. A production of 480 000 t. means a lesser drop that is 7.7%.

Small and medium planters currently account for some 25% of total acreage under cane, some 18,000 hectares (44,540.3 *arpents*). According to the medium-term review, the production from the small and medium planter sector is essential for five key reasons. Firstly, the increase in production would enable the country to ship the supplies agreed upon at the ESA level, otherwise, Mauritius would be underperforming with all the attendant consequences. Second, enhanced production, coupled with economies of scale, would ensure the long-term viability and sustainability of the small and medium planter sector. Further, enhanced cane supply would impact positively on the milling sector and other sugar/cane based downstream sectors, at a time when equity participation by employees and small and medium planters is being stepped up. Fourth, improved viability impacts positively on the 'pro-poor dimension' which is furthered given the participation of SMEs in the Field Operations Regrouping and Irrigation Project and lastly, land under cane, as opposed to abandoned land, affords better protection and preservation of the environment and fits well in the *Maurice Ile Durable* project and complies with the environment concerns of the EU. The extent to which all these objectives have been met needs to be evaluated.

## 6.6 The Voluntary Retirement Scheme (VRS)

### 6.6.1 Historical Background

In 1993 and 1994, with the closure of sugar factories St. Antoine and The Mount, the Government and the Sugar Industry agreed to provide for a compensation for the employees in cash and kind, i.e. a plot of land for each employee.

Thereupon, in 1997, Government came up with a Blue-print on centralisation of sugar milling operations in Mauritius. One of the main features was the recommendation that employees affected by a factory closure would be offered compensation in cash and in kind, if they accepted to voluntarily terminate their contract of employment. The cash compensation was equivalent to 2.5 months per year of service and in-kind compensation in the form of a plot of land of an extent ranging from 540 to 720 square metres, with all infrastructural works. Moreover, the children of the employees are entitled to scholarships.

In 2001, this principle of compensation was extended to the growing activities of the Sugar Industry and the VRS was introduced. Two categories of workers were defined, those having more than a certain age and the rest. The offer was compulsorily made to those having more than a certain age. For the other employees, the employer has the liberty to choose to whom he makes the offer of a VRS but the decision to accept or reject the offer rests solely with the employee. This is the Early Retirement Scheme. Moreover, the older category was entitled to higher cash compensation, two months' compensation per year of service, plus the possibility to draw an early pension, as compared to 1.25 months on average for the others. The cash and in-kind compensation were to ensure the financial security of the planters. The provision of land is also highly valuable, providing a means to grow subsistence crops and/or to build a house, whilst at the same time it is an asset that can be handed down to their heirs. Depending on the category and the age of a VRS employee, he/she secures 4 to 6 times more compensation/value (value of land) than an employee

in any other sector who is paid the severance allowance. Around 8,000 employees accepted the VRS I.

Gradually, the intent has been to encourage the younger employees to accept the VRS. In this context, the VRS II was introduced in 2007. It was an improvement on the 2001 VRS in three aspects, namely the lowering of the cut-off age for entitlement to the highest level of compensation per year of service; the increase of the compensation package to younger workers; and the introduction of a re-skilling scheme. The age limit to benefit from a '2 months per year of service' compensation was brought from 50 years for women and 55 years for men to 45 and 50 years respectively. The package for the younger employees has been increased from an average of 1.25 months per year of service to 1.5 months (see Table 31). Employees who accept the VRS are entitled to the early receipt of the contributory retirement pension but at an actuarially calculated reduced rate. Thus, a person aged 50 would receive 60 per cent of his/her retirement pension.

Table 31 VRS I and VRS II Packages

Category of employees	Age (years or more)		Cash Compensation (months/year of service)	
	VRS I	VRS II	VRS I	VRS II
Female agricultural worker	50	45	2.0	2.0
Male agricultural or non-agricultural worker	55	50	2.0	2.0
All other cases including staff				
First 5 years of service			1.50	1.50
Next 10 years of service			1.25	1.50
Next 10 years of service			1.00	1.50
Remainder of service			0.75	1.50

(Source: Multi-Annual Adaptation Strategy, 2006-2015.)

The effects of the reduced pension are more pronounced in the case of women for three reasons, namely their basic salary is lower than for men on account of the wage packages and remuneration orders prevailing in the Sugar Industry. Also, they retire younger, at 45 or 50 years, as opposed to 50 or 55 years for men and the actuarial factors used to compute retirement pension are lower. Lastly, they are often widows or are the only bread earner in cases where the husband is unable to work.<sup>256</sup> To provide support to women affected by the VRS, an amount of Rs 800 million<sup>257</sup> was included in the Action Plan 2006-2015 for adaptation and empowerment. These funds would go to safety nets, possibly in a revamped Social Aid Program. However, this specific project was not implemented. There is, in addition, an adaptation and Empowerment Policy to ensure that those employees who lose their jobs can be retrained with a view to encouraging them to move to other sectors or start small businesses. The re-skilling is done prior to an employee leaving in the context of the VRS II. So far, some 6,000 employees have been involved in VRS II.

VRS II is not financially attractive to the sugar estates in the short term but helps estates to mechanise field operations, which will not be possible, if the vast majority of workers remain as permanent employees, and to reduce labour costs in the long run. VRS II concerns around 6,000 agricultural and non-agricultural workers and many of these workers are replaced with workers employed on a seasonal basis in the short term. Over time, however, it is expected that the number of seasonal employees will be reduced. The cost of the new VRS amounted to more than Rs 3.6 billion, with an internal rate of return of 5 per cent. Cash compensation is paid in year one, while infrastructure costs and other social costs are incurred in years 2 and 3. Since higher number of employees accepted the VRS and the cost of infrastructure in respect of land given to the employees has gone up, the total costs of the VRS II has been revised upward from € 47 to € 97 million. The costs of VRS II amount to 14.4 per cent of total costs involved in the restructuring of the Sugar Industry. The cost of the VRS forms part of the accompanying EU measures and is financed both by the EU and also sugar cane producers/private sector.

26 sugarcane growing companies applied for the VRS 2 and the applications of all these companies have been processed and the payment of cash compensation and overseas leave due has been completed. They included 19 MSPA members, 4 members of the Cane Growers Association; the

SLDC, Rose-Belle SE and the SIT. In late 2008, Cie Sucrière de St. Antoine Ltée applied for the VRS 2 and payment of cash compensation was effected in December 2008. As at January 2009, 6,628 employees have opted for the VRS 2 and a total amount of Rs. 3.1 billion has been paid as cash compensation. If ERS, La Baraque, Belle Vue, Medine and FUEL, and Blue Print, St. Felix, Mon Trésor, Riche-en-Eau and Mon Désert Alma, employees are included, some 7,400 employees would be concerned with cash compensation representing some Rs. 3.74 billion<sup>258</sup>. Land to be converted would amount to 350 hectares (866.1 *arpents*). In May 2010, there were 78 sites which are to be given to employees having accepted the VRS 2, the ERS and the Blue print for factory closure. Ultimately, some 385 hectares would be needed. Of these 385 hectares (952.7 *arpents*), some 300 hectares (742.4 *arpents*) would be transferred to the employees after deducting roads, green spaces etc and at a market value of Rs. 13.5 M per hectare (2.475 *arpents*), some Rs. 4.05 billion of value would be transferred to the employees. The successful implementation of the VRS and land compensation is to be completed by 2012.

## 6.6.2 Assessing the Livelihood of the VRS 2 Beneficiaries

### 6.6.2.1 Data and Sampling Technique

This part of the Study assesses the livelihood of the VRS beneficiaries after the sugar reforms. We seek to understand how the changing productive and labour market structures, brought about by the EU sugar regime, affect the family and community relations of the VRS beneficiaries.

The focus was primarily on VRS II beneficiaries for the simple reason that sugarcane workers who benefited from VRS I in 2001 have now reached the age of 60 or more and are within their normal retirement period. Beneficiaries of VRS II are middle-aged workers who benefited from the scheme in 2007 and 2008. Our sample includes beneficiaries from various regions of the country and from different sugar estates.

The sample was designed in such a way as to allow for age, gender, length of service, occupation and remaining life-hood span of the individuals. The stratified sample is obtained by independently selecting a separate sub-sample from each population *stratum*. The population is divided into different groups based on characteristics such as gender, age, occupation and location of the respondent. To determine the sample size, three criteria are specified namely the level of precision, the level of confidence or risk, and the degree of variability in the attributes being measured.<sup>259</sup>

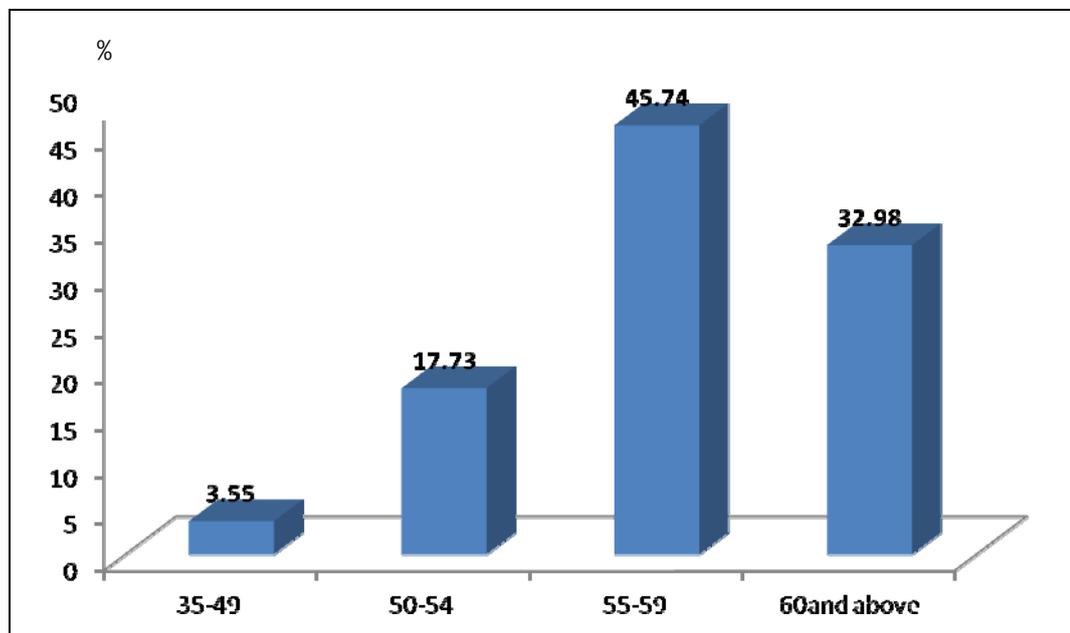

Assume that we do not know the variability in the proportion of VRS beneficiaries; therefore, assume *proportion* = 0.5 (maximum variability). Furthermore, suppose we desire a 90 per cent confidence level and  $e = \pm 5$  per cent is the level of precision. The resulting sample size is then 272. We use 5 per cent for the level of precision since it was expensive, time consuming and often impractical to visit the VRS beneficiaries. Most of them live in the rural regions and near the sugar estates. Long-distance travelling, as well as difficulties in looking for the VRS beneficiaries, increased the cost of the survey. In fact, our data set thus covers 283 sugar-cane workers, which is representative of the total population of VRS II beneficiaries.

A questionnaire was designed to assess the livelihood of the VRS II beneficiaries before and after the reforms. The survey instrument was divided into different sections. The first section concentrates on the general profile of the respondent, including his/her age group, sex, region where he/she lives, his/her family size, number of dependent children and family support available, as well as the profile of the respondent's children and parents. The second section covers the last occupation of the respondent in the Sugar Industry and the third section includes their present activity or occupation and their daily/ monthly expenses, as well as the amount and use of compensation and land which they obtained together with training received in different fields. The fourth section analyses the social and psychological dimension of the Scheme by analyzing the community life of the VRS beneficiaries. Lastly, they were asked to give some general comments on the Sugar Industry, lifestyle of workers and the VRS package in the face of the EU sugar reforms.

6.6.2.2 Profile of VRS Beneficiaries

From Figure 6.1 below, we note that the majority of the VRS II beneficiaries were between 55 and 59 years old, 45.7 per cent of our respondents were within that age group. 17.7 per cent were between 50 and 54 years, while 3.6 per cent was within the age bracket of 35 to 49 years. Further, 33 per cent of the beneficiaries are now 60 and above.

Figure 6.1: Age Profile of Respondents

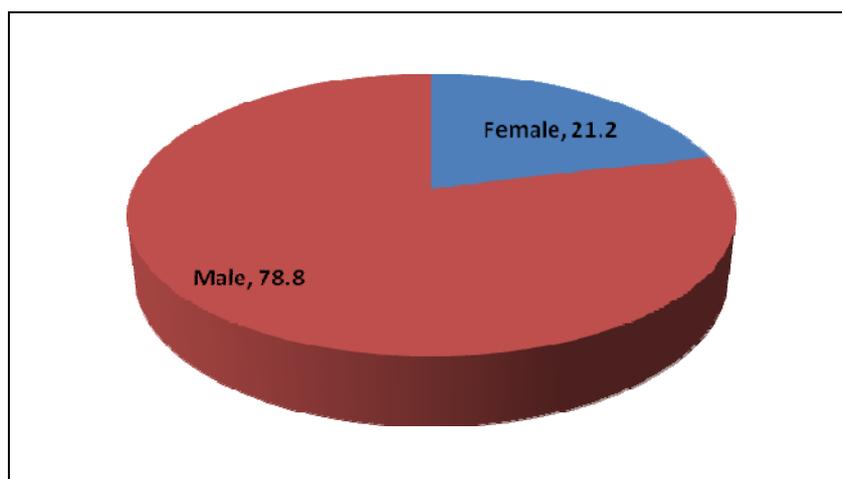

A breakdown by gender reveals that 10 per cent of the female VRS beneficiaries are below 50 years, while male beneficiaries below 50 years represent only 1.8 per cent of our sample (see Table 32). In fact this confirms that under VRS II, women retire younger 45 or 50 years as opposed to 50 or 55 years for men.

Age Group	Female (%)	Male (%)
<50	10.0	1.8
50-55	33.3	22.1
56-60	45.0	47.7
>60	11.7	28.4

In addition, from Figure 6.2, male respondents form 78.8 per cent of our sample and around 21 per cent are women.

Figure 6.2: VRS Respondents by Gender

We also observe that 87 per cent of the VRS beneficiaries are married and 6 per cent are widowed. From a gender perspective, 57 per cent of the female beneficiaries are married while 10 per cent are single and 20 per cent are widowed. 8 per cent are divorced while 5 per cent are separated.

With respect to their family size, we observe that most of the VRS beneficiaries (around 37.5 per cent) have 1 to 3 family members. For the others, around 25 per cent have a household size of four, whilst 16 per cent and 7 per cent have respectively 5 and 6 family members in all. Around 5 per cent have a household size of 7 people. In addition, 48 per cent of the respondents have 1 to 2 dependent family members and around 20 per cent and 10 per cent have 3 and 4 dependents, respectively. This can be shown by the following table.

Household Size	Per cent (%)	Dependent Family Members	Percent (%)
1	2.5	0	8.1
2	12.4	1	25.4
3	22.6	2	22.6
4	25.1	3	20.5
5	16.3	4	9.9
6	7.4	5	1.1
7	4.9	6	1.1
8	3.2	>7	1.2
>8	5.8		

From Figure 6.3 below, we note that 81 per cent of the beneficiaries attended school and they were also asked the level of education which they have attained. This is shown in Table 34 where we observe a high per centage (48 per cent) have passed C.P.E. and completed education.

Figure 6.3: Educational Background of the VRS Beneficiaries

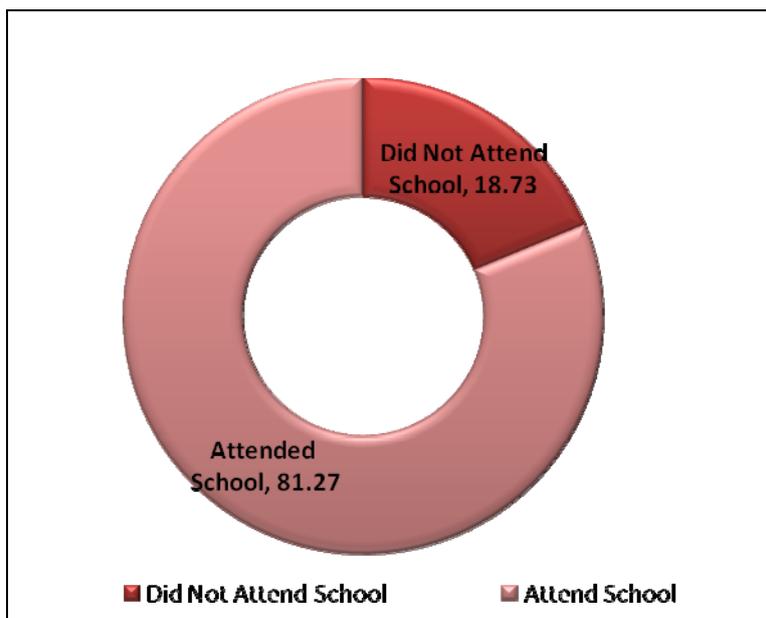

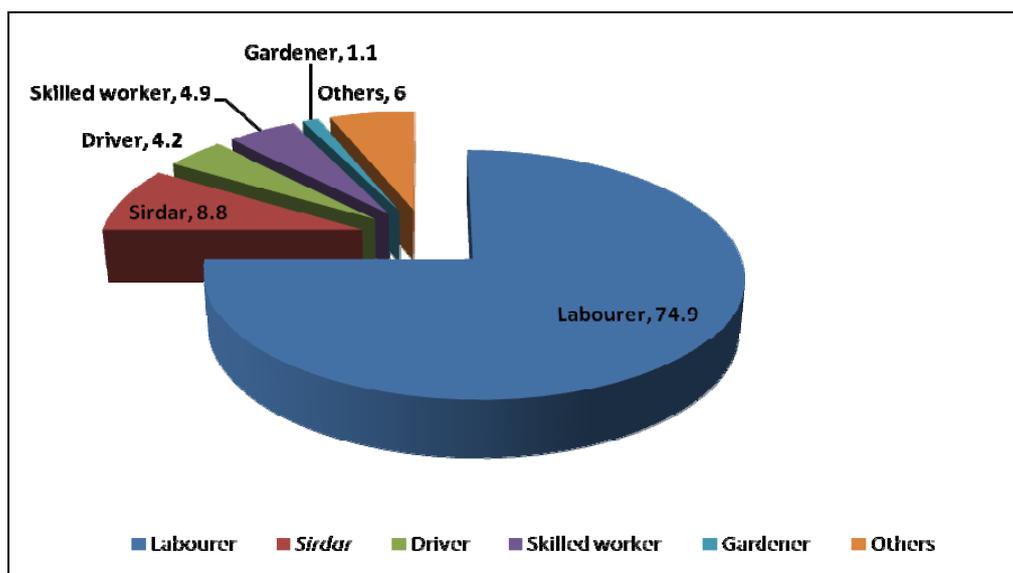

Table 34 Educational Background of VRS Beneficiaries

Education	%
<b>Primary Education</b>	
Std 1-Std 5	32.9
Std 6 - Passed	48.1
<b>Secondary Education</b>	
Form 1	3.2
Form 2	2.3
Form 3	4.2
Form 4	5.3
SC - Failed	1.1
SC - Passed	2.5

Our survey also demonstrates that around 75 per cent of the respondents were previously labourers, around 9 per cent were *sirdars*, 5 per cent were skilled workers, whilst 4.2 per cent were drivers. This is shown by Figure 6.4 below.

Figure 6.4: Previous Occupations of the VRS Beneficiaries

It was also noted that 50 per cent of female VRS beneficiaries were the bread winner of the family, while 94 per cent of male beneficiaries were the head of households. Female head of households represent a large share of the sample, which implies that their wages obtained in the Sugar Industry play an important role for their family. From Table 35, we note that most of the VRS beneficiaries (around 47 per cent) earned between Rs. 5,000 to Rs. 7,000 while around 24 per cent were in the income range of Rs. 7,000 to Rs. 9,000. Those earning more than Rs. 9,000 made up of around 12.5 per cent of the sample and 9.5 per cent were in the lowest income bracket of less than Rs. 5,000.

Table 35 Salary before the VRS

	Frequency	Percent
Salary < 5000	27	9.5
5000 < Salary < 7000	132	46.6
7000 < Salary < 9000	69	24.4
9000 < Salary < 12000	28	9.9
> 12000	5	3.6

Further, we study the average wage obtained as per the different occupations of the workers (Table 36). On average, *sirdars* earn much more than the other categories of workers and the lowest pay was registered by labourers. In fact the salary of the *sirdars* was 1.5 times higher than that of the labourer. Drivers on average were earning Rs. 8,750 and a skilled worker's wage was Rs. 8,668. In addition, we find that the female VRS beneficiaries were all labourers and their average wage was Rs. 4,814 which is much lower than a male labourer earning Rs. 6,398.

Table 36 Salary before the VRS by Occupation

Salary Before VRS	Obs.	Mean	Std. Dev.	Min	Max
Driver	10	8750	4563	3000	20000
Gardener	3	7133	231	7000	7400
Labourer	201	6263	1575	2000	17000
<i>Sirdar</i>	23	9557	1919	7000	15000
Skilled worker	14	8668	2696	5700	15000

### 6.6.2.3 Occupational Mobility

The Study also investigates the occupation of the parents and grandparents of the VRS beneficiaries (see Tables 37 and 38 below).

Grandfather's Job	Number	Percentage	Grandmother's Job	Number	Percentage
Labourer	69	24.4	Labourer	34	12.0
Planter	3	1.1	Gardener	1	0.4
Gardener	1	0.4	Housewife	43	15.2
Unspecified	199	70.3	Unspecified	201	71.0
Others	11	3.9	Others	4	1.4
Total	283	100.0	Total	283	100.0

Father's Job	Frequency	Percent	Mother's Job	Frequency	Percent
Labourer	191	67.5	Labourer	148	52.3
Planter	2	0.7	Planter	1	0.4
Gardener	6	2.1	Housewife	120	42.4
Others	84	29.7	Servant	3	1.1
Total	283	100.0	Others	11	3.9
			Total	283	100.0

We note that for their grandfather was essentially labourer, while the grandmother was either labourer or housewife. For their parents, we observe that for 67.5 per cent and 52.3 per cent of the respondents, their fathers and mothers were labourers, respectively. It can be said therefore that the present VRS beneficiaries have taken up the work of their parents which may not necessarily be the case of their children, as seen by Table 39.

From the survey, 33.6 per cent of respondents do not have working children, while 31.8 per cent have 1 child working and 24 per cent have 2 working children in the family. 7 per cent and 2.5 per cent have respectively 3 and 4 working children. The more the number of working children, the better it may be for the VRS beneficiaries in terms of income and a better standard of living. For those respondents who have children of working age, they were asked for more information on the occupation on their first and second child. This is shown in Table 39 below.

	Where does your first child work?		Where does your second child work?	
	Frequency	%	Frequency	%
Skilled Worker	44	21.9	22	14.8
Unskilled Worker	34	16.9	15	10.1
Planter	3	1.5	4	2.7
Labourer	5	2.5	2	1.3
Student	10	5.0	12	8.1
Factory Worker (EPZ Type)	8	4.0	4	2.7
Salesman/clerical/storekeeper/fire-fighter/policeman	22	10.9	15	10.1
Teacher/Inspector (Education Sector)	9	4.5	4	2.7
Asst. manager	2	1.0	1	0.7
Professional (accountant/Engineers)	15	7.5	7	4.7
Call Centre	1	0.5	3	2.0
No fixed job	3	1.5	1	0.7
Others	12	6.0	9	6.0
Unemployed	33	16.4	50	33.6

We observe that for 21.9 per cent of the VRS beneficiaries, their first child is a skilled worker and further 7.5 per cent of their children are professionals. For around 11 per cent of them, their first child work as salesman/clerical/policeman/fire-fighter but 16.4 per cent of the first child are unemployed. It is also noted that around only 4 per cent of either the first or the second child works as planter or labourer. We further note that for a large per centage (42.8 per cent), the first child is manual worker, showing that for most of them, they have been able to secure only an unskilled job with a relatively low pay. Their children have not been able to move to a higher ladder in terms of occupation and income category. Unemployment seems very much more pronounced for the second child.

In fact, grouping the skilled worker, unskilled worker, planter, labourer, factory worker and 'no fixed job', as manual worker, we find that 48.3 % of the respondents' first child is in a manual job. Further, if we include the categories 'others' and unemployed as manual workers, then the per centage go to 70.6 %. Thus, it indicates that out of 10 agricultural workers, 7 have their first child as manual worker, revealing a lack of upward social mobility.

#### 6.6.2.4 Landownership by Parents and Grandparents

Further, we also analyse landownership by parents and grandparents of the VRS beneficiaries. Table 40 is a cross-tabulation on landownership. We argue that 24.4 per cent of the respondents' grandparents possess land, while 52.3 per cent of the beneficiaries' parents have a plot of land. Landownership is an important factor that has caused many to work on the sugarcane fields. However, in the sample, we also note that for many their family did not possess land. This can also explain the reason behind the favourable reception of the VRS package by the sugarcane workers, since the package includes, not only cash compensation, but also a plot of land. In the Mauritian context, land acquisition is an important asset and represents for the elderly, in particular, an undeniable achievement for their hard work on the estates. From Table 40, 51.2% of the labourers currently own a plot of land.

			Did your parents have land?		Total
			Yes	No	
Did your grandparents have land?	Yes	Count	53	16	69
		% within. Did your grandparents have land?	76.8%	23.2%	100.0%
		% within. Did your parents have land?	35.8%	11.9%	24.4%
	No	Count	75	104	179
		% within. Did your grandparents have land?	41.9%	58.1%	100.0%
		% within. Did your parents have land?	50.7%	77.6%	63.3%

Do you possess any land?	Male Beneficiaries		Female Beneficiaries		Total	
	Frequency	Percent	Frequency	Percent	Frequency	Percent
Yes	114	51.1	31	51.7	145	51.2
No	99	44.4	26	43.3	125	44.2
Unspecified	10	4.5	3	5.0	13	4.6
Total	223	100.0	60	100.0	283	100.0

#### 6.6.2.5 Working Conditions on the Sugar Estates

Around 64 per cent of the VRS beneficiaries seem to like their job on the sugar estates, while 36 per cent did not like their working conditions (see Figure 6.5).

Figure 6.5: Perceived Working Conditions on the Sugar Estates

For those 36 per cent, the following explanations were given. For 32 per cent, the nature of the work was highly stressful and 43 per cent argue that they were more stressed because of the low salary. Almost 28 per cent of the respondents claim that the working-time was not appropriate and 33 per cent state that the work-load was cumbersome and difficult to manage. Further around 25 per cent argue that there were extensive pressure from the *sirdars*. All these factors led to a very stressful working environment for the sugar-cane workers. As far as their physical health is concerned, for many working on the sugar estates was not easy. For 34 per cent of the respondents, the nature of the work on the estates affected their physical health and for around 31 per cent and 34 per cent of them the working-hours and the heavy work-load were respectively significant elements affecting their health conditions. For around 16 per cent of the VRS beneficiaries, their physical health was also affected by insufficient time for eating either for lunch-time or short breaks.

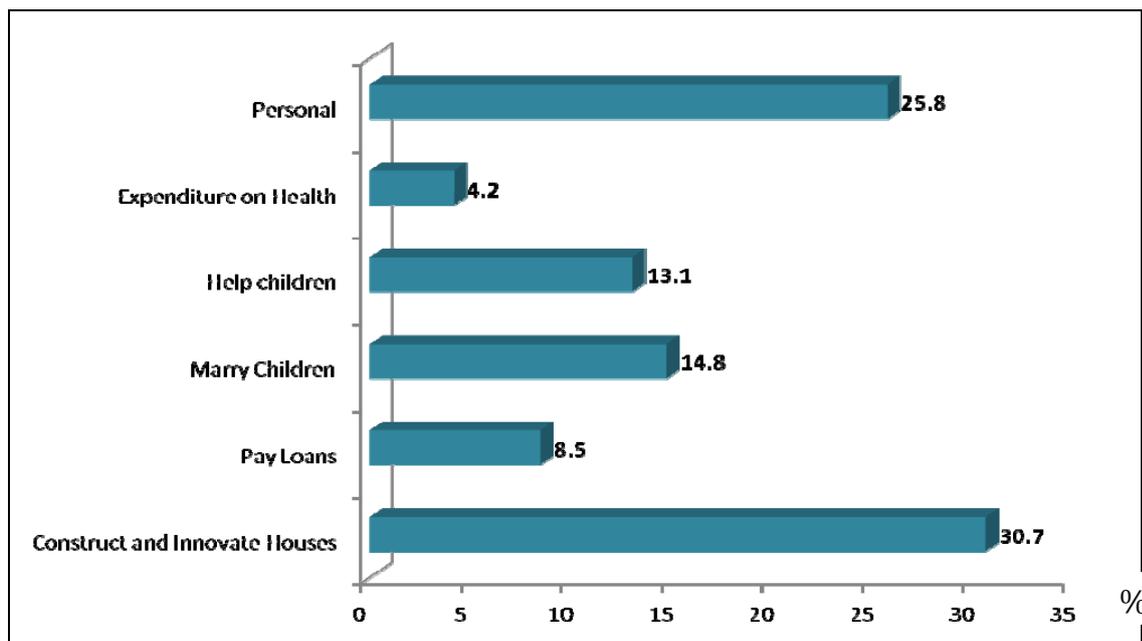

Further, we observe that the health conditions of women workers were as much affected as those of their male counterparts (Table 42). We note that a higher per centage of women (42 per cent) claim that they now have pains and 5 per cent went through operations compared to 2 per cent for men.

Impact on Health	Male		Female	
	No.	%	No.	%
Not Affected	79	35.4	6	10
Operation	5	2.2	3	5
Sick	29	13	8	13.3
Tired	51	22.9	11	18.3
Pains	43	19.3	25	41.7
Others	16	7.2	7	11.7

#### 6.6.2.6. Cash Compensation and Land

In addition, when receiving their cash compensation, we note that only 54 per cent of them have saved their money. The 46 per cent, who spent their money, have used it for different purposes. This can be shown in Figure 6.6:

Figure 6.6: Use of Cash Compensation

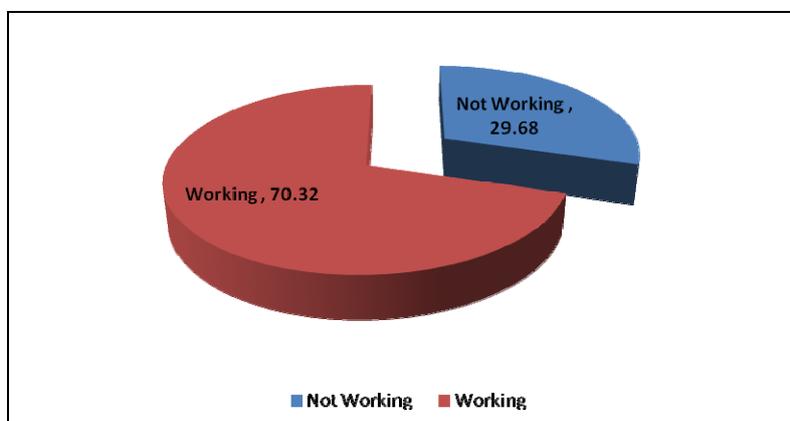

With regard to the land, which they were entitled to, under the VRS, around 89 per cent of the surveyed respondents have not yet obtained their plots of land at the time of the survey. For the 11 per cent who have received their land, most of them (78 per cent) are not aware of the type of land they obtained. Around 8 per cent and 14 per cent of them received respectively agricultural and residential land. The land has more often been given to children (for 4.9 per cent of the respondents) or been used for cultivation (2.1 per cent) or can still be used for house construction (1.8 per cent) and 1.1 per cent of the beneficiaries sold the land.

#### 6.6.2.7 Present Activities and Income

In addition, we also investigate on their present activities and income of the beneficiaries after the VRS (see Figure 6.7 and Table 43). Our results show that 70 per cent of the beneficiaries are actually working and many of them are women. 78 per cent of women have re-entered the labour market, compared to 68 per cent for men. This may confirm the earlier age of voluntary retirement by female sugar workers relative to the male workers, and often these women are widowed and are the heads of households; so they need to have an important source of income, essentially if they have to cater for their dependent children.<sup>260</sup>

Figure 6.7: Employment Status of the VRS Beneficiaries

Employment	Male		Female	
	No.	%	No.	%
Not Working	71	31.8	13	21.7
Working	152	68.2	47	78.3

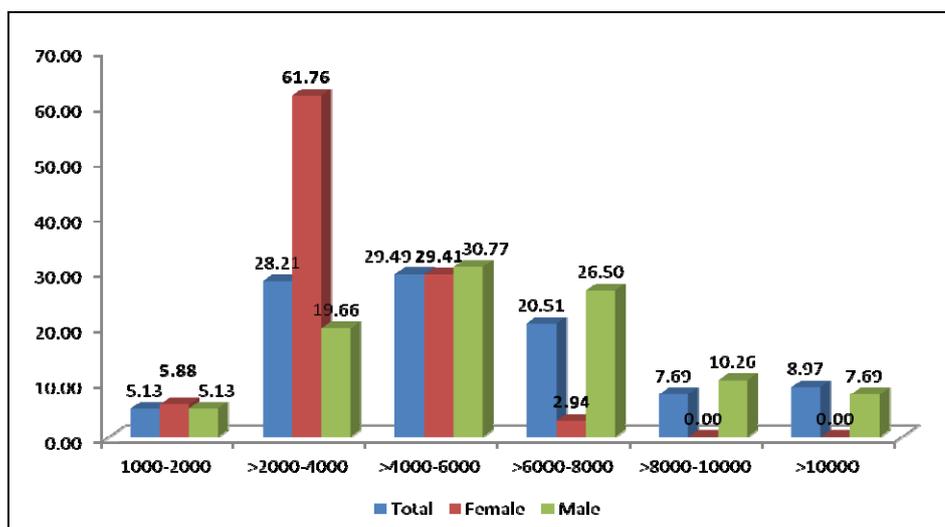

We observe that 45 per cent of the VRS beneficiaries were working with contractors of sugar estates and 31 per cent were actually casual workers on the same sugar estates where they were working before the VRS (see Table 44). 11.8 per cent were self-employed and around 5 per cent were working with different planters. Adopting a gender perception, we note that 80 per cent of the women were working with contractors of the sugar estates and only 4.4 per cent are self-employed compared to 14 per cent for men. Around 9 per cent of women were working with other planters while 3 per cent of men engage in a similar activity.

Overall, in the end, 76.4% of all the labourers, after having taken the VRS package, found themselves working over again on the sugar estates as casual labourers, no longer enjoying the wages and benefits of the permanent employees.

Present Occupation	Male		Female	
	No.	%	No.	%
On contract with sugar estates	59	39.3	2	4.4
With planters	5	3.3	4	8.9
With contractors of sugar estates	52	34.7	36	80
Self-employed	21	14	2	4.4
Others	13	8.7	1	2.2

Further, we analyse the income of the VRS beneficiaries after having accepted the Scheme (see Figure 6.8 below). We see that, now, most of them have moved in the lower-income bracket of Rs. 1,000 to Rs. 6,000 after the reform which makes them worse off than before the VRS. Women, in particular, are more affected since around 62 per cent of them are now in the income group Rs. 2,000 to Rs. 4,000. Men (29.4 per cent), in turn, found themselves more in the income category of Rs. 4,000 to Rs. 6,000 and that around 17 per cent of them earned more than Rs. 8,000.

Figure 6.8: Income of the VRS Beneficiaries after the Scheme

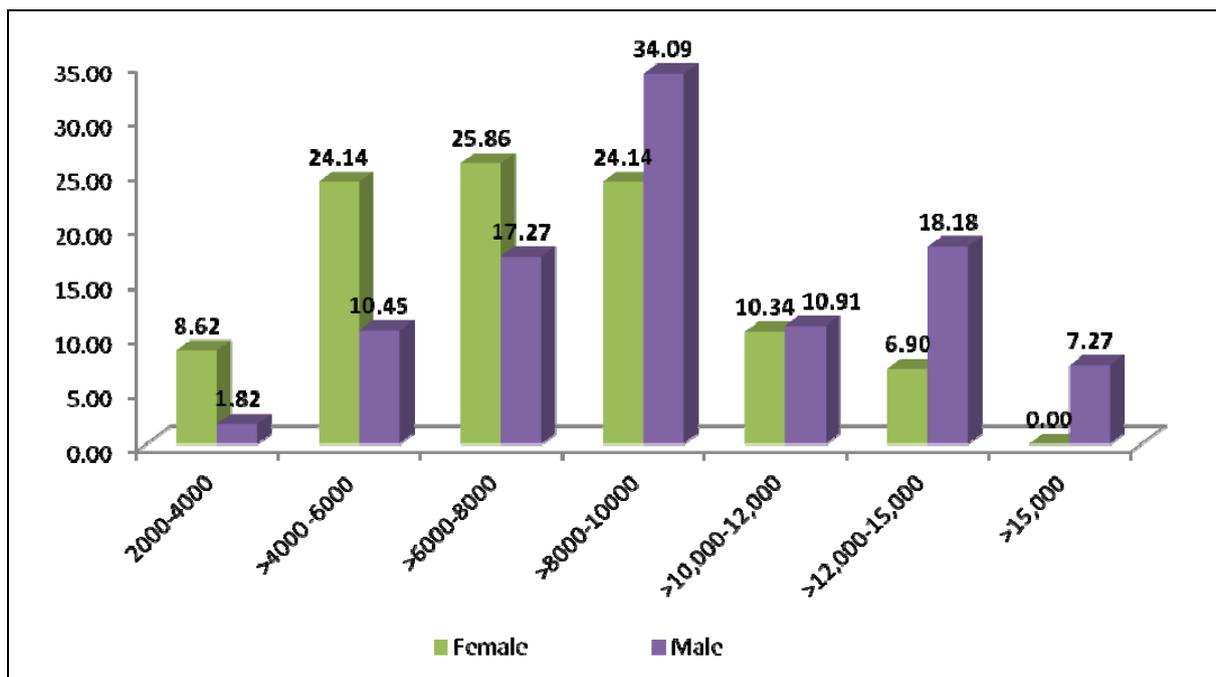

#### 6.6.2.8 Expenditure

Similarly, we also analyse the expenses of the VRS beneficiaries. It was observed, from Table 45, that 10.4 per cent of them spend only between Rs. 2,000 - Rs. 4,000 per month. However, for most of them expenditure exceeds their present income. For around 35 per cent of the respondents, their expenses are in excess of Rs. 4,000 to Rs. 6,000 while for the majority (around 58 per cent) expenditure is in the bracket of Rs. 8,000 to Rs. 10,000. Expenditure even exceeds Rs. 10,000 for 46 per cent of the beneficiaries. Based on a comparison with their salary before the VRS in Table 45, we note that most of them have a salary between Rs. 5,000 to Rs. 7,000 which shows that by far expenditure exceeds income earned of most of the beneficiaries in our sample. These results are in line with a previous study on VRS beneficiaries for Mauritius.<sup>261</sup> Expenditure was concentrated mainly on food, water, electricity and phone bills as well as transport costs.

Expenses (rs)	Female Beneficiaries	Male Beneficiaries	All Beneficiaries
2000-4000	8.6	1.8	3.2
>4000-6000	24.1	10.5	13.4
>6000-8000	25.9	17.3	19.1
>8000-10000	24.1	34.1	32.0
>10,000-12,000	10.3	10.9	10.8
>12,000-15,000	6.9	18.2	15.8
>15,000	0.00	7.3	5.8

We also analyse differences in expenditure pattern by gender (Figure 6.9 below) and note that most of them (25 per cent) spent more than Rs. 6,000 and less than Rs. 8,000 and 24 per cent have an expenditure bracket of Rs. 4,000 to Rs. 6,000. Male beneficiaries are more likely to spend between Rs. 8,000 to Rs. 10,000 which is much higher than that of their female counterparts.

Figure 6.9: Expenditure by Gender

6.6.2.9 Training

Under the VRS II, many also benefitted from training programmes. From our sample, we observe that around 62 per cent were entitled to a training programme, but only 29 per cent attended the training sessions, whilst 38 per cent were not interested in any training. This can be shown by Figure 6.10 below.

Figure 6.10: Training

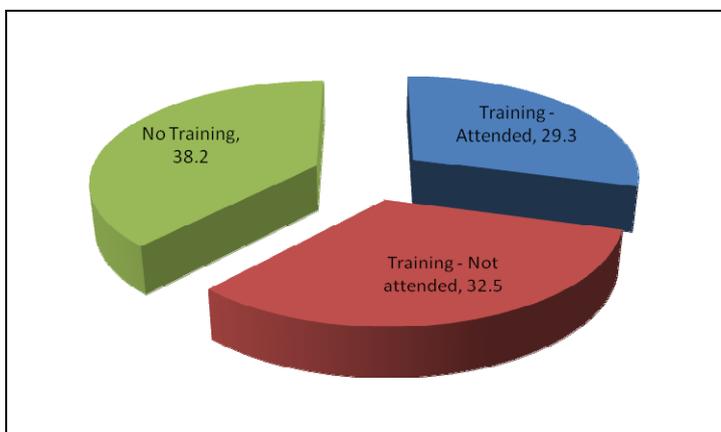

Table 46 Training from a Gender Perspective

Training	Male		Female	
	No.	%	No.	%
No Training	81	36.3	27	45
Didn't Attend Training	70	31.4	22	36.7
Yes	72	32.3	11	18.3

From Table 46, we note that 45 per cent of women did not benefit from training and 36 per cent did not attend the training sessions, while only 18 per cent were trained in their preferred activity. It is also observed that 32 per cent of male beneficiaries benefitted from training. The different types of training obtained can be shown in Table 47. Most of the VRS beneficiaries (around 22 per cent) received training in gardening, followed by training in cooking, and around 3.2 per cent were interested in plumbing. For those who chose training, they wanted to learn something new or even broaden their existing knowledge, especially in the field of agriculture. For around 17 per cent of them, the training was beneficial and helped them in their daily activities and also to enhance their present work. Overall, the training provided seems not to have satisfied the objective of re-skilling as defined in MAAS.

Type of Training Received	Percent
Gardening	22.2
Rearing of animals	1.8
Cooking	4.9
Mechanic	0.4
Plumbing	3.2
Others	5.3

#### 6.6.2.10 Social Dimension of the VRS

The last aspect which our survey covers is the psychological and social dimension of the Scheme. We investigated more in their social network and essentially their other VRS beneficiaries living in the locality. For most of them (around 80 per cent), they still meet their VRS counterparts and for around 40 per cent of them, they meet their friends on a daily basis. For 11 per cent, they get together only one to three times per month, while for 10.6 per cent of the respondents, they see their friends at work, that is five days a week, since they are still employed as casual workers on the sugar estates. They were also asked to how the closure of factories has affected the daily life of their local community and its people. From their viewpoint, closures of shops and businesses have only been moderately affected. For around 7 per cent of the respondents, there is a lack of social activities in the locality and no gathering place to meet their friends. We also investigated their drinking and smoking habits. We explored whether with the VRS, they have more time for themselves, and it this may have led to a rise in the consumption of alcohol and cigarettes. Though the responses to our questions may be biased, since we may not have an honest response, we could however, note that there could have been a rise in alcohol and cigarettes consumption after the VRS. The impact of VRS on community life and on the drinking and smoking habits of the beneficiaries needs to be studied in a more elaborate manner.

#### 6.6.2.11 Views on the VRS Package

We also analyse their attitudes and thoughts on the VRS package and on the future of the Sugar Industry. 85 per cent of them think that it was a good decision to accept the VRS for a number of reasons. Moreover, there is a higher per centage of women (35%) than men (9.4%) who found that the decision to accept VRS was not good, as per Table 48.

		Gender		Total	
		Male	Female		
Was it a good decision to accept VRS?	Yes	Count	202	39	241
		% within Gender	90.60%	65.00%	85.20%
	No	Count	21	21	42
		% within Gender	9.40%	35.00%	14.80%
Total		Count	223	60	283

	% within Gender	100.00%	100.00%	100.00%
--	-----------------	---------	---------	---------

Different reasons have also been specified by those who thought that they should not have taken the VRS. These are shown in Table 49.

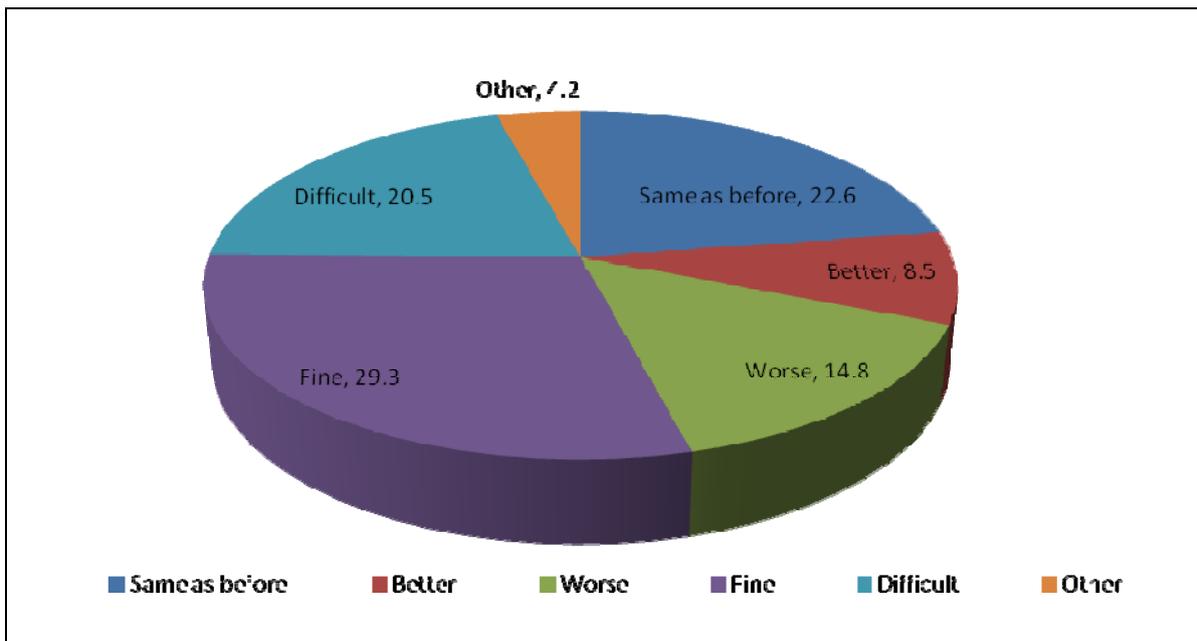

Good Decision to Accept the VRS	%	Not a Good Decision to Accept the VRS	%
To be landowner	11.0	Already spent all money	2.5
Age factor	27.9	Not same facility as before	2.1
To get the money	21.6	Working conditions worse now	0.7
Work becoming tougher	5.7	No other option available	4.6
No other option available	6.4	Others	3.9
No one to help me	0.7		
Health factor	10.2		
Others	3.2		

We note that for 28 per cent of them, the VRS package was a blessing because of their age and 22 per cent found the cash compensation an interesting financial package. Also, being a landowner is an important factor which makes the VRS attractive for 11 per cent of the respondents. In addition, working on the sugar estates has not been an easy job; the working conditions, as seen above, have had a negative impact on the health status of many. Their deteriorating health has been a significant element for many (10 per cent in the sample) in accepting the VRS. The VRS has not been a good thing for many since they have already spent all the money (2.5 per cent of the respondents), or they do not obtain the same facility as before (2.1 per cent of the respondents), and for around 5 per cent of them, they had no choice than to accept the scheme; in other words, they had no other option made available to them.

An analysis of the response by job shows that the higher income groups are more likely to find that it was a good decision to accept VRS; in particular, 100% of the *sirdars* and the skilled workers do think so.

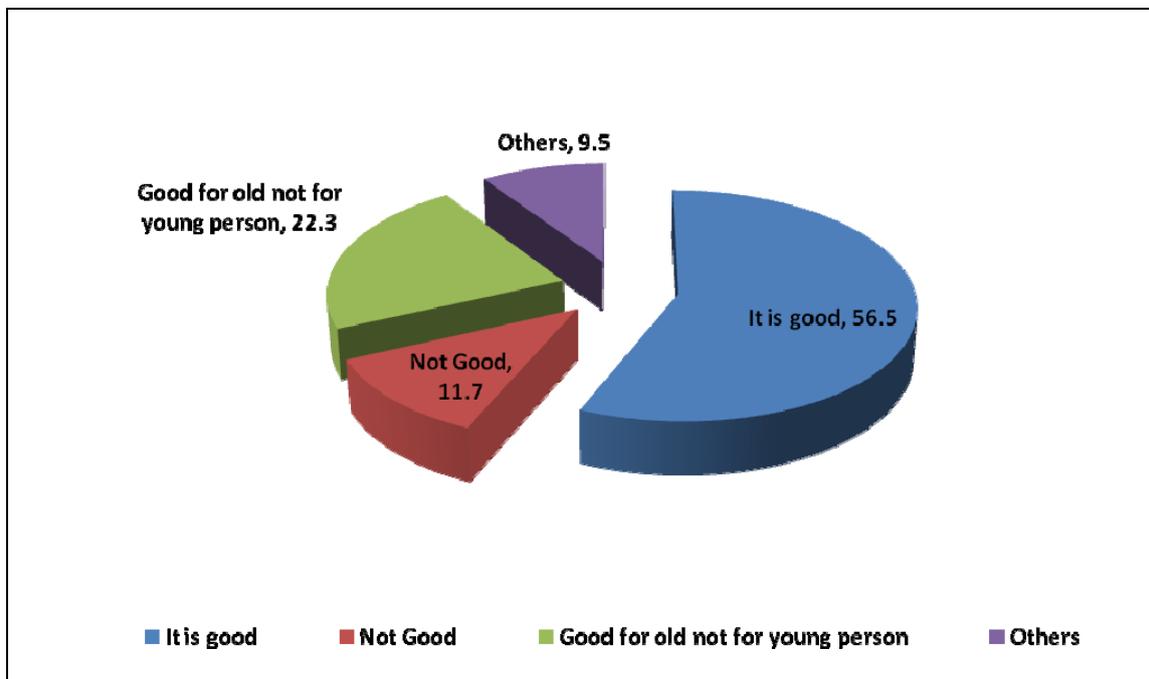

We also analyse their living conditions after the Scheme and we observe that 22.6 per cent of the respondents have the same standard of living as before and 8.5 per cent are even better off (see Figure 6.11); 29.3 per cent find that life is fine. For 20.5 per cent of them, they face difficulties having a decent living standard because of the fixed compensation and rising inflation, namely rising food prices. For around 15 per cent, life is worse after the VRS, it is difficult for them to manage.

Figure 6.11: Life after the VRS

Further, we note that 56.5 per cent of the respondents believe that the VRS is a good package but 22.3 per cent argue that it is appropriate essentially for the old people, and not necessarily for the younger workers. 11.7 per cent state that the VRS is not a beneficial scheme. This is shown in figure 6.12.

Figure 6.12: Opinion on the VRS Package

## 6.7 The Cheap Labour Policy of the Post-Independence Period

### 6.7.1 The Export Processing Zone (EPZ)

In 1970, the Export Processing Zone (EPZ) was established in Mauritius and the Export Processing Zone Act was passed. The Act provided major incentives to manufacturers catering for foreign markets. Moreover, firms within the EPZs equally benefited from the availability of cheap labour which came from unemployed workers and women who were outside the labour force at that time.<sup>262</sup> In his paper, Ali Zafar elaborated as follows

*“According to interviews with textile executives located in the EPZ, 80 per cent of workers in the EPZs in the 1980s were women. The rate has decreased somewhat in the 1990’s and 2000’s, but women continue to be more than 60 per cent of the workers in the zones. The lower wages that were paid to the workers in the EPZs in the early years allowed the firms to accumulate capital and reinvest the earnings into the firm’s expansion.”*

History has repeated itself. About one hundred and thirty years ago, the plantocracy recruited indentured labourers from a vast reservoir of cheap labour found in British India. As a result, the plantocracy accumulated capital which was partly siphoned off to financiers/ investors abroad (Britain and France mainly) and partly reinvested in modernising the sugar factories. The new dimension, this time, lies in the fact that the reservoir of cheap labour came from within Mauritius: women and the unemployed. As argued in chapter 5, unemployment and poverty were the direct consequences of policies of free trade by British Imperial Government and of cheap labour policy of the Colonial Government and the plantocracy.

For this process of capital accumulation to be successful, there was a need to control the labour force and, even to coerce it into accepting special working conditions applicable in the EPZ and not applicable in other sectors of the economy. Certain key features of the EPZ Act of 1970 are highlighted to illustrate the point.

Firstly, the notorious policy of ‘double-cut’ for absenteeism which was prevalent in the Sugar Industry during the period of indentured labour was introduced in the EPZ Act. It stipulated:

*“An employee who without his employer’s consent or without good and sufficient case absents himself from work on a day which immediately proceeds or follows a public holiday, shall forfeit one normal day’s pay in the next following week or if he is entitled to paid holidays the amount which would have been accrued to him in respect of the next ensuing paid holiday.”<sup>263</sup>*

Secondly, new legislation, not in line with existing legislation and practice, was included on the issue of severance allowance and termination of service. Section 14, paragraph 18 stipulated

*“When an employee reckons not less than three years continuous service with an employer and his services are terminated, he shall be entitled to receive compensation which shall be equivalent to not less than two weeks’ wages for each year of service he reckons with an employer.”<sup>264</sup>*

The Legislation prevalent in other sectors of the economy provided for the payment of severance allowance after twelve months of continuous service with an employer. With respect to termination of service, section 14 paragraph 9, stipulated that

*“The provisions of the termination of contracts of service ordinance 1963 shall not apply to any contract of employment between an employee and his employer.”*

Thirdly, the working week for workers of EPZ was of forty-five hours duration and overtime work for ten hours was, in practice, made compulsory. The Act provided for the following clauses:

a) *“An Employee shall not be made to work overtime for more than ten hours per week.*

- b) *An employee may be required to work for more than the normal number of hours on any day other than a public holiday and no payment for overtime shall thereupon accrue to the employee if the number of hours of actual work in the week does not exceed forty-five."*

Overtime work was made compulsory on the one hand, and worse still, was payable only after a working week of forty-five hours. In many sectors of the economy, overtime work was paid on a daily basis where necessary. Ali Zafar summed up succinctly the situation prevailing at that time in the EPZ:

*"Firms within the EPZ were subject to general labour laws (including minimum wages) but were free to fire workers, to demand compulsory overtime work, and to penalise workers heavily for absenteeism."*<sup>265</sup>

There is no doubt that with the establishment of the EPZ in the 1970s and its expansion in the 1980s, unemployment was reduced considerably and the economy benefited substantially, with the growth rate of the EPZ's value added being close to 30 per cent annually between 1983 and 1988. Moreover, employment fluctuates over the years. But the major issue is that this was done in a manner similar to the growth of the Sugar Industry in the 19<sup>th</sup> and 20<sup>th</sup> centuries whereby the workers' share in the wealth created was minimal and their working conditions were such that it was to a certain extent like coercible labour.

The Export Oriented Enterprises (as the EPZ is to be known as from 2006) employed, by March 2001, 93,218 workers of whom 30,783 and 62,435 were respectively males and females, giving a ratio of nearly 1:2 in favour of female workers. With the restructuring of the sector, there were many redundancies so that by June 2009, there were 58,066 workers of whom 24,451 and 33,615 were respectively males and females, giving a ratio of 1:14 or 5:7 in favour of female workers. Of the 35,000 workers made redundant, about 29,000 were women and about 6,000 were men. Thus women are the most vulnerable group in the labour force in that sector.

In the process of restructuring, wages went up compared to the 1980s; but nevertheless, in the textile sector, monthly wages in March 2002 went down from Rs. 7,039 to Rs. 6,236 in March 2008 in real terms (using 2001 as base year). The wages reached its March 2002 level in March 2009. As wages go up, the share of females in the labour force in this sector goes down. The obvious question is: "What happens to the 35,000 workers made redundant and, in particular, to the 29,000 women?"

#### 6.7.2 Migrant Labour

There are essentially three sets of problems faced by migrant labour. Firstly, the dormitories provided to the migrant workers are awful and the established criteria are not respected. Secondly, in certain cases, working conditions are not respected. Thirdly, very often migrant workers have two contracts; one which they get in their country of origin which usually provides very favourable conditions (e.g. wages); then another contract which is the real one, and which they have in Mauritius.

Whilst it is rather difficult for the State to intervene in the third problem mentioned above, it is indeed disturbing that Mauritius, having had the experience of both the labour of enslaved people and indentured labour, should allow the awful conditions to prevail. Migrant workers represent an asset to employers because of their understandable 'flexibility' to work many hours in a given week, as opposed to Mauritian workers.

It is the duty of the State not to allow conditions prevailing under indenture period to be reproduced, if only on a limited scale, in the 21<sup>st</sup> century.

## 6.8 The Cooperative Movement after independence

### 6.8.1 The Initial Phase

In the first years following Independence, it seems that the cooperative movement evolved along the path it had developed over the previous few years. Initially, there was some progress in the number of Cooperative Societies and their membership as shown in Table 50.<sup>266</sup>

	1970-1971		1971-1972		1972-1973	
	Societies No.	Members No.	Societies No.	Members No.	Societies No.	Members No.
Mauritius						
<i>Secondary Societies</i>	6	682	9	755	9	796
<i>Primary Societies</i>	304	34198	338	37881	373	42881
Rodrigues						
<i>Primary Societies</i>	32	4671	33	5403	38	5460
<i>Total</i>	342	39551	380	44039	420	49137

Between 1971 and 1973, there was an increase in the number of cooperative societies and in the membership respectively of 22.8% and 24.23%.

Moreover, the report did not convey any information on the functioning and management of the societies. By June 1983, the Ministry of Information and Cooperatives produced a White Paper in Cooperative Development which provided a good insight in the cooperative movement at that time and which made bold proposals, which, it seems, were not implemented. At that time, the cooperative movement was facing a credibility gap, as it had a tarnished public image. There were four proposals:<sup>267</sup>

- i. The cooperative movement should gradually reduce its dependence on Government support and eventually develop a self-reliant people's cooperative movement;
- ii. It should not be the domain of a privileged few;
- iii. It should promote workers' cooperatives, including the involvement of the unemployed;
- iv. The cooperative movement should no longer stick to single-purpose, small and unviable societies. Instead, it should develop multi-purpose societies which provide an integrated range of goods and services.

For the success in the implementation of these proposals, there was a need for a change in the attitudes/mind-set of all co-operators and equally, there should be structural changes in the cooperative movement.

Moreover, in the key secondary societies, the Mauritius Cooperative Union Ltd (MCU) and the Mauritius Cooperative Central Bank Ltd (MCCB), the constitution of the board of management and their internal management showed serious shortcomings. For the MCU, an Executive Committee under the general control of a Central Committee constituted its management structure. The representatives of the Cooperative Credit Societies, elected at the Annual General Assembly, were often the Secretaries of the Societies who were paid employees. Thus these paid employees or Secretaries wielded power of decision at the highest level of management, whilst they had no right to vote in their society. Further, "the paid employees or secretaries, who became Directors of the Union, have their books of accounts sometimes audited by the Union staff, i.e. their own employees".<sup>268</sup>

In a similar manner, at the MCCB Board of Management, the Secretaries of Cooperative Credit Societies were very much represented. And there was the obvious conflict of interests, since the

Secretaries of the societies became “both the Directors of the bank and the Executors of the bank’s policies at field level and a kind of middlemen of the bank’s broker”.<sup>269</sup>

It is beyond imagination that such obvious threats to the proper running of the MCU and MCCB did prevail for so long. There were still other factors which hampered the development of the cooperative movement: the existence of many small cooperative societies designed to cater for a single service, scant interest from the members, absence of proper planning and of scientific management. Although thereafter there would be general positive development in the number of cooperative societies and their membership, on the other hand, the inherent shortcomings of the MCCB, together with other management problems, would, in the end, bring about the collapse of the Mauritius Cooperative Central Bank Ltd.

#### 6.8.2 The Collapse of the MCCB

In December 1993, a Commission of Enquiry was set up to inquire into the operations and management of the former Mauritius Cooperative Central Bank, with Mr. Yip Tong as unique member.

The findings of the Commission of Enquiry revealed major shortcomings on the part of the General Manager and the Board of Management.<sup>270</sup> Since his appointment, the General Manager had a policy to increase massively the loans/advances portfolio of the Bank. To do so, he admitted Associate Members as opposed to Cooperative Society Members; yet the Bank’s rules did not provide for the admission of such Associate Members. The Commission noted that:

*“A small credit financing strategy was overnight converted into a full fledged banking institution. Existing systems and procedures were totally inadequate and existing staff incompetent to deal with assessment, control and monitoring of the huge loans granted in the period. As a result operating results were damaging with accumulated losses of Rs 71.4 million incurred on 29 February, 1992”.*

Moreover, there were glaring malpractices on the part of Management and on the part of some Directors, who were members of the Board of Management. Some of these malpractices were:

- i. As early as 1988, the Bank of Mauritius report was highly critical of the Bank’s systems and procedures. “Besides, advances aggregating Rs. 16 million are sub-standard or show major irregularities, such as lack of proper sanction, drawings allowed for in excess of sanctioned limits, inadequate security...”<sup>271</sup>
- ii. The General Manager did not give due consideration to the auditor’s report. He even had the auditors for 1990/91 replaced at a Special General Meeting. Another firm of auditors expressed their unwillingness to continue as auditors.
- iii. Some members and Chairman of the Board of Directors had some special, if not privileged treatment and made matters worse. Thus, there was the practice of paying commissions by the bank up to 1992, though they were generally not welcome by the banking sector. The commission highlighted “... substantial commissions were paid to the same person, a one time director of the bank, over the years”.<sup>272</sup> Further the Commission noted that two past Chairman had taken substantial loans and facilities from the Bank.

By 1995, the Government decided to close the MCCB. By then, the impact of the failure of the MCCB did much harm to the cooperative movement, causing discouragement among co-operators and the public at large. As far back as 1983, in the White Paper on Cooperative Development, it was stated that the cooperative movement had already a bad name; the collapse of the MCCB could only worsen further the image of the cooperative movement.

Moreover, since 1991 there has been a marked tendency for the percentage of planters who were members of Cooperative Credit Societies to decrease progressively. Table 51 highlights that trend.

Table 51 Distribution of planters and CCS planters\* over the years

Year	No. of planters	CCS planters*	
		No.	%
1985	34,634	24,832	71.7
1990	34,130	23,714	69.5
1991	33,148	22,534	68.0
1995-96	29,323	17,941	61.2
2000-01	28,461	14,245	50.1
2005	26,898	13,001	48.3
2007	24,342	11,641	47.8
2009	21,498	9,919	46.1

Source: SIFB Annual Reports  
 \* CCS planters are planters who are members of a Cooperative Credit Society

Table 51 reveals that, firstly, the number of sugarcane planters has been decreasing substantially from 34,634 in 1985 to 21,498 in 2009; there has been a decrease of 38 %. Secondly, the number of CCS planters has been decreasing in similar manner. From 71.7 % of the planters being in CCS in 1985, the percentage has dropped to 46.1 %, i.e. less than 50 %. There are several reasons for this decrease; the collapse of the MCCB would be only one of these at a given point in time.

### 6.8.3 The survival and revival of the Cooperative Movement

In spite of various problems the cooperative movement kept on functioning; the number of Primary Cooperative Societies during the period 2003-2006 kept on increasing progressively from 416 to 461.<sup>273</sup> Similarly, the membership increased from 138,446 to 142,972. As at end June 2006, the Primary Cooperative Societies were prevalent in many economic activities: agricultural marketing, credit, fishing, pig-rearing and marketing, tea credit and marketing, livestock, mechanisation, consumer stores, credit unions, bus-ownership and housing.

And there were some cases of successful cooperative societies which received coverage in the publication 'The passion of the people: Successful Cooperative Experiences in Africa' (2008), by the Cooperative and Policy Alternative Center (COPAC). It is worth mentioning briefly the three cases covered in that publication: Medine Camp de Masque Cooperative Credit Society, Vacoas Popular Multi-Purpose Cooperative Society Limited and Fair Price Cooperative Stores.<sup>274</sup> All these three cases represent interesting features according to each case.

In the case of the Fair Price Cooperative stores, it is frankly written that "The history of nepotism and patronage in former cooperative stores is a lesson well learned by the federation."<sup>275</sup> There is a concern that the next generation of cooperation is not being produced; hence there is an urgent need in education at grass roots level as well as in the formal education system.

As far as the Vacoas Popular Multi-Purpose Cooperative society is concerned, it ensures that any surplus generated remains in the cooperative. Moreover, it regrets that it does not receive support from the cooperative division in the Ministry.

The Medine Camp de Masque Cooperative Credit Society had a long history in the traditional sugar sector. It was formed in February 15, 1914. Its members are mainly small-scale, part-time planters with less than one hectare (i.e. about 2.3 *arpents*) of land and its main activities are loans, procurement and marketing. The society gets involved in the community and further helps its own members by contributing to the setting up of an Information and Technology Centre as well as a cooperative store. Moreover, strong family ties tend to influence the choice of people to occupy certain key positions like the post of Secretary. Thus, it is written that "for example, the secretary of the cooperative is the third generation cooperative member (his grandfather was one of the founding members and his father was a secretary for years as well) and remembers growing up in the cooperative." Whilst "growing up in the cooperative" certainly helps, on the other hand, family ties have been found to be a threat to proper functioning of cooperative societies in the past.

#### 6.8.4 Successes and New Perspectives

It is appropriate to note that, as at December 2010, there are 918 cooperative societies in Mauritius and Rodrigues operating in 30 different sectors, with a turnover of Rs. 4.5 billion and total membership of 159,853.<sup>276</sup> In particular, the cooperative sector marked a significant contribution in certain areas. In agricultural production, it caters for 75 % of onion production, 40 % of potato production, 70 % of fresh green vegetables, 10 % of sugar production. In national bus transport, its contribution is 40 %.

Cooperative spirit can be used, to different degrees in various aspects of economic and social life. In the modern world of globalization, where threats from big enterprises/companies from within, and from transnational enterprises from without, there is the potential to cooperate and transform these threats into opportunities. As far back as 1963, Balogh and Bennett mentioned that two sugar factories were run on a cooperative basis to some extent for their milling operations. More recently, in the distribution sector, some medium 'supermarkets' have grouped together and have been ordering their goods as a big purchasing unit. This has helped them to obtain cheaper prices for their goods and has created conditions for them to compete with the 'big' supermarkets.

In the sugar sector, small planters grouped in cooperatives are being encouraged to undergo a Fair Trade Certification process, which provides for a premium of US\$ 60 per ton of sugar. There is a joint project involving OIM group (The Consultants for Fair Trade), Ministry of Business, Enterprises and Cooperatives, Ministry of Agro Industry, Mauritius Sugar Syndicate and Mauritius Sugar Authority which aims at having a greater number of small planters choosing to produce their sugar cane, by adhering to the norms and standards of Fair Trade Certification, and eventually to increase total production of Fair Trade sugar and its consequent Fair Trade premium.

Equally important is the fact that the planters will be empowered through their cooperative societies to be involved in sustainable and community development.

The Fair Trade Certification provides the following benefits:

- i. Stable price of sugar - US\$ 150 per ton;
- ii. Fair Trade Premium for Community Development Programmes - US\$ 60 per ton of sugar produced;
- iii. Empowerment of planters and workers.

In Phase 1 of the project, five Cooperative Credit Societies obtained their Fair Trade Certification in October 2009; they produced 3,000 tons; thus, they received US\$ 180,000 premium, i.e. approx. Rs. 5,400,000.

In Phase 2, 27 CCS have been certified by June 2011, producing 12,990 Metric Tons. The 32 CCS have received Fair Trade Premium of US\$ 271,533 as at July 2011. The Mauritius Sugar Authority covered the accreditation cost of Rs. 325,000. The Fair Trade sugar sold as at July 2011 was 4,525 Metric tons.

Sustainable development is one of the criteria used by Fair Trade; in Mauritius, for example, the use of gramoxone is prohibited and the planters involved agreed to abide by this criterion. Also, there is an auditing of internal management of all cooperative societies so that, in turn, Good Governance is being encouraged.

Thus, both the cooperative movement and the small planters will benefit from the Fair Trade Initiative.

### 6.9 The Labour Struggles of the Post-Independence Period and the New Labour Systems

#### 6.9.1 Post Independence Labour Struggles

The conditions facing Mauritius on the eve of Independence were favourable, not surprisingly, to the development of some major struggles of the labouring classes in the 1970s; other political developments on the part of the Government and the emergence of new political forces/parties,

the main one being the Mouvement Militant Mauricien, contributed significantly to these struggles, in some way or the other.

The level of unemployment and of poverty was very pronounced in the early years of Independent Mauritius; there was a policy of wage freeze in the early 1970s. As a consequence, there was a policy of some resistance on the part of the working class. In the early 1970s, there were strikes on a small scale in different economic sectors like the tea industry, the sack factory, the Municipality of Beau Bassin/Rose Hill and the power sector (Central Electricity Board).<sup>277</sup>

Moreover, as opposed to the 1930s, there already existed Trade Unions and Federations of Trade Unions so that new Trade Unions Federation, the General Workers Federation (GWF), faced some resistance on the part of the former prevailing in various sectors of the economy, including the Sugar Industry.

The State reacted to the situation by adopting a mixture of anti-democratic and repressive legislations such as the Public Order Act of 1970 on the one hand, and attempts to solve problems, on the other hand. Moreover, the former did not prevent the development of major strikes in 1971 by the workers under the leadership of the new Trade Unions and their Federation. For example, there was a major strike of the Public Transport (by bus) Employees in 1971 which was declared illegal by the State. Moreover, the State appointed a Judge, Mr. D. Ramphul, to study the various issues relating to the strike.

In his Report, released on the 17<sup>th</sup> November 1971, Mr. D. Ramphul declared that the strike was legal and awarded an increase of 15% in the wages of the workers in Public Transport Sector; he criticised the Ministry of Labour for not managing properly the chain of events.<sup>278</sup>

Similarly, in November 1971, the dockers obtained an increase of 12% in their wages, following strikes organised by them.<sup>279</sup> And the Plantation Workers Union, grouping the 'old' Trade Unions of Labourers and Artisans of the Sugar Industry, campaigned for the implementation of this decision for the workers of the Sugar Industry. And effectively, this decision was implemented, for all sectors of the economy, including the public service.

With the growing discontent among the workers, the Government amended the "Trade Disputes Ordinance" of 1954, with a view to rendering it difficult to hold a strike. Further, the Special Mobile Force was called in to disembark goods in the harbour during a strike by dockers.<sup>280</sup>

By December 1971, a strike started by the Dockers led to a general strike involving many key sectors of the economy: Public Transport, the CEB and the Sugar Industry, amongst others. The State declared a state of emergency and the Riot Unit of the Police Force intervened to break up many public gatherings. And the general strike was called off with many Trade Union leaders of GWF put in prison.

In fact in 1971, there were 19 work stoppages involving 25,845 workers, with 142,916 man days lost.<sup>281</sup> The aftermath of these strikes of 1971 was harsh for the workers, in particular, and for the population at large in so far that certain basic democratic rights were being threatened and even denied.

C. Bhagirutty wrote:

*« Cette vague de répression allait laisser des séquelles des années après, quand le gouvernement vota deux lois iniques, le Public Order Act (POA) qui interdit les rassemblements publics sans autorisation préalable de la police et l'Industrial Relations Act (IRA) véritable écharde dans les pieds du mouvement syndical, puisqu'il rend toute grève pratiquement illégale par de longues et fastidieuses procédures bureaucratiques. »*<sup>282</sup>

In a nutshell, that brief description of the POA and the IRA sums up the fundamental issues at stake. Moreover, the repressive legislation was not sufficient to nip in the bud the willingness of the workers to keep on with their struggles for decent wages and appropriate working conditions. Thus, in 1973, there were 9 work stoppages involving 29,738 workers, with 88,588 man days lost.<sup>283</sup>

In that year, “a long standing issue on the question of non-recognition of workers as permanent and pensionable employees by the Mauritius Sugar Producers Association (MSPA) resulted in a strike by the Plantation Workers Union in 1973. As a result of this strike, an agreement was reached with the MSPA to the effect that daily-paid workers, after a period of twelve months, should be considered as permanent employees and thus be covered by the Sugar Industry Pension Fund.”<sup>284</sup>

In fact, the Plantation Workers Union succeeded in winning some improvements in their working conditions and various fringe benefits. In the second half of the 1970s, there were many work stoppages, involving many workers, as highlighted in Table 52 below.

Year	No. of Stoppages	No. of Workers Involved	No. of Man Days Lost
1975	69	88,075	124,586
1976	86	67,841	114,716
1977	41	9,629	11,644
1978	33	42,813	46,571
1979	29	64,698	373,058
1980	7	3,760	12,548

In 1978 and 1979, the Plantation Workers’ Union on the one hand, the Sugar Industry Labourers Union (SILU) and the Union of Artisans of the Sugar Industry (UASI) of the GWF, went on strike. In 1978 and 1979, the Plantation Workers Union went on strike to protest against the closure of the sugar factories Solitude and Réunion and to have improvement in various working conditions of the labourers and artisans of the Sugar Industry. The PWU succeeded in winning over some of the demanded improvements. Thereafter, the SILU and UASI started a campaign and a strike on the following issues: the recognition of them as Trade Unions by MSPA, an increase in wages to compensate for rise in cost of living, against the closure of sugar factories, a five-day week for labourers and a 40-hour week for artisans and for a productivity bonus.<sup>286</sup>

The Trade Union leaders went on hunger strike. In the end, a deal was struck between the Trade Unions and the Government; but, meanwhile, 2000 workers lost their jobs because of the strike and some Trade Union leaders were arrested.

Industrial Relations in the Sugar Industry were very often questioned by the Trade Unions; it seemed that till then, the sugar oligarchy found it hard to envisage industrial relations in new perspectives, whereby workers would be treated as human beings with basic human rights, and expecting decent wages and working conditions. Mr. Balogh’s and Bennett’s views were still relevant.<sup>287</sup>

Another sector where workers were unhappy and went on strike was the Export Processing Zone (EPZ). The EPZ represented a sector where since the 1970s, the Government applied a policy of particularly cheap labour, with rather restrictive legislation concerning overtime and the notorious ‘double-cut’ system of the period of indentured labour. The Government wanted to reassure the investors in that sector, both foreign and local, but at the expense of the workers. Thus, in 1985, as a result of mistreatment of two female workers, there was a one-day strike; the State decided to send the Special Mobile Force to the sites of work. Similarly, in January 1989, the workers of the EPZ demonstrated against the closure of factories and the Riot Unit of the Police Force was sent and the workers were attacked.<sup>288</sup> It seemed that Trade Union leaders of the Trade Union Federation, FTU, had to give up their struggle on the one hand, and thereafter, there were hardly any strike in the sector.

By the 1990s and 2000s, there were no work stoppages involving a significant number of workers. Moreover, it is of importance to note that, after sometime, political parties, once in power, tend to ignore the legitimate aspirations of the workers as expressed by their Trade Unions. As a result, there is a split between the political party and the Trade Union with which the party was linked previously. The Plantation Workers Union took a decision to sever links with the Labour Party in 1981.

C. Bhagirutty explained:

*«Après un cheminement long de 43 ans avec le Parti Travailleiste, le syndicat décida de prendre ses distances du parti qui, à ses yeux, ne représentait plus les aspirations légitimes des travailleurs comme indiqué dans une lettre que le président de la PWU adressa au secrétaire-général du P.Tr le 24 avril 1981, énumérant les raisons de la désaffiliation. »<sup>289</sup>*

Similarly, quite some years later, the General Workers Federation would sever its links with the MMM.

### 6.9.2 Labour Legislation and Labour System

The Labour Legislation and Labour System prevailing in the 1970s was that set up during the colonial period. During the 1950s and the 1960s, there were some positive developments in the enactment of some labour legislation. In particular, there were firstly the Trade Dispute Ordinance (GN 36) of 1954 which provided for the unrestricted right to strike, except for employees in essential services. Then, secondly, the Trade Union Ordinance of 1965 provided for the right to declare a strike if there is a deadlock at the level of negotiations/conciliation.

The enactment of the Industrial Relations Act of 1974 unfortunately turned the clock backwards in terms of certain basic rights of workers, especially the right to strike, when compared to the legislations of 1954 and 1965. Two examples would suffice to illustrate the point. Section 92 rendered the right to strike ineffective, since the Trade Union concerned had to give a notice of 21 days to the Minister of Labour who, in turn, could refer the case to the Permanent Arbitration Tribunal. The latter could take sometimes two years to sort out the matter. Further, Section 102 provided for severe penal measures against those who called for, or who participated in, an 'illegal' strike: fines and terms of imprisonment up to one year.

In its report in 1983, the Select Committee on the Industrial Relations Act wrote:

- i. *“The unanimous opinion of the witnesses before your committee was that the Industrial Relations Act had hindered the development of harmonious industrial relations in Mauritius and had been the root-cause of increased antagonism between employers and employees.”<sup>290</sup> Among the witnesses, there were the main trade union federations.*
- ii. *Through the compulsory intervention of third parties, the Industrial Relations Act has discouraged negotiation between social partners and brought about a breakdown of communication.”*
- iii. *“More generally, Your Committee are of the opinion that the Industrial Relations Act is based on fundamentally anti-democratic options, constraining the basic right of workers to organise themselves as a socio-economic force not only for the achievement of better terms and conditions of employment, but also in the process of the economic development of the country as a whole. Your Committee consider the Industrial Relations Act to be a piece of repressive legislation which creates in the individual worker a feeling of fear - fear of being dismissed, victimised and imprisoned on the sole ground that he has striven for better conditions of life.”*

For an industrial relation system to be fair and reasonable, all disputes should, in the first place, be the subject of negotiation between the Trade Union and the employer; i.e. there must be collective bargaining. The Committee highlighted that “Your Committee feel that the introduction of effective bargaining procedures coupled with expedition and effective conciliatory machinery should result in peaceful settlement of disputes, thereby lessening recourse to strike actions as a method of dispute settlement.”<sup>291</sup>

The Committee considered the right to strike as a fundamental Human Right. Thus it wrote:

*“Your Committee strongly consider that, irrespective of the nature and functions of industrial relations machinery, the right to strike should, as a fundamental human right, remain the ultimate weapon of the worker in the furtherance of his rights.”*

The Select Committee made recommendations for a new approach to the industrial relations system and proposed a new legislation to be called ‘Trade Unions and Labour Relations Act’.

However, there was no follow up to the Report of the Select Committee. It was only in 2008 that the Industrial Relations Act would no longer be on the Statutes Book, and it was replaced by the Employment Relations Act of 2008.

It is appropriate to note that, in 1975, the Labour Act<sup>292</sup> was passed and dealt with essentially the rights of the labouring classes. In particular, the Termination of Contracts of Service Board (TCSB) was established within the framework of the Labour Act. That board had the power to enquire into any 'economic' redundancy and make recommendations. It provided for a safeguard for the workers against arbitrary redundancy; but the most common criticism against the TCSB is that it may take a long time before making a recommendation. The Labour Act was replaced by the Employment Rights Act in 2008 and the TCSB had been done away with altogether.

The Employment Relations Act has brought about some improvements in Industrial Relations Legislation. It no longer imposes compulsory arbitration, as used to be the case with the Industrial Relations Act, and it provides for collective bargaining. It reintroduced in some way the right to strike, and provided for instantaneous strike under certain conditions. Section 76 of Part 7, subsection (2) stipulates:<sup>293</sup>

*“Notwithstanding subsection (1), a worker shall have the right to strike where -*

- a) The strike relates to a major health and safety issue that may jeopardise the life and security of any worker, unless the worker has been transferred forthwith to another workplace which is safe and without risks to health; or*
- b) More than 50% of the workers of an enterprise have not been paid remuneration within the prescribed period,*

*and the Minister has been notified and remedial action has not been taken by the employer within a reasonable delay fixed by the Minister.”*

This right of instantaneous strike, as defined by Section 76, is obviously most appropriate, especially in the light of recent labour relations crisis in the sector of Business Process Outsourcing. Overall, the Employment Relations Act provides for the right to negotiate and make provision for conciliation and mediation through the Commission for Conciliation and Mediation. The Employment Rights Act has introduced flexibility, as defined, for example, by normal working hours in Section 14. One feature of this 'flexibility' is particularly detrimental to the worker, when it deals with overtime Section 14, Subsection (2) reads as follows,<sup>294</sup>

*“A worker other than a part-time worker or a watchperson and an employer may agree that the worker works in excess of the stipulated hours without added remuneration, if the number of hours covered in a fortnight does not exceed 90 hours, or such lesser number of hours as may be specified in an agreement.”*

And this is even worse than in the Export Processing Zone when, after having worked for 45 hours, a worker is entitled to added remuneration for working in excess of the stipulated hours. The approach is the same old approach of cost reduction to the advantage of the employer, and at the expense of the worker. Moreover, such legislation does present problems at the level of implementation: at a given place of work, those workers, having started to work before 2008, had an old contract with a different notion of overtime, when compared to the workers who started to work after 2008. And this state of affairs is tantamount to discriminatory practice at one workplace.

Further, there is the gloomy side to the mediation process; in practice, it happens that no conclusion is reached and there is no decision taken. In the field of work related to information and communication technology, and, in particular, in Business Process Outsourcing, there is an entirely new system of organisation of work, for which no legal framework has been defined yet. And, as revealed in the recent crisis in a company involved in BPO, the basic rights and dignity of the employees were not respected. Many employees did not receive their wages/ salaries for months. The relationship between the employers and employees is such that there have been reports in the press of major abuses by the employers. There are international norms and standards which are not respected. The employees have had to go on hunger strike to have their basic rights respected to a certain extent.

This state of affairs is very disturbing in the year 2011 when the workers' rights are considered as Human Rights. One is tempted to compare this with the past. Call centres, the main activity of BPO, represent problems linked to Occupational Health and Safety. Some of these problems are:<sup>295</sup>

- i. Occupational stress like visual fatigue and vocal fatigue;
- ii. Working postures; musculo skeletal disorders;
- iii. Noise related problems like hearing/ acoustic shock.

Given the very specific demands on the employees, the work organisation has to take them on board. For example, the intensity of work in call centres requires that regular rest/breaks away from telephone are essential to protect the health of employees. The absence of a legal framework to regulate the working conditions of employees and the absence of fair Industrial Relations is a matter of concern. In this new sector in the age of information and communication technology, by not defining an appropriate legal framework for Industrial Relations and the organisation of work, is the State allowing the companies to yet again accumulate capital at the expense of the employees?

Although the TCSB was criticised at the level of implementation (e.g. it may take one year to reach a decision), the spirit underlying the TCSB should not be done away with. According to the Employment Rights Act Section 37.4, termination of contract has been facilitated, which is tantamount to be granting a license to employers to fire. Reasons for a closure should be given so that the State may ensure that such a closure is not merely an excuse for the exodus of capital. The TCSB made legal provision for reinstatement in case of unfair redundancy, but the Employment Rights Act does not. By so doing, the State is creating conditions which cause labour to become a commodity as in the old days of slavery and indenture.

Similarly, in the period 1982/83, the *Code Napoléon* was amended so that when a factory is closed, priority should be given to the payment of wages and salaries to workers. But later, this decision was reversed. The recent case of workers going on a hunger strike to ensure the payment of a few months of wages in the BPO sector is a consequence of that decision-reversal.

Another major issue facing the labouring classes is the retirement gratuity, whenever there is a factory closure. With respect to export-oriented enterprises, factory closure tends to be a major issue for the labouring classes. A worker may find himself/herself having worked for five factories in his/her working-life. Each time, the factory closes down; the worker loses his/her retirement gratuity. The latter is paid only at the time of retirement. But then, at that time, the worker might have worked for a short time at the factory, say five years, and then obtains retirement gratuity only for these five years. The State needs to look into the matter (See Chapter 7).

## 6.10 Landownership and Income Distribution

### 6.10.1 Landownership

The ownership and distribution of sugar cane lands during the 20<sup>th</sup> century and early 21<sup>st</sup> century give an indication of the extent to which wealth is distributed among the various categories of persons involved in the Sugar Industry.

According to the Agricultural Census carried out in 1940,<sup>296</sup> the distribution of the sugarcane lands by acreage is given in the Table 53 below.

Districts	Estates with Mill		Estates without Mill		Total on Estates	Total off Estates	Grand Total
	Estate Plantation	Planters on Estates	Estate Plantation	Planters on Estates			
Pamplemousses	2540	253	2021	247	5062	3872	8934
Rivière du Rempart	2320	63	1656	59	4097	2217	6315

Flacq	2458	1241	3574	944	8216	3667	11883
Moka	2772	48	1466	0	4286	2109	6395
Plaines Wilhems	1364	362	1081	8	2814	1919	4732
Black River	264	37	1361	0	1662	198	1859
Savanne	5404	599	1403	0	7406	1290	8696
Grand-Port	5466	441	3570	293	9770	2429	12199
Port Louis						32	32
Total	22588	3043	16132	1550	43313	17732	61045
Percentage	15	2	11	1	29	12	40

Thus, approximately 29% of the land was owned by planters and 71.0 % belonged to the sugar estates. Moreover, there were 149 estates of varying areas, as indicated in the Table 54 below.<sup>297</sup>

Acreage ( <i>Arpents</i> )	Estates No.	Percentage	Cumulative %
Less than 100	16	10.7%	10.7%
100 - 200	26	17.5%	28.2%
200 - 401	36	24.2%	52.4%
401 - 801	32	21.5%	73.9%
801 - 1602	26	17.4%	91.3%
Greater than 1602	13	8.7%	100.0%
Total	149	100.0%	

It is of interest to note that in 1930, out of 166 estates, 62 were of less than 200 *arpents* (81 hectares), i.e. 37.3%, whilst in 1940, the corresponding per centage was 28.1%. Moreover, 7 estates, i.e. 4.2% were greater than 1602 *arpents* (642 hectares), whilst, in 1940, the corresponding per centage was 8.7%. The tendency showed clearly the decrease of small-sized estates and the increase of large-sized ones, confirming the trend towards merging of sugar estates or concentration of landownership in fewer hands.

Moreover, the distribution of landownership (off estates) by the small planters reveals the predominance of small acreage, as per Table 55. 91.3% of the small planters had holdings of less than 5 *arpents* (2 hectares).

\* 1 *arpent* = 0.404 hectare; 1 hectare = 2.475 *arpents*

Size of Holding ( <i>Arpents</i> )	Planters No.	Percentage	Cumulative %
0.1 - 1	8263	58.1%	58.1%
1.1 - 5.01	4716	33.2%	91.3%
5.11 - 10.01	675	4.7%	96.0%
10.11 - 20.03	277	1.9%	97.9%
20.13 - 40.06	153	1.1%	99.0%
40.16 - 100.14	98	0.7%	99.7%
100.24 - 300.41	40	0.3%	100.0%
Greater than 300.41	1	0.0%	100.0%
Total	14223	100.0%	

The national average holding per head was 3.1 *arpents* (1.3 hectares). The extent of cane cultivation by the Indian planters showed that there were some estate owners in their midst with a total *arpents* of 5522.6 (2232 hectares), with one estate having a factory.

Districts	Indian Cultivation		Indian Estates	Total Indian Cane Cultivation	Percentage of Total Cane Cultivation
	On Estates	Off Estates			
Pamplemousses	479	3528		4007	18
Rivière du Rempart	122	1974	110	2205	14
Flacq	2175	3163	1175	6514	22
Moka	44	1670	74	1787	11
Plaines Wilhems	369	1698		2067	18
Black River	37	73		110	2
Savanne	565	1091	83	1739	8
Grand-Port	618	2282	791	3691	12
Port Louis		3		3	4
Total	4409	15482	2232	22123	
Percentage	8	28	4	40	15

Thus, using data from Table 57 as well, 14,223 small planters owned 38,310.8 *arpents* (15483 hectares), giving an average of 2.7 *arpents* per planter. Moreover, there were 11 estate owners who owned 5522.6 *arpents* (2232 hectares), giving an average of 502.1 *arpents* (203 hectares) estate owner. By 1940, the social stratification among Indian 'planters' became very pronounced, with a few wealthy ones. The distribution of the size of estate is of interest.

Size of Estate ( <i>Arpents</i> )	Number of Owners
100 - 200	4
200 - 401	2
401 - 801	3
801 - 1602	2
Total	11

Among the two very big estate owners, one owned a factory. Moreover, in 1930, there were 21 estates owned by Indians<sup>298</sup>; the drop to 11 in 1940 could be explained by the impact of the depression of the 1930s.

Table 58 Number of Cane Planters in Different Size Classes of Holdings and Estates 1946 <sup>299</sup>			
<i>Data compiled from Cane Sales Contracts registered at the Central Board and Information supplied by the Deputy Registrar Co-operative Credit Societies.</i>			
A. Small Planters cultivating between:	No. of Planters	%	Cumulative %
0.1 - 5.0 <i>arpents</i>	12,253	91.2%	91.2%
5.1 - 10.0	417	3.1%	94.3%
10.1 - 20.0	307	2.3%	96.6%
20.1 - 50.0	210	1.6%	98.1%
50.1 - 100.0	114	0.9%	99.0%
Total	13,301	99.0%	99.0%
B. Large Planters cultivating between:	No. of Planters	%	Cumulative %
100.1 - 200.0 <i>arpents</i>	49	0.4%	99.3%
200.1 - 500.0	41	0.3%	99.6%
500.1 - 1000.0	14	0.1%	99.7%
1000.1 - 6000.0	5	0.0%	99.8%
Total	109	0.8%	99.8%
C. Estates (with factory) cultivating between:	No. of Planters	%	Cumulative %
1000.1 - 2000.0 <i>arpents</i>	16	0.1%	99.9%
2000.1 - 3000.0	8	0.1%	100.0%
3000.1 - 4000.0	3	0.0%	100.0%
4000.1 - 5000.0			100.0%
5000.1 - 6000.0	2	0.0%	100.0%
Total	29	0.2%	100.0%
Grand Total	13,439	100.0%	
<i>Note: 1 hectare = 2.475 arpents. The data as contained in the report are reproduced here.</i>			

By 1946, the pattern of sugar cane landownership by small planters was rather similar to that of 1940, with 92.1% owning 5 *arpents* or less. Moreover, there was a decrease in the total number of planters from 14,223 to 13,301. But, there was an increase in the number of planters owning between 20 *arpents* and 100 *arpents* to 324, from approximately 251 in 1940.

The up-to-date trends and tendencies are highlighted in Table 59.<sup>300</sup>

Table 59 Distribution of Land among Planters for 1985 - 2009

Acreage of Land ( <i>Arpents</i> )	Number of Planters				
	1985	1990	2000-01	2005	2009
Up to 1.2	17,447	20,052	15,408	14,572	11,489
1.2 - 2.4	14,524	7,108	7,058	6,447	5,347
2.4 - 4.7	1,867	4,210	3,599	3,458	2,835
4.7 - 11.8	587	2,100	1,823	1,893	1440
11.8 - 23.7	138	412	364	340	245
23.7 - 236.9	71	221	150	127	98
Above 236.9		27	45	50	38
Millers*			14	11	6
Total	34,634	34,130	28,461	26,898	21,498

\*The SIFB reports do not give the breakdown for 'millers' for 1985 and 1990; they are included in 'Above 236.9'. Moreover, for 2000-01, 2005 & 2009, the extent of land owned by millers is not given.

It is very much evident that the number of sugar cane planters has been decreasing consistently as from 1990 overall, as well as in all categories of acreage of land.

#### 6.10.2 Income Distribution

As data on income distribution for the population of Mauritius are not published, the best source of information on the issue is the Household Budget Survey carried out by the Central Statistics Office at regular five-year intervals. The last such survey was carried out in 2006/2007. A national random sample of 6,720 households was selected and it should provide a reliable estimate of income distribution for the whole population.

Table 60 gives the income distribution obtained from the Household Budget Surveys for 1996/1997, 2001/2002 and 2006/2007 and helps to grasp the evolution of income distribution during the period 1996 to 2007.

The share of income between 1996/97 and 2006/07 tends to be the same. Thus, as an example, 65.7 % of households who had 37.7 % of total income in 1996/97; in 2006/ 2007, 68.5 % of households had 40.7 % of total income. Moreover, the data for 2001/2002 would give a different picture; Table 61 gives the details.

Table 60 Income Distribution based on HBS<sup>301</sup>

Monthly Household Disposable Income (Rs.)	HBS 1996/97				HBS 2006/07			
	Households (%)	Cumulative %	Total Income (%)	Cumulative %	Households (%)	Cumulative %	Total Income (%)	Cumulative %
Less than 5000	23.7	23.7	7.6	7.6	6.5	6.5	1.2	1.2
5000 - 10000	42.0	65.7	30.1	37.7	20.4	26.9	8.3	9.5
10000-14000	15.6	81.3	17.9	55.6	20.4	47.3	12.7	22.2
14000-16000	4.7	86.0	6.9	62.5	9.1	56.4	7.2	29.3
16000-20000	5.3	91.3	9.2	71.7	12.1	68.5	11.3	40.7
20000 - 25000	3.2	94.5	7.0	78.7	10.5	79.0	12.3	53.0
25000 - 30000	2.1	96.6	5.5	84.2	6.5	85.5	9.4	62.3
30000-40000	1.8	98.4	6.0	90.2	6.7	92.3	12.2	74.5
40000&Above	1.6	100.0	9.8	100.0	7.7	100.0	25.5	100.0
Percentage	100.0		100.0		100.0		100.0	

Monthly Household Disposable Income (Rs.)	HBS 2001/02			
	Households (%)	Cumulative %	Total Income (%)	Cumulative %
Less than 5000	10.2	10.2	2.4	2.4
5000 - 10000	32.4	42.6	17.3	19.7
10000 - 14000	21.0	63.6	17.4	37.1
14000 - 16000	7.3	70.9	7.6	44.7
16000 - 20000	9.8	80.7	12.2	56.9
20000 - 25000	7.6	88.3	11.8	68.7
25000 - 30000	4.4	92.7	8.5	77.2
30000 - 40000	4.0	96.7	9.6	86.8
40000 & Above	3.3	100.0	13.2	100.0
Percentage	100.0		100.0	

The income share of different income groups gives a more precise idea of the inequalities prevailing in income distribution. The following presentation gives the income share of the lowest earning 20% of households and the highest earning 20% of households for 1996/1997, 2001/2002 and 2006/2007.

	1996/1997	2001/2002	2006/2007
1. Percentage of Income going to:			
<i>lowest 20% of households</i>	5.9	6.4	6.1
<i>highest 20% of households</i>	46.2	44.6	45.7
2. Gini Coefficient (A measure of inequality)	0.387	0.371	0.388

In 2006/2007, the lowest earning 20% of households have a share of 6.1 % of total income, whilst the highest earning 20% of households have a share of 45.7%, which is 7.5 times that of the lowest earning 20% of households. In 1996/1997, that ratio was still worse being 7.8.

Overall, inequality in income distribution is 'measured' by the Gini coefficient. When there is perfect equality, i.e., 20% of the households have a share of 20% of income, the coefficient would be equal to 0. When it is equal to 1, this indicates the worst inequality in income distribution possible.

Thus the inequality in income distribution in 2006/2007, with Gini coefficient 0.388, became worse than in 2001/2002 when the Gini coefficient was 0.371.

Moreover, the various indicators of income and expenditure given below reveal that between 2001/2002 and 2006/2007, there was "no significant change, after adjusting for inflation"<sup>304</sup> in average monthly income.

Table 63 Income & Expenditure

Table 63 Income & Expenditure			
Base year 1996/97 = 100			
Indicators of Income & Expenditure	1996/97	2001/02	2006/07
CPI	100	132.9	178.3
Average Monthly Household Income	10179	14232	19083
Average Monthly Household Real Income	10179	10709	10703
Median Monthly Household Income	7870	11150	14640
Median Monthly Household Real Income	7870	8390	8211
Average Monthly Household Expenditure	8609	11390	15238
Average Monthly Household Real Expenditure	8609	8570	8546
Median Monthly Household Expenditure	6209	8154	11054
Median Monthly Household Real Expenditure	6209	6135	6200

When the inequalities in income distribution become more severe, then, more often than not, this state of affairs leads to poverty. In Mauritius, there is no official poverty line; moreover, a relative poverty line defined as half the median salary is commonly used. With this definition applies to an adult, we have the following data.<sup>305</sup>

Table 64 Poverty

Table 64 Poverty			
Indicators	1996/1997	2001/2002	2006/2007
Poverty Line	Rs. 2,004	Rs. 2,804	Rs. 3,818
Estimated number of poor households	23,800	23,700	26,900
Proportion of poor households	8.7	7.7	8
Estimated number of poor persons	92,700	93,200	106,100
Proportion of poor persons	8.2	7.8	8.7

Whilst the proportion of poor households decreased from 8.7% in 1996/1997 to 8.0% in 2001/2002, that of poor persons increased from 8.2% to 8.7%; this data indicates that, though there was a drop in 2001/2002, there is a tendency for an increase in poverty in Mauritius.

Increase in poverty tends to produce certain behavioural patterns. Thus, the monthly household consumption expenditure (expressed as a percentage of total expenditure) shows a consistent increase for the consumption of alcoholic beverages and tobacco from 8.9% in 1996/1997, to 9.1% and 9.5% respectively in 2001/2002 and 2006/07.

### 6.11 Concluding Remarks

When Mauritius became independent in 1968, the economy grew as part of the overall Colonial Empire which produced an extreme international specialisation rendering it vulnerable and fragile. In particular, the economy was very much dependent on the preferential trade provided by the British Colonial Power. Large-scale unemployment and poverty were the symptoms of that fragility. On the other hand, the process of social stratification, which has been taking place since the second half of the 19<sup>th</sup> century, produced a new bourgeoisie from among the emerging planter class, the new elite and the new business community. Today, this bourgeoisie controls State power. Further, the country is 'imprisoned' to a certain extent by its history. The sugar oligarchy still controls the Sugar Industry and has extended its control to some extent to the tourist sector, export-oriented industries and financial services.

The economic diversification which took place after Independence was a success; the mono-crop economy has been transformed into five pillars which allowed Mauritius to adapt to threats and changing circumstances on the international and local scenes. A number of authors have agreed on the fact that the economic diversification has been a major success. Further, although major progress has been achieved in the field of Education, Health and Social Security, there are still major problems. Yet, we have more than 100,000 poor persons out of a population of 1.2 millions, i.e. representing about 8 % of the population. Why is this so?

The Cooperative sector is an area which could have helped in economic diversification and genuine empowerment of the labouring classes. But poor internal management and corruption have prevented a significant take-off of the cooperative movement. Yet it could have helped enormously in the struggle against poverty, social exclusion and in job creation. From Dr. M. Curé to Balogh, suggestions were made to enhance the cooperative movement. Attempts to set up a sugar factory run on a cooperative basis in the 1980s failed because of the resistance of vested interests. In India, there is such a factory in Maharashtra which produces yearly 6,000,000 metric tons of sugar. The State and the new elite failed in respect to the setting up of a sugar estate by small planters on a cooperative basis.

Environmental degradation has been a major problem since the Dutch and French colonial periods. With the rapid development of the Sugar Industry in the nineteenth century, the destruction of forests has had a major impact on water supply which is a major problem nowadays. Post-independence industrialisation and the increasing traffic intensity made matters worse. Some mitigation of that long process of environmental degradation is now taking place.

The economic and social structure of Mauritian society has not fundamentally changed from the point of view of labouring classes: though there is a larger multi-ethnic bourgeoisie, and a larger multi-ethnic middle-class, yet the economic and social structures are such that wealth and, more generally, the ownership of means of production (land, banks, trade/commerce, factories etc.) has been restricted to a rather small minority involving both the old and new bourgeoisie. The value and belief systems of colonial society and, in general, of Capitalism have permeated the minds of the new bourgeoisie, of the political elite, of the new middle class and even, to some extent, of the population at large. As a result, the strategy for development has been such that the economic and social structures have been consolidated and the root causes of unemployment and poverty have not been tackled. The old system, reformed to a certain extent, prevails, together with its obvious limitations like acute material disparity/ inequality between the social classes, social exclusion, corruption and poverty. The basic rights of the labouring classes as workers are still not being given due recognition. In particular, labour is being treated more and more as a mere commodity. The tendency is that workers are not considered as human beings, but as mere factors of production.

Admittedly, Mauritius being a small Archipelago Republic, there are constraints to its development. But, there are possibilities which should have been explored and which need to be explored, at least to mitigate the problems facing the labouring classes and the poor.

## CHAPTER 7 CONCLUSION AND RECOMMENDATIONS

*“What was achieved fascinated subsequent generations who attempted both to romanticise the founders of the empire and invest all of them with qualities they never possessed...Drake, Morgan and American pioneers were endowed with such contemporary virtues as manly courage, fortitude, comradeship and a love of adventure for its own sake, and the ruthless pursuit of profit was under played or left unmentioned. This was a distortion both of the men and their motives, but an attractive one which, during this century, has been given a new lease of life through Hollywood’s popular swash buckling movies [...]”<sup>306</sup>*

### 7.1 Conclusion

Slavery and the indentured labour system in Mauritius were developed and sustained by Colonial Powers: the Dutch, the French and the British. Profit brought the first colonisers to Mauritius and has dominated life ever since.<sup>307</sup> There has been a striking continuity underlying the process of colonisation by each of the colonial powers: on the one hand, the development of specific economic and social structures and, on the other hand, economic exploitation and social oppression and exclusion. A rigid class and racial hierarchy was established.

A turning point was reached in the 1830s with the legal abolition of slavery and the importation of indentured labour from British India. Not only the trauma of slavery, but also the harsh conditions of apprenticeship and of abolition contributed to the leaving of sugar estates by ex-enslaved people. They were paid very low wages based on those of indentured labour and they lost the housing facilities and the land which they had been cultivating for decades. They could not reconcile their newly-acquired ‘legal’ freedom with their loss of basic necessities like land and housing. They were excluded from the new Capitalist System, and most of them earned a meagre living by fishing with primitive equipment and by working as stevedores, drivers and artisans. Many were somewhat permanently unemployed, forming a lumpen proletariat living on the margin of the plantation (sugar) economy.<sup>308</sup>

Moreover, the subservience of the economy to the British Colonial Empire with (amongst others) its free trade policy and adoption of the cheap labour policy and the frequent economic depressions in the international economy and in Mauritius led to a growing lumpenproletariat, together with unemployed ex-indentured labourers. Under such circumstances, other sectors of the economy would progressively come under the fold of very cheap labour, excluding those used to working for somewhat higher wages. Unemployment and poverty were very much prevalent by the last third of the nineteenth century and in the major part of the twentieth century.

Epidemics of cholera and malaria, together with cyclones, would make matters worse for the labouring classes and the growing lumpenproletariat; so much so, that the Royal Commission of Enquiry of 1909 expressed concern about the level of poverty and about the amount of government relief to the poor. Nevertheless, the plantocracy kept on pressing for the importation of indentured labour to sustain its cheap labour policy, creating further unemployment and poverty. And the Colonial State caused further impoverishment of the labouring classes and the poor by levying heavy taxes on them. And the Royal Commission essentially recommended measures in favour of the plantocracy, with hardly any for the labouring classes and the poor.

By then, the internal dynamics of the economic system, through the need to modernise the Sugar Industry to face international competition, created the conditions for the parcellisation of land. In the process, those excluded from the plantation economy did not, and could hardly, become buyers. On the other hand, those mainly from the ex-indentured labourers, the job contractors, the *sirdars*, the traders, the middlemen would become small landowners. A new social class of small and medium planters was born and a new business community and elite was in the making. The emergence of this new social class did not fundamentally have a major impact on the prevailing large lumpenproletariat and generally on the poor. The overall social structure would prevail, except with this new transformation: the plantocracy and the Colonial State would continue to be the supreme powers.

Another major turning point in the historical development of Mauritius was the unparalleled resistance of the labouring classes (especially in the 1930s and 1940s) to the oppressive and exploitative system: the strikes and marches of the labourers and small planters of 1937, the strike of the dockers and labourers of 1938 and the strikes and marches of the labourers in 1943. Preceding these events, the Mauritius Labour Party was founded in 1936 by Dr. Maurice Curé, assisted soon afterwards by Emmanuel Anquetil. The Colonial State would react with a mix of approaches: repression, divide and rule tactics and accommodation.

A host of changes would follow in various aspects of the society. A new era of Industrial Relations was ushered in, measures to help the small planters class especially in its relation to the sugar oligarchy were put into practice, major constitutional developments, including universal suffrage in 1959, took place. On the societal level, a new bourgeoisie/elite emerged. Experts were sent by the British Imperial Government to study the economic and social state of affairs and to make recommendations: Meade, Titmuss and Balogh. The Colonial Power in the end controlled the situation and created conditions, with the help of the elite and the business community, to grant Independence to Mauritius. But, the perennial problems of unemployment and poverty were still prevalent. Social exclusion had become a permanent feature of Mauritius; economic power was still concentrated in the hands of the sugar oligarchy, whilst the new bourgeoisie stepped to the shoes of the Colonial Power and made its way slowly into the world of business. An entrenched economic and social system developed and nurtured over more than two centuries, prevailed.

During the post-Independence period, major changes took place: economic diversification, development of educational facilities like free secondary education and the setting up of public universities, expansion and improvement of the public health system as well as the private one, development of wide-ranging social security system. Moreover, fundamental changes to the economic and social structure did not materialise. Whilst economic power remains concentrated in a small minority, including the new and the old bourgeoisie, political power is controlled by the new bourgeoisie.

Depending on the prevalence of economic boom or depression, the labouring classes face alternate conditions of relative well-being or very hard times. Unemployment and poverty, admittedly on smaller scale than in the 1960s, are prevalent, so much so that social exclusion has not been eradicated. On the contrary, with ultra liberal economic policies and the international economic crisis, inequality is on the increase; factory closures are more frequent and poverty and social exclusion are still entrenched in Mauritian society.

Colonialism, together with slavery and indentured labour, has had consequences of a systemic nature. The policies of the post-Independence era have, only to a limited extent, succeeded in mitigating these consequences. But still, cheap labour policy has been adhered to; in new sectors, like BPO, and in new privatised services, like cleaning, working conditions are awful and, in the latter case, very low wages (about Rs. 3500) prevail. No doubt, improvements have been made in the economic and social fields. But the old capitalist system, reformed to a certain extent, still prevails with its obvious limitations like acute material disparity between the social classes, social exclusion, corruption and poverty.

## 7.2 Recommendations

In the light of the analysis carried out in this Study and in the light of the diagnosis of the prevailing problems and issues, the recommendation made here demand a major shift in attitude towards economic and social development. But there is an urgent need to provide compensation for reparation of social ills and problems in the making during more than two centuries.

1. The Colonial Powers, Holland, France and Britain, must be asked by the Government of Mauritius to pay compensation for implementing the slave system, and later the indenture system, and thus bringing underdevelopment for the majority of the people of Mauritius.
2. The Creation of a Special Fund to be Managed Independently of the Yearly Budgetary Exercise: Some of the sources of the Fund would be the revenues obtained by increasing the Corporate Tax from 15% to 20%. The decrease of Corporate Tax from 30% to 15% over

the last few years was exaggerated. Equally, another source of the fund would be a 2% tax on profits of the banks which have benefitted a lot from various policy decisions lately\*.

3. **Decent Wage For Decent Work:** We should remember that slavery and indentured labour were, amongst other things, labour systems. There should be an overhaul of the labour system. Firstly, a decent wage for decent work policy should be adopted. Whilst the notion of a decent wage will be defined in different sectors of the economy through consultation with labour and capital, the notion of decent work has been defined by the International Labour Office as far back as 1999.<sup>309</sup> It includes, *inter alia*,
  - i. rights at work whether in the formal or informal economy;
  - ii. the obligation to promote the possibilities of work;
  - iii. protection against vulnerability and contingency arising from unemployment, loss of livelihood, sickness or old age;
  - iv. social dialogue.
4. **Migrant Labour:** Review the conditions of migrant labour and their implementation, especially the non-respect of conditions relating to dormitories as well as conditions relating to site of work.
5. **Gender Policies:** Women and the unemployed are being targeted as reservoirs of cheap labour. Discriminatory wage rates against women and generally occupational segregation should be done away with. Economic structuring, as it has occurred in the Sugar Industry and in the EPZ, is characterized by redundancy, low incomes/wages and high levels of insecurity. Whilst both men and women do suffer from this state of affairs, women workers are much more likely to be the victims.
6. **Re-skilling:** As far as the export-oriented enterprises, which are being restructured, are concerned, there is now a new trend (e.g. in UK) for enterprises to provide the training required for the re-skilling of the workers. Workers concerned should not be made redundant but should be provided with appropriate training.
7. **New Emerging Sectors and the BPO:** The setting up of enterprises in emerging new sectors, the workers should not have very harsh working conditions as has been the case in BPO. For enterprises involved in BPO, given the new type of work environment and new health hazards, there is an urgent need for defining the appropriate legal framework to ensure decent wages and working conditions for the workers.
8. **A Paradigm Shift - Cooperative Development:** The influence of the State since the inception of the cooperative movement and of the new elite espousing values and practice contrary to cooperative principles and values have had a negative effect on the cooperative movement. There is a need to adopt a new approach to cooperative development. Cooperative development, which respects the cooperative values and principles, as defined by the International Cooperative Alliance<sup>310</sup>, provides for a genuine empowerment of everyone, and certainly the poor and the needy ones. In 1966, the International Labour Organisation adopted the Cooperatives (Developing Countries) Recommendation, 1966 (No. 127), which called for Governments to aid cooperatives without affecting their independence. We recommend that:
  - i. the State introduces the teaching of cooperative values and cooperative principles in the school curriculum;
  - ii. given that cooperative savings existed at schools in the past, the Government and other educational authorities should re-introduce the school savings project to enhance cooperative spirit and to put into practice cooperative values and principles;

- iii. in view of the international financial and economic crisis, and given the international competition, and given the small size of the economy of Mauritius, Government should take the initiative to suggest and encourage the cooperative approach in business, to varying degrees, to face increasing challenges and threats.

The population at large and the Trade Unions in particular, should be made aware of the potential for development and for genuine empowerment of everyone concerned, through cooperatives. The potential to take into consideration the social dimension of economic development and to get the community more involved can be materialised in the medium- and long-term. In Singapore, about 50% of the consumer sector is controlled by cooperatives. Further, the cooperative movement could be more effective in bringing community involvement in dealing with the environmental problem, especially in the context of the project *Maurice Ile Durable*.

Ultimately, the Cooperative Sector should be able to co-exist effectively together with the Public and Private Sectors. For this to be possible, there is a need for a new leadership which adheres to cooperative values and principles.

9. **Low-Cost Housing:** More low-cost housing on the model used in Valetta, should be implemented. Four hundred and four hectares (1000 *arpents*) out of the eight hundred and eight hectares (2000 *arpents*) to be provided by MSPA could be used for that purpose. It is understood that, so far, only 162 hectares (400 *arpents*) have been used.
10. **Land for Descendants of Employees of Railway Lines at time of Closure of Railways and for Dockers at the time of Opening up of Bulk Sugar Terminal:** The Sugar Industry has had to go through major phases of restructuring during the 20<sup>th</sup> and 21<sup>st</sup> centuries. The latest one, involving MAAS, provides amongst other things, for compensation in cash and in kind to employees. Each employee is entitled to a plot of land of seven perches. The laudable initiative is most welcome. Moreover, in the not too distant past, the Sugar Industry underwent other phases of restructuring, when the railway lines were closed in the 1960s and when exports in bulk sugar were initiated in the late 1970s, then, the employees have had only cash compensation. Additionally, given the poor plight of their descendants and especially among the descendants of dockers, we recommend that the descendants of each employee should be given a plot of land (per employee at that time), in the spirit of the compensation in cash and in kind currently applicable in the Sugar Industry.
11. **Labour Market and Employment:** Recruitment and selection of employees both in the public sector, and in the private, should be made according to merit. For this policy to be effective, there must be openness in the recruitment exercise so that the broad public is kept aware of all steps and procedures involved well in advance.
12. **New Social Contract:** There is a need to define a new social contract in Mauritius, whereby the labouring classes are not considered as mere factors of production, with certain obligation/duties, but as human beings with fundamental rights and participating fully in wealth creation of the country. The State should do the needful, in terms both of introducing new appropriate legislation, and of contributing in the development of a new mind-set both in the public and private sectors. The State should further give due consideration to better communication with the people at large and to making the public sector more responsive and welcoming in the provision of various services to the population at large. The private sector must not restrict itself to an eternal cost-cutting exercise in its factories at the expense of Health, Safety and Welfare of the labouring classes.

In the fight against poverty and social exclusion and other consequences of slavery and indenture, action should be taken in the employment sector, especially in the private sector and, in particular, in the sector of the export-oriented enterprises. We recommend the following measures:

- i. The Employment Rights Act should be amended so that there is not a license to 'hire and fire'.

- ii. Whenever there are no valid reasons for economic redundancy, the Law should be amended to provide for reinstatement of the redundant workers. The Law, as it stands, does not do so, so that the Industrial Court cannot give its ruling for the reinstatement of the workers in such circumstances.
- iii. There is a need to be inspired by Dr. Curé's struggle for a minimum wage. There is a minimum prescribed wage rate which prevails in each sector, but there is no minimum wage across the sectors. A minimum wage should be introduced.
- iv. The *Code Napoléon* is to be amended so that, whenever there is a factory closure, first priority should be given to the payment of wages and salaries of all employees.
- v. Workers should be paid for their overtime work on a daily basis, not after forty-five or ninety hours of work.
- vi. The tendency for many workers is to have been employed for more than one factory during their working life, possibly by as many as four/five factories. As explained in Chapter 6, the worker ends up with a very small gratuity retirement arising out of his/her last employment. We recommend that the Government introduces a portable retirement gratuity by creating a Special Fund. Each time a factory closes, the employer should place in that Special Fund the entire retirement gratuity to which the redundant workers are entitled. Thus, by the time of his/her retirement, the worker would obtain his/her due as gratuity retirement.
- vii. The right to strike by workers should be considered as a fundamental Human Right. The possibility of incorporating this right in the Constitution should be given serious consideration.

The above recommendations would ensure, to some extent, that workers are not treated as mere commodities, but as human beings with their basic rights and dignity. This, in turn, would represent a major step towards severing the links with the remnants of slavery and indenture, when workers were not considered as human beings but mere factors of production.

13. Land: Land, being a valuable scarce resource, the management of it should be done with transparency so as to ensure that the people of Mauritius derive the maximum benefits. This includes access to beaches, as well as the lease and sale of State Lands. As far back as Ordinance 18 of 1874, there was provision for the sales of Crown Lands by public auction and the granting of leases of such lands by either public competition or private contract. And it prohibited the grant of 'jouissances' limited or unlimited. The spirit underlying this Ordinance should underlie any contemporary legislation.

According to the classic ‘value of marginal product’ theory of the wage of a worker, slave or free, wages are defined as follows:

$$w_t = \frac{\partial f_t}{\partial L} P_t \quad (1)$$

where  $f_t$  is the total sugar production,  $w_t$  is wage at time  $t$ ,  $P_t$  is price of the commodity produced at time  $t$ ,  $L$  is labour, and  $\frac{\partial f_t}{\partial L}$  is the marginal product of labour. In other words, wages at time  $t$  are equal to the value of marginal product of labour or the result of multiplying the number of units produced at the margin by the price at time  $t$  of a unit of that output. Wages are evidently not an issue in a slave system so instead we will account for shadow wage which is a measure of the exploitation of the slave’s labour by the owner.

Since the value of the slave is the present value of the wages expropriated (net of upkeep and monitoring costs) we can write the expression for the value of the slave as follows:

$$NPV_{t=k} = \sum_{t=k}^{t=L} \frac{\left[ \frac{\partial f_t}{\partial L} P_t - U_t \right]}{(1 + \delta)^{t-k}} \quad (2)$$

where  $t=L$  is the years the slave will be used that is the effective useful life of the slave. The  $U_t$  term is defined as upkeep costs in time  $t$  and the discount term  $\delta$  defines the rate of time preference, where current investment and borrowing is traded off against future consumption. However, there are several types of uncertainty, which take the form of transaction cost discounts, to the value of a slave. The first, easily incorporated into equation 2 above, is uncertainty about commodity prices  $P_t$ . Secondly, owners were concerned about the possibility of slave revolts in groups, or escapes, either of which were likely to make the slave unavailable for service. Consequently, this form of uncertainty takes the form of a probability distribution defined over a discrete outcome set: either a slave continues in service, or is lost forever, due to escape or participation in a rebellion. Finally, there is uncertainty over the prospect of the abolition of slavery. Again, the form of the outcome is discrete, with a high probability that abolition will not occur, and some small probability that it will occur in any given year. Like escape, however, abolition is forever: if it occurs, the value of the slave is lost.

To capture this logic in terms of a discount for the likelihoods of escape or emancipation, consider the following equation:

$$[1-E_s] * [1-E_m] = [1-E_m-E_s+(E_m*E_s)] \quad (3)$$

where  $E_s$  and  $E_m$  are Boolean operators, taking the value “true” (1) if the slave escapes or is emancipated, respectively. It is difficult to analyze such an equation probabilistically since each separate occurrence of escape or emancipation would constitute a separate event (e.g. “escape in year 7” is different from “escape in year 13”). So, we will make two simplifying assumptions: (1) We will only consider the case where the slave neither escapes nor is emancipated over his entire useful life; and (2) the likelihood function can be described as the product of a sequence of independent probabilities. With these assumptions, the risk discount factor for escape/emancipation can be written as a likelihood function:

$$\prod_{t=k}^L (P_{es,t} P_{em,t}) = (P_{es,k} P_{em,k}) \times (P_{es,k+1} P_{em,k+1}) \dots \times (P_{es,L} P_{em,L}) \quad (4)$$

A simple example reveals just how sensitive this discount factor is to even small changes in the subjective assessment of the ‘safety’ of an investment in slaves. Imagine that a potential slave-buyer believes that the chances of a successful escape are zero, and that emancipation is

impossible. Then there is no risk discount at all, and equation 2 describes the value of the slave. But then suppose that the prospective buyer learns new information and decides that the probability of escape is actually 0.001 in any given year, and that the probability of emancipation is also 0.001. What is the discount? From equation 4, we know that it is  $(P_{es}P_{em})_{L-k}$ . Imagine that the slave is expected to have a useful life of 10 years; then the discount is  $(0.999*0.999)^{10}=0.98$ . This means that the prospective buyer who believes that the chances of either emancipation or escape are low will pay very nearly the full value of the expected marginal product of the labour of the slave. What if the slave has a 30-year expected useful life? The discount then would be  $(0.999*0.999)^{30}=0.94$ . A 5% discount for the total risk of escape or emancipation would influence the price.

The fully-elaborated model of value of slave will be as follows:

$$ENPV_{t=k} = \sum_{t=k}^{t=L} [P_{es,t} P_{em,t}]^{t-k} \frac{\left[ \frac{\partial f_t}{\partial L} P_t - U_t \right]}{(I + \delta)^{t-k}} \quad (5)$$

where ENPV is expected net present value.

The model captures the potential sources of variation in the present value of slave-ownership that one would expect to observe. The easiest, in economic terms, are the ‘price of output’ and ‘marginal product of labour’ variables. If the price of sugar, or the productivity of slaves working in sugar, rises then the price of slaves is expected to rise also. The time rate of discount represents the opportunity cost of the labour tied up in labour assets.

The interesting feature of the model is the impact on asset prices of the probability that slavery will be abolished. Even a small risk of abolition had to be taken extremely seriously because it affected the value of the entire future income stream. If an individual changed their expectations, even slightly, about the persistence of the slave regime, the amount they would pay for their slave would also shift. A rational individual would then buy a slave if the expected present value of slave-labour exceeded the price at which slaves could be purchased at auction. In terms of the model,  $P_{em}$  would be greater under the British rule than before with the near abolition of slavery. This, in turn, would imply that, *ceteris paribus*, EPV also increased. On the other hand, if abolition seemed unlikely, then  $P_{em}$  would have remained essentially constant over time with, *ceteris paribus*, no change in EPV.

## INTRODUCTION

In 1840, Mauritius, formerly Isle de France, already had a complex history which was to become more complex with the Indians - Hindus and Muslims - and the Chinese being added to the ex-slaves mainly of Malagasy or African origin, to the Coloured people, the Whites. Among these last ones, were some of French origin and colonists in the country, the others being British and new administrators of the island; they were to form a population in search of its identity and to see imposing one which would be imposed upon them by the dominant racial oligarchy. It is within this complex socio-political system that the Church would have to integrate itself.

Research on missionary intervention in Mauritius has progressed rather slowly,<sup>1</sup> but it has recently gained momentum within scholarly and public discourse, exploring the role played by missionaries in the immediate post-emancipation period and its impact on contemporary Mauritian society. Indeed, the years 1860-1895 were marked by dynamic exertions on the part of the Catholic and Protestant Churches to bring the former apprentices and indentured immigrants within the pale of their respective churches.

This study begins with a brief survey of missionary interventions during the pre-emancipation period, when the majority of the population were non-Christians although Catholicism was the only official religion. Next, the missionaries are discussed in terms of their unique role as intermediaries between the Colonial Authorities and the colonized peoples through evangelization. This is followed by special attention being paid to the areas of Education and Public Health in which the missions made their greatest impact, but where the State's concern for promoting basic literacy and numeracy, the Church's interest in indoctrination and practical training, and the people's wish could never be fully reconciled.

Finally, the third consequence of the missionary experience concerns the relationship between Church and State. The controversial issue of collaboration between missionaries and colonial enterprise in Mauritius or the dominant oligarchy is discussed. For any but the most anticlerical of scholars today, however, relations between the two forces can be seen to range from close collaboration to open conflict; and how we assess the dominant tendency of any particular Church will depend on the empirical historical record, as well as the ideological outlook of the particular researcher.

## CHAPTER 1 BACKGROUND TO CATHOLIC MISSIONARY MOVEMENT

### 1.1 Prelude to Catholic missionary movement

During the 17<sup>th</sup> century and part of the 18<sup>th</sup> century, France had developed a '*régime de chrétienté*, and spurred by the Gallicanist trend, Catholicism was raised up to the status of a State Church. Consequently, Catholicism was theoretically the only official religion practised in the Colony during French occupation. That situation stemmed from the status of that religion in France, where it was the State religion. In practice, however, the majority of the inhabitants in the Colony, as a matter of fact, were non-Christians.

The intellectual and spiritual development of slaves, the overwhelming majority of the population at that time, was almost entirely neglected. Although the *Code Noir* prescribed the compulsory conversion of slaves to Catholicism,<sup>2</sup> the Lazarist missionaries in Isle de France, for pastoral reasons, boldly discarded that legally-binding obligation<sup>3</sup>, without in the least suffering political interference or being disturbed by the Colonial Authorities. Indeed, the *Code Noir*, as Amédée Nagapen remarked, drew an idealized picture of the religious life of the slave, not easily achievable in practice. On the one hand, the slaves who were unloaded from the vessels of the slave traders had their own religion. Plunged brutally into the slave system of Isle de France and forced to fight for a painful survival in a French-speaking foreign society, they were quickly stripped of their language, their religion, their habits, in short, of their culture. Moreover, factors such as the mode of life of the masters, their daily needs for manpower, the requirements of the Sunday drudgeries, the impossibility of sanctioning the delinquents, made it impossible to abide to the decrees of the *Code Noir*.

On the other hand, the missionaries, in practice, adopted different standards, more pastoral principles in conformity with their conviction that faith is a gift of God, a supernatural grace. Consequently, ignoring the rules of the *Code Noir* which ordered the baptism of the slaves and Catholic religious instruction, the Clergy of Isle de France initially took care of catechism and then of the ceremony of baptism, depending on the dispositions of the catechumen. Above all, they took care not to baptize inconsiderately slaves who then generally precipitated in cohabitation, could not receive the sacrament of marriage.<sup>4</sup>

For obvious reasons, in Isle de France, there existed neither mass catechizing nor mass Christianisation, still less mass administration of baptisms.<sup>5</sup>

So, as regards to the slave population, in spite of the legislation in force, the majority were not Christians. The Government just had to rest content with the existing situation.

It must be noted that Roman Catholic missionary enthusiasm waned at the dawn of the eighteenth century, following the traumatic experience of the French Revolution.

Yet, by the 1830s, following the changing attitudes of the planting community and during the amelioration period, some local Catholic priests started catechism with the slaves. Nagapen outlined the work of Father Déroulède in the 1830s among the slave population. At the opening of a new Church at Flacq in 1832, *Le Cernéen* of 27 September rejoiced that both the inhabitants and their slaves should be able to receive a religious instruction.

But despite all these efforts, it could scarcely be expected that Christianity would have made much progress among the slaves, given that they met with such harsh treatment at the hands of men professedly Christian, or that the prayers which they were compelled to offer up every evening for the welfare of their masters could not have been uttered with much sincerity.<sup>6</sup>

#### The Indian Catholic slaves

Historical documents record with certainty that the Indian slaves were integrated into the burgeoning Mauritian population as far back as 1729. From 1729 to 1731, the vessels of the French East India Company landed no less than 3,300 slaves on the two islands of whom 2,000 had been captured in Madagascar, 1,000 along the various coasts of Africa and 300 in India.<sup>7</sup> Regardless of

their country of origin, they were all designated under the generic name of 'Blacks', including those of India.

### Legal theory and missionary practice

Although the *Code Noir* prescribed the baptism of slaves, in their field-work, however, the Lazarist priests followed different norms, pastoral ones, in keeping with the God-given grace of faith. Thus, whilst the royal *Code Noir* set forth that the slaves should be baptized and instructed in the Catholic religion, the local Clergy carried out religious teaching first and administered baptism afterwards, depending on the disposition of the applicant.

The priests were never in any hurry to admit a catechumen slave to baptism. Thus, in spite of the introduction of slaves to the Isle de France as early as 1722, Mr. Borthon, the Apostolic Vice-Prefect, did not confer baptism on any slave before 1725. On 11<sup>th</sup> March of that year, he baptized the very first slave couple and on that same day, he blessed their union in matrimony.<sup>8</sup> The Lazarists, as a rule, would admit into the Church through baptism only those who had given evidence of their willingness and determination to abide by the Church's moral teaching. Because of the promiscuity attendant on slavery, they would baptise adults, when these were imported, on condition that they could settle down in matrimony, monogamous and indissoluble.<sup>9</sup> They therefore fostered the ideal of married family life for the youths, a policy backed by the French East India Company, albeit not for the same reason: Young people who were married would not think of marooning.

As regards to the period of probation and instruction undergone by Indian catechumens, it would vary. In any case, the request to convert to Christianity came in the wake of an irresistible process of depersonalization. Usually, the Hindu slaves, many of them Gentoos from Bengal (unconquered as yet by the English), were first rigged out by their masters with a French name or nickname that ripped off their external Hindu personality. Next, they were per force subdued to an un-Indian way of life, fed on the slave diet (manioc and so on), clad with the coarse blue denim, holding on to the Creole patois for communication and survival, and prevented by the local environment from professing their ancestral faith. Stripped, to that extent, of their cultural identity, the Indians would look towards Catholicism, the official and exclusive religion. The young male adults would turn all the more easily to Christianity as through scarcity of Indian women, they were left with no alternative but to marry female slaves of other ethnic groups. The Indian children, in all events, were christened in infancy, like all slave-born children, and as is the traditional practice in Catholic families. Musleem Jumeer goes so far as to state that:

*"The civil status registers of the early years of colonisation of the island show the existence of the island show the existence of a great number of Indian female slaves who have their new-born babies christened."*<sup>10</sup>

On 19 July 1760, Mr. Le Tellier, a Lazarist priest of St. François of Assisi Parish, administered the sacrament of baptism to eight children, all slaves of Le Page, an inhabitant of Flacq. One of them was an Indian baby-boy, Vincent, *illegitimate child of Louise, Indian slave, born a month ago*. It is worth noting that all Indian slave-born children - according to public records, Civil Status registers, censuses and elsewhere - are categorised as Creole slave (native slaves). As a result, within the span of one or at most two generations, the latter had suffered a total loss of whatever link they have might maintained with their Indian origins.

To revert to the implementation of the *Code Noir*, stress should also be laid on the local practice that was a far cry from the legal prescriptions. Thus, as the Law prohibited official marriages between White and Black partners (Art. 9), concubinary unions prevailed, with no penal sanction. On the other hand, on Sundays, those Catholic Indian slaves were expected to attend mass and religious instruction, or the religious function on the owner's estate. In fact, hardly any Indian slave could benefit from such facilities. *Corvées* had to be performed on Sundays and religious Holidays. Besides, their occupation as domestic servants precluded them from benefiting from such legal weekly rest. Room-cleaning, cooking, serving at table allowed no break, not even on Sundays.

Clearly, the legal framework and the social environment encompassed those Indian men and women in such a tight set-up that an infallible course of events led them - many of them understandably, and all their offsprings invariably - to the Catholic Church.

How numerous were they? It is difficult to have an exact, or even an approximate figure, of the number of Indian slaves especially, since this early phase of local religious life remains shrouded in a misty lack of documentation. Moreover, the historian needs to be wary of the pitfalls of Christian names that are unreliable indicators of Catholic membership. Furthermore, the Catholic profile of the Indian slaves is very slight, as the latter are, all in all, but a marginal element of the slave population of Mauritius over the period 1722-1735.

## 1.2 Restructuring of the Church after 1840

The mid-nineteenth century represented a turning point in the History of the Church in Mauritius. Apart from the various social changes taking place in the country (abolition of slavery and apprenticeship), there was also a need for a Catholic revival. If the Roman Catholic Church could embark on such a revival, it was largely owing to the zeal and personality of Mgr. Collier who happened to be the right man at the right time.

During the century-long presence of the Benedictines in Mauritius, the episcopate of Bishop William Bernard Allen Collier (1841-1863) stands out remarkably, as the period during which the Catholic Church experienced a conspicuous spiritual regeneration; this revitalization that contrasted with the lethargy that it had endured over the first three decades of British colonization.

Undoubtedly, the lasting impact of Bishop Collier's episcopate sprang from a pastoral plan that he had already been actually conceived, although nowhere formulated on paper. It probably originated right from the time he was designated the Vicar Apostolic of Mauritius.

The outline of his policy can be sketchily drawn around the following guide-marks:

- reading the signs of the time;
- recruitment of Clergy;
- founding of new parishes;
- introduction of religious congregations;
- lay apostolate;
- Fund-raising measures.

### Reading the signs of the time

As soon as he set foot on the island, he became aware of the real nature of the motley population; religious life was a mere veneer of Catholicism. The majority of the population was formed by the large class of former slaves recently emancipated. In that impoverished and illiterate community, tens of thousands were not even baptised; educational institutions for boys as well as girls were really scarce.

Besides, he was quick to observe a few trends that were gradually modifying the profile of the colony, especially the influx of Indian immigrants working on the ever-expanding sugar plantations. Similarly, he was attentive to the repeated calls from the small dependency of Rodrigues, and as soon as he could spare a priest, he began the evangelization of the neighbouring island.

Furthermore, as time elapsed, conflicts arose between the Government and the Church. On these occasions, Bishop Collier's reactions enable us to picture his views on the State-Church relationship.

In order to effectively bring the Gospel to such a large and multicoloured population, the bishop needed collaborators, especially priests. So, his primary concern was to recruit missionaries from abroad.

## Recruitment of the Clergy

An adequate number of suitable priests was of paramount importance to evangelize the inhabitants of the colony. When he embarked for Mauritius on board the *Tanjore* in 1841, he took along with him an English Benedictine, Dom Stanislas Giles, an Irish priest, John Larkan, another one from Savoy, the Abbé Rovey, and Jacques Desiré Laval, a French missionary, whose priestly ministry was to operate a real transformation of minds and hearts and to cause the Christian faith to take root in an enduring way in Catholic families.<sup>11</sup> On his arrival, the Bishop had found eight priests in the Colony. However, without losing time, he had to interdict, three of them and soon afterwards, two others left the island.

Bishop Collier was but two years in Mauritius when he decided to return to Europe on a recruiting spree (1843-1845). His mission was a fruitful one. He was able to enlist eight priests, of whom six were Irishmen and two Belgians. One of the Belgians, the Abbé Xavier Masuy, proved a most successful apostle of the educated white classes. Later, the Bishop was successful in bringing in other Belgian priests, such as the Reverend Paquet, and the Reverend Frederick Muijhe.<sup>12</sup>

Then as from 1846, through a liberalising step taken by Downing Street, he was able to admit alien priests as well, even those of French nationality. At his request, the Holy Ghost Congregation of Father F. M. Paul Libermann<sup>13</sup> started sending missionaries to the island. When he finally left Mauritius in 1862, his Clergy had reached the impressive total of 35.

Better still, as from 1860, non-British priests were authorised to apply for naturalization. This process, initiated by Bishop Collier had far-reaching consequences over the following decades and on the future of Catholicism in the Colony. Henceforth, the "Open Sesame" enabled alien priests to freely undertake missionary work in Mauritius and to earn their salaries from the Public Treasury. From that time to the end of the nineteenth century, over 94 alien priests - all of them Frenchmen save two Belgians and two Italians - thus took advantage of legislation to apply for, and to obtain, their naturalization as British subjects in Mauritius.<sup>14</sup>

With the increasing number of priests, the educated classes - White Voltaireans and Gallican Catholics, as well as Coloureds with an inclination for Protestantism - were brought back to the Catholic fold. A few priests, like the Abbé Xavier Masuy,<sup>15</sup> dedicated themselves with success to that apostolate. Furthermore, the Black maids and servants who were being evangelized by Father Laval, in turn evangelized their white employers.

## Clergy for the Future

In order to provide the colony with an adequate Clergy in the future, Bishop Collier launched a three-pronged strategy:

First, he cautiously observed the attempts of Father Libermann to provide "British born" priests to Mauritius. On 19 February 1842, only five months after his landing in the colony, he stated his intention of directing English or Irish seminarians to Paris, with the hope that some of them would join the missionary institute of Father Libermann.<sup>16</sup>

During his trip across Europe (1843-1845), he applied for seminarians from Baltimore, who would be trained in the French novitiate of Fr. Libermann.<sup>17</sup>

On the other hand, Fr. Libermann, around that period, contemplated the opening of a branch of his Congregation in Ireland and in England. But that wish did not materialise.

Later, in 1849, Bishop Collier entertained the project of sending four young Irishmen, then studying at the Benedictine Douai Abbey in France, to Fr. Libermann, in the hope that they would enter his novitiate.<sup>18</sup>

In 1853, Father Laval suggested the recruitment from the seminary in Rome of British subjects from Malta who would enter the Holy Ghost Congregation and could thus be sent to Mauritius.<sup>19</sup> But no real thought was ever given to that possibility.

So, all in all, none of the above endeavours ever materialised!

The second point of Collier's strategy was directed towards Ireland. During his visits to Europe (1843-1845 and 1850-1851), he called at the *All Hallows* missionary seminary in Ireland, where he presented his requests. The steps which he took met with some success. He enlisted several students for the colony. As a matter of fact, of those enlisted, only six in all actually came to work in the Diocese. He also addressed similar pleas to *Saint-Patrick's College, County Carlow*. There, as well, he made several recruits, but after their ordination, they all opted out and went to minister elsewhere.

However, during his episcopate, thanks to his negotiations, sixteen Irish priests came to Mauritius, although only seven out of that number actually worked for more than seven years in the Colony.<sup>20</sup>

Thirdly, he set up bursaries to finance the studies of the Irish seminarians. The funds for that purpose had to be raised in the Colony. However, the Bishop also applied to the Colonial Government to bear those expenses.<sup>21</sup>

Strangely enough, while Bishop Collier was striving hard to enlist European missionaries for his Diocese, at no time seemingly did the idea of indigenous vocations strike him. Yet, worldwide, a process of recruiting and training youngsters in mission territories had already been triggered in the 19<sup>th</sup> century. The Benedictines in Mauritius, however, seemed to have remained impervious to such an eventuality throughout a century of their presence in the Colony.

Paradoxically, the Protestant Government in Downing Street positively imagined the feasibility of young Mauritians being selected and trained for the priesthood. In his despatch to the Governor, the Secretary of State for the Colonies hazarded the view that such a project should be presented to Bishop Collier.<sup>22</sup>

### Establishment of new parishes

As regards places of worship, Bishop Collier succeeded in materializing that chapter of his pastoral policy.

In 1841, there existed only five parishes. With the increase in population, a good number of villages were, therefore, far away from the parish centres, and the faithful in those rural areas forcefully petitioned for extra parish churches. As soon as he had recruited a handful of additional priests, he therefore set up new parishes.

With the arrival of more and more priests, Bishop Collier was in a position to set up additional parishes in various disadvantaged districts. Thus, by 1846, his Clergy had increased to 12 and he established 3 new parishes (St. Philomena's, Poudre d'Or; St. John's, Quatre Bornes; St James, Souillac). Ten years later, there were 15 priests in the Colony, and in 1861, they numbered 35. Consequently, two other parishes were established in 1849: Holy Ghost, Rivière Sèche; and Holy Saviour, Bambous; in 1859, another one: St. Augustine, Black River, and finally in 1862, that of Notre Dame de la Salette, Grand Bay.<sup>23</sup>

### Religious Congregations

Right from the start, Bishop Collier considered what valuable assets religious congregations would prove to be in the implementation of his pastoral policy.

His first connection occurred fortuitously. After his Episcopal ordination in Rome on 3 May, 1840, he made a stopover in Paris, where he was informed of the burgeoning institute set up by Francois-Marie Pascal Libermann, the Congregation of the *Saint-Coeur-de-Marie*, with the aim of sending missionaries to French colonies. Clerverly and successfully, Collier volunteered to act as the Bishop Protector that the nascent institute was in need of. Thus, for the ordination to the priesthood of the founder F.M.P. Libermann and of the first contingent of his followers, Bishop Collier was the one who granted the canonical Dimissory Letters. Astutely enough, as Bishop Protector, Collier had anticipated the coming to Mauritius of those missionaries. On that score, he experienced real disappointment, as Libermann dispatched his religious priests to other African mission territories. Still, Collier welcomed to the colony the very first missionary of that religious institute, Father Jacques Désiré Laval, and a few years later a string of other Holy Ghost missionaries.<sup>24</sup> Better still, from 1841, the *Holy Ghost Congregation* had unflinchingly sent to the country over a hundred religious

missionaries, from France, Britain or Ireland, who kept involving themselves in a wide range of pastoral activities, from parish duties to educational, catechetical and other occupations.

Another male congregation that Collier welcomed into the Diocese was the *De la Salle Brothers*. Both Bishops Slater and Morris had unsuccessfully tried to bring the teaching Order into the Colony. The Reverend J.-D. Laval and X. Masuy, for their part, together with the Saint-Vincent de Paul Society, succeeded in enlisting these religious from Reunion Island and thus satisfactorily answered Bishop Collier's expectations. The first De la Salle community landed on 8 December 1859. They straightaway opened a free primary school in Port Louis, followed by other primary and secondary schools over the island. They operated a breakthrough in the educational field for youths, by organising evening classes, technical courses, boarding schools and especially, by initiating joint school ventures, whereby paid boarding-schools financed the running of free primary schools.<sup>25</sup>

The Prelate was also fortunate to obtain nuns for the colony, as a result of attained only after knocking in vain at several European doors. In any case, on 8 September 1845, he landed at Port Louis, accompanied by three priests and eight Loreto nuns from Ireland. In the 19<sup>th</sup> century, Teresa Ball had inaugurated in Ireland a branch (Loreto) of the Institute of the Blessed Virgin Mary, founded by Mary Ward in the 17<sup>th</sup> century. When in 1844, Bishop Collier visited Rathfarnham, Teresa Ball was inspiring the community with such a missionary zeal that eight of the nuns readily volunteered to expatriate themselves and to devote themselves to the education of Mauritian girls. In the colony, the Loreto nuns embarked on a pioneering enterprise and their influence on the education of girls, both Catholic and non-Catholics, as well as on subsequent family life, can hardly be exaggerated. This influence was all the stronger as for over a century on other religious congregation ran high schools for girls and even the Government did not open its first college for girls until 1951.<sup>26</sup>

Now Bishop Collier's pioneering drive now led him to found a local congregation of nuns, that of the Bon-et-Perpétuel-Secours.<sup>27</sup> At one time, as he carried out parish work in Port Louis, he had been the spiritual director of a young Mauritian woman, twenty-five years old, Caroline Lenferna de Laresles. He helped her mature her vocation, entrusted her to the Loreto nuns for her noviciate and received her religious vows in 1850. She had taken her name of Marie Augustine. The Bishop confided to her care the burgeoning diocesan congregation. As he was sailing to Europe, he appointed the able Reverend Xavier Masuy Chaplain of the institute.

A number of young Mauritian women joined the community, which prospered under the holy and charismatic leadership of Marie Augustine. The co-founders wanted the nuns to look after the poorest and most destitute. She thus opened a variety of charitable institutions, previously unknown: hospitals, hospices and infirmaries for the sick and for the old people, crèches for abandoned babies, orphanages for boys and girls, a Lazar-house for lepers and, above all, free primary schools for boys and girls in many localities.

With the encouragement and support of the Bishop, the diocesan congregation went on thriving, benefactors assisted with contributions, novices steadily applied for admission to that life consecration, dedication and poverty. Even the Government Authorities paid tribute to the exemplary and dedicated work of these nuns.

Sadly, the behaviour of the two following Benedictines Bishops turned out to be abusively detrimental to the developing and delicate congregation.

Bishop Collier's episcopate might have been enriched with an extra congregation that of the *Filles de Marie*, a Diocesan Institute of the neighbouring Reunion Island, founded by Marie Magdeleine de la Croix. Assuredly, all parties concerned wanted a foundation in Mauritius. That wish, however, did not materialise owing to an intractable attitude on the part of a stubborn Collier. Just as he held full authority over the Bon-et-Perpétuel-Secours Congregation, a Diocesan body, he obstinately demanded that he similarly be the undisputed superior of the Filles de Marie in Mauritius in lieu of the canonical and appropriate superior, the Head of the Church in Reunion. Only after Collier had resigned as Bishop of Port Louis were the *Filles de Marie* able to set up their first convent in Port Louis.<sup>28</sup>

For the sake of accuracy, mention should be made of the presence of the French community of Sainte-Marie-de-la-Famille which contributed positively in the field of education from 1860 to 1887. Those nuns had been called to Mauritius by the Reverend Julien Pierre Le Boucher, an experienced

educationist. Although Bishop Collier had authorized them to stay in his Diocese; in point of fact, he unaccountably and disdainfully ignored them and their positive apostolate as well.<sup>29</sup>

### Lay associations

No lay associations had existed before the administration of Bishop Collier.

During the 1840 decade, several religious groups came into being, backed up by the Clergy. One that did not lack originality was undoubtedly the *Association Chrétienne*, founded by Tristan Bardet in 1848. The latter, a laureate of the Royal College of Port Louis, subsequently studied for the priesthood at Oscott Seminary in England.

Clearly, the most popular associations were the confraternities that sprang from the midst of the communities motivated by Father J.-D. Laval and his fellow-missionaries as from 1846. These associations, firmly structured and regulated, assuredly energized the Christian way of life of those neophytes. Lads and men followed the banner of Saint Joseph; young ladies those of Sainte Cecilia or Sainte Lupercile. Married women and mothers gathered around Sainte Anne. A great number of faithful joined the Association of the Rosary. For those black men and women determined to place themselves among the élite of the community, and they were enlisted in the Confrérie du Saint-Scapulaire.

In the Cathedral Parish, Port Louis, Father Laval and his missionaries established the Arche-confrérie de Notre-Dame-des-Victoires, directly affiliated with the head office of that international confraternity in Paris.

Father Laval also initiated a fairly far-reaching enterprise: a relief fund. He wanted the poor ex-slaves to be aware that around them were to be found still poorer fellow creatures. So the faithful set up a *Caisse de Charité*, to which they contributed in a spirit of solidarity and from which they helped out victims of cyclones, fire and other disasters or they helped finance funeral costs.<sup>30</sup>

Indisputably, the organisation that was the most widespread and actually the most efficient one was the Saint Vincent de Paul Society. The first conference was formed in Port Louis in 1855, and steadily reached the various parishes. Those conferences gave an opportunity to upper class laymen to be involved in charitable activities. On the advice of Father Laval, the Vincentians invested significantly in primary schools for the benefit of the popular classes.<sup>31</sup>

Bishop Collier encouraged the appearance and expansion of a set of Marian confraternities. Thus, the Bon-Secours Sisters, with the active support of the Bishop, developed in the country the Arche-confrérie de Notre-Dame-de-la-Salette. By 1872, that pious association included over 800 members.

Worthy of mention was the concerted and successful petitions to the Colonial Government of an array of influential laymen over the 1840 decade. These people were not members of any informal religious body. Still, by their addresses to Downing Street and their simultaneous overseas media campaigns, they skilfully and successfully submitted the grievances and expectations of the Mauritian Catholics. An outcome of such bold steps was, among others, the permission for foreign priests to come and work in Mauritius. This liberal measure enabled Bishop Collier to enlist a steady flow of Holy Ghost and other European missionaries.<sup>32</sup>

### Fund-raising measures

Bishop Collier was continually confronted with a distressing want of funds. In fact, money problems have really been a feature of all Catholic Bishops in Mauritius, Benedictines as well as others.

The development of Catholicism entailed the building of new churches in the capital as well as in the rural districts. To that end, Bishop Collier set up a *Comité chargé de l'œuvre de la construction de nouvelles églises catholiques au Port-Louis*. He nominated to that committee meritorious notables, assisted by a dedicated team of *Dames de Charité*.<sup>33</sup> The latter organised yearly fund-raising activities, charity bazaars, various collections. The proceeds enabled Bishop Collier to buy several plots of land and to help finance building sites.

However, the large scale enterprise of Bishop Collier that engulfed inordinately large sums was actually the building of the Episcopal palace. Unquestionably, the head of the Catholic Church needed a self-contained apartment as well as a diocesan central office<sup>34</sup>. As the construction of the Bishop's house spanned over four years (1849-1853), money grew scarce. The Bishop embarked on a string of savings and financial cuts that might undoubtedly have caused some harm to a few pastoral activities. It should also be observed that from the start, rightly or wrongly, there were dissident views, some of which were vocally expressed in local newspapers.<sup>35</sup>

## CHAPTER 2 AN APPRAISAL OF MISSIONARY INTERVENTION IN POST-EMANCIPATION MAURITIUS

Any study of missionary history must consider the fact that many Christian missionaries overseas were surprisingly ill-prepared for their work. This is not to say that these evangelists were lacking in zeal or determination or to ignore that some of them contributed, in some ways, toward the development of the country. But in general those who accepted the call to the colonies knew little about the societies they hoped to redeem from "barbarism."

### Evangelization of the ex-apprentices: its implications

The major change in the profile of the Catholic Church under Bishop Collier was clearly the conversion of the emancipated slaves, the free Creoles and the Coloured people. As from his arrival in 1841, he assigned that community to Father J.-D. Laval, who, after five months in the Colony, expressed his concerns in relation to the mission among the ex-apprentices in a letter to Galais:

*"This unfortunate colony is in a pitiful state. There are some eighty thousand Blacks on the island and I am alone to care for them. Half of them are not baptized, even those who are, live like idolaters. Very few get married in the church. They take and leave one another several times; they are given to drunkenness and impurity and all kinds of pleasures of the flesh. They have been snubbed so often that they no longer go to church, they rarely call a priest to administer the last sacraments to the dying. Most of them know nothing of their religion; they cannot even make the sign of the cross."*<sup>36</sup>

The neglect and abandonment of the ex-apprentices by the Clergy angered both Father Laval and Bishop Collier. In October of 1841, the Bishop informed Libermann, the Superior and founder of the missionary of the Holy Heart of Mary, that:

*"I could not imagine that a Christian country could end up in such a state of moral degradation. The Europeans sometimes ignore their religion, but the people here are absolutely like the inhabitants of China or Kamtchatka. How could it be otherwise? No one has ever given them the least consideration. They have been forsaken like beasts of burden."*<sup>37</sup>

Father Laval had thus identified the challenges which he faced and concluded that he was in unfamiliar territory. He expressed his concern in a letter to his uncle in July 1842:

*"One can find oneself in circumstances that are not found in France nor in other countries and one does not know how to behave. These are cases which have never been spoken of in theologies, and one hopes for the best, for I have no-one to consult since we have never taken care of the poor and unfortunate Black population."*<sup>38</sup>

### But how did Father Laval overcome the challenges of his ministry?

Without a specific plan, Father Laval was forced to play it by ear. He evangelized the ex-slaves in his own unique way by devising plans and strategies as the need arose. His lifestyle and personality would greatly influence the decision of the ex-apprentices to convert to Christianity. From the very beginning, Father Laval went against the norm. Instead of living with his fellow-priests at the presbytery in Port Louis, he felt that there was a need for him to be amid the people he came to serve. To him, the presbytery was confined and he knew that the ex-slaves were hesitant to come there. At his instigation, Bishop Collier erected a wooden shack to accommodate Laval's "*dear black children*". It was approximately 32 square metres and it became the Centre for his mission. Father Laval set up his own room at one end of this "hut".

### Communication Problems

Fr. Laval was faced a communication problem because he could not converse in Creole. During the first three years of his ministry, he spent time at the school for the emancipated slaves; he took notes on their vocabulary, their figures of speech and their cultures.<sup>39</sup> This decision played an important role in the conversion of the emancipated slaves. He could now communicate more effectively. This drew the Blacks closer to Jacques Laval who assimilated into the black society - he lived in a hut, he avoided contact with the Whites and he spoke their dialect.

### Shortage of Priests

The lack of priests was by far the greatest impediment of Fr. Laval's ministry. Government's antipathy towards French priests was a major obstacle to evangelization. Since French priests were not allowed on the island, the Church had to recruit them from other parts of Europe, but the majority of them did not speak French and their ministry was confined to baptisms and funerals. The problem was so severe that even the Protestants argued the cause:

*"It is, in our opinion, an unjust and absurd restriction; it is a blow to religious liberty for by imposing English priests, that is, men who will never speak French well, one removes from the apostolic see all prestige and all efficiency. We Protestants admit freely that we would revolt against an order which imposes priests who speak English."*<sup>40</sup>

From 1841-1853, out of 33 priests whom Bishop Collier had enlisted since 1841, only 14 were active in 1853: 8 British, 2 Belgians and 4 French Spiritans. A parish priest was thus responsible for 7 to 8,000 souls.

### Lack of priests generates lay participation

The shortage of priests was a major cause for the change in the lives of the ex-slaves. Fr. Laval set out on a unique journey which revolutionized and revived the Catholic Church of the nineteenth century. By involving lay participants, Fr. Laval based his method of evangelization on four pastoral practices that a century later, would be endorsed and propounded by The Second Vatican Council:

- Indigenous catechists: lay men and women, many of them married couples, many of them former slaves and virtually illiterate, but thoroughly well-catechized;
- The setting up of innumerable small Christian communities;
- The evangelization of the ex-slaves by the ex-slaves;
- A network of places of gathering and of worship.

Laval saw what no one else had before him - that the ex-slaves were called to act as apostles in the Church by virtue of their baptism. He felt that these people ought to live in small Christian communities in order to live their faith and to fulfil the obligations of their baptism. To further increase their interest in the faith, Fr. Laval and the Spiritan brothers grouped them in confraternities according to sex and age.<sup>41</sup>

In front of the immensity of the task, and not being able to be everywhere, Fr. Laval chose lay men and women, many of them married couples, many of them former slaves and virtually illiterate; his colleagues and he himself directed and supported the apostolate of these lay collaborators who proved to be devoted and competent.<sup>42</sup> However, whether the catechists had an understanding of what they had to preach, and the fact that they would endeavour to spread the same message to the catechumens, is not certain.

The Counselors had the responsibility of the sick and the catechists that of the catechumens. To facilitate their work, Father Laval will draft for their benefit the "Small Catechism" (*petit catéchisme*) which presented, in a simple vocabulary full of imagery, the essentials of the Christian faith. So, slowly, the ex-apprentices were called to participate in a more and more direct way in the life and in the mission of the Church.

The former slaves' antagonism towards the Whites caused them to be suspicious of Fr. Laval when he first arrived. To overcome this, he sought them, first of all, in their homes where he even heard their confessions. Houses and huts in and around Port Louis, as well as in other parts of the island, were used for catechism and to pray. Some of these centres became makeshift chapels in which mass was celebrated. As more people flocked to catechism classes, the small chapels were extended and eventually, they became large churches. These chapels were built in such haste that many of them were destroyed by cyclones, due to their weak construction. They were later rebuilt of stone.

By April 1847, ten chapels were under construction in the neighbourhood of Port Louis, and by 1848, there were forty. In the following years, chapels were built in rural districts also. The ex-slaves contributed by providing as much land and material as they could while those who were poor donated of their labour.

### Impact of Lay Auxiliaries on the Community

Over the years, the involvement of the lay auxiliaries shaped the religious, social and in a small way economic structure of Mauritius and the names of at least sixty of them have survived.<sup>43</sup> These disciples of Laval went to every corner of the island in order to evangelize the ex-slaves population. At the end of March 1846, Le Vavas seur wrote: "*The black population outside Port Louis is totally abandoned.*"<sup>44</sup> However with the help of the auxiliaries, Fr. Lambert was able to report at the end of 1852: "*The farthest districts have seen the light; the greater part of the work is done.*"<sup>45</sup> All praise must go to the catechists who were "immensely useful". To Fr. O'Dwyer they were indispensable:

*"I am convinced that a priest, with the help of well organised catechists, would be more useful than two priests without catechists. His flock would be better instructed, the sick better cared for, and the scandals would be stopped sooner; there would be more order and regularity in the parish."*<sup>46</sup>

The contribution of the auxiliaries to Fr. Laval's ministry was immense in terms of impact on the Mauritian community. They became the link between Fr. Laval and the ex-apprentices who became Christians. By involving the lay participants, Fr. Laval had given the ex-slaves responsibility which helped to improve their self image.

### Breaking down barriers

Father Laval's ministry to the ex-slaves was especially productive because he did not approach them as one who was superior to them, as most white people did at that time; instead, he became like one of them in poverty. His lifestyle, his paternal affection and his sermons were directed towards restoring the pride and confidence of the ex-apprentices. One of the ways in which he did this was by crossing a boundary forbidden by the Whites. Besides living and speaking like the ex-slaves, Fr. Laval also entered their homes. This behaviour was seen as an affront to the Whites, but the ex-slaves were honoured that a white man should come into their homes.

### The Fruits of Laval's Ministry

Being in contact with ex-slaves on a human cultural level was considered as a betrayal of the whole White society of the island.<sup>47</sup> Regardless of this, Father Laval's popularity filtered through the multitude of ethnic origins of Mauritians - Europeans, Africans, Indians, Malaysians, Malagasy and Chinese. His success is reflected in the diversity of the first converts, their different races, ages and sex and the different trades in which they engaged. Fr. Laval had already baptized thirty young illegitimate children, when on Saturday 13<sup>th</sup> November 1841, four catechumens were received to the Church by Bishop Collier. They were Cassimir, an Indian aged 70, René Baton-Brède, an African from the Mozambique Coast, Pierrot Hiescomah, a fisherman and Marie Calou, a washerwoman. The last two, natives of Madagascar, soon after their baptism received the sacrament of marriage. On the following Friday, Michel Tablier, a mason originally from Malaysia married a Creole dressmaker, Sophie Fanchette, while the maid of the presbytery - a native of Madagascar - married Charles Congo. These two had been living in *de facto* relationship for years. On the same day, a carpenter native of the Comoros Islands married a creole dressmaker.<sup>48</sup>

In May 1847, 3,000 people were converted; of these 1,400 received communions. In December of the same year, 7,000 were converted and two masses had to be said for the ex-apprentices on Sundays. Between 1847-48, Jacques Laval and his colleagues baptized approximately 600 adults: 300 Madagascans, 170 Mozambiques, 75 Creoles, 40 Indians, 20 Malaysians or Chinese and 20 converts from the Seychelles. These figures are, however, deceiving for the majority of converts were Creoles, already baptized when they were young. Marriage Registers show that at the time 1,500 people, two-thirds of them Creoles were married by the missionaries.<sup>49</sup>

Yet, despite Laval's success, it seems that many of the converts were Christians by name only as he himself acknowledges it:

*"...the players and drinkers have abandoned religion entirely for some time, they no longer go to the confession, they have absented themselves from the communion table, and they live, as they did, in all sorts of dirty and horrible habits. All that they have retained of religion, is attendance at mass on Sundays, and very often miss it [...] and the rosary is hung on a nail in their home or perhaps has been lost for some time."*<sup>50</sup>

The ex-apprentices were mostly illiterate (10 apprentices out of an estimated population of 70,000 were reportedly able to read and write in 1836)<sup>51</sup> but the majority had very good memories. Whether or not they understood what they were memorizing would probably have depended on the individual's ability to do so. Overall, Fr. Laval found it difficult to teach these illiterate and ignorant men and women *"who did not know their right hand from their left"* and whose minds were not used to stimulation, and that is why he prepared the simple catechism in order to make religion accessible to the ex-slaves.<sup>52</sup>

He advised his missionaries to also teach the faith simply and to reflect their virtuous lifestyle, when doing so as the apostles did because:

*"...if you reason with these poor people, they will want to reason too; you will even teach them to argue about what you said and this will be a disaster."*<sup>53</sup>

Therefore, it can be argued that Fr. Laval was more interested in saving the souls of the ex-apprentices rather than in awakening their class consciousness in order to lead them into the mainstream of Mauritian society. Although the ex-slaves and the coloured population represented a political threat to the White society for they outnumbered them nine to one, they never made any demands on the Government and Father Laval never pressed them to do so. The Creole society of pre-Emancipation Mauritius was highly segmented where race was concerned, and remained for another century, the fundamental factor. Society was pyramidal in structure with the white - descendants of French colonists and some British occupying the apex - and the slave at the broad bottom and the Coloured people in between<sup>54</sup>. This situation was never questioned by Father Laval.

## 2.2 The Indian Mission: attempts at evangelizing the Indian Immigrants

Well before the French Revolution in the 18th century, Indians had come to the colony either as slaves or as freemen. At the British conquest of 1810, a great number of them were already Catholics.

In the wake of the abolition of slavery and the expansion of the Sugar Cane Industry, an ever increasing number of extra workers were needed. So, the British started the introduction of indentured labour from India (1829-1923). In 1861, the Indian immigrants had reached a total of 192,634 of a population of 310,050 inhabitants.

In such circumstance, Bishop Collier applied for Jesuit missionaries. In 1861, the first two missionaries landed from Trichinopoly, India: Fathers Francis Roy s.j. (of Brahmin origin in India) and Lawrence Puccinelli s.j. (of Italian origin). They arrived in 1861 and established the Indian Mission at Nabob Street (Saint-Francois Xavier Street) at Plaine Verte. For the beginning, Father Laval gave him one of his best catechists and laic auxiliary, Emilien Pierre.

The Indian Mission that the Bishop established in 1861 had to cater for a wide variety of Indian communities in Mauritius:

- The Indian Catholic families who came from Pondichery before the French Revolution and who very often were traditionally Catholic from India and who were concentrated at Camp des Malabars at Plaine Verte;
- The Catholic Indian immigrants who came with the other indentured labourers after the abolition of slavery;
- The Indian indentured labourers who married young Catholic girls and who embraced Catholicism;
- And finally the large mass of indentured labourers.<sup>55</sup>

The demographic burden which the Indian population represented, following the continued arrivals of the coolies in the country and which was to increase further, once the favourable conditions would encourage its natural increase locally, explained the decision of Mgr. Collier. The two Jesuit missionaries "found an Indian population amounting to 192,000 souls, entirely pagan, dispersed on the various sugar estates"<sup>56</sup> and the suburbs of Port Louis East. Father Boudou gave the following figures for 1871 which are equally significant:

"Out a total of 316,042 inhabitants, Mauritius had 216,258 people of pure Indian origin. As opposed to 81,739 Catholics and 6,165 Protestants of all denominations, there are to this date, 132,652 pagans, 41,575 Mahomedans, not to mention those who have not mentioned their religion, who number 51,955."<sup>57</sup>

With regard to the statistics of 1851 (see table below), established according to religious faiths, it is easy to notice the evolution of the Indian mission in 1891. Although we note, from the beginning, the "prodigious success" of the missionaries, the difficulty of getting in touch with indentured labourers because of their dispersal on the sugar estates and their work schedules, suggest that their 'success' with the Indians was more real in Port Louis than anywhere else. However, Indo-Creoles at Camp des Malabars were more easily converted because of their mixed origins than the Indian immigrants, less inclined to lose their identity by adopting a faith that was perceived as Western and that was not well-tolerated.<sup>58</sup> Those who, comparatively, accepted more easily to be converted were the Tamils.

### 2.3 The Chinese Mission

It was at the Parish of St. Vincent of Paul at Pailles - which was under the responsibility of the Lazarists for some time<sup>59</sup> - that the Chinese mission was born with certain rights and duties attached to it:

*"I do not approve that a priest baptizes, admits in the First Communion or marries a member of the Chinese population, without consulting in advance the Chinese missionary who is exclusively responsible for this portion of the herd and who, by being in charge, is able to gather all the information which caution will make necessary."*<sup>60</sup>

The suspicion of Mgr. Scarisbrick that "*baptisms were given too rapidly*" that he attributed to "*an enthusiasm that needed to be corrected*" did not correspond to the ill-founded reactions of the missionary evoking that "*his efforts have been useless to date, that he had no hope for the future [...]*."<sup>61</sup> The deception was that these missionaries would withdraw, leaving the Chinese mission to depend solely on the apostolic fervour of Mother Barthélémy and a few catechists.<sup>62</sup> Numerous testimonies gave evidence of the popularity of this nun and the privileged place that she held in the hearts of the Chinese Community. Yet, it seems that this was not sufficient to provoke a decisive surge of conversions among an ethnic group who, at that time, was more involved in the trading business than in metaphysical interrogation.<sup>63</sup> However, the Chinese Catholics gradually increased, and they progressively participated to the life of their parish.

### 2.4 Catholic ideology on education

Indeed, the Roman Catholic Church has played an important role in the development of education, not only in Mauritius, but also in other places of the world. Although the 80,000 inhabitants of the Colony in 1810 were nominally attached to the Church of Rome, because no other religion was recognised by the State, there was no great attempt by the Roman Catholic Church to provide education in Mauritius. It is only in the mid 19<sup>th</sup> century that this interest in promoting education was to be aroused. Should we consider this lack of interest as arising from the indifference of the previous Bishops faced with a process of de-Christianisation which was already at work since the late 18<sup>th</sup> century, when being an intellectual was associated to the feeling of anti-clericalism?

Didier Colson's picture of Mgr. Slater and Mgr. Morris is far from being a flattering one

*"[...] the twenty years of muddle of Mgr. Slater [...]. The Government of Mgr. Morris idle in the deficiencies all the more obvious as his energies turned him more to protect his tranquillity than to answer the needs of the time."*<sup>64</sup>

Should we see the interest in opening schools in the mid-19<sup>th</sup> century as a reaction to the removal of all restrictions in 1836, thereby providing the opportunity for the Dissenters and Protestants to build schools in the country?

Indeed, with the coming of Reverend Lebrun and other religious groups, the Roman Catholic felt threatened. In his book *Le Diocèse de Port Louis* J. Mamet wrote:

*"Faced with primary schools opened by the Government and by Anglican or Methodists, Ministers, all entrusted to a Protestant staff exclusively, not a single Catholic... the most pressing need of Mauritius is the religious instruction."*<sup>65</sup>

However the Roman Catholic religion would benefit more from the removal of the restrictions in 1836 and would set up more schools than the other religious bodies.

*"The Roman Catholic Church takes the lion's share in the competition with the Anglican Church thanks to the local support of elites, worried of granting to their children quality instruction at school and the principles of the faith at the same time."*<sup>66</sup>

### The Church And State In Education

In any consideration of the progress of popular education, not only in Mauritius but throughout the whole of the British Empire in the nineteenth century, the work of the Church and Missions holds the highest place. The phenomenon of priests and monks engaged in educational work is familiar in both European and British educational history, but in Mauritius, as well as in the whole of the British Empire, where secular benefaction was comparatively small and ineffective, the contribution of religious bodies can hardly be overstated.

When in 1836, the Secretary of State refused to sanction the arbitrary restrictions placed on education, the Government of Mauritius was forced to pass a law ordering that it would henceforth be lawful to establish schools *"without the previous licence or sanction of the Governor"* and *"without any control or superintendence"* because *"restrictions on the right of teaching scholars in the private schools are unnecessary and burdensome and tend to obstruct the progress of education"* in the island.<sup>67</sup>

By 1843, a number of schools had been opened by private agencies and by the Government. There were, at that time, five Government schools in Port Louis, one at Pamplemousses and one at Grand Bay. The Society for the Propagation of the Gospel had two schools in Port Louis and four in the provinces. The Mico Trustees had three in Port Louis and seven in the country. The London Missionary Society had four schools in Port Louis and one district school.<sup>68</sup> Another school was established and supported by Lady Gomm, the Governor's wife, at Réduit.

In 1842, it was announced that the Parliamentary grant then made to the Mico schools would cease. The imminence of the withdrawal of the Parliamentary grant in 1845 increased the need for an ordered System of Education. It was in 1843 that the Mico schools were handed over to the state, which undertook to support them entirely. However, it seems that much of their usefulness, however, had been impaired by petty sectarian rivalry. The Roman Catholic and Anglican Authorities objected to losing control over education, and were anxious to found schools of their own. Anxiety to found schools appears to have been motivated more in a spirit of rivalry than to have been regulated by any sound principle.

The attitude of the Catholic Church in Mauritius seems to have been typical of the general Catholic traditions of education, in that, at first, it concentrated its efforts on the education of the elite to the exclusion of the masses. In Mauritius, the Catholic Clergy had identified themselves too much with the interests of the ruling White community and were at first slow in taking an active interest in the education of the masses. The Catholic authorities began to pay attention to the education of the lower classes only when their supremacy was threatened by the work of Lebrun. Moreover, the allocation of the Parliamentary grant had excluded the Catholic Church and served to exacerbate the ill-feeling between Church and State in education.

### Initiation of the Grant-in-Aid

The conditions under which Indian immigrants were contracted to work on the sugar estates made no provision for the education of their children. By 1851, however, it was clear that large numbers of Indians were settling down in the island after the expiration of their contract. The harmful consequence upon society of a large population of children growing up in a "savage" state, forced itself upon Governor Higginson, who, in 1851, drew the attention of both the Local and the British Governments to their destitution, and the need to improve their state through education. But if it was difficult to induce the ex-apprentices to have their children instructed, it was almost impossible to persuade Indian parents to send their children to school. This, according to Higginson, could only be effected by a system of compulsory education. The matter was taken up in 1855 and, in the following year, grants-in-aid were offered to Denominational Schools. Ordinance No. 6 of 1856 stated, in the preamble,

*"that a large portion of the inhabitants of the colony being, in consequence of the extremely limited number of schools established, deprived of the means of procuring Elementary Education, it was expedient to provide for the furtherance of such Education by Grants from the Public Treasury"*.

This measure served a very useful purpose. In the first place, it smoothed over some of the difficulties which religion presented to the introduction of compulsory education; secondly, in stimulating the religious bodies to establish schools, it relieved Government of some of the onus of providing for the great increase in the number of primary school pupils that would result from this; and finally, it introduced a measure of control over denominational schools.

### Antagonism of Church and State in Education

After the conquest of the island, the maintenance of the Roman Catholic religion was guaranteed to the inhabitants by the Articles of the Act of capitulation. For many years subsequently, the fact that the island was Roman Catholic in religion was fully recognised; a liberal and tolerant spirit pervaded the administration. But it had become quite clear, after 1850, that the Local Government had embarked on a policy of anglicizing and protestantising the island. A more intolerant spirit succeeded. On the one hand, the Roman Catholic religion, the French language, and French manners, were cherished as badges of nationality. On the other hand, as Governor Gordon recorded:

*"The Roman Catholic Church, instead of being recognized as the prevailing religion of the country, was treated as a tolerated sect to be repressed and checked. The Government Schools, if not made, at least became engines of proselytism; and converts to Protestantism obtained a favour which those who adhered to their religion looked for in vain. In connection with this it is worth remarking that almost all the natives of the island who hold any considerable office under Government are protestant members of Catholic families".*

The Catholics felt that the ultimate object of the grant-in-aid system was to supplement and, in time partly, supersede the Government System of Education. It became clear to the Catholics that the Government was trying to gain control of the whole System of Education.

It was felt that the Grant-in-aid schools were put by no means on an equal footing as the Government schools. Instead of permitting, as they had hoped, the Grant-in-aid system to keep pace with the increase of the Aided Schools, the Local Government did just the contrary: the annual amount of the Grant-in-aid remained fixed at Rs. 90,000; and consequently, with the creation of more schools, each particular school received an amount much lower than that to which it was entitled. This naturally discouraged both the Managers and the school masters and prevented the further increase of Grant-in-aid schools. The Catholic community was further incensed, when the Government did not honour its undertaking in the appointment of an independent Inspector of Roman Catholic schools. The Grant-in-aid schools, having attained an importance nearly equal to that of the Government schools as to the number of children under instruction, the Superintendent of Schools could no longer perform alone the whole work of inspection and two Officers, termed "Assistant Inspectors", were appointed to do part of his work under his supervision and guidance.

But as the Government and the G.I.A. schools viewed each other as natural rivals. The supporters of the G.I.A. schools applied for, and were granted, the administrative separation of the two systems.<sup>69</sup> In reality, however, no change took place except in words. The Superintendent of Schools continued to exercise his authority over both sets of schools; the two Assistant Inspectors of Schools were both called Inspectors of Schools, but they remained subordinate Officers of the Superintendent.

For some time, the Catholics made little outward show of resistance. But with the foundation of the "Union Catholique" in the 1870s, a more militant attitude prevailed, and Catholics were determined to attack the principle of neutral education on which the Government schools were based.<sup>70</sup>

Neutral education was justified in Government schools on the grounds that where pupils of one school were of different creeds, Government could not possibly base its teaching on the tenets of one particular creed, without becoming guilty of proselytism. Hence, the necessity of abstaining altogether from teaching religion.

From 1877 to 1882, a "conscience clause" was introduced into the conditions under which the Aided schools received grants, which caused an increase in the number of pupils. On the other hand, the fact that no provision had been made for religious instruction in the Government schools was

detrimental to those schools. Arrangements were, therefore, made for priests of any Christian Denomination to give religious instruction to Government schools for one hour a week, and half an hour was allowed daily for the preparation of work set in connection with such instruction. This removed the disadvantages concerning religious instruction under which the Government schools had laboured.

## 2.5 Church contribution in Public Health

The varied contributions of the Catholic Church in Mauritius were very much appreciated by the British Government, given that the natural or epidemic calamities were very frequent during the period 1840-1895 and that the unlimited dedication of the Sisters of Charity at first, and who were later joined by the Filles de Marie, can never be questioned.

Consequently, if cyclones have always been frequent in Mauritius, the sanitary and social questions have never arisen with more acuteness than in the period of indenture. The British administration would never have praised Mère Augustine and the Filles de Marie, and would not have entrusted to them the responsibility of a number of hospitals, if it had not had the proof of the quality and quantity of services rendered by these nuns.

The Church, through its congregations, administered directly a number of orphanages, asylums for the olds and even a leper-house.<sup>71</sup>

In a period when poverty was as hard as usual (otherwise more) for the poor men, the management of similar works completed what the missionaries, in the service of the most deprived, were achieving in other fields. The traditions of evangelic charity of the Church were present in Mauritius and, certainly also, that of the charity of the rich.

## 2.6 Church attitude towards African and Malagasy Cultural practices

African and Malagasy cultural practices, very frequent at that time, were considered as superstitious practices that needed to be discarded by those who were converted to Catholicism, as shown by the fears of Mgr. Meurin:

*"Unfortunate events which have occurred in Mauritius, these last weeks, have revealed to us the upsetting fact that part of our dear children are full of superstitious beliefs. We consider it our duty to educate them on this subject and to enumerate to them the empty observances and the superstitious customs which exist in our Diocese so that they understand the insignificance and stop practising them"*<sup>72</sup>

In fact, these practices, commonly known as the "Petit Albert" were illegal and those who were found guilty of practising them, were exposed to capital punishment.

## CHAPTER 3 THE CATHOLIC CHURCH AND POWER

The questions of religion, political control and social conflict, all form an undefined web which we must often tear apart for the sake of analysis. The foreign missionaries were servants of God, but they were also partners of the white elite and Colonial Administrators. Their converts became children of God who had to renounce some of their customs for the sake of Redemption. The Colonial State could not subsist without the services of its religious devotees; yet it could never wholly bind them to apply their labour to its cause.

The search for a simple formula to determine whether a particular mission served the interests of the State more than the indigenous society, or *vice-versa*, is obviously a futile one. Although, from a distance, we can make out the pattern clearly enough and can see the non-contradictory relationship between Western Christianity and Western Colonialism, from close up, the pattern is far more intricate, and even parallel threads would occasionally diverge.

### 3.1 Colonial Administrators and Missionaries

Compared with State-Church relationships during the French period, the British colonial policy on religion in the 19<sup>th</sup> century shows a strange volte-face.

On the one hand, the Colonial Authorities, from the moment of conquest, repeatedly stated that the island would, in no circumstances, return to France. So there could be no link whatsoever between the Church in Mauritius and the Archbishop of Paris. That accounted, in part, for the reluctance of the British to allow into the Colony priests of French nationality. Besides, they overtly and shamelessly professed to be a Protestant Government. Consequently, Catholic prelates and priests were time and again slighted, as pre-eminence, precedence or privileges were granted rather to the Clergy of the Established Church, although the Anglicans were only a few hundreds, whereas the Catholics totalled over 100,000. But the rationale behind such policies was that the colonizers were "a Protestant people and Government".<sup>73</sup> However, it should also be noted that if the Colonial Governors, subordinate officers, were prone to act as petty potentates, the Ministers at Downing Street, as a rule, displayed a good deal of fair play, even to the extent, at times, of disowning the British Governors of Mauritius.<sup>74</sup>

On the other hand, the Colonial Office strove to foster harmonious relations between the heads of the Civil Administration and of the Church in the Colony, while in the same breath emphasizing the distinction between Civil Authority and Ecclesiastical Jurisdiction. Contrary to the French period, when the State had the upper hand over the Church, Whitehall directed the Colonial Governors not to meddle in spiritual matters and not to hinder the religious Heads in the Church's organisation and management.

Better still, Whitehall requested the Court of Rome to grant to the Colony an ecclesiastical superior holding a higher rank than the traditional position of Apostolic Prefect. The Holy See readily complied with Whitehall's wishes, by taking two immediate steps. First, it created an Apostolic Vicariate encompassing a vast area of the Southern Hemisphere, comprising Saint-Helena Island, South Africa, Madagascar, Mauritius, the Seychelles, Australia and New Zealand. Secondly, at the head of that immense ecclesiastical organization, Pope Pius VII, himself a Benedictine monk, appointed an English Benedictine, Edward Slater, who was at that time staying in Rome, as the Apostolic Vicar. He received the Episcopal consecration in Rome in June 1818. Fifteen years later, on 5<sup>th</sup> February 1832, his successor, Dom William Placid Morris, chosen by Dr James Bramston, Vicar Apostolic for London, was ordained a Bishop at St. Edmund's College, Old Hall, Ware. He too was a Benedictine.

Three established Christian religions received grants from the Public Treasury: the Roman Catholic Church, the Church of England and the Church of Scotland.

Historically, the subsidisation of the Roman Catholic Church was a heritage from the French Concordat. In any case, the British Government passed legislation regulating subsidies and grants allocated to the three above Churches,<sup>75</sup> while no grant was made to the other denominations of Christian faith.

The Colonial Treasury adopted different scales of salaries for the Roman Catholic Church and for the Established Church (Church of England). Generally, while the non-British-born Catholic priests earned £150 per annum, the British-born earned £200, the British Anglican Clergymen earned varying grants from the Colonial Treasury (£510, £400, £300).<sup>76</sup> However, for Clergymen of the Established Church, the Governor would present the following request to Earl Grey, Secretary of State:

*"I should not hesitate to propose that two efficient Clergymen of moderate expectations should be sent out upon a salary of £300 per annum each...But I could not hold out such a stipend as being adequate for the decent support of a minister of the Establishment."*<sup>77</sup>

In 1878, the *Union Catholique de L'Île Maurice* petitioned the Earl of Derby for more adequate grants, more in line with the generosity which the Anglican Diocese was favoured with, but the Secretary maintained the status quo.

Over the decades, the Colonial Government granted preferential treatment to the Church of England.

That the Anglican community should be granted favours because it was part and parcel of the Established Church seemed to be the result of an underlying reasoning of the colonial religious policy that stood no discussion. Protestant Governors were so persuaded of that postulate that they did not hesitate to mention it in their correspondence to the Colonial Office.

A case in point related to the table of precedence. The Secretary of State, Earl Grey, having queried the list of precedence, Governor Anderson boldly stated that "*the Protestant must take precedence of the Roman Catholic Bishop vide reasons stated in Dispatch accompanying.*"<sup>78</sup> The Governor's argumentation was that:

*"In respect to the Protestant and Roman Catholic Bishops, I have considered that, however desirous we may be to pay every due respect to the Roman Catholic Prelate, yet as a Protestant people and Government that we ought to give precedence to the prelate of our own Established Church; and I do not think that this distinction could be justly felt offensive or derogatory to the Roman Catholics, presuming, as I do, that, on such a question, could it arise with them, they would adopt the same principle and course."*<sup>79</sup>

### 3.2 The Catholic Church and the Anglican Church

Describing the unpleasant coexistence between Anglicans and Catholics in the 19<sup>th</sup> century, the Anglican historian Ghislain Emmanuel summed up the relationships between the two religious communities thus:

*"Against this background of political upheaval, one of the saddest images that emerged was the constant bickering between the leaders of the two main Christian bodies. The main areas of contention were: (i) the respective status of the bishops; (ii) marriage law; (iii) educational policy; (iv) ecclesiastical grants."*<sup>80</sup>

Regarding the order of precedence of the Heads of the two Dioceses, in due course the Colonial Office determined that the rank between them would go by seniority of appointment.

Throughout the colonial period, the British Government granted freedom of religion to the population. Thus, in the 19<sup>th</sup> century, besides the Catholic Church, with its long-standing history that dated back as 1721 and its status of official religion under French rule, Anglicanism gained ground from the British occupation in 1810 onwards. Given the British Government's policy of freedom of religion, a wide spectrum of Christian denominations operated in the Colony. However, that freedom entailed respect of the rights of individuals to practise their own faith. A corollary resulting from the above related to the circumspection in the methods of carrying out evangelization, without proselytization by the other groups.

As for criticisms of Protestantism, they abound in the correspondence, as exemplified by the following statement which is representative of the common tone of the Catholics with regard to the Protestants:

*"At first we meet in front of us the numerous missionaries of fault, who, strong of the Protestant Government, sow everywhere the rye grass in the field of the head of the family. It is strange, Sirs, that the hatred inoculated against Catholicism by these false apostles who have only the lie to fight the truth and make it pass all the better in these pagan souls, given that they transport it by the vehicle of money, so known, so popular to it. Little scrupulous on the means, they often buy some adherence for some cents, less still for some tobacco leaves, or a little opium. And urged to magnify of figures the reports which they send to the biblical societies, they baptize most of the time without giving to their neophytes the slightest instruction. Our missionaries, on the contrary, more exact observers of the regulations..."<sup>81</sup>*

This rivalry was particular true when it came to the Government schools, where Protestant teachers were seen by the Catholics as wolves in the sheepfold, that harmed the Catholic children who were entrusted to them. It was to check such a terrible plague that the creation of Catholic Primary Schools was fervently advocatged, while the St. Louis College, then St Joseph College was to compete with the Royal College.

## CONCLUSION AND RECOMMENDATIONS

One significant fact about the occurrence of most Truth Commissions, held throughout the world, is that what previous generations would likely have been forgotten or suppressed, is today discussed and dissected in public forums. Obviously, the Truth and Justice Commission cannot, by itself, repair the legacies of trauma and deprivation that slavery and indenture have left, but it has created clear, undeniable public records of what occurred - records that provide an essential buffer against the inevitable tendencies to deny, extenuate, and forget. Perhaps most importantly, TJC offers the one thing that victims of gross Human Rights abuse almost universally cite as their most pressing need: the opportunity to have their stories heard and their injuries acknowledged.

The quest for retrospective Justice is a global phenomenon, with a crowd of different groups claiming for some form of recognition or material reparation for historical injuries. In Mauritius, some socio-political groups have entertained reparations claims, especially in the form of monetary compensation but is that the solution? An examination of the different examples of retrospective justice initiatives from around the world would surely reveal that, while each case is unique, the most successful generally combine three elements: formal acknowledgement of an offence; a commitment to truth telling, to ensure that the relevant facts are uncovered, discussed, and properly memorialized; and the making of some form of amends in the present to give material substance to expressions of regret and responsibility.

The challenge, of course, is not only to understand the sources of our current problems but also to devise ways to make the situation better.

This is the task of retrospective Justice. The last twenty years, in particular, have witnessed the emergence of an international consensus on the importance of confronting traumatic histories, as well as the creation of a variety of modalities and mechanisms for doing so. These approaches include, not only the payment of monetary reparations (the focus of the current slavery reparations debate in Mauritius), but also international tribunals, formal apologies, truth commissions, the creation of public memorials and days of remembrance, educational initiatives, and a wide variety of other non-monetary reparations programs. Although these different approaches, as well as some of the specific circumstances in which they have been or might be used are debatable, what is important to bear in mind is that there is no magical formula for righting historical wrongs.

From what has been witnessed elsewhere, retrospective Justice is a messy and imperfect business, and societies and institutions that undertake it should do so with humility and a clear-eyed recognition of the inadequacy of any reparative program to restore what was taken away. Yet, looking at the experience of other societies that have confronted (or failed to confront) legacies of historical injustice - at the contrasting experiences of West Germany, East Germany, and Japan following World War II; at the operation of Truth Commissions in South Africa and elsewhere; at the bitter controversies generated by the Turkish Government's denial of the Armenian genocide or by the Australian Government's refusal to apologize to Aboriginal children for being abducted from their families as part of a State-sponsored forced assimilation policy - there seems good reason to believe that communities that face their histories tend to emerge stronger than those that choose the path of denial and evasion.

### Acknowledgement

While different people may have different opinions about the propriety and value of an institutional apology, we believe that it is incumbent on the Church, as a minimum, to acknowledge formally and publicly the benefits that the Church derived from the institution of slavery. This was done in 2006, during the mass of 1<sup>st</sup> February 2006 commemorating the Abolition of Slavery at the Church of Notre-Dame du Grand Pouvoir at Vieux Grand-Port. Mgr Maurice E. Piat, c.s.s.p, Bishop of the Diocese of Port Louis, has expressed an apology of the Catholic Church for having been linked to slavery in History. He has also recognized the contribution of Creoles to the Church of Mauritius. The Church has also accepted that it is the missionary work of Father Laval and his collaborators<sup>82</sup> that has consolidated the Church through the centuries. Yet with institutions as with individuals, taking responsibility for an offence entails more than expressing remorse for past conduct; it also requires a commitment to doing better in the future.

### **Tell the truth in all its complexity**

We cannot change the past but we can reconcile ourselves with our past so as to have a better future. Every confrontation with historical injustice begins with establishing and upholding the Truth, against the inevitable tendencies to deny, extenuate, and forget. The appointment of the TJC and the various public programs it has organised has certainly done a great deal to create awareness of a history that had been largely erased from the collective memory of our country. Yet, there is more to be done.

Therefore we recommend that the Government:

- encourage the Church in being more open about its history and allowing access to its archives to researchers before these disappear forever. This can only be achieved by providing assistance in the conservation of church repositories<sup>83</sup>;
- commission a new history of the Mauritius that is not compartmentalized by ethnic considerations to replace the currently available text, which makes virtually no reference to role (both positive and negative) played by the Church in the forging of Mauritian society;
- lend its support and assistance to other institutions that might be considering undertaking similar investigations.

### **Social Responsibility**

Like other great historical crimes, slavery had profound consequences. The most fundamental was racism - the enduring stigma borne by darker-skinned people. But the institution left other legacies as well, including vast gaps of wealth and poverty, privilege and deprivation.

The Government should

- provide assistance to the various Catholic organizations in their fight aiming at empowering the poor and extremely poor people, irrespective of religion or creed, culture or tradition, background or region and sex;
- use the resources of the Church to help ensure a quality education for needy children;
- expand opportunities for those disadvantaged by the legacies of slavery by creating special scholarships;
- recognise and promote the Creole language within the Church and at a national level so as to provide a sense of cultural identity to the descendants of slaves and Creoles in general.

## BIBLIOGRAPHY

### PRIMARY DOCUMENTS CONSULTED AT THE PRIVATE ARCHIVES OF THE DIOCESE OF PORT LOUIS

1. LETTER BOOK - Correspondence of the Bishops of Port Louis -Mauritius - 6 volumes

## APPENDICES

### APPENDIX 1

#### Lettres autographes ayant trait à Sainte-Croix entre 1848-1859

Caisse de charité établie à la chapelle de la Sainte-Croix en janvier 1851

Provincial du Père Pellerin, curé de Sainte-Croix

Article 1: Une caisse est établie à la chapelle de la Sainte-Croix pour le soulagement de nos frères qui se trouveraient dans le besoin: cette caisse sera formée et entretenue par une quête qui aura lieu tous les dimanches à la messe du dimanche: on recevra aussi les offrandes particulières qui seront présentées.

Nos frères de Roche Bois, Ste. Famille, St. Michel, enfoncement des Prêtres, St. Jean Baptiste Terre Rouge, Tombeau, chapelle de la Nativité, auront droit de recourir à la caisse.

Article 2: Cette caisse sera tenue par un trésorier choisi parmi les hommes de la persévérance, qui jouiront de l'estime général, tous les 1<sup>er</sup> dimanches du mois ils rendront compte au Père de ce qui aura été reçu et dépensé.

Article 3: On nommera les conseillers et conseillères deux, pour chaque quartier

Article 4: Les fonctions des conseillers et conseillères seront:

- 1<sup>er</sup> de recevoir les demandes qui seront faites pour obtenir des secours;
- 2<sup>e</sup> de s'assurer que ces demandes sont justes;
- 3<sup>e</sup> de porter les secours accordés et de donner en même temps des consolations et de bons conseils;
- 4<sup>e</sup> enfin de faire la quête le dimanche, de la compter et de la verser dans la caisse

Ces fonctions des conseillers exigent les personnes les plus pieuses et les plus charitables de la persévérance, aussi un conseiller qui tomberait dans une faute grave sera cassé et remplacé immédiatement.

Article 5: Ces secours accordés aux frères qui sont dans le besoin seront de leur faire quelque petites aumônes, pour leur fournir de la nourriture, un peu de sucre quand ils sont malades; on ne donnera rien pour les frais de médecins ainsi que pour les médicaments

Article 6: La caisse ne fournira rien pour les enterrements, excepté le cas où il y aurait besoin d'une caisse qui alors sera fournie en bois blanc.

Article 7: Le Père aura la surveillance générale: il veillera avec le plus grand soin à ce que le trésorier et les conseillers et conseillères remplissent bien leurs fonctions: jamais la caisse ne pourra être déposée entre ses mains: il ne fera par lui-même aucune aumône, il recevra toujours aux conseillers et conseillères tous les dimanches il rendra toujours compte à la messe de ce qui aura été reçu et dépensé pendant le mois.

Noms des conseillers et conseillères	
Trésorier	Eugène Marie
Sainte Famille	Victor Mahomet Aimé Aglué
Saint Michel S. Sepuletre?	Marie Jeanne Victorine Bossue Frère Valsin Moustapha
Saint Jean Baptiste Valée des Prêtres	Mélanie Bemist
Sainte-Croix	Eugene Marie Marcellin
Tombeaux	Frère du Bout Colas

## APPENDIX 2

Il faut voir qu'une grande partie de la population catholique descend des affranchis de 1838 et que, sauf une portion qui forme une classe plus élevée, elle est encore illettrée et ignorante. Il est inutile de lui mettre des livres entre les mains et les prédications faites en français ne sont que très imparfaitement comprises de pauvres gens dont le langage est un grossier patois. La génération nouvelle prend un certain vernis superficiel de civilisation, mais elle n'est pas christianisée comme il faudrait: les prêtres, les catéchistes, les œuvres font défaut.

Si toute la population d'origine africaine est convertie, ou, pour parler plus exactement, baptisée, il n'en est pas ainsi de celle d'origine asiatique, indienne principalement, qui forme près de deux-tiers de la population totale. Celle-là est mahométane, hindoue ou bouddhiste [...] La civilisation chrétienne se l'assimilerait graduellement si un apostolat approprié s'exerçait à son égard.

Sait-on combien il y a de missionnaires, pour nos 260,000 Indiens? Deux! Encore la nécessité d'aider le clergé paroissial les détourne-t-elle souvent de leur œuvre particulière. Et, pour cet élément si important, il n'y a pas une école spéciale!

Ainsi donc, le personnel ecclésiastique rétribué par l'Etat serait à peine suffisant pour les colons d'origine européenne; et les populations introduites de l'Afrique et de l'Inde ne sont évangélisées que d'une manière incomplète ou ne le sont pas du tout.

Puisque l'Etat a charge d'âmes dès lors qu'il a entrepris de pourvoir aux besoins matériels de l'Eglise, c'est à lui qu'incombe la responsabilité de cette situation. Il ne saurait en tout cas échapper aux conséquences qu'elle engendre. Lorsqu'une dépression morale se produit, la compression matérielle doit inévitablement se faire sentir. Tout ce qui est économisé sur le clergé sera dépensé avec usure pour la police, la magistrature et les prisons, on verra la décadence aboutir à la ruine.

De Boucherville A., 1903. *Les Rapports de L'Eglise et de l'Etat à l'Île Maurice*. Extrait de la *Revue Catholique des Institutions et du Droit*. Lyon: Imprimerie X. Jevain.

## Translation

It is necessary to see that a large part of the Catholic population are descendants of the emancipated slaves of 1838 and that, except for a portion which forms a higher class, they are still illiterate and ignorant. It is useless to put books between their hands and for preaching to be in French; this is only very imperfectly understood by poor people whose language is a rough dialect. The new generation takes a certain superficial varnish of civilization, but it is not Christianized as it should be: the priests, the catechists, the works are lacking.

If all the population of African origin is converted, or, more precisely, baptized, it is not the case for the population of Asian origin, mainly Indian, which represent two-thirds of the total population. That one is a Mohammedan, an Indian or a Buddhist

Christian civilization would assimilate them gradually if an appropriate apostolate was practised towards them. Do we know how many missionaries there are, for our 260,000 Indians? Two! Still the necessity of helping the parochial Clergy often diverts them from this particular work. And, this such an important factor, there is no special school! Thus, the ecclesiastical staff remunerated by the State would be hardly sufficient for the colonists of European origin; and the populations introduced from Africa and India are evangelized either in an incomplete way or not at all.

Since the State has the responsibility of souls and since it undertook to provide with the material needs of the Church, it is on it that falls the responsibility of this situation. It cannot escape, in any event, the consequences which it engenders. When a moral depression occurs, the material compression inevitably has to be felt. All the effort that is spared on the Clergy will be made by the police, the judiciary and the prisons, as we shall see the decline end in the ruin.

## 1. EXECUTIVE SUMMARY, FINDINGS AND RECOMMENDATIONS

### Executive Summary

Mauritius is a country which has known the worse forms of injustice during its 400 years of history, marked by slavery and its aftermath and the indentured labour system. That this country is now considered as one of the most *avant-gardiste* in the field of Social Justice is in itself a great feat.

Much water has, however, passed under the bridge to achieve this level, although much remains to be done to correct inequalities inherited from our colonial past.

Slavery, which was practised during the Dutch occupation, was marked by the worse forms of ill-treatment to human beings. The treatment meted out to slaves is at the root of revolts. These contributed to the abandonment of the island by the Dutch colonists in 1710.

During the French occupation, which lasted for almost a century 1715-1810, the practice of slavery was legalized following the enactment of the *Lettres Patentes* framed under the *Code Noir* of 1685 and 1723. Slavery, which is now officially recognized as a crime against humanity, was practised in its cruellest form. Treated as beasts of burden, if not as movables, slaves could be sold, hired out and transferred to the heirs and successors of their owners. Classified legally as movables, they were listed after horses and draught animals in the register of the assets of their owners.

Assigned to hard manual labour during long hours, slaves received no wages for their labour, had no legal personality and could not possess anything. Most slaves had no rights to family life. Slaves had no right to surnames, but to first names only, given by the owner. Slavery was marked by the denigration of African and Malagasy culture and the subsequent loss of this identity.

The laws governing slaves conferred upon the masters wide powers to punish men and women alike for the slightest offence. A special enactment was provided for the punishment of runaway slaves. This took the form of mutilation and even entailed the execution of the slave after a third offence. Of course, no appeal for any unjustified action of the master was accented.

Slaves could not assemble, nor be found in possession of any offensive weapons. The decision of the French National Assembly *Convention* to abolish slavery in 1794 was not even communicated to the slave population. Refusal to abolish slavery led to the breakdown of relations between Isle de France and the Metropole.

### British Occupation

The slavery regime continued during the first part of the British occupation until its abolition in 1835. Slavery was not marked by any uprising, contrary to what happened in Haiti. This passivity may be attributed to the most stringent laws in force to control slave movement in Isle de France.

After the abolition of slavery in 1835, a great injustice was done to slaves, when their masters decided to do without their services on a phase to phase basis in the wake of the arrival of indentured workers. Some 32,000 slaves, '*esclaves de plantation*', were thrown out of work for one reason or another.

No rehabilitation plan was mooted either and they, thus, took refuge in the outskirts of Port Louis and on the periphery of coastal villages for a living. Many settled on the coasts where the presence of fish and marine products was sufficient to ward off famine. Their descendants are still to be found among such people.

During the French occupation, under the *Gouvernement Royal*, a law was passed to ensure better treatment for emancipated slaves and people of colour *loi de l'Emancipation* of 1767. This new class of citizens could henceforth own property, maintain slaves, but could not receive any donation or be given any property by way of succession. They had to pay special respect to the white men for these to prove their superiority as human beings. It was not before the enactment of Ordinance 57 of 1829 that the free people were put on a par with their white counterparts in the Parish Registers and could accede to the succession of their natural parents and receive any

donations made to them. This was the beginning of some recognition of non-white persons in Mauritian history.

As regards ex-slaves left stranded after the abolition of slavery, this liberation was more a poison chalice. With the arrival of indentured labour from India, they lost all hopes of employment. Housed in ramshackle premises, they were easy victims of epidemics which occurred in the second part of the 19<sup>th</sup> century and were largely decimated. It is estimated that the cholera and the malaria epidemics of 1854 and 1867, and onwards, carried away half the population of ex-slaves.

Although the British Government compensated the owners of slaves for their liberation, it failed to put forward any rehabilitation plan to take them out of their state of absolute poverty. This is considered as a great injustice to a class of helpless people on the grounds of pure racism, in as much that they no longer formed part of the plantation economy, i.e. sugar production.

The advent of indentured labourers, who came from India and who were themselves subject to some of the worst forms of ill-treatment, is another landmark. The history of Indian immigrants is a tale of injustice and misery. Leaving his wife and children behind, the Indian labourer was made to work odd hours in extraneous conditions. Poorly-housed in Sugar Estate Camps, devoid of elementary amenities, he received part of his wages in cash and part in kind. From his monthly pittance of Rs. 5, he had to save Rs. 1 to pay off his return voyage.

His movement was confined to the estate and he had no right to pay visit to a friend or attend a funeral outside the estate boundaries. In case of default, he was caught and housed at the Vagrant Depot in Grand River North West and tried under the Law of rogues and vagabonds and he suffered corporal punishment.

Fortunately, the Indian immigrant found in Alphonse Von De Plevitz a friend who showed marked sympathy to their cause. He was appalled by the treatment meted out to Indian labourers. Although married to a Franco-Mauritian girl, whose parents own an estate at Nouvelle Découverte, he encouraged them to put up a petition to Queen Victoria to redress the wrong done to them. The petition received 9401 signatures. The British Government reacted positively and appointed a Royal Commission to inquire into their complaints and to make appropriate recommendations. This was the first quest for Justice in Mauritian history. The findings and recommendations which ensued went a long way to put a stop to the inhuman treatment meted out to a community of individuals.

### **Political Reform**

Although ex-slaves, people of colour and Indian immigrants represented around 90% of the population, they had no say in the affairs of the country. In 1885, a new Constitution came into force providing for the election of 10 members of the Legislative Council, hitherto largely dominated by British officials, land proprietors and merchants. But these elections were not democratic in the form of voting which was restricted to only 3% of the population and based on specific criteria.

In 1909, another Commission was mandated by the British Government to inquire into the critical financial situation of the colony, after the passage of the violent cyclone of 1892 and the conditions prevailing on the labour market. The Commission recommended the cessation of the Indian immigration but observed that, in spite of the fact that Indian immigrants and their descendants represented around ⅔ of the colony's population, they had no representatives in the Legislative Council. The Commission recommended the restoration of all civil rights to indentured labourers and their descendants.

In order to facilitate the upkeep of plantations of the newly-acquired land by the small planting community, the Commission recommended the setting up of village banks better known as co-operative credit societies.

The Constitution of 1885 remained in force up to 1948, when the conditions set for voting insisted only on the ability to sign one's name in any language spoken or written in the colony. It is under this Constitution that voting rights was first conferred on women. The new Constitution allowed 27% of the population to take part and knelled the monopoly of the oligarchy in the Legislative Assembly.

### The Advent of Trade Unions and Social Unrest

Much before the constitution of the 1948, there was widespread discontent in the country and the advent of Trade Union Organizations helped to prepare the ground for better conditions in the Sugar Industry. The Labour Movement was officially launched in 1936 in Port Louis amidst 30,000 militants. In 1937, a riot took place at Union Flacq where labourers and small cane planters assembled to voice their grievances. While attempting to penetrate on the premises of the sugar factory, shots were fired and there were 4 casualties. A Commission of Inquiry, headed by the Procureur General Hooper, was appointed which brought about certain measures to guarantee the marketing of cane by small planters 'the Cane Sale and Purchase Ordinance of 1939' and the recognition of Trade Union Organisations and improved working conditions and the pay of artisans and labourers.

A similar riot occurred in 1943 protesting against conditions of work and pay on sugar estates, in view of rocketing prices of consumer goods. This also culminated in a loss of life, including one pregnant woman named Anjalay Coopen. Further measures to improve conditions of the labouring class were recommended by an Inquiry Commission headed by the then Colonial Secretary, Mr. S. Moody. The Commission recommended, *inter alia*, the setting up of Industrial and Arbitration Tribunal and an increase of wages by 10%.

Before 1940, apart from limited health care services, provided by Government through hospitals and dispensaries, poor people lived very much as they did in the days of the 'survival of the fittest.' Infant mortality was high, while life expectancy was short. Although a Poor Law Office was created as far back as 1904, it was not until 1940 that a Public Assistance Department was set up to help the needy. More primary schools were created in order to ensure basic education for the labouring class, workers and artisans.

In the field of constitutional reform, things moved fast in the wake of the policy of decolonization. In 1958, adult suffrage was conferred with a new Constitution. This paved the way for greater Social Justice. Legislation guaranteeing employment, protection against unjustified dismissal, safety and security of workers were ensured. In 1950, the old aged pension was granted to senior citizens who reached the age of 60. It amounted to Rs. 22.50 per month as opposed to Rs. 3,200 per month nowadays.

### The era of independence

The advent of Independence in 1968 marked a new departure in Social Justice and equal opportunities for each and every one. Social Justice was reinforced in specific clauses in the Constitution which prohibits discrimination on the basis of race, colour, gender, caste, public opinion, etc. Any citizen feeling aggrieved by dispossession of his rights can appeal to various institutions set up, such as the Ombudsman, the Independent Commission Against Corruption (ICAC), the Appeal Tribunal, as regards appointments and promotions in the Civil Service, the Human Rights Commission, quite apart from any complaints which may be lodged through the competent Law Court.

Various legislations have been enacted to guarantee equal rights between men and women. Besides, a special Ministry has been set up for Women's Rights Child Development and Family Welfare.

Certain sections of the population, mostly descendants of slaves, have not been able to benefit from the process of development, and now rank among the less enviable class in the Mauritian society in terms of education, employment and social status. The Ministry for Social Integration and Economic Development has been set up with funds, both from the public and private sectors, to offer assistance to this class of citizens and ensure better housing conditions, proper schooling and various other support social services.

While assistance to the poor and needy was reinforced, a National Pension Scheme was created in 1976, guaranteeing revenue to non-government officers on retirement. During the same year, free education was extended to all students attending secondary schools. Improved standards of living through higher wages, health care and support services have resulted in life expectancy, which was 59 for man and 62 for woman in 1962, increasing to 69.6 for a man and 76.8 for a woman in 2010.

**Findings and Recommendations:**

1. The Equal Opportunity Act should come into force. Its implementation will go a long way towards guarantying equal rights for citizens, irrespective of ethnic, political, sex and religious appertenances.
2. Certain categories of workers who are self-employed do not always contribute to the National Pension Scheme, and may in their old age find themselves in difficult conditions. A special scheme should be devised to market them contribute to their pension scheme.
3. In spite of their defects, co-operative organizations proved to be essential tools to extirpate small producers, whether in the field of agriculture and livestock. Fishermen, pig breeders cannot be left to fend for themselves. The habit of thrift and saving is not one of the virtues of people of slave descents. This situation results in many of them falling into the grip of unscrupulous middle men and usurers. Throughout the world, credit unions, whether community-based or industry-based, have proved that they can inculcate the habit of saving and provide short-term credit at concessionary rates to their members in times of dire need. However, the setting up of such organisations and their management cannot be left to people who are hardly literate. The assistance of dedicated social workers, co-operative development officers are essential to see to it that the affairs of such co-operatives are run on a sound basis.
4. A new class of psycho-sociologists and social workers generally should be employed to cater for the people residing on housing estates and in such other areas where poverty is rampant. A special class of trainers in small business enterprises should be appointed to support an emerging class of small entrepreneurs in the management of their ventures in order to avoid pit-falls.
5. Often linked with charity work, social work and psychological and sociological support are essential elements to bring about a new mind-set of people living in housing estates and in similar milieux. Efforts should be made to give social work its proper standing, including adequate remuneration, and to recognize voluntary work as worthwhile. Voluntary work should be encouraged among Mauritian citizens, and especially among young people.
6. Programmes, aimed at adding value to manual and technical jobs, must be further developed and encouraged as too much emphasis is laid on white collar jobs in Mauritius. In addition, entrepreneurship and subsistence farming should be further encouraged. In this connection, land settlement schemes for farming, livestock keeping, including pig breeding, should be made available.
7. All Government services should provide an 'ethnic sensitive service', be it in the hospitals, the police department and in government offices. Officers should be trained for better public relations to this effect.
8. Recruitment practices must be reviewed in the Public, Parastatal and the Private Sector so as to ensure that such exercises are solely based on merit and qualifications. A Parastatal Appointment and Appeal Tribunal should be instituted in line with the Civil Service Appeal Tribunal for public officers.
9. Stricter anti-racist laws should be passed in order to check racist associations/ statements/ creating hatred for any ethnic group.
10. The Certificate of Primary Education curriculum should be reviewed so that every student, at the end of the cycle of primary education, has a certificate: the possibility of a 'vocational' certificate at primary level should be seriously studied.
11. The model of *Certificat d'Aptitude Professionnelle* (CAP) delivered by technical schools in countries like France, Australia, etc. should be adopted, thereby ensuring quality work by artisans and other private skilled workers

12. A review of the present electoral boundaries must be undertaken in order to ensure the better representation of ethnic minorities.
13. Under-representation of ethnic minorities at this level of Parliament and at Cabinet levels is a cause of frustration and may lead to political instability.
14. Some functions of the Public Service Commission, the Local Government Service Commission and the Discipline Forces Commission should be revisited. The practice of delegation of powers through the appointment of minor grade officers to different Ministries continues to give rise to frustration and has resulted in the exclusion of Creole minorities, in particular.
15. The abolition of the Best Loser System should only be envisaged in the context of an overall review of the Constitution which would ensure a fair and equal representation of ethnic minorities.
16. The 'Protection of Fundamental Rights and Freedoms of the Individuals', embodied in Section 2 of the Constitution, should be amended to include economic, social and cultural rights also.
17. Aggressive campaigns on the promotion Human Rights should continue to be carried out through various media, including media and school, so that the population is aware and learns the importance of respecting its fundamental rights. Similarly, Consumer Laws should be tightened to provide sufficient protection to consumers, and sensitization campaigns should be carried out to empower the population with consumer protection knowledge.
18. The promotion of multiculturalism should be encouraged as it helps to maintain national unity. Such a policy will undoubtedly further help the Mauritian nation to strengthen a common civic culture, based on the values of freedom, belonging, patriotism, and of human rights, while encouraging intercultural exchange.
19. With regard to the relationship between politics and religion, Government and political parties should not be associated with religious bodies. In this way, the Government will be protected against undue interference from religious organizations.
20. Freedom of expression should continue to be encouraged and liberalisation of television channels should be considered.
21. Regarding housing estates, put up by the C.H.A where 19,400 householders reside-roughly 125,000 individuals - there exists a serious problem of overcrowding. For instance, a 3-room apartment can sometimes accommodate as many as 12 individuals. Besides, many of the housing estates do not provide amenities such as playgrounds, kindergarten and do not have any community hall. This is not conducive to the welfare of the young generation who tend to be idle and demotivated.
22. The present rate of old age pension should be revised, specially for those reaching the age of 70 or more. The present rate of Rs. 3,200, allocated to people without resources, is a cause of extreme poverty, especially for those who do not enjoy any retirement benefits. This rate should be upgraded to Rs. 4,000
23. Certain housing estates (residences) have been constructed with asbestos, a substance known as a serious health hazard. Such houses should be pulled down on a phase to phase basis, and new apartments allocated to such residents.

## 2. THE CONCEPT OF SOCIAL JUSTICE

### Meaning and Relevance in the context of the Social Justice Project

*Social justice is what faces you in the morning. It is the awaking in a house with adequate water supply, cooking facilities and sanitation. It is the ability to nourish his children and send them to school and where their education not only equips them for employment, but reinforces their knowledge and understanding of inhabitants of their cultural inheritance. It is the prospect of genuine employment and good health: a life of choices and opportunity free from discrimination.<sup>1</sup>*

#### Brief historical background

Social justice is a concept which is quite new in the history of mankind. Before the beginning of the 19th century, much of Mankind lived in what Charles Darwin termed as the rule of the survival of the fittest. The poor and the weak had to fend for themselves in a hostile world, just as in the animal kingdom. It was the world of kings and princes and chieftains who had the Divine Rights to treat their subjects according to their whims. People were deemed to have no rights but obligations. Obligations to produce one's own food, and other necessities to wage war, and to pay taxes.

The concept of Human Rights was developed in the mid eighteenth century, with the surge of a generation of thinkers and humanists. In France, the *Siècle des Lumières* in the mid-18th century, saw the emergence of reformers like Jean-Jacques Rousseau, Montesquieu, Voltaire and Camille Desmoulins, all precursors of the French Revolution of 1789 which led to the proclamation of Human Rights which later on became the basis for the universal Declaration of Human Rights. But it was not before the early 19<sup>th</sup> century that the concept of a more egalitarian society was mooted by powerful thinkers like Le Comte Henri de St. Simon, Charles Fourier Robert Owen and Louis Blanc. All these precursors dreamt of a more egalitarian society where the concept of liberty, equality and fraternity would not be mere slogans.<sup>2</sup> They were the pioneers of the co-operative movement and socialist ideas. But much water would, however, to pass under the bridge before the rights of the poor and the down-trodden would be a priority of the Government in power.

*"The central ideas of socialism have their roots in man's perennial discontent in search of the condition of his existence. They reflect his desire to overcome scarcity, inequality and social strife and longing for justice and happiness. The search for a better world the Golden Age, the Kingdom of God, Utopia to Communism is western ideas that have embodied these instinctive drives."*

But these quests for a better world emerged much later.<sup>3</sup>

Most religions preach that the search for a better world is in the kingdom of God that is after death. Karma in Hinduism, paradise for Christianity and Islam clearly demonstrate that salvation is not on this earth. Religion is therefore a powerful tool to prevent people questioning the established order.<sup>4</sup>

These religious dogmas, which were questioned in the sixteenth century by reformers of the Christian church like Martin Luther, John Calvin and John Knox all have led men to inquire and explore rather than to accept and paved the way for reform leading to a more egalitarian society.

#### 2.1 Clash of civilization and colonial mentality

Ironically it was not necessary in the wake of this new mindset that Europe embarked on the conquest of new lands and clashed with the indigenous people in the Americas, Africa and the Far East. These people according to Aimé Césaire who had the misfortune to be on their way, were considered as inferior beings. The history of emerging Colonial Powers is littered with genocides, atrocities and humiliation and remained unwritten for long. Voltaire in his *Essais sur les races* in 1756 describes the people of Black Africa as half savages and mentally deficient, in short of inferior beings. The *Code Noir* of 1685 under Colbert, Minister of Louis XIV, to manage slaves in the newly-acquired colonies is a typical case of the bias ideas of the black people generally. Slaves captured

on the African continent were legally assimilated as movables which could be sold rented and transferred as any belonging to heirs and successors.<sup>5</sup>

Ironically, the *Code Noir* was enacted to render the treatment of slaves more humane, as opposed to the treatment meted out to slaves by the Dutch and the Spanish in their newly-acquired colonies.

But the driving force behind the *Code Noir* was, not to evangelize people in the newly-acquired territories as the Papal Bull of Nicolas 11 stipulates, but to help in acquiring the much-needed raw materials, and tropical products for their rising economies. Slavery, slave trade and coolie trade and indentured labour systems were all intricately linked with the object in view.

\*Bernardin de St Pierre, the celebrated French novelist, who revisited Mauritius, the then Isle de France in 1768, has rightly said:

*"I do not know whether coffee or sugar is necessary ingredients for the welfare of Europe, but one thing I know is that these two products have been responsible for the great human suffering for these two regions of the world. America has been depopulated in order to obtain a land for their cultivation; Africa has been depopulated in order to have people to care for their cultivation."*<sup>6\*</sup>

### 3. SOCIAL JUSTICE DURING THE DUTCH AND FRENCH PERIOD

Mauritius, an island ideally situated in the sea routes leading to India and the Far East, has inherited a long colonial history starting with the Dutch occupation in 1638 which ended only in 1968, in the wake of the decolonization of the British Empire. The Dutch outpost was set up, not for strategic reasons necessarily, but for exploitation of the untouched rich ebony forests. With the Dutch colonists, administrators and a small standing army, the first Malagasy slaves. The population rarely exceeded 300 individuals. Many of the slaves chose to elope in the thick forests as they disliked the idea of being exposed to ill-treatment by their masters. In the absence of any law governing slavery, the Dutch administrators showed extreme cruelty and on two occasions, in 1695 and 1706, the slaves revolted. Their moves were cruelly repressed, but the surge for justice had its first imprints during the Dutch occupation. Harassment by maroon slaves was the main reason for the abandonment of the island by the Dutch in 1710.<sup>7</sup>

Surprisingly, during the whole French and British colonial era, there has not been any uprising of the slave population, although these individuals outnumbered their white masters by 10 to 1. The reason behind this was the stringent laws governing slave movement and the strong application of the *Code Noir* concerning behaviour of the slaves.<sup>8</sup>

Although slaves *per se* were not assimilated as human beings, but as mere movables, surprisingly they had to be baptized as Roman Catholics. As such, they were not expected to work on Sundays and public holidays. Slaves would not receive any pay for their labour but were only housed, fed and provided with clothing twice yearly.<sup>9</sup> Slavery saw the dislocation of family life as husband and wife did not cohabit in the same house, but in different places of the domaine.

The French colonial period is undoubtedly the darkest period in Mauritian history, when it comes to the ill-treatment inflicted on human beings, to keep the slave population at bay. All rights conferred on slave-masters under the *Code* as enacted by the *Letters Patents* in 1723 were fully implemented; corporal punishment, mutilations for the slightest offences and the death penalty were the rule. Over the years, several clauses of the *Code Noir* were amended to reinforce control on slave labour and to act as deterrent against marooning which has always been a scourge for the authorities.<sup>10</sup>

The Law governing Emancipation passed in 1767, however, allowed for a more humane treatment of free people of colour and emancipated slaves. This new category of individuals could buy land, keep slaves, but could not in any way benefit from donations and grants by their natural white parents and had to show respect to white individuals. No emancipated individual could carry any offensive weapon either, and they had to pay due respect, when in contact with white people.<sup>11</sup>

In 1794, in the wake of the French Revolution, the Convention proclaimed that all men were created equal under the sacrosanct principles of liberty, equality and fraternity. While the slaves of Haiti, availing of the Convention's decision, managed to free themselves under Toussaint Louverture leadership, no move for freedom took place in the then Isle de France. The slaves' masters put up a strong resistance at the idea that their slaves could be set free and no move by the Convention could make them agree, so that a detachment of soldiers and emissaries of the French National Assembly were compelled to retreat in the face of fierce opposition. Isle de France thus became a breakaway colony.<sup>12</sup>

The decision of the *Assemblée Nationale* in France to grant the right to vote to all citizens, including free People of Colour, is characterized by a *flou juridique*, a legal void for this category of individual who, in principle, should henceforth enjoy all rights and privileges conferred upon white citizens, but this decision was challenged by the Whites of Isle de France who rejected the idea of having People of Colour being elected to sit at the National Assembly. Otherwise, this is a period marked by the acquisition of land by the free People of Colour who could henceforth have their children registered in the same Birth and Death Registers *registres paroissiaux*. Relations between Whites and Coloured People remain strained for over a century; this would reach its peak only in 1911, when a riot was avoided after the Election held in the same year between the factions of Armand Enouf, Member for the Plaines Wilhems District and Eugène Laurent Member for Port Louis.<sup>13</sup>

However, with the advent of Napoleon Bonaparte in power in 1802, slavery was reintroduced and many of the privileges conferred to free People of Colour abolished. The *Code Decaën* did not tolerate any bonding whatsoever between the White people and their Coloured counterparts. As far as inheritance was concerned, children born of mixed unions would not be allowed to make a claim or inherit any property from a white parent, even when the latter had left no direct heirs nor could a free person receive a donation either by will or notarial act.<sup>14</sup>

The refusal to abolish slavery is one of the root causes of the defeat of French forces in 1810, as the standing army was reduced to its minimum, while no free people nor slaves could be called upon to form part of a militia for fear of any uprising once armed.

## 4. SOCIAL JUSTICE DURING EARLY BRITISH OCCUPATION (1810-1968)

The British occupation which lasted from 1810 to 1968 was characterized by a series of measures destined to create a more egalitarian society, but things did not move fast in that direction for diverse reasons.

4.1 Although slavery was abolished in 1807 in Britain and slave trade in 1813, the British showed leniency towards the French *colons* who had decided to stay in Isle de France in as much that the treaty of capitulation of the 3rd of December 1810 had guaranteed that their land property would not be confiscated, they were thus allowed to import slaves to look after the sugar plantations. But following strong lobby from the Anti-Slavery Society who argued that Mauritius should not benefit from preferential prices for its sugars on the London Market as slave trade was still being practiced; illegal slave trade was brought to an end in 1827.

### 4.2 Protest for artisans, laborers and small planters and the advent of trade union

It was not before 1936 that the Mauritian society witnessed new configuration and consciousness of workers conditions. This occurred with the advent of the introduction of trade unions and the foundation of the Labour Party by Dr. Maurice Curé and Emmanuel Anquetil. This was perhaps the direct result of very low wages, vagrancy and indifference of the Government of the day more inclined towards the interest of sugar barons. Several strikes by workers struck the island claiming justice causing loss of life and damage of property. Protests also came from small planters as it had become difficult to survive with the meager revenue from the cultivation of sugarcane. In the absence of regulations concerning purchase and sale of cane in different factory areas, a drastic cut of 50% on the price of cane belonging to the *Uba* variety was effected. This added fire to the flame.

The Labour Party campaign had a tremendous impact on the mindset of the people, and it was the first time that an open confrontation took place between sugar barons and the masses which culminated into mass protest at l'Union Flacq where an angry crowd wanted to damage the factory. All the labour disturbances and protests culminated in the setting up of the Hooper Commission which published its Report in March 1938. Similarly, the Moody Report was published in 1943 to shed light on the reasons of labour unrest which occurred at Belle Vue Harel in the same year. It was during the confrontation of labourers and police that Anjalay Coopen and 3 other workers were shot dead. The Commission headed by Moody recommended legislation governing the purchase and sale of cane, the setting up of Industrial and Arbitration Tribunal and an increase in wages up to 10%. The first half of last century was thus marked by labour consciousness and opened the way for more social reform and better bargaining power of the labouring class including artisans and general workers.

### 4.3 Political reform

In 1885, an important event took place in the democratic field when free elections were held. But unfortunately, voting rights were restricted to only a few persons, as stringent conditions regarding property, rent and revenue debarred some 96% of the population from taking part. The result is that only the sugar barons and a few members of the Coloured community could vote. The Constitution of 1885 (Pope Hennessy Reform) continued up to 1948. Needless to say, the great majority of descendants of Indian immigrants and descendants of ex-slaves were debarred from taking any active part in politics.

Further, the riots of 1937 demonstrated clearly the resentment existing between the White plutocracy and the Coloured people. This is also another desire to enfranchise part of the population from the grip of the white plutocracy. In spite of the restrictions imposed by the *vote sensitaire*, a new elite emerged in the Indian community. At the Elections of 1936, 2 Indo-Mauritians, namely Rajcoomar Gajadur in Flacq and Dunputh Lallah in Savanne, were elected

## 5. MAJOR DEVELOPMENTS FROM THE 1940S TILL INDEPENDENCE

### *Introduction*

This period in the history of Mauritius witnessed a drastic change in the way the British Government viewed its colonies and their inhabitants. Following the publication of the Hooper Report in 1938 and the passing of the Colonial and Development Welfare Act 1940, major changes took place in the field of education, housing, and healthcare. These decisions also laid down the foundations of the Mauritian Welfare State.

Following the cyclone of 1892, the Sugar Industry was seriously hit and in need of capital for reconsolidation and expansion. Request for assistance from the United Kingdom met with reticence. In 1909, however, the Colonial Office appointed a three man Commission headed by Sir Frank Swettenham to enquire into the financial situation of the country and all problems connected with labour and immigration. The Commission submitted various recommendations and showed its apprehension concerning the idea that in spite of the overwhelming majority of people of Indian origin in the colony. These were not represented in the legislature. It is the Royal Commission of 1909 which recommended the cessation of labour recruitment from India. This marked a new era in Mauritian history. The First World War (1914-1918) did not slow down the fighting spirit of the emerging class of politicians which, hitherto, comprised the Indian elite.

### 5.1 The laying of the Foundation of a more egalitarian society

In their manifesto of 1948, the Labour Party already had plans to introduce Social Security, Old Age Pension, compulsory education, low-cost housing and expansion of co-operatives for small planters. Further reforms in education and health services were also advocated.

Indeed, this period in the history of Mauritius saw the beginning of a more humane society through constitutional reforms and the involvement of several intellectual elite dedicated for the cause of workers, artisans and small planters in Mauritius.

For the first time in the history of the island, elections were held in 1959 on the basis of universal suffrage. This marked an era of emancipation of the whole population in the fight for social justice.

In the field of healthcare, malaria had practically been eradicated which was taking a huge toll on the population. There was a marked balance between economic power in the hands of the plutocracy and political power in the hands of the population at large.

The first breakthrough in the field of education was brought about by the Education Act of 1941, when the administration of schools, primary, secondary, aided and non-aided were centralized. A common VI<sup>th</sup> standard examination was introduced and, under the pressure of the political class, primary education was expanded which paved the way for the enrolment of nearly of all children, although in many areas primary schools were non-existent. The country also witnessed the establishment of the University of Mauritius in 1965. Furthermore, following the cyclone *Carole*, a new housing policy for the poor was implemented which provided housing facilities to the most needy. Many of the measures taken to reinforce Social Justice were inspired by reports submitted by two famous economists, namely Meade and Titmuss.

## 6. REVIEW OF POST 1968 SOCIAL MEASURES

**In the field of health, housing, education, income maintenance and social security/ Measures taken by the government in order to maintain Social Justice in Mauritius.**

### Introduction

Measures taken by the State in the area of health, housing, education, social security and employment have been great landmarks in Mauritian History. What is remarkable is that all successive Governments which have been in office since Independence, while striving hard towards economic consolidation and expansion, have at the same time never relegated the poor and the vulnerable to the periphery of society. This philosophy has contributed tremendously to Social Justice and improved the overall quality of life of the people.

Long before the Second World War, a wind of change was blowing in the British Empire and a more humane approach for the old and vulnerable class was advocated. This was in line with the growing influence of the British Labour Party under Ramsey Mac Donald and others.

Some of the measures for the better care of the poorer section of the community in power in Britain were advocated in some colonies including Mauritius. Already a Poor Law Office was created in 1904.

### 6.1 Overall Achievements

One of the most remarkable features characterizing post-Independence Mauritius is its set philosophical basis of policy-making, inspired by Fabians and the ethical Socialism of today. However, as from 2005, major structural changes took place in the vision and application of Social Justice in the wake of global changes in the political, social and economic configuration.

Fundamentally, there have been profound structural changes on the level of the economy as well - Mauritius has been able to move from an agricultural economy based solely on sugar, to new areas such as Tourism, export processing, fish processing, financial services and Communication Technology.

### 6.2 Keynesian Economics, Fabianism and the Welfare State

The carving of Social Justice in Mauritius was the direct result of the political philosophy of the Founding Fathers of Mauritian Democracy. In times of economic recession, characterized by massive unemployment, people were given unproductive jobs just to help stay out of absolute poverty and keep the economy running. Major political figures, such as Maurice Curé, founder of the Labour Party, Emmanuel Anquetil, Guy Rozemont and Dr. S. Ramgoolam the country's first Prime Minister, profoundly influenced policies towards Social Justice

### 6.3 Achievements in the field of Health

Providing a good health care is one of the means of preventing poverty through the prevention of sickness. The Government Medical Service has its origins in the provision of medical care under the Poor Law. Prior to Independence, there were 8 general hospitals, with 1642 beds and 46 dispensaries. There also existed 24 sugar estate dispensaries, with a total capacity of 494 beds. Over time, the sugar estate hospitals were phased out and in 1991, the Government Medical Service had four Regional Hospitals, five District Hospitals and four Specialized Hospitals. Private and Public Health Care also exist side by side; the former is serviced by about 50% of the physicians in the country.

Today, Mauritius has a highly developed free health service, modelled mainly on the British system. However, the disease profile has changed - from the diseases of poverty, such as malaria to the diseases of affluence, such as hypertension, diabetes and cardiovascular diseases. Following Independence, high priority was given to preventive health and primary health care, including ante-natal and maternal health care. Moreover, much attention was also given to supplying of clean drinking water and proper disposal of human waste and the collection of refuse both in urban and rural areas.

Government today provides a comprehensive, high-tech health service free of charge to the population. This serves as a basis for giving social wages to the poor and vulnerable since despite low wages, people are able to maintain an optimal health, as the health service is free and efficient on demand. Amongst others, the Ministry of Health and Quality of Life carries out measures for the promotion of health which includes the prevention of diseases; the treatment of diseases; a controlling practice of medicine, dentistry and pharmacy, and providing facilities for the training of paramedical personnel.

### 6.4 Achievements in the field of Housing

Housing is another sector which has greatly contributed to the quality of life of vulnerable groups. Mauritius, being a small tropical island with limited availability of space, is prone to cyclonic weather, and this has had a bearing on the policies of the Government. Following the cyclone 'Carole', the Central Housing Authority was established in November 1960. It has to this day built 19,440 low-cost and cyclone-proof houses. The Mauritius Housing Corporation (MHC), which was set up in 1963, catered for the housing of the middle classes. Initially assisted by a loan from the Commonwealth Development Corporation, and loans from local Insurance Companies, it started operating as a Private Limited Company in 1989 to become a major player in the provision of loan facilities in the construction sector.

In 1972, the MHC launched the Exceptional Savings Scheme, and then the *Plan Epargne Logement* (PEL) in 1988, to encourage savings for the purpose of the construction of a house. A new Savings Scheme was launched in 2009 - the Junior PEL Savings Scheme with a unique package of benefits designed for babies and children of up to the age of 18. Since 1986, as part of its programme to help lower income groups, the MHC has been offering them government-sponsored loans.

To date, the MHC Ltd proudly claims to have helped more than 75,000 families in Mauritius and Rodrigues to become house-owners.

The National Housing Development Company (NHDC) was set up in March 1991 to plan and implement a National Social Housing Programme with special consideration for the most vulnerable groups in Mauritian Society. To date, some 12,000 housing units have already been constructed, with a total investment of about 4 billion Rupees. In addition to the costs of constructing the housing units, Government provides land and all the infrastructural facilities, such as roads, electricity, water supply and sewage facilities. Provision is also made for open space and green areas in these housing complexes, with the possibility of nurseries, schools and community centres. In order to achieve the goal of providing each family with a decent housing unit in Mauritius, the Government intends to build another 10,000 housing units for the poor and the vulnerable.

## 6.5 Achievements in the field of Education

After the country achieved Independence, it is observed that the different National Development Plans of 1971-75; 1975-80; 1980-82; 1984-986; 1988-1990; 1992-1994, all stressed the need for an Education System geared towards the socio-economic needs of the country. The first National Development Plan, which coincided with the implantation of the Export Processing Zone in the country, emphasized the need to move from academic to more Technical and Vocational Orientations. Under the formal recommendation of the UNESCO/UNDP for Curriculum Development, Teacher Education and Research, the Mauritius Institute of Education was established in 1973. Secondary Education was made free in 1976, after which the Private Secondary Schools Authority (PSSA) was established. Tertiary Education became free in 1988.

Three important Commissions on Education need to be mentioned under this review: The Glover Report (1978); the White Paper on Education (1984) and the Ramdoyal Report (1990).

The Glover Report (1978) reviewed the post-primary and secondary sectors. It identified various problems, including infrastructure, overcrowding in schools, lack of equipment, poorly-qualified teachers, the language issue and private tuition. The White Paper (1984) stressed the efficiency of the Education System and underlined the high number of failures at the Primary level and the Certificate of Primary Education (C.P.E). The White Paper also gave clear indications that those C.P.E drop-outs could follow technical and vocational courses. Finally, the Ramdoyal Report (1990) considered issues discussed under previous reports, but also dealt with the problem of private tuition and the pre-primary sector.

Despite several debates, plans and Commissions on Education, two main issues remained unsolved: too much academic orientation and a considerable number of drop-outs from the system.

The 1991 Education Sector Master Plan (ESMP) was a breakthrough in modernising the Education System, making it more adaptable to future needs. The main thrust was on the streamlining of C.P.E failures towards Vocational Training which provided a solution to the high drop-out rate. Unfortunately, one of the most important recommendations of making nine-year schooling compulsory was not put into practice.

The Social Fabric Study<sup>1</sup> observed that, in spite of efforts to expand, outcomes of the System remained modest and were mostly to the benefit of advantageous groups. S. Bunwaree<sup>2</sup> repeatedly laid stress on the importance of Cultural Capital in scholastic achievement, which includes linguistic competence, literacy in the home, reading habits, availability of reading materials etc. She argues that this is what makes the Education System less equitable, especially for the disadvantaged groups.

In March 1998, another plan for the Education Sector was published: Action Plan on Education (1998) which revealed great similarities with the previous plan published in 1991. However, some positive points were: decentralization, compulsory nine-year schooling and the elimination of exclusion in school.

One of the darkest spots in Primary Education is the 'rat race' to secure admission in 'star secondary schools' in Mauritius. However, in 2002, the ranking system was abolished and a new grading system was used instead. Nevertheless, 'pressure' put on students is indeed very high to seek admission in a 'good' secondary school.

In an effort to deal with the problem of C.P.E and school drop-outs, the Government came with the concept of inclusive Education: the ZEP (Zone Education Prioritaire) schools where several measure were taken to improve the performance of pupils from poorer sections of Mauritian society. Till now, the results have been rather 'mixed'.

The Education and Human Resources Strategy Plan 2008 - 2020<sup>3</sup>, published in 2009, is a very elaborative document depicting the Government's firm intention to bring about fundamental reforms in Education. Two key words are: creativity and innovation as the basis of reforms which are essential for meeting the needs of a growing economy. The plan covers all sectors: Pre-Primary, Primary, Secondary, Technical and Vocational and Tertiary. Focus has also been put on major

pillars of a good Education System, namely Increased Access, Improved Quality and Morally-Binding Equity.

With the implementation of this plan, the Government is determined to realize its objectives: to achieve excellence by promoting an effective and efficient Training System that is inclusive, integrated, comprehensive and holistic.

## **6.6 Achievements in the field of Income Maintenance and Social Security**

Social Security has its origins in the Poor Laws of Colonial Mauritius, all enacted under the guidance and approval of the Colonial Office. It was under the pressure of the Labour Party that much legislation came into force in the Colony in this field.

Although many measures were gradually taken at the beginning of the 1950s, with the means-tested Old Age Pension at the age of 60, Family Allowance in 1961, the most important piece of legislation was the National Pensions Act 1976 which introduced Social Insurance for Private Sector employees, through payment of contributions and the payment of pensions on a universal basis. Other important measures are: the Unemployment Hardship Relief Act 1983, the Employees' Welfare Fund Act, 1991 and the National Savings Fund Act, 1995. Unemployment hardship relief provided assistance to unemployed heads of households. The Employees' Welfare Fund was created for the welfare of all employees from the Private and Public Sectors.

In a spirit of growing concern for vulnerable groups, several measures were taken in favour of the elderly, the disabled and abandoned children.

As at date, the Social Security Scheme under the National Pensions Act 1976 has the following coverage: Universal (Non-Contributory) Benefits; Social Insurance (Contributory Benefits) and Compensation for injured workers. This Act provided a comprehensive Pension Scheme for the protection of all categories of people.

Universal Benefits comprise Basic Retirement; Basic Widow's Pension; Basic Invalid's Pension; Basic Orphan's Pension; Guardian's Allowance; Child's Allowance; Inmate's Allowance; Carer's Allowance for Beneficiaries of Basic Retirement Pension and Carer's Allowance for Beneficiaries of Basic Invalid's Pension.

Contributory Benefits comprise Contributory Retirement Pension; Contributory Widow's Pension; Contributory Invalid's Pension and Contributory Orphan's Pension.

Compensation for injured workers (or their dependents) is normally paid to workers who are injured on duty. It is also known as Industrial Injury Benefits. Such compensation comprises Industrial Injury Allowance; Disablement Benefit; Survivor's Pension; Dependent's Pension and Orphan's Industrial Injury Allowance.

Universal Benefits are paid in a spirit of Social Justice, and despite pressure from international Institutions to do away with some of the measures in times of depression, the Government has maintained them. For example, in the case of Basic Retirement Pensions, at one stage of policy-making, it was decided to target it, but subsequently, it was reinstated. Social Security Benefits absorb the biggest chunk of Welfare spending.

## **6.7 Greater Social Justice fostered through the Trade Union Movement**

At the origin of employment policy in Mauritius is the pressure put on the Colonial Government by the general working-class consciousness and the growth of Trade Unions, especially after the Second World War.

In 1965, there were about a hundred Unions registered in Mauritius, as opposed to only about 25 in 1948.<sup>4</sup> The first Law which revolutionized labour / employment relations in Mauritius was the Security of Employment (Sugar Industry) Ordinance which came into force in November 1963. It was a measure against growing unemployment which provided for work by employers in the Sugar Industry and provided for employment during the intercrop season. The Act was further amended in 1966 to consolidate provision of work during the intercrop season.

The second Law which revolutionized Employment Relations and the protection of workers is the Termination of Contract of Service Ordinance which came into force in November 1963. This Law provided for the payment of a severance allowance to a workers whose employment is terminated by an employer.

Wages Councils for both agricultural and non-agricultural workers were set up to review the quantum of wages and the application of their recommendations did contribute immensely to the increase of wages and the improvement of the standard of living.

Regulations were also made in relation to termination of contract by the Industrial Relations Act (IRA) 1973 and the Labour Act 1975. The Export Processing Zone Act was passed in 1970 for employees in the Export Processing Zone Sector. This Act was replaced by the Industrial Expansion Act (IEA) 1993.

Termination of contract of Public Sector workers was regulated by special regulations for the Public Service and the Constitution and which were enforced by special bodies such as the Civil Service Industrial Relations Commission and the Civil Service Arbitration Board. In all cases, the burden of proof of dismissal rests with the employer.

In 1988, the Employment of Disabled Persons Act came into force. This Act provided for the employment of disabled persons. During the same year, the Occupational Safety, Health and Welfare Act which regulated health, safety and welfare standards in the work environment came into force.

The two most recent pieces of legislation in the field of Employment in Mauritius are the Employment Rights Act 2008 and the Employment Relations Act, 2008, which came to replace the former Labour Act, 1975 and the Industrial Relations Act of 1973 respectively. These Acts came in at a crucial moment in the history of the island in order to respond to the new work environment, as a result of forces of globalization.

However, there have been widespread protests against these two Laws from Trade Unions since 2008 and recently, Government has agreed to make amendments to the Acts. Nevertheless, many positive results have come up such as registration of Trade Unions for officers of the Fire Services Department and the Prisons Department.

## 7. ETHNIC BALANCING POLITICS AND SOCIAL JUSTICE

### *Introduction*

The present Mauritian society, which is a vibrant democracy, is the result of several economic, social forces which have interacted together over time. Given its complex ethnic composition, when it comes to democracy and politics, Social Justice should be one of the cornerstones for peaceful development. To achieve this end, the *modus operandi* is to use what is specific to Mauritius: 'ethnic balancing' - so that all ethnic groups feel 'comfortable, secure and included'. This technique was successfully used and in contemporary times, it is an essential tool for anyone wishing to achieve success in the field of politics.

### 7.1 Ethnic Origins of the Population of Mauritius

Mauritius is a land of migrants. When the Dutch landed in 1598, the island was uninhabited. It is only the French colonisers who decided to settle permanently on the island. They brought in slaves from Madagascar, from mainland Africa and India. When the British took over the island, there was already some form of a 'Mauritian Society' which took shape as a result of nearly a century of interaction of various people namely the Whites, the Coloured and people of slave descent from Africa and Madagascar.

Vijaya Teelock,<sup>1</sup> while describing the demography of Mauritius at the end of the 18<sup>th</sup> century, mentions a huge increase in the size of free people. The authorities at that time could not prevent intermarriage between Whites and non-Whites, despite laws against that. It is important to note

that since then, there has been a considerable intermixture of Africans, Malagasy, Malays, Indians from Malabar Coast, Bengal and Madras and the Whites themselves.

## 7.2 Political Consciousness of Ethnic Group

After the abolition of slavery, the arrival, gradual settlement and assimilation of Indians immigrants in the new 'Mauritian Society' already made Mauritius a 'melting pot' in the Indian Ocean. Despite racial intermixture, there were clear categories in the population of Mauritius: the Whites, the Indians, the ex- slaves and the Coloured. Rémy Ollier, a person of mixed white and Indian origin, was seen as the first great leader of the Coloured population.

## 7.3 The Class Struggle

The establishment of the Labour Party by Dr. Maurice Curé in 1936 was a breakthrough in the fight for Justice by artisans, general workers, labourers and small planters the latter being mostly Indians. The strikes which followed shortly afterwards sowed the seeds for a Constitutional Reform which ultimately led to the Independence and the birth of a new multiracial and multicultural democratic country.

Following the unprecedented success of the Labour Party at a rally held on 1 May 1938, there appeared a determination on the part of workers and artisans to put a stop to injustices meted to them. On the plutocracy side, there was an effort to stop the awakening of the proletariat. Dr. Curé became the main target of newspapers and a private radio who were supporters of the oligarchy. Varma<sup>6</sup>, has described in detail the injustices meted out to Dr Curé: how the money he collected from labourers could not be deposited in a bank account; how a Law was passed to inquire into the activities of 'Société de Bienfaisance'; the boycott of the newspaper *Le Peuple Mauricien*; how the money collected from workers was confiscated; and the manner in which his appeal against the judgement of the Supreme Court was rejected by the Privy Council. Such a state of things simply describes the tug-of-war between capitalists who were backed by the Colonial Government and the Labourites.

## 7.4 The New Constitution and the First Popular Elections of 1948

In the wake of the policy of decolonisation in the British Empire, a request for better representation of the masses met with a more favourable response by the United Kingdom. Regarding Mauritius, a new Constitution was adopted, after which the first popular elections were held in 1948. During the elections, the Labour party defeated the traditional Conservative Party. Dr. S. Ramgoolam, Guy Rozemeont, Edgar Milien and R. Seeneevassen were among those who won the day. This marked the end of 63 years of Conservative rule. According to Varma<sup>7</sup>, this was a period when all separatist tendencies based on ethnicity, race and religion, were replaced by a sense of patriotism inspired by a class struggle.

## 7.5 Ethnic struggle and the threat of Communalism inspired by the Parti Mauricien

The Conservatoire defeat in the 1948 elections was a clear signal of popular support for the Labour Party. The *Parti Mauricien*, later on *Parti Mauricien Social Democrate*, used a political strategy by branding the whole Hindu population as communalists and, at the same time, asking all non-Hindus to unite. The political awakening of the Indo-Mauritians was interpreted as the rise of Indian Nationalism. The opposition expected the Indo-Mauritians to join them in a common front against what was termed as a Hindu-dominated Labour Party, the aim being to create a rift between Guy Rozemont and Dr. Ramgoolam. The PMSD thus weakened the Labour Party, by using the communal argument, and it championed the cause of all minorities, including the Muslims. This part of the history of Mauritius is perhaps the darkest in terms of national unity and nation-building.

## 7.6 Ethnicity, Political Parties , the Constitution and Independence

After attempts towards the formation of all-Party Government fail, the country was clearly divided in two blocks: One in favour of Independence and the other against. During the 1967 elections, 44 % of the electorate in the country voted against Independence. It was Gaëtan Duval's *Parti Mauricien* who rallied most of the Christians backed by the white plutocracy political grouping of some capitalists and its allies: The Tamil United Party and the Muslim United Party. The 1967 elections

were, in reality, an ethnic exercise which did not help forge national unity for a country set to achieve Independence soon. With the fear of ethnic domination, many people, mostly Christians, started leaving the country for fear of persecution and the retaliation from the Hindu Community.

### 7.7 Post-Independence Elections: An ethno-political game

The aftermath of the 1967 elections, which had as its main theme, ethnic strife has left deep scars in the Mauritian electorate. Kadima Denis and Roukaya Kasenally<sup>8</sup> have analysed the various political formations and coalitions in relation to the elections that have taken place after 1968. The paradox is that all political parties openly preach national unity but actually play ethnic games to achieve power. This ethnic game, which can be easily traced back to the pre-Independence period, continues as every political block tries to show how 'national' a party it is and their leader a '*rassembleur*', that is someone successful in bringing together people of various ethnic backgrounds, but the reality is far from this. The scars of ethnic identities can still be seen in the choice of candidates in the constituencies which they wish to represent in the Legislative Assembly.

## 8. CLAIMS OF INJUSTICES IN THE COUNTRY: POVERTY AND EXCLUSION

### Introduction

The track record of Mauritius in the field of Social Justice is a really impressive one. It has won recognition the world over. Contrary to the opinion of Meade<sup>1</sup> and Titmus<sup>2</sup>, Mauritius has made it a success. One of the cornerstones of success is undoubtedly the peaceful coexistence of the various ethnic groups in a vibrant democracy. Fabian Socialism, inspired by the British Labour Party, even prior to Independence, has had a tremendous influence on policy-making, and all Governments to date have openly professed economic growth with Social Justice.

However, sadly, as is usually observed in several democracies, there are cries of Injustice, the voice of which has become louder during the past two decades. These cries of Injustice have come mainly from the Creoles who feel that they are disproportionately represented in the main stream of power.

### 8.1 Major structural Changes in Mauritian Society

Mauritius has been traditionally an agricultural economy based on sugarcane cultivation. When Meade and Titmus painted a very bleak picture of the future of Mauritius, the decision-makers, with the help of international institutions, helped move the country from a mono-cultural economy to one with several pillars, each substantially contributing to the national growth. The implantation of the Export Processing Zone, the Tourism Industry, the Financial Services Sector, the Fish Hub, Information and Communication Technologies Sectors has brought profound changes in the society. In terms of efforts, one must acknowledge the contribution of all Mauritians, irrespective of their ethnic background. Indeed, the review of the Social Policies since Independence bears testimony to this commitment. While many multicultural countries have fallen apart, or are beset by conflicts, Mauritian multiculturalism has been spared from such situations.

In its development, Mauritius has also constantly adapted to the changes in the global economy. While initially, it was the Keynesian 'demand side management' of the economy, since 1983 there has been a gradual shift towards a 'supply side management' of the economy. Market forces have come into play, along with development, in order to encourage investment and earn foreign exchange earnings. While the Government has continuously been consulting various parties in national decision-making, market forces have also been contributing to 'the trickle down effects' in the lives of people. In fact, there has been a gradual liberalization of the economy since the mid 1980s which was accelerated after 2005.

## 8.2 Social, Economic and Political Rights guaranteed by the Constitution

The Constitution of Mauritius enshrines the rights of people to diversity in terms of religion, culture and politics, irrespective of race, ethnicity and caste. It is important to note that our Constitution has neither a preamble nor a declaration of policy. After evoking the State in Chapter 1, it jumps straightaway to the protection of fundamental rights and freedoms of the individual. Such order in the tabulation of the Chapters reflects the importance of guaranteeing such rights in democracy.

Social Benefits are shared by all citizens. In addition, there are several institutions which have been set up to guarantee social, economic and political rights of citizens of Mauritius, as already mentioned. The Judiciary in Mauritius operates in a fair and independent manner.

Except for the January 1968 riots between Creoles and Muslims, which lasted for about a week, where about 20 people were killed and 220 injured and which necessitated the intervention of British Troops, the country has not since lived through any major social upheaval.

## 8.3 Cries of Injustice in the Republic of Mauritius - The Chagos Saga

The Chagos Archipelago was part of the outer islands of the Colony of Mauritius. However, in the wake of an independent Mauritius, the British, contrary to U.N resolution regarding the dismantling of territories of any future State, decided to separate the Chagos Archipelago as part and parcel of the Colony of Mauritius. The Chagos Archipelago, very much like Rodrigues, Agalega, was inhabited by people of slave descent who laboured in the Coconut and Fishing industry in extremious conditions. The decision of the then Colonial Office to sever connections with the Mauritius mainland is a dark spot in Colonial History of the British Empire. As a consequence of the British decision, in 1970, thousands of them were deported to Seychelles and to Mauritius. They were uprooted from their motherland Peros Bahnos and Salomon Islands in the Chagos Archipelago, Diego Garcia. Following an agreement between USA and UK, shortly afterwards, Diego Garcia was ceded to USA for the establishment of a military base with sophisticated armaments. In 1972, the British Government paid a sum of 650,000 pounds sterling to the Mauritian Government destined for the displaced Chagossians. In 1982, the UK Government paid a further sum of Rs. 100 million to the Chagossians.

The Chagossians are the descendants of slaves from Madagascar and Mozambique and were brought there by the French between 1780 and 1828 and by the British in the 1840s and 1850s.

The exiled Chagossians are today dispersed in Mauritius, Seychelles and the U.K. It was in 2002 that the Chagossians, who are presumed to be *de facto* British citizens, were allowed in the UK. These people, on their own, have fought to return to their native island and are presently awaiting the decision of the European Court of Justice for Human Rights over their right to return in their homeland. The tragedy is that it is nearly after 40 years that the Government of Mauritius has challenged Britain's decision to excise part of its territory. The argument is that the Chagos Archipelago was ceded to Britain in exchange for the rejection of certain proposals concerning the mode of electoral representation in a matter of long-standing debate.

In Mauritius, most of the Chagossians who were living in Cité Ilois, Baie du Tombeau, have sold their property and left for the UK. Presently, there are about 150 families only in Mauritius.

## 8.4 The 'Malaise Creole' : The Social Exclusion of the Creole Community

The term 'Malaise Creole' was used for the first time by the Creole Catholic priest Father Roger Cerveau in the year 1993. He used the term to describe a situation where the Creole community, particularly the Afro-Creoles descendents of slaves, were not able to integrate the mainstream of Mauritian society in terms of education, health services, employment and housing. Their situation, in comparison with other ethnic groups, was relatively bad and it was felt that something should have been done about it. In the words of Sewlyn Rayan<sup>3</sup>:

*" Creoles are the most economically and politically marginalized group in Mauritius. They are the dockers, the fishermen, the lorry's assistants, home and construction workers and in some cases lower level clerks and factotum in the public and private sector."*

The Malaise Creole had also to do with the history of the Creoles: the dispossession and suffering associated with slavery and the aftermath of it, the consequences of which can be seen in the persistence of poverty, social problems and political marginalization.

Despite the panoply of measures to bring about Social Justice in the country by successive Governments, widespread discontent persists in the Creole milieu. The malaise also had certain physical and spatial characteristics. Social Housing Projects across the State are now better known as the *cités* and over the years of their existence, some of these popular residences have become breeding grounds for all sorts of problems besetting Mauritian Society: unemployment, poverty, delinquency, prostitution, child abuse, criminality etc.

### 8.5 The 'Kaya' Episode and the Creole Community

Despite the numerous measures taken to ensure the social citizenship of Mauritians at times, for both the rich and poor, the country witnessed the 'Kaya Episode', the open expression of the 'malaise Creole' which struck the Mauritian Society. Violent protests against the singer's death in doubtful circumstances was an expression of the 'Otherness' and the 'inability to integrate' the mainstream of Mauritian Society. Conscious of the wide discontent of the Creole community, the Government decided to bring further certain measures to improve the situation: the introduction of Zone d'Education Prioritaire (ZEP schools), poverty eradication programmes, such as *Anou Dibout Ensam* and a Trust Fund for the Vulnerable and reinforce measures for housing accessibility. The creation of a separate a Ministry for Social Integration and Economic Development, to look after the poorest of the poorest of Mauritian society, is undoubtedly a powerful effort towards the eradication of absolute poverty.

### 8.6 Further explanations of the Exclusion of the Creole Community

There have been several interpretations of this state of affairs for this ethnic group, but many psycho-anthropologists and historians trace it back to slavery and its aftermath. The treatment which they were subjected to and their deculturalization appear to be deeply ingrained in their sub-consciousness. W. Devore and E. Schlesinger<sup>4</sup> have strongly argued that the past affects, and gives shape to, problems manifested in the present. Such non-conscious phenomena affect individual functioning and become a source of strain, discord and strife.

Other studies have also been done in the context of a deep insight of the psycho- sociological problems of Creoles in Mauritius and are contained in this report.

#### 8.6.1 The protection of women's rights

The Colony of Mauritius made history when it extended voting rights to women in 1948, at that time when such rights were not even in force in many Western democracies. Over the years, women were empowered; as legal persons, they can act independently of their spouses in matter concerning business, property acquisition, child custody, following Ordinance 50 of 1949 which provides for separate regime of goods and property. Men and women enjoy the same rights under the Constitution and the Law; and the Ministry of Gender Equality, Child Development and Family Welfare promote the rights of women. We can also appreciate the efforts made to change patriarchal attitudes and stereotypes regarding the roles and responsibilities of women and men both in the family unit and in society; and to empower women and promote gender equality and equity.

Nevertheless, these efforts need to be intensified through comprehensive awareness raising and educational campaigns, as sexist advertising, gender job classifications, gender prejudices are still very much present. Women continue to play subordinate roles in society and societal discrimination continues.

Even if the Law prohibits rape, including spousal rape, rape is still widespread. Many victims choose not to report such cases to the police because of cultural pressures and fear of retaliation. Similarly, the Law criminalizes domestic violence, but it is still a major problem in the country. The Ministry for Gender Equality, Child Development and Family Welfare is leaving no stone unturned to create awareness against domestic violence and child abuse.

Abortion in Mauritius is criminalized in all circumstances, including when the mother's life is at risk, and when the pregnancy is the result of rape - Article 235 of the Criminal Code. Punitive measures, imposed on women undergoing abortion, must be removed and a review of the circumstances in which abortion could be permitted must be undertaken. Sexual and reproductive health services must be more widely available in Mauritius and reproductive health education and services must be reviewed. Similarly, birth control measures should be made more readily accessible to poorer segments of the population.

#### **8.6.2 Legal protection and services for disabled people**

Persons with disabilities are no longer neglected as in the past. Now, there is an increased awareness of their needs and the Law prohibits discrimination against people with physical, intellectual, sensory and mental disabilities in the fields of employment, education, health care and in various other services. According to the Law, organizations employing more than 35 persons have to allocate at least 3 percent of their positions to disabled persons. It must also be stressed that disabled persons qualify for financial assistance by the State. Specialized schools are run to rehabilitate them and make them enjoy, as far as possible, a normal life.

Government services generally enforced this Law and such initiatives must be widely encouraged in the Private Sector. Programs are also effectively implemented by the State to ensure that persons with disabilities have access to information and communications. If progress is noted in this field, such positive practices need to be further encouraged both in the Public Sector and State institutions.

#### **8.6.3 Revision of the Constitution**

With regard to the Constitution, there is a need to revisit some Sections, as they do not presently meet the needs of a true democratic society. Indeed, more than 43 years have elapsed since Independence and public opinion is that a revision must be undertaken. An example is in Chapter 2 of the Constitution which provides for the guarantee of civil and political rights, and this Chapter may be amended to include guarantees of economic, social and cultural rights. Although not explicitly enshrined in the Constitution, they are widespread in practice. Such amendments will go a long way towards making Mauritius a sophisticated democracy as regards representation of minority groups.

The Best Loser System has so far ensured an adequate representation of ethnic minorities in the National Assembly, but there is a heated debate on this issue. Various proposals have been made to replace ethnic denomination in the first schedule of the Constitution. The elimination of the best loser system is far from making unanimity. This can only be viewed in the context of an overall review of the Constitution which would ensure better representation of all segments of the population.

#### **8.6.4 Role and freedom of speech and press**

Even though the Constitution and Law provide for freedom of speech and of the press, most Governments in power do not necessarily respect all such rights sometimes. If it is true that the independent media are able to express a variety of views which has lately been criticised and blamed.

Furthermore, the Government-owned and sole domestic television network, the Mauritius Broadcasting Corporation (MBC), seems to be primarily viewed as a propaganda tool by the opposition. Cries have been raised against abuse of the MBC as a tool in favour of the party in power, and these cries should not remain unheard. The practice of the MBC to provide an extensive coverage of politicians attending various functions, including socio-religious ones, and the diffusion of large segments of their speeches in its news bulletin should be discouraged.

## 9. CLAIMS OF GLOBALIZATION, SOCIAL JUSTICE AND THE END OF AN ERA IN MAURITIUS

### Post-2005 Revolutionary Measures in the Administration of Social Justice

#### Introduction

Mauritius has moved from a period characterized by the absence of Social Justice, as was the case during the period of slavery (1721-1839) to a situation where Social Justice has become the very essence of a democratic society. Around the 1980's, when the liberalization of the economy took shape, there was a marked improvement of the lives of the people. However, the fall of the Berlin Wall in 1989 had profound global consequences on the economic, social and cultural profile of nations: Mauritius was no exception. The old concept of Social Democracy had to be reinvented and this new approach so essential to adapt to the widespread changes as it is seen in the socio-economic policies of the Government of the day.

#### 9.1 Some landmarks of Neo-Liberalism and Reduction of Social Protection in Mauritius

Mauritius had fallen in the clutches of the International Monetary Fund during the late 1970s and early 1980s as a result of growing balance of payments deficits and stagnation of the economy. The country had to go through a structural adjustment programme where food subsidies had been reduced and wages were held below the rate of inflation. In 1983, a Sales Tax of 5% was introduced to raise Government revenue. In 1998, the Value Added Tax (VAT) at the rate of 10% was introduced in replace of the sales tax. Shortly afterwards, in 2000, the VAT was increased by 50%, bringing the rate to 15%, while its applicability was extended to services as well. The paradox about Value Added Tax is that it is paid by even the poorest of the poor.

#### 9.2 Income Tax Rates

Taxation is a financial charge imposed on the individual by the State mainly to raise revenue in order to be able to pay for the provision of public goods and services. Taxation also serves the purpose of redistribution of income from the rich to the poor. In the process of the gradual liberalization of the economy, there has also been an income taxation revolution: from a top marginal rate of income tax of 70% in 1982-83 to 35% in 1985-86. In 1999-2000, it was still decreased to 28%, and finally in 2005, it was brought down to a flat rate of 15%, a figure on a par with the Value Added Tax. (VAT). This rate probably helped in making Mauritius the 17<sup>th</sup> most business-friendly country in the world. Higher rate of taxation has the effect of discouraging investment, thereby in increasing unemployment. This strategy seems to have had positive results so far.

#### 9.3 The Year of the Great Divide: 2006

People in Mauritius are now jealous of the rights and privileges acquired since the country achieved Independence. Any attempt to strip people of their acquired rights and privileges tends to give rise to widespread discontent.

The 2006- 2007 Budget, which advocated the abolition of certain social measures due to financial constraints, was considered in some quarters as a departure from Social Justice Policy.

Widespread protests from all sectors, including Trade Union leaders, came in as a result of the abolition of subsidies on rice and flour; the end of the school feeding programme; the elimination of the 50% fees paid by the Government to students sitting for School Certificate and Higher School Certificate examinations; the introduction of the National Residential Property Tax; the end of tax concessions on revenue declaration; retirement at the age of 65; the introduction of taxes on interests received on savings in a bank. All these measures directly contributed to the pauperization of middle classes and the stigmatization of the lower and working classes.

In brief, this was a set of policy measures taken in line with global integration in a Neo-Liberal environment and as a result, the welfare and social protection measures were now funded to a large extent by the middle and lower classes. At this stage of policy-making, poverty and social

exclusion were rediscovered and the State's strategy to deal with them also changed. In the wake of the improvement in the financial situation of the country, however, some measures relating to food subsidies, assistance to students belonging to the lower income groups and other measures concerning payment of Old Age Pension and tax on interest received on savings have been withdrawn.

## 10. NEW APPROACHES: EMPOWERMENT, INCLUSION AND RESPONSIBLE CITIZENSHIP

### Introduction

Despite efforts made to initiate and reinforce measures to combat Social Injustice within a socio-democratic environment, poverty, social exclusion and other social ills still persist in several parts of the world. Mauritius is no exception. Many people continue to live in poverty and in deprived conditions, despite the rising standard of living of the average Mauritian. The Government of the day has not remained insensitive to this situation, and several measures are being initiated to reinforce Social Justice.

### 10.1 Poverty in Mauritius

Following rapid progress on the economic and social fronts in the 1980s and 1990s, there were visible signs of a better standard of living for the average Mauritian.

Various Ministries were involved directly and indirectly in programmes aiming at reducing social exclusion and alleviating poverty. In addition, several Local Authorities, Cooperative Societies, and NGOs and grassroots organizations made efforts towards poverty alleviation. Despite, efforts made between 1985 and 2005, absolute poverty still exists.

The 1999 riots also confirmed the "malaise Creole" where one ethnic group felt disproportionately represented in institutions and various spheres of activity.

According to the Central Statistics Office<sup>2</sup>, Mauritius has about 23,700 poor households, with a population of about 93,200 poor persons. Although there is no official poverty line in Mauritius, there have been several attempts to quantify poverty.

### 10.2 Post February 1999 Poverty Alleviation Programmes

After the February 1999 riots, involving the death of a Creole pop singer in police cells in mysterious circumstances, Government adopted a new approach to alleviate poverty. This was a participatory approach where the poor were empowered with relevant skills to get out of the poverty trap. Various programmes were adopted along these lines.

### 10.3 Other welfare measures destined to encourage a new class of *entrepreneurs*

In 1999, the *Trust Fund for the Social Integration of Vulnerable Groups* (TRSIVG) was set up and operated under the *aegis* of the Ministry of Finance and Economic Development. A sum of Rs. 500 million was earmarked for the financing of community development projects, micro credit schemes and loans to needy students and improvement on housing infrastructure.

The *Anou Diboute Ensam* (ANDE) programme, funded by the European Union, to the tune of Rs.100 million, focused on social infrastructural, income generating and technical assistance projects. This lasted between 1999 and 2004. However, both projects seem to have yielded mitigated results due to lack of support by social workers.

Similarly, the Rural Diversification Programme (RDP) of the International Fund for Agricultural Development (IFAD) had two components: *Micro Enterprise and Micro- Finance Development and Community Development* which focussed on land irrigation and in the fisheries sector.

In the year 2006, the Government embarked on an Empowerment Programme spread over a period of five years to the tune of Rs. 5 billion. The National Empowerment Foundation (NEF) superseded the Empowerment Programme in 2008. In the same year, the Eradication of Absolute Poverty (EAP) Programme to the tune of Rs. 395 million was voted in the Budget. This aimed at providing outreach facilities in the 229 pockets of poverty identified in the country in terms of increasing access and equity in education, health, environment etc.

The *La Valette* very low cost integrated housing project is an example of the new approach in the reduction of absolute poverty and the Foundation intends to go ahead with five similar projects in several parts of the island. However, although the annual payment is very low (less than a thousand rupees) nearly 30% of the beneficiaries do not care to honour their engagement.

Corporate Social Responsibility (CSR) is an established policy whereby companies in Mauritius have the legal obligation to contribute 2% of their profit after tax towards CSR- listed activities. However, there seems to be many constraints in its implementation<sup>3</sup>. Indeed, as highlighted in the survey report of the Mauritius Employers' Federation (MEF) in April 2011, the MEF argues that the Government's approach to CSR differs from the generally-accepted voluntary definition of CSR by reiterating the fact that "*CSR is voluntary and cannot be governed by legislation*" and by arguing the fact that the "*regulatory requirements are somewhat tedious*".

In order to tackle the problem of extreme poverty and seek permanent solutions for a new approach in the poor milieu, a separate Ministry has been created. The Ministry for Social Integration and Economic Development is the new organ which is responsible for coordinating and monitoring funds made available by private companies to the tune of 2% of their profit after tax. This will account for quite a substantial amount of funds to be collected for implementation of short-and long-term projects.

The new Ministry should invariably work in close collaboration with all stake-holders so that a judicious use of funds is made available.

It is felt that in the long run that people who have for generations been left in absolute poverty will come to realise thanks to the new structural approach of their problems that they should live in the new social order if they wish to be extirpated from their present state of poverty and social distress.

## ACKNOWLEDGEMENTS

The Truth and Justice Commission for its trust in the working group.

1. The Commission of Arts and Culture (RRA) for hosting and the meetings and providing the service of a secretary to the working group.
2. François Leguat Ltd. for providing access to the Alfred North-Coombes Documentation Centre to the members of the working group.
3. Finally, to all the members of the working group for their contributions and inputs to the document.

The present report, done by a group of Rodriguans, aims at presenting, in an objective way, how the population of Rodrigues sees their past traumatic history, how they are coping with the present and how they envisage the future of the next generations. It is, indeed, an attempt to revisit the history of the island from the days of slavery to present time from a Rodriguan perspective. It is hoped that the recommendations of this report will be integrated in the National Policy and implemented as soon as possible so that in 2030, every single person born in Rodrigues in 2011(18 - 19 yrs old by then) is able to benefit from the plethora of opportunities offered by his/her fatherland to develop to his/her full potential in a totally liberalised world.

*« Nous n'héritons pas la terre de nos parents, nous l'empruntons à nos enfants. »*

(Antoine de Saint-Exupéry, *Terre des Hommes*, 1939)

## 1. INTRODUCTION

Situated nearly in the middle of the Indian Ocean, East-North-East of Mauritius, Rodrigues is the last firm, hospitable land towards the Eastern coast of Australia. Due to its geographical position, at the turn of the 19<sup>th</sup> century, during the time when the European Colonial power games for control of the Indian Ocean, particularly by the French and the British, Rodrigues played an important role in the political and economic destiny of the Mascarenes, namely Mauritius and Reunion. In fact, Rodrigues became, for a very short time, the theatre of the power game between the British and the French Colonial powers at the turn of the 19<sup>th</sup> century, but unfortunately History seems to have forgotten the role played by Rodrigues and, consequently, succeeding Colonial Powers and national political powers up to the second half of the 20<sup>th</sup> century neglected Rodrigues and its inhabitants.

In 1845, more than 35 years after the British colonised Rodrigues, Captain W. Kelly of the *H.M.S Conway* wrote:

*"It is lamentable to see any colony or dependency of a colony belonging to a country like Great Britain so utterly neglected. If the island of Rodriguez is worth keeping possession of, which it unquestionably is from its position, surely it should not be debarred from all the blessings and privileges of the mother country."*

### *Methodology*

The Working Group met the first time on the 23<sup>rd</sup> February 2011 at Mont Plaisir Multipurpose Cultural Centre in the presence of Mr. Jacques David, Commissioner of the Truth and Justice Commission.

The terms of reference were to present the Rodrigues' Case to the Truth and Justice Commission, accompanied by recommendations to be implemented in the final national document.

A series of meetings, seven in all, was scheduled to:

1. Brainstorm the above terms of reference;
2. Divide the work load and assignment among the members;
3. Undertake Research works and writing of the documents;
4. Complete Editing by the Team Leader.

Schedule of Meetings:

Meeting Dates	Place
23 <sup>rd</sup> February 2011	Mont Plaisir Multipurpose Cultural Centre (MPMC)
3 <sup>rd</sup> March 2011	MPMC
10 <sup>th</sup> March 2011	Araucaria Community School
17 <sup>th</sup> March 2011	François Leguat Reserve
31 <sup>st</sup> March 2011	Araucaria Community School
27 <sup>th</sup> April 2011	Araucaria Community School
22 <sup>nd</sup> June 2011	Araucaria Community School

## Division of Work-load and Assignment:

NAME	ASSIGNMENT
Mrs. Arlette Perrine Begue	Autonomy, Land issues, Agriculture
Mr. Jacques Edouard	Slavery and its stigmas
Mrs. Vinolia Ramanitrarivo & Ms. Lovena St Pierre	Education, Unemployment
Mr. Karl Allas & Mr. Rosaire Perrine	Culture and Religion
Mr. Aurèle Anquetil André	Heritage, Economy, Tourism, Communication, Rodrigues, Part of Mauritius?
Mr. Henrico Louis	Secretary: Notes of meetings and coordinator of meetings

## 2. COLONISATION

### 2.1 French Supremacy

The first serious attempt at colonisation took place in 1691 by small group of French Huguenots led by Francois Leguat but they all abandoned Rodrigues in 1693.

The second attempt at colonisation was spear-headed by the French, but this time, it was decided by the Conseil Supérieur de l'Île Bourbon in 1725 in the name of the French East Indian Company. This attempt did not last long because of the isolation of Rodrigues and its difficult port-access. However, a small contingent of slaves under the supervision of Julien Tafforet, whose main occupation was to harvest tortoises in Rodrigues, stationed in Rodrigues for just under one year. Once more the island was abandoned, but the Directors of the Company took care to forbid the removal of tortoises, which they reserved for the requirements of vessels returning from India. In order to regulate the trade of tortoises from Rodrigues, Mahé de Labourdonnais created a small establishment for the sole purpose of gathering tortoises in readiness for shipment. The establishment consisted of a few soldiers, lascars and slaves. It would appear that the relationship between the White Settlers and the slaves was always under great strain and that "marronnage" was a regular practice.

In 1761, when Alexandre Gui arrived for the observation of the Transit of Venus, there were the French Officer in Charge, a surgeon and corporal (all three Europeans) and 12 to 15 blacks, natives of Madagascar or India, most of whom were slaves belonging to the Company. There were also 22 freemen. However, in 1767, Rodrigues, now retroceded to the French Crown, had a very small slave population of five and Yves Mathurin Jullienne.

Permanent settlement in Rodrigues could be said to have started with the arrival Legros and Fremont in 1792, followed by Michel Gorry in 1793. They came after the French Revolution to start fishing-posts and do commerce with Mauritius. In 1794, Philibert Marragon arrived as Civil Agent with his wife, his mother-in-law and his slaves.

Shortly afterwards in 1798, instructions arrived from authorities in Ile de France, regarding the land concessions, namely 100 *arpents* per married couple and 50 *arpents* for each child on their arrival at Rodrigues.

Marragon was definitely not an easy character and his relationship with the slave'-owners was always on edge. Rivalries among them were rampant. It appeared also that Marragon was very concerned about the ratio of slaves and masters - slaves largely outnumbered masters. In his letters to the authorities in Mauritius, he was always complaining about the behaviour of the slaves. For him the slaves of the other settlers, particularly those of Lambert Gautier, whom he considered to be "*de mauvais sujets rebut de l'Isle de France*" or "*Mauvais sujets, marrons, etc., qui ont fait les dégats dont on se plaint*", were constant sources of trouble. Marragon accused the "marrons" of theft and criminal burning of crops and forests.

One important decision that needs to be noted is that upon his arrival at Isle de France, General Decaen immediately decided to evacuate the settlers from Rodrigues to counter the British influence. He was convinced and he was right that the British found in Rodrigues a source of supply for their ships on blockade duty around Isle de France. As leprosy was becoming a real threat at Isle de France at the beginning of the 19<sup>th</sup> century and the *arrêt* of 30<sup>th</sup> July 1800 made provision for segregation in special asylums of persons affected:

*" Those amongst the persons affected who shall be found to be incurable, shall, by the first opportunity, be sent to a place that shall be fixed, the colony shall see to their being settled, and to their keeping and maintenance during the period of six months". (Acticle VI of the Arrêt).*

General Decaen thought that Rodrigues would be ideal place and that would also scare the British away.

For the interest of Isle France and Bourbon, Rodrigues would have been sacrificed and turned into an asylum for the lepers.

### *2.2 First attempt of Slave Revolution in Rodrigues*

Marragon conducted a survey of the population of Rodrigues in 1804. He thus established that there were 82 slaves belonging to five colonists and their families operating on the Island. There were 32 who originated from Mozambique, 18 from Madagascar and 24 born in Rodrigues.

In 1806, the Slaves plotted to take the Schooner of Germain Le Gros to escape to Madagascar or India. The plot was uncovered and the culprits severely punished. This is a stark indication of the harshness of the lives of the slaves under the French administration. In an island so isolated as Rodrigues, the masters could do whatever they wished and one can imagine the vulnerability of a servile population. Marragon mentioned in his letters that Slaves were still fettered:

*« Les Noirs du Citoyen Gautier toujours marrons, ayant rencontré un Noir et deux négresses du Citoyen Rochetaing aux environs de son habitation, ont entraîné avec eux le Noir, après avoir ôté un collier que son maître lui avait fait mettre: les deux négresses qui avaient aussi des fers, n'ayant pu en être délivrées, ils les ont renvoyés de peur que la lenteur de leur marche ne les fît prendre. »*

The fate of the slaves did not improve under the British rule. After the signing of The Treaty of Paris (30 May 1814), which was proclaimed in Mauritius on the 15<sup>th</sup> October, Bourbon was restored to France, while Isle de France and its Dependencies, especially Rodrigues, and Les Seychelles came under the British rule

### *2.3. British Rule*

British presence in Rodrigues dated back to 1761 when at least 12 ships of the English navy were manoeuvring in the waters around Rodrigues, waiting for the forces from Europe to conquer Isle de France. The forces never came and after having taken Rodrigues as hostage for a few months, they departed to Madras. Finally, the British were back in the Rodrigues waters as early as 1794 to start the blockade on Isle de France and in 1809, in a second attack, Isle de France capitulated. Rodrigues thus played a critical role in the future destiny of the Mascarene archipelago.

It is to be noted that Robert Farquhar, who administered Bourbon Island after its capitulation to the British, travelled to Rodrigues just before the expedition against Isle de France got underway. He promised the inhabitants of Rodrigues that a Government Agent would be appointed to look after their interests, "in the same manner as in the French times". Obviously, Robert Farquhar was very active on the diplomatic front and succeeded in winning the allegiance of the people of Rodrigues.

### *2.4. Robert Farquhar's False Promise*

Governor Farquhar never appointed a Government Representative to Rodrigues as he had told them he would. A number of historians think that this was intentional, a loophole left for some slave trading which could be officially ignored so long as there was not a local authority to report its existence. Was it just a case of indecision or was the neglect intentional? Abandoned by the French, the arrival of the British gave the people of Rodrigues a glimpse of hope but that as well also fizzled out rapidly. Instead, in preparing the Slavery Abolition Act, the British, anticipating the potential problems of its implementation, thought that Rodrigues would be an ideal place for the reforming of those slaves of notoriously bad characters. However there is no indication that this measure was ever implemented like Decaen's leper island.

Rodrigues remained without any official rule for more than 30 years. One could imagine that everybody could have done anything without being reprimanded.

## **2.5 British Colonial Rule (1809 -1968)**

When the islands became British, slave trading became automatically illegal and preventive measures were devised. However, because there no official government.

Representative in Rodrigues, these measures would remain ineffective. Rodrigues was thus under the first few years of British rule a land with no law at all. So if any of the settlers took some liberties, who would stand in the way? The possibility that the settlers engaged themselves in illegal of slave trading cannot be wholly discarded.

The registration of slaves that was compulsory by the Order in Council of 24<sup>th</sup> September 1814, was only partly applied to Rodrigues in 1820, but no official registration was done.

This situation brings into light Farquhar's obstinence not to appoint an Official Government Representative in Rodrigues. There are evidences that a network of illegal slaves trade was going on between the coast of Africa to Seychelles, and thence to Rodrigues. Farquhar, after much ado, although he was convinced that Rodrigues would not be worth much to the British without slaves, Farquhar appointed Robert Pye as Government Agent in Rodrigues. Pye reported on the slave situation in 1821 but for reasons unknown, his return on slaves was never registered in the Slave Registration Office in Port Louis. In fact, the slaves of Rodrigues were only officially registered in 1827, at the request of the Eastern Enquiry Commissioners, who held that many of these slaves had a just claim to freedom, having been introduced into the island after the 1814 Order. Unfortunately, these slaves were not set free.

The first official visit of a Governor of Mauritius took place 71 years after the British conquest of the Mascarene Archipelago. F. Napier-Broome, Lieutenant-Governor accompanied by his wife, Lady Barker, visited Rodrigues from the 26<sup>th</sup> June to the 4<sup>th</sup> July, 1881. Lady Barker, a very prolific writer, referred to Rodrigues as "a most distressful dependency of Mauritius".

### 3. SLAVERY IN RODRIGUES

Slavery is said to have been different in Rodrigues. Slaves, were better treated and cared for, more through fear because they outnumbered the settlers.

Interestingly enough, the particularity of Rodrigues is that slaves and masters arrived at the same time. We learn thus from historians that the first slaves arrived in Rodrigues in 1736, when the first establishment was in place to collect land tortoises. It is to be noted that in 1725, Julian Tafforet landed on the island, accompanied by four men, presumably four slaves, but they only stayed a few months. It is not recorded whether slaves gave birth to children at that time. We only know that the first white Rodriguan was born on the 15<sup>th</sup> September, 1752, of the first European woman to land in Rodrigues. Jeanne Francoise de Rancars was the wife of the Officer in charge of the establishment, Vincent Francois Martenne de Puvigné.

At that period, Alexandre Gui Pingré, an Astronomer on mission to observe the first transit of Venus, noted 15 slaves, natives of Madagascar and India. A Census carried out by Philibert Marragon in 1804 revealed 24 slaves, born in Rodrigues.

According to Bertuchi, a good number of slaves were from Madagascar and the East Coast of Africa. The inhabitants cultivated manioc, coffee, mountain rice, tobacco, citrus, mango and sweet potatoes. They also reared sheep, pigs, turkeys, and fowls of all descriptions. Some cattle ran wild.

The slaves from Africa were more strongly-built and more amenable to work than the Malgaches, who often escaped, although they were more intelligent. At sunrise, these slaves were awakened and sent to work till sunset. Their nourishment consisted of boiled maize or manioc. It was the custom to give each slave a shirt on New Year's Day. There are no details about the punishment of slaves. Some said that it was rather cruel. If a woman had to be punished, the husband was ordered to inflict it. To contract marriage, the slave had to obtain the permission of his master, who rarely refused it. They seemed to have preferred the idea of marrying women a good deal older than themselves.

It was almost one hundred years later that the authorities seemed to care about the conditions of slaves in Rodrigues. In 1830 Captain Lyons was asked to report on the state, condition and appearance of the slave population in Rodrigues. Lyons found slaves well-clothed and well-fed, having great facility to catch fish, keeping pigs and poultry which they fed on manioc.

Slavery was abolished by an Act of Parliament on the 7<sup>th</sup> August, 1833. Slaves were to remain with their masters for a period of 5 years as apprentices. It is only towards the end of the period of apprenticeship (1839) that Special Justice C. Anderson was appointed to report on the conditions of apprentices. He sent six days in Rodrigues.

Anderson reported that apprentices in Rodrigues were working longer hours than the Law allowed; their clothing was inadequate and their huts miserable, but they were well-fed, and extensive ground was allotted to them.

He concluded that Rodrigues was over-populated. Its only revenue was derived from fisheries. He fixed the hours at which work was to begin and to end. Wages were to be paid at the rate of 3 rupees per month.

#### *3.1 Illegal Slave Trade*

By the Treaty of Paris, proclaimed in Mauritius on the 15<sup>th</sup> October 1814, Bourbon was restored to France and Isle de France and its dependencies; Rodrigues and the Seychelles were to remain under British rule.

Slave trading was thus illegal at that time. On the 24<sup>th</sup> September 1814, slave-owners were obliged by law to submit returns of their slaves every three years. Robert Farquhar, Governor

of Mauritius, did not deliberately appoint a Government Representative to Rodrigues, as he promised the Rodriguans during the British blockade of Isle de France in 1809. This was to allow illegal slave trade to continue, with no local authorities to report it. It was only in 1820 that he appointed a youngman Thomas Robert Pye, a Lieutenant of the Marines, who participated in the attack on Bourbon. His mission was to register the slaves in Rodrigues, to keep an exact account of all arrivals and departures of ships, to see their logs and their papers. He resided at Baie Lascars in the quarters vacated by the British army, but he soon moved uphill on the former Rochetaing's concession at Mon Plaisir.

### *3.2 Abolition of Slavery*

While Honoré Eudes, a settler of Rodrigues as from 1820, was visiting Mauritius, he was charged by the Government to proclaim, on his return to Rodrigues, total freedom for all slaves on the Island of Rodrigues. Honoré Eudes did so on the 4<sup>th</sup> June 1839, the day of his arrival in Rodrigues. Interestingly Honoré Eudes offered to his slaves two options; either, firstly, they returned to Mauritius, or secondly, money, food, alcoholic drinks, the right to cultivate freely a plot of his land for their own benefit. The slaves agreed to the second option but shortly afterwards, they deserted the master's concession and took refuge in the interior of the island to enjoy their freedom. It was clear that the ex-slaves wanted to be as far as possible from their past masters.

For the first time, the liberated slaves had a sense of belonging, and they indeed made the best of it. They could easily squat on a piece of land, help themselves to the runaway cattle, catch their own fish, and till as much land as they wanted. There was nothing to stop them from doing so. Charles Lenferna attempt's to interfere with this new mode of living of the ex-slaves prompted the Government to send a magistrate, H. M. Self, to Rodrigues in June 1841. Yet, no official Government Representative was appointed. It was only after the wreck of the good ship *Oxford* (1<sup>st</sup> September 1843) that forced the Governor of Mauritius to send a corporal and five constables to Rodrigues. Sir John Marshall, Captain of Her Majesty's frigate *Isis*, was given a special commission to act as Magistrate and Judge surrogate of Rodrigues.

Colonisation of Rodrigues resumed after a period of military occupation, and settlers came from Mauritius with slaves from Mozambique coast and the East coast of Madagascar. Some of the settlers were involved in direct slave trade, through the East Africa/Seychelles network, although the practice was prohibited under British Law.

### *3.3 Ex-slaves after abolition*

After the abolition of slavery, some estate-owners returned to Mauritius because of the state of lawlessness prejudicial to the whole island.

However, a number of new people from Mauritius, tempted by the opportunity thus created, moved to Rodrigues mainly to establish fisheries. The master fishermen employed people of dubious characters, ex-convicts, and some of them came straight from jail.

Blacks from Mauritius complained to have been shipped by the Police to Rodrigues without any formal contracts of service. Furthermore, those who were on a one-year contract could not afford a passage back to Mauritius. They were perpetually in debt and forced against the Law to remain in their employers' service.

There were no shops at that time. Each employer had a store of his own. He supplied his men on credit at extortionate prices.

Dupont wrote that the sale of Crown Lands started around 1850. Settlers, most of them emancipated slaves, opted for a lease because perhaps they lacked financial means. This had the devastating effect of accelerated deforestation. Forest covers were systematically cleared to make room for the cultivation of cash crop, such as coffee, indigo and cotton, and stapled food such as wheat, rice, potato, vegetables, sweet potatoes, maize and beans.

Traditionally, Rodriguans ate maize that they produced, and very little rice. This was most probably due to their African origins and also because of very few contacts with the Asian subcontinent.

According to Bertuchi, by 1843, the population of the island had risen to 500, only one-fifth of which were females. Owing to this preponderance of males, great immorality prevailed. Each woman had three or four husbands, in some cases as many as six. The children, however, were harmoniously brought up together; the favoured husband at the time exercised the role of father to all of them.

A few White Creoles from Mauritius and Bourbon came and settled on the island and intermarried with the Blacks, which accounts for a section of the population being of a "café au lait" colour. Interestingly, some of the settlers were descendants of the French who had been expelled from settlement at Fort Dauphin in Madagascar.

Other White Creoles married Whites like themselves, which accounts for a number of inhabitants who are, in appearance, Europeans, except that in their habits and customs through prolonged stay have espoused those of the Blacks.

The bulk of the population consists of Negroes who were originally imported as slaves from Madagascar and the East coast of Africa through Mauritius. They were not as black as the Guinea Negroes; the majority have deep brown velvety skin. Their hair is of a very deep black, woolly and curly, their noses short and fairly flat, and the eyes black. Their protruding thick red lips allow one to admire a magnificent row of snow-white teeth. Their arms are longish and thin, and their legs look rather weak and thin. The average height of the men is 5ft. 6 inches. They are very strong, although their outward appearance does not give this impression. It is a marvel how physically strong they are, considering the food they live on. The children of both sexes commence work at a very early age.

The native had his plot of land; he grew maize, manioc, beans, sweet potatoes and vegetables and his own tobacco. He rears sheep, goats, cattle, pigs and fowls. Wood for fuel is nearby, whilst water was procured from rivulets and springs. Fruit trees abounded everywhere. The fat from the pigs was melted and used for cooking. The man went out in his boat and fished all day, or went out to the opposite end of the island and fished the whole week, and came back to his little straw hut in the mountains on Saturdays to find his wife and children left at home, to look after the plantation and the fowls. He brought with him enough salted fish to last at least a whole week.

They had no rent to pay, as their houses were built by themselves of local wood, and latanier leaves and barks, and lasted for many years. They had only to buy sugar, tea and clothes, and they could easily procure these from the proceeds of fish, fowls, and goats, and so on. Those who did not own their plots of land rented it from the Government. The rent per acre was only three shillings per annum, and two acres were sufficient to produce enough food to ensure a livelihood for a family of five to six persons.

During the week-ends, when the men were back with their families, one heard the constant sound of the tom-toms, the concertinas, and merry mixed voices of the family and friends. On Sundays, they did their best to go to Church. Very few of the natives ever missed the Sunday Church service.

Marriage is good example of the strong attachment that the natives had with church. If a man wanted to take unto himself a wife, he chose her and married her. They lived together and they worked together. When they had collected a few animals and had saved some money, and were in a position to stage a feast, they then underwent religious and civil ceremonies of marriage.

H. M. Self reported in 1841 that he had found liberated slaves entirely self-supporting from the produce of their cultivation and the livestock they raised. They squatted unlawfully on the Crown Lands.

### 3.4 Stigmas of slavery

Slavery has been recognised and condemned as a crime to Humanity. This inhumane practice has left lasting stigmas on the lives of its promoters and particularly on the lives of the victims. It is needless to go into great details about the general and lasting collateral damages that Slavery had caused in the History of Humanity; the following will suffice:

1. Rodrigues was important to the French Colonialists because of the reservoir of free animal proteins; namely, an abundance of tortoises. The massive exploitation resulted in the extinction of practically the totality of the endemic fauna and some of the unique flora of the island. What did Rodrigues get in return? The French wanted to turn Rodrigues into an asylum for people having contracted highly contagious diseases such as leprosy or into an ideal place to exile criminals, trouble-makers and revolutionaries to.
2. Rodrigues was left without any official Government Representative for more than 30 years, with the complicity of the British Governors who deliberately turned a blind eye on the illegal slave trade. Rodrigues had high expectations with the arrival of the British, but they were very quickly disappointed and disillusioned, for nothing was done to improve their living conditions.
3. Rodrigues played a critical role in the destiny of the Mascarene Archipelago in 1809-1810. This historical truth was yet again brushed aside as Rodrigues was forgotten. However, as soon as trouble started in Mauritius, Rodrigues came into the picture. To enjoy the peace of mind in Mauritius, trouble-makers were exiled to Rodrigues and those inflicted with deadly cholera were sent to Rodrigues.
4. The posting of Public Officers from Mauritius to Rodrigues was considered to be a punishment by the incumbents. As obedient servants of the Government, they had to serve but did so happily. Some of them went further, indulging into unfair trading, perpetuating the exploitation of the Rodriguans and thus forgoing what they were expected to do in Rodrigues. This situation affected the relationship between Mauritius and Rodrigues, thereby giving rise to a strong perception that Mauritians are Neo-Colonialists in Rodrigues.
5. The way Rodrigues had been treated made it obvious that neither the French nor the British believed that Rodrigues could have a reasonable future. At every opportunity, the Rodriguan people were made to believe that there was no future for Rodrigues. Hence, recommendations had been made on several occasions to evacuate the island or to encourage massive emigration. This attitude towards Rodrigues had untold effect on the psychological make-up of the people of Rodrigues, to the extent that the sense of unworthiness still prevails today amongst the population. There has been bred a fear for adventure and calculated risk-taking.
6. Furthermore, from a White European perspective, Rodriguans were seen as a lazy and slow people. They doubted whether Rodriguans could make it above the level of a primitive society, let alone making the Secondary School leaving grade. Today, this has been proved wrong, but we must ensure that no encouragement is ever given to those obscure and spiteful forces.
7. Unfair trading practices: Exploitation through supply on credit at extortionate prices. This stigma is still present today, whereby Rodriguans have not been able to shake off the perpetual need to be indebted.
8. Alcoholism: After the abolition of slavery, wages included spirit "Iarak", as during slavery, spirits were included in the food distributed.
9. A form of polygamy was condoned, not to say forced on the population of Rodrigues. This practice may have encouraged prostitution. In Rodrigues, prostitution is mainly referred to as women having more than one partner. It may also be the root cause of the growing number of single-parent family (*fille-mères*).

### 3.2 Recommendations

1. Encourage Research Fellows from Rodrigues and Mauritius to relook at the way Mauritius and Rodrigues history was written.
2. Increase the number of opportunities now available regarding education so that more Rodriguans could get access to Tertiary Education.
3. Economically, Rodrigues lagged behind because historical circumstances forced it to be a late starter. Of course, there have been a number of affirmative actions towards helping Rodrigues to catch up and to make up for the lost time. Today there is the will, the design and the plan to kick-off of the economic development of Rodrigues, but the means for a real take-off are seriously lacking.

## 4. RODRIGUES' ADMINISTRATION

The first Police Magistrate under British rule, Blaise Bacy, arrived in Rodrigues in December 1843, 34 years after the colonisation of the Island. From the outset, he raised questions of education for the children, health care, safety at sea, lighthouse, among others. In 1845, the population of Rodrigues was 323, of which 240 descended from the old slave population and were generally of African parentage, the 83 others came from the old free population. M. Chapotte, a Frenchman, was the only alien.

The future of Rodrigues once more came into focus when the epidemic cholera struck Mauritius in 1854 and 1856. The Secretary of State suggested Rodrigues as a quarantine station. Fortunately, the project never materialised and once more, Rodrigues was saved from the consequences of colonial's drastic decisions.

The first six-beds Hospital was only set up by Police Magistrate Messiter in 1861. Messiter also created the first post office. Formal primary education started in 1865 under George Jenner, with 13 girls and 14 boys under the tutorship of a Schoolmaster and a Schoolmistress - Mr. and Mrs. Corson but it closed a month later to reopen shortly afterwards under the tutorship of Mr. and Mrs. Lalande. Coincidentally the first secondary school to be officially registered in Rodrigues was in 1961, nearly 100 years after the beginning of Primary Education.

### 4.1 Human Settlement

The first human settlement on Rodrigues took place in 1691 and lasted for just under three years. The second attempt of settlement was in 1725 but did not really last long (December 1725 to June 1726). Until the arrival of Mahé Labourdonnais, as Governor of the Isle de France, passing ships regularly stopped over in Rodrigues to harvest tortoises which were then abundant in Mauritius. Labourdonnais decided to control the tortoise trade in Rodrigues by creating a small establishment under the leadership of Oscal from 1736 at Rodrigues for the sole purpose of gathering tortoises in readiness for shipment. The small establishment consisted of a few soldiers, lascars and slaves.

Twenty-five years later, in 1761, Alexandre Gui Pingré wrote that the population consisted of the French Officer-in-Charge, a Surgeon and a Corporal, both Europeans, and 12 to 15 Black/s, natives from Madagascar or India. There were also a number of freemen. By the time of the 'retrocession' of Rodrigues from the East Indian Company to the French Crown in 1767, there were only five slaves in Rodrigues.

From then on, the population of Rodrigues dwindled until the arrival of Germain Le Gros in September 1792. In fact, it could be said that permanent human settlement in Rodrigues was provoked, when news of the French Revolution reached Isle de France. The news created such pandemonium that a number of people decided to leave the Isle de France, and some first went over to Rodrigues to have a look at the island. Most of them immediately gave up any idea of settling.

The first French Civil Agent to rule over Rodrigues was Philibert Marragon from 1794 to 1809. He died on Rodrigues in 1826 at the age of 76. Marragon carried out a Census of the population of Rodrigues in 1804, and there were 22 Europeans and 82 slaves.

The land lords of Rodrigues in 1804 were Marragon with 400 *arpents*, including 100 *arpents* under cultivation; Le Gros 100 *arpents* 25 cultivated, Gorry 70 cultivated and Rochetaing 350 *arpents* 70 cultivated. There were thus 850 *arpents* of land concessions of which 265 were under cultivation to sustain the livelihood of a population of 104.

### 4.2. The People of Rodrigues

In a paper published in 1971, 'Notes et Etudes Documentaires', 28 mai 1971, No. 3794), Louis Dollot wrote:

*“A la différence de Maurice, cette population (de Rodrigues) est très homogène. Avec un pourcentage de 85%, les Noirs créoles constituent l’ethnie dominante de sorte que, si la Réunion paraît plutôt «européenne» et Maurice «asiatique», Rodrigues est nettement «africaine».*

*“Since the day Mauritius attained the status of an independent nation, Rodrigues has, of course, shed its status of a dependency. Under the new Constitution, the smaller island is now “part” of Mauritius. Politically, it is fully integrated. Physically, it cannot be. Ethnically it is thought to stay the same as long as one could to imagine. Economically, however, if the destinies of Rodrigues are to remain linked with those of Mauritius, the Rodriguan problem must be studied in greater depth and in more detail than has been done in the new Mauritius 4-Year Plan for Social and Economic Development. The plan provides a capital expenditure programme estimated to cost 32.5 million rupees in the four years ending on the 30<sup>th</sup> June 1975. This is roughly 2.3 million rupees more annually than in the last three years. (Alfred North-Coombes)*

There has been an erroneous and widespread perception that the Rodriguans, particularly the descendants of ex-slaves, led as lazy a life as they could. However, Alexandre Gui Pingré, way back in 1761, had this to say about the slaves, when they set out to work: *“Il fallait arracher les ouvriers du travail pour les faire manger et dormir.”*

Quite often, owing to extreme climatic conditions on the island, the Rodriguans have had to face near starvation. They had learnt to eat anything that was available; namely wild fruit, snails etc. Over the years, they have become a resilient people. They can put in long and sustained efforts when necessary. They do not like to be hurried or bullied in doing things quickly. In fact, as they have been for so long masters of their time and property, they have developed a great sense of freedom in their actions and also demonstrated an innate pride.

There is thus a case to revisit the ‘lazy’ tag that the past masters have stuck on the Rodriguans. This brings us to look at the stigmas left by the inhumane practice of slavery.

## 5. FROM TOTAL NEGLECT TO FORGETFULNESS (OR EITHER WAY)

Compared to Mauritius and Reunion, Rodrigues never knew the development of a colonial plantation economy, even though there have been several attempts to grow tobacco, cotton, coffee etc. Isolated and away from the main trade routes, the island of Rodrigues was just a stopover for infrequent vessels.

From a land of abundance, Rodrigues is now relegated amongst the first three Small Oceanic Islands (Rodrigues 94%, Norfolk Island 94% and Ascension Island 91%) in the world, where the natural biodiversity is the most devastated.

Isaac Balfour, a Botanist, referred to Rodrigues as a barren land in the 1870s, some 180 years after the first settlers enjoyed to the fullest the natural resources of Rodrigues in 1691. Once an idyllic place, fertile valleys, potable fresh water, pure and healthy air, the land that saw the evolution of an amazing mega-fauna (exceptionally beautiful though strange birds, Solitaire and reptiles - giant tortoises and lizards) is now a depleted and desolate place. The exploiters have gone and in their memory, the atrocity caused to Rodrigues has been completely forgotten.

Rodrigues is probably amongst the first few places in the world with a colonialist past and a dependency of Mauritius that has been most neglected. A glance through the scarce historical literature and records on Rodrigues strongly confirmed the above statement, namely:

In *“The Island of Rodrigues”* by Alfred North-Coombes (1971), the author wrote as an introduction;

*“Though I was born and educated in Mauritius and went to the College of Agriculture there before going to University in England, I cannot recall anyone at school or within the family circle ever mentioning the island of Rodrigues. I cannot recall our lecturer in agriculture, who knew Rodrigues well and indeed had established a branch of the Department of Agriculture there, ever mentioning the island in the course of his lectures [...]”*

In *Rodrigues, La Troisième Ile des Mascareignes* by Jean-Michel Jauze (1998), the author wrote as an ‘avant-propos’:

*«L’archipel des Mascareignes comprend trois îles: la Réunion, Maurice et Rodrigues. Or si les deux premières qui sont également les plus grandes (2512 km<sup>2</sup> et 2100 km<sup>2</sup>, contre uniquement 110 km<sup>2</sup>) sont relativement bien connues, il est assez curieux de constater qu’en cette fin de 20<sup>e</sup> siècle, la troisième demeure encore bien souvent ignorée.»*

In *«La Petite Mascareigne»* by Lilian Berthelot (2002), the author wrote in her ‘avant-propos’:

*“La petite Mascareigne comprend ainsi deux parties:*

1. *(a) une description de l’existence des esclaves, des apprentis et des libres, (b) la correspondance de personnages illustrant l’existence à Rodrigues entre 1795 et 1843, et quelques événements marquants de la vie du peuple rodriguais, après le 19<sup>e</sup> siècle et, finalement,*
2. *Une chronologie, sans doute perfectible, qui retrace l’avancée de Rodrigues de son état de dépendance négligée au statut de l’autonomie.*
3. *Faire mieux connaître l’histoire de Rodrigues - aux Rodriguais et aux Mauriciens, surtout, et de surcroît aux étudiants et chercheurs : c’est là mon souhait.»*

Rodrigues suffered an abject neglect for most of its known history. It came under consideration only at the whim and will of the masters of the time. Having suffered terrible losses by the French stationed at Isle de France, the British decided to use Rodrigues as an assembly point for its Navy in 1809 to conquer Isle de France and Isle Bourbon. Even though Rodrigues played such a critical role in the Anglo-French struggles for supremacy in the Indian Ocean during the Revolutionary and Napoleonic Wars, between 1793 and 1811, Rodrigues was forgotten shortly afterwards and never got any recognition. The slaves, brought in by the French and the British, were left stranded on the island, with no basic support whatsoever for their livelihood. Naturally located right in the track of tropical cyclones and also prone to long periods of drought, the population of Rodrigues have experienced serious times of famine in its very short human history.

At other times, Rodrigues was often considered as a land of exile, an island of punishment. In 1804, Governor Isidore Decean wanted to turn the island into a camp for lepers. In 1832, under the British rule, Rodrigues was designated as a land for the deportation of the undesirable slaves with a bad reputation and as a quarantine station for people affected by cholera. There is no evidence, though that these measures were ever implemented. But still the idea was evoked and the perception that Rodrigues did not really have the capacity to sustain a viable economy was enunciated.

The lepers from Mauritius and Reunion were finally shipped to Diego Garcia and later to Curieuse Island in the Seychelles.

However, on two occasions, Rodrigues became the land of exile for two turbulent and undesirable politicians, Antoine de Rivaltz de Saint-Antoine in 1768, and Emmanuel Anquetil in 1938.

It is inconceivable today to imagine how the colonialists sat down and shared among them the morsels. Following the Treaty of Paris (30<sup>th</sup> May, 1814) which was proclaimed in Mauritius on the 15<sup>th</sup> October, Bourbon was restored to France. The then Isle de France and its dependencies, especially Rodrigues, and the Seychelles came under British rule.

For some obscure reasons, Governor Farquhar did not appoint a Government Representative to Rodrigues. In fact, he failed to hold his promise to the Rodriguans. Alfred North-Coombes inferred that perhaps, Farquhar's decision was intentionale, *"a loophole left for some slave trading which could be officially ignored so long as there was not a local authority to report its existence. Perhaps Rodrigues, as so often before and after, was simply forgotten."*

Furthermore, the administration of the island, when it came, was chaotic. For instance, declarations of births and deaths, and publications and celebrations of marriages in Rodrigues, were first made compulsory from the 1<sup>st</sup> January 1857. However, it was only in 1890 that a Civil Status Office was created in Rodrigues. This infers that from 1857 to 1883, year when the Police Magistrate was given the powers to validate any will or contract of marriage certified as genuine, all acts so authenticated prior to that year were in fact illegal. Legally, the people of Rodrigues did not officially exist until 1883. There is thus a case to be made to research the History of Rodrigues from the official abolition of slavery in 1835 to 1883, to find out what really happened to the people of Rodrigues during that particular period.

This perception of Rodrigues as a land of exile and punishment had been exacerbated by both an officious policy on the part of the authorities in Mauritius, and the behaviour of a majority of public officers from Mauritius during their tour of duty and service in Rodrigues.

In its human history, the first popular consultation was in 1967 compared to Mauritius where a Legislative Council, with an elected minority, was set up in 1885. As early as 1915, a serious representation was made by Rodriguans by sending a memorial to H. M. the King of England. The memorial pointed out that Rodrigues had not been included as an Electoral District in the 1885 Constitution, although it had a population larger than that of the Black River District in Mauritius, which had one. It was unfortunate that no decision was ever taken on this issue due to the lack of consideration or, more to the point, the lie of Sir John Chancellor to the Secretary of State. In fact, the King was never advised of the

representation of the Rodriguans. Decisions, most of the time, indecisions continued to be taken in Port-Louis and implemented.

## 6. DESTRUCTION OF HERITAGE IN RODRIGUES

Untold damages have been done to the natural, historical, cultural, social and physical heritage in Rodrigues over the past three hundred years or so.

However, Rodriguans never gave up and they entertain, hope as a people, and rightly so that one day they shall overcome. The days of reckoning are ever so close. Rodrigues is probably among the last firm land to experience the impact of human. This is very good news because the first settlers left a number of records of how Rodrigues was before human settlement. There is thus a case to be made to study Rodrigues as a Rosetta Stone to understand the impact of human settlement on insular territories and the findings could be used to partly restore the natural biodiversity on other islands in the world. Rodrigues could be a test-case and a model for small island restoration in the world.

A number of Historical Buildings have been destroyed by cyclones, but no efforts of reconstructions and restorations were undertaken to protect the heritage of the island. Some of the buildings fell into ruins, due to a lack of fund to repair and restore them, and also due to lack of the official policies. Recently, an old building which used to house the Maternity Ward at Port Mathurin was entirely pulled down without any reaction either from the authorities or the civil society. The old Health Centre at Mont Lubin was left to rot and, with it, the whole history of health care in Rodrigues. The public garden in Port Mathurin, with its tennis court and other leisure facilities, was scrapped to make way for the New Administration Building. Yet again, a whole piece of Rodriguan social and cultural history was swept away for good. It must be pointed out that since the demise of the public garden, Port Mathurin has no proper green space left. The lack of systematic town and country planning is the main cause of this situation and even today, decisions regarding buildings and development projects are left solely to the whims of the authorities that be, and are still being one on a piecemeal basis.

However, among the bleakness of this situation, there are also some positive undertakings, the old administration and the Residence have been restored and are now maintained properly. Mauritius Telecom is looking after one of the old buildings built by the Eastern Telegraphic Company way back at the beginning of 1900. Sadly, one of the buildings which used to be the ETC Manager's Lodge and housed the first Hotel of Rodrigues - Relais Pointe Venus - was burnt down, thus making room for the New Pointe Venus Hotel. The officers' mess, though under the responsibility of the Government was left unattended and has been vandalized to the ground. The kitchen of the officers' mess is currently being used by the MBC for its Television signals transmission.

Pointe Venus (first appeared on the Rodrigues map in 1876) is an important location in the scientific history of Rodrigues as the place where the scientific expedition observed the second transit of Venus in 1874. There are today no indication of this historical event, but quite wrongly the commemorative plaque that stands there, concerns the observation of the first transit of Venus by Alexandre Gui Pingré in 1761. The locals used to call the place "Battery" because of the presence of surveillance canons set-up there during the colonial days. The location of the surveillance canons have not been traced so far.

### Natural Heritage:

The limestone region of the South West of Rodrigues (Plaine Corail and Plaine Caverne) is unique in this part of the Indian Ocean, among the Mascarenes Archipelago. There is thus an urgent need to create a heritage trust within the RRA in Rodrigues whereby the civil society, the public and private sectors would all be represented to draw up a master plan for the management, conservation and restoration of the area. Among the 30 known limestone caves, two of them are show caves; Caverne Patates run by the a public company - Discovery Rodrigues and Grande Caverne by a private company - Francois Leguat Ltd. Ten of the caves

are situated within the Francois Leguat Reserve at Anse Quitar and are therefore being protected from vandalism, but for the others, there is no surveillance at all. The caves are often very important storage of historical informational and thus prime locations for scientific research, particularly in the field of palaeontology, palaeoecology, geology, ecobotany and geomorphology.

Caves are considered to be mysterious places and in Rodrigues, they have been rather well-preserved until now because Rodriguans superstitiously believe that the caves are home to all sorts of spiritual monsters. Indeed, gradually, the caves are beginning to reveal their embedded secrets in ways of critical scientific information on the Natural History of Rodrigues and thus very important for the laudable efforts of reconstruction of the island natural biodiversity. The scientific expeditions to Rodrigues first by Alexandre Gui Pingré in 1761 (250 years in 2011) to observe the 1<sup>st</sup> Transit of Venus, and more importantly, the 1874 one which also coincided with the 2<sup>nd</sup> Transit of Venus provide enough evidences on the karst area of Rodrigues. Unfortunately, nothing substantial in matters of legislation has been done to protect the area.

This scientific undertaking with the collaboration of national and international academies and universities should be encouraged and supported, as it is believed that Rodrigues could be a Rosetta stone in the endeavour to understand the impact of human activities on small oceanic islands. Francois Leguat Ltd. is spearheading research projects in multi-disciplinary subjects; ranging from palaeontology, palaeoecology, geology, climatology, zoology, botany etc.

Rodrigues is blessed with a complete fringing reef and the surface area of the lagoon is more than twice the surface area of the island. Even though there has been massive exploitation of the lagoon resources, it is reckoned that more than 90% of the coral reef is in a good healthy condition. The decision to set-up a marine reserve, the South-East Marine Park Agency is a very commendable undertaking and will certainly help to preserve the marine resources within the lagoon.

## 7. ECONOMIC DEVELOPMENT OF THE ISLAND

Since the very beginning of human settlement in Rodrigues, the economy has been essentially based on the primary trilogy; cultivation, stock-breeding and fishing. Rodrigues' economy is solely an auto-subsistence practice which is on the decline year in year out. From the days of the first permanent settlement until 1995, the economic development was limited to a form of subsistence agriculture and fishing. Massive deforestation took place to make land available for agriculture and stock-breeding and considering the topography, no serious measures were implemented to contain the top soil of the slopes. Consequently, erosion was rampant and the fertility of the soil degraded rapidly. Furthermore, the eroded materials were carried downstream and had a devastating silting effect on the lagoon. There is a clear case of mismanagement of natural resources without a well-thought integrated and sustainable development plan.

Way back in the 1930s, Mr. Henry Martin initiated the terracing operation in Rodrigues. But it was Philip Hotchin who undertook a major terracing operation in the 1950s and 1960s. Unfortunately, the terracing were not managed properly; animals, particularly cattle, were allowed outside the cattle walk into the agricultural land, the leases selling the rock to the owner of mechanized stone crusher thus amplifying the erosion effect and the acceleration of the impoverishment of the soil.

After more than 220 years of agricultural practice in Rodrigues, the agricultural community still depends on the dwindling climate situation to ensure a good harvest.

The degradation process was left to deteriorate year in year out, without any serious and sustainable measures to curb its effects. Many reports have been written with sound proposals but unfortunately, most of the time they have not been implemented.

A report entitled 'Development Strategy for Rodrigues', initiated in 1993 by the government of Mauritius and financed by the United Nation Development Programme (UNDP), concluded in very strong but realistic terms, namely:

*« Rodrigues, tel qu'il apparaît actuellement, ne présente pas une économie viable. Il produit uniquement une faible part de ce dont il a besoin et a recours massivement aux importations afin de nourrir sa population et de soutenir son activité économique. Le déficit de sa balance commerciale est en augmentation constante et doit être soutenu par le Budget National ainsi que par le transfert de l'aide internationale. »*

### 7.1 Commerce

After the departure of the white settlers, commerce on the island came into the hands of Asian settlers; Chinese and Indians. They set-up an all one-sided barter and credit system. The imbalance of the trade was flagrant and the exploitation excruciating. Acacia seed was the great barter commodity, and on Saturday, the day chosen for the barter transactions, procession of men, women and children made their way to Port Mathurin, all carrying sacks of acacia. In exchange, they received cloth, soap, oil, sugar, rice, tea or rum. Fishermen received tackle and gear and sometime the rent of a boat in exchange for fish at a predetermined price, which was always much under the real selling price.

In 1893, J. Pilot, the Audit Examiner made a proposal to establish a branch of the Savings Bank in Rodrigues. The proposal was turned down by the Governor on the ground that only 127 persons out of a population of 570 had expressed themselves in favour of the Bank. At the time, the population of Rodrigues was nearing 2500. In 1908 -1909, a series of administrative measures of interest to the community in Rodrigues were taken by the Auditor General and one of these measures was the establishment of the Post Office Savings Bank. The private first Commercial Bank, namely; a branch of Barclays Bank International Limited was established in Rodrigues on the 2<sup>nd</sup> May 1967.

A first attempt to set up Cooperative Society was made in 1917 but the first Cooperative Society, (Trefles Cooperative Credit Society), was established in Rodrigues in 1924 under the *aegis* of Geoffrey Corbett, the agricultural superintendent. However, it was only in 1938 that the Cooperative Societies really took off and by the 1950s, there were 21 societies in existence, including 7 Schools Saving Banks. The Cooperative Societies have still a bright future in Rodrigues but a lot has had difficulties due to bad management.

Today, there are a number of Commercial Banks operating in Rodrigues and a branch of the Development Bank of Mauritius, thus more opportunities to access financial assistance.

#### 7.1.1 Recommendations

1. Empowering the Rodriguan to develop a saving culture;
2. Encouraging Foreign Direct Investment;
3. Strengthening the private sector through SMES.

#### 7.2 Fisheries

The Fishing Industry was originally mostly in the hands of white settlers, but gradually free men took over the trade to establish a number of fishing-posts all over the coast around the island. Each fishing-post would employ 12 to 20 men. The owner of the fishery provided boats and tackle, housing and food for the men. The fish caught was salted and dried. The gross returns were shared on a "50:50" basis, between the owner and the fishermen who received their share in cash.

With the proliferation of fishing-posts all over the island and also the damaging effect caused by the net fishing, fish started to become scarce. Consequently in 1917, net-fishing was banned. Fishing was limited to line and fish pots. However, the prohibition order was not effective because the shrewd and cunning Chinese traders decided to engineer a network of illegal fishing which was far more destructive than legal fishing. The Government had no other alternative but to revert back to the original system but by that time the Chinese Traders had entire control on the Fishing Industry in Rodrigues.

Before prohibition of net-fishing, the returns from the Fishing Industry went mainly to the native Rodriguans. With prohibition, the illegal catches were bought by the Chinese Traders at ridiculously low prices and the fishermen were forced to buy their consumer goods on credit at the Chinese shops. Obviously, this trade was always in favour of the Chinese who exploited the fishermen.

The result is that a few people made a lot of money in the Fisheries Industry, while the majority of the fishermen get poorer and poorer, while the fish stock gets smaller and smaller. To ensure that fish will always be available for local consumption, thus ensuring food security and also to develop the plan sea food hub, a number of measures have been taken by all the stakeholders, namely:

1. The creation and delimitation of four marine reserves in the lagoon of Rodrigues.
2. A marine park (South-East Marine Park Agency) has been created.
3. Alternative jobs will be provided for ex-fishers.
4. Fishermen are being trained to practise off-lagoon fishing.

#### 7.2.1 Recommendations

1. Ensure the continuous support of the National and Regional Authorities.
2. Encourage fishermen to become more professional.
3. Encourage foreign investors to invest in the fishing and aquaculture sectors in Rodrigues.
4. To develop the Port of Port Mathurin so that it caters for the future development of Rodrigues.

### 7.3 Is there an economic future for Rodrigues?

The emancipation of Slaves and land Issues

Rapport de C. Anderson - Archives de l'île Maurice. Ref. V3/2 PP. 67-74

*"L'émancipation des esclaves eut lieu à l'île Maurice et dans ses dépendances en 1834. Mais ils furent tenus de travailler encore cinq années chez leur ancien maître comme «apprentis labourers», travailleurs en apprentissage. Ce rapport est celui d'un fonctionnaire colonial, venu s'assurer à l'île Rodrigues des conditions faites aux apprentis. Il comporte en outre des données intéressantes sur l'économie de l'île qui permettent à l'auteur de conclure à la possibilité de faire de Rodrigues le fournisseur attitré de l'île Maurice en poisson et produits d'élevage. En ce qui concerne l'état d'avancement de la colonisation de l'île, les chiffres fournis par le rapport permettent de dire que celle-ci est encore assez peu développée. Le cheptel est peu nombreux, les productions végétales juste suffisantes. Or, le décompte des apprentis fournit le total de 127 adultes dont 99 occupés aux travaux agricoles, auxquels s'ajoutent 42 enfants et 13 hommes libres. C'est dire que la population totale de l'île ne doit même pas atteindre 300 habitants à cette date.» (1838)*

*"On the three first mentioned Establishments namely, Madam Pison, Messrs Bessiere & Husson formerly Mr. Gory and Mr. Eudes, the working hours of the apprentices have been carried for beyond legal time, and they have only received half of their clothing since the commencement of the apprenticeship. They and their children have, however, been well-fed and extensive garden ground is allotted to them, but their general comfort has been entirely neglected. Their huts are miserable and medical attendance, and even hospitals, are unknown on all the establishments of this island.*

*To prevent the continuation of illegal labour, I minutely explained to the apprentices the nature of their rights in every respect, and I strongly represented to the different managers the consequences of the infraction of the law."*

Anderson recommended that the cultivation of land in Rodrigues be abandoned and that the entire island be devoted to animal rearing particularly cattle.

*"I am perfectly aware that the present proprietors have not sufficient energy to attempt a change of system, and that they are incapable of conducting an undertaking of this nature, but if the plan which I have suggested should ever be acted upon, under proper direction, I have no doubt that Rodrigues, instead of remaining comparatively useless, would in a few years become a most valuable possession by rendering Mauritius in a great degree independent of Madagascar for supplies of cattle."*

Obviously, the recommendations of Anderson were never applied, the apprentices, when freed from their proprietors, moved as far as possible from their past masters to squat Crown Lands, particularly in the interior part of the island. Consequently, the subsistence farming system started and still perdures today.

*"To Mauritius, Rodrigues might in many ways be made most valuable; as a sanatorium - a rendez-vous for ships in time of war - a source whence a large supply of food might be obtained - etc, this dependency might become an acquisition of much importance." (W. Morrison 1863-64)*

W. Morrison recommended an interesting proposal on management of concessions and Crown Land in Rodrigues:

*"I would then strongly recommend that steps be taken to put en regle the proprietors who have received concessions - to parcel out crown land and*

*dispose of them at prices which may enable the local population to purchase them."*

This recommendation was not implemented and thus add to a succession of recommendations that stayed and rot in the drawers of Government Offices (*Ieskelet dan Iarmwar*).

Agriculture never sustainably took off in Rodrigues because the many reports written over the years were either never implemented, or because of mismanagement and lack of proper monitoring. In the late 1960s and early 1970s, Rodrigues was hit by a successive number of tropical cyclones and long periods of drought and as a relief measure, the Government of Mauritius decided to massively employ labourers to carry out menial tasks. All of a sudden, agricultural lands were deserted and every young man's aspiration was to have a job in the Public Sector. The stigma emerging during slavery that tilling the land was a demeaning job.

Decision in the late 1960s and early 1970s to massive employ labourers by the Government as a relief measure, due to climatic catastrophes, has instilled in the mind of the Rodriguans "une mentalité d'assistés". This mentality still perdures as everybody's aim is to secure a job in the Public Sector thus ensuring a retirement pension.

However, there have been tremendous efforts made to empower the Rodriguans to develop entrepreneurship through Cooperative Societies, but most of them failed because there was not enough efficient mentoring.

Today, things are looking a bit brighter because more and more young Rodriguans are literate and a growing number is opting for Tertiary Education. There are more training facilities available both in the academic and technical fields, but acces to financial supports is still very difficult.

Over and above the development of sustainable agriculture, stock-breeding and fishing, over the past twenty years, Rodrigues has seen the emergence of significant development in Tourism and arts & crafts. However, it is only very recently that the Rodriguans have been made aware of the concept of integrated and sustainable development. Fortunately, better late than never; there is an integrated approach to development in Rodrigues.

## 8. EDUCATION

It is undeniable that education is the key to development. The present level and type of development in Rodrigues simply reflects, to a large extent, the insufficient consideration given to the education of the inhabitants of Rodrigues. It is also a fact that, for years, the type of education dispensed in the island was alien to the inhabitants, with a curriculum that absolutely abstracted the daily living realities of Rodrigues. Everything was foreign to the islanders, as if the brain-washing practice of degrading the culture of the colonised or dependents was a sure mean of asserting the hegemony of the rulers.

From the available historical literature on the History of Rodrigues, it is thus crystal clear that the education of the inhabitants of remote Rodrigues seemed not to have been a major concern to the rulers of Mauritius in the nineteenth and the first half of the twentieth century.

In 1845, Captain W. Kelly of *HMS Conway* reported that:

*"All attempts to colonize Rodrigues and render it of use to Mauritius, must fail, if some provision be not made for religious and the education of the children; in our days, these are requisites that will not be dispensed with in a British colony."*

The population of Rodrigues was then 323 of which 240 descended from the old slave population and were generally of African descent.

Kelly pursued to state the following:

*"It is lamentable to see any colony or dependency of a colony belonging to a country like Great Britain so utterly neglected. If the island of Rodrigues is worth keeping possession of, which it unquestionably is from its position, surely it should not be debarred from all the blessings and privileges of the mother country."*

### 1. State Primary Schools

It was only 57 years after the colonisation of Rodrigues that the first primary school was set up with 27 pupils in 1866. Magistrate Jenner opened the first school in Port Mathurin in a building situated on lot 25 at the corner of Jenner and Gordon Streets. Classes started on the 12<sup>th</sup> November 1866, but due to a controversy between Jenner and the schoolmaster, the school was closed down a month after but reopened a few days after under a new school master, Desiré Lalande. His wife Ninka was a teacher as well.

A second State School was opened at St. Gabriel in 1882 and closed down in 1932, when Latannier School opened.

The Port Mathurin School was transferred to Baie Lascar in 1951 in huts vacated by the army.

To relieve Port Mathurin from the pressure of a fast-growing number of pupils, Oyster Bay School opened in 1958. From then on the Government has taken an active role in Primary Education in Rodrigues and the following schools have been erected:

1. Roche Bon Dieu School;
2. Grand la fouche Corail;
3. Mangue School;
4. Batatran School;
5. Araucaria Community School at Mont Lubin two years ago.

While, in the old days, small children had to walk long distance to attend classes, today schools are closer to their homes and they are being provided with free transport as well.

## ***2. Church Primary Schools***

The initiatives of the Roman Catholic missionaries greatly contributed to the expansion of Primary Education throughout the island. Father J. N. Pivault, who was Rector of the Parish of La Ferme from 1905 to 1915, played a major role in setting up Primary Education in the region. He founded the first church school at Rivière Cocos in 1906, but the school was closed down in 1918, while La Ferme School became an aided School. It is to be noted that Logis Tolbize and his son Jean Baptiste Tolbize played a major role in the development of La Ferme. The School of La Ferme was placed under the care of the Congregation of the Filles de Marie who arrived in Rodrigues on the 20<sup>th</sup> December 1920.

The School of Rivière Cocos was reopened by Father Wolff in 1945/46, with the precious help of Bertin Spéville and Family.

In 1932, Father Simon opened the School of Latanniers and the School of Brulé which started in 1924, closed down and all the pupils were transferred to the Lataniers School. Incidentally the Government School of St. Gabriel was also transferred to Latanniers in 1933. The Church pursued the development of Primary Education with the new School in Brulé in 1955-56 under the leadership of Father Ronald Gandy and ten years later, the Dom Bosco School at Petit Gabriel was inaugurated.

According to Alfred North-Coombes in 1971,

*"From the point of view of mental development, the Rodriguan has been judged harshly right through its history. There are too many people, I believe, who still think that the Rodriguan cannot be taken much above the level of a primitive society."*

This clearly illustrates a general paternalistic attitude toward Rodrigues but today, this has been proved to be an absolute fallacy, considering the number of Rodriguans who have successfully gone through Tertiary Education and have even left their marks in practically all the spheres of national hierarchy.

What Rodrigues badly needs is the right opportunities for his own personal development.

## ***3. Relations between Education (Knowledge), Culture and Religion***

It is a recognised fact that everywhere in the world, where colonialism has had a strong hold, the cultures of the colonialists have dominated those of the colonised. In the case of Rodrigues, the dominant culture has been the Western one, with more emphasis on the French culture. This implied a complete denial of the cultures of the descendants of slaves.

*"Avoir de la culture" - être cultivé signifiait des savoirs encyclopédiques (d'après les Assises des Ecoles Catholiques en 1995).* Thus the Churches in Rodrigues have, in some way, denied the African Culture. Dancing the "sega tambour", a deep expression of the Afro-Malagasy cultural roots, was considered as provocative and lewd by the Church Authorities.

The underlying principle behind the teaching of religious practice and the acquisition of knowledge was to instil in the minds of the Rodriguans that "black" is bad, forbidden and negative. For example, some common expressions such as "*ale dan nwar dan lanfer, to leker nwar*" are still in use today. In the Catechism Manual, God was depicted as white with blue eyes and the devil as black with pointed horns and a tail.

The slave descendants, with a dark complexion, were thus given very little consideration. They were not even allowed to occupy front pews, reserved for the 'middle or higher socio-economic classes - the people with lighter complexion' in Churches.

Such humiliation was tolerated, thus giving rise to low self-esteem among many of the inhabitants, so much so that they developed a real aversion and shame for their own pigmentation. And to quote R. Ramdoyal, "*they grew to hate, despise and to be ashamed of their own pigmentation, origin and culture*".

#### ***4. The State Role in Education development in Rodrigues***

Even though the first Primary School was started in 1861, it was only in 1913 that Rodrigues had the first visit of a School Inspector. Three major decisions were taken then, namely:

1. A grant-in-aid to the schools.
2. An alignment of the curriculum on the national level.
3. Woodwork at Port Mathurin School, Gardening at St. Gabriel School and Hygiene in both schools for half an hour every week.

The fact that the curriculum was supposed to be the same as in Mauritius, pupils who had passed the 6<sup>th</sup> Standard had to be sent to Mauritius to take examinations in History and Geography, if they wanted to sit for the Junior Scholarship Examination. At least one student, Paul Cyril Stephen, had to go to Mauritius to sit for the examination in December 1928.

Way back in 1923, Magistrate Watlace Hanning raised the question of the grant of two scholarships, one for boys and one for girls, for the education of Rodriguans at secondary level. The proposal was turned down. In 1938, Magistrate Le Roy proposed the institution of a secondary scholarship for Rodriguan students, tenable at a convent or brothers' school in Mauritius. The proposal was opposed by the National Direction of Education, with a counter proposal in favour of farm school scholarship, Rodrigues being so essentially agricultural. Six cadetships were thus created in 1946 for training at the Agricultural Experimental Station at Oyster Bay. It was only in 1956 that two scholarships were awarded to Rodriguan Students to pursue Secondary Education in the State Schools in Mauritius.

Up to about the 1950s, education in Rodrigues was available only at the primary level. It may be said to have aimed simply at providing a meagre measure of education as a means of lifting the primitive population from a state of complete illiteracy.

After leaving school, the young Rodriguans gradually forgot what had been taught, there being no opportunity, nor any need to practise or improve their knowledge. As no attempts were even made to provide newspapers, radio, libraries except the Sunday Church services to the inhabitants, it was not surprising that they reverted back, in the course of time, to a state of illiteracy.

In 1947, Paul Henri, the Assistant Director of Education, visited Rodrigues and reported a very good school attendance, over 70% comparing favourably with Mauritius. One of his recommendations officially inaugurated the "Rodriganisation" of the Education System in Rodrigues.

"The need of staffing the schools with Rodriguans as born teachers". This process had been started by Father Ronald Gandy in 1941, when he started to train Rodriguans to become teachers by teaching them English.

Even though the recommendation of Paul Henri was a milestone in the development of education on the island, he did not then think that Rodriguan candidates should be sent straight to the Teachers Training College in Mauritius, where he felt they would be out of their depth. Initially their training should begin in Rodrigues itself at the post primary stage. Two grades, Pupil Teacher and Student Teacher were created and they were to be given extra training in English language, Mathematics and initiation into teaching method. They should spend two years as pupil teacher and if successful promoted to student teacher for an extra two years before being admitted to the Teachers Training College to become a full

fledged primary school teacher. In 1953, four places were set aside for Rodriguan candidates at the Teachers Training College.

### *5. Secondary School Education*

The Anglican church under the direction of Reverend Father Wilfrid Cathan spearheaded secondary school education in 1926. From then on the Roman Catholic Church through the tandem Fathers Wolf and Gandy also accompanied young Rodriguans to acquire knowledge beyond primary level.

In 1955, H. F. Kynaston, director of Education visited Rodrigues and was so impressed by what he saw in terms of progress. He immediately recommended that the churches applied for the registration of their endeavours. St Barnabas College was registered as a secondary school on the 13<sup>th</sup> December 1961, incidentally 100 yrs after the first primary school was set up in 1861. St Louis College was registered on the 12<sup>th</sup> April 1962.

The two secondary schools were managed separately by the Anglican and Roman Catholic Churches until 1974 when they merged to become Rodrigues College.

The first State Secondary School was set up at Marechal in 1977 after the implementation of national free secondary education. The free education policy liberalised access to secondary education and consequently to date there are five state secondary schools in Rodrigues. By 2012, the new state secondary school will be operational in Terre Rouge.

### *6. Tertiary Education*

Up to now, Rodriguans students who wish to pursue their education beyond secondary level have to go either to Mauritius or elsewhere. A number of scholarships are available to Rodriguans. Very recently, with the development of distant learning, a growing number of Rodriguans are pursuing their education at tertiary level. In the 1990s there was an attempt to establish an "Antenne Universitaire" in Rodrigues but it did not last long.

There are talks about the setting up of the first university in Rodrigues by 2012, and it appears that the time is ripe for such a project.

### *7. Education Policy in Rodrigues*

Some 220 years after the permanent human settlement in Rodrigues and more than 150 years since the setting up of the first Primary School, and despite the numerous reforms in education, Rodrigues is still not sufficiently present in the school curricula. This point is highlighted by all the reports in particular "Les Assises des Ecoles Catholiques de Rodrigues 1995". Even though enormous effort has been made by the Commission of Education (Rodrigues Regional Assembly) to correct this anomaly, the fact remains that decisions regarding education still rest with the National Government in Port-Louis, the school curricula are still alien to the Rodriguans.

For the Rodriguans, the major concern is still whether the present Educational System, the curricula and the type of education dispensed to our children meet the latter's needs. There is a general consensus that the present Education System is not appropriate to equip the younger generation for future responsibilities in the Rodriguans society because it totally makes abstract of the core history and culture of the island. There is, therefore, an urgent need to revisit the whole Educational System in Rodrigues, by aligning it more with the Rodriguan realities.

## 8. Pre-vocational Departments

### Introduction and General Remarks

Rodrigues was named after the Portuguese explorer Diego Rodrigues, is the smallest of the Mascarene Islands and a dependency of Mauritius. With a peak elevation of approximately 355 metres (1165 ft), it is located 560 km (348 mi) East of Mauritius island, in the middle of the Indian Ocean. It is 109 km<sup>2</sup> (43 sq miles) in size, and surrounded by coral reefs. The capital of the island is Port Mathurin. As of 2006, the island's population was about 40,000. The main language is Rodriguan Creole, while French and English are spoken or understood by some of the inhabitants. The main religion is Roman Catholicism, with a small minorities of other religions. Most of the inhabitants are of mixed African and French descent. The main industries are handicraft, farming, fishing and tourism. In 1968, Rodrigues was joined with Mauritius when it achieved Independence; it achieved an autonomous status in 2002 and during the same year, the island was made the seat of the Roman Apostolic of Rodrigues. The Catholic Church has a key position in the social life of the country and is at the basis of community development

In education, Rodrigues suffers all the evils present in the Mauritian system, compounded by the fact that their students, being 90% Creole, have more difficulty in adapting to the examination-performing mindset of the Ministry of Education in Mauritius; it controls policy and practice in Rodrigues very closely, by means of a plethora of directives and paperwork. For these reasons, the education team decided to treat Rodrigues as a separate entity, and, as was the case in Mauritius, the inquiry took the form of a teacher's questionnaire, followed by a Focus Group Discussion with the students, dealing with similar themes.

There are five Secondary Schools in Rodrigues- all of them house pre-vocational streams. It was decided to visit all of them. Infrastructurally, the schools varied widely, from the lush sophistication of Maréchal College to the rather grim basics of Brûlée, but once more, it proved evident that good teaching was independent of infrastructure, and that with pre-vocational students an ounce of kindness and devotion was worth a bushel of educational theory, since the happiest children and most successful teaching were not always discovered in the finest surroundings.

Every school was co-educational, and the teachers were practically all Creole, and consequently Christian. All, except one, were qualified, with a teacher's diploma following an SC or HSC, and all, except one, were fairly well-experienced. There were no graduates in this group - in itself this is of interest - obviously the best-qualified teachers, in Rodrigues as in Mauritius, are reserved for the 'high fliers', those students with the best chances of academic success. It is also perhaps worth noting that these teachers were restricted to the PVE streams, and had no responsibilities with mainstream students. We noted, in most places, a tendency to segregate the PVE students, by restricting their access to school facilities, and by situating their classrooms at a distance from the others, isolated from the rest of the school. This is surely not the best way to ensure their social inclusion.

Most teachers were matter-of-fact about descent from slave labour, though during the focused group discussions (FGD's), we did not observe that this same attitude was handed down to the students, who, for the most part, seemed confused by the question, or rather not to have given the subject any consideration. The ambiguity of response to this question must raise speculation as to how exactly they are taught to look upon themselves, and the extent to which a specifically Rodriguan identity is recognised and respected in Rodrigues. In schools (whether in Mauritius or Rodrigues), Creole children seemed often unaware of their mainly slave ancestry- neither were they aware of the contribution of their ancestors to the economic development of these islands. This report will follow the general outline of the Questionnaire, with interspersions from the FDGs, where relevant.

## SECTION A. CURRICULUM AND SYLLABUS

As with many answers to the questionnaire, one notes that perfect corroboration of a response does not always make perfect sense. Time and again, one sees how everyone could agree on point A, but when it comes to explaining or illustrating the point in B, half the respondents showed that they had not understood the question or were unfamiliar with the concept. This point was particularly well illustrated in answers to this section of the questionnaire.

Thus, nearly everyone thought that the History of Rodrigues should form part of the PVE curriculum for many good reasons, and although everyone said they knew the difference between a curriculum and a syllabus, when pressed to explain what they understood by a curriculum, there was little correlation in their answers.

It is hardly reassuring that most teachers thought that the PVE syllabus was relevant to the lives of their students, since they could not agree on its composition. It was the same with 'critical thinking': the majority of respondents claimed to understand the term, but less than a third of them used the concept in the classroom. Indeed, given the proportion of these students (as it transpired during the guided group discussions) who cannot read, it is difficult to see how critical thinking in these classrooms can be encouraged through functional literary skills, reading comprehension or whatever, as claimed by the teachers. These students simply did not read, many because they could not adapt to the mainstream education system after 10 years formal education! Fewer than 1 in 10 could be easily identified as 'slow learners', the others were victims of poor teaching, indiscipline, absence of home stimulation, etc. In some cases being debarred from the library, they had no access to any reading material at all, except for the local newspapers!

The same goes for the teacher's guide. Obviously, it does not fit the needs of most PVE teachers or students, and like so much paperwork at this level, it should be considered as a huge waste of time and money.

Again, although there is formal assessment at the end of the Form 1 programme, and every teacher claimed to use continuous assessment with these students, there is no real remedial programme. This is possibly the saddest indicator on the questionnaire, for one may well ask: what is the point of the one without the other?

The great majority of teachers knew about the proposed Form 3 National Exams, but did not think their students would be able to pass it, being 'educationally backward'.

Most telling in this section were the answers to Section 9, in view of the fact that nearly 100% of respondents were Creole. Only 4 agreed that the teaching material contained racial/ethnic bias (once again clearly disagreeing with their students in the FGDs). In addition, every teacher agreed with the next 4 propositions, that:

- PVE students were poor performers at C.P.E.;
- they came mostly from disadvantaged backgrounds;
- most PVE parents are not interested in their children's studies; and
- they have very little chance to find a job in the labour market.

According to the students in the FGDs, the curriculum, as planned, written and expedited from the MIE, seems to be largely besides the point. They are not being taught what interests them, nor what they need for their future. Too many tests and assessments only serve to further exclude them - they get three more years of failure to add to the disasters of the primary schooling. Neither materials nor examinations seem to take account of these students capacities and expectations.

One cause of all these problems could be that the entire approach to teaching these students is too academic, in the absence organised extra-curricular activity, which most teachers agree is the case. Mgr. Alain Harel, Bishop of Rodrigues, strongly backed this viewpoint, insisting on a return to basics in these sections, forgetting the programme and testing, and aiming-rather at basic literacy for all.

## SECTION B. LANGUAGES AND LINGUISTIC ISSUES

It was obvious that PVE students have very little chances of ever becoming properly functional in English, given the quality of language teaching they have to endure.

Clearly, the teachers considered the choice of the medium of instruction to be important, and 100% of them used Creole as the medium of instruction in the PVE classroom. Given this, it follows that the English text-books, written for these students, are generally too difficult for them (as indeed may be the case for some of the teachers as well), and that their communication skills in English may be below average. Even in French, which after all is a language more commonly spoken in Rodrigues), most teachers consider their students' performance to be 'below average'. Neither is it any surprise to learn that the students use Creole 100% of the time to communicate amongst themselves both inside and outside the classroom.

Most teachers thought that Creole, as a language of support/ medium of instruction, would make Maths and Technical Subjects easier, help these students to acquire basic concepts more easily, and, in the long run, improve their achievements. It would also help them to communicate better with their teachers (as indeed it does at the moment), and the formal teaching of Creole would facilitate the teaching/learning process. As to whether it would constitute a form of cultural reparation, opinions were divided, with a small majority of respondents agreeing to the proposition.

Three-quarters of teachers agreed that the use of Creole as a formal language would improve students' overall results. Here, teachers and students differed, for the majority of students in the FGDs insisted on the maintenance of English as the main medium of instruction. They wanted the recognition of Creole as their ancestral language, on a par with the other ancestral languages recognised in Mauritius, and they wanted to use it freely for facilitating the teaching process. But they were very aware of the danger of abandoning English as the medium of instruction, and the effect of this would have on their future social mobility.

## SECTION C. GENDER EQUALITY

Society in Rodrigues is more homogenous than in Mauritius, hence the tensions of inter-racial and inter-communal relations are relatively absent. Rodrigues has its problems, but these are poverty, neglect and under-development by Mauritius, as well as violence, and are always compounded by the more sophisticated social evils of alcohol and substance abuse. It is difficult for gender equality to flourish in this milieu, and it is nevertheless heartening to see that so many teachers are open to the idea, and prepared to learn more. However, gender equality needs some special attention in Rodrigues, as indeed it does even more so in Mauritius, possibly because strong women in Rodrigues anchor many families, and are mainly responsible for the upbringing of their children and grandchildren.

The first question in this Section clearly caused some problems, since the great majority of teachers thought boys and girls did enjoy the same rights in society, yet the answer to the next question showed that they had interpreted the question in the strictly legal sense. Although everyone, without exception, agreed that it was an important function of the school to promote gender equality, the response to the next question was essentially the same as for Mauritius; no such directive from the Ministry in Mauritius had ever been received.

Most teachers admitted that they were not familiar with the term 'gender friendly school'. When pressed for further details, most teachers chose not to answer the question. On the next question, most agreed that teachers had 'very little knowledge about what is meant by gender bias in textbooks', and the great majority agreed that teacher training did not provide enough information about gender equality within the school set-up. The same proportion agreed that gender equality was about more than mere numbers. Most hopefully, everyone disagreed that gender equality was not important for PVE students.

In the case of a mixed-class scenario, most teachers disagreed that boys tended to dominate the scene, and most teachers thought it untrue that boys did not have enough opportunity to study 'girlie' subjects. The same proportion disagreed that girls were not given enough opportunity to

study subjects like Agriculture, Design and Communication, etc. The majority of teachers disagreed that girls did not generally participate in sports, and this reflects the basically healthy outlook of most Rodrigans, where walking is still the commonest form of transport, and most food is home-grown. The last two questions in this Section were probably badly worded for the Rodriguan context, where we should have remembered that 90% of the population is of slave descent.

#### SECTION D. TEACHER/STUDENT RELATIONSHIP

Most pre-voc teachers we spoke to gave indications of being sympathetic to their students and willing to work for their welfare. However, their answers to the questionnaire revealed some rocky areas in the relationship.

On whether teachers were aware of the choices offered to their students after 3 years of PVE, they showed that they were aware of a number of possibilities, but none that were very interesting, or offering any real opportunity for successful employment. It looks as if these students are being taught as 'rejects' of a system, and their future prospects are as 'rejects' of Society.

During the FGDs, one wanted to weep at their humility and low expectations- these children have not been encouraged to dream: A boring list of plumbers, electricians and waiters, with only the occasional hotel entertainer. Have they ever sat down to review the possibilities available (are there any?) or build a vision of what could be done? An occasional child was more specific, and spoke of 'refrigeration technician' or 'CID officer', obviously inspired by a family member or acquaintance. There were almost no artists, musicians, or sportsmen. These children live in the real world.

The next question, dealing with the relationship between teacher and students in the PVE classroom, revealed this as 'difficult' by a small majority, though half of the respondents preferred not to elaborate by giving reasons as to why this was the case. Obviously, the good teachers talk to the students and try to build a climate of confidence - without which any sort of teaching is impossible - the majority claimed that they did in fact do so, and ran through a comprehensive list of issues they discussed with them.

The depressing conclusion was that nearly all the teachers were convinced that these students are lazy and disinterested in studies, and insufficiently integrated into the mainstream because there is little possibility of interaction between PVE and mainstream students. They also said that teachers of the mainstream are not interested in the PVE streams, and this may well be the case, from what we saw during our visits, both in Rodrigues and Mauritius.

This last answer highlighted one of the main problems mentioned by the students during the FGDs: that of the treatment meted out to them by some teachers and students of the mainstream - this ranks from disparaging remarks to insulting language, restrictions on the use of school facilities, and even access to things like the library, specialist rooms and labs, gym and playing areas. What students wanted, unanimously, was respect, consideration and equitable treatment from the schools in which they found themselves. In the FGDs, they all asked for: more sporting facilities, better-organised sports. 'Creative subjects like Art, Music, Drama.' They wanted access to all school facilities, and more facilities on offer. Above all, they wanted respect from other Staff and students of the 'mainstream' sections, and an end to disrespectful/abusive language.

Many teachers seem kindly disposed towards these students, but are untrained and insufficiently experienced. These are challenging students that would call on the skills of the most experienced teachers. Fortunately, it transpired that many PVE teachers were aware of these issues: most of them disagreed that their students were more undisciplined than the others, and everyone agreed for the need of these children to meet more frequently with social workers, educational counsellors and psychologists.

Tellingly, most teachers seemed unaware of a school policy about bullying, harassment and violent language, although students in the FGDs frequently complained of all three. For starters, their experiences of Primary Schooling was a litany of horrors. Some of this beggars belief; inevitably, one found it difficult at times to believe ones ears. A long list of bad teaching practices compounded unethical, even cruel treatment of the young. Those who reported good, conscientious teachers were an absolute minority, in many places completely absent as these children denounced beatings in the classroom with 'rotin bazar', sticks, dusters, chalk, and what have you. Compounded with verbal abuse and the use of extraordinary epithets to a captive audience. Apart

from the violence, some really bad teaching, as has to be the case when a child with a normal I.Q. fails the C.P.E. twice over, and still cannot read three years later! If this is indeed true, whose sense of identity can survive such treatment? And more importantly, what can be done to stop this, at once? After the trials of life in the Primary Schools, they all agreed that the pre-vocational class was preferable, even in those schools which were not obviously child-friendly, inclusive or well-organised.

Happily, a majority of teachers declared themselves satisfied with their jobs. Some complained of lack of materials, encouragement, coaching and support for teachers as well as students.

## SECTION E. HOME/SCHOOL RELATIONSHIP

This Section highlighted one of the main 'grey areas' in PVE education both in Mauritius and in Rodrigues: very few teachers seem prepared to assume the role of social worker, as well as educator, and liaise with the parents of their students, who in many cases are struggling with the problems of a dysfunctional family, in addition to the basic poverty and ignorance that beset too many Creole families. Significantly, the majority of teachers said that any form of communication with these parents was rare.

An overwhelming majority of respondents agreed that the 'cultural background' of a student is not necessarily the same as an 'ethnic background', and the same proportion agreed that problems could arise through an insufficient understanding of the students' cultural background by the teacher. Significantly, everyone agreed that the text-books and curriculum ignored this element.

Most teachers thought that parents of PVE students did not come to the school often, unsurprisingly, in view of the attitudes displayed to their children by teachers and students of the mainstream, and (one suspects) by the school administration. In fact, apart from collecting reports and occasionally attending meetings, as well as mandatory visits 'for disciplinary problems', few of these parents ever came to the school.

Half of the teachers consulted thought that these parents did not sufficiently encourage their children to come to school regularly, and it followed that everyone thought that they had very low aspirations for their children. This dovetailed with the responses students gave in the FGDs, when one remarked the relative absence of hope and career ambitions. It is sad to see such realism in children of this age, but they have probably had all idealism knocked out of them long ago.

Everyone thought that there was insufficient communication between the PTA and PVE parents, unsurprisingly since half of them thought that PVE parents were not part of the PTA. Teachers were divided as to whether or not a data base exists on these parents, although obviously this is an important point.

The final question dealt with the sense of History and identity of these students and with how easily they could relate to them. Significantly, most teachers thought this was not possible, mainly because of the entire absence of these topics on the curriculum.

This last issue raised - that of a Rodriguan sense of history and identity - would appear crucial to the work of the Commission: for we may well ask ourselves what is the main purpose of Education, if it is not to give the young a strong sense of identity and purpose in life, and liberate them from the hereditary constraints of History? And how can this be done, by these teachers, and in these classrooms, bound, as they are, by the often illogical directives coming from Mauritius?

### *RECOMMENDATIONS FOR EDUCATION*

Following a short survey of the pre-vocational classes in all Secondary Schools in Rodrigues, these are our recommendations, inasmuch as they apply specifically to this sector, although some of them will obviously work well in the main Secondary Department:

1. The quality of teachers recruited at both Primary and Secondary levels, and the training they receive. Many of the issues we uncovered were linked to this failing - including that of the amount of violence at Primary level reported by these students. If true, it would seem that too many Primary teachers are unfit for teaching. A certain amount of indifference, and even cruelty, towards low-achieving pupils was easily discernible in the workings of the

Secondary Schools we visited: how else can one qualify the segregation practised in some of them, and the extraordinary limits imposed on students and even teachers of the Pre-Vocational Departments? Where children are being taught to read (by non-English speaking teachers who have passed an HSC, but without a training) without access to any suitable books or a library, where Music and Art, Drama and Dance are practically inexistent on the syllabus - although Rodrigues abounds in natural beauty and local folklore - where Sports and Physical Education are so restricted, although within a population of obviously physically-gifted individuals, one can only conclude that Education itself is not serving its purpose. As with other sectors, some experienced and better-qualified candidates should be included in each batch, and ways found of attracting such people to apply for teaching posts in Rodrigues.

2. The Teacher's training syllabus should include such well-established concepts as 'whole class teaching' and 'child-centred learning', and teachers should be taught to encourage students to use critical thinking in the classroom as well as in exams. The teachers role as guides and counsellors must be emphasised, particularly for pupils who are lower academic achievers. In the case of children from a socially disadvantaged background, the need to meet and interact with the parents/ responsible parties should be stressed.
3. There is need of a revised syllabus for Pre-Vocational Departments in all schools (including those in Mauritius), but with a section on the History and Culture of Rodrigues. Text-books and student workbooks should accord more with the cultural and ethnic background of Rodrigues. A new Teachers' guide is necessary, one which will include new and creative teaching methods, while cutting down on the amount of paperwork that moves between the two territories. Many teachers complained about the amount of useless information that they were regularly required to produce and reproduce on demand, and the sheer volume of testing that went on. We need to find ways of reducing emphasis on assessments and tests, except informally, as a means of encouraging pupils and documenting their progress, instead of eliminating them. New subjects should take into account the sea, Rodriguan History, the Geography of the island and fishing, as well as the practice of animal husbandry which has always existed on the island.
4. It is important to have a running 'Remedial Programme' so that all pupils (except the most disabled) can stay together with the class. There are different ways of doing this, but one should aim at basic literacy by the third year of Primary Schooling. Pre-vocational students should have achieved this in practically all cases by the end of the first year. If Primary Education is successful the need for Pre-vocational classes will fall - eventually they will contain only those children with real learning difficulties who are in need of specialised teaching, which will have to be addressed. Eventually, a single Pre-vocational Department will probably suffice for Rodrigues.
5. **End segregation of these Departments** within the schools-whether in sitting of the classrooms, access to facilities, and the treatment accorded to Pre-vocational teachers and students by the denizens of the mainstream. All school areas and facilities should be held in common, and a common practice and discipline applied to all. This should include the mutual respect that should characterise relations between the Departments.
6. **A great deal of attention must be paid as to how English and French are taught, how Creole will be taught in the future, and how the teaching of Creole can best be used to improve the teaching of English.** The standard of English practised by many teachers in Rodrigues, as well as in Mauritius, is probably inadequate for this purpose. One must bear in mind that most Pre-vocational students do not want to replace English or French with Creole.
7. **A module on 'family life' and 'sex education' should be included in the Teachers Training course in Mauritius, with a strong, practical component on 'gender equality'.**

## 9. COMMUNICATIONS

### 9.1. *Postal Services*

The first Post Office was established in Rodrigues by Administrator Edward Stevens Messiter who appointed himself as Postmaster as well in 1860. It is to be noted that the Post was the only link with the outside world until the advent of telegraphic services by the E.T.C. (Eastern Telegraph Company) on the 20<sup>th</sup> September 1901.

At least two Administrators of Rodrigues had sought separate postage stamps for the dependency. In 1901, E. R. Macmillan proposed the diagonal overprint "Rodrigues" on the stamps of Mauritius.

In March 1923, Magistrate W. Hanning suggested a separate postage stamp for the Dependency. He rather fantastically estimated the revenue therefrom at Rs.1,000,000 to Rs.1,500,000. He did not mention "Stamp Collectors". The annual revenue from postage stamps sold at Rodrigues at that time was Rs.500 per annum. His Excellency could not approve.

On 15<sup>th</sup> November 1929, during his second term of office, Hanning "charged" again. Special Rodrigues Postage Stamps should bring in between Rs.500,000 to Rs.1,000,000.

He was informed by Postmaster General that Rodrigues, being a dependency of Mauritius, could not have a postal system of its own. He said that he was not asking for a separate postal system, but for a separate stamps issue.

1. In 1880, the Seychelles Islands, although a dependency of Mauritius, were allowed to have their stamps issue. They only made a separate colony only in 1903.
2. In 1890, the Cayman Islands had their postage stamps, although they were and are still (1929), a dependency of Jamaica.
3. In 1922, Barbuda, a dependency of Antigua, with a population of only 900, was visited by a severe cyclone which wrought havoc. A Public Relief Fund was subscribed to and Barbuda was allowed to have a stamps issue of its own. Similar distresses happened at Rodrigues.

### 9.2. *Recommendation:*

A plea is therefore made for the National Authorities to allow the Rodrigues Regional Assembly to work on a proposal for Rodrigues to issue its own stamps in the near future.

### 9.3. *Telecommunications*

Regarding electronic communications and the internet, it is unthinkable that Rodrigues, at the beginning of the third millennium, is still lagging far behind. Recently, there has been encouraging signs that new development will take place in this sector, but Rodriguans, due to numerous unfulfilled promises, now take all these good intentions from the political authorities with a pinch of salt.

Rodrigues was first connected to the outside world in 1901 by the Eastern Telegraphic Company. In fact, Rodrigues played a role of great importance in the development of the British System of Communication. This was the extension of the submarine telegraph cable from Mauritius to Australia and China *via* Rodrigues and the Cocos-Keeling Islands. The whole Eastern extension all the way to China and Australia was known as "The Australasia and China Telegraph Company. The first official cable that went through from Magistrate, R. E Macmillan, was a message to the Governor of Mauritius on the 20<sup>th</sup> September 1901, transmitting an expression of loyalty to the Crown on behalf of all Rodriguans.

Since then, communication has improved in Rodrigues, but we are still light years away, when compared to the development within the Republic.

*9.4. Recommendations:*

1. That no effort be spared by all parties concerned to bring Rodrigues up to date with modern communication.
2. To equip young Rodrigues with the technical know-how in the field of Information Technology.

## 10. RODRIGUES - CULTURE

### *10.1. Historical Background*

Rodrigues played a critical role in the Anglo-French struggles for supremacy in the Indian Ocean during the Revolutionary and Napoleonic Wars between 1793 and 1811. Considered as a dependency of Mauritius in the colonial era, Rodrigues is part of the State of Mauritius since Independence (1968) and, as such, was referred as the Tenth District with the other nine districts of mainland Mauritius. Rodriguans voted for the first time in 1967 National Elections, which was also crucial for the Independence of Mauritius; practically, all the Rodriguans under strong advice of Sir Gaetan Duval, voted against the Independence project and favoured the 'Parti Mauricien Social Democrat' ((PMSD) ideology of integration with Great-Britain.

When the Labour Party (the Parti de L'Indépendance) under the leadership of Sir Seewoosagur Ramgoolam won the elections for Independence, the Rodriguans strongly opposed that the National Flag be raised in Rodrigues on the 12<sup>th</sup> March 1968, the day Mauritius became independent. There was a great resistance and soldiers from the mainland were deployed to maintain Law and Order in Rodrigues.

All these did not favour of Rodriguans themselves. Consequently, no development projects were initiated and Rodrigues was first left in the hands of a Civil Magistrate. Then from the early 1970s, Civil Commissioners were appointed to run the Rodrigues Administration. The "Mauvais Sujets" of the Public Service in Mauritius were exiled to Rodrigues as punishment. This practice naturally created a highly conflicting situation between the Public Officers and the population because the Public Officers did not perform their duties as they were supposed to do. The fright of the Independence nurtured by the PMSD resulted in a major brain-drain in Rodrigues. A sizeable number of Rodriguans mostly Civil Servants, those of European origin, migrated to Australia in the early 1970s.

At that time, few Rodriguans were employed in the Public Service. The majority of the population was farmers and fishers. They exported to mainland Mauritius, farm products such as red beans, onions, garlic and live animals and marine products, such as salted fish and dried octopuses. In those days, Rodrigues was considered as the "greniers de Maurice". Unfortunately a number of successive devastating tropical cyclones in the late 1960, followed by a very severe drought in the early 1970s, totally fragilised the Rodrigues' economy, and consequently the Government had no other alternative but to employ practically the farmers as labourers in the Public Service Thus a new mentality was installed in the Rodriguan society, whereby all Rodriguans have ever since aspired was to have a job in the Public Service because salaries were not linked to productivity, but simply attendance. It was, therefore, easier to work as Civil Servants than being self-employed. What was meant to be just a measure to alleviate a harsh situation became the norm. The very foundation of work culture was altered for good.

### *10.2 Religion*

Rodriguans are of mixed origin and fall into two distinct groups; the descendants of the first European settlers and the descendants of the first European settlers, and those of African and Malagasy descents who were ex-slaves on the sugar estates in Mauritius. As Rodrigues never undertook the extensive plantation culture, this explains why the Indian indentured labour never took roots in Rodrigues. The population stands about 37000 and is predominantly Christians, the majority of whom are Roman Catholics. There are a small community of Anglicans, legacy from the British Colonial rule and an even smaller community of Hindus and Muslims who were amongst the latest to arrive in Rodrigues as traders in the late 1890s. The Chinese traders also arrived around this period, but they right at the start fully-integrated the "Creole" community by marrying Rodriguan women. Churches are well attended on Sundays, and it is the main regular occasion for Rodriguans to dress up on an island where leisure activities are rare.

### *10.3. Folklore - Traditional Dances*

It is natural to greet everybody in the streets in the friendliest way. The Rodriguan is generally honest and has a quiet disposition and slow to anger.

The Sega "Tambour" is good indicator of the Rodriguan temperament. It is among others a vehicle of approbation or disapprobation of the conduct or attitude of a member of a family, thus constituting a sort of social judgement from which there is no escape for the guilty.

The Sega Tambour is the island's unique folkloric dance performed by Rodriguans to celebrate special occasions. Sega Tambour is the traditional form of music and dance found exclusively in Rodrigues. It is one of the forms of music and dance representative of the Cultural Identity of the inhabitants of Rodrigues. As most of the segas of the Indian Ocean Islands, the Sega Tambour took birth within the slave population of Rodrigues and is reminiscent of African and Malagasy musical traditions. With many contributions from other population groups, the sega tambour evolved into a unique form of music. It has been adopted by the whole population without distinction of ethnic origins.

The Sega "Tambour" continued to be practised on the same land. It is to be noted that the Sega "Tambour" is different from other segas in the Indian Ocean Islands. It has its own originality, particularly when it comes to musical rhythm, beats and dances, despite having the same name. The principle underlying the Sega "Tambour" is that the male partner does not have a fixed female partner, everybody dances at the same time. Male and female partners are always trying to out-dance each other.

The lyrics, simple and vivid, narrate the daily realities of the local life. In the past, it was quite common to sing a refrain freshly and spontaneously composed, to make fun of the physical aspect of an individual and laugh at the misfortunes and misdemeanours of one's daily life, and to mock people of light and easy virtues.

The Sega "Tambour" costume, important for the female partners only, is a long swaying dress usually with sleeves and a tight belt around the hip. All the female dancers wear petticoat with a perfect bun. The male dances are dressed in patent leather shoes, pleated trousers and silk shirts and usually the colourful motifs match those of the female dress.

To invite the female dancer, the man holds out his white handkerchief in her direction.

The "Tambour" is the main musical instrument for the Sega "Tambour". The latter is made with dried and cured goat skin glued on a circular wooden frame. It is often accompanied with a "Triang", a musical instrument made of steel stem folded in triangular shape and a short steel rod served to hit the base of the "Triang". The "Bobre" reminiscent of the "African Calbasse musical instrument" is also used. It is made of a wooden arched by a metallic string with half a coconut shell attached at the wooden arch.

### *10.4. Sega "Tambour" - Singers, Dancers and Musicians*

The performance of the Sega "Tambour" is a very well-structured activity, even though it might look disorganised to foreign onlookers. The main actors are the singers, dancers and musicians.

The musicians have to first ensure that the "Tambours" are ready and fine-tuned for the performance. The "Tambour" is warmed on an open fire until the skin is optimally stretched out the circular wooden frame. The action of warming the "Tambour" complicated and delicate task because too much heat on the whole skin surface or on part of it could damage the instrument. In fact, the action of warming is done simultaneously with gentle tapping on the skin by connoisseurs listening attentively to the emitting sounds. Once the right sound is obtained the "Tambour" is said to be ready for the musical performance. For a good performance it is imperative to have at least two "Tambours" as this ensures continuity in the performance.

The singers will either sing already known songs but also will compose new songs spontaneously depending on the event being celebrated. There is always a main singer who will start the singing and a chorus then repeat the same words after him or her. The first line of the song is always sang "a capella" so that everybody could hear the words and also the underlying message.

Traditionally, there were no readymade songs; they were made up as the performance unfolded. The composition of the songs usually geared to the personality's present, social concerns, natural catastrophes, nature conservation, and so on. The singers will, therefore, communicate through their songs issues that are affecting the lives of the population for all concerned to hear. Hence, the Sega "Tambour" is a powerful way to communicate the state of mind of the population to the authority.

The dancers will come in only when the "Tambours" call them, and it is the female dancer who starts by inviting the male partner with rhythmically moving her hips while quickly in successive small steps and flipping, flapping and swinging her dress/skirt which she holds with both hands. The male dancer will reply to the invitation with wide opened arms in rapid circular movements accompanying the female dancer up the down the room. After a couple of minutes or less, a second male dancer will move in challenging the first one who, by this time, is showing signs of fatigue because of the frantically rhythm of the Sega "Tambour". The first male dancer will give up after a few seconds thus accepting defeat and the sega will go on along the same lines.

The mixed population in Rodrigues has also given rise to a form of cross-breeding musical tradition commonly known on the island as "Musique Traditionnelle".

The "Musique Traditionnelle" is practised with the accordion, Triang, Wooden Chest and recently the "Tambour" has been integrated in the music. In fact, the population has adapted the old European folk music and dances such as the Quadille, Waltz, Mazurka, Polka, and Scottish. These dances and music were brought in by the French.

The introduction of gramophone, records players, tape recorders and even the advent of the radio somehow overshadowed the "Musique Traditionnelle" and the Sega "Tambour" to such a point that it was thought that these two musical traditions would die a natural death. Fortunately, this never happened and in the mid-1970s a group of young people decided to revive the traditional music customs. Today, the natural transmission mechanism, whereby the tradition is handed by the parents to the children, is functioning again and the ever-increasing recognition of the "Musique Traditionnelle" beyond the local borders is very encouraging, thus ensuring its perennality.

#### **10.5. Food**

The staple food of Rodriguans was originally composed of maize, sweet potatoes, manioc, fish and beans. Rice and meat were consumed only on special festive occasions. Due to the devastating effects of cyclones and long periods of droughts, the relief measures, implemented by the government to alleviate the hardship of the population and the progress in education, less and less Rodriguans cultivated the land resulting in a sharp reduction in the staple food production. Furthermore, tilling the land was considered by many as a devilish curse on the people to such a point that the hoe was commonly known as the "Devil's Pen". Consequently, all these factors combined resulted in a significant shift in the eating habits of the Rodriguan people. Imported rice took over from maize as the staple food, and today maize is a luxury.

#### **10.6. Recommendations:**

1. That the Rodrigues' culture should find its place in the school curriculum.
2. To encourage the cultural and artistic creations of talented Rodriguans.
3. The setting up of a Cultural Museum in Rodrigues.
4. To encourage young Rodriguan academics to carry out cultural research.

## 11. RODRIGUES' AUTONOMY AND ITS LIMITATIONS

### 11.1. INTRODUCTION

Rodrigues, the smallest of the Mascarenes Islands in the Indian Ocean, having been severely exploited and neglected by the different colonial powers over nearly four centuries, has known a very slow development since its discovery in 1528 by the Portuguese pilot Diogo Rodriguez. It has been successively ruled by the French (1630-1810) and British (1810-1968) until its integration within the Mauritian territory with the advent of the latter's Independence in 1968. Over the succeeding centuries, the island underwent a few institutional changes which did not answer the population's needs and aspirations. The most fervent and popular claim of its people had been the island's autonomy, which was subsequently granted after 20 years of struggle. Constitutional amendments and appropriate legislation were required and were unanimously voted for in the National Assembly by all the country's political parties represented therein on the 20<sup>th</sup> November 2001. However, while this decentralized System of Government has undisputedly proved to be the instrument that better answered the people's aspirations so far, it has rapidly demonstrated numerous limitations which gave way to recurrent political instabilities, as well as regular conflicts with the Central Government.

### 11.2. INSTITUTIONAL EVOLUTION

#### 11.2.1 *Cinderella*

Rodrigues has always expressed dissatisfaction with the pace of its development in this part of the world, as compared to its other sister islands. The disparities were so obvious compared to the rest of the world that she has been ever since named "Cinderella of the Mascarenes" and "The Sugarless Mascarenes". Such labels were not bound to please the poor, but proud Rodrigues, and the island will not stop urging for better consideration from its different political masters.

#### 11.2.2 *Economic plunder and neglect*

Due to its very small surface area of 110km<sup>2</sup>, including the numerous islets, as well as its geographical isolation, ex-centered from the major commercial routes, as well as the regular severe climate conditions that it faced, throughout the colonial times Rodrigues did not attract numerous settlers to set up a solid Private Sector Development, as was the case in Mauritius. Many came in prospection and due to administrative neglect and indecisions, left for Mauritius. The Colonial Administrations, both under the French and British rule, never had a clear roadmap for the island's future but, instead more than once, considered that the island was best suited as a land of exile or quarantine, where undesired trouble-makers such as political opponents, prisoners and patients suffering of dangerous diseases could be sent. It was also a land for plunder. Its abundant tortoises were massively exploited to feed the population of mainland Mauritius and navigators until complete extinction and its most delicious bird "Le Solitaire" did not know a different fate. The Rodriguan producers in the Agricultural and Fisheries sectors were outrageously exploited mainly through a barter system resulting in the enrichment of the more powerful forces at the expense of its inhabitants. As for the British, it was interested in Rodrigues only as a strategic base to defeat the French and conquer Mauritius. The slave trade continued in Rodrigues well after it was made illegal in the colony and the slaves were liberated only 4 years and 4 months after those in Mauritius had already undergone apprenticeship and been set free. Throughout the Colonial Rule, Rodrigues remained underdeveloped but nevertheless managed, through hard work in agriculture and fishing, to be considered as the granary of Mauritius as far back as 1867 and even later in 1970s before it was stopped by long periods of drought and severe cyclones.

### 11.3 DEPENDENCY, FRANCHISE, INTEGRATION AND REVOLT.

As a British Colony, Rodrigues became a dependency of Mauritius in 1815. It obtained its representation in the Council of Government as an Electoral District in 1967 when the Rodriguan people voted for the first time as the 21<sup>st</sup> constituency of Mauritius. As early as 1915, a petition was sent to the King George V in 1915, claiming for a Rodrigues to be an Electoral Constituency but as usual, nothing happened. A judicial battle was staged in the 1960s challenging the validity of previous elections when Rodrigues was set aside. Finally in 1967, after Constitutional Talks towards Independence where all quarters of Mauritius sat around the table for negotiations without Rodrigues, it was agreed to extend the universal franchise to Rodrigues. And it was in such circumstances that Rodrigues became an integral part of Mauritius, when it became independent, and some incidents followed the aborted celebrations of the event in Port- Mathurin.

#### 11.3.1 Ministry for Rodrigues and the Rodrigues Local Council

After the advent of the Independence of Mauritius and the *de-facto* integration of Rodrigues, the island did not know the same developmental strength as its sister but experienced some timid progress, namely in the commercial sector, where history details inhuman exploitations through trade, especially the barter system and the education sector undertaken mainly by the Catholic Church. The infrastructural development remained merely non-existent. In 1976, a Ministry for Rodrigues was created and a Mauritian-born became the island's First<sup>t</sup> Minister followed by a Rodriguan in 1982. Rodrigues knew a new institutional development in 1992 in the year when Mauritius became a Republic, with the setting up of a Rodrigues Island Council. It was considered as a non-event by opponents because it was a body where all 21 members were nominated by the Minister for Rodrigues and were to act as advisers to him as one body. It was suspended in 1996. However, over 25 years, Rodriguans never stopped claiming an appropriate and distinct status within the Republic of Mauritius and asked for more administrative and political autonomy in the management of the island's of affairs. In November 2001, the Constitution was amended and the appropriate legislation introduced and voted unanimously by all political parties in the National Assembly to grant Rodrigues an autonomous status. The island became an autonomous region in the Republic on the 12 October 2002, after the first regional elections took place, shifting 46 areas of responsibilities from Central Government to a regional one in Port Mathurin.

#### 11.3.2 AUTONOMY RODRIGUES-

The announcement in 2001 by the National Government that Rodrigues will be given a degree of autonomy through a decentralised devolution of powers came as a shock, even to the elected Rodriguan politicians of the time. They complained that they were not consulted but had no choice. The perception that Rodrigues is a burden for Mauritius has not changed an iota today as opposed to stark negligence by Mauritius in the old days, Rodrigues receives practically nothing, but a few tokens to keep her within the Republic of Mauritius.

The devolution of powers can be considered to be purely cosmetic as access to finance rests sole with the Minister of Finance and Economic Development.

There is an urgent need to revisit the Rodrigues Regional Assembly Act in order to translate into reality the proper meaning of decentralisation of power from Port-Louis. This could only be done with a paradigm shift that takes into consideration the particularities of the island and its people. It is believed that Rodrigues is a victim of the identity crisis that exists in Mauritius, which constitutes a base line for political, social and economic decisions.

Amidst this situation of neglect, Rodriguans have over the years developed a true resilience that has enabled them to overcome terrible hardships. Generally, the Rodriguan is easy-going, well-behaved, law-abiding, to a large extent, and respectful. He/she looks free and happy, even though he may not always have enough to eat.

Rodriguans, like any other people in the world, have the qualities and character to lead a better and more comfortable life, if they are given the right opportunities and means to do so.

There is definitely enough evidence to file a genuine case of negligence towards the successive political masters of Rodrigues over the past three centuries. There is an urgent need to get the historical facts right. This is critical for the relationship between Mauritius and Rodrigues.

### 11.3.3 *Limitations immediately experienced*

Rodrigues' accession to the status of autonomy was joyfully welcomed in the island both by those who struggled for it, and those who proposed alternatives. All the political parties ran for elections during their inauguration on the 29<sup>th</sup> September 2002. The decentralized system embodied in a body corporate labelled Rodrigues Regional Assembly (the RRA) comprises all the tenets of democracy; it is enshrined in the country's Constitution, guided by electoral rules. It has its Assembly, its executive council and its official opposition, and is in charge of 46 areas of responsibilities devolved to it. The RRA's executive arm is made up of 7 Commissioners with ministerial role.

The First limitations of the present Law guiding the autonomy were felt immediately after the very first elections, when the clear majority which emerged from the first-past-the-post system in the 6 electoral regions shrunk after the full application of proportional representation. This situation which was also due to the relatively equal strength of the then two principal political parties has impacted ever since on the conduct of Rodriguan affairs and caused major instabilities. Other limitations were also gradually experienced regarding the practicability of Rodrigues' autonomy, governed by the RRA Act 2001, and there is a general request for its amendment.

### 11.3.4 *Budgetary difficulties*

One of the most criticised problems that surfaced was the budgetary process. Regional MPs and Commissioners are of the opinion that the budget provisions, as well as its mechanisms, do not allow them to fulfill the Rodriguan people's will and their projects and programmes. The international economic situation and context are constantly being put forward to explain budgetary constraints to justify the allocations made to Rodrigues by the Central Government. Rodrigues, on its part, considers that it deserves better consideration in view, as underlined in the Section 46 of Rodrigues Regional Assembly Act 2001, of its

*"(a) physical separation from Mauritius; [... (b) omitted]; (c) its isolation from the principal national growth centres; (d) the absence of the multiplier effect from expenditures and investments (private and public) made in Mauritius; (e) Restricted opportunities for employment and career fulfillment in Rodrigues; (f) the impracticability of participation by residents of Rodrigues in the major education, cultural and sporting facilities located in Mauritius; (g) the lack of sustained development in Rodrigues; [... (h) omitted]; and (i) the special needs of Rodrigues in terms of accelerated development."*

This Section of the Law came into operation on the 30<sup>th</sup> September 2002. The regular disagreement between the different regional autonomous authorities over the quantum is explained by the fact that the capital budget allocated do not respond to the infrastructural and development needs in the island. The more so since many studies have proved that Rodrigues is the poor relative of Mauritius. A study done in 1998 concluded that 36.4% of its families lived in precariousness, and another 13.2% in "ultra-poverty". During the recent years, there was a widespread opinion that for Rodrigues to feel real integration into the nation and for its economy to thrive, Mauritius must stop displaying the same attitude as the ancient Colonial Powers, that of neglect and snobbism, and start to bridge the development gap between the two islands and lever the same level of services available in Mauritius for the island.

For political observers and practitioners, the autonomy should imply an increase in funding given the number of new institutions created with the advent of the RRA (7 Commissions excluding the Assembly House) and the new policies and expectations of the people. For many, while the institutional set-up has changed considerably, the way the budgetary allocation is decided for Rodrigues has never changed. Rodrigues' budgetary calculation is

aligned in the same principle as that of a particular Ministry, while Rodrigues is a separate island, with the same needs as those of the island of Mauritius as a whole. It is felt that, due to the constant increase in the cost of living, coupled with the growing management needs of the island, the capital budget is being down-sized each year, although that it shows an insignificant increase in figures. Over 9 years since autonomy, very few infrastructural and structural developments have been observed. The inability of the Regional Government as the main employer of the island, to invest in infrastructural development and the lack of private investors and the narrowness of the market, result in a lack of opportunities for the youth who have massively become economic refugees on mainland Mauritius.

#### *11.3.5 Other major concerns*

Rodrigues' autonomy involves power being transferred in 46 areas of responsibility, among which some concern only the administrative power, policies remaining in Mauritius. This is the case of some major portfolios such as Social Security, Education and Health among others. In such cases, a very close collaboration between the Commissioner and the Minister is required to ensure continuity in the quality and types of services delivered in both islands. However, there are some very important sectors for which Rodrigues does not have authority, such as for example Foreign Affairs, Defence, Finance, and Service Commissions which remain with the Central Government. While not being claimed at all by the Rodriguans, it is felt that the total exclusion of Rodrigues' representation in those sectors, especially that of Economic Diplomacy on which Mauritius is relying more and more for its development, is not acceptable. Rodrigues feels that major negotiations for investments; agreements, loans, development prospection and other international conventions and tools are thus being made, and used solely for the benefit of mainland Mauritius.

#### *11.3.6 Growing disillusion with the system*

Other questions pertaining to the practicability of the Law guiding autonomy concern Section 30 of the Act which gives power to the Regional Authorities to introduce Bills in the Regional Assembly. None of them have ever been introduced in the RRA to date. The Rodrigues Children Council Bill, for example, has remained a dead Bill since 2004 because it was never introduced in the National Assembly as required by the Law. Rodriguans question the fact that Mauritius chooses never to give its green light for Rodrigues' request for twinning projects with other regions of friendly countries. Such silence is diversely commented on by the locals, with some viewing it as a form of mistrust, and others as a neocolonialist attitude to close all the doors for a conquered land. The latter opinion is on the rise in the island, especially with the young generation who regularly compare Rodrigues' narrowing scope and the visible accelerated development of Mauritius and its visibility at international level through economic diplomacy and international agreements and loans. Strong signals of commonness, national unity and equality must be sent out to tone down such growing feelings.

### **11.4 RECOMMENDATIONS**

1. Revisit and amend the Rodrigues Regional Act in the light of the experience acquired over the past 8 years.
2. The budgetary process must be improved and the necessary legal provisions reviewed to provide for formal consultations at specific times of the year between the designated Commissioner for Finance and the Minister for Finance. And a formal system must be set up for Rodrigues to benefit automatically during the course of the same year, of additional and proportionate funding for projects announced at national level, not included in the Regional authority's budget estimates.
3. Budget provisions must allow for a leverage of the level of service and development in Rodrigues before starting to allocate budget on a strictly per capita grant.

4. A Memorandum of Understanding must be signed between the Ministry for Finance and the RRA to address other administrative obstacles, finance not being an area of responsibility devolved.
5. Rodrigues should be present in all the national formulations of new laws and projects in order to facilitate a better integration of the island in the national developmental dynamics.
6. All Bills passed by the RRA, except in case of illegality, should be introduced in the National Assembly.
7. A Rodriguan representative must accompany the Mauritian delegations on some international missions.
8. Sectors that do not fall under the purview of the RRA should, nonetheless, provide for its inclusiveness and active participation at national level.
9. All international commitments and conventions signed by the Central Government must be discussed and applied in Rodrigues.

## 12. RODRIGUES, PART OF MAURITIUS?

It is inevitable and intellectually dishonest to make abstraction of the question: Is Rodrigues part of Mauritius? Comparing the level of development in all economic and social spheres on mainland Mauritius with that in Rodrigues, one is bound to conclude there is a great disparity. Being citizens of the same Republic, Mauritians born in Rodrigues do not enjoy equal opportunities as their fellow countrymen born in Mauritius. This is not just a matter of perception, but a stark reality. All through this document, it has been made clear that Rodrigues, throughout its human history, has been either neglected or totally forgotten by the powers that be in Mauritius.

There is a very strong feeling among Rodriguans that they are like strangers in their own country and this is even more so with the advent of the Autonomous Government.

There are a number of hypotheses to explain this absolute lack of consideration towards Rodrigues, namely:

- a. The National Government's incapacity to acknowledge the particularities of Rodrigues as a different island within the Republic of Mauritius.
- b. Mauritius considers Rodrigues as a socio-economic burden. The irony of it all is that Rodrigues is very often used by the National Government to justify its request for considerable funds from International Organisations to finance projects in Mauritius but Rodrigues gets very little of the funding.
- c. The paternalistic attitude towards Rodriguans thus makes them believe that they are second-class citizens of the Mauritian Republic.
- d. The advent of the regime of Autonomous Government was imposed without allowing enough time for transition and the proper empowerment of the Rodriguans to efficiently manage the island.
- e. The origin of the population of Rodrigues seems to be one of the core problems in the relationship between Mauritius and Rodrigues. Very often, the following comment is being voiced out for all concerned to hear: "Rodrigues is in such a state of neglect because most of the population is from African origins and if they were of Indian origins, the island would be different".

It would be unfair to stop at the above hypotheses as there have been a number of affirmative and laudable actions over the past few years, but too much depends on the political masters in power either in Rodrigues or in Mauritius. The development of reliable communications between Rodrigues and Mauritius badly needs to be reinforced as this will help to do away with the negative perception that mainland Mauritius has of Rodrigues. This will ensure that much greater, more genuine and more sustained effort is done by the Public and Private Sectors in Mauritius and Rodrigues to examine issues that are vital to the development of the island. There are signs that things are moving in the right direction, and the present report is an indication that there is a real will in Mauritius to listen to what the inhabitants of Rodrigues have to say on their own development.

## 13. CONCLUSION

Rodrigues must be seen as an asset of the Republic, and this needs to be publicly acknowledged by all Mauritian citizens. Rodrigues is also a golden opportunity for the Mauritian Republic to prove to the world that sustainable development can be successful. It is possible and much easier to implement a mode of development that increases the health or value of the existing assets without (or with minimal) destruction of other assets, and without significantly increasing the restored assets' geographic or ecological footprints.

Rodrigues has experienced a lot of strife and trial over the years but the wounds that have been inflicted on her can be healed. However, if the healing is going to be done, it must be done now. Otherwise, it may never be done at all.

The people of Rodrigues nurture the hope that things will be brighter tomorrow and will remain so for the coming generations.

To end this report, we would like to quote from "Sustainable Integrated Development Programme for Rodrigues" (SIDPR 2009) - Rodrigues in 2025 - An Enlightened View:

*"This blue-print for Rodrigues has been elaborated with the active participation of the local population during the period 2006-2008. The vision it embodies, represented by two fictitious characters below, Roland and Jeannine, whose transformed lives in 2025 are viewed as the product of a successful living and rolling integrated development process, originated from the 2007 Sustainable Integrated Development plan for Rodrigues (SIDPR).*

*As he turns 18 in 202, born from modest agricultural peasants in 2007 in the sub-humid uplands of La Ferme, is able to leverage the plethora of opportunities offered by his native land to develop to his full potential in a totally liberalised world. At the same time, Jeannine, a Generation Y yuppie, who was born in a wealthy family of traders in Port-Mathurin in 1995, is creatively collaborating with the Global ICT initiative which has reached the Rodriguan shores in a fully digitalized, broadband, and wireless Web 3.0 world.*

*The socio-economic situation prevailing in Rodrigues in 2025 that will enable the young healthy Roland to contemplate a fruitful career in a well-preserved environment, is documented in the long-term Sustainable Development Strategy, and a way to get there is detailed in the Short-term Action Plan.*

*As he seeks to further his education in a field well suited for the Rodriguan context, Roland also has the opportunity to contribute to developing the productive capacity of the Island, while continuing to uphold the highest family and cultural values, inherited from his parents. The young adult's circle of opportunities is wide and choices abound.*

*After successfully completing secondary schooling where he had the chance to learn a curriculum well suited for his Island, Roland is now faced with several alternative choices. He has the possibility to join one of the specialised, organic agricultural filieres in place in Rodrigues, which is producing highly valued and internationally-acclaimed transformed product using a unique local recipe, inherited from the ancestors. Alternatively, Roland could choose to embark on higher education in ICT so that he could one day join the local branch of Microsoft set up in Rodrigues as part of it's founder's active involvement to help remote and isolated communities collaborate with advanced countries. The local branch is headed by Jeannine and is situated in the state-of-art Technology Park at Grand Baie, with an impressive view on the aquaculture activities being undertaken in the lagoon using innovative technologies. The Rodriguan seaweed has been found to*

*possess medicinal properties and is now in high demand in Japan, the U.S.A and the Scandinavian countries.*

*Jeannine's lovely children find it hard to believe that water used to be a problem in Rodrigues. They had always thought that the abundance of "retenues collinières" situated inside the valley bottoms, and other simple but ingenious water capture devices installed on the Rodriguan houses were legacies of their ancestors. They don't believe that these devices have being designed and popularised only two decades ago. The idea that water used to be free and distributed only once every week, as opposed to continuous supply in 2025, is to them, a joke of bad taste.*

*Roland's and Jeannine's grand-mothers are neighbours and enjoy a healthy lifestyle. Whilst Roland's grand-mother, who has been struggling hard to support the family in the 1950s, is still dependent on Social Aid being provided by the RRA, Jeannine's is wealthy and supported by two maids. However, both of them are equally happy and enjoy life to the full. In a peaceful land of paradise such as Rodrigues, being an elderly that is filthy rich is immaterial. In any case, the social security system in place provides adequate support to allow one to live a decent life. The two grand-mothers feel proud to live on a calm and peaceful island where societal problems are things of the past and cultural values are passionately preserved by the youths.*

*They both know that Rodrigues has been able to achieve wonders, in less than a generation, largely thanks to the promotion of good governance and democratic principles, the will to take courageous decisions, the power of new technology, and the adoption of a participatory process that is now not only a model for the rest of the world, but also being emulated in the pacific small island states. The Economic Planning and Monitoring Unit which was launched in 2007, is recognised by one and all as having played a pivotal role in the socio-economic development of Rodrigues.*

*As Roland ponders his future career, he cannot resist the temptation to be part of the vibrant tourism sector of Rodrigues. Only a year ago, in 2024, 125,000 tourists had paid a high price to experience the Rodriguan adventure. Several regional jets operate round-the-clock and keep the airport and its vicinity busy 24 hours a day. The triangular route Mauritius-Rodrigues-Reunion is a hot favourite in this part of the world and the package is being marketed aggressively to tourists visiting both Mauritius and Reunion Island. Cruise ships are also choosing Rodrigues as one of their favourite stop-overs between East and West. These ensure the regular presence of high net-worth individual on the island, who are also the main buyers of high-quality handicrafts available on the island. Tourists enjoy the idea that the local hats they are wearing are also being supplied to Disney World in Florida and Euro Disney at Marne-la Valley, France. Indeed, a few years ago, the Walt Disney Group, as part of its corporate social responsibility initiatives, agreed to outsource its supply of traditional hats to Rodrigues. The hats are used by its artists daily during one of the favourite daily shows.*

*The adoption of a few agricultural filieres and the focus on high-quality niche products and on technology, have allowed a remarkable preservation of the environment and natural resources. As Air Mauritius' mid-range airplane prepares to land at Plaine Corail, visitors are thrilled to see the island covered with crops and other plants that are driving one of the pillars of the Rodriguan economy. Hardly a plot of land can be seen as bare. The lagoon also appears impressive with marine parks and aquaculture dominating the view. Fishing boats in the outer -lagoon, are numerous and visitors can observe from the plane the interplay between small local fishing boats and*

*mid-sized Japanese vessels as they slowly approach to land their catch in the seafood hub at Pointe Monier.*

*For both Roland and Jeannine, the future looks bright. The Rodriguan Administration is no more dependent on budgetary allocations from Mauritius for its recurrent budget. However, Mauritius as well as friendly countries remain key providers of capital supporting the ongoing massive infrastructural developments, such as investments in Port-Mathurin harbour that will soon allow even larger cruise ships to berth.*

*The economy is dependent on four pillars, driven by a vibrant private sector comprising mostly SMEs operating in niche market: agricultural exports, which contribute significantly to GDP; tourism, the seafood hub and aquaculture activities; and creative online collaboration of Rodriguan ICT companies with global players through the internet-based services. Indeed, Generation Z Rodriguans have mastered software such as wikis and the new Web 3.0 and have become agile in securing lucrative contracts internationally by working collaboratively with leading companies. Rodriguan companies now form an integral part of the open-source movement of software development in a virtual universe that characterizes the world in 2025."*

## 14. GENERAL RECOMMENDATIONS

2. At the heart of the Rodriguan problem is the inappropriateness of the Education System whereby a majority of our youngsters are eliminated and made to feel that they are losers. There is thus an urgent need to revisit the education system in Rodrigues.
3. The way forward is encourage research fellows from Rodrigues & Mauritius to relook into the way Mauritian and Rodriguans History have been written so far.
4. Capacity-building and empowerment of the Rodriguan people by giving them access to available opportunities to Tertiary Education by implementing a University project in Rodrigues.
5. Economically, Rodrigues lagged far behind Mauritius for historical circumstances that we have been debating above. There must be more affirmative actions and even an official policy of positive discrimination, when it comes to help Rodriguans catch up and make up for the lost time. Today, the will, the design and the plan are there ready to kick-off the economic development of Rodrigues. What are badly needed is the policy-decision and the means for a real take off.

In spite of all the affirmative actions taken in the past 40 to 50 years, Rodrigues is still having enormous difficulties in shaking off the shackles of the stigmas of slavery. However the hardship of life over the years has enabled the people of Rodrigues to build a strong identity, a network of solidarity, a sense of pride and an amazing capacity of resilience. The canva is, therefore, present to enable the success of an urgent plan to address the problems Rodrigues is facing in an integrated and sustainable manner.

Neglected, alienated, undesirable and forgotten throughout most of its History, Rodriguans categorically refused to give up. Rodriguans are now more than ever convinced that they have a brilliant future.

### Illiteracy and Unemployment

Before the liberalisation of Secondary Education, namely the implementation of Free Education at secondary level, illiteracy was very high in Rodrigues. Very few children had access to Secondary Schools through the Church School and the majority was left to revert back to permanent illiteracy. Parents did not see the need to help their children to pursue their education because social mobility was inexistent. Children left Primary School at a very early stage to help with the family agricultural fields, to tend domestic animals, such as goats, sheep and cows, and to join the fishing squad. They were condemned to become "ti gardien ek ti pesser". This was a vicious circle that ensnared many generations of Rodriguans. Due to the lack of proper training in agricultural management and animal husbandry, the land resources were exhausted very quickly, and combined with severe climatic disruption, production in both the agricultural and marine sectors, became poorer and poorer year in and year out. On the other hand, the demographic level of the island exploded, meaning that there were more people to feed.

Faced with this catastrophic situation, a number of recommendations for the development of the island were made by Government Officials, but their implementations when it happened failed to meet the challenges because of lack of funds and proper monitoring.

Alfred North-Coombes summarised the Rodrigues' situation as follows in 1971:

*"Since the day Mauritius attained the status of an independent nation, Rodrigues has, of course, shed its status of dependency. Under the New Constitution the smaller island is now a "part" of Mauritius. Politically, it is fully integrated. Physically, it cannot be. Ethnically, it is likely to remain very much as it is now, for as long as one can care to imagine. Economically, however, if the destinies of Rodrigues are to remain linked with those of Mauritius, the Rodriguan problem must be studied in greater depth and in more*

*detail than has been done in the New Mauritius 4-Year Plan for Social and Economic Development. The plan provides a capital expenditure estimated to cost 32.5 million rupees in the four years ending on the 30<sup>th</sup> June 1975. This is roughly 2.3 million rupees more annually than in the last three years."*

Obviously, mainland Mauritius was preoccupied with its own development and, therefore, somehow did not feel the need to consider the situation of Rodrigues, as it should have been. Hence, no serious efforts were made to empower the people of Rodrigues. In fact, Mauritius only tried to do the minimum required for the upkeep of Rodrigues.

The only way to make the case of Rodrigues heard was through political representation, and in 1976 the first significant local political party to challenge the Government of Mauritius was formed. Unemployment was then rampant in Rodrigues. A growing number of young Rodriguans had been educated at least to the secondary level, and the hope of better paid and satisfying jobs was practically inexistent. This provoked mass migration to Mauritius and this trend is continuing to this day.

Even though there had been some encouraging measures to reorganise the productive sectors of Rodrigues, the traditional agricultural and fishing trades are on the verge of bankruptcy, due to lack of organised export markets. The Tourism Industry is facing huge difficulties to develop in a sustainable manner because of the constraints of air and sea access. Industrialisation never took off. New technologies are still inaccessible to Rodriguans. This situation is not conducive to potential investors in Rodrigues and, hence, Rodrigues is still under a regime of maintenance development with the devastating effect of considerable brain-drain every year.

Encouraging literate young people to invest the productive sectors, such as agriculture and fishing, has failed for many reasons, namely:

1. Agriculture is not profitable because it is till dependent on the dwindling climatic conditions, for instance no irrigation system is available in Rodrigues.
2. Practically everybody aims at securing a job in the Public Services.
3. Mechanisation of agriculture is still in its infancy and ran by the Government Authorities; thus most of the time, it is unreliable.
4. The soil is getting poorer and poorer due to lack of proper management.
5. The non-implementation or the lack of a systematic land-use planning.
6. The common land syndrome is a major handicap to development in Rodrigues.
7. Unwarranted political interference and corruption in every sphere of development in Rodrigues.

We are, therefore, left with an explosive situation and if nothing is done immediately, Rodrigues will constitute a major headache for the Republic of Mauritius and a liability to its own population.

## THE 'COLOURED POPULATION' OF RODRIGUES

### 1. SLOW COLONISATION

Any historical sketch of the colonisation of the island of Rodrigues sets it apart, and highlights its differences, from Isle de France/Mauritius. Clearly, there were several aborted attempts by the French to colonise the island before 1750, when a "small permanent colony" was established.<sup>1</sup> During his well-documented visit, Abbé Pingré found 100 people living on Rodrigues, including about ten Frenchmen, although from those 100 must be deducted the two crews of small French ships.<sup>2</sup> In 1803, General Decaen ordered the few colonists and their slaves to evacuate the island, for fear of a British invasion that subsequently took place in 1809, through a landing at Anse aux Anglais. Neglected under the French authorities, Rodrigues was to witness a period of 'start-stop-start' colonisation under the British, as agriculturalists and fishermen from Mauritius made their way over to the small island. In his excellent study, J.-F. Dupon declared: "After a period of military occupation, the colonization of the island, thenceforth British, was to start anew, led by colonists from Mauritius who used slaves from the coast of Mozambique and the East Coast of Madagascar."<sup>3</sup>

### 2. EARLY EUROPEAN 'WHITE' SETTLERS

Philibert Marragon, who arrived in Rodrigues on 12 May, 1794, with his wife, Marie Jeanne Elisabeth Guillon de Neuville, and his mother-in-law, settled above Oyster Bay. He soon took possession of 400 *arpents* at Les *Soupirs*, on a hill between Oyster Bay and Mont Charlot, a property and plantation which he named *L'Orangerie*.<sup>4</sup> Marragon's grave, and his wife's, can still be visited today at *L'Orangerie* where he lived till his death in 1826. His daughter, Séraphine, born there on 30 July, 1802, lived with her parents until 1826, after she had married a businessman from Port Louis, Charles Pierre François Pison. She became the owner of *L'Orangerie* in 1826, had 66 slaves and 17 free children. When she left for Mauritius, she gave permission to her slaves to live on her land, *Jardin Mamzelle* that became a squatting area for emancipated slaves.<sup>5</sup> Séraphine Pison died at La Chaumière, Savanne, in 1892.

When Marragon carried out his first Census in 1804, he found 82 slaves and 22 'Whites' on Rodrigues, of whom at least half - or 11 - were of mixed blood. The following Table is borrowed from Alfred North-Coombes' seminal work, *The Island of Rodrigues*:<sup>6</sup>

	Marragon	Le Gros	Gorry	Rochetaing	Bréhinier	Total
HOUSEHOLD (Individuals)	6	1	1	13	1	22
LAND (arpents) conceded	400	100	-	350	-	850
cultivated	100	25	70	70	-	265
SLAVES						
Mozambique	8	-	9	12	3	32
Malagasy	7	1	5	3	2	18
Talinga	4	1	-	-	-	5
Guinea	1	-	-	-	-	1
Malay	-	1	-	-	-	1
Bengaly	-	1	-	-	-	1
Born at Rodrigues	17	2	5	-	-	24
<b>TOTAL SLAVES</b>	<b>37</b>	<b>6</b>	<b>19</b>	<b>15</b>	<b>5</b>	<b>82</b>

From Marragon's Census (1804), we know that another early settler, who came from Bourbon, *via* Mauritius, was: E. Rochetaing, a fifty-five-year old, who took with him Marie, a *mulâtresse libre*, and her daughter. He was given a concession of 350 *arpents*, which he called 'Mon Plaisir'; it lay between Malartic, Mont-Lubin and St. Gabriel.<sup>7</sup> Germain Le Gros, who landed in 1792, with his partner, Frémont, was a master mariner and engaged in fishing. They settled on

the Northern foot of 'Le Piton' on 100 *arpents*, part of 'Les Soupirs'; this was later handed down to Séraphine Marragon. In 1812, Le Gros owned the boat *La Séraphine*, a schooner and did so until 1816, when Marragon took over.<sup>8</sup> For his part, Michel Gorry made his living from the land rather than the sea; he had settled at Oyster Bay, with Roger and Boulerot, both fishermen. When they left for Isle de France, Gorry moved up country to a property called 'Les Choux'; there, he first grew indigo but, later, confined his activities to growing only what satisfied his family's needs. Early settlers, who relied on fishing for their livelihood, included D. Raffin who settled in 1803 and started a fishery, with 20 slaves, as well as Lecloud and Gautier.<sup>9</sup> Lecloud had arrived earlier than Raffin with 16 slaves.

Most of the early colonists were of European origins and regarded themselves as 'Whites', but it is known that several were *métis* themselves or cohabited with female slaves or *mulâtresses*, as was the case with Rostaing. Commenting on the relatively 'recent populating' of Rodrigues, Dupon wrote: "Some of these colonists engaged in, for some time, a direct slave trade and disregarded the British legislation."<sup>10</sup> Marragon and Rochetaing were probably the only true 'Whites' in Rodrigues' history. Statistics provided by Dupon put the population, during the early years of British colonization, as follows:

1820: 200 (Source: *Almanach of Mauritius*)

1827: 123 (*Ibid.*)

1845: 495 (*Ibid.*)

1861: 699 (Fr. François, Catholic Missionary)

1862: 756 (*Ibid.*)<sup>11</sup>

From those statistics, Dupon concludes: "This assessment allows, one can see, little room for true colonists and their descendants, at most about ten families."<sup>12</sup> North-Coombes put the population in 1809 at 41 slaves and 8 other residents,<sup>13</sup> while Baron d'Unienville declared, in 1830, that Rodrigues was capable of receiving a much larger population, and that it was essential for the Government to send a surveyor there to establish concessions.<sup>14</sup>

At the very start of the Government's policy of granting land concessions, between 1815 and 1830, those only rarely surpassed 350 acres, or 135 *hectares*. Subsequently, they were limited to about 108 acres. Because Rodrigues did not share in the sugar cane boom of Mauritius, it ceased to be of interest to the British Authorities very early in the history of colonization. The small settlement under Marragon (1794-1796), who had the title of *Agent Civil de la République* (1794), led to a semblance of colonization because of the British threat, but it really started in 1825, with the arrival of C.T. Hoart, as Government Surveyor. His Report has been discussed at length by North-Coombes, who saw it as "the first of its kind", for it proposed the division of the 'Oriental' side of the island into 78 plots of 108 *arpents* (112 acres). Hoart also recommended that those plots be granted to "deserving families from Mauritius, who had the means of bringing them into cultivation."<sup>15</sup> The population of Rodrigues in 1826 was put at 123 by Hoart, and divided as follows:<sup>16</sup>

	Men	Women	Boys	Girls	Total
Europeans	7	5	8	-	20
Freed	2	1	-	-	3
Slaves	49	28	12	11	100

In his chronology, Antoine Chelin has highlighted a most important arrival at Port Mathurin on 20 October, 1843: that of John Henderson, the first Brigadier of Police and, later on, the Police Magistrate.<sup>17</sup> Accompanied by five constables, he landed from the *Isis* (Captain John Marshall).<sup>18</sup> This was to mark the beginning of some kind of Law and Order on Rodrigues. Five years earlier,

Special Justice C. Anderson was dispatched by the Governor of Mauritius to gather information on Rodrigues. He spent six days and reported the following establishments:

- (i) *Madame Pipon's, [Marragon's daughter, who was then owner of L'Orangerie] with 66 slaves and 17 free children.*
- (ii) *Messrs. Bessière and Husson's, on land formerly belonging to Gorry, with 36 slaves and 17 free children.*
- (iii) *Mr. Eudes', at Grand Baie and Sygangue, with 19 slaves and 8 free children.*

*Ninety-nine of these slaves were predial. In addition, Gabriel Bégué, who had settled on the land now forming part of the Roman Catholic Parish of St. Gabriel, had 4 predials; a certain Jean Marie had one and, likewise, Gonnet who had in addition 13 free men employed in his fishing establishment. The apprentices were working longer hours than the law allowed, their clothing were inadequate and their huts miserable, but they were well fed and extensive ground was allotted to them.*<sup>19</sup>

Another settler, Charles Lenferna de Laresle, Mrs. Pipon's bailiff, returned to Rodrigues, after a stay in Mauritius, and opened a fishery with Furcy Labour who lived at 'Les Soupirs' in the 1840s.<sup>20</sup>

Table 2 has already drawn attention to the gender imbalance that prevailed in Rodrigues, especially among slaves, from the start; Bertuchi, who visited the island much later in the 1920s, remarked that in the early days, "great immorality prevailed. Each woman had three or four husbands, in some cases as many as six. The children were brought up together, the husband in power at the time exercising the role of father to all."<sup>21</sup> Many descendants of slaves took to the hills after the Abolition of Slavery (proclaimed and diffused in Mauritius and Rodrigues in 1839) and became known both as 'Montagnards', and, according to Dupon, also as 'planteurs', 'habitants', 'laboureurs', 'piti nation', "désinane vénielle, beaucoup moins péjorative que celle franchement insultante de 'mouzambique'." <sup>22</sup> Several of the descendants of 'Whites' or *métis*, whom we interviewed, used the word *Zabitants* for descendants of slaves, but they did not mean any insult by it.

As for families of European or French descent, Dupon notes in 1967: "Though extremely spread out, they are represented by a small number of names, common in Réunion, and perhaps also in Mauritius: Roussety, Bégué, Rivière, Meunier, Legoff, Perrine, Lévêque."<sup>23</sup> We know some of the dates when the early settlers bearing European names, emigrated from Mauritius, or from elsewhere, to Rodrigues: Charles Weder (before 1827); Mathieu Roussety, a master-fisherman and trader (about 1842); his brother Auguste Roussety (1844); Jean-Marie Meunier (about 1840); Zéline Labour (about 1840); Bercy Labour, with four young children (1845); Désiré Calamel (1845); Charlotte and Marie-Louise Perrine (1846); Marie-Jeanne Geneviève, with a daughter (1846); Ferdinand Bonnelle (1846); Clodimir and Emilien Jean (1846); Louis François, his wife and five children (1848); Pierre Raffault (1848); the Legoff, Lévêque, Ithier, Castel and Allas families (later than the 1840s).<sup>24</sup> Descendants of the early *Café au lait* settlers, as they are known, or *Rouges* - because they grow red in the sun - gladly recall the adventures of their pioneer ancestors (see below for some families). Parish Registers of Births, Marriages and Deaths draw attention to the evolution of *Rouge* families. Gabriel Bégué, the ancestor of a powerful landed family, settled in 1825 on land now forming part of the Parish of St. Gabriel, which was bought or acquired, in a part-exchange deal, by the visiting priest, Father Thevaux (Parish priest from November 1850 to May 1851). He erected a "latanier hut 50 ft. long by 24 ft. wide", a primitive Church which became known as St. Gabriel from "the owner's name" - the Saint being later declared the patron saint of Rodrigues.<sup>25</sup>

There is much evidence, oral and written, to indicate that cohabitation between 'Whites' and descendants of slaves and 'mulâtresses' was common, not least because of the infrequent visits of priests to Rodrigues. Father Thevaux celebrated 50 marriages and baptized 400 individuals during his six-month stay in 1850. In December 1848, Brigadier Henderson had noted that when *H.M.S. Isis* called at Port Mathurin in 1844, its chaplain Rev. Mr. Brown offered to baptize and marry locals, but that "there were then only five married couples on the island, the inhabitants being reluctant to have their marriage ceremony performed by any civil commissary or magistrate."

<sup>26</sup> A.J. Bertuchi concludes from information that he gathered at first hand: "A few white Creoles from Mauritius and Bourbon came to settle on the island and intermarried with the blacks, which accounts for a section of the population being of a 'café au lait' colour. Some of these settlers were the descendants of the French who had been expelled from the settlement of Port-Dauphin, in Madagascar." <sup>27</sup> Descendants of 'White' families, today, also point out that many of early ancestors intermarried. Indeed, Bertuchi adds that "other Whites married Whites, which explains that they are, in appearance, like Europeans, except in their habits and customs which, through a prolonged stay, have merged into those of the blacks." <sup>28</sup>

Emigration of 'mixed-blood' or 'White' families appears to have slowed down as the nineteenth century wore on. <sup>29</sup> From his analysis of statistics available, Dupon was able to assess that "if one examined the origins of deceased people, one noticed that, from 1860 to 1865, 40% to 50% were born in Mauritius [...] However, from 1870 to 1875, this percentage dropped to 10%." <sup>30</sup> Moreover, Rodrigues seems to have missed out altogether on Indian emigration and Indentured Labour in the 19<sup>th</sup> century. In 1962, the first official Census that allowed individuals to declare their belonging to a community, indicated that of a total population of 18,333 inhabitants, 117 deemed themselves to be Hindus and 378 Chinese.<sup>31</sup> Indeed, early Indian and Chinese emigrants to Rodrigues had blended well with the Creole Mass through intermarriage. Early Chinese and Indian settlers were actively engaged in Commerce and Trade, a "system of barter and credit [that was] all one-sided", according to Bertuchi. For example, Acacia seeds, collected and used for this barter, were exchanged against the necessities of life. <sup>32</sup> While the arriving Mohammedans retained their religion, North-Coombes explains that "most of the Chinese have now embraced Christianity, either as Anglicans or as Roman Catholics, and most of them now regard themselves as Rodriguans. Many of them have married native Rodriguans and live very happily with them." <sup>33</sup>

### 3. EDUCATION

The role of the Catholic, Anglican, or other Christian, Churches was significant in moulding the population of Rodrigues into an entity. Though not always unified at the start, the population is now showing less signs of communalism than Mauritius. Dupon warns us, though, to look for divergences and nuances:

*"The relative homogeneity of the population has not, for all that, excluded nuances. Fr. François remarked in 1862: "The population is divided into two perfectly distinct classes: the indigenous people or farmers, scattered here and there, can be numbered at 400 over the spread of the Mountain, and the fishermen who have mostly come from Mauritius and work for about twenty small bosses, small mulattoes or blacks; the latter number about 300 and live on the coast." <sup>34</sup>*

According to the first Catholic priest, Fr. F. Thevaux, 1850, some 11 years after the Abolition of Slavery had been announced in Rodrigues, there were 350 non-baptised individuals, and a hundred 'Catholic' Mauritians who had come to trade in salt fish. <sup>35</sup> In his Chapter, 'The Churches and the Schools', Alfred North-Coombes has adequately discussed the contribution of Churches (Catholic and Anglican, to begin with) to this 'brassage' of the Rodriguan population. <sup>36</sup> The role of Father Thevaux in assuaging the jealousy and animosity of the "twenty or so master fishermen, who ran the fisheries all around the coast," cannot be overstressed. Several 'Rouge' inhabitants we spoke to, stressed the vital contribution of the Catholic Church to the development of schools and colleges. In 1843, a former court usher, Mr. Christopher Mann, and Mrs. Henderson, the wife of the Brigadier of Police, were the only teachers. By 1866, a school-master and a school-mistress had been appointed. <sup>37</sup> From October 1866 to August 1867, Father Frédéric Muylhe, a Belgian priest, ran the Government school but insisted on 'Catholic prayers being said at the start and at the end of the day. Little wonder that he was recalled to Mauritius, after causing much conflict with the authorities. In September 1869, Fr. Emile Hilaire became the first 'curé' of Rodrigues and greatly developed the Parish of St. Gabriel. <sup>38</sup> From then on, schools began to flourish; the Church of England College of St. Barnabas and the Catholic College of St. Louis were the culmination of much hard work, when they were registered on 13 December, 1961 and 12 April, 1962 respectively, before merging to become the Rodrigues College. Prior to the creation of St. Barnabas and St. Louis Colleges, young Rodriguans had to do their secondary schooling in Mauritius. Above all, what

the Christian Churches did was to promote education for *all* Rodriguans, irrespective of colour or creed, thereby working towards greater homogeneity and interculturalism among the people.

Over the years, a small Protestant/Anglican community had emerged. As early as August 1876, Anglicans petitioned the Mauritian Government for a clergyman to be sent to Rodrigues. Early Anglican families included such *métis* as the Waterstones, Vandorous, Bennetts and Capdors, among others.<sup>39</sup> Some had been descendants of British officers; others still were shipwrecked and decided to stay on the island, such as William Vandorous. One or two came as clergymen, as was the case with William Waterstone and C.A. Capdor, in 1881.<sup>40</sup> Bishop Peter Royston visited Rodrigues in 1881, and afterwards, a catechist, Edward Francis, was sent in March 1883, to be followed, in March 1886, by Pierre Edmé Gellé who had been a missionary in Madagascar.<sup>41</sup> What is apparent from any sojourn in Rodrigues today is that 'Montagnards' and 'Rouges', and 'Anglicans', other Christians, and Catholics cohabit in peaceful harmony; hence, religion has been more of 'cement', than a source of disunity, in Rodrigues between classes and communities. As for 'nuances' and 'hidden prejudices', these are only detectable to the sharp-eyed observer, such as Dupon who comments: "Aujourd'hui encore, les éléments asiatiques mis à part, de subtiles nuances distinguent les Rodriguais et d'une façon générale, les plus clairs d'entre eux, de fait souvent pêcheurs, qui allient parfois les yeux bleus de quelque ancêtre picard à une peau bien pigmentée, professent un amical mépris à l'endroit des plus sombres, ceux de l'intérieur [...]"<sup>42</sup> And, while nowadays habitations of both groups show a remarkable similarity, when Bertuchi visited the island in the 1920s, he noticed that some of the inhabitants' houses were made of vacoas, acacia poles and latanier palm leaves, while "the more prosperous construct[ed] their houses entirely of wood." These had wooden floors, which became the fashion, on account of the Rodriguans' passion for dancing.<sup>43</sup> For all the homogenization sought and achieved through religion, and the democratic ideals of some of the people, the scars of slavery remained in the early colonization period even if slaves, according to individuals spoken to during the research trip, were well treated by such owners as Marragon and Séraphine Pipon. In fact, Marragon was so kind to his workers that Rochetaing "complained bitterly about Marragon's attitude and the lawlessness of his run-away slaves."<sup>44</sup>

#### 4. PRESENT DESCENDANTS OF EARLY 'WHITE' OR *MÉTIS* SETTLERS IN RODRIGUES

A number of structured interviews were conducted in Rodrigues and will be analysed separately and summarized in Chapter 7. In addition, during a research trip, a number of descendants of early settlers were spoken to in order to determine: (a) How their ancestors and they saw Rodriguan society in the past and today? (b) What information they could shed on the 'Coloured Population' in the nineteenth century and at present? (c) Whether they felt that slavery and its abolition had left an indelible mark on Rodriguan customs and lifestyles? The individuals interviewed in this context will be referred to as 'X., Y., Z.'

##### 4.1. A member of the Ithier family

The Ithiers came to Rodrigues from Mauritius, and it is likely that the first Ithier to do so was Victor, who accompanied Beyts on the *Hattonbum* which arrived at Port Mathurin on 19 August, 1888, after an unusually long passage of 19 days.<sup>45</sup> The speaker [hereafter X.] stressed that his great-grandfather may have come from Brittany, and was the father of Jean-Baptiste Ithier, who married Miss Eva Hombrasing. They had thirteen children. Whilst the ancestor [Victor] is said to have been a sea captain, Jean-Baptiste Ithier had settled on a concession of 14/15 *arpents* at *La Ferme*,<sup>46</sup> where the family still owns land today. X., the interviewed person, pointed out that his own father was a pastoralist and agriculturalist who owned a farm called 'La Ferme Piments' at *La Ferme*, land which, on his father's death in 1976, was divided between his children whom he had by a Miss Meunier - another very common 'Rouge' name in Rodrigues. The Ithier family, from Jean-Baptiste onwards, grew such crops as maize, haricots, vegetables, as well as keeping cattle. They originally had, in their employ, descendants of previous slaves, all freed since the family did not settle at *La Ferme* until the 1880s.

A brother of Jean-Baptiste's, Bonnet Ithier, left for Mauritius early on and settled in the Flacq District; he is buried at St. Julien Cemetery. There is a 'Camp Ithier' in the vicinity of Flacq/Trou d'Eau Douce, that is said by X. to be connected with the Rodriguan branch of the

Ithiers. Some of Jean-Baptiste's daughters were well-educated and became teachers at the local *La Ferme* primary school, but the more common practice, in olden days, was to encourage children to abandon their primary schooling to work on the farms, tending to the crops and animals. This was the case for the individual interviewed. There were no *débouchés* for students other than work, and few could go to Mauritius to pursue their studies. The Ithiers are also reported to have rented extra Government land in the days of Jean-Baptiste Ithier, to grow additional crops which were transported to Mauritius for sale. In Mauritius, it is likely that the Ithiers owned land in the Beau-Bassin, as well as the Flacq Districts. Large 'White/Coloured' families were the order of the day; the interviewee's father also had 13 children, as had his father before him.

X. also pointed out that, at the time of his grandfather and father (born in 1912, he died in 1976), one tended to marry other 'White' individuals, i.e. intermarry; for example, of the five daughters of Jean-Baptiste's, two married Ithier cousins, one a Roussety, another married an Albert, and so on. 'Mulâtres', he regarded as pejorative, and despite X. acknowledging the existence of cohabitation with 'darker' women, he stressed that a 'mésalliance' was, at the time of Jean-Baptiste, considered taboo. Such pejorative terms as 'Mozambique' and 'Chevrette grillée' were used, in the old days, for the 'Montagnards', but are no longer in common usage. At *La Ferme*, the 'White' families have always been the: Roussety, Ithier, Meunier, Bouton, Allas families, among others, all agriculturalists. Unable to travel to Mauritius for their secondary education such families had their children taught privately or publicly until the end of the primary schooling. Many members of the Ithier family, in the early twentieth century, knew how to read and write from an early age - perhaps because they were taught by their elders, notably aunts of the interviewee. The Church also fostered education among the families.

As for the descendants of freed slaves, they were treated as domestics, given the right to build their own homes on the family's land, as well as grow their own vegetables. Because 'White/Coloured' families were fond of food, domestics were hired to prepare copious meals and to work in the fields, and were remunerated per day's work. They were not looked upon as inferiors, nor were they exploited. All Ithiers owned various-sized plots and used workers who were descendants of slaves, but these were well treated. Slavery has, in the interviewee's viewpoint, left little impact on the psyche of the Rodriguan population today.

Emigration to Mauritius has already been referred to. The interviewee's parents left for Mauritius, with their youngest daughter, and died there. Other Ithiers have emigrated to Australia (mainly Melbourne), while a number remained at *La Ferme*. The lack of good positions and the attractions of Mauritius and Australia are seen by the interviewee as reasons for this; he himself spent over twenty years in France. A niece of the interviewee is living in Malvern, Victoria, Australia as is her father. So it is that the lure of distant climes was too strong for even the most reasonably comfortable pastoralist families of Rodrigues. This constitutes a change, since Bertuchi observed, in the 1920s, that Rodriguans were "quite averse to emigration [...] Not all the tales of a thousand Eldorados will make leave their little isle." <sup>47</sup>

#### 4.2. A member of the Gontran[d] family [whom we shall call Y.]

Y. is a former teacher and a highly respected member of the Port Mathurin community, a writer and local historian. Interviewed at his house, he stressed the importance of Rodriguan 'séga' and accordion music as a unifying factor that was inherited from both slavery and French colonists. Explaining who the 'Gens de la Montagne' or 'Zhabitants' were, he indicated that many freed slaves were offered the opportunity to return to Mauritius, but that they refused, preferring to squat on some high lands. Mme Pipon's slaves [Séraphine Pipon, nee Marragon] were reportedly in that position, but chose to stay on *Jardin Mamzelle*, after her departure, cultivating maize and manioc, and living in huts. The terms used for descendants of slaves, 'Zhabitants' and 'Montagnards' or even 'Noirs', Y. sees as not pejorative, while the 'Whites' were described as 'Zens la Kotte', 'Café au lait' or 'Mulâtres, the latter being a more offensive appellation. 'Bène Mozambiques' was not used in a 'nasty' way, to begin with, but became pejorative. 'Zens la kotte' were originally fishermen or marine carpenters.

Some areas were exclusively 'White', such as sections of Port Mathurin, but many were mixed, for example Oyster Bay or Rivière Cocos and Anse Mourouk. The Catholic [and to a lesser extent, the Anglican] Church is perceived by Y. as having cemented the population, by creating

primary schools open to all, and through other forms of education, music and French. Catholic priests are said to have banned Kreol, at one time, from the Church, and Fr. Thevaux's role is said by Y. to have been crucial in developing education and in the spread of Christianity. Some 'Gens clairs' married one another, but many men were tempted by cohabitation and by 'Sega Tambours' in the hills, which were decried by the Church, because of ensuing rampaging immorality and the births of illegitimate children. Hence, priests kept a watchful eye, and 'White' men became more secretive. Yet, all along, families, who were of 'café au lait' complexion, thought it unacceptable for their young people to marry outside their community, an indication that prejudices did exist in the nineteenth century, according to Y.

Y.'s ancestors, the Gontrans [also spelt Gontrands] came from Brittany, *via* Mauritius. Ferdinand Gontrand, the ancestor, arrived with Father Hilaire in September 1869, when the latter took up his post as the first *curé* of Rodrigues, in what became a parish of the Diocese of Port Louis.<sup>48</sup> When he left Rodrigues for good in September 1880, Fr. Hilaire donated his properties to Ferdinand Gontrand; no title deed had been issued when the land was surveyed in 1878.<sup>49</sup> The Gontrands continued to occupy the land, known even today as 'Concession Gontrand', until an instrument of acquisition was granted on 13 September, 1894, by the Registrar General's Department of Mauritius, to Mr. Ferdinand Gontrand and his heirs.<sup>50</sup> Y.'s father saw himself as being of Breton origins, but Ferdinand Gontrand married Palmyre Colette, a *métisse* of Mozambique origins, with whom he begat 12 children, 8 boys and 4 daughters - large 'White' families being the order of the day at the end of the 19<sup>th</sup> century. One of the sons, Elysée, fought at the Battle of the Marne for the British in World War I.

The 'Zens de la Kotte' had money, being mainly owners of fisheries. Cohabitation, started by 'Ségas Tambours', led to many illegitimate children being born out of wedlock and outside the community, but Y. stressed that they were recognized and accepted by their fathers. 'Rouges', he explained, came from the fact that 'Café au lait' men would go fishing and be scorched by the sun. The Catholic priests practised discrimination in the 1890s, so the story went, when the front benches were all allocated in Church to the 'Rouges'. Illegitimate children were baptised on Fridays and given the names of their fathers to avoid future incestuous relationships, likely on a small island. Many descendants of 'White' settlers went off to fight in the First World War (1914-1918), while Y.'s father took part in World War II. Several Gontrands continued to live at St. Gabriel, on the 'Gontrand Concession', or 'sous le vent', as it was known. Yet, others had fishing posts at *Anse Baleine*, where they also bred goats.

The Gontrand children did not go to school until 1906, when a primary establishment was built at Rivière Cocos. At Port Mathurin, where some Gontrands set up fisheries, the girls were educated at home, and it is known that Ferdinand Gontrand, a 'Choir boy' to Fr. Hilaire, had been taught to read and write in the 1870s. Ferdinand died before the First World War, and his wife Palmyre in 1937 - she had been married religiously to him. Their children and descendants were listed by Y. as follows (m: married):

1. Elizène, m. Charles François (7 children)
2. Léonard, m. Yeyette François (8 children)
3. Ferdinand Achille, (born 1907), m. Louise Pierre (7 children)
4. Emile, m. Olivia Raffault of Oyster Bay (8 children)
5. Roger, m. Léonida Allas (9 children)
6. Madeline, m. a Roussety (3 children)
7. Mabelle, m. first an Elysée; then a Meunier (10 children)
8. Fernand, m. Olive Ismaël (of Persian descent) (6 children)
9. Ida, m. Noë Meunier (10 children)
10. Abel, m. Edith Roussety (11 children)
11. and, 12. Elysée and Élie died young.

Intermarriage within the 'Rouges' is illustrated by this, but marriage to *métis* is also brought out. To support such large families, 'White' men had to fish, as well as set up plantations. The son of Elizène, Fernand, acquired land on *Ile aux Chats*, where a little maize was cultivated. The 'Rouges' employed 'black workers' as domestics and labourers, but treated them well, feeding them and allowing them to grow their own crops. Rice was a special treat for all and was served only once a week on Sundays, on account of it having to be imported. Domestics were paid wages on a daily basis, and often workers were given a loan of the masters' boats to go fishing. The 'Montagnards', through the system of 'barter', traded in maize and crops to the shopkeepers (Indians or Chinese) in return for other goods. Y. pointed out that this was very much to the advantage of shopkeepers.

In his youth, Y. stated, slavery was not an issue, nor discussed much. Freed slaves, who came from Mauritius after Abolition in 1839, were fishermen. They lived or survived through work, even though their skills were limited: 'Rouges' later often referred to the work of descendants of slaves as sloppy, and the phrase 'travail Zhabitants' has survived to designate 'unsatisfactory work'. 'Rouges' were not just fishermen and pastoralists; a few were excellent carpenters, as for 'Ton. Bébert Rose', who built some excellent colonial homes at Port Mathurin. Other members of the Rose family had cattle at *Baie du Nord* or *Baie aux Huîtres*, while also repairing and building 'pirogues'.

#### 4.3. A Member of the Castel family (called Z.)

Several members of the Castel family have gained prominence in Rodriguan society; North-Coombes indicated that they arrived in Rodrigues from Mauritius, as *métis*, later than the early settlers. Z. indicated, during the interview, that increasingly, divisions ('cloisons') between communities were disappearing, as the young generation intermarries, so that 'Rouges' and darker-skinned individuals set up homes together. He identified social and economic factors as the chief causes of this, and since the majority of Rodriguans are *métis*, it is not surprising that social prejudices have not survived. He used another expression to describe the 'Montagnards': the 'Gens de la Campagne'. Areas, where non- 'campagnards' are numerous, include: *La Ferme*, Port Mathurin, *Anse aux Anglais*, *Baie aux Huîtres*, *Camp du Roi*.

Trade and Port Mathurin can account for the visible wealth in some areas. Yet, many descendants of freed slaves worked 'under the yoke of early colonialists', namely rich merchants. When they succeeded in freeing themselves from this yoke, they took refuge in the hills, either to become 'their own masters', or to 'lord over others'. However, today, in schools, divisions are not noticeable and a certain 'fellowship' prevails. Workers nowadays share jobs in hand without any reticence, and at a social level, there are few problems. Balls attract people from all communities. In this, the Catholic and Anglican Churches have played a prominent role, the *Centre Carrefour*, run by the Church, attracts all types of persons, although 'Montagnards', often 'pale skinned' but 'disadvantaged', attend more regularly. 'Campagnards' have the legal rights to enjoy fertile lands in the mountains, but they pay a lease - 'bail' - (about Rs 400 per year) that is renewed every so many years (20 years in most cases).

One major source of concern is illiteracy among the 'Campagnards'; many still do not send their children to school, as used to be the case in the past. Others earnestly wish their children to have a good education, but the latter have great difficulties in going to and from school, walking long distances. Since 1990, education has made huge strides, but a criticism that is frequently voiced is: "If Rodrigues were a Hindu colony, the population would be taken better care of." The amount of money spent on libraries by the Mauritian Government is ludicrous; the collections do not allow for project work or research by school children. Hence, Rodriguan adolescents struggle to reach the same standard as their Mauritian counterparts, through no fault of their dedicated teachers. The Kreol language is unanimously accepted by all communities; hence, the fight is won in this respect. It is a strong unifying element. Most children also love French and work hard at it, but they are not as proficient in English as Mauritian children.<sup>51</sup> The previous snobbishness, associated with French, as displayed by 'Rouges' families, is fast disappearing.

For all their willingness to progress, Rodriguan children manifestly lag behind their Mauritian counterparts at secondary level, because of a scarcity of resources, facilities, equipment and funds. Z. underlined the fact that 'Gens de la Campagne' often appear more conscious,

nowadays, of the importance of education than 'Gens Clairs'; the reverse was true in olden days. Rodrigues forms more professionals - e.g. teachers and doctors - than it needs; returning to one's island after University studies is not a common practice. Scholarship winners (Laureates) often stay on abroad; the few doctors who return are not recognized for what they are worth by visiting Mauritian professionals and either feel neglected, or are unable to keep abreast of new techniques. After a while, Z. assumes, they are discouraged.

#### 4.4. Impact of slavery

Slavery, it would appear, has not left an indelible imprint on the psyche or character of descendants of slaves. X., Y. and Z. pointed out that, rarely - if ever - had he heard 'Campagnards' state: "I am a descendant of slaves." Local historians do not dwell on slavery, and no one seems to discuss at length the implications of the 'Truth and Justice Commission'. Artists in Rodrigues even look at slavery with a pinch of salt and have published amusing tales concerning freed slaves, according to Z. As for local politicians, they do not put undue emphasis on communalism or the legacy of slavery. For all that, to a candid observer on a visit, Rodrigues *does* suffer considerably in its present infrastructures (social, physical and educational) <sup>52</sup> from the fact that it has been, and is largely, a 'Creole' island blighted by its past. Would the island lag so far behind, if it had been populated by large numbers of Hindu/Moslem labourers, or indeed 'White' colonists? It is manifest that Rodrigues has missed out on 'Indentured labour' and, hence, it is more than a little neglected. The Rodrigues Regional Assembly will take some time to set those reversals right, but the people of Rodrigues remain generally optimistic about their future and are 'grands débrouillards'. The present and the future are of greater concern to them, justifiably, than the past. One of our recommendations, however, is that in the field of Education and literacy, the Government of Mauritius, and of Rodrigues, ought to do more for the island and, by treating it as a special case, we should invest a great deal more in the dependency's educational infrastructures (see Recommendations).

#### 5. RODRIGUES: LANDOWNERSHIP

The Project Teams, working on Projects (a) on 'Land', and (b) on Rodrigues, will present its own separate findings on the two issues. Our concern here is to include a few details about the 'Coloured Population' borrowed from the *Recueil de documents pour servir à l'histoire de Rodrigues* (1969). <sup>53</sup> The list of land concessions on Rodrigues from 1817 to 1871 mentions herein the following individuals of 'Coloured' origins. Reference is to M.N.A. File R/R2. Obvious French 'White' and British names are excluded.

##### Land Concessions

Vol. 24 No.	Names	Dates	Descriptions/sites
68	Germain <u>Legros</u>	29.9.1820	3 sites of 108 <i>Arpents</i> , <i>Anse-aux-Anglais</i> and <i>l'Hermitage</i> .
140	<u>Delaître</u> (substituted to M. Rochetaing who abandoned the place)	14.8.1817	<i>Trois-Ilots</i> , 2 sites of 108 <i>Arpents</i> in Rodrigues.
Vol. 25 No. 100	Dame Avice, wife of <u>Chenard</u>	21.7.1830	A site of 108 <i>Arpents</i> at <i>Anse-aux-Cannes</i> ; 'pêcherie' at <i>Islet-aux-Insectes</i> .
No. 103	Gabriel <u>Bègue</u>	27.8.1829	3 sites totaling 324 <i>Arpents</i> on Rodrigues.

85	Antoine <u>Charles</u>	29.6.1866	Plot of 1882 sq. yards, Port Mathurin.
86	Albert <u>Haoust</u>	29.6.1866	Plot of 1638 sq. yards, Port Mathurin.
88	Emma <u>Félicité</u>	29.6.1866	Plot of 3333 sq. yards, Port Mathurin.
89	George <u>Edouard</u>	29.6.1866	Plot of 2935 sq. yards, Port Mathurin.
90	Pierre <u>Raffaut</u>	29.6.1866	Plot of 4836 sq. yards, Port Mathurin.
91	Ozélie <u>Carel</u>	29.6.1866	Plot of 1870 sq. yards, Port Mathurin.
111	Marie Rose <u>Portalis</u>	13.10.1866	Plot of 2987 sq. yards, Port Mathurin.
112	Marie Aurore Claire <u>Winters</u>	13.10.1866	Plot of 1846 sq. yards, Port Mathurin.
141	Charles <u>François</u>	31.7.1867	Plot of 8404 sq. yards, Oyster Bay.
152	Albert <u>Haoust</u> ; Joseph <u>Berton</u> ; Fernand <u>Bonelle</u>	16.9.1867	Plot of 400 acres, Rodrigues.
165	Marie Palmyre <u>François</u>	20.12.1867	Plot of 3863 acres, <i>Trèfle</i> , Rodrigues.

No. Vol. 30	Names	Dates	Descriptions/sites
198	Béline <u>Médecis</u>	18.2.1869	Plot of 2472 sq. yards, Port Mathurin.
200	Ozélie <u>Clarel</u>	28.4.1869	Plot of 25 acres, <i>Trèfle</i> , Rodrigues.
201	Ozélie <u>Clarel</u>	28.4.1869	Plot of 60 7/10 acres, <i>Montagne François</i> .
208	Désiré and Ninka <u>Lalande</u>	31.12.1869	Plot of 100 acres, <i>Diamond Bay</i> .
219	Messrs. <u>Télescourt</u> and <u>Lauricourt</u> , Jean Félix	3.5.1871	Plot of 1972 sq.yards, Port Mathurin.
220	<i>Ibid.</i>	3.5.1871	Plot of 3944 sq. yards, Port Mathurin.
221	Ernest <u>Allas</u>	3.5.1871	Plot of 937 sq. yards, Port Mathurin.
223	Jean Evenor <u>Meunier</u>	3.5.1871	Plot of 3289 sq. yards, Port Mathurin.

At the M.N.A., one also finds the following details under 'Rodrigues Land Concessions' (1845), *Extracted* from the books 'Domaine', Archives Office, 1845' (TB 6/4).

No. 162, F. 197	<u>Duessy</u> , Wm.	25.1.1821	216 <i>Arpents</i> in <i>Anse East North East</i> .
--------------------	---------------------	-----------	---

Of special interest are the following details concerning the Marragon family:

No. 160, F. 182	Mr. <u>Marragon</u>	29.9.1820	324 <i>Arpents</i> and the 'jouissance' of <i>Îlot aux Fous</i> and <i>Îlot aux Crabes</i> for a fishing establishment.
No. 161, F. 183	Mad <sup>e</sup> <u>Marragon</u>	29.9.1820	216 <i>Arpents</i> at <i>Baie aux Huitres</i> .

In his short introduction to this table, J.-F. Dupon commented: "De 1817 à 1830, les concessions de terres, qui s'ajoutent aux cessions en jouissance des îlots du lagon, sont de 108 arpents (environ 43,2 hectares ou multiples de 108 arpents à l'exception d'un employé du gouvernement (250 arpents)". He adds that small concessions multiplied at Port Mathurin, measuring ½ hectare or 1/10 hectare, which shows a real development of this urban agglomeration.<sup>54</sup> Finally, it is to be noted that on 31 December, 1869, George Jenner, who had replaced Edward Stevens Messiter, as Police Magistrate on 14 May, 1862, received a land concession of 24 6/10 acres at *Bambou*, Rodrigues, while Thomas Morris [John Morris' descendant] was also granted a concession of 15 acres at *Bambou* on 31 December, 1869. In his analysis of the economy of Rodrigues, Dupon observed in 1967:

*"As for lands appropriated, they represent about 1/7<sup>th</sup> of all cultivated land, and if one were to exclude the Catholic Church which, with about 40 hectares, was by far the biggest landowner on the island, and less than 10 owners who had 5 to 10 hectares each, the average property would be well below 2 arpents. The Napoleonic Code, as applied to Mauritius, was partly responsible for this division of land [...]"<sup>55</sup>*

As for the 'squatting system', we leave it to the 'Land' and 'Rodrigues' teams to discuss this at length. One major contributor to legalizing the system was Georges Jenner, Magistrate. North-Coombes explains:

*"As regards land, Jenner, unlike his predecessors, limited the inhabitants' practice of occupying crown lands as they pleased, and succeeded in inducing the Government to take positive action. The result of this was that a number of so-called "squatters" became owners of land on easy terms of payment, though as yet no rent was exacted from those who continued to cultivate crown land on verbal leases." <sup>56</sup>*

Today, the entire system of 'leases' has been developed and legalized; less resentment prevails, and the gap between landowners and 'lease holders' has narrowed.<sup>57</sup>

## INTRODUCTION

This report is based essentially on the analysis of fieldnotes and oral interviews which were conducted during field research in Rodrigues in 2010. Fieldwork was carried out in the context of the Oral History of Descendants of Slaves Project commissioned by the TJC. This report should therefore be read in conjunction with the Oral History Project. This report is based on a judgement sample of eight respondents that is equivalent to half of the testimonies collected.

The transcripts were analysed in line with the objectives of this research. Relevant extracts of informants' testimonies are included in support of the analysis. These extracts are in the language used in the interviews followed by a translation in English.

This document should be seen as a complement to the information provided in other reports with the aim of building a comprehensive picture of the impact of slavery in Rodrigues.

The history of island remains unknown to many people (including Mauritians and Rodriguans), with Mauritian History taking precedence over that of Rodrigues. This report aims at adding to our knowledge of slavery, its sequels and legacies in contemporary Rodrigues.

In this respect, this document focuses on the impact of slavery on contemporary Rodriguan society.

## SLAVERY IN RODRIGUES

Agriculture and fishing were high-intensity in terms of human labour. Hence, when the colonisers settled, they introduced slaves as domestic and agricultural labourers. The slaves were first introduced under the French colonisation. Berthelot (2002, p. 65) wrote that:

*"[...] Le doc no. 16 datant de 1769 décrit la colonie comme étant composée d'un commandant et sa famille, de son gendre M. De Julienne, d'un chirurgien, un caporal et d'un groupe de 'noirs' [originaires de Madagascar ou des Indes] esclaves de la compagnie auxquels se joignent quelques libres [...]"*

(Eng. trans: the document No. 16 dating to 1769 describes the colony as composed of a commander and his family, of his son-in-law, Mr. De Julienne, a surgeon, a corporal and of a group of 'blacks' [natives of Madagascar or India] slaves of the Company as well as some freed).

Since there were no sugar plantations in Rodrigues, during interviews, respondents stated that the slaves in Rodrigues were agricultural labourers and breeders, they 'in aranz zot ti lakaz nourri zot zanimu'<sup>1</sup> (Eng. rans. Built sheds and reared animals) and were plito konsidere kom domestik<sup>2</sup> (Eng. rarns. Were considered as domestic workers). Their statement is sustained by historians who wrote that the 'Blacks' in Rodrigues were planters and breeders.<sup>3</sup>

The slaves outnumbered the *Colons* as Berthelot (2002, p. 6) explains; in August 1767, there were 5 slaves and in November 1767, 7 slaves and 16 free Indians were recorded. The slaves' experiences in Rodrigues differed from the practice of slavery in other colonies including Mauritius:

*"[...] mai esklav la li pa esklav ensener...ti 1 esklav mai zot ti trait zot esklav difereramen...nou p dir esklavaz ti bien e bel presen dan rodrigues osi mai li pa ti mem form ki esklavaz a moris ou a madagascar ou a la reunion [...]"*<sup>4</sup>

(Eng. trans: But the slaves were not chained [...] there were slaves but were treated differently [...] we saying that slaves were also present in Rodrigues but it was not of the same nature as slavery in Mauritius or Madagascar or Reunion).

One of the correspondences referred to in Berthelot (2002, p. 8) illustrated that, even if slavery in Rodrigues is perceived as having been mild and rather humane, the slaves experienced oppression and servitude. They were '*des Noirs brutes sans vices ; il sera facile de les soumettre au travail*

*nécessaire*' (Eng. trans. Brute Blacks without flaws; it will be easy to subject them to the necessary work).

Indeed, they were governed by the *Code Noir*, 1723, that explicitly objectified them as the property of their masters. The slaves were not human beings and thus did not have any human rights. The latter, the Freed population and Coloured People, did not enjoy the same status and privileges as the *Colons* who were the only Citizens.

The correspondences cited by the author also revealed that, although in the oral interviews, the slaves were conceived as enjoying freedom of movement and as not being enchained, yet, they were not free to move all over the place and sometimes they even wore chains, as illustrated in the extract below:

*"[...] Les Noirs du citoyen Gauthier toujours marrons, ayant rencontré un Noir et deux négresses du citoyen Rochetaing aux environs de son habitation ont entraîné avec eux le Noir, après avoir ôté un collier que son maître lui avait fait mettre : les deux négresses qui avaient aussi des fers, n'ayant pu être délivrées, ils les ont renvoyées de peur que la lenteur de leur marche ne les fît prendre [...]"*

(Eng. trans: The Blacks of Citizen Gauthier always maroon, having met a Black and two Negroes of Citizen Rochetaing in the whereabouts of his property hauled the Black with them after removing the collar which his master made him wear: the two negroes who had chains as well, not having been able to be freed, they sent them back for fear that because of their slowness, they would be caught).

What they conceived as freedom of movement was, in fact, a form of maroonage or vagrancy, although for most of the informants, there were no maroon slaves or 'vagrant slaves' in Rodrigues. Maroonage on the island was different compared to Mauritius in that the maroons did not hurl themselves by hurling themselves off a mountain or a cliff and it was rather similar to vagrancy. The slaves were vagrant for a few days and then came back.

The origins of the local popular term *esklav libre* (Eng. trans. Free Slaves) is rooted in this common perception that in Rodrigues there were 'free slaves'. They were free in the sense that they were not physically enchained. Nonetheless, they were slaves because they were mentally enchained and legally, as per the *Code Noir*, they were the property of their masters. Hence, by Law, they were slaves and mentally, they internalised their slave status.

*«[...] esklav zot ban anglai in amen zot dan 1 bato apar e ler zon desan zon zot de lamain lib zot de lipied lib sa v dir dan moris ena dimun in vin avek la sen dan la mein [...]"<sup>5</sup>*

(Eng. trans: slaves whom the British brought them in a separate boat when they landed, had both their hands free, both feet were free which means in Mauritius, there are people who arrived with their hands chained)".

*«[...] wi parski tou nwar a lepok dapre listwar tou person de la ras noir eter esklav parski ti enan 1 kod nwar ki dapre listwar dir nou...toute person non ras blans noir eter esklav [...]"<sup>6</sup>*

(Eng. trans: yes because in the past according to History, all people belonging to the Black race were slaves because there was a Black Code that, according to history, tells us...all people that are not of the White race Blacks are slaves)".

*«[...] oun dir mwa ban esklav ti vin lib non ? Wi exactemen; ek ki zot ti melnaz ek ban zot pa ti ensene? non non zot pa ti ensene [...]"<sup>7</sup>*

(Eng. trans: you told me the slaves arrived free ? yes exactly, did they mix and they were not enchained? No, no, they were not enchained)".

This popular perception of 'free slaves' might be consequential to the fact that Rodriguans do not seem to distinguish between the 'Blacks' who arrived as slaves and those that arrived as Liberated Africans after the abolition of slavery in 1835 (and in 1839 in Rodrigues). In keeping with historians, after the death of Marragon in 1826 and until 1843, the island was abandoned without any administration, and hence there are not records of the number of Liberated Africans who landed during this period.

In conformity with Berthelot (2002) and the testimonies gathered, vagrancy was the main cause of social disorder on the island and underpinned the tensions between Marragon and the other *colons* especially Rochetaing and Gauthier. There were hostilities between the *colons* and Marragon because of a lack of harmony, and the former considered that the latter treated the slaves too humanely and was too lenient.

The respondents such as Ben represented Marragon as a *bon maître* (Eng. trans. Good Slave-Master) who treated his slaves humanely, compared to the other local masters, and especially Rochetaing and Gauthier who were represented as Cruel Slave-Masters North-Coombes (1971, p.59) supported these representations:

*"[...] things did not go smoothly between Rochetaing and Marragon. Rochetaing complained bitterly about Marragon's attitude and the lawlessness of his runaway slaves. He says Marragon grew manioc to feed the cattle which he sold to the British and that his slaves appeared to have been brought to Rodrigues only 'to be fattened [...] later Rochetaing petitioned the authorities to remove him on the grounds of old age [...]"*.

In instances of maroonage, the Article 31 of the *Code Noire* stipulated that the slave who went maroon for one month had an ear cut and a shoulder marked with a Fleur de Lys. If the slave went maroon a second time, he/she had a hallow of the knee cut and the other elbow marked with a Fleur de Lys. The third time, it was death penalty.

Philibert Marragon, with his wife settled on the island as Civil Agent of the French Government. He officially administered the island until the French ceded the country to the British. After the Lieutenant-Colonel Henry S. Keating took possession of the island in August 1809, Marragon swore an oath of allegiance to the British and, in 1810, he was promoted Major. From 1810 to 1820, he unofficially administered the island.<sup>8</sup>

During British colonisation, even if slavery was proclaimed illegal since 1807 in all British colonies, more slaves were introduced to Mauritius. Berthelot (2002, pp.14-17) recorded that on the 20<sup>th</sup> August 1809 there were 41 slaves of whom seven belonged to Le Gros and more than 20 to Marragon. The Indians were repatriated to Bombay. In 1826, there were 20 Europeans, 3 Freed and 100 Slaves (49 men and 28 women) on the island. These figures indicate an increase of 59% slaves in 17 years, as a result of births and the introduction of new slaves. In 1838, at the abolition of slavery, the number of apprentices and the total population amounted to 127 and 300 respectively.<sup>9</sup>

The names of the slave-masters are still present in the collective memory of the Rodriguans. It seems that the local population keep alive the memory of the *Colons* rather than that of the slaves.

The local residents have a high respect for Maragon especially. It is believed that he was buried with his slaves, but only his grave was renovated and a monument erected in his memory. The probable location of the tomb of the slaves is marked with stones. No archaeological digging was undertaken to find out whether his slaves were indeed buried with him.

However, given that Colonial Rules forbade slaves to be buried in a cemetery and most of all, not with their master, in a Whites' cemetery, it is most likely, as mentioned by Rosange, that the slaves were buried in an old cemetery named by the elders *Montagn Simtier* (Eng. trans. Cemetery Mountain) located near Union. An archaeological survey has to be carried out to ascertain whether this potential heritage site can be listed as national heritage.

One of the reasons why the Rodriguans perpetuate the legacy and memory of the slave-masters might be that slavery was not as harsh and cruel as in the other islands of the Mascarenes. The

slaves were not tortured and did not want to be emancipated. Another reason might be that there is no history of maroonage on the island, as in metropolitan Mauritius, and there are no 'slave hero' stories. Consequently, there are no myths, legends and local history of resistance with which the Rodriguans can identify.

## POST-INDEPENDENCE

The pre-and post-Independence period are still living memories in Rodrigues for various reasons. Firstly, it was a key historical moment that had a major impact on the socio-political relationships with Mauritius. Secondly, Rodrigues was against Independence and pressed her case to remain a British colony. This political choice already indicated divergent political directions and the willingness of Rodriguans that their country be considered as a separate entity from its sister island. This aspiration for autonomy is at the core of political debates even now. Thirdly, the fact that the Rodriguans were discarded from the Colonial Assembly debates on the Constitution of 1958 was a sign of the long marginalisation of the island. Fourthly, this period correlates with the emergence of a Rodriguan consciousness and the building of Rodriguan national identity.

The historical events associated with Independence are still alive in the Rodriguan collective memory. The local population irrespective of the religio-ethnic affiliation identify with their local History. This shared History is the founding-stone of this strong and deeply rooted Rodriguan consciousness. The testimonies uncovered a common perception and feeling that Rodriguans have historically been ostracised and that their island has been neglected, marginalised and kept in an underdeveloped State by the British Colonial Government and, subsequently by the various Mauritian Governments.

Ben and Noel testified that in 1967, Rodriguans voted for the PMSD. Guy Olivry and Clément Rousty gathered 96% of the votes<sup>10</sup>. In 1968, they protested against Independence and were pro-PMSD, as they believed in the Party's propaganda that Independence would lead to Hindu hegemony to the detriment of the 'Creoles' and General Population category. They claimed that if the Indo-Mauritians came to power, in other words, if the Labour Party won the elections, English and French would be removed from academic schools, and they would close the Catholic Churches. On the 12<sup>th</sup> March 1969, the national flag was raised in Rodrigues.

Testimonies and historiographies stress the fact that from the 17<sup>th</sup> century to the beginning of the 20<sup>th</sup> century, Rodrigues was chiefly a land of exile. Most probably, because of its spatial characteristics, and particularly because of its remoteness, the country was conceived as an ideal 'refugee land'.

Even if, on the one hand, the island's climatic conditions, topography and geographical location and isolation did not deter the 'refugees', on the other hand, because of these natural characteristics, Rodrigues was, for most of the time, uninhabited and occasionally a land of temporary settlement. It was, for a long time, considered as being uninhabitable.

The various unfruitful colonising attempts were factors that heralded the obstacles to the country's development. Despite the fact that these natural and environmental features preserved and protected the island from external influences, they deterred the inflow of external investment that hampered its economic development.

Its natural landscape and localisation, combined with the national politico-economic orientations of the Republic, kept the island, for a long time, in a state of dependency and underdevelopment. It is only at the end of the 20<sup>th</sup> century that the economy of the island underwent fundamental changes with Tourism and particularly Eco-Tourism becoming a third economic pillar.

Nevertheless, the country is still largely economically dependent on metropolitan Mauritius, and compared to Mauritius, Rodrigues is poor economically. The United Nations Development Programme (2009) reported that the incidence of poverty in the land (3.6%) is well above the national average (9.7%). Indeed, as per the Central Statistics Office (2001, p. 250) data, the average household income in Rodrigues is 6,622 rupees, while in Mauritius, the average is 10,323 rupees, a difference of 3,701 rupees.

It is a vulnerable small developing island with, as UNDP reported a low relative development index, facing problems of inadequate access to clean, drinkable water and disposal of solid water that do not fully comply with the norms of the World Health Organisation. In terms of energy supply, the Organisation has stated that the island is still greatly dependent on imports of fossil fuel.

## DEMOGRAPHIC PROFILES (See Table 1)

Rodrigues, like almost all former slave colonies, is a land of immigration that was built on the Diasporic movements of Africans, Europeans, Chinese and Indians during the Colonial and Post-Colonial era. Although from an etic perspective, Rodriguan society is perceived as homogenous because of the predominance of African and Malagasy Diasporas, from an emic stand, ethnic variations can be observed based on phenotype and socio-economic differences.

In line with what Jean Michel Jauze asserts (1998), compared to the other islands constituting the Mascarenes, Rodrigues is *la plus Créole des trois îles* (Eng. trans. The most Creole of the tree islands) because she presents *les traits les moins altérés de cette culture Créole ancienne* (Eng. trans. Least altered traits of this ancient Creole culture).

On the one hand, colonialism in Rodrigues was not of the same nature as in its sister island, since the former experienced different degrees of domination, 'Europeanisation' and experiences of settlement and cultural patterns. On the other hand, its remoteness and its isolation from the main inter-continental migratory movement from Europe and India, until the end of 20<sup>th</sup> century, protected the island from the impact of modernisation and globalisation. Consequently, Rodrigues was, for a long time, a closed system, to some degree self-sufficient, and thus did not undergo the aversive processes of acculturation and deculturation.

The ethnic stratification of Rodriguan society differs from that of Mauritian society because of differing migratory histories. The present local cosmopolitan composition is the product, and the window, of the island's peculiar settlement History.

The local population can be divided into four ethnic groups namely: 'Black' Rodriguans, 'Mulattoes', Chinese and Asians (Muslims and Indians). These taxonomic categories are founded on the folk categorisation; in other words, how the Rodriguans categorise themselves.

The Rodriguans of Asian origins (Indians, Muslims and Chinese) are in a minority on the island. As historians have pointed out, the indentured-ship system was not implemented in Rodrigues, and the island was not on the migratory route of the Asians. Jauze (1998) proposes two reasons for the insignificant presence of the Indian Diaspora in Rodrigues despite its proximity to Mauritius. Firstly, there was no massive and constant immigration of Mauritians to Rodrigues and, secondly, the indentured labour system was introduced in the main sugar plantation colonies of the Mascarenes.

Historians date the arrival of the Chinese and Muslims traders on the Rodriguan shores at around the 1890s that coincide with the first exodus of the Chinese immigrants from Mauritius to the African continent and other countries. Consequently, these traders most probably came from Mauritius where they were considered as 'aliens'. Facing racial discrimination and nepotism, they went to another refugee land.

Each ethnic group has peculiar categorical characteristics that function as descriptors and membership markers. These markers play a core role in self-identity and social identity construction that regulate inter-group and outer-group negotiations during social interactions. Religious affiliation, skin colour and ethno-spatial organisation are indicators of the heterogeneity of Rodrigues.

Rodriguan society is born from *métissage* (Eng. trans. Cross-breeding) especially African and European miscegenation. The meeting of these cultures resulted in cultural cross-fertilisation and mixing that constitute contemporary Rodriguan culture.

For Ben, gender imbalances, with the number of women exceeding the number of men, meant that 'White' men had priority over Black men for access to women. For a long time, children born out of illegitimate relationships were baptised on a different day (on Fridays) than the legitimate children (who were baptised on Sundays) and the former were, often, not declared by their biological fathers.

Indeed, the population imbalance between the slaves and the *Colons*, with the former outnumbering the *Colons* and the lack of *Colon* women, might surely have encouraged inter-racial sexual relationships and cross-breeding, even if the *Code Noir* and successive colonial legislations such as the *Code Decaen* forbade such relationships. Although the island was administered by the *Code Noir*, since Rodrigues was isolated from Mauritius, the application of the *Code Noir* was, surely, loose, and it was not applied to the letter.

The interviews revealed with the exception of some instances of cross-breeding, that the 'colour bar' system prevailed on the island after the abolition of slavery and until the end of the 20<sup>th</sup> century. The island was divided between the dark-skinned Rodriguans living inland, and the light-skinned people residing along the coast. This division was maintained by endogamous marriage as in the past marriage based on colour was the norm. The light-skinned Rodriguans married within their immediate social network and cousin marriages were common practice.

However, recently, inter-racial mixing has become more frequent and has contributed to the breaking down of these colour barriers and to the emergence of a hybrid phenotype. Socio-economic developments and westernisation have furthered exogamous marriage that subsequently influenced the local macro-system such as the local stratification system and the national identity construction. The local residents consider themselves as Rodriguan Creoles.

As stated by Ben, this shift in marriage patterns results from changes in the social and economic profile of the island. Rodrigues was a self-subsistent agrarian society and by the end of the 20<sup>th</sup> century, it gradually entered the free market capitalist system, following the diversification of its economy. The local economy is currently relying on the agricultural sector, the construction sector and the commercial sector that are the main employers, as indicated below.

Capitalism brought a shift in the local occupational pattern from a traditional one, based on diversified foraging, to a more complex one based on the division of labour and technological production. The capitalist mode of production, similarly, led to changes in the local stratification system with the introduction of a more complex social class stratification.

Even though the Rodriguans are more and more dependent on the market economy, arable land is still available, especially in the interior part of the island, and hence most of the *zabitan* continue their farming activities for personal consumption and for sales to supplement their income.

Rodriguan society is becoming more complex, being divided along socio-economic lines (job status, educational achievements and financial ranking) as well as biophysical appearance. Although racial divisions are disappearing, skin-colour is still salient in social interactions. The inflow of Mauritians and foreign settlers is adding to this internal diversity.

Unfortunately, accurate statistics are not available on the number of Mauritians and foreigners residing in Rodrigues. The Central Statistics (2000) provide aggregate data on the number of Mauritians and foreign visitors who number 35,749 and 72 respectively.

Consequently, occupational status and social class are the main criteria in spouse choice, as marriage is conceived as an opportunity of upward socio-economic mobility. As Luc has indicated, socio-economic criteria underpin inter-ethnic marriage. A 'Mulatto' man will marry a 'Black intellectual' woman but not one who is inferior to him. However, an 'intellectual Black' woman will marry a 'Mulatto' who is not as 'intellectual' as her.

In the first instance, Black women achievers represent upward socio-economic mobility and marriage will ensure that the man will climb up the social ladder. In the second instance, for women to marry a light-skinned man is conceived as a social promotion, whether the man is a social achiever or not. This stereotypical perception and conception of Whiteness as being superior to

Blackness is a sequel of slavery, whereby Whiteness is portrayed in positive terms, since it is associated with purity, with to evil, ugliness and failure.

In popular perception, the real slave descendants are the Black Rodriguans living inland, who are farmers and planters. They are also commonly referred to as *zabitan* (Eng. trans. Native). The light-skinned residents are considered as the real descendants of the *Colons* who are pejoratively referred to as *demi kle* (Eng. trans. Half-key) or *Zens la kot* (Eng. trans. Coastal people) and who are fishermen. The local term *demi-kle*, as Ben explained, referred to fair-skinned Rodriguans born out or cross-breeding.

This biophysical categorisation of the local population is substantiated by Jauze (1998, p.20):

*“L’existence de trois phénotypes, les ‘Noirs’ agriculteurs de l’intérieur, les ‘Rouges’ de la côte, pêcheurs en majorité et les ‘Asiatiques’ [Chinois ou Musulmans] commerçants de profession qui constituent de ce fait ‘la couche privilégiée de la société rodriguaise’. La provenance ethnique, l’activité exercée et la répartition spatiale sont intrinsèquement liés. Sous l’action de métissages de plus en plus fréquente un phénotype supplémentaire émerge progressivement.»*

(Eng. trans: The existence of three phenotypes, the 'Black' farmers of the interior, the 'Red' of the coast, fishermen for the majority and the 'Asians' [Chinese or Muslims] traders of profession who constitute the 'privileged group of Rodriguan society'. The ethnic origins, the professional activity and the spatial distribution are intrinsically connected. Following more frequent interbreeding, an additional phenotype appears gradually).

Irrespective of the different ancestral origins, the local residents identify themselves primarily as Rodriguans, because of their strong national identity resulting from a deeply-anchored Rodriguan consciousness. Their secondary identification is to their religious group; either they are Catholics or Muslims or Hindus. In fact, whilst Mauritian, primary identification tends to be to their religio-ethnic community, such an identification process is non-existent in Rodrigues because there are no 'communal' divisions (in the Mauritian sense of the word) in Rodriguan society.

However, since the beginning of the 21<sup>st</sup> century, a new form of social division is emerging, based on political divisions. This socio-political division is threatening social cohesion and unity. Following the General Elections of 2010, many interviewees stated that the metropolitan political system is negatively affecting the local political system, with local politicians adopting the same political behaviour as their Mauritian coreligionists; for example, some mentioned that politicians bought the elections, which implies that corruption has entered Rodriguan society. Patronage, as well, is becoming common practice, especially in the Public Sector. Such practice and limited employment opportunities encourage young Rodriguans to migrate to Mauritius and abroad.

## RELIGION AND TRADITIONAL PRACTICES

According to Jauze (1998, p. 25), the population's growth from 1871 was fast and constant, and from 1982, it experienced a downward shift. As from 1996, the growth stabilised. At 31<sup>st</sup> December 2009, the local population was estimated to be 37,774.<sup>11</sup> Roman Catholicism remains the main religious group, with the majority of the population being of African descent, European descent and of mixed African and European descent. There is a minority of Hindus, Muslims and Buddhists.

Even if Roman Catholicism is the main religion on the island, traditional spiritual practices and customs of Afro-Malagasy origins are still present. These customs are legacies of slaves that have survived and are still perpetuated in parallel to Roman Catholic ones.

In metropolitan Mauritius, these rites and traditional practices are almost extinct for various reasons, such as exposure to a European value system, limited generational transmission and a religious campaign from official religions, mainly Catholics, Hindus and Muslims. In Rodrigues, since the island was, for a long time, a closed and self-sufficient system, to some degree protected from

Eurocentric influences and precepts, these ancestral precepts and traditions have survived and were transmitted to the successive generations.

For example, one of the interviewees mentioned that her elders were practitioners of witchcraft and this knowledge was transmitted to the present generation. Her father was known to be a sorcerer and healer who taught her some practices and rituals that she perpetuates.

Although the Law of 1846 proclaimed these spiritual customs (sorcery and traditional spiritual healing) as illegal, in the popular imagination, they are not conceived as deviant cults. They are overt practices, and all Rodriguans know the names of the *deviner* (Eng. trans. Fortune-tellers) and of the *gueriser* (Eng. trans. healers).

Another traditional practice is traditional medicine that is still deeply-rooted in Rodriguan society. Many Rodriguans adhere to Biomedicine and almost all of them have knowledge of traditional medicine. Some have basic knowledge of the most common herbs and body manipulations whilst others are more knowledgeable in the different healing practices.

The traditional medical system include healing with, firstly, medicinal plants; secondly, body manipulations such as *krake* (Eng. trans. Cracking), *drese* (Eng. trans. Set up) and *frote* (Eng. trans. Rubbing); thirdly *pas* (Eng. trans. Passes) and *mark* (Eng. trans. Marks), and fourthly with magical acts, including prayers and the use of talisman.

All these traditional practices and this knowledge are threatened by occidental medicine, official religious institutions and Eurocentric value systems. Under the impact of globalisation and modernisation, these traditional value systems and cultural systems are undergoing transformations.

For example, following industrialisation, supernatural occurrences like werewolves, *matapan* and other supernatural appearances are rare and disappearing.

One respondent even mentioned that for him, Biomedicine and these traditional practices are not legacies of slavery but rather sequels that hamper modernisation and social progress. For him, these traditions and rituals are like superstitious beliefs that are still present in Rodriguan society, such as the existence of *malmor* (Eng. trans. Vagrant spirits) and other superstitions like placing a broom in-front of the bedroom door at night to chase away evil spirits. The people who perpetuate such superstitious practices are somewhat mentally enslaved people.

Some people perceive these traditions as being inconsistent with modernisation and industrialisation. Based on such perceptions, it can be stipulated that for the latter, they are chains that mentally and psychologically enslave them. This enslavement holds them back and prevents them from seizing opportunities, as they keep them in slavery. For others, they constitute their heritage and are intrinsic to their family origins. They are proud of their heritage on which they construct their Self and social identities.

Part of the island's natural and architectural heritage is already lost with the extinction of animal species (tortoises, Solitary, birds, fish stock) and the destruction of traditional constructions. With the disappearance of these traditions, it is now a component of the local cultural and intangible heritage that is being lost. Therefore, all these traditional forms of knowledge, myths and legends that constitute the local folklore have to be recorded before they go into oblivion. The local cultural and intangible heritage has to be preserved, as it is inherent to the construction of the Rodriguan identity and Nationalism.

## SOCIAL LANDSCAPE

### Ethno-Spatial Organisation

Rodriguans interviewed stated that, after the abolition of slavery and when the *colons* departed from the island, they left their slaves behind and the latter settled on the inland. Historians, such as Berthelot (2002), have corroborated this settlement movement. She reported that, after the abolition of the Apprenticeship System in Rodrigues on the 4<sup>th</sup> June 1839, the apprentices left the estates to settle in the inland.

This local internal settlement movement is different to the settlement of the ex-slaves in its sister country. In metropolitan Mauritius, the former slaves left the sugar estates to settle along the coast, since the rural regions were difficult to access and the *Colons* were concentrated in the urbanised part of the island like the Plaine Wilhems (the malaria epidemic, as well, impacted on the residential settlement of the *Colons*). In Rodrigues, the internal migratory movement was reverse; the *Colons* lived on the coast that was more developed, while the inner lands were wooded and not easy to access.

Furthermore, in Rodrigues, there was no *morcellement* movement as in Mauritius but there was a form of ethnic residential segregation based on skin colour (which is an overt sign of ethnic differences), with each group occupying a specific space. This internal settlement movement is seen as a legacy of slavery that forged the contemporary spatial organisation of Rodrigues whereby the 'Black' Rodriguans who are presumably of slave descent still live inland and the fair skinned Rodriguans, presumably descendants of *Colons*, live along the coast. The Rodriguans of Asian, as indicated by Ben, settled in Corail.

It forged the present development of urbanisation on the island and residential development. The houses and retail shops are concentrated in the commercial space of the villages. There are villages separated by expanses of land used as arable land and pasture groundland. There are residential buildings, as well, that are dispersed in between these agglomerations.

Open spaces are still available, and it seems the population enjoys freedom of movement. Fortunately, few plots of land are fenced, and gated residential developments are not, yet, part of the landscape. Rodriguans value open space and this 'natural' lifestyle.

In fact, while in Mauritius buildings are constructed close to one another and people tend to live in apartments, the construction patterns are different in Rodrigues. The residences are individual housing units built on large plots of land and the houses are constructed far from each other.

However, since the beginning of the 21<sup>st</sup> century, this ethno-spatial residential organisation is undergoing changes. As mentioned earlier, with *Métissage*, colour barriers gradually broke down and, subsequently, this spatial organisation is disappearing.

Information on landowners diverged but a common point came out of the interviews that the present landowners are of slave descent, whilst the other Rodriguans do not live on private land but on State Land.

On one hand, MacDonell testified that two families are the main landowners in the island, namely the Finiss Family of Rodriguan origins and the Malherbe Family of Mauritian origins and there are few private landowners.

The private landowners are, according to Ben and MacDonell, the slaves' descendants whose ancestors received land from their masters when the latter left the country after the abolition of slavery. The slaves passed the land on to their descendants.

On the other hand, Jean Noel stated that land in Rodrigues is largely agricultural State Land. Residential and private land is limited. Christophe also confirmed that the young generations are facing problems buying and/or leasing land for construction. A causal relationship can be drawn between the expansion of construction and the increase in the stock of residential buildings and the difficulties to access residential land.

The Central Statistics Office (2003) estimated that the stock of residential buildings increased by 1,400 or 17.7% between 1990 and 2000. There are approximately 8,651 buildings, with nearly 400 storeyed residential or partly residential constructions. The housing structures and amenities have improved, with most houses constructed in concrete and 85.9% houses connected to piped water network and 94.6% to electricity.

However, some basic amenities are still missing. Sixty-seven percent of the households are served by pit latrines, 3% only with other types of toilet and some do not even have toilet facilities. Fifteen percent do not have a bathroom and 63% still use ash-pits as method of refuse disposal.

It is most probable that after the abolition of slavery and the Apprenticeship System, the freed slaves had access to land, and later on, they were registered as landowners. Whilst in Mauritius, the freed slaves lost their land (either they sold it for a meagre sum of money or were dispossessed of their land, as they did not have land deeds to prove their ownership); in Rodrigues the situation was different.

Indeed, the local residents were foragers and thus were dependent on land for their subsistence. Land was, and still is one of the main natural and income-generating resources (the other being the surrounding sea). They are conscious of the importance of landownership and for generations, they have developed and nurtured a symbiotic relationship with land.

The Rodriguans are not landless, since most of them have access to land. Until now, they have preserved their rights and opportunities to occupy and utilise land through kinship, including the transmission of land rights through inheritance and within families, and land allocation by the State. However, the island is not protected from the current global housing crisis and the economic and financial downturn. Land is the new *or vert* (Eng. trans. Green Gold) and is a luxury asset.

Many Rodriguan landowners are selling their properties to Mauritians and even Europeans of Mauritian nationality<sup>12</sup>. Living in relative poverty, and upward economic mobility being limited on the island, property sales are a means for them to have access to money capital and to vertical mobility. Some Rodriguans view with suspicion the acquisition of local land by non-Rodriguans.

## EMIGRATION OF RODRIGUANS

The emigration of Rodriguans to Mauritius, Australia and other European countries is not a contemporary migratory movement. It dates back to post-Independence, when Sir Gaetan Duval, Leader of the PMSD, encouraged the mass exodus of Mauritian 'Creoles', and particularly 'the Coloured Bourgeoisie', because of lack of employment opportunities, social unrest caused by tensions between the two main ethnic groups (Creoles and Indo-Mauritians) and the riots of 1968. This state psychosis and socio-economic tensions conjointly encouraged the emigration of the 'Coloured Population'.

Employment opportunities were the main reason underlying the emigration of Rodriguans to foreign lands. Dupon (1969) observed a mass departure of young Rodriguans to metropolitan Mauritius and Australia in view of a better and prosperous future.

Young Rodriguans still nourish this perception fuelled by socio-economic conjunctures and limited opportunities of social and economic mobility. As Noel has stated, employment opportunities and Tertiary Education are the main reasons underlying emigration of young Rodriguans. Those who go to University often do not return because they do not find a job in their home country and if they find a job, they are underpaid.

Net migration figures for the island of Rodrigues uncovered gender imbalances, with women who leave the country outnumbering males. For 1983 to 1990, figures indicated that more females (-150) left Rodrigues than males (-100). The 1990-2000 data showed an overrepresentation of women emigrants (-625), while males returned back to their homeland (+19).<sup>13</sup>

Only a rough interpretation of these figures can be provided because of the lack of official disaggregated data on the causes of this emigration of women. Building on Boswell (2006, p.158) social pressures, such as unplanned early pregnancy,<sup>14</sup> and socio-economic inequalities (looking for

a job), are two reasons to come to Mauritius. However, it should be pointed out that these figures included Rodriguans that migrated for educational reasons; to attend Tertiary Institutions.

## EDUCATION AND EMPLOYMENT

According to Noel, the 'Black' Rodriguans made an effort to send their children to school, while the 'Mulatto' relied on patronage for the children to find a job and, hence, did not motivate them to be academic achievers. Their children could easily find a work in the Marine sector and in the Cable and Wireless (former Mauritius Telecommunication).

The Digest of Educational Statistics (2010) reported a significant improvement at the Higher School Certificate level in Rodrigues and it is probable that the latter continued their Tertiary Education in Mauritius. Unfortunately, enrolment statistics of Rodriguans were not available. (See Table 3)

## FAMILY AND GENDER RELATIONS (See Table 2)

Rodriguan society is at the sub-surface patriarchal, even though, at the surface, it seems matriarchal. As Noel has pointed out, the Rodriguan family is patrilocal since it is considered that it is the role of the father to protect and defend his family. In the inland, particularly, families live on large plots of land and, hence, children tend to build their houses around their fathers' residences. When they get married, they favour extend family patterns.

According to Aurèle, before getting married the future husband should build a house for his future wife. Property ownership is proof that the man will be able to provide for his family and guarantee their security. House ownership can be seen as a rite of passage that functions as proof of manhood.

It is common practice for Rodriguan men to have extra-conjugal relationships. The male interviewees stated that often men go *dan post* (Eng. trans. to post). This expression is used to designate that men go to see their mistress. It is derived from the expression to go 'to the fishing station'. In other words, instead of going fishing, in fact, they go to their mistress's place.

There are various stories surrounding these relationships. One of them is about the belief that mistresses use sorcery *pou gard enn zom* (Eng. trans. keep their lovers). They give the man a concoction to drink; this is named *potion dir wi* (Eng. trans. potion to say yes) to ensure that their lovers 'Say Yes' to all their demands. Hence, the men neither eat nor drink at their mistresses' place for fear of sorcery.

However, it should be pointed out that serial monogamy concerns both men and women, although extra-conjugal relationship is widespread amongst the men.

Mauritians tend to have a negative stereotypical representation of Rodriguan women as having multiple sexual partners and of being of loose character or 'easy girls'. As Boswell (2006, p. 158) has observed, the early sexual life of Rodriguan girls is often attributed to their precocious nature, thus undermining other social and economic inequalities. Such analysis is a primordialising of the sexual behaviours and sexuality of these girls and implies that they are naturally precocious.

The role of women is still conceived in domestic terms since their role is limited to the private sphere of the family. Facing relative poverty, women have no other choice but to work to supplement the family budget. Although more women have entered the public space of work and are active employees, the majority of women are currently housewives as indicated in the statistics below.

*" [...] missier ki bizin amen kas lakaz se inpe sa e en tifi si li al travay se en mover zafer mai heursemen avek ledikasion sa in sanzer e se inpe sa [...]"<sup>15</sup>*

(Eng. trans. The man should bring money homes it is somewhat like that if a girls works it is a bad thing fortunately with education it changed somewhat)."

The gender socialisation of children perpetuates traditional patriarchal values, norms and ideologies of marriage, domesticity and subordination. Girls are socialised in the traditional patriarchal dogma that they should get married and be housewives.

In the past, approximately ten years back, the academic education of Rodriguan girls was not a priority. They were given access to basic education to develop their numeracy and literacy skills sufficiently for them to acquire the basic skills to perform their housewife duties. Even though now more girls have access to education, the educational statistics show that from the first year of the Secondary Cycle (Form 1) up to the fifth year of Secondary Education (Form 5), girls outnumber boys. But, as from Form 5 and at Tertiary Level, boys exceed girls in number. At University Level, there are 50% less girls that continue their Tertiary Studies.

The gender differences at S.C, H.S.C and Tertiary Level might be attributed to various reasons such as low educational achievement of girls and High School dropouts of girls, following teenage pregnancy. To continue their Tertiary Studies, Rodriguans come to Mauritius and young girls and their parents might be reluctant to do so. They might perceive the relocation to Mauritius as too risky and socially unacceptable for a girl.

Furthermore, Tertiary Education is at a considerable cost (University fees, board and lodging, purchase of material and transport costs) and families might not have the financial means to meet these expenses. In such instances, often, the academic education of boys takes precedence over that of girls, to the detriment of the latter.

Statistics for 2000 revealed a substantial increase of 21% in the literacy rate. Literacy increased from 56.5% in 1998 to 68.1% in 2000. The rate for women was slightly higher than that for men with 68.5% for women compared to 67.7% for men. There was no gender disparity for the lower-age groups up to 44 years of age. The disparity was greater for those aged 55 years of age and above (males 3.5% and females 29.5%).

This disparity resulted from gender discrimination in terms of access to academic education. It should be pointed that almost all Rodriguans are literate in French and are numerate, with the exception of the elders who are not as literate as their grandchildren because during their childhood, some of them did not attend school.

Although they did not go to school, they can read and write basic French as they acquired basic literacy skills through informal education, such as training courses provided by the Roman Catholic Church. Indeed, almost all Rodriguans speak French. According to Ben, the Church played a core role in the literacy education of the elderly population by providing prayer books that were, and are, in French; people learned to read and write through these books.

**Table 1**  
**Composition of Local Population**

Category	Characteristics	Arrival Period
Rodriguans of African origins ('Black' Rodriguans)	African phenotype. Endogamy and intra-racial marriage long preferred marriage pattern. They are Roman Catholics. They live in the interior land are farmers and herdsman.	Ancestors came during French and British Colonisation.
Rodriguans of European origins (Mulattoes)	Fair-skinned people. Endogamy and intra-racial marriage long preferred marriage pattern. They live along the coast and are fishermen. They are Roman Catholics.	Ancestors came during French and British Colonisation.
Rodriguans of Chinese origins	Chinese phenotype. They are owners of retail shops. They are either Roman Catholics and/or Buddhists.	Arrived in around 1890 as traders.
Rodriguans of Islamic faith	They are owners of retail shops. Their dressing code often acts as marker.	Came as traders, most probably during pre- and post-Independence.
Rodriguans of Indian origins	Usually followers Hinduism.	Most probably during pre- and post-Independence.
Mauritians		Immigrated during the 20 <sup>th</sup> and 21 <sup>st</sup> centuries.
Europeans		Immigrated during the 20 <sup>th</sup> and 21 <sup>st</sup> centuries.

## CONCLUSION

Slavery has had an impact on the life experiences of the Rodriguans and is still influencing their lives. For those who conceive their descent in positive terms and as a heritage of resistance to oppression, they seized life opportunities for social and economic mobility to improve their lives. Those who conceive their slave ancestry in negative terms, are still mentally and psychologically enslaved. In their perceptions, hard work and low-paid jobs are a modern form of slavery, and refusing this form of enslavement is a means to rebel against the institutions and express one's resentment for the Social Establishment.

Rodriguans still bear the weight of their Colonial History and of their past historical development, and especially their Political History. The present socio-economic situation is the result of years of repression and ostracism from the preceding Governments that maintained the island in a State of underdevelopment. The local population is currently experiencing the triple burden of their past (slave ancestry, Colonial and Post-colonial political orientation and socio-economic poverty) and the current social and economic crisis exacerbates their already vulnerable state.

In their sub-consciousness, the 'Blacks' who belong to the African Diaspora are of slave descent because 'slave blood' flows in their veins, as it flows in the veins of the Africans who were the main source of servile labour. Even if they recognise their slave ancestry, unlike some Mauritians who claim their identification to Africa as their motherland, such identification process is non-existent in Rodrigues. Their identification with their African Diaspora is rather cultural and physiological, and there is no longing for an imaginary motherland.

There is a strong national identity that is the product of groups' self-identification process. The primary identification as Rodriguans is a result of the absence of ethnic group competition, tensions, power struggles and inequalities. For the local residents, Rodrigues is their motherland since it is their native country and that of their immediate elders. Their religious identity and identification as slave descendants are subordinate identities that have meaningful meanings in the construction of Rodriguans self-definition.

## EXECUTIVE SUMMARY

In early times, Rodrigues had the reputation of being a healthy island with a relief and topography that spared it from the epidemics that afflicted Mauritius in the 19<sup>th</sup> and 20<sup>th</sup> centuries. The plight of Rodrigues on public health matters started deteriorating with the influx of migrants between the two islands and visiting ships during the second half of the 19<sup>th</sup> century and early 20<sup>th</sup> century. Epidemic diseases were inadvertently introduced. Later, tuberculosis, as well as water and faecal-borne diseases, became widespread as a result of poor housing and sanitation, and a lack of safe drinking water, exacerbated by rapid population growth in the early 20<sup>th</sup> century.

The staple foods of the Rodriguans were maize and manioc, supplemented with beans, fish (fresh and salted) and livestock produce, with very little fruits and vegetables. They faced famine situations several times due cyclones and droughts, when they survived on sweet potatoes, roots and wild fruits, while they waited for food supplies from Mauritius. In the latter part of the late 19<sup>th</sup> century, rice was introduced in the diet, followed by wheat flour (for bread-making). Rum and wine drinking was prevalent. The availability of safe drinking water was always a problem.

Rodriguans have always relied on traditional medicine, namely medicinal plants. The availability of such plants is linked with the terrestrial biodiversity which plays a key role in the livelihoods of many people. Perception of mistrust in the medical service provided by Mauritian doctors prevailed through a lack of understanding or the indifference to the population. A survey (1994) on the traditional pharmacopoeia in Rodrigues, has identified 193 medicinal plants currently used by the population of Rodrigues to treat some 93 diseases.

During the first half of the 20<sup>th</sup> century, Infant Mortality Rates (IMR) in Rodrigues were generally lower than those in Mauritius, due to the multiple epidemics (particularly malaria) that afflicted the latter. In those days, Rodrigues was relatively spared of the scourges, although water and sanitation problems perpetuated high morbidity and mortality affecting mostly children. This trend was reversed after the mid 1950s, when IMR in Mauritius decreased dramatically, mainly due to the eradication of malaria and other public health measures. IMRs, as well as the nutritional status of children on both islands, are now very close.

During the last three decades, the aetiology of diseases has shifted from those of typical infectious and parasitic origin, to diseases more related to the lifestyle just as in Mauritius. The pattern now is predominantly that of heart diseases, hypertension, diabetes and obesity. This is linked to a changing lifestyle, such as overconsumption and dietary imbalance, decreasing physical exercise level and alcoholism, more or less reflecting the health situation in Mauritius.

Our recommendations are the same as for Mauritius. However, the geographical, economic, social and cultural specificities of Rodrigues should be taken into consideration in the formulation of a Health Policy.

## INTRODUCTION

In the heart of the Indian Ocean, at latitude 19°43' S and longitude 63°25' E, Rodrigues Island stretches over a surface area of 108 square km. About 650 km to the North-East of Mauritius, it is the part of Africa that is closest to Australia. Born from volcanic activity between 1.3 and 1.5 million years ago, the island (18 km long, 8 km wide) is the smallest of the Mascarene Archipelago.

Rodrigues is a mountainous, volcanic island, with a succession of valleys plunging to the 300 square km lagoon, whilst meandering through steep escarpments and terraced fields towards its 80-km coastline, with an enthralling though accessible relief. The island enjoys a tropical climate with temperatures varying between 28 and 35°C during the Southern summer, which coincides with the cyclonic season (November to April) and between 18 and 27°C in winter. The Island had been hit by several crippling cyclones between 1863 and 1963 (North-Coombes 1971).

Under the French, the inhabitants consisted of a small garrison and a small number of slaves and freemen. When the British took possession of the island in 1809, there were about a hundred inhabitants (including 41 slaves). In 1810, Rodrigues was used as the launching pad for the victorious assault on Isle de France, renamed Mauritius, pursuant to the terms of the Vienna Treaty in 1815. Under British Administration, the slave trade became illegal as from 1814, although it was privately tolerated for some time in Rodrigues. It was only in 1820 that a resident Government Agent was appointed for Rodrigues and started the registration of slaves. In 1826, the total population was 123, consisting of 100 slaves, 20 Europeans and 3 freed persons. (North-Coombes 1971).

The British occupants were favourable to the settlement in Rodrigues and encouraged the agricultural development of the island to the extent that it became the “attic” of Mauritius.

Communication, road and schooling infrastructures were set up at a relatively slow pace. The island was linked to Mauritius by means of the telegraph in 1901, which made communication much easier. Traditionally linked to Mauritius by sea (Port-Mathurin being the main harbour), Rodrigues took a leap into modernity in 1972 when the first Air Mauritius flight landed at Plaine Corail.

There was no local official administration of Rodrigues until 1846 when the first Police magistrate was appointed. The people of the island voted for the first time in 1967 in the historic poll for the Independence of Mauritius and its outer islands. Rodrigues is represented at the National Assembly in Port Louis since that date. After Independence, Rodrigues was administered by a Resident Commissioner who coordinated the activities of the various Ministries and Departments. In 2002, the National Assembly unanimously voted in favour of a constitutional law granting an autonomous status to Rodrigues regarding its internal affairs and bringing about the devolution of certain administrative and political powers. The Rodrigues Regional Assembly was established following elections. The local Executive has the same powers as a Regional Government presided by a Chief Commissioner, who is the direct interlocutor of the Prime Minister and of the Central Government regarding Rodriguan affairs.

Since the arrival of the first European settlers in the era of French colonization, certain traces have survived over the generations. The predominance of African and Malagasy blood in the mix is explained by a wave of settlement following the abolition of slavery by the British Colonial Administration in 1835.

Before Independence in 1968, Mauritius did not show much interest in Rodrigues and the first comprehensive publication on the latter came out in 1923 (Bertuchi, in North-Coombes 1971). Information on the health and disease situation in Rodrigues during the colonial times was scattered and patchy. Therefore, this report only attempts to provide a brief overview of the situation in Rodrigues.

## 2. FOOD SUPPLIES AND NUTRITION

### 2.1 FOOD SUPPLIES

#### 2.1.1 French Period (1720 - 1810)

##### Earlier period

In 1691, when the French explorer and naturalist François Leguat and his companions established themselves near Port Mathurin, there was an abundance of local foods; viz. birds and birds' eggs, fish of all kinds, eels, crabs, lobsters and oysters, tortoises and turtles, palm and latanier cabbages, melons, water-melons, other fruits and various vegetables. From the palms and lataniers, they made alcoholic beverages like toddy and arrack. They also ate smoked flesh of a dugong (a large marine mammal) (North-Coombes 1971).

##### Giant tortoises and the Solitaire

Before the arrival of Europeans at the Mascarene Islands, there was an abundance of giant tortoises. In Rodrigues, these reptiles had also colonised most of the small islands dotting the reef platform around the main island. This fabulous development was favoured by the isolated position of these islands, and the absence of man and natural enemies. However, tortoises were killed for food and oil. They were brought onboard ships because they could go without food or water for up to six months, meaning they could be killed for fresh meat at any time and provide an insurance against scurvy (North-Coombes 1971).

During the French period, from 1720, the tortoises were plundered and thousands were exported to Isle de France (Mauritius) with each shipment, for their meat and oil, for local consumption and for visiting ships. By the 1760s, tortoises were already scarce in Rodrigues and virtually disappeared by 1795 (North-Coombes 1971).

The Solitaire was a species of large apterous bird, unique to Rodrigues, so named because, though initially abundant in Rodrigues, it was seldom seen in the company of other birds of the same species. The birds were ruthlessly slaughtered, and by the time of Pingré's visit (1761), the bird had virtually disappeared and became extinct soon after (North-Coombes 1971).

##### Staple foods

During the French settlement period (1792-1809), maize was the main stand-by crop for the inhabitants. They grew wheat for bread-making from seeds brought from Isle de France. Coconuts from Diego Garcia were planted at Port Mathurin. There was no game on the island and the rabbit and guinea fowl were probably introduced at that time. There was no important agricultural or commercial activity, except tortoise exploitation and some small-scale cultivation (maize, wheat, manioc, coffee) and fishing. Manioc was mainly used to fatten cattle. Ships called for fresh water, wood, *latanier* cabbages, fish, tortoises and oysters (North-Coombes 1971).

According to Philibert Marragon's Census of 1804, the crops cultivated were: wheat, maize, rice, manioc, coffee, some tobacco and fruit trees - mostly citrus and a few mango trees. The farm animals, included ducks, pigs, goats and some cattle. The pigs and goats, cats and some cattle ran wild. At that time, there were a total of 82 black slaves (mainly from Mozambique, Madagascar and born in Rodrigues) and five white land owners (North-Coombes 1971).

### 2.1.2 The British Period (1810 - 1968)

#### Food production and export during the 1830s

During that period, there were only about 125 to 250 inhabitants on the Island. In 1838, Justice C. Anderson reported that grain and root crops produced were only sufficient to meet the food needs of apprentices, and the large numbers of pigs and poultry. Salted fish, pigs and poultry were exported. There were also cattle, goats and sheep, but they were never exported and appeared to be left in the wild. He concluded that the Island was well-suited for grazing farms, and proposed that its development be reoriented to produce cattle for export to Mauritius and render the latter, to a great degree, independent of Madagascar for its meat supplies. However, following massive deforestation by the settlers and successive droughts, this proposition got nowhere (North-Coombes 1971).

#### Slave emancipation

In Rodrigues, when the slaves were set free on 4<sup>th</sup> June 1839, the men were offered a monthly wage of 3 *piastres*, and the women 2 *piastres*, as much free food as they could consume according to custom already established, i.e. 1½ pounds of salted fish per week, two *coujarons* of spirits as before, and the liberty of cultivating their small gardens. They unanimously accepted these conditions (North-Coombes 1971).

However, the liberated slaves did not remain long in the employment of their past masters and left to go into the interior of the island where they squatted without authority on their garden plots or on land belonging to the Crown. They also helped themselves to meat from cattle, which had been free-ranging for years, as well as to pigs or game which they come across. A number of the “squatters” eventually became owners on soft terms in 1865 (North-Coombes 1971).

In June 1841, Magistrate H.M. Self, sent from Mauritius to enquire into some civil cases, found the people (both Rodriguans and the labourers brought from Mauritius for fishing) rather happy. Pay was reasonable, food plentiful, consisting mainly of manioc (the staple food) with a ration of rice on Sundays. In fact, the liberated slaves did not work for others; they were entirely self-supporting from the produce of their cultivation and the livestock which they raised, plus the odd fish and wild cattle (North-Coombes 1971).

#### Food production and exports during the 1850s

During the 1850s, the staple crops were “haricots” (beans), maize, manioc, sweet potatoes, rice, yams and pumpkins, which formed the principal nourishment of the 324 inhabitants and were cultivated in small quantities. These were supplemented with fish, eggs, poultry, wild guinea fowls, pigs and goats. There were also some cattle, asses, sheep and large number of pigs and dogs (the latter being a nuisance since they destroyed animals and poultry) on the island. The exported products of Rodrigues consisted mainly of salted fish, livestock and beans. Only one landowner did larger-scale cultivation and planted coffee, lime, oranges and other kinds of fruits (North-Coombes 1971).

#### The truck system and indebtedness

There were no shops on the island at that time. Each employer had a store of his own from which he supplied his men on credit, at extortionate prices. The workers were thus perpetually in debt and forced against the Law to remain in their employers’ service until the debt had been cancelled - which was hardly ever possible (North-Coombes 1971).

The truck system, in which those employed by the master-fishermen were trapped, made them so indebted to their masters that they never received wages and were little more than slaves to them. There was an abuse of the truck system (in the 1860s) which had been prevalent from the start of

employment of free labour, after the liberation of the slaves. The contract between employers and labour allowed wages to be “payable in merchandise so that when the servant is disposed to intemperance, two bottles of rum issued to him in six-penny grogs pay his wages for one month and five days”. Many labourers got into debt as they were unable to resist the grog. The cost of goods was anything between 150 and 300 percent higher than in Mauritius; except for rice which was 75 to 100 percent higher (North-Coombes 1971).

The Rodriguan was always short of money and bought virtually everything on credit. It had to be given, because everything depended upon the timely arrival of the trading vessel to carry the island’s products to Mauritius. The island was so poor that there was virtually no cash flow at all. Rodriguans were exploited by the six shopkeepers and the trading ship-owner using the truck system (North-Coombes 1971).

#### Cyclones and near famine

In January and February 1876, Rodrigues was struck by the worst cyclone season of the 19<sup>th</sup> century, with four cyclones in two months. The island was recovering well until April 1878, when another dreadful cyclone struck, followed by drought that destroyed the crops of maize and manioc, as well as other crops. The mountaineers had no food left; they lived on wild fruits, and roots, on cabbage palms and *songes*. Shopkeepers refused to sell their rice stocks when Government supplies were exhausted in January 1879; then, they were forced by the Magistrate to sell one-fifth of their stock. Children became emaciated; many people suffered from sores and dysentery. In December 1880, as a result of poor crops and deficient rainfall, a famine became imminent. People were surviving and had to rely on sweet potatoes and *songe*. Emergency rice supplies were sent from Mauritius. Those too poor to pay were put employed in road-building and sanitary works (North-Coombes 1971).

Before 1873, rice was sent from Mauritius in small quantities. The inhabitants had to pay cash for these purchases, or they obtained the rice in payment for road works. After the cyclone of 1886, the quantity of rice sent was increased, and its distribution was made on fairly liberal terms. In a land where there was normally little or no cash flow, this led to indebtedness. As from 1890 to 1901, payment for rice had to be made in cash or in return for labour on public works, and in no case were issues to be made on credit (North-Coombes 1971).

In 1890, a certain prosperity was becoming evident among the inhabitants. This was brought about almost entirely by the start of cultivation of tobacco for export to Mauritius. (Tobacco had always been grown in Rodrigues for local consumption). This improved the cash flow of the island (North-Coombes 1971).

#### Food insecurity

In times of scarcity, the Rodriguans eat anything available that can be consumed, wild fruit, and even snails. In the old days, when *latanier* palms were still plentiful, the cabbage was eaten. *Lataniers* became scarce after the prolonged drought of 1928. In the pre-ETC<sup>1</sup> days, it could be weeks before a ship would bring an emergency supply of rice, and the inhabitants often had nothing at all to eat; fortunately, the resources of the sea helped out. In the course of their history, Rodriguans have often endured famine conditions, under which any other people would have rebelled (North-Coombes 1971).

During the 1930s, a portion of leased crown lands was planted with manioc as a food reserve to tie over the people during the annual dry season. School gardens were established at La Ferme and Lataniers. The seasonal dry period at the end of 1933 extended into the main growing season of

---

<sup>1</sup> Eastern Telegraph Company, including Cable and Wireless Limited.

1934. The usual plea for assistance was made to Mauritius during the food shortage. This food insecurity was attributed to the increasing population, but was, in fact, due to a lack of objectives and policies as problems had been dealt with in a piecemeal manner as they arose (North-Coombes 1971).

Food stocks had fallen so low in 1943 that food cards had to be issued, and even sugar had to be rationed. In 1943, the standing crop of maize of the whole Riviere Coco area, the only one to come to maturity at the time, was requisitioned by the Magistrate. This enabled the islanders to live through the most critical period of its war-time food problems (North-Coombes 1971).

Except for the food rationing and the impossibility of obtaining some consumer goods, the Second World War did not affect Rodrigues adversely. In fact, the wages of troops stationed on the island, the remittances from Rodriguan men serving overseas and various contracts for supplies (such as meat, fish and eggs) brought about an unprecedented cash flow. Due to import difficulties, excellent local substitutes for bacon and ham were produced for the English people on the Island; oil was extracted from groundnuts; local butter and cheese were made, and seaweed was used as vegetables (North-Coombes 1971).

In 1947, the island sustained great devastation caused by 4 cyclones in a month, followed by scanty rainfall, with considerable crop destruction. Imported food supplies were regularly available, and destitution was minimised by the distribution of money grants and relief work by the Government and from charitable sources (MHD 1947). This was followed by an almost continuous drought in 1949, which resulted in the failure of practically all food crops and a scarcity of fodder. The majority of inhabitants had to buy food imported from Mauritius at a high cost. People, deriving an income mainly from fishing and traditional pig-rearing, were underfed (MHD 1949).

However, Rodrigues continued to export food products to Mauritius from 1961 to 1970, which included cattle, sheep and goats, poultry, pigs, onions and garlic, and salted fish and octopus (North-Coombes 1971).

#### Fish scarcity

Already in 1916, there was a scarcity of fish in the lagoon, resulting in smaller catches; this drop was attributed to excessive net-fishing. Total prohibition of net-fishing was enforced from 1920, but fraud was rife. The fish was salted with salt (not brine) for preservation. It was later realised that the main cause of fish scarcity was not net-fishing but the construction of coral parks on the reefs, and net-fishing prohibition was lifted in June 1939 (North-Coombes 1971).

#### Citrus and *limon*

Although citrus plants had been introduced in Rodrigues since the mid-1750s, the island began to have a good reputation for its *citrons* by 1845 and in 1874 it was growing spontaneously. The leaves and rind of fruit were used in preparing tisanes for various maladies. The *citron doux*, which is a variety of "rough lemon", and the *petit limon* gradually spread practically over the whole island in the 1930s. The fruits were in great favour, both locally and for export to Mauritius, where they were often pickled for sale in shops. Every Rodriguan planted a *limon* tree near his hut and looked upon a full-grown tree as a source of income. The plantation of other types of citrus (orange, lime, lemon and grapefruit) was also tried at Oyster Bay with seeds from Barkly Station (Mauritius). As a result of the citrus canker disease, the agricultural staff embarked on a citrus eradication campaign (by uprooting and burning the contaminated plants) that failed, due to inadequate sensitisation, and lack of staff and proper control. However, there was much opposition to the agricultural staff and the three years that the campaign lasted caused a good deal of hardship and much heartache, since almost every mountaineer had his citrus plants by his hut. Some of them actually lived

exclusively on the income which they derived from the sale of the fruits. They were never offered any compensation for that loss (North-Coombes 1971).

#### Changes in diet

The staple diet is still the yellow flint maize which, after crushing and sifting, is boiled, either plain or mixed with rice.<sup>2</sup> This is eaten by itself or with some beans, curry, greens, or salted fish. In older days, the Rodriguans lived on manioc in the dry season, after the maize supply had been exhausted. From 1927, when manioc was so severely attacked by die-back disease that it was virtually wiped out, the inhabitants fell back on sweet potatoes. The Rodriguan is not very fond of sweet potato which leaves an empty feeling, even immediately after a meal. He usually feeds it to his pigs, with maize bran. However, in hard times, a few pieces of sweet potato often formed the sole food of a large section of the population for weeks on end. Up to the 1940s, rice was still considered as something of a luxury, to be consumed when there was nothing else, after cyclones or droughts, and on Sundays and feast days, when it was eaten with either meat curry or fresh fish. Incidentally, the term 'curry' is very loosely used to apply to any cooked relish to eat with boiled maize. Rodriguans had no milk or consumed only goat's milk (North-Coombes 1971).

A comparison of data between the periods 1953-55 and 1965-67, shows that Rodriguans ate more flour and rice, drank more wine and beer but less spirits, used more soap, dressed better, and made greater use of motor vehicles. The consumption of rice, flour and cooking oil increased by half during that period. Rodriguans tend to consume more flour and polished rice as a substitute for a traditional maize diet, as a result of decreasing maize cultivation (North-Coombes 1971).

#### Alcohol consumption

Most Rodriguans used to have a fairly temperate character; those engaged in fishing were generally more prone to liquor than the farmers. On Saturdays, most of the men like a tot of rum or two, even if this had to be obtained on credit. Since Mauritius has had its own brewery, the consumption of spirits in Rodrigues has fallen. The inhabitants now consume appreciable quantities of beer and cheap Mauritian fruit wine. These are now distributed all over the island, even in the highlands (North-Coombes 1971).

## 2.2 NUTRITION STATUS AND DEFICIENCY DISEASES

In 1830, at the request of Governor Colville, Captain J. Lyons reported that slaves on several establishments were "being well clothed and fed; having a great facility of catching fish; besides the thriving state of the manioc, enabling them to keep pigs and poultry" (North-Coombes 1971).

In 1838, C. Anderson reported that apprentices were working longer hours than the Law allowed, their clothing was inadequate and their huts miserable, but they were well fed, and extensive garden ground was allotted to them. In 1838, after the abolition of slavery, the population consisted of a few whites, 127 apprentices and 142 children (North-Coombes 1971, Kuczynski 1949).

In 1949, the standard of nutrition was not as good as it was in 1948. In 1962, it was noted that illegitimacy rates and birth rates were high and that many of the children were malnourished. Parental ignorance of a proper diet led to high incidence of *kwashiorkor*. The worst cases were admitted (19 during the year), but the mild cases were very numerous and were treated with milk given at the dispensaries or social services (MHD 1949, 1962).

---

<sup>2</sup> One cup rice for three cups of maize brought to the boil and then cooked on a very gentle fire.

In the late 1960s, the black Rodriguan men were described as being about 168 centimetres tall, with disproportionately long and thin arms and legs. They were much stronger than they looked. The Whites were more powerfully built, and generally their features closely resembled those of Europeans. They too were strong, but they aged prematurely and more quickly than the Blacks (North-Coombes 1971).

#### Anaemia

Anaemia in Rodrigues did not seem to be as common as it was in Mauritius during the first half of the 20<sup>th</sup> century, probably due to the fact that the Rodriguans' diet always contained a fair amount of animal foods, including fish. However, there was a fair amount of anaemia on the island during the 1930s, and the cause was thought to be nutritional, as well as *ankylostomiasis* (MHD1933-35). However, surveys done in 1995 and 2004, revealed higher levels of anaemia among Rodriguan children than among Mauritian children (MOH/UNICEF 1996, MOHQL 2006).

#### Avitaminosis

In 1934, apart from imported cases of beriberi (brought in by returning emigrants from Réunion), there were few cases of a scurvy-like condition, characterized by a sore tongue, dryness of the skin and eruptions. Bleeding from the gums was present in a few cases; the disease undoubtedly resulted from a lack of fresh fruits and vegetables which followed the drought or a cyclone. People with Beriberi completely recovered in 1935 (MHD 1934-35).

#### Nutritional status

Rodriguan children have always shown a better nutritional status (based on anthropometric measures) than Mauritian children in surveys carried out from 1985 onwards, despite the fact that Rodrigues has higher infant mortality rates for the same period. Table 1 shows that Rodriguan children were consistently taller, heavier and less thin than Mauritian children for the period studied. That observation still holds good even when the Rodriguan children are compared with Mauritian Creole children in the survey for which those data were disaggregated (MOH/UNICEF 1988, MOH/UNICEF/WHO 1996, MOHQL 2006)

Table 1: Comparison of the nutritional status of Rodriguan and Mauritian children

Year of survey	Age group (years)	Percent Underweight (Low weight-for-age)		Percent Stunted (Low height-for-age)		Percent Wasted (Low weight-for-height)	
		Rod.	Maur.	Rod.	Maur.	Rod.	Maur.
1985 (a)	0-5	12.0	23.9 (T) 18.8 (C)	17.5	21.5 (T) 24.7 (C)	4.9	16.2 (T) 11.2 (C)
1995 (b)	0-5	9.6	16.4	10.2	9.6	9.0	15.0
2004 (c)	5-11	1.2	3.4	0.6	1.0	6.3	11.3

Note: (T) = Total children in Mauritius sample; (C) = Creole children in Mauritius sample.

Sources: (a) MOH/UNICEF (1988); (b) MOH/UNICEF/WHO (1996); (c) MOHQL (2006)

According to a 2004 survey, overweight plus obesity levels amongst Rodriguan children, aged 5-11 years and 12-19 years, were slightly less than among Mauritian children, but were the same (56%) amongst adults 20-49 years (MOHQL 2006).

### 3. DISEASE PATTERN

In the 19<sup>th</sup> century, Rodrigues had the reputation of being a healthy island. Governor Napier-Broome after a visit to Rodrigues in 1881 concluded that the island was a healthy place (North-Coombes 1971).

When the British (under H. Keating) took possession of Rodrigues from the French in 1809 and started the blockade of Isle de France, the island was used as a convalescent station for its seamen because it was 'particularly adapted for the recovery of those suffering from scorbutic disease, debility and other disorders incident to seamen', and a hospital was built for seamen at Port Mathurin (North-Coombes 1971).

Rodrigues was twice identified to be used as quarantine stations for people affected by two dreaded diseases from Mauritius; in 1800 for lepers and in 1856 for immigrant labourers arriving from India with cholera. Fortunately for the Rodriguans, both ideas were never executed (North-Coombes 1971).

However, by the mid-19<sup>th</sup> century, more immigrants arrived and more ships visited the Island, bringing with them various infectious diseases that were already prevalent on the surrounding islands (mainly Mauritius and Réunion, and India).

### 3.1 LEPROSY

In 1876, H.E. Desmarais reported on the spread of leprosy on the island (North-Coombes 1971). The leprosy situation on the island was considered to be satisfactory with 22 known cases in 1933-34. There was a positive attitude of the population and they were keen to follow treatment with satisfactory results. A number of cases continued to be treated locally until the 1960s and few advanced cases were sent to Powder Mills leprosarium in Mauritius. (MHD 1933-35, 1962).

### 3.2 TYPHOID

Typhoid was of exogenous origin. The first typhoid epidemic outbreak occurred at Port Mathurin in April 1880; there were many deaths. A Medical Officer was despatched from the Civil Hospital, Port Louis, and a hospital was opened in a private house and then transferred to a building to treat the cases. From now on, Rodrigues was to have a hospital of sorts and a resident Medical Officer. The outbreak was followed by sanitary measures: cleaning up of the village and water supply at Grande Rivière, and a scavenging service introduced. All pit latrines were filled and a bucket system introduced with disposal at sea (North-Coombes 1971).

In 1921, a severe epidemic of typhoid hit the island and twice as many people died than in the previous year (North-Coombes 1971). There was outbreak in 1934 causing many deaths, but it disappeared 1935. All cases were treated at hospital. Mass anti-typhoid vaccination (T.A.B. vaccine) was being carried out (including in schools) during the 1930s accompanied by Health Education to improve hygienic practices and sanitation. (MHD 1934).

### 3.3 MEASLES

In 1888, measles were first introduced in Rodrigues from Mauritius (where an epidemic already existed) by a ship passenger (North-Coombes 1971). Measles were not seen for some time; an epidemic outbreak occurred in January 1949 and lasted until June 1949, causing two deaths (MHD 1949).

### 3.4 MALARIA

Rodrigues was free of the malaria parasite vector, the *Anopheles* mosquito. A survey done in 1923 by McGregor found no *Anopheles* mosquito and this was confirmed by another island-wide survey carried out in 1934. Malaria occurred only among persons coming from Mauritius, India and other malarious places. All cases seen in 1934 were imported from Réunion and totally recovered in 1935. (MHD 1934-35).

### 3.5 PLAGUE

A threat of the plague being introduced into Rodrigues was real. In early 1900s, the plague was afflicting Mauritius and a quarantine period of six days was enforced for arriving ships. Incidentally, a case of the plague did get into island through a passenger in 1907; prompt action was taken and the disease successfully prevented from gaining a foothold in the dependency (North-Coombes 1971).

### 3.6 INFLUENZA

In 1890, the island was hit by a severe influenza epidemic that impacted on agricultural production. Seasonal sporadic outbreaks occurred through the 1960s (North-Coombes 1971, MHD 1933-34, 1949, 1962).

This seemed to be the commonest disease on the island, to which Rodriguans appeared particularly susceptible. Any sudden change in climatic conditions was liable to cause a small epidemic with frequent pulmonary complications. During the winter months, influenza levied a heavy toll among the newborn (MHD 1933-34, 1949, 1962).

### 3.7 PULMONARY TUBERCULOSIS

Pulmonary tuberculosis was the commonest cause of death on the island in the 1930s, having caused 21 deaths in 1933. The number of actual cases in 1934 was half that of 1933. It was the commonest cause of deaths among the adult population between 20 and 50 years. In 1962 only three new patients discovered and tuberculosis was found to be on the decline (MHD 1933-34, 1962).

### 3.8 DYSENTERY

Bacillary dysentery was endemic on the island in the 1930s, with sporadic outbreaks causing death mostly among aged persons and debilitated children. There was an outbreak in 1934, but it disappeared in the following year. A mass Health Education campaign to improve hygienic practices and sanitation was being carried out. There was an epidemic outbreak of amoebic dysentery in 1962 (MHD 1934, MHD 1962).

### 3.9 CATARRHAL JAUNDICE (HEPATITIS A)

This disease appeared in Rodrigues in 1934 and was due to extensive soil pollution. It was transmitted as a result of poor hygiene or by eating contaminated food (MHD 1934).

### 3.10 CHICKEN POX

A few sporadic cases occurred in 1933. A fairly extensive outbreak occurred in 1934, affecting mostly children with pulmonary complications and high fever present in a few. It occurred mostly in Port Mathurin and a few hamlets up the hills (MHD 1933-34). An outbreak occurred in 1947 (MHD 1947).

### 3.11 POLIOMYELITIS

In January 1949, the Island was visited by two concurrent epidemics, viz. *poliomyelitis* and measles. The former was hitherto unknown in Rodrigues. The polio disease was introduced into the Island by a healthy carrier coming from Mauritius and quickly grew into an epidemic which swept over the Island until it finally disappeared on 2<sup>nd</sup> March, following public health measures; no sporadic case encountered until end 1949 (MHD 1949).

### 3.12 VENEREAL DISEASES

The prevalence of venereal diseases (*syphilis* and *gonorrhoea*) was generally low but a marked increase was noted in 1949 and kept increasing through the 1960s (MHD 1933-34, 1949, 1962).

### 3.13 FAECAL-BORNE DISEASES

Soil pollution on the island was extensive. Even today, the houses on the hills have no toilets since as a night soil service this would be impossible; so people use the maize field or odd stone as substitutes. When heavy rainfalls, the streams below are polluted and the inhabitants are exposed to contamination, especially *gastroenteritis*, dysentery and worms, all of which are endemic. There were frequent epidemic outbreaks of *gastroenteritis* with sporadic cases every year particularly during the heavy rainy season January-February; it was a common cause of death among children, especially the malnourished ones. In 1934, 328 cases were reported, with 24 deaths. In 1961, it was the first cause of death with 65 dead. In 1967, 1210 cases of *gastroenteritis* were reported for the year; in the very wet, heavy cyclonic period of January-March 1968, 2300 cases were reported (MHD 1934, MHD 1967, North-Coombes 1971).

It can be said that every man, woman and child on the island was heavily infected with *Ascaris lumbricoides*. In the 1930s, heavy infections with round-worms (*ascariasis*) was quite common causing toxæmia and exhaustion; deaths occurred only in children. *Ankylostomiasis* were also on the increase. They were treated with vermifuge free or charge. However, Rodriguans also used the extract from the leaves of *Chenopodium sp.*, although this practice was discouraged by health workers (MHD 1933-35). Still in 1962, practically all children of the poorer classes were infested with *Ascaris*. No hookworms were found (MHD 1962).

### 3.14 "1934: THE YEAR OF EPIDEMICS"

The year of 1934 was known as "the year of epidemics" in Rodrigues. During that year, the island was visited by no less than six epidemics, a cyclone, and a partial famine. The drought resulted in an acute economic situation which had a profound effect on the health of the population. During the early months, there was an extensive epidemic of *gastroenteritis* that was aggravated by inadequate diet. (MHD 1934).

687 emigrants returned from Réunion, bringing with them numerous cases of beriberi and malaria, and introduced into the Island diseases like typhoid fever, bacillary dysentery and measles, all of which were not present in 1933. This was followed by outbreaks of typhoid fever, bacillary dysentery and catarrhal jaundice; and lastly the seasonal influenza outbreaks with an epidemic of chickenpox to close the unhappy series. An epidemic of measles, several cases of which were among the returned emigrants, was fortunately avoided by quarantine measures (MHD 1934).

All this caused a dramatic increase in the death rate from 12.7 during the previous year to 20.8. 15 deaths were among those returning from Réunion. Deaths from typhoid fever, bacillary dysentery, beriberi, and cirrhosis of liver (the result of catarrhal jaundice) were unknown in 1933, with increased fatalities from *gastroenteritis*, post-typhoid tuberculosis, and marasmus and debility (MHD 1934).

### 3.15 HEALTH OF SCHOOL CHILDREN

The most common health problems found in the children of the three primary schools on the island during the 1930s were by far dental caries (nearly 25%), followed by tonsillitis, scabies and worm infestation (less than 5% respectively). Dental caries were most common among children below six to seven years of age, i.e. during the first dentition. The children were generally clean, which is a fairly good indication of the habits of the average Rodriguan. The general condition and state of development of two-thirds of children was qualified as "excellent", and the term was only used in

the case of children in splendid physical condition. (MHD 1933). In 1947, the standard of health and cleanliness of pupils was considered to be good. The spreading of scabies was due to poor housing and overcrowding as a result of large families, as well as poor washing facilities; treatment was given at school (MHD 1947).

### 3.16 PRESENT DISEASE PATTERN

Over the years, all the health parameters for Rodrigues have caught up with the trends in Mauritius. For example, Infant Mortality Rates, as a sensitive indicator of health in a population, have improved markedly from a high of 59.6 per thousand live births in 1975 to 14.0 in 2010, compared to figures of 48.7 per thousand in 1975 and 12.4 per thousand in 2010 for Mauritius. Life expectancies recorded in 2008 for Rodrigues were: Male: 70.7, Female 76.4 and Mauritius: Male: 69.2, Female: 76.1.

During the last three decades, the aetiology of diseases has shifted from the typical infectious and parasitic origin to diseases more connected with the lifestyle as in Mauritius. The pattern is now predominantly of the heart, and other, diseases of the circulatory system, responsible for 35.9 % of all deaths in 2008. Cancer and neoplasm accounted for 19.9%, diabetes and other endocrine, nutritional and metabolic disorders 18.9% and accidents and other consequences of external causes took another 5.3%, totalling a staggering 80%.

The 2004 Non-Communicable Diseases Survey and the trends in NCDs and their risk factor prevalence during the period 1992-2004 confirm the above trends (MOHQL 2006a):

- The age-standardised prevalence of diabetes in the Rodriguan population aged 20-74 years was 9.4% (7.0% in males, 10.7% in females). The prevalence in 1992 was 8.1% and in 1999 this prevalence had increased to 10.9%.
- Obesity i.e. (BMI > 30) was found in 23% of the Rodriguan population aged 20-74 years and another 33% were overweight (25 < BMI ≤ 30).

Prevalence of obesity among females (28.6%) was more than twice that of males (13.5%). Obesity prevalence had remained almost unchanged during the period 1992-1999 at around 19.5%. Overweight prevalence has remained around 32-33% during the period 1992 to 2004

- The prevalence of hypertension in 2004 in participants aged 20-74 years was 34.1% in males, 32.4% in females and 32.8% in both sexes.

The hypertension prevalence rates in males were slightly higher than those in females during the period 1992 to 2004 (Table 6). When males and females are taken together, a 11% decrease is noted in the prevalence from 1999 to 2004.

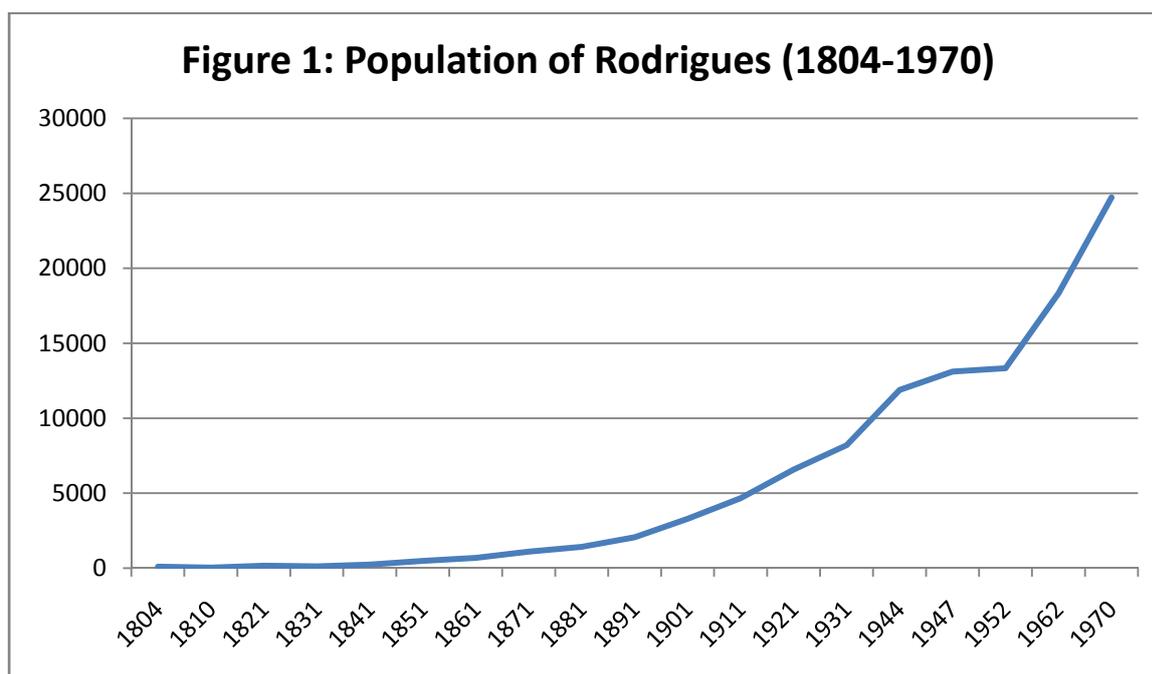

## 4. HEALTH AND LIVING CONDITIONS

### 4.1 POPULATION AND VITAL STATISTICS

The pristine Island of Rodrigues was visited off and on by travellers, without mooring ground for long-term settlement. Under the French, the inhabitants consisted of a small garrison and a small number of slaves and freemen. When the British took possession of the island in 1809, there were 3 French planters and between 60-70 slaves. Table 1 shows the population in 1826 (North-Coombes 1971).

	Men	Women	Boys	Girls
Whites	7	5	8	.....
Free	2	1	.....	.....
Slaves	49	28	12	11
Total	58	34	20	11

The population of Rodrigues increased with some fluctuations from about 100 in 1804 to about 700 in 1861. Then, during the 20<sup>th</sup> century, there was an exponential population increase, except for the Second World War period, reaching to 25,000 in 1970 (See Figure 1).

Source: North-Coombes (1971) Appendix 10.

The British occupants were favourable to settlement in Rodrigues. The population of the island started growing slowly when demands for lands by those residing in Mauritius to settle down with some slaves were met. The censuses of 1851 and 1944 recorded population sizes of 495 and 11,885 respectively. Table 2 shows the comparative vital rates for Mauritius and Rodrigues for selected years between 1975 and 2010.

Table 2: Vital Rates: Mauritius-Rodrigues, 1975-2010

Year	Crude Birth Rate		Crude Death Rate		Infant Mortality Rate		Still Birth Rate	
	Mau	Rod	Mau	Rod	Mau	Rod	Mau	Rod
1975	24.8	43.4	8	8.1	48.7	59.6	40	26.3
1980	26.6	44	7.1	8.6	32.3	57.1	24.3	24.7
1985	18.8	28.5	6.8	6.1	23.8	51.9	19.5	18.2
1990	21.3	23.7	6.7	5.8	19.9	40.7	15.7	19
1995	18.2	20.9	6.7	4.8	19.6	20.6	14.8	3.2
2000	16.9	22.2	6.8	5.1	15.8	23.5	13.4	8.3
2005	14.9	24.6	7	6.2	13.2	20.6	9.6	17.3
2010	11.5	18.9	7.2	6.3	12.4	14	6.6	11.1

Note: Caution has to be exercised in interpreting figures for Rodrigues as the small numbers can give rise to wide fluctuations.

It is to be noted that during the first half of the 20<sup>th</sup> century, Infant Mortality Rates in Mauritius were generally higher than those in Rodrigues due to the multiple epidemics (particularly malaria) that afflicted the former. In those days, Rodrigues was relatively spared of the scourges. This trend was reversed after the mid 1950s when IMR in Mauritius decreased dramatically, mainly due to the eradication of malaria and other public health measures. In Rodrigues, water and sanitation problems perpetuated high morbidity and mortality affecting mostly children.

#### 4.2 HEALTH SERVICES

Health services in the island were quasi-inexistent under French Administration and, at the early phase, much of British Administration. The most common form of remedy resorted to by the descendents of slaves and free citizens were mainly traditional medicine, particularly herbal medicine.

In June 1841, Magistrate H.M. Self recommended that the establishment of an official authority in the island. This had become an urgent necessity for various reasons. First, the great change brought about in the social state of the island by the emancipation of the slave population, their unlawful squatting on unalienated Crown Lands, and the social problems arising from the growing number of workers employed on contract from Mauritius; secondly, the unlawful and reprehensible conduct of crews of visiting ships, mostly of American whalers who paid no heed to any law in the absence of any recognised authority and did a lot of harm to Rodrigues. Eventually Ordinance No.7 of 1843 was issued “for the purpose of forming at the island of Rodrigues a Judicial and Police Establishment” and the first Police Magistrate landed on the island on December 1843 (North-Coombes 1971).

The conditions of slavery in Rodrigues had, on the whole, been less harsh than in Mauritius. Work started at seven in the morning and lasted till four in the afternoon. During the rest time of the day, known as *la berloque*, they were free to do as they pleased and cultivate their small patches of garden up in the hills. Their work was not hard but it was compulsory labour. Punishment for desertion or negligence was severe and painful; thus, for absence without leave, it was fifty strokes of the whip, administered in small doses but with a firm hand (North-Coombes 1971).

#### 4.2.1 Hospitals

The first hospital in Rodrigues, if one excludes the army hospital during the occupation by British forces from 1809 to 1812, was opened at Port Mathurin by Messiterin 1861; it contained 6 beds. There was no doctor on the island then and the place served mostly to accommodate poor inhabitants and distressed seamen. It is not known when it was closed down. The next hospital was opened as a temporary emergency hospital (in a rented house) in 1880, during the first typhoid epidemic. In 1891, a new hospital was built at Mont Lubin (with 12 beds) and as from 1895, Port Mathurin had only a dispensary. Finally, a new hospital was opened in Port Mathurin on 10<sup>th</sup> March 1919 with 16 beds; a maternity ward was added in 1947. In the 1950s, the hospital, which had become too small for the population, was condemned. A modern well-equipped hospital, the Queen Elizabeth Hospital, erected at Crève Coeur, was inaugurated on 29<sup>th</sup> April 1959. This included an out-patient service, a maternity ward, male and female wards, an operating theatre, an X-ray block, a pathology laboratory, a pharmacy, a store and an administrative block (North-Coombes 1971).

At the end of 2008, there were 14 Community Health Centres. These provide basic services including treatment of common diseases and injuries, maternal and child care and family planning. Two Health Centres at Mont Lubin and La Ferme operate as mini-hospitals on 24-hour service with 54 beds and providing minor facilities including deliveries. Complicated maternity cases and caesarean operations are dealt with at the Queen Elizabeth Hospital.

During the last decade major improvements were made through the setting up of a new Physiotherapy Unit(2001), Haemodialysis Unit with 4 dialysis machines and 1 water treatment plant at the Queen Elizabeth Hospital in June 2002, a new X-Ray heavy duty unit with highly sophisticated X-Ray machine installed and operational in 2010 and the Non-Communicable Diseases Programme strengthened. A nutritionist is now posted in Rodrigues.

Two private pharmacies operate in Port-Mathurin.

#### 4.2.2 Health Personnel

At the end of 2008, there were 18 doctors in Rodrigues with a ratio of one for 2.094 inhabitants (Island of Mauritius: 1: 876). Qualified nurses numbered 155 at the end of 2008 with a ratio of 1:243 inhabitants, and 2 dentists for the island.

Most of the paramedical and manual workers are Rodriguans. The Medical Health Officers/Senior Medical Health Officers are posted on a tour of duty from the Ministry of Health establishment. In addition, there are specialists in the fields of General Medicine, Surgery, Gynaecology and Obstetrics, Paediatrics, Orthopaedics and Anaesthesia are posted on a full-time basis. Specialists in other fields such as Dermatology, ENT and other specialities are sent on tour of duty on a quarterly basis.

#### 4.3 SANITARY CONDITIONS

The Medical and Health Department Report of 1934 can be considered as a watershed in the understanding of health and living conditions prevailing in Rodrigues until the mid-1960s.

*“There is no disease worth mentioning whose development, the climate could be held to favour, and the inhabitants, once past the infant critical stage, can expect to live to a ripe old age.”*

Alfred North-Coombes

The relief and topography of the island are such that Rodrigues was spared the epidemics of diseases that afflicted Mauritius in the nineteenth and twentieth centuries. However, shortage of domestic water supply has plagued the people in Rodrigues and contributed to a host of water-borne diseases, with children as the prime victims. In 1934, 21 out of 24 deaths (87.5%) due to *gastroenteritis* were among children less than three years old. The most common diseases prevailing among children were: *gastroenteritis*, (24.2%), marasmus and debility, (14.7%), acute bronchitis and broncho-pneumonia, (11.6%), (around 50%). Safe and regular disposal of human excreta was a major problem that contributed to perpetual infestation of *Ankylostomiasis*. Bacillary dysentery was endemic. Pit latrines are still in usage.

In Port Mathurin, the inhabitants could ill-afford the night-soil fee service, whereas the pit-latrines are not suitable because of the low sea-level water table. Annual exposure to cyclones worsened sanitary conditions.

In the early days, water supply from rivers was abundant and clean at most times (except after heavy rains). In the 1890s, a small dam was erected up Grande Rivière valley and pipes were laid for distribution of water to Port Mathurin. This water became muddy after cyclones and floods, and was polluted by human habitation at the dam. In 1971, Port Mathurin drinking water still had to be filtered and boiled (North-Coombes 1971).

## 5. TRADITIONAL MEDICINE

Rodriguans have always relied on traditional medicine, namely medicinal plants. The availability of such plants is linked with the terrestrial biodiversity which plays a key role in the livelihoods of many people. Besides the collection of leaves of the endemic vacoa (*Pandanus heterocarpus*) for the production of handicrafts, for sale mainly to tourists, several endemic species are noted for their medicinal properties. The most commonly used endemic plants for medicinal purposes are *bois gandine* (*Mathurina pendulifera*) and *affouche à petites feuilles* (*Ficus reflexa*).<sup>3</sup> In their survey (1994) on the traditional pharmacopoeia in Rodrigues, Gurib-Fakim and Gueho have identified 193 medicinal plants currently used to treat some 93 diseases, by the population of Rodrigues.

According to Lelio Roussety, traditional medicine “*primait alors dans les moeurs*”, considering the rugged topography of Rodrigues. Despite its small size, 110 square kilometres, it has never been easy for sick people to walk for example from Patate Theophile to Mont Lubin or from Rivière Cocos on the other pole of Port Mathurin to La Ferme to seek medical help. Thus, they had no choice but to have recourse to *tisanes* which had been used for generations.

### 5.1 RELIANCE ON ALTERNATIVE MEDICINES

Rodriguans depended almost entirely on traditional medicine until the late 1960s. The medical service was practically not existent or rudimentary and difficult to access by all the inhabitants of Rodrigues. Hospitals and dispensaries were at Mont Lubin, Port Mathurin, La Ferme especially to those living on the hills, in valleys and gorges. Up to the late 1960s, child birth was the affair of the traditional midwives who were called upon at any time of the day or night. They would walk kilometres to perform this benevolent duty. The *sages-femmes* (Midwives) without qualifications, but with knowledge and skills acquired from elders, while assisting them in childbirth, assumed the responsibility of child delivery. They depended wholly on traditional medicine and especially *tisanes* and oil for the recovery of the mother and in baby care. (pp. 90-91). According to Roussety, midwives had multifarious skills which they performed for the community and they were generally paid in kind. Besides child delivery, they were also herbalists, *guérisseuses*, as well as dress- and mattress-makers. Although babies were vaccinated against smallpox and diphtheria, mothers used, and continue to use, *tisanes* to cure ‘tambave’, as was the case in Mauritius. Women knew the secrets of preparing the *tisane* against ‘tambave’. The infusion of the same plants also provide relief from gas or *balonnement* and allergies that produce skin eruptions and also against itching.

Roussety gives a list of plants used as *tisanes*, commonly resorted to in the absence of medical accessibility or ineffectiveness of medicines prescribed by doctors. Infusion, decoction and cataplasm or poultices are commonly used. The infusion of *citronelle* mixed with ginger and honey is used against influenza; the infusion of *saponaire blanc* against colic; the infusion of *cassepunte* is said to be an excellent remedy for fever; the infusion of *ayapana*, together with mint leaves, to find relief from *balonnement* or gas; the bark of the filao is boiled together with the tender leaves of pomegranate to cure diarrhoea and dysentery. And, as is the practice in Mauritius, the roots of the coconut tree is boiled and taken as *rafraïchi* to cure inflammation of the stomach and intestines, caused by excessive consumption of spicy food, intake of alcoholic drinks or due to excess heat or cold in the body. The *petit trefle* and the *jean-robert* are also infused to find relief from inflammation. Cough elixir, namely from *baume du perou*, is also prepared and kept. Like Mauritians, Rodriguans also use a number of plants in the form of poultice on wounds, injuries and swellings. Infusion of plants in baths is commonly used to cure skin infections and allergies. A bath with the infusion of leaves of the *poc poc* creeper, mixed with crude sea salt, is highly

---

<sup>3</sup> Rodrigues, volcanic island, situated at latitude in the cyclone belt, has a warm wet season lasted from November to April and a cool dry season from May to October which explains the availability of only some 4000 ha of forest and some 2500 ha of arable land including pasture. Some parts of the coastal area are very dry and often subjected to drought.

recommended to cure scabies and skin allergies. The infusion of tamarind leaves is commonly used as a gargle for sore throat.

Rodriguans also use animal fat and oil against a number of ailments. Melted chicken, as well as mutton fat, is applied in the case of mumps. For headache, Rodriguans have a number of remedies: the head is massaged with castor oil and is covered with the leaves of *palma christi*.

In the past, when the service of the doctor was not always available, Roussety says that in the absence of the doctor, especially in times of epidemics, the services of “des docteurs sans souliers” that is “guérisseurs et herboristes” were highly solicited. Roussety says “ Faute de mieux on ne crie pas charlatanisme ou superstition. D’ailleurs, la médecine traditionnelle a toujours tenu une place importante dans la vie de la population. Du point de vue psychologique, pratique et charismatique, l’on ne peut nier que beaucoup de gens dans la souffrance ont été ainsi soulagés et guéris.» In desperate situations, the inhabitants often had recourse to sorcerers and the ‘titalberniens’, especially when helplessly left stranded with agonizing pains in the crevices of hills and valleys. According to Sam Lingayah who carried out a sociological study in Rodrigues in 2003, their services are still highly prized.<sup>4</sup>

## 5.2 CONTINUED RELIANCE ON TRADITIONAL MEDICINE

In his study of social exclusion in Rodrigues (2003), Sam Lingayah, states that the difficulty of reaching hospitals and dispensaries or health centres have caused many Rodriguans to continue to rely heavily on herbal medicines and trust in God, Jesus, for relief and recovery from sicknesses and diseases. The study based on intensive fieldwork provides deep insight into the health conditions of Rodriguans and their lack of faith in the formal medical services that are available to them on the island. The author shows deep concern on the rudimentary service provided by the state and the powerlessness of the majority of the Rodriguans. He qualifies the system as ‘inhumane’ and helplessness of the sick, the disabled and the old as an ugly scar on the Mauritian Welfare State. Perception of mistrust in the medical service provided by Mauritian doctors prevailed through a lack of understanding or total indifference. The sick, especially the old and the handicapped, find it very difficult to have access to the existing medical services. Despite the recent introduction of an ambulance service, they have to depend on the generosity of neighbours. Lingayah adds , “ ...family solidarity and community support are still strong in some parts of Rodrigues.”

Cases documented by Lingayah , through informants in Rodrigues, gave reasons for reliance and trust in traditional medicines. Doctors generally prescribe medicines that are ineffective and often not related to the disease. Misdiagnosis and prescription of wrong medicines are also current. Victims blame doctors for their deteriorating health conditions aggravated by unemployment and poverty and the continuing inaccessibility to hospital care. This causes loss of faith in the health services in Rodrigues. One of his informants blamed a Mauritian doctor who administered drops for her eye and said that she was waiting for deliverance in death. Lingayah cites the case of an 84 years old man suffering from high blood pressure, partially blind and disabled, with limited mobility and severe skin problems, for which he had not sought hospital treatment. He was using the traditional herbal medicine but the wife-carer said it was not really effective. “Mo ena confiance dans Jeji”. Faith in religion was their only hope.

A 57-year-old fisherman who had a stroke was bedridden and suffered speech impairment. “There had been no physiotherapy since discharged from hospital”. Similarly, a woman paralysed with stroke said, “There has been no physiotherapy since she was discharged from hospital at Creve Coeur...”. She was advised to do her own physiotherapy. Her hospital outpatient appointment was six-monthly. Having lost confidence in hospital treatment, she saw the appointment as a waste of

---

<sup>4</sup> Sam Lingayah is a sociologist and experienced social worker in London. He is author of *Social Welfare in Mauritius*.

time...Doctors repeated the same medications and asked her to return home. The author was informed that a homemade concoction of local herbal medicine was administered to her, instead of the tablets from hospital.

Recourse to traditional medicine is common. Diabetes, strokes, high blood pressure are very common among the Rodriguan population. It is observed that many people, especially those living on the hilly part of the island, become disabled after the first stroke itself for lack of adequate treatment and poor supervision of patients in hospitals. A 60-year-old woman was so discouraged with hospital treatment that she stopped taking medications prescribed by doctors and her son had to try using herbal medicines to cure his mother.

Lingayah writes: “ In my view, it is the prohibitive expenditure involved in seeing a good doctor and meeting the bills for medicines that encourage the poor to resort to traditional and herbal medicines.” (p. 90) The overwhelming majority of his informants found health services in Rodrigues unsatisfactory and of very poor quality. Moreover, the medications prescribed were perceived as ineffective, for instance panadol tablets are systematically prescribed for all diseases, even for serious conditions. Many medications are available at the hospital pharmacy and patients need to buy them from the chemist. Ineffective medications and the high cost of procuring better ones from the chemist cause many patients to resort to herbal remedies.

Roussety says that the problems of access to medical facilities were due to the distance from hospital, and this was the main factor for relying on traditional herbal medicine in Rodrigues. On the other hand, Lingayah says that “many sociological factors”, namely “poverty and powerlessness, among others, drive people to rely on the inexpensive traditional herbal medicines, many of which have proved ineffective as compared to modern conventional medications.” Both views are valid, given that Roussety provides an ethnographic account of life in Rodrigues aiming at preserving memories and Lingayah “a diagnostic and analytical investigation based on a critical and radical sociological perspective” aiming at “stimulating debates on social problems ... approaching an unacceptable condition in any society in the world of the 21<sup>st</sup> century.”

Although Roussety writes mainly about the past and his account may be tinged with subjectivity. As a Rodriguan, he writes on the basis of lived experiences and close interactions with fellow countrymen. His ‘temoignages’ contain the social history of Rodrigues. However, the use of traditional medicine should also be seen from the cultural point of view. North-Coombes<sup>5</sup> writing on *Citrons*, says: “Furthermore, the native Rodriguans developed a natural urge to consume the fruit, whose dietetic properties he had discovered in the course of time.” (p. 208) He quotes Balfour<sup>6</sup> who calls the fruit *Citrus medica*, “the leaves and the rind of the fruit are used in preparing tisanes for various maladies”.

Similarly, Rodriguans have adopted several other plants, the medicinal virtues of which they discovered over time; for instance, “la barbe maye” is valued as excellent *rafraïchi*. They also concocted several recipes for medications, the most celebrated elixir is the mixture of *eau de vie* with an equal amount of lime juice and much honey for relief from respiratory problems. Traditional medicine is used in parallel with modern medicine.

---

<sup>5</sup> “By 1845, Rodrigues was “getting a reputation for its citrons” North-Coombes, *The Island of Rodrigues*, 1971, p. 208.

<sup>6</sup> *The Botany of Rodrigues*, Balfour.

### 5.3 CONCLUSION

The original vegetation of Rodrigues has been destroyed by human activity so much so that Rodrigues ranks among the most environmentally degraded place in the world. There is an ongoing decline in the use of traditional varieties of crops as well as endemic plants, due to the tendency to cross-hybridise local species with introduced varieties, and represents a major threat to medicinal plants as well (Tatayah, 2007).

Other threats include change in land use pattern which impacts on the ecosystems. Invasive alien species such as the *“piquant loulou”, jamrosa, bois d’oiseau, vieille fille, ravernale”* constitute another major threat to terrestrial biodiversity and threaten the native vegetation, even in the “well-intended management measures of the reforestation programme in view of protecting watersheds and prevent soil erosion”(Tatayah 2007). Overgrazing, indiscriminate collection of plants for handicrafts and medicinal use also threaten the survival local species. The increasing globalisation of consumption patterns is also leading to the gradual replacement of diverse crop and medicinal varieties.

The importance of medicinal and artisanal plants in the lives of Rodriguans can be gauged from projects such as the one on sustainable use of endemic plants awarded to UNDP/GEF SGP. This project involved developing an area with plants used by villagers for medicinal and artisanal purposes, which aimed at propagating these plants which are inextricably linked with the livelihoods of the inhabitants

## 6. CONCLUSION

In the early times, Rodrigues had the reputation of being a healthy island with a relief and topography that spared it of the epidemics that afflicted Mauritius in the 19<sup>th</sup> and 20<sup>th</sup> centuries. During the French Administration, the island was sparsely populated and not much interest was shown for settlement and development, except for exploitation (plundering) of the abundant tortoise population. The British began to take a keener interest of the island by the mid-19<sup>th</sup> century with the appointment of a magistrate.

The plight of Rodrigues on public health matters started deteriorating with the influx of migrants between the two islands and visiting ships during the second half of the 19<sup>th</sup> century and early 20<sup>th</sup> century. Epidemic diseases (like leprosy, typhoid, measles, influenza, and poliomyelitis) were inadvertently introduced. Later, tuberculosis as well as water and faecal-borne diseases (like dysentery, enteritis, ascariasis, ankylostomiasis, etc.) became widespread as a result of poor housing and sanitation, and lack of safe drinking water, exacerbated by rapid population growth in the early 20<sup>th</sup> century.

The staple foods of the Rodriguans were maize and manioc supplemented with beans, fish (fresh and salted) and livestock produce, with very little fruits and vegetables. They faced famine situations several times due to cyclones and droughts, when they survived on sweet potatoes, roots and wild fruits, while they have to wait for food supplies from Mauritius. In the latter part of the late 19<sup>th</sup> century, rice was introduced in the diet followed by wheat flour (for bread making). Rum and wine drinking was prevalent. The availability of safe drinking water was always a problem.

Rodriguans have always relied on traditional medicine, namely medicinal plants. The availability of such plants is linked with the terrestrial biodiversity which plays a key role in the livelihoods of many people. Perception of mistrust in the medical service provided by Mauritian doctors prevailed through lack of understanding or indifference to the population. A survey (1994) on the traditional pharmacopoeia in Rodrigues, has identified 193 medicinal plants currently used to treat some 93 diseases, by the population of Rodrigues.

During the first half of the 20<sup>th</sup> century, Infant Mortality Rates (IMR) in Rodrigues were generally lower than those in Mauritius due to the multiple epidemics (particularly malaria) that afflicted the latter. In those days, Rodrigues was relatively spared from the scourges, although water and sanitation problems perpetuated high morbidity and mortality affecting mostly children. This trend was reversed after the mid 1950s, when IMR in Mauritius decreased dramatically, mainly due to the eradication of malaria and other public health measures. IMRs, as well as the nutritional status of children on both islands, are now very close.

During the last three decades, the aetiology of diseases has shifted from the typical infectious and parasitic origin to diseases more related to lifestyle as in Mauritius. The pattern now is predominantly that of heart diseases, hypertension, diabetes and obesity. This is linked to the changing lifestyle, such as overconsumption and dietary imbalance, decreasing physical exercise level and alcoholism, more or less reflecting the health situation in Mauritius.

## 7. RECOMMENDATIONS

As the present disease pattern of Rodriguans is more or less similar to that found in Mauritius, the same recommendations as for Mauritius apply to Rodrigues.

However, the specific geographical, economic, social and cultural aspects of Rodrigues should be taken into consideration in the formulation of a Health Policy.

## Geographic Location of the Chagos Archipelago

The Chagos Archipelago is a chain of some 65 small coral islands in the Indian Ocean, about half-way between Africa and Indonesia, seven degrees South of the Equator. The total area of the atoll is 65.6 sq miles and the lagoon area is 47.9 sq miles. Diego Garcia, which is the largest island, covers 17sq miles. Some of the other smaller islands are Peros Banhos, the Salomon Islands, the Three Brothers, the Egmont Islands, Six Islands and Eagle Islands. The climate is hot and humid, and tempered by sea breezes. The soil is very fertile and the seas around the islands are rich in fish and a variety of marine resources. In view of its unique Fauna and Flora, the Archipelago should be preserved in its natural state for generations to come

Arab seafarers briefly visited the islands in the 14<sup>th</sup> century, but the Portuguese were first Europeans to discover them in the 16<sup>th</sup> century. There were no permanent inhabitants then. The Portuguese gave the name 'Diego Garcia' to the main island, but did not establish any settlement. The history of the Archipelago is closely associated with that of the Seychelles which were discovered by the Portuguese during the same period.

## Emergence of a Chagossian Community

In 1778, French colonists were given permission to develop coconut plantations in the Chagos islands on condition that they also established a leper colony there. Slaves were brought in from Madagascar, Mozambique and Senegal. As they were hard workers, the coconut palm plantations flourished. The Archipelago remained a French colony until it was ceded to the United Kingdom in the Treaty of Paris (1814).

Some after, the islands were taken by British colonists. The Archipelago was administered by the colonial Government in Mauritius until 1965. Seychelles was detached from Mauritius jurisdiction in 1903 and became a separate colony. With the abolition of slavery in 1835, the slaves were freed and became the plantation owners. As the demand for coconut oil kept rising in the 19<sup>th</sup> and early 20<sup>th</sup> centuries in both Europe and the Indian subcontinent, the British turned to India for cheap labour. Indian indentured labourers, and their families, were thus brought in from Mauritius and the Seychelles. The workers were paid mostly in goods and services and also in cash which was used to enable them to travel to Mauritius by the supply ship and buy goods. The voyage lasted six days.

The ship came at intervals, bringing mail and supplies and collecting the coconut crop. The working and living conditions were generally acceptable. The workers received free housing, medical care, food rations, education and religious facilities. In Diego Garcia, each family had its own house and plot of land on which to grow fruit and vegetables and rear poultry. The men enjoyed traditional fishing and there was lobster in abundance.

Gradually, the Chagossian people evolved their own culture in terms of food, music and religion and their own distinctive Creole language, based on a French-based Creole dialect. The social system was matriarchal. The majority of the islanders were Christian. With the inevitable growth of the population, some of the other islands like Peros Banhos and the Salomon islands were also settled. Throughout their recorded history, the plantations in the Archipelago had a population of approximately 1,000 individuals, two-thirds of whom lived in Diego Garcia. A peak of 1,142 persons was recorded in 1953. Those workers, born in the Archipelago, were referred as '*Ilois*', a French word meaning 'Islanders' but, in the 1990s, they adopted the name 'Chagossians'. Visits from Diego Garcia to the islands were not easy as Diego Garcia was some 100 miles away. But it was thousands of miles away, in the metropolitan capital, that an unexpected and tragic decision was taken. The unique and peaceful way of life of the Chagossian community came to a dramatic end, following a decision taken in London in 8<sup>th</sup> November 1965 for the excision of Chagos Archipelago from Mauritius. That decision has had tremendous and serious consequences for the Chagossian community and these far-reaching consequences are still being felt today.

## The Strategic Importance of Diego Garcia

During the Cold War, the United States decided to establish a military base in the Indian Ocean to keep the USSR and China from threatening the Arabian Gulf. The US opted for the uninhabited Aldabra Atoll, but the British Government preferred to avoid confrontation with ecologists, as Aldabra was home to a rare breed of giant turtles and so offered Diego Garcia, even though it was inhabited. Later, British politicians, diplomats and civil servants began a campaign "to maintain the pretence that there were no permanent inhabitants on Chagos."

As early as 1969, the French Naval Lieutenant La Fontaine made a thorough survey of the Chagos Bay and recorded a possible strategic value of Diego Garcia. From 1881 to 1888, Diego Garcia was the location of two coal stations for steamships crossing the Indian Ocean. The strategic situation of Diego Garcia, about 3,400 miles from the Cape of Good Hope, 2,600 miles from North West Cape, Australia, 2,200 miles from Berbera, Somalia, and its proximity with the Maldives and India was gradually recognised by the UK and US. During the World War II, Diego Garcia proved to be a valuable naval port of call and became more prominent after the war, especially after the withdrawal of the British forces from the region following the independence of India (1947) and other colonies. Later, the Gulf crisis, the Kuwait, Iraq and the Afghanistan wars contributed further to the strategic importance of Diego as a military base for the US. Evidence laid out before the Select Committee on the Excision of the Chagos Archipelago, set up by the Mauritius Government in 1982, shows that the UK and US were in close consultation over the choice of Diego Garcia as a joint naval base for more than a year before the excision order.

## Decision of the British Government on the Excision

The long association of Chagos Archipelago with Mauritius came to an end on 8<sup>th</sup> November 1965, with the coming into force of the British Indian Ocean Territory. It originally included not only Chagos Archipelago, but also Farquhar Islands, Aldabra Group and Desroches Islands which formed part of the British colony of Seychelles. However, Seychelles carried out successful negotiations for its independence on 28<sup>th</sup> June 1976 and also for the return of the three groups of islands.

Sir Seewoosagar Ramgoolam, the Prime Minister, appeared before the Select Committee on Chagos in 1982 and made the following statement which was recorded in the Select Committee's Report:

*"He declared that the eventual excision of the Chagos Archipelago from Mauritius never appeared on the agenda of the Constitutional talks nor was it ever brought for discussion in*

*Mauritius prior to the conference. It was only, while the talks were on that he had two private meetings with the British Authorities; one, at 10, Downing Street where the British Government's decision to grant independence to Mauritius was communicated to him by the then Prime Minister, and the second, on 23<sup>rd</sup> September, 1965, in one of the committee rooms of Lancaster House where he was, for the first time, informed by the Secretary of State, Mr. Anthony Greenwood, of the United Kingdom's intention of detaching the Chagos Archipelago from Mauritius.*

*Sir Seewoosagur declared that he accepted the excision, in principle, as (i) he felt he had no legal instrument to prohibit the United Kingdom Government from exercising the powers conferred upon it by the Colonial Boundaries Act 1895, which powers could not be resisted even by India when the partition of this country took place before its independence (ii) he could not then assess the strategic importance of the archipelago which consisted of islands very remote from Mauritius and virtually unknown to most Mauritians and (iii) it was concretely expressed to him that the islands would be used as a communications centre and not as a military base."*

The population in Mauritius was apprised officially of the excision on the 10<sup>th</sup> November 1965, when the British Secretary of State made the following statement in the House of Commons in reply to a Parliamentary Question:

*"With the agreement of the Governments of Mauritius and the Seychelles new arrangements for the administrations of certain islands were introduced by an Order in Council made on the 8<sup>th</sup> November. The islands are the Chagos Archipelago, some 1,200 miles north-east of Mauritius, and Aldabra, Farquhar and Desroches in the Western Indian Ocean. Their population are approximately 1,000, 100, 172 and 112 respectively. The Chagos Archipelago was formerly administered by the Government of Mauritius and the other three islands by that of the Seychelles. The islands will be called the British Indian Ocean Territory (BIOT) and will be administered by a Commissioner. It is intended that the islands will be available for the construction of defence facilities by the British and the U.S. Governments, but no firm plans have yet been made by either Government. Compensation will be paid as appropriate."*

## Compensation

The British Government excised the Chagos Archipelago, despite UN Resolution 2066 of 1965 which instructed Britain to take no action which would dismember the territory of Mauritius and violate its territorial integrity. The British Government undertook to provide to Mauritius, following the excision of the Chagos Archipelago, grants amounting to £3 million for expenditure on development projects in Mauritius. It also undertook to compensate the company 'Moulinie Co.' which could not exploit the copra plantations anymore and meet the resettlement costs of inhabitants who could no longer remain there.

It is confirmed that an amount of £3 million was paid by the British Government in the financial year 1965/1966 and credited to Capital Revenue, item 'Sale of Chagos Islands'. There is no information on the basis on which that sum was arrived at. Later, on the 28<sup>th</sup> October 1972 the British Government effected a second payment of £650,000 for the 'Resettlement Scheme'. In 1982, a full and final payment of £4 was made by UK.

## US/UK Agreement on Diego

In 1966, the US and the UK signed an 'Exchange of Notes' which permitted the US to use the BIOT for defence purposes for 50 years (ending in December 2016), followed by a 20-year optional extension. The US did not pay any amount to the British Government. However, it gave the British a US \$ 14 million discount on the acquisition of Polaris submarine nuclear missiles.

In March 1971, the US Navy forces arrived in Diego Garcia to start the construction of a communication station and an airfield. They closed the plantation business in Diego. Plantation workers and their families were relocated to plantations in Peros Bahnos and Salomon islands. Some were transported to the Seychelles and Mauritius. In 1972, the UK decided to close the plantations throughout the Chagos and deported the workers and their families to Mauritius and Seychelles. No

exact figures are available for the number of Chagossians deported to Mauritius and Seychelles. However, in 1972/1973, the UK Government decided to grant £65,000 for resettlement purposes. The number of families was quoted as 426 i.e. 1,151 individuals who were due for compensation. However, in 1982, the *Ilois* Trust Fund Board arrived at a figure of 1,579 individuals.

As a matter of fact, the process of eviction started in 1967, when the UK stopped the regular supply ship and the return and new inflow of workers. Plantation workers were forced to abandon their homes. Life became miserable for them, when they were uprooted and shipped to Mauritius on board the 'M.V. Nordvoer' in 1971/1972. They had very little belongings with them. The final voyage of 'Nordvoer' was effected on May 1973, transporting 8 men, 9 women and 29 children from Peros Banhos. The displacement from the Chagos was complete.

## Living Conditions in Mauritius - Prosser Report

After a sea voyage of six days in traumatic and appalling conditions, the exiles, who travelled in batches, were left stranded at the quayside in Port-Louis. They were confused and frightened and had to fend for themselves by living in slums and huts. As Mauritius was facing a high rate of unemployment, it was extremely difficult for them to find work and earn a living. To make matters worse, they had no formal education and were not fluent in the local language. Life was hell to many. They experienced feelings of vulnerability, powerlessness, injustice and isolation, together with a social, cultural, psychological and economic marginalisation as a result of their expulsion. There were a number of suicide cases and some became alcoholics and drug addicts as their families suffered from malnutrition, but others benefitted from social welfare and were gradually integrated the local community.

It was only in 1976 that the British Government decided to send Mr. A.R.G Prosser, Adviser on Social Development in the Ministry of Overseas Development, to propose a plan for the resettlement of the *Ilois* community. He acknowledged that the *Ilois* were living in deplorable conditions and called for urgent action. His main recommendations were:

- a) The immediate setting up of a Resettlement Committee with proper staffing;
- b) The setting up of an occupational training scheme for the unemployed;
- c) Employment of a full-time social worker to counsel the *Ilois* community;
- d) A housing scheme for all *Ilois* families.

## Cash Payments

Unfortunately, the *Ilois* community was divided on the issue of housing, as shown in a survey by the Ministry of Social Security in 1977, and finally, the Government of Mauritius decided to effect cash compensation to all *Ilois* irrespective of their date of arrival. The following payments were made in March 1978:

	Rs.	Total
351 children under 5	1,000	351,000
459 children between 5 and 11	1,200	550,800
474 children between 11 and 18	1,500	711,000
1081 adults	7,590	8,204,790
109 old age pensioners (additional)	250	27,250
71 females with children (additional)	250	<u>17,750</u>
TOTAL		<u>9,862,590</u>
Amount available (including interest)		11,167,604
Amount paid		<u>9,862,580</u>
BALANCE		<u>1,305,014</u>

According to the survey of the Ministry of Social Security (1977), the following families were scattered in various localities:

Locality	No. of families	Under 5	5-12	12-18	Adults	Over 60
Baie du Tombeau	5	3	7	3	7	-
Bois Marchand	2	-	1	-	5	-
Beau-Bassin	9	3	6	15	22	3
Cassis	94	67	82	49	181	17
Cité la Cure	22	24	27	14	64	3
Docker's Flat	40	31	48	30	107	4
Grand River North West	5	1	2	5	10	-
Le Hochet	5	1	6	8	10	-
Les Salines	51	43	44	19	94	10
Pointe aux Sables	31	24	38	22	72	7
Pailles	16	14	8	8	22	3
Port Louis	4	3	8	1	8	2
Petite Rivière	26	14	22	28	55	5
Roche Bois	225	130	210	117	370	45
Ste. Croix	10	11	16	6	13	1
Other Areas	12	9	18	9	28	1
TOTAL	557	378	543	334	1068	102

*Note: The survey also indicated that there were 38 Ilois families in Agalega.*

The amounts paid were clearly insufficient. The British Government agreed in 1982 to allocate to the Chagossians, through the *Ilois* Trust Fund £4 million as 'Full and Final Resettlement', on the condition that they sign a document that they renounce their right to return to their homeland. They refused and, after further negotiations with the UK, most received some combination of land, housing and cash payments, totalling Rs. 55,000 for each adult.

## Legal Battle

The living conditions of the Chagossians in the different suburbs of Port-Louis are still to be improved. The younger generation finds it easier than the older generation to adapt to the Mauritian way of life. The latest figures indicate they number approximately 4,700, with some 600 living in Seychelles. Quite a number of Chagossians were given British passports and left for the UK. The single largest concentration is in Crawley, West Sussex. In 1983, some leading Chagossian members formed a group called 'Chagos Refugee Group' to defend the rights of the Chagossians to return to their homeland. The group started a national and international campaign to promote the Chagossian cause. The campaign gradually gained momentum as the international Press, Human Rights groups, academia, conservation groups, film-makers etc. stood up for the Chagossian cause.

Under the dynamic leadership of Olivier Bancoult, a Chagossian, a case was lodged at the High Court in UK, arguing that the decision to expel the Chagossians from the Archipelago was unlawful. That was the start of a long-running legal battle. In November 2000, the High Court gave a landmark ruling in favour of the Chagossians. It ruled that the decision by the British Government to expel the Chagossians from their homeland was unlawful. During the following year, the British Government decided to carry out a feasibility study into human resettlement of the islands. It concluded, in June 2002, that it would be difficult, precarious and costly and evoked the possibility of natural disasters like floods, earthquakes, tsunamis etc. However, a US resettlement expert, Mr. Jonathan Jenness, qualified the conclusions as 'erroneous'.

Unexpectedly, on the 10<sup>th</sup> June 2004, 'Orders in Council' were passed in London, banning anyone from setting foot on the Chagos Islands. Clearly, the 'Orders in Council' were issued to counteract the High Court ruling of 2000.

The legal battle continued, with the High Court overturning, on the 11<sup>th</sup> of May 2006, the 'Orders in Council' of 2004. The British Government appealed to the Court of Appeal and lost a year later. It then took the appeal to the House of Lords where the Law Lords ruled in October 2008 by a majority of three-to-two to allow the Government's appeal.

The determination of the Chagos Refugee Group, backed by an 'All Party Parliamentary Group on Chagos', established in London in 2008, to fight against the injustice caused to the Chagossian community by the British Government, led them to file a case at the European Court of Human Rights. The British Government decided, in 2010, to contest the case, instead of seeking a friendly settlement. The case is still pending at the European Court of Human Rights. The Chagos Refugee Group also filed a case before a US Court in 2001 against the US Government. Not much came of it under the Bush Administration. There may be hope under the Obama Administration.

## Visit to Family Graves in 2006

An emotional homecoming for some 100 elderly Chagossians, who had wanted for a long time to visit the graves of family members, took place in March 2006. They travelled on board the *Mauritius Trochetia*. Feelings of nostalgia ran very high, when the Chagossians set foot on the islands after their eviction some 33 years ago. The visit, which lasted ten days, was given extensive coverage in Mauritius and beyond.

## Marine Protected Area

On 1<sup>st</sup> April 2010, the British Government went ahead with its proposal to declare the Chagos waters a 'Marine Protected Area' (MPA), hoping to prevent any form of human resettlement, fishing and extractive industry activities. The uniqueness of Chagos waters needs to be underlined. The reserve covers 545,000 sq. kms around the Archipelago. It is the world's largest coral atoll, containing some of the world's healthiest coral reefs and the cleanest seawater. It is one of the richest marine ecosystems in the world.

The Mauritius Government has lodged a formal objection to the British Government on the MPA and considered its decision as illegal. The Government of Mauritius has decided to take up the matter before the UN International Tribunal on the Law of the sea. Proceedings will start shortly.

## Hope for the Future

The dream of the Chagossian community is to go back to their homeland as soon as possible. The Government and people of Mauritius are very supportive of the difficult and long-drawn struggle undertaken by the Chagossian community who deserve the utmost respect and admiration of the entire international community. The unflinching determination of the Mauritius Government in this regard is reflected in the following extract from the Government Programme 2010-2015:

*"Government will intensify its action to defend the right to effectively exercise sovereignty over the Chagos Archipelago and explore all options available to ensure its early return to Mauritius and the resettlement of the Archipelago."*

The fire of hope in the Chagossian community and, indeed, in the entire Mauritius population will continue to be kept burning until the final battle is won, thus paving the way for a new life and a new destiny for the Chagossian community, and for Mauritius to fully exercise its legitimate sovereignty over the Chagos Archipelago.

# COLONIAL TORT: THE CHAGOS ISLANDERS' EXPERIENCE OF FORCED DISPLACEMENT

SOPHIE LE CHARTIER,  
*Applied Anthropologist*  
Truth and Justice Commission

## 1. INTRODUCTION

The Chagos Archipelago is situated approximately 1,200 miles North East of the Republic of Mauritius and South of India. It is a group of seven atolls named: Diego Garcia the largest landmass, Peros Banhos, Salomon Islands, Egmont or Six Islands, Three Brothers including Eagle Islands, Danger Island and Nelsons Island.

The Archipelago was formally administered by the British Crown Colony of Mauritius until 8<sup>th</sup> November 1965 when it was unlawfully excised by the United Kingdom from the Mauritian territory<sup>1</sup> and was established as a British overseas territory.

When Mauritius was granted self-governance in 1968, one year later, the Archipelago was officially part of the British Indian Ocean Territory, and since from 1971, Diego Garcia has been a United States Military Base. In 2010, the United Kingdom declared the Archipelago of approximately 54,400 sq km as a marine reserve.

The history of the Chagos Islanders, also named Chagossians and commonly known as *Ilois* (Eng. trans. Islanders) in Mauritius, has been under-researched. While colonialism and post-colonialism in Mauritius Island has been systematically researched, there is limited documentation on the history of the Chagossians that, until the beginning of the 21<sup>st</sup> century, has been overlooked.

With the exception of a number of ethnographic writings, such as the narrations of Father Dussercle, anthropological works of Vine (2009) and Jeffery (2010) and a few official documents, research publications are limited.

Since 2001, following the high coverage of the Chagossians' litigation, much research from different perspectives (anthropological, international politics, human rights and historical) has been conducted on the Chagossian experience of exile to furnish documentation pertaining to the Chagossian court case.

While many people, including Mauritians, ignored the detailed history of the Chagos Archipelago, contemporary researchers are now attempting to remedy this historical oversight by unravelling the intricacies of the excision of the Chagos and to place the Chagossian history within Colonial historiographies.

This report aims at documenting the Chagossians' experience of forced displacement and their resettlement in Mauritius focusing on the impact of forced relocation on the current social, cultural, material and economic situation of the Islanders. The document is divided into three chapters:

The first chapter details the colonisation of the Chagos focusing on the settlement of the islands and on the living and working conditions of the islanders under British colonisation with emphasis being placed on cultural patterns, spatial organisation and occupation.

The second chapter details the excision of the Chagos from Mauritius and their resettlement in Mauritius, focusing on the main historical events and underpinnings of this geo-political decision.

The third chapter focuses on the social, cultural, material and economic impact of forced displacement and resettlement in Mauritian society, with special mention of their right to return.

## **Methodology and Treatment of data**

This report is based on secondary sources exclusively, because the transcriptions of the interviews of the Chagossians, conducted in the context of the Oral History of the Descendants of Slaves, were not available at the time of data compilation. Consequently, the voices of the Chagos islanders are, unfortunately, not included in this document.

The testimonies of the Chagos Islanders would have been a valuable source of information on their life-experiences, viewed from their own perspective and expressed in their own words. Moreover, their interviews would have provided insight into their feelings and perceptions of their life history and their experience of exile and resettlement.

Given the short time for documentary research and to draft this report (two weeks only), I have not been able to do an in-depth archival research. I relied on the books and dissertations available in the Library of the University of Mauritius and on the articles accessed from online academic journals.

In the document I recurrently refer to four main sources of information: the Report of the Selection Committee (1983); the ethnographic writing of Dussercle (1934); the report of D'Unienville (2002), and the anthropological article of Jeffery (2007).

This report is not an in-depth analysis of the Chagossians' experience but rather complements the information provided in the other reports, with the aim of building a

comprehensive picture of the impact of forced displacement and resettlement on the latter. Hence, it should be read in conjunction with the Oral History project and other TJC reports on the Chagos Archipelago, since topics covered in these documents are not included in the present document.

## 2. BRIEF HISTORY OF THE CHAGOS ARCHIPELAGO

The history of the Chagos Archipelago and the Mascarenes islands are interrelated. In fact, their history forms an integral part of the history of colonialism. The geo-political history of the United States of America and of the United Kingdom greatly impacted on, and played a decisive role in, shaping the historical path of the Chagos and Mauritius as well. (For a historical account of French colonisation of the Chagos Archipelago, see other reports).

### British Colonisation

The Chagos was a Crown colony administered by the Seychelles but in 1903, it was attached to Mauritius as a dependency, whilst the Seychelles Archipelago was detached from Mauritius. From that moment until the excision of the Chagos from Mauritius, a metropole-satellite relationship was established between the two islands.

The Archipelago was a Mauritian dependency and, thus, was under the administration of the Mauritian Colonial Government. Under Farquhar's governorship, more land concessions were granted on the atolls, such as in Peros Banhos, Trois Frères, Eagle and Salomon Islands, for the expansion of copra production. The establishment of more coconut plantations meant the introduction of more slaves on the island from Mauritius and the development of the Archipelago's social, economic and infrastructural structures.

Just as in Metropolitan Mauritius, the Chagossian population was a slave population in majority and they built the Archipelago and its economic sector and social fabric. The Free Coloureds and settlers were in a minority on the islands. The historians report that during the first half of the British colonisation, the copra production was prosperous and even though copra exportation was the main economic pillar, the economy diversified.

During slavery and after the abolition of slavery in 1835, the coconut plantation and copra production including the manufacture of other by-products was the main employment sector. The slaves worked in the Fishing Industry and the production of guano, timber and tortoise as well.

The Ilois Support Trust writes that in 1826, the Baron d'Unienville, Chief Archivist of Mauritius, reported that the Chagos was a bountiful Archipelago and he observed that:

*«...L'île produit beaucoup de cocos, elle ne manque pas non plus de bois, tels que [t]atamaka, bois blanc bon pour pirogues, bois à brûler; elle abonde en poisons, tortues, oiseaux de mer, poules sauvages...<sup>2</sup> »*

(Eng. trans: the island produces many coconuts, wood was not scarce, such as Tatamaka, White wood good [in the construction] of boats, firewood; fishes, tortoises, water birds, wild hens are abundant).

The slave census of 1826 estimates the slave population in the Chagos Archipelago to be approximately 351 people. Even though these figures are not accurate, yet, they give an estimation of the slave population at the beginning of the British colonisation<sup>3</sup>.

In accordance with Valéran (1999), the application of the *Code Noir stricto sensu* in the Chagos failed. For example, she observes that the Christianisation of the slaves was not systematic. However, she writes that in 1838, after the visit of Charles Anderson to Chagos, the latter reported that the treatment of slaves was too harsh, but their workload in the coconut plantation was lighter than in the sugar plantocracy.

Since the colony was remote, approximately 15 days travel by sea in times of windy weather, the application of the *Code* was loose and was left to the discretion of the administrators of the coconut plantations who were the representatives of the Colonial Government as well.

Table 1: Population Distribution in the Chagos Archipelago as at 1921			
Islands	General Population	Indo-Mauritian	Other Indians
Eagle Island	86.26%	12.98% <sup>3</sup>	0.76%
Diego Garcia	89.66%	9.89%	0.45%
Salomon Island	93.01%	6.99%	-
Peros Banhos	82.57%	17.14%	0.29%
Sources: Census Enumeration made in the Colony of Mauritius and Dependencies, 31 <sup>st</sup> March 1931.			

After the abolition of slavery, Indian indentured labourers were brought to the island as additional source of labour to work in the plantations, but the indentured population was not as substantial as in Metropolitan Mauritius. Thus, as at 1921, demographic distribution in the Archipelago was enumerated as such:

None of the sources read documented the Apprenticeship period in the Archipelago with the exception of Vine (2009) who writes that the Apprenticeship System brought little change to the living and working conditions, with the exception of the daily work tasks and the introduction of Indian immigrants. Vine's book entitled *Island of Shame* is a valuable source of ethnographic data on the Chagos Archipelago.

Dussercle (1984, p.146) gives more information on the religio-ethnic profile of the local population composed of 'Afro-Creoles' and people of European origins who are Roman Catholics, Chagossians of Indian origins who abide to Hinduism and one of Islamic faith.

The Roman Catholics were in majority but, with the exception of few anecdotes, he does not provide information on whether or not the Muslims and Indians practised their religion.

*« ...car il m'est revenu qu'elle avait pris part ou tout du moins assisté à une danse sur le feu... »<sup>4</sup>*

(Eng. trans: Because I remembered that she had taken part or rather assisted to a fire dance)

The Report of the Select Committee (1983) is a valuable source of information on the social and political evolution of the Chagos under the British colonisation, and especially on the main historical events during the pre-Independence period of Mauritius, uncovering that because of its strategic geographical location in the Indian Ocean, Diego Garcia was bound to play a pre-eminent role in modern Geo-politics.

### Living and working condition after the abolition of slavery

The ethnographic writing of Dussercle (1934) is a rich source of information on the life of the Islanders.

However, his accounts as a priest and a settler should be read with a critical eye as they are permeated with negative racial representations at times.

These value loaded representations document the racist prejudices that the colonisers cultivated against the locals who were considered as 'uncivilised' and on the racist imperialist underpinnings of the European missionaries in the colonies as reflected in the above extract:

*« ...comme elles ont besoin, de cette vie, de ce salut, de ce sauvetage divin, nos âmes, mais [...] leurs âmes, à ceux-là qui sont seuls [...] le fait de l'isolement et de l'instinct d'indépendance surtout en matière de morale, pourraient bien replonger dans une moralité dégradante... »<sup>5</sup>*

(Eng. trans: As they need, of this life, this salvation, this divine rescue, our souls, but...their souls, to those who are alone...the fact of the isolation and of the instinct independence especially regarding morality, could indeed drive back into a degrading morality)

He describes the islanders as being primitive, native, cultivating atavistic and endemic laziness<sup>6</sup>. These negative stereotypical observations from the writer provide evidence that the author describes the islands from a Eurocentric and imperialist matrix. He considers, as a priest, Christian Western value systems as superior to the inhabitants' ancestral values and customs.

The spatial distribution and population settlement pattern conjointly indicate an appropriation of the islands by the local population. There was no morcellement movement in the Archipelago and accommodation was somewhat similar to the plantation camps settlement in metropolitan Mauritius.

In addition, although there was no urbanisation plan, Dussercle's writings point to some degree of spatial planning and organisation with

*trois rangées de cases en feuilles de cocotier s'alignant sur deux semblants de rues entre la résidence et le cimetière<sup>7</sup>*

(Eng. trans: three rows of houses made of coconut leaves aligned along two semblance of streets between the residence and the cemetery)

In keeping with D'Unienville (2002) and Vine (2009), accommodation was free and the plantation owners provided the labourers with free construction materials to build a shelter. The latter did not purchase land and were granted land to settle free of charge.

The working conditions, as well, were somewhat similar to that of the estate workers in Mauritius, although the nature of the work was different. The plantation owners provided their workers with basic food rations, clothing, free accommodation, minimum wages and free basic health services. Gender division of labour, hierarchical power relations and labour oppression were identified.

To supplement their daily ration, the Islanders fished and cultivated vegetables. The local residents, therefore, were horticulturalists<sup>8</sup> and lived, to some degree, a self-sufficient lifestyle.

Besides these similarities, the work of the coconut workers was different from the sugar cane workers, and it is described as 'light work' and the skills required were different.

Based on the various writings (Valéran, 1999; Jeffery, 2007; Vine, 2009), the local residents' occupations were diversified. They reared livestock, cultivated land and fished for subsistence. However, the presence of retail shops implies that they were not completely self-sufficient and relied on the market economy. They purchased commodities that were not produced locally and that were imported from Mauritius such as milk, sugar and clothing.

This self-sufficient lifestyle is one component of the local social organisation. Two other proofs that the Chagossian society was socially organised are the development of the local educational and health systems.

In accordance with Valéran (1999) and Vine (2009), before 1953, schooling was made available by the Catholic Church and in 1953, the Government opened a school that was closed in 1959. Basic health care was available on Diego Garcia, but for more serious illnesses, Chagossians came to Mauritius.

The inhabitants' lives revolved around the coconut plantations that were the main source of employment. During their free time, it seems that they did not have much entertainment since, apparently, some games were not allowed on the islands like playing cards.

Les cartes, défendues, mais qu'ils introduisent à l'insçu de l'administration<sup>9</sup>

(Eng. trans. Cards were not allowed but they were introduced without the administration knowing).

With the authorisation of the plantation owners, they organised Sega parties for various occasions to celebrate:

*...il y a le séga navire, c'est celui que l'on danse après le départ du bateau pour remercier le ciel, sans doute, de tous les bienfaits apportés. Il y a aussi le séga bananée ; celui la, c'est pour le jour de l'an, que l'on fait suivre de danser français...<sup>10</sup>*

(Eng. trans: there is sega ship, it is the one that we dance after the departure of the boat to thank Heaven, doubtless, for all the goods brought. There is also a new-year sega; this one is for the new eve, that is followed French dance.)

In keeping with Dussercle (1934), partying without the authorities' approval was illegal and was perceived as debauchery because people abused alcohol and misbehaved:

*« ...Mais de leur avoir dit qu'ils ne savaient pas s'amuser 'comme du monde', comme des personnes convenables et qui se respectent, cela leur a donné un coup de fouet...Ce qu'il y a de mauvais, c'est que d'abord cela se passe toujours le soir, dans les bois...De plus il faut boire ; en temps ordinaire, on boit du vin qui fait faire la tête virer, et quand la tête n'y est plus...on peut s'imaginer ce que cela devient. C'est alors que Satan conduit le bal...<sup>11</sup>*

(Eng. trans: But to have told them that they did not know how to have fun 'like everyone', as suitable persons and who show self-respect, it lashed them...What is of bad, is first that it is always in the evening, in woods...Furthermore it is necessary to drink; under normal circumstances, we drink wine that makes them dizzy and when they lose their heads...we can imagine what it is like. It is then that Satan enjoys)

They were allowed to organise Sega nights under the supervision of the administrator and until eight o'clock in the evening only, which implies that they were not free and were subjugated.

It corroborates the public narratives of the Islanders who remained in the Archipelago after deportations and that are reproduced in Jeffery (2007) work. These oral narratives picture life in their homeland as harsh, and they were dominated by the Colonial Power and were oppressed.

The priest's description also provides information on the local social and cultural life. It informs us, firstly, that alcohol was available on the islands that caused social disorder.

As in Metropolitan Mauritius, alcohol was inherent to plantation life. Secondly, that the Islanders developed their own insular culture consisting of their distinctive artistic assets, culinary traditions and folk healing and spiritual practices.

Dussercle (1934) also writes that on the Archipelago there were healers and sorcerers that were a threat to Catholicism and social order. Even if Islanders were Roman Catholics, in parallel, they practised their folk religion born from a syncretism of Animism, Catholicism and Hinduism. The local administration disapproved of these folk beliefs and through proselytism and preaching, they tried to fight these practices but the local inhabitants perpetuated and transmitted these traditional knowledge to the younger generations:

*« ...Le Rosaire, le chapelet...n'est ce pas là l'occasion toute trouvée de leur administrer une petite causerie sur leur tabiz et leurs gris-gris...ce sont des sachets content des clous de girofle enveloppés dans de la poussière de tabac ; des dents de rat ; du poil d'ânon pris sur le dos de la bête à l'endroit où se dessine la croix est appelé pour cette raison la croix bourrique...ce que l'on appelle corde la fouche, un talisman quelconque que l'on attache au bras pour conserver ou obtenir la santé ; et puis, des bouts de papier graisseux sur lesquels s'effacent dans l'huile odorabonde et qui generis des signes cabalistiques extrait du livre de petit ou de grand Albert des formules du Coran écrit en Arabe, des prières baroques à la sainte croix... »<sup>12</sup>*

(Eng. trans: The Rosary, the rosary...is it not there the opportunity to administer them a small talk on their talisman and their amulets...they are bags containing cloves wrapped in some tobacco dust; teeth of rats; hairs of ass foal taken on the back of the animal where a cross is outlined named, for that reason the ass cross...what we call thread la fouche, a talisman that we wrap around to the arm to preserve or obtain health; and then, greasy scraps of paper on which fade in smelly oil...cabalistic signs extracts from the book Petit and Grand Albert, formulae from the Koran written in Arabic, baroque prayers to the holy cross)

His description illustrates the complex belief system impregnated with supernatural and spiritual practices that are often pejoratively perceived and rationalised as superstitions.

The local social dysfunctions and problems were often put down to the sorcerer and to these folk systems. The presence of a sorcerer is also sustained by Jeffrey (2007, p.959) who publishes, in her article, the testimony of a Chagossians testifying the practice of voodoo on the islands.

In fact, the ethnographic writings (Dussercle, 1934 & Jeffrey 2007) reveal that the Islanders constructed a rich culture from Diasporic cultural cross- fertilisation and diffusion to form what is now designated as Chagossian Creole culture.

They developed a rich oral tradition which took the form of folktales and songs as medium of transmission of knowledge and as 'a means of making history'<sup>13</sup>. It seems that the Chagossian society did not develop a structured written system, and thus oral narratives were a means of communication and transmission of their life-experiences and individual life histories.

A collective memory was created out of these oral narratives that, through a Eurocentric matrix, were conceived as gossips. For example, Dussercle (1934, p.37) narrates his encounter with a local resident who sung his sadness of being separated from his wife and family:

*« ...et pour me montrer combien son chagrin était grand à cause de l'absence de ses enfants il s'en va décrocher sous la toiture de la case un bobre africain avec lequel il s'accompagne pour me dire ses malheurs... »*

(Eng. trans: And to show me how much his sorrow was great because of the absence of his children he takes down from under the roof of his house an African bobre that he uses to tell me his misfortunes).

This anecdote exemplifies the existence of a musical tradition that is inherent to oral tradition and that had a psycho-emotional function as well. Singing had a therapeutic effect. What the author calls *palabres* (Eng. trans. gossips) that is a belittling term in the Western cultural world, in the African culture *palabres* is part of their custom and serves

social functions; they maintain social cohesion and order and are a mean of socialising in a culture where collectivism primes over individualism.

For example, they make it possible to settle disputes and encourage debates. The delimitations between private/individual space and the public/collective space were thus blurred in the Chagossian society.

Another evidence of social organisation is the development of a form of retributive justice in which groups of islanders developed their own punishments for deviants<sup>14</sup>. It implies the existence of some customary Law, in parallel with Constitutional Civil and Statutory Laws, that regulated the lives of the Islanders.

However, these customary laws need to be researched to investigate whether there are similarities with African customary Laws such as Tribal Laws and to identify whether they are legacies of the slaves.

In addition, the Chagossian society is commonly described as being a matriarchal society because women outnumbered men. This normative essentialisation of the Chagos as matriarchal based on, solely, on demographic data can be considered as reductionist and a misnomer. Moreover, even though at the beginning of settlement, women were in a majority, according to the 1931 Census, it seems that by the mid-twentieth century, the gender differential equalised.

Furthermore, although women numerically formed a majority, it does not necessarily imply that the Chagossian society was matriarchal and that women had a dominant status and role. Other social traits have to be considered to classify Chagos as a matriarchal society, such as, non-hierarchical social organisation, consensus, balanced gender relations, non-violence, sexual freedom and other traits.

The gender distribution and other social traits, usually prevailing in patriarchal societies, prompt us to question to what extent the Chagossian society was matriarchal.

For example, based on the Dussercle's (1934) observations, *concubinage*, extramarital relationships and serial monogamy were widespread social practices.

Table 2: Sex Distribution in the Chagos Archipelago as at 1921		
Islands	Males	French
Eagle Island	56.49%	43.51%
Diego Garcia	57.30%	42.70%
Salomon Island	56.64%	43.36%
Peros Banhos	55.43%	44.57%
Sources: Census Enumeration made in the Colony of Mauritius and Dependencies, 31 <sup>st</sup> March 1931.		

They were main social problems for the priest as it was unacceptable social behaviour, that is against Catholic precepts. In addition, historical writings (Vine 2009) report gender differentials in wage pay and promotional prospects (women were underpaid and had a lower job status), incidences of violence, the socio-economic powerlessness of women, and it seems that power resided with men rather than with women.

Further research needs to be conducted on the Chagossian society to collect empirical data on, for example, gender relations, gender roles, social hierarchy and to identify how far women were autonomous agents, rather than dependents or subordinates of men to ascertain that the Chagos was a matriarchal society.

### 3. EXCISION OF THE CHAGOS ARCHIPELAGO FROM MAURITIUS

The process of decolonisation started in the 19<sup>th</sup> century and in the African region as from post second World War that correlates with the end of the British Empire<sup>15</sup>. The decision to give freedom and independence to colonial territories was not an altruist choice motivated by human rights considerations, but rather a political and economic decision.

The Government's policy to decolonise the dependent territories did not exist in a vacuum but was an outcome of national and international political ventures. According to Green (1989) and Heilein (2002), there were a number of factors: the rise in political consciousness and 'nationalism' in the colonies lobbying for self-governance and statehood, overexpansion of British territories and mis-management that led to tension and conflict in some colonies, pressure from emerging Europe and superpower rivalries led to a transfer of power to the ex-colonies.

In view of that, the Independence of Mauritius should not be considered in isolation but should be placed into a regional African context and a broader international politico-economic perspective. It appears:

Firstly, that "colonialism prevents the development of international economic co-operation, impedes the social, cultural and economic development of dependent peoples."

Secondly, that "people may, for their own ends, freely dispose of their natural wealth and resources without prejudice to any obligations arising out of international economic co-operation, based upon the principle of mutual benefit, and international law."

Thirdly, that "the process of liberation is irresistible and irreversible and that, in order to avoid serious crises, an end must be put to colonialism and all practices of segregation and discrimination associated therewith", the United Nations welcomed the decolonisation and independence of territories.

In this respect, the United Nations Declaration on the Granting of Independence to Colonial Countries and Peoples was adopted on 14<sup>th</sup> December 1960. This declaration sets out a series of principles, intended to guide the progressive stable and peaceful independence of the colonies "based on respect for the principles of equal rights and self-determination of all peoples, and of universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language or religion."

Yet, the Report of the Select Committee (1983) and other publications expound that the British Indian Ocean Order of 1965 was not in accordance with the UN Declaration. As per the Order, British Indian Ocean Territory is a separate colony that was initially composed of the Chagos Archipelago, the Farquhar Islands, the Aldabra Group and the Islands of Desroches. From the 28<sup>th</sup> June 1976, only the Chagos Archipelago remains British territory.

This documentation details how the excision of the Chagos from Mauritius was a violation of Resolution 6 of the above-mentioned UN Declaration, of the African Union Resolution on Diego Garcia of 1980 and of the UN General Assembly Resolution 2066 of 16<sup>th</sup> December 1965.

For example, the Resolution 2066 "notes with deep concerns that any steps taken by the administering Power to detach certain islands from the Territory of Mauritius for the purpose of establishing of a military base was in contravention of the Declaration' and 'invites administering Power to take no action that would dismember the Territory of Mauritius and violate its territorial integrity<sup>16</sup>."

However, it should be noted that the United Nations Declarations and Resolutions are not legally binding documents and that the countries considered the Great Powers,

including the U.S.A and the British, run the United Nations and thus have power to overrule the United Nations' findings.

As the organisation points out, the resolutions and declarations "represent the dynamic development of international legal norms and reflect the commitment of states to move in certain directions, abiding by certain principles." Hence, the above-mentioned declarations were only instruments for providing effective means of implementing these international principles and recommendations.

Furthermore, the UN General Assembly had no power to compel the administering powers, both the British Colonial Government and the Mauritian Labour Party to respect these agreements.

Even if the role of the 1963 Mauritian Government in the excision and deportation of the Chagossians is minimised, the Select Committee of 1983 and recent publications, uncover how, the Government of that time colluded with the British. Researchers such as Vine (2006) and Chauvek (2006) detail how, for years, the truth on the forced displacement of the Chagossians was strategically concealed and a politics of silencing prevailed.

Fortunately, in 1998, after some British Foreign Office documents were declassified and made public, and subsequently when the secrecy was removed, it became clear that the decision to dislocate and relocate the Islanders was an elaborate scheme<sup>17</sup>.

These recent findings confirm the conclusion of the Select Committee of 1983 that the Meade Commission of November 1959 were intent on the omission of the dependencies' socio-economic contributions including Rodrigues, Chagos, Agalega and St. Brando in the framing of the national social and economic development policy. This was a strategic decision and heralded the excision of the Chagos Archipelago.

The labelling of these dependencies, as 'lesser dependencies', is a symbolical representation of the marginalisation of these territories and the subsequent undervaluation of their economic potentialities. Their outright ostracism on the eve of Independence negatively affected the long-term social, economic and material development of the dependencies that were, and are until now, maintained in relative poverty.

In this testimonial to the Select Committee, Sir Seewosagur Ramgoolam, the Mauritian Prime Minister at that time, Sir Gaetan Duval, the Leader of the Opposition and other Parliamentarians who were present at the Mauritius Constitutional Conference of the 1965, reported that one of the reasons why they accepted the excision was that the British concretely expressed the view that the island would be used as a communication centre, and not as a military base, and that at no time, during the various meetings with the Secretary of State, after the constitutional talks, were they made aware of the joint British/American defence venture<sup>18</sup>.

However, these unclassified official documents reveal that, in fact, the Mauritian Government of that time and the Parliamentarians were informed of the plans of the British and United States of America, but the latter closed their eyes and 'buried their heads in the sand'.

It is evident that the Mauritian Government and delegates did not have in mind the Chagossians' welfare, but rather they were eager to defend the Mauritian interests, and especially local economic and political interests, to the detriment of its dependencies and their native population. Furthermore, the latter did not have power to negotiate with these 'Big Counties.'

Sir Seewosagur's statements are evidence enough that the sole political and economic interests of the Mauritian Government were to gain Independence and to guarantee preferential trading terms and, in this perspective, they bartered the Chagos Archipelago.

His testimony is obvious that the Government undermined the economic potential of its dependencies including Agalega and Rodrigues islands.

*"...When Sir Harold Walter questioned Sir Seewoosagur on the excision of the island the latter revealed to him that he had to make some concessions on that score as he felt that at one time at the conference, the British tended to agree to the claim of the PMSD for a referendum...the delegates wanted to excise Chagos against preferential trading terms especially sugar quota at a more remunerative terms and rice and flour from America at subsidised prices..."<sup>19</sup>*

The report also uncovers that prior to Independence, Mr. Young, the Information Officer at the British High Commission either destroyed or took over valuable documentation including correspondence between the Governor of Mauritius and the Secretary of State for the Colonies pertaining to the period immediately preceding Independence.<sup>20</sup> It seems that this deliberate or unconscious act was part of the strategy of concealment to the detriment of the reconstruction of our history, leaving sections of past undocumented.

The deportation of the Chagos Islanders should not be seen as an isolated outcome of decolonisation, but should rather be placed within a broader international perspective as an American and British geo-political strategy to expand their military power worldwide and ultimately become a world military power.

The inclusion of the Archipelago as a British Territory and the militarisation of Diego Garcia can be conceived as a perpetuation of colonialism, but under a different form. They essentialise politico-economic colonisation with these 'Great powers' maintaining and re-affirming their military and political influence. We are presently suffering from the after-effects of the American military colonisation with the current social and economic crisis and the war against terrorism.

As Vine (2009, p. 25) commented, there are widespread speculations about 'terrorism suspects' having transited through Diego Garcia. Furthermore, on the international political world, the coalition forces recalled the strategic importance of Diego Garcia in the fight against terrorism and in the Arabo-Islamic war. On 7<sup>th</sup> August 2011, Terrorism Watch published:

*"...One should bear in mind the fact that US and British bases located on the Chagos Archipelago in the Indian Ocean play the central role in the possible attack against the Islamic Republic. The army bases on the islands can accept sea vessels of all classes. In addition, there were arms systems, military hardware and commando troops deployed on the archipelago. The troops can be urgently dispatched to any location, which Washington picks. The territory of the archipelago is also used as a secret prison of the CIA. The US and British air base, one of the largest in the world, plays the most important role in the militarist plans of the two countries. The base accepts and provides technical servicing for aircraft of all types...including the 509<sup>th</sup> squadron, were deployed on the base last year for the military operation in Iraq and Afghanistan...The USA and Britain received a powerful outpost in the Indian Ocean for the struggle against the "Soviet influence"...The importance of Diego Garcia in USA's militarist plans has been demonstrated several times already. US pilots refer to the base as "aircraft carrier"...Afterwards, the base was used to lash Iraq and to conduct combat actions in Afghanistan. There are no doubts about the fact that the base will play one of the important roles in case of aggression against Iran...Alexander Mordovin, Major-General of the Russian Air Force, told Pravda.Ru that the air base on Diego-Garcia had not lost its significance after the end of the Cold War."It is really telling that the United States are strengthening their position there on the base. The base has a very important location from the point of view of strategic interests of the West - between Africa, India and Australia. The fly-in time to strike targets in the area of the Persian Gulf is minimal. From this point of view, this base is much more important than the bases in Western Europe..."It goes without saying that the neighboring states were extremely concerned about the deployment of such large military objects on Diego Garcia. Indian officials believed that the appearance of the base created a serious threat for peace in the Indian Ocean. Things have changed since then, and the base poses the largest threat to Iran as the country refuses to dance to the tunes of the West. Nearly 400 powerful bombs were sent to the base on Diego Garcia in March 2010. The bombs are*

*capable of destroying large objects under the ground. It goes about 195 high-precision Blu-110 smart bombs, and 192 2000lb Blu-117 bombs. If the USA launches a military campaign against Iran, it will have to use its strategic planes to drop the bombs on the country..."*

In his article, Nauvel (2006) analyses the various courts' rulings regarding the Chagossian litigation. In brief, the BIOT Ordinance No. 1 of 1971, also known as the Immigration Ordinance 1971, provides for the compulsory removal of the Islanders and denies them their right to return home. In 2000, British High Court of Justice quashed parts of the Ordinance and the British Government introduced an Immigration Ordinance that, on paper, allowed the Islanders to return home.

However, in 2004, the Government used the Orders in Council to enact a new Immigration Ordinance preventing non-authorised persons from entering the whole territory. The promulgation of this Order coincides with the war in Afghanistan and the Second Gulf War that started in 2001 and 2003 respectively.

Consequently, a second Judicial Review was launched in 2006 in the Divisional Court and, in 2007, in the Court of Appeal and both courts were in favour of Olivier Bancoult (the applicant). In 2008, the Foreign Commonwealth Office appealed to the House of Lords that ruled in favour of the Foreign Commonwealth Office judging that the Government had no obligation to consider the Chagossians' interests as paramount.<sup>21</sup>

Presently, the Chagossians are awaiting the ruling of the European Court of Justice for Human Rights. While the Islanders are fighting for their right to return and for compensation for their dislocation, territorial disputes and sovereignty claims underpin the Mauritian Government's legal actions. In this respect, on 20<sup>th</sup> December 2010, Mauritius initiated proceedings against the United Kingdom under the dispute settlement provisions of the 1982 United Nations Convention on the Law of the Sea.

In view of the recent political upheavals in the Arab-Islamic countries, the right of return of the Islanders is a delicate and sensitive human rights issue. We can question whether security and defence matters will not take precedence over the human rights of the Islanders again, as was the case in the ruling of the House of Lords that judged that "the Chagossians returning to the outer Chagos Islands could lawfully be displaced for the time being in the interest of defence but that there was no reason why the ban should not be lifted if circumstances changed<sup>22</sup>."

Furthermore, as mentioned earlier, the Great Powers are the main funders of the United Nations and most influential member states that dictate and make the laws and as such determine United Nations rulings and not the other way round.

The National Support Front for the *Ilois* (1981) enumerates how the British breached the Islanders' human and indigenous rights by using coercive, illegal and unscrupulous means to compel them to leave their home country. Firstly, the Chagossians, who were in Mauritius for personal reasons such as for medical treatment or on visit, were not allowed to go back. Before leaving the Chagos, they were not informed that would not be able to return. Secondly, in 1967, the British closed the coconut plantations and copra production and, thus, they were forced out of their jobs and had no food ration. Thirdly, the rulers stopped the supplying ship from entering the British territory. Hence, the local population relied solely on fishing and farming as means of subsistence. Fourthly, in 1971, the last inhabitants were informed that were no more entitled to remain on their land and were deported to Salomon and Peros Banhos islands. In 1972 and 1973 they were expelled from the two islands respectively to the Seychelles and Mauritius.

They were progressively and strategically driven out of their homeland and were allowed to take with them only the bare minimum. Hence, they left behind their dwellings and most of their belongings. They were destitute of their belongings and thus when they arrived in Mauritius, they were economically and materially deprived.

The various research reveals how the British Government, played on the conceptualisation of indigeneity and the settlement of the islands arguing that the Chagos Islanders are not indigenous people of the Archipelago, but are Mauritian contract workers to justify the legality of their deportation. Whereas the Chagossians battle to have their expulsion declared illegal is based on their self-identification as being indigenous people of Chagos.

This issue is still a space of a highly fraught constitutional and human rights debate. In fact, until now there is no universal fixed definition of 'indigenous'. Even the United Nations have not adopted an official definition. It remains a flexible construction with legal, social, cultural and political conceptualisations diverging. Yet, in the context of human rights issues, the United Nations' understanding of this term primes. They identify 'indigenous' people on the following criteria: (i) self-identification as indigenous people at the individual level that is accepted at community level; (ii) historical continuity with pre-colonial and/or pre-settler societies; (iii) a strong link to territories and surrounding natural resources; (iv) distinct social, economic or political systems; (v) distinct language, culture and beliefs; (vi) people forming non-dominant groups of society and (vii) people desire to maintain and reproduce their ancestral environments and systems as distinctive people and communities.

For the United Nations, self-identification and group identification underpin the recognition of a local inhabitants as indigenous population. Hence, building on their approach, the Chagoassian population meets all these criteria to be considered as indigenous people of the Chagos Archipelago.

At the end of colonisation, the local population was one mainly of Afro-Malagasy origins with a minority of people of South Indian origins. The labour force (composed of Freed slaves and Indian indentured labourers) outnumbered the plantation owners of European descent. In this closed insular society, it seems that population migratory movements were rather stable; the in-ward and out-ward migration of people was not as massive and diversified as in metropolitan Mauritius. Hence, it is most probable that ethnic cross-breeding was frequent and that the present Islanders were born out of miscegenation.

As indigenous people of the Chagos, their rights, as spelt out in the United Nations Declaration on the Rights of Indigenous People, adopted in 2007 should be respected and promoted. They also have the right to claim reparation for the discriminations, prejudices and sufferings which they are presently experiencing following historic and contemporary injustices as a result of, *inter alia*, their colonisation, forced displacement and dispossession of their lands, territories and resources, thus preventing them from exercising, in particular, their right to development and return to their homeland.

#### 4. IMPACT OF DISPLACEMENT OF THE CHAGOS ISLANDERS

The Chagossians were doubly victimised in that they were illegally dislocated from their homeland, and when they arrived in their host country, there was no resettlement strategy plan to accommodate them. Although the Mauritian Government received a financial compensation of £ 650,000 from the British Government for the resettlement of the displaced Chagossians, however, the Government did not have any resettlement strategy.

When the Islanders landed on Mauritius, there was no infrastructure to receive them and no plan of social and economic integration such as no housing programme and employment ventures. Subsequently, they fell into gross poverty and since then, they were maintained in this spiral of impoverishment. In 1978, they received a financial compensation on condition that they should abandon their right to return to their homeland. However, the Chagossians in Seychelles did not receive any compensation.

In actual fact, 1,500 to 2,000 resourceless and powerless Chagosians were dumped in Mauritius. They were socially, economically and materially disadvantaged and the recent research findings reveal that they have not been empowered to get out of poverty. For example, they do not secure an income, a safe job and social welfare. They constitute the 'working poor' class.

The present generations are still suffering from the negative aftermath of this unplanned resettlement, they live in absolute poverty and constitute the most vulnerable and deprived group. Vine (2006) confirms, most Chagossians received no resettlement assistance and quickly fell into poverty. Three decades later, most of these Chagossians, currently more than 5,000 individuals, remain impoverished in Mauritius and Seychelles<sup>23</sup>.

In 1976, Prosser was despatched to Mauritius to carry a situational analysis of the Islanders and advised the Government on the resettlement of the latter. The National Support Front for the *Ilois* (1981) observes that Prosser was contradictory on the housing and living conditions of the Islanders, stating that they were 'reasonably well settled' and finally concluding that they 'were living in deplorable conditions'<sup>24</sup>. He advised the Mauritian Government on the resettlement of the Islanders but the Government ignored his recommendations.

Instead of implementing the recommendations made in Prosser's Report regarding housing, occupational, training and welfare schemes, the Government instead chose to give financial compensation to the Islanders. In 1978, each Chagossian received approximately £ 550 but, following inflation, this sum was insignificant. Out of 557 families who registered, 341 opted for housing rehabilitation and 213 for cash compensation. The Report of the National Support Front for the *Ilois* gives ample details on this matter.

Furthermore, it seems that Prosser was not objective in that his observations were not representative of the Islanders' voices, especially regarding their return to their homeland and their integration into Mauritian society. He interviewed the Chagossians' leaders only and the latter might not necessarily be representative of all the voices, but rather of a sample of them. In addition, the leaders' narratives might be politicised and thus biased.

Actually, the current public narratives reveal that most Chagossians do not want to integrate with Mauritian society that belies Prosser's stipulation that the latter wish to assimilate. Although the 'Others' (referring to the non-Chagossians), tend to integrate the Islanders with the Mauritian Creoles, especially the Afro-Mauritian Creoles, the Islanders claim to be a distinct socio-cultural entity and desire to preserve their distinctiveness. Besides, they are actively lobbying for their right to return and this again discredits Prosser's assertion that the Chagossians do not wish to return to their islands.

A study carried out by Francois Botte, a social worker (cited in National Support Front for the *Ilois*, 1981) dresses another and more authentic picture of the living and social

conditions of the Islanders based on empirical facts. She describes the harsh and inhumane living conditions, with limited employment opportunities because of lack of employable skills. They were, and still, are vulnerable to social exclusion and ailments, especially prostitution, alcoholism, high level of school dropouts and low academic achievement among the children and socio-cultural ostracism<sup>25</sup>.

She uncovers that, firstly, the latter never integrated into Mauritian society and that the social, economic, cultural conditions in which they were living worsen. Secondly, consequent to displacement they experienced another trend of life that negatively affected the majority of the displaced. Thirdly, they were nostalgic of their homeland with 77% of them expressing their wish to return to the Chagos<sup>26</sup>.

All the reports published centre on the social, economic and material conditions of the Chagossians for their integration. None focuses on the cultural impact of forced displacement and resettlement on the latter and on identity construction with the exception of Jeffery (2007) who studied the representation of homeland amongst the Chagossians.

In his article, Vine (2006, p. 21) explains how researchers employed a model developed by scholars working with the World Bank for documenting the impact of involuntary displacement and calculate monetary compensation. This holistic model researched the negative economic, material, psychological, physical, social and cultural consequences of forced expulsion.

In 2005, they published the research findings in a report entitled '*Dérasiné: the expulsion and impoverishment of the Chagossian people*' and developed 10 dimensions to characterise the Chagossians' impoverishment: (1) traumatic expulsion; (2) joblessness; (3) economic and social-psychological marginalisation; (4) homelessness; (5) landlessness and lost common property; (6) food insecurity and malnutrition; (7) increased morbidity and mortality; (8) socio-cultural fragmentation; (9) educational deprivation, and (10) ethnic discrimination.

Given that the report provides a detailed analysis of their findings, I shall not expound on all these findings and shall briefly develop on some issues in line with the TJC scope of investigation.

## Land Dispossession

The Chagossians forced dislocation and resettlement is a history of land, and property and resources dispossession. The latter were deprived of their rights to property ownership, physical integrity and decent living and housing conditions.

The United Nations Declaration of Human Rights and on the Rights of Indigenous people unequivocally state that, firstly, everyone has the right to own property alone as well as in association with others and no-one shall be arbitrarily deprived of his property. Secondly, indigenous people have the right to the lands, territories and resources that they have traditionally owned, occupied or otherwise used or acquired. They have the right to own, use, develop and control the lands, territories and resources that they possess by reason of traditional ownership or other traditional occupation or use, as well as those which they have otherwise acquired.

Human rights were recognised to be inherent in a peoples' dignity and as being equal, unalienable, universal and indivisible. Hence, it is the duty of States to ensure that the human rights of all people, both citizens and refugees, are respected and promoted.

Dussercle (1934) and D'Unienville (2002) divulge that the administrators of the plantations were also representatives of the Colonial Government on the islands, and thus many duties were conferred upon them such as keeping birth, death and marriage records and land transactions. The Colonial Government was kept informed of the land occupations, natality and mortality rates for census records and for the good administration of the island.

D'Unienville (2002) provides valuable information on the property rights of the Chagossians. Regarding land acquisition, he states that people chose the land they wanted to occupy that the Administrator registered. Although they did not purchase the land (there was no money transaction), nonetheless they owned the land they acquired. Later the transaction was made public; it was publicly known that he/she was landowner. Islanders occupied land of approximately 75 toises on which they constructed their house and practised farming (they cultivated land and reared livestock).

*"...The lands, which were there to be taken and which were indeed so taken by the Chagossians, were not part of the domaine public (public domain) and were susceptible de possession (susceptible to ownership). They were never prevented from taking those lands nor did they have to obtain the permission of anyone to occupy same. The owners of the islands and in any event their representatives were, at all material times, fully aware that the Chagossians, either were occupying these lands as owners or were choosing these lands to occupy as owners...because the chagossians were at all material times owners of the said lands and never renounced any of their rights thereon..."<sup>27</sup>*

Once they were landowners, the property was transmitted to other generations through inheritance and when the Chagossians were deported to Mauritius, they did not voluntarily renounce their rights on their land. They were illegally stripped of their land, houses, belongings and resources.

The lawyer further stressed that until its excision from Mauritius (from 1965 to 1971), the Chagos Archipelago was subject to the Civil Code of 1894 and Constitution of 1964 that governed the Mauritian territory. Hence, in 1965, Mauritian Law on property was still applicable in the Chagos. In keeping with the Law, the Islanders' property rights were transferred in three ways: by obligation and/or prescription and/or succession.

He identifies one main difficulty in proving their landownership since they have no title-deeds for the land they occupy. Without these deeds, it is impossible to prove their ownership 'by way of effect of obligations'. Hence, it is essential:

*"...to analyse whether the conditions for acquisition by prescription are met, which would in turn determine whether or not the Chagossians were full owners (with the prerogatives of usus, fructus and abusus) of the lands they occupied or just mere occupiers (with the prerogatives of usus and fructus). This would also determine the nature and extent of the property rights transmitted from generation to generation of Chagossians by way of succession..."<sup>28</sup>*

He concludes that the Chagossians were fully-fledged property-owners that were forcefully removed from their land and thus were deprived of the three prerogatives of their property rights listed above and also of their right to have a domicile.

Based on his conclusion, when the Chagossians were exiled to Mauritius, they were deprived of their ownership prerogatives and of a decent household. From property owners, they became tenants and even homeless. In Mauritius, they fell into poverty and were ghettoised in the slums of Port Louis. They even experienced multiple dislocations, such as when they were moved to the Dockers Flats, and were then moved to the North and South ends of the District of Port Louis.

Their lives were disrupted and their dislocation impacted negatively on their lifestyle and ways of living that changed drastically. For example, in Chagos it was spacious, and in Mauritius they were dumped in overpopulated slums where presently, there is a lack of space. The regions where they live were identified as forming the poorest areas of the island facing various social problems as collateral consequences of poverty.

## Social and Economic Impoverishment

When the Islanders were relocated to Mauritius, the British promised a house and employment to the latter. However, in fact, when they arrived in the land, Mauritius was at a stage of social and economic restructuring. Hence, the social and economic integration of the Islanders was not a Government's priority, and it can even be said that the Islanders added to the Government's burden.

Furthermore, given that the Chagossians worked in the coconut plantations and production, their skills did not meet the Mauritian skills demand. They did not possess employable skills for neither the textile production nor the Sugar Industry nor the Tourism sector that were the three main economic pillars. Thus, they were classified as unskilled workers and there was no training programme to recycle the Islanders for them to be employable.

The 1970s was a period of economic transformations and upheavals. At the beginning of the 1970s, the Mauritian Government adopted a diversification programme, with the setting up of the Export Processing Zone and the development of the Tourism sector. Mauritius was a mono-crop economy but following the down turn in sugar exportation, demographic explosion (high population growth) and economic downturn, the Government had to diversify its economy. However, by the end of the 1970s, the economic situation worsened following the rise in petroleum prices and the end of the sugar boom. Consequently, the balance of payment deficit steadily rose, and this led Government to approach the International Monetary Fund and adopt the structural adjustment.

Jeffery (2007) wrote that:

*"...When the Chagos islanders arrived in Mauritius during the 1960s and early 1970s, Mauritius was already experiencing high unemployment, high population growth, and over-reliance on the sugarcane industry (Bowman 1991: 112-13), an industry in which Chagossians had no prior experience. In addition, the Mauritian economy was characterized by domination by Mauritians of European and Asian descent, preferential employment of members of one's own family or ethnic group, and negative racial stereotypes of Afro-Creoles (Boswell 2006; Eriksen 1998: 62-7; Mauritius Research Council 1999: 10, 60). No resettlement or employment programmes were put in place to assist the Chagossians' integration in Mauritius, and many Chagossian families subsequently faced chronic homelessness, unemployment, and poverty" (see Botte 1980; Walker 1986).*

Building on her analysis, when the Islanders landed in Mauritius, they were unemployed, and only in 1978 and 1982, and they receive financial compensation. It seems that in 1982, some received a plot of land in Pointe aux Sables and Baie du Tombeau and each adult and child was granted 56,000 rupees and 28,000 rupees respectively. The compensation they received was insignificant, as it was not enough for them to settle and start building a decent life. Under pressure, the Government chose the easy way to deal with the Chagossians' situation, instead of developing a programme of integration and resettlement. In a way, they bought the latter's silence.

In fact, it can be said that the Islanders were coerced into accepting this compensation, since they were made to sign a pledge whereby they give up their right to return to their homeland in exchange for the compensation. The Government acted in a dubious, illegal and unethical way since the Islanders were not informed of the implications of their actions and were deceived into signing the document. We can even question whether they were illiterate and understood the conditions of the pledge.

In the Chagos, they lived a self-sufficient life and they did not rely on the capitalist market to sustain a living. Hence, they did not suffer from starvation and were able to meet their family's basic needs. They lived a simple life and were not familiar with the implications of living in a complex Consumer society. Mauritius is a modern economy that relies essentially on the market economy, whereas Chagos was a post-modern country

where, that relied on a semi-capitalist and semi-subsistence economy. Hence, the Mauritian lifestyle, and especially the urban life, differed greatly from that in the Chagos.

Accordingly, the deportation of the Islanders negatively affected their living standard, since when they arrived on the island, they relied completely on the market economy to meet their family needs and secure food. They lacked financial means to afford a proper and decent living standard and to meet their basic needs. Furthermore, they were socially and economically marginalised and constituted a class of *lumpenproletariat* (lowest and most degrading social stratum). Unemployment and poor living conditions conjointly resulted in the Chagossian impoverishment and socio-economic exclusion.

The Islanders are still experiencing poor living and working conditions and socio-economic marginalisation. The new generations are disadvantaged from birth, and thus we can say that there is a generational transmission of impoverishment and marginalisation. Vine (2006) describes the Islanders situation in Mauritius as 'sever and chronic impoverishment' that "has extended beyond economic poverty to include material, physical, psychological, social and cultural impoverishment."

## Cultural Stock

The Chagossians were also deprived of their indigenous identity and their cultural rights when they were deported to Mauritius and forced to assimilate to the Mauritian Creole social group (General Population demographic category). They are integrated into the Afro-Creole Mauritians because of their biophysical appearance and, consequently, they are doubly victimised. They are doubly discriminated against because of their origins, and they experience discriminations because of their group categorisation.

Although 'Others' (non-Chagossians) catalogue them as Creoles, they identify themselves as a distinct group with their own specificities that act as group descriptor. These descriptors contribute to portray the Chagossians as a separate social and cultural entity. For example, they have distinct customs, traditions, mores and values that differ from the Mauritians.

Building on Jeffery's (2007) study, it can be propounded that the displaced Chagossians romanticised and standardised collective historical narratives, and their constructions and representations of their homeland and return to their home country<sup>29</sup> form part of their cultural stock. Their culture is a legacy of their experience of displacement and resettlement in that their right of return and the romanticisation of their homeland are the result of their exile, impoverishment, marginalisation and oppression in their host country.

The researcher also expounds on the politicisation of the displaced Chagossian oral narratives and songs that are instruments of their political and legal struggles. They have socio-political functions and thus should not convey public representations that could hamper, and have detrimental impacts on, their legal actions.

*"...Romanticized portrayals of life on the Chagos Archipelago have been used effectively to elicit political, legal, financial, institutional, and moral support from diverse outsiders...How Chagos is remembered and represented by public representatives such as singer-songwriters and community leaders is politically important for the Chagossian struggle in exile. Critical engagement with the problems of the colonial Chagos Archipelago, which used to find an outlet through a vibrant tradition of musical composition, is no longer appropriate because of the detrimental effects such negative portrayals of Chagos could have on the Chagossian struggle for the right to return and on Chagossian unity, optimism, and activism..."<sup>30</sup>*

The displaced Chagossians share some cultural traits with the Mauritians but also show distinct cultural traits that are symbolically represented in their oral narratives. Their collective identification, longing for the home country and a desire to return to their

homeland as well, constitute their distinctiveness and are inherent to their group and self-identity construction.

This 'mythico-historical' and longing for the homeland are peculiar to Disaporic and displaced population groups. Their relocation in Mauritius led to cultural loss and cultural mutation, leading, in turn, to differences between the displaced Chagossians' culture and the homeland culture. Jeffery (2007) reveals how the representations of the displaced Islanders and those who remained in the Chagos differ. These discrepancies can be conceived as an enrichment of the Chagossian culture.

The Islanders' collective memory is a social construction based on their interpretation and reconstruction of their past; with the present influencing their reminiscences and reconstructions of their past. Their experience of displacement and resettlement is perceived as a shared experience with 'others' (other Islanders) experience being conceived as 'my' experience (personal experience) as well. The distinction between the 'others' (other Chagossians) and 'me' (personal) are blurred as the collective experience primes over the individual experiences.

Romantisation of homeland and 'collective memory of loss' are inherent in the displaced cultural identity construction and this self-identification can be considered as a surviving mechanism. Their longing and desire to return help them to face their present reality of impoverishment. For them life in the Chagos will be better than their current life in Mauritius. For example, in Mauritius they are ostracised whereas in the Chagos, they will be at home. This longing has psycho-emotional underpinnings and social functions in that it maintains strong group cohesion and helps the Islanders to face their harsh reality.

Culture is not bounded within country boundaries and is not fixed. The Islanders arrived in Mauritius with their cultural assets such as a strong musical culture that they transformed through their encounters, experiences and power relationships to develop what can be named the displaced Chagossian culture. This displaced culture plays a central role in their struggles for their rights to be respected and for reparation for breach of rights.

In fact, as Jeffery (2007) exposed, that their public narratives and especially *chansons engagés* (Eng. trans. engaged song) have helped to secure international mobilisation and sensitise the world about their plight and their experience. They have adapted their cultural assets to their current displaced situation and ensured the survival of some of their cultural traits. Their use of their cultural assets and their oral narratives are a means to pass on their message to create awareness and to make their voices heard.

## 5. CONCLUSION

The Chagossians are a population in exile. They are descendants of slaves and Indian indentured labourers that were sent to the Chagos Archipelago as plantation workers under colonialism. The successive generations native of the islands peopled the Chagos and evolved into an insular society with distinct social and cultural systems, including a distinctive Creole language and valuable cultural system born from cultural diffusion.

At the end of Colonialism, the British rulers forced them to leave their homeland. They experienced multiple historical victimisations and discriminations. Firstly, they experienced forced and involuntary dislocation and, secondly, they were stripped of their right to return in a coercive way.

The Chagos Islanders are fighting for their right to return to their homeland, professing they are indigenous of Chagos, based on their self and collective identification to the Archipelago, their attachment to their islands and claiming their cultural distinctiveness as *Ilois*. Their attachment to their land is inherent in their collective memory and is passed on through public narratives across generations.

The Chagossian population is a discrete socio-cultural unit, constructed through successive settlement movements during Colonialism and common living and working

conditions. Their shared the experience of deportation, and resettlement and impoverishment in their host country led to the Islanders forming a close and distinct socio-cultural group with intrinsic and distinct customs, traditions and dialect. They forge a collective identity and a group consciousness based on these experiences.

All the research conducted discloses that in 21<sup>st</sup>-century Mauritius, this population continues to be an underclass and vulnerable citizens who bear the burden of their forced and illegal displacement and resettlement. They live in relative poverty and experience multiple impoverishments and multiple victimisations. The latter continue to endure the negative aftermath of historical patterns of socio-economic exclusion and discriminations and of the denial of their human rights.

## INTRODUCTION

In January 2011, the Truth and Justice Commission, through Mr. Jacques David, Commissioner, and Mrs. Colette Le Chartier, Research Coordinator, entrusted me with a study on Agalega. The Aims and Objectives and Terms of Reference were:

*“PROPOSED PROJECT PROPOSAL: AGALEGA*

*Aims and Objective:*

*To make a historical, social, economic, cultural, and land use study of Agalega from the end of slavery to date.*

*Terms of Reference:*

*To study the historical, social, cultural, economic, land situation of Agalega.*

*To study the conditions of living of the inhabitants.*

*To make an assessment of the present situation.*

*To propose recommendations in connection with Section C above.”*

Given that I was sent by the Roman Catholic Education Authority in 1971, to found Agalega primary schools, nominated by the Government of Mauritius as Resident Manager in 1983 and Chairman of Outer Islands Development Corporation Board in 1992, Agalega is not unfamiliar to me. I was not reluctant to accept the proposal, as a service to the Commission, and specially to the people of this territory of Mauritius.

Luckily, Mr. Dwarkapersad Jawaheer, who was employed by the Outer Islands Development Corporation, as Purchasing and Marketing Officer, and who was also a member of Outer Islands Development Corporation Board, willingly accepted to join me in this project.

The remoteness of Agalega, the restricted availability of transport to visit the Islands, the limited accessibility of documents and the time constraint to complete the study, were our principal difficulties. Fortunately, I had a chance to spend 3 days in Agalega from 2<sup>nd</sup> to 5<sup>th</sup> March 2011. The bad weather did not help much in my observations but did not prevent me to note the infrastructural development on both islands and the material progress of the inhabitants. However, much has to be done in the field of human development.

The Collective Agreement between the Corporation and the Employees of the OI DC residing at Agalega, effective since 1<sup>st</sup> July 2008 (Doc. II attached) is a reference to the significant progress made by the authorities, to put Agalegans in line with their Mauritian counterparts regarding conditions of work. Still Agalega is different to Mauritius in many respects. The environment and living conditions are specific. Money does not make a man happy. There is a feeling of dissatisfaction among the small population of 300 inhabitants. Nevertheless, they are passionate about their Islands and leaving it is not easy. An in-depth social study should be carried out to analyse the feelings of the inhabitants, as there is much to be done in the field of social events, and this present study is far from exhaustive. To carry out a more thorough study, one will have to spend at least three months on both islands, the interval between the visits of two ships, using this report as a base.

## 1. GEOGRAPHY AND HISTORY

1.1 Agalega, an atoll situated at about 1,100 Kms North of Mauritius and 563 Kms South of Seychelles, latitude 10° 25' South and longitude 56° 35 East (Appendix II), is made up of two small islands, the North and the South, Tamarind and Avocado-shaped respectively. Separated by a narrow stretch of about 2 Kms channel formed by reefs on two sides, it is crossed by foot, with ankle deep of water, and occasionally by a trailer drawn by tractor at low tide; by boat at high tide, and it is impracticable when the sea is rough. (Appendix 1) Formerly, the channel was crossed by carriage/cart pulled by horses, or by boat equipped with oars or sails.

Photo 1 Today, Crossing the channel (*La Passe*) by an outboard, from one island to another

1.2 The bravest of Captains has always feared to approach the coast due to the unpredictable change of the wind and waves. On the other hand, the coral barrier, acting as a close protection belt to the islands, was so feared by sailors, because of the surf and swells that they considered Agalega a pitfall to avoid. Furthermore, it lies in the region of the Inter Tropical Convergence Zone and is not spared by cyclones. (*Document 1; Agalega The Way Ahead*, by D.Burranchobay 4.4).

Photo 2 'SS. Wajao' engulfed by the waves in 1933 at Port Ste. Rita in the South

1.3 However, Man likes challenges; he will eventually achieve his aim. Thus, following the wreckage of *SS. Wajao* in 1933, Port Sainte Rita, in the South, was transferred to the North during the same year. This port was blessed by Mgr. James Leen in 1936, and is named Port St. James. The channel, in the coral reef, was enlarged to ferry passengers and for embarkation and disembarkation manoeuvres.

Photo 3 Jetty of Port St. James

1.4 Only privileged witnesses like birds can tell the story of ancient visitors. Nevertheless, they cannot disclose whether the Malays, the Arabs or the Portuguese were lucky enough to set foot on one of the islands before the 16<sup>th</sup> century.

1.5 In spite of some speculations, it is commonly accepted that in 1501, the famous navigator, Juan de Nova, nicknamed Gallego, who was employed by the Portuguese, discovered the islands and dedicated them to his homeland, Galicia (*Galice* in French). This is why Father Dussercle, in his famous book *Agalega Petite Île*, named its inhabitants “*Agaliciens*”. The local people accepted it and made reference to this appellation publicly (Appendix IIIA, IIIB). By a decision, in Parliament, of the late James Burty David, former Minister of Local Government and Outer Islands, the inhabitants of Agalega are now called *Agaléens/ Agaleans*.

Photo 4 A fresco at Lafourche made in 2010, by Mr. Felix, a Secondary school teacher

## 2. EARLY SETTLEMENT IN AGALEGA

2.1 Two centuries after its discovery, there were some unsuccessful attempts by the French to settle in Agalega. The approach to the islands, with the encircling reef barrier, was too hazardous and the distance from Mauritius too far.

2.2 In 1799, Dr. Carosin obtained the permission to open an establishment in Agalega. He sent a European sailor accompanied by a “*Black*” to prospect the Islands, but they were left there on their own, without any support. Three years later, Dr. Carosin returned to France and he managed to repatriate his European prospector, completely depressed, to Isle de France. No mention was made of his companion, the first slave, sent there.

2.3 On 19 August 1808, 'Sieur Laurent Barbé obtained a provisional authority from General Decaen to found a settlement on the island (Appendix IVa). The concession was ratified on 28<sup>th</sup> October 1820 by the English Governor Farquhar (Appendix IVb).

2.4 On 26 September of same year, Mr. Caillou de Rosemond, as first Manager of Agalega Islands, and thirty slaves originating from Madagascar, Mozambique and Isle de France, left Port-Louis on board *Le Tailvent* bound for Agalega. They reached their destination after eight days of navigation, but landed six days later, due to the difficulties which they encountered to negotiate their way through the reefs in an inclement sea. As soon as they settled, the thirty slaves started to toil in the coconut field for the production of oil, with much satisfaction, under the supervision of Mr. Lefranc.

Mr. C. de Rosemond died on 2 November 1814. Later in 1835, Mr. Leduc, the then Manager, found a skull in North Island which he associated with Mr. Rosemond. He erected a monument in South Island in memory of the first Manager and founder of the colony, died on Agalega (Appendix V). Other administrative staffs who died on the Islands were also buried in this area. This place is called “*Cimetière Blanc*” and by tradition, is reserved for administrative staff only or for “*mistresses and/or natural children*” of staff. Before the death of Mr. Caillou de Rosemond, a cemetery, “*Cimetière Noir*”, was created, formerly for slaves, and it is today the common burial place for all workers.

Both cemeteries are found in the South island. There is also one in the North, open to all.

During that period, the Islands have known three Administrators who maintained discipline, with the help of their “*Commandeurs*” (foremen, also acting as disciplinary force) and controlled the slaves according to the set rules. The *Code Noir* was applied. Consequently, the whole population was baptised as Catholic and was given a Christian name.

2.4.1 As in all societies, some people are prone to transgress the Law or to disobey orders given by administrators; a few, at that time, who vindicated their rights and were considered as activists, were punished. Their punishment was perceived as a deterrent to their peers. Depending on their offence, they either were sent to prison or they received twenty-five lashes, or both concurrently (Ref. 3, for a picture of a Whip).

This is why the village where the public punishment was inflicted is still called ‘Vingt-Cinq’ (twenty-five). Some people want to change this name in order to blot out the unhappy memories of slavery. Others insist that it is important to keep history alive. Most inhabitants have no opinion. A consensus thereon is needed (Doc III TJC 99- 102 Créole Version).

Photo 5 Old prison with 6 cells

Photo 6 Actual Police station equipped with police cells

2.5 In 1832, Mr. L. Barbé entered into partnership with Le Comte de St. Aulaire and others. Agalega became “*Société d’Agaléga Limited*”. At that time, some 100 slaves were attached to the coconut establishment, and later 200 were. The Administration had already been entrusted to Mr. Auguste Leduc since 1827.

Under the administration of Leduc, the slaves and their children were happy, healthy and well fed; this was officially reported on 21<sup>st</sup> October 1828, by Captain Greville, Commanding Officer of Corvette *L’Espoir* to H.E the Governor of Mauritius, witnessed by Dr. John, travelling on board the same vessel. Law and order were well maintained (*Agaléga Petite Île, Livre II*). The reports of different visiting Magistrates corroborated with the observations of the Captains of different vessels (Appendix VI).

2.6 The acquired rights of the slaves were respected. They gave full satisfaction in the production of coconuts and its by-products, in spite of hard and primitive work. The copra crusher presented here was used to extract oil and was turned with a transversal pole pushed by five men/women, in place of donkeys.

## 2.7

Photo 7 Part of Oil extractor still found in the South

## 3. ABOLITION OF SLAVERY

3.1 The Emancipation Bill, passed in the House of Commons in July 1833, led to the abolition of slavery, in February 1835.

3.2 As soon as Mr. Leduc, the Administrator/Manager (*Régisseur*), received the “Bill”, he gathered the whole population and communicated the historical event to each and every one. From then on, there were no slaves and no one belonged to a master. He explained to the working population their rights and duties, stipulated by the Bill, as free men and women. No whip would be used but discipline would be maintained. Same punishment (except the whip), would be maintained for those who were found guilty of severe breach of the Law. The case and punishment would be registered in a book and presented to the visiting Magistrate for control.

3.3 The liberated slaves were told that they were not forced to work for the establishment. As against other parts of the world, Agalega has no other source of earning money; so no work, no pay. Before becoming fully-fledged workers, as carpenters, blacksmiths..., they were considered as apprentices. All workers, men and women, would have to enter into a contract with the establishment and would be allowed to return to Mauritius at the end of their contract, if they so wished. However, these men and women knew little of working conditions elsewhere, apart from Agalega, which they considered as their homeland by adoption, their children being born on these islands. The land remained the property of the establishment.

3.4 They were so well considered by Mr. Leduc, who had a really humane approach to them, that they welcomed their new status and did not want to leave the islands. They were free to work and grow their own vegetables on a plot of land allocated to them. Fish was abundant. Rations of rice, pulses, oil and salt were maintained, and they were paid according to their work. They all decided to stay (Appendix VI; also 4.3).

Photo 8 Monument in memory of the slaves	Photo 9 Plate unveiled by late Hon. Min. James Burty David
	

#### 4. TRANSITION PERIOD

4.1 Freedom was liberty for some and unconditioned liberation for others. At the beginning of emancipation in Agalega, abuses were more frequent than self-control. It took the Manager much tact and patience to educate the workers, to bring them to upgrade their living condition and to devote more time to their families. For some, the freedom of movement during weekends from one island to another was the main source of abuse. As corrective measures, after consultation with the working population, a working week of 45 hours, divided into five days, was reconsidered, and the hours redistributed over 6 working days. On Saturdays (half-day) and Sundays, Mr. Leduc encouraged the couples to devote themselves to their families and embellish their environment, as well as take care of their homes and children. They were allowed to do extra duties, such as planting maize, after working hours, in order to better their new social and economical situations. All workers agreed, with enthusiasm, to the Manager's proposals. The Manager also explained to them that they could strictly abide by the articles set by the *Bill* and refuse all other advantages. To alleviate their burden, donkeys were introduced to turn the oil extractor. A new mode of living thus started on the islands. Men and women were no longer attached to their masters, but to their families. Mr. Leduc taught moral values through Catechism, in the absence of priest, organised an infirmary, built houses with block of corals for his administration, thatched huts for labourers and other workers, workshop for skilled workers; a real establishment village was created with religious and social life. It was the dawn of a new culture.

The 'Camp' for labourers and other workers/apprentices, called '*Camp Noir*' (Appendix VII: *Le Mauricien* June 1982) was separated from that of administrative staff, called '*Camp Blanc*'. Up to the late 1990's, *Camp Blanc* was a restricted zone after 6.00 p.m.

4.2 On a special mission to Agalega in June 1838, Judge Anderson gave an excellent report on how the Islands were administered by Auguste Leduc. He confirmed that discipline was well administered and adhered to. Unwarranted punishment was not inflicted on the workers. The houses were in good condition. Moreover, Management gave proper clothes to the children.

4.3 The visiting Judge found it important to explain again to the workers their rights, in detail, but they wanted no change in their weekly rations of food, as part of their wages and their working conditions as agreed with the Manager. In such conditions, concluded Judge Anderson, there was no way that the workers would apply to leave Agalega, after the end of their contracts, and this was to the credit of the Management (Appendix VI). The whole population was then 230, including 73 children born on the Islands.

## 5. MISMANAGEMENT LEADS TO SOCIAL CONFLICT

- 5.1 Unfortunately, in April 1839, Auguste Leduc, who was considered by his workers, as a father, had to leave Agalega to visit his family in France. He recommended Eugène Pallière, one of his assistants, to replace him temporarily. The proprietors approved the proposition, given that Eugène Pallière knew the workers and was acquainted with the administration of Leduc.
- 5.2 Change of a Manager often brings a change in administration and a subordinate wants to prove that he can give a better performance than his former Chief. This principle works when the one who steps in, masters his job perfectly, is loyal to his job and knows how to manage a society by putting the people first. Thus, the choice of a Manager is a determining factor for the welfare and prosperity of workers, especially in remote Agalega.
- 5.3 Eugène Pallière asked the help of his brother Pierre, Administrator (*Régisseur*) of Agalega from 1819 to 1827, (before the abolition of slavery). The arrival of the brother changed the social atmosphere completely. Pierre Pallière refused to stay in the North in the role of a *Commandeur* and joined his brother Eugène in the South. Both took advantage of the situation, as in the time of slavery. The result was catastrophic. The workers felt oppressed. The production suffered much and North Island was badly neglected.
- 5.4 Eugène Pallière acted as a tyrant, ordered all the workers with their families, to move to South Island, with their belongings, including their hens and pigs. The population, just freed from slavery, was reluctant to work under pressure. Most of them wanted to leave the islands in order to free themselves from what they considered as a reintroduction of slavery.
- 5.5 To recover the confidence and sympathy of his men, Eugène Pallière, without any plan or consultation with the proprietors, increased considerably the wages of all the workers, as a bribe. However, the production remained unchanged to the detriment of the establishment.
- 5.6 Young and inexperienced workers were privileged and were given posts of responsibility as team leaders (*Commandeurs*). Management, on credit and without control, sold alcoholic drinks, thus leading to a lack of discipline and morality and social unrest was installed.
- 5.7 Repression is not a method to maintain Law and Order. Everything turned topsy-turvy. Eugène Pallière kept a pistol on him to protect himself. The inhabitants grew weary of the life they had. In unison, they claimed their right to go to Mauritius on the first arriving ship. All the rehabilitation work done by the former Manager was lost.
- 5.8 By that time, August Leduc had become a shareholder of Agaléga Société Ltd. He set foot again on the Islands on 30 January 1841. His former workers, who found in him much hope to redress the awkward situation, greeted him with much enthusiasm, except the two Pallières.
- 5.8 The situation was not clear for Mr. Leduc. While Mr. Aullaire, a shareholder in the Company, entrusted him with the Management of the Islands in writing, Mr. Barbé, another shareholder, asked him in another letter to support Mr. Pallière, whom he maintained in his post as Manager.
- 5.9 This confusing situation and the stubbornness of Laurent Barbé led his partners Leduc and St. Aullaire to sell their shares. With no more interests in Agalega, Leduc sailed to Mauritius on 15 December 1841, to the great dismay of his former workers. They begged him to send a ship from Mauritius on, or about, August 1841, at the end of their engagement. But Leduc had no more say in the chaotic situation on Agalega, and his representations in Mauritius, to the concerned authorities, in favour of the labourers, were of no avail. The emancipated population organized itself and took the serious decision to vacate the land, to which it was attached.

## 6. INDENTURED LABOURERS

- 6.1 The products of the islands were no longer flourishing. Felix Barbé, the son of Laurent Barbé, and other partners of the Company had no alternative but to sack the Pallières brothers. They were replaced by Mr. Gonard in 1842.
- 6.2 Meanwhile, the movement towards Mauritius continued. Only a few families, mostly those with children born in Agalega, were left behind.
- 6.3 The constant movement of workers to and from Agalega was a source of concern to Management. A shortage of workers was felt. Indian immigrants who had arrived in Mauritius, as indentured labourers, were recruited to work in Agalega, on the same contractual basis as their counterparts there. They received their rations of rice, pulse, oil, salt as part of their wages. They bought other necessities in the only shop of the establishment, owned by the company.
- 6.4 Those Indo-Mauritians adapted themselves on the Islands. They contributed much in the production of copra. A few were married, or cohabited with, the local women. They adopted the Catholic religion for their children, and some died in Agalega.

Today we come across such names as Meness Mootoo, Marday, Petchaye Poulay, Sababady, Soopramanien etc. In the South, there is a place called "*kas gounn*", where workers of Muslim faith used to celebrate their feast-days and there is still a family bearing the name of Mamode in the North (Ref. Names in Doc. III of TJC).

## 7. FROM PRIVATE COMPANY TO CORPORATION

- 7.1 Before and after the British occupation of Mauritius, Agalega was under a grant of “*Jouissance*” made to Mr. Eugène Laurent Barbé (Appendix IVb: *La Gazette des Iles*, No. 17, décembre 1987). The responsibility for the administration of the settlement was vested in him. He, in turn, delegated his rights and duties to the different Managers (*Administrateurs/Régisseurs*) on the spot.
- 7.2 In 1865, the owner of the *jouissance* was given the option of changing his holdings into grants in perpetuity or making cash payments on certain conditions.
- Agalega thus passed on for perpetuity to the heirs of Mr. Laurent Barbé claimed by his daughter-in-law and her three grand children.
- 7.3 In 1934 ‘La Compagnie d’Agaléga’ was formed. It is obvious that, as a Company, the land belonged to a group of persons, and not to an individual.
- 7.4 In 1961, the Company was sold to ‘Diego Co. Ltd.’
- 7.5 In 1962, the Islands were sold and became ‘Chagos Agalega Co. Ltd’. A third of the Company belonged to a Seychellois, Paul Moulinié, another third to Rogers Co., together with the Colonial Steamship Co. Ltd., and the remaining third was owned by a group of Seychellois. Thus, the Company was registered in Mauritius as a foreign company and administered by a Seychellois Manager under the Mauritian jurisdiction (Doc. I, *Agalega The Way Ahead* by D. Burrenchobhay 4.7 - 4.9).
- 7.6 In 1976, with the acquisition of the Islands by the Government, Agalega Corporation was formed and managed by Mauritians.
- 7.7 Since 1983, Agalega became OUTER ISLANDS DEVELOPMENT CORPORATION (OIDC) and is governed by a Board, the OUTER ISLANDS DEVELOPMENT BOARD (OIDB), now under the aegis of the Ministry of Local Government and Outer Islands. No individual or group of persons is proprietor of land on Agalega. The whole Island is actually a State land.

## 8. LAW AND ORDER

### 8.1 Law and Order

Before Mauritius became independent, Agalega was considered as a lesser dependency. A Magistrate, who had the power not only to see if the population observed Law and Order, but also to verify if it was correctly administered, visited it on an annual basis. He went through the perusal of all administrative books, checked the accuracy of weights and measures, and even inflicted fines on the Manager, if needs be. The Manager was also reprimanded for arbitrary or excessively severe punishment inflicted on workers. In the absence of a magistrate, a maximum of three days imprisonment, by the Resident Manager, was allowed. Insolence and insubordination were considered as serious in order to secure respect for the Manager (to be compared as a Contempt of Court). On the other hand, inadequate punishment was rectified and those who were found guilty of severe faults were sent in prison to Mauritius. It is to be noted that no legal assistance was available on the islands for the accused.

In 1904, Administrative arrangements were reviewed by the Colonial Government and the "Administrateur" (Manager) was allowed "to impose a sentence of imprisonment of not more than six days for insolence and insubordination. He could detain disturbers of peace, and those whose conduct was likely to lead to that, until the danger of disturbance was over. He could hear cases of 'praedial' larceny and impose fines not exceeding ten rupees. Particulars of all cases must be entered in a register, which must be submitted to the magistrate on his next visit". (Doc I, *Agalega The Way Ahead* by D. Burrenchobay 5.8 Document I)

- 8.1.2 Most offenses were due to theft, family squabbles, drunkenness, wounds and blows and some rare disputes led to serious fight. Cases of rape were most often reported as elopements. It was considered as breaking news and *the talk of the village* that gave rise to sudden row between parents of both parties and then was heard no more. When it involved a member of administrative staff or other outstanding officers, the case was never reported as such, as if '*droit de cuissage*' was implicitly accepted or imposed.
- 8.1.3 Before the arrival of the Police, the Resident Manager was responsible for Law and Order with the help of his '*Commandeurs*' who often acted as bouncers. The community on the islands was used to that practice. Very often, cases of family affair were brought before the Manager for conciliation.
- 8.1.4 It happened, not so long ago, that when a woman wanted to express her grudge against someone else, she vented her aggressiveness on dogs. Thus, she gave her dog strange names such as: Zamiodan (*ami aux dents/ friend only by smiling*), foupamal (*Je m'en fou / careless*), volersavon (*voleur de savon/ soap theft*), Veillerzaction (*curieux ou espion/curious or spy*) zalou, (*jaloux/jealous*). Pabliémoi (*fais toi attention à moi/mind you*), zolirob (*jolie robe/nice dress*), grogra (*gros et gras/big and fat*), etc... Dogs were considered as members of the family. Males were castrated to control reproduction.
- 8.1.5 With Independence, Agalega is no more a lesser dependency, but part of Mauritius.
- 8.1.6 The police arrived in Agalega in the early 1980's and all criminal and civil cases are now taken charge of by them. "*Commandeurs*" became officially foremen in June 2006, following the signature of the Collective Agreement between Outer Islands Development Corporation and the employees of the OI DC residing at Agalega.
- 8.1.7 Unfortunately, cases of brutality, involving Police Officers against inhabitants, did happen (Appendices VIII & IX). In such a small community, the Resident Manager should represent the highest authority on the Island, and a *modus operandi* be found to protect the inhabitants and the interests of the Republic in certain cases.
- 8.1.8 With a population of 302 inhabitants (*Ref. NO. 9; Appendix XVI*) including 10 police, 6 SMF, 6 Coast Guards, the ratio of police to inhabitants is 1:19 (Including the Coast Guard as inhabitants).

Photo 12 'Ste. Rita' Village South

## SOCIAL, CULTURAL, ECONOMIC SITUATION IN AGALEGA AFTER ABOLITION OF SLAVERY

There are three distinct villages on the two islands of Agalega, which cover a total area of about 26 Km<sup>2</sup>.

- 8.2.1 The main village, with the largest population is 'Vingt-Cinq,' in the North, where the principal administration and the airstrip are found. 'La Fourche' village is also situated in the North and is important for its Port (Port St. James). The third village is 'Ste. Rita' in the South. Life is influenced by the environmental activities in each village.
- 8.2.2 From the very beginning, Mr. Leduc taught moral values through Catechism, in the absence of priest, set up an infirmary, built houses with blocks of corals for administration, workshops for skilled workers, thatched houses as *camp* for labourers. With the oil-extracting machine, the *calorifer* (barn to dry coconut for copra) an establishment village was created with its activities and social life (Ref. 4.1). His good Management brought peace, harmony and social justice to the establishment. However, a soft kind of semi-slavery was maintained, with an Administrator as the only Master after God, because of the remoteness of the islands. (Ref. 4.1 to 4.3). His social and religious work was, however, interrupted by his immediate successors (Ref. 5.1 to 5.7).
- 8.2.3 Coming from different cultures, Madagascar, Africa, Mauritius, India, the Seychelles (workers/labourers since 1925), and France, the people use as their language of communication Creole as in most French colonies. Agaleans use a few particular words, which are not in use in Mauritian Creole, picked by their proximity with Seychellois and old French masters, ( *enkuri* for direction, *abou* for succeeded, *bosoir* for a single man/woman without steady family life, *ranmafan* for hot sweet drink made of hot water and grilled rice, *gobergé* for eating and drinking merrily etc...) Today, the '*Kreol Morisien*' language is strengthening through the constant visit of the Agaleans to Mauritius and the presence of different Departments of Government employees on the Island (Education, Health, Meteorological officers, Post Office and Police). With this new generation, there is practically no difference between Mauritian Kreol and the Agalean dialect.
- 8.2.4 Influenced by the Seychellois on the Islands and by Seychelles Radio, the *Sega* sung by the parents has a typical beat and is accompanied with the harmonica, *triangle*, *guitar* and *ravanne*, whereas the new generation is influenced by the modern trends such as *Rap*, *Reggae* and *Seggae*. Programmes of MBC Radio and TV are now received on both Islands. Almost all families possess a Radio, a TV and a video set.
- 8.2.5 In March 2011, some Mauritian artists gave a concert in Agalega. They were accompanied by a group named "*Zenfan locéan*", a few young Agalean descendants residing in Mauritius. Some musical instruments and audio-sets are left in the Community Hall of North Island, built as a refugee centre in case of natural calamities. There is no qualified technician to maintain these instruments.
- 8.2.6 Culture and tradition are also found in traditional meals. The typical Agalean food is called "*Seraz*", cooked with coconut juice, as in some Indian regions, Seychelles, Diego Garcia and other coconut islands. Fish and/or other sea products accompanied their daily plates of rice. Turtles, birds and their eggs, which were much appreciated in the past, are banned today for the preservation of the species. Local drinks "*Bacca*" made from fruit or pulse fermentation, often prepared in spite of prohibition by Law.

Photo 13 Mauritian and Agalean artists performing in Agalega May 2011

Photo 14 Refugee centre, (Arche de Noé) in the North, in case of natural calamities

- 8.2.7 Alcohol is on the rise on both islands, regardless of age and sex. The youth's exposure to it is extremely worrying. All private selling points should be regulated. Dependence on alcohol is another form of insidious voluntary slavery (Ref.8.4.9).
- 8.2.8 Agalega had a matriarchal community not long ago, because polyandry was tacitly accepted, due to the fact that the male population exceeded the female one. The mother was the only one who could ascertain, without confusion, that all the children belonged to her. Therefore, she had the full control of her family. It was a common discreet practice that, with the consent of the husband, a second man (*noir bosoir* Ref 8.24) was accepted in the family. This additional man contributed considerably by fishing and with his weekly ration of food. In return, the woman attended to his daily chores and other intimate needs.

Up to late nineteen seventies, apart from the Manager, his assistants and the outstanding staff (Meteorological officers, nurses) only a few men were educated, especially those coming from Mauritius or Seychelles. Even the ‘Commandeurs’ had a basic notion of counting and reading. However, during the administration of Leduc, he started what he called a school for children. It was simply private tuition on a part-time basis. During the administration of Mr. Volcy Monier (1922- 1949), he opened a small school and some basic reading and counting were taught to the children. Mr. V. Monier was also instrumental in introducing a nursery for babies in the three villages during working hours, while the mothers were at work (*Agalega Petite Île* p.192). He favoured social, Christian and family life (*Agaléga Petite Île* pp.186, 187) and he managed to keep his community happy and contented.

8.2.9 A fully-fledged RCA teacher, helped by his wife, and recruited by the Catholic Church, founded the South and the North school on a solid basis, in January 1972 (Appendix X). Apart from dispensing full-time education, both acted as social workers and organised religious, social and cultural activities. As from 1978 at least one pupil, each year, with a good pass in Primary School Leaving Certificate attended a Secondary school in Mauritius. This project was supported by the Catholic Church and later, based on CPE results, the OI DC offered a scholarship to the best boy and the best girl. In 1976 and 1978, the Agalega school had a result of 100% passes in Primary School Leaving Certificate. In 2001, 13 students were attending Secondary Schools in Mauritius. Unfortunately, some left well before the completion of the secondary cycle for want of means, difficulties to integrate the school environment, homesickness, among other reasons” (Ref. Appendix XI Report on mission to Agalega April 2001, by Mr. Judex Viramalay, Assistant Director and Mr. Balakrisna Nirsimloo, Primary School Inspector).

8.2.10 Today there are a Pre-Primary school in the North

A Primary School on each Island;

A Medco Secondary School in the North covering Forms I to III and catering for three years Prevocational classes.

Some 13 students are actually attending Secondary School in Mauritius. They are partly subsidised by the OI DC and live with foster parents.

Photo 15 Nursery North	Photo 16 Jacques Le Chartier Primary School	Photo 17 MEDCO Secondary School
		

8.2.11 Some pupils who have attended Agalega Primary School and who have successfully completed secondary classes in Mauritius are today Administrative Staff of OI DC in Agalega.

8.2.12 The cultural life of a population is linked, to a large extent, to religion. The population is Christian by tradition. The inhabitants have always celebrated Christian festivities such as Christmas, Pentecost, Ascension, Assumption etc.

8.2.13 Father Malaval, a Jesuit, was the first missionary to visit the island in 1837. The visit of the priests, at that time, was not regular due to transport difficulties and the remoteness of the islands. However, the administrators and / or other members of the administrative

staff organised the Sunday Assembly in chapels on both islands and took charge of basic religious instruction and traditions (Ref. TJC Hearing of Mr. Soopramanien NO. 579 to 596).

- 8.2.14 Today, we have two nuns to assist the community. A Catholic Priest visits the population at least once yearly on special occasions. A couple belonging to the Pentcostal sect “Mission” canvassed the population through their neophytes. There is a Church on each island and a grotto at ‘La Fourche’. This Grotto serves as a bearing to incoming ships. Furthermore, the outstanding Mauritian staff, which is almost non-Christian, has a “Mandir”(Hindu temple) in the North (Ref. TJC hearing NO.602)

Photo 18 Sacré Coeur North Chapel	Photo 19 Mission ‘Voix de la délivrance’	Photo 20 Voice of Hindu temple
		

- 8.2.15 There was much ado among the population about the decoration of the temple with the Voice of Hindu buntings on Maha Shivaratree Day in 2011 and the wearing of VOH T-shirts by some of the devotees present. That celebration coincided with the arrival of *SS. Mauritius Pride*, on 2<sup>nd</sup> March 2011 and a team of Indian workers to place a radar system at ‘La Fourche’ for coast and sea watch, especially in connection with pirates.

### Services in Agalega

- 8.3.1 Communication: Agalega has a particular variable Population Census, because the inhabitants used to work on contract and at its completion, they returned to Mauritius for various reasons. The main ones work in health, especially in maternity, and shopping especially for shoes and clothes. A few send their children to Mauritius for Secondary Studies and try to place them under the guardianship of close relatives. O IDC provides free passages to these students, when available. Thus, the school population fluctuates with the arrival of each ships or planes visiting the Islands.

8.3.2

Photo 21 Tristan Carver, Resident Manager and Emmanuel Jasmin, ODC employee busy preparing for disembarkation of passengers from *SS. Mauritius Pride* (2<sup>nd</sup> March 2011)

*From hold to saloon (8.3.3).*

- 8.3.3 Free passage by ship is provided to workers and their families. A full chapter on passage facilities is present in 2008 Collective Agreement .(Doc. II, Art. 4.4)
- 8.3.4 In the past, labourers travelled in the hold of the ship reserved for animals or guano on their way to Mauritius. They even slept on guano coming from Farquhar Is. Today, a comfortable saloon or cabin is offered to them.
- 8.3.5 On each island, there is a mini bus for the transportation of workers and the inhabitants to attend other activities.
- 8.3.6 A boat ferrying passengers between the two islands is available on a schedule of times, depending on tides.
- 8.3.7 Recently, the firm *Emtel* donated a cell phone to each adult and a bicycle to each child under 18. Prams were also given to babies and wheel-chairs to handicapped.

Photo 22 Child on bicycle

- 8.3.8 Health: There is a dispensary operated by a nurse on South Island and a hospital in the North with a charge nurse, a nurse and a doctor. In cases of emergencies patients are sent to Mauritius by the Police plane, *Dornier*.
- 8.3.9 For approximately ten years, only one case of death was registered on the island. He was an Agalean on a visit to his native land. He drowned at 'La Passe'. Patients are sent to Mauritius for in-depth treatment and those who were seriously ill, passed away there.

Photo 23 Air strip in North Island

- 8.3.10 Since 2005 only one woman has given birth to a baby girl in North Island Hospital, whereas, during this same lapse of time, 16 males and 8 females were born in Mauritius (Ref. XVIa). This is viewed with much concern by the population, as in future there will be no real Agalean born.

The residents, through the 'Island Council' and the group 'Amis d'Agaléga' have made representations to remedy the situation. On the one hand, there is a real risk of exposing the expected mother to deliver in the local hospital, without the same pre-natal treatment and facilities this exist in Mauritius, on the other hand a solution should be found to equip the hospital accordingly. On several occasions, the Agaleans have raised their voices publicly to protest against the situation of Health, among others, in Agalega (Annex XII A, B, press cuttings). The General Manager of OI DC has recently applied to the Ministry of Local Government & Outer Islands to find a solution to this social problem (Appendix XIII Letter from GM. OI DC).

Photo 24 North Hospital

Photo 25 Young disabled children

Three cases of handicapped children existed on the island. The three boys under 12 (two brothers in the South and one boy in the North) cannot stand on their feet, due to genetic disorders most probably caused by consanguinity. On the extreme left is one of the two brothers at Ste. Rita Village in the South.

- 8.3.11 Education. (Ref. 8.2.8/ 8.2.9). The children of Agalega do not benefit from the same facilities as exist in Rodrigues and Mauritius. Their insularity does not mean that they cannot adapt to normal education (8.2.10). They have the same potential which needs to be developed, as other children of the Republic. Good examination results in the nineteen seventies prove this. Special attention, according to their environment and their needs, should be given to them and support from the Ministry of Education in Mauritius (Ref. Appendix XI Report of visiting inspectors).
- 8.3.12 A Post Office exists on the Island and was inaugurated on 10 July 2002. It is *de facto* an agent of MPCB Bank. At the same time, Mauritian currency has reappeared in Agalega.
- 8.3.13 The shop of each island, which is an essential service, is now operating on a five-day basis, instead of one or two days weekly.

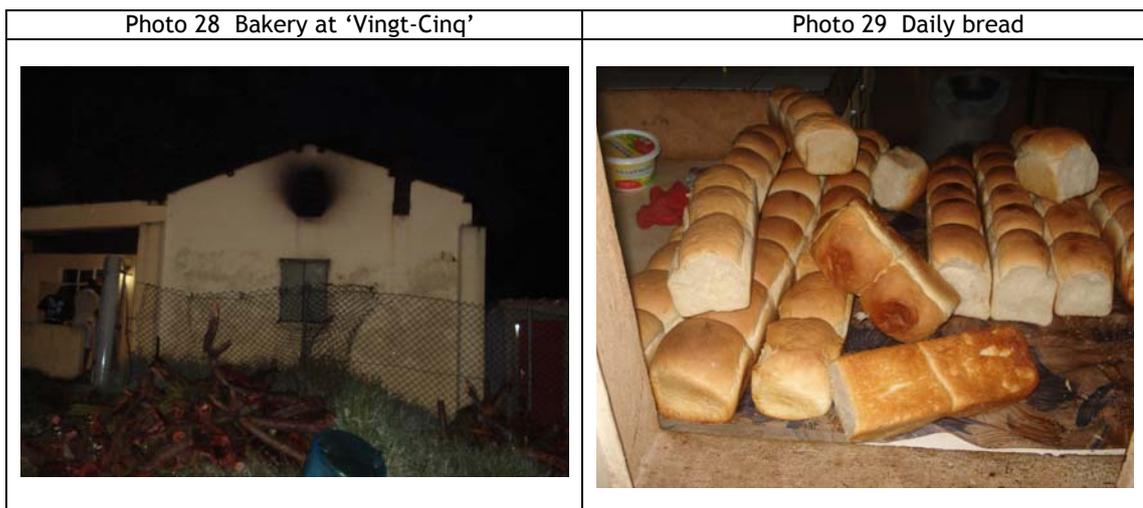

Photo 26 Post Office North Island

Photo 27 Shop North Island

## 8.3.14 A bakery at 'Vingt Cinq' provides bread for both islands.

8.3.15. Police was introduced in early 1980's and there is a Police Station on each island. The Coast Guards are posted at 'La Fourche' Village and will be equipped soon by a radar (Coastal Surveillance Radar System) installed by Indian Engineers for Coast and Sea watching, especially to track pirates (Ref. 8.1.6 to 8.1.8)

## Economic situation in Agalega

8.4.1 Much is being done these days to alleviate the sufferings of the residents. Even recently (1990s), rations of food were distributed weekly to workers on contract, as stipulated as far back in the 1877 regulations to govern the employment of labourers. Normal weekly rations for a worker on the establishment list, irrespective of whether it is a man, woman or child was as follow:

- (i) 10<sup>1</sup>/<sub>2</sub> lbs of rice and or flour. (To be delivered in the proportion of available stock)
- (ii) Salt at the rate of 125 grams;
- (iii) 1 pound of lentils or dhal or peas as available;
- (iv) 2 bottles of edible oil per month.

(Appendix XIV: Agreement between O IDC as Employer and the recruit as Employer)

8.4.2 All workers were considered as labourers. In 1975, in addition to the weekly rations, their monthly salary was:

Men: Rs. 50 against Rs. 25 in 1973

Women: Rs. 32 against Rs. 13 in 1973

Children (Both sex above 10 years old):

Rs. 15 to Rs. 18 against Rs. 7 to Rs. 10 in 1973.

(Doc. 1: *Agalega The Way Ahead* by D. Burrenchobay, 3.30)

8.4.3 At that time life on the Islands suited the needs of permanent residents, who depended on only basic things to live. Fish was abundant and they lived on the weekly rations received, and shopping was not a big issue (Ref.8.2.7). They were completely detached from material things. They possessed nothing except some rustic furniture, which accompanied them in their trips to and from Mauritius.

During same period, unemployment in Mauritius attracted workers to Agalega, regardless of the primitive living conditions. But after some time of observation and compliance, on 3<sup>rd</sup> February 1981, while the Seychellois Manager was on leave in the Seychelles, a petition with 28 signatures and 113 finger prints, was sent to the Prime Minister of Mauritius and copied to the Commissioner of Police and to the Chairman of the then Agalega Corporation, through the Director of Meteorological Services. The petitioners asked the Mauritian authorities to consider the security, working conditions and salaries, and the social, cultural and welfare situation of the inhabitants of the Island. They also asked that the Minister of Rodrigues be their representative in Parliament and that, in future, they could have the right to vote. (Appendix XV; Copy of petition) This was a historical event. It backed up the recommendations of Burrenchobay Report of 1975, *Agalega: the Way Ahead* (Copy of document I attached for ease of reference). It was the first time that the oppressed people of Agalega, as a team, helped by Mauritian workers, dared to face administration, and petitioned the authorities in Mauritius. The Prime Minister's Office replied favorably on most issues through the Director of Meteo (Appendix XV).

- 8.4.4 In 1995, there was a revision of their salaries and workers, from General Purpose workers to drivers, were considered to form part of the establishment on Agalega Islands. Their salaries ranged from Rs. 2,530 to Rs. 5,300 (Ref. Appendix XVb). Then, later, cash was given in lieu of ration (Ref. Addendum of Appendix XIV) and the right to vote was acquired. Concrete houses have been built on both islands. Primary and secondary schools are made available with more teachers (Ref. 8.2.9).

Today, helped by some social groups and organizations, especially the Syndicate Jack Bizlall and the Lawyer Dev Ramano, the young generation have become aware of their rights. Following a representation made by the Employees of the OI DC residing at Agalega to the Outer Islands Development Corporation, a Collective Agreement was reached on the whole question of work on the islands, with details. A giant step forward was thus made. At last, Agalean workers are on a par with their counterparts in Mauritius, in line with PRB. The basic salary now ranges from Rs 6,300 to Rs 19,500. (Ref. Art 3 of Agreement Doc. II) They are even allowed to apply for transfer to other parastatal corporations, whenever opportunities exist (Ag. 2.28). The Classification of employees and their job specifications are inserted (p 2-3) and salary scales listed accordingly (p. 5-6). Job description is also attached. (Document II; A complete copy of award attached for ease of reference).

- 8.4.5 In March 2011, 60 families signed a lease for land and houses. (For conditions, cf. Art. 4.3; Page 12 of Award). The land remains a State property. The lease is for 20 years. This was long overdue. (Ref. TJC Hearing NO 645 - 685).

Photo 30 Signature of a lease for housing

8.4.6 Apart from bicycles donated to children by Emtel, many motor cycles can be seen on both Islands. As employee of a Parastatal body or a worker is allowed a grant through the Civil Service Mutual Aid Bank. Workers take advantage of this offer, but most of them spend their money blindly.

Photo 31 Brand new motor cycle

- 8.4.7 As there is no unemployment, there is no real problem of money, except for those who have contacted loans.
- 8.4.8 There are small shops '*Tabagie-like*' to sell cakes, sweets and other candies coming from Mauritius. Even sandwiches (*pain fourré*) and noodles can be found in some places.
- 8.4.9 Alcoholic drinks can also be obtained, at late hours, outside the shops. This practice leads to many social problems. Police and Management should remedy it (Ref. 8.2.8).
- 8.4.10 Fishing for sale and for export to Mauritius by the residents and some outstanding staff, is becoming a common feature. This is a second source of income for Agaleans. However, exploitation of the local people mostly by Mauritians, should be avoided. A barter system is in practice through this method. OI DC should devise ways and means to regulate this situation. Furthermore, the lagoon is being depleted by over exploitation. Octopus is the first to suffer.

9. POPULATION CENSUS ON AGALEGA APRIL 2011

Particulars	Male	Female	
0 - 5 yrs	21	17	
5- 10	19	18	
10 -15	28	14	
15-18	09	05	
18 - Above	115	56	
Total	<u>192</u>	<u>110</u>	G.Total= <u>302*</u>

\*312 including 37 males and 06 females Mauritian officers working in Agalega.

(Annex XVIa; XVIb)

## 10. RECOMMENDATIONS

10.1.1 Human promotion and community development rehabilitate the individual and his family in his dignity and upgrade the status of the population. To reach this goal, Integral Education, training, communication, information and participation in the development are the Key Concepts.

10.1.2 The Ministry of Local Government and Outer Islands, OI DC, Island Council, 'Les Amis d'Agalega' and 'Mouvement Diocésain, 1<sup>er</sup> février' and/or other interested parties/stakeholders (Civil Aviation, Education, Health, Meteorological Officers, the Police, Telecom Officers and others) should coordinate their efforts for an integrated development in Agalega.

The Resident Manager has a prominent role to play and should be referred to as the Representative of the Government on the Islands. His participation and that of the representative of the inhabitants are important to motivate action. A workshop or a round table thereon, with all stakeholders *in situ*, would help.

### 10.2 Incentive for a comeback

10.2.1 Agaleans have never possessed any land or houses on Agalega, so dispossession does not apply. In his statement in front of the TJC, on 18 August 2010, Mr. Soopramanien said that the Agaleans are not in search of money as compensation but of social services as Mauritians (TJC Hearing NO.381 - 396). However, Agalean descendants, who have been deported, and want to come back to be reinstated and recover their rights of earning their living on what they consider their *mother land*, or the land of their ancestors, should be given priority in contractual work according to their competence especially in the field of fishing, construction, agriculture, cultural and social activities etc. (Ref statement of Gino Alfred & Co. on 18/08/10. No.126, 155, 166, 252, 353, 391). An addendum can be made to the note on Article 3.10, p. 8 of Collective Agreement (Document II) as follow: *This is not an agreement to exclude employees residing in the islands of Mauritius and Rodrigues. It should be applied on the basis of priority of consideration to interested and eventually qualified Agaleans and/ or Agalean descent residing outside Agalega.*

10.2.2 4.3.2 of C.A (Doc. II) will automatically apply:

*“ In the event any employee who has not been issued with a residence would wish to construct his house, he shall be entitled to a lease of residential plot of land, a housing loan deductible from his loan account for the construction of his house, and the cost price for the purchase of building materials”.*

10.2.3 As there is no *Home* for elders in Agalega, housing should be made available, on a humanitarian basis, to old and faithful retired workers of the Corporation, who are not entitled to a lease, to have a residence in Agalega close to their children. One or two are, indeed, in a destitute condition in Mauritius. The Ministry of Social Security, through their representative in the Legislative Assembly, could attend to this issue.

### 10.3 Education and Training

10.3.1 The basis of all development is Education. Pre-Primary, Primary and Secondary Schools exist on the Islands (Ref.8.2.9). A proper screening should be made before sending teachers to Agalega. Even if they receive re-location allowance, as do other Government officers, they should be properly briefed before assuming their duties, equipped and sustained by the Ministry of Education. On the islands, they should meet on a regular basis to support each other in their duties and socially. They are the *artisans* of the progress of Agalega. Much could be done through them. Some are doing very well. Frequent visits of Officials of Parent Ministry would be appreciated. A special case should be made to recruit Teaching

Assistants among Agaleans (Doc. II 3.9), with special training in Mauritius, as it was the case in the past for Rodrigues.

10.3.2 A common Parent Teachers Association of the three institutions combined would be beneficial. As it is actually the case, motivation must come from the schools' administration.

10.3.3 Scholarships for students in further studies in Mauritius and for upgrading the capacities of the employees in Agalega, should be envisaged. Beneficiaries should be strictly Agaleans or of Agalean descent. A proviso to serve Agalega for a given period should be inserted in an agreement between the provider and the beneficiaries.

The Ministry of Education, the Ministry of Local Government and Outer Islands, OIIC should look into it for the provision of an annual budget.

10.3.4. Training in related fields should be given to interested candidates to implement recommendations of the C.A. Award 2009 (Art. 3.9, Doc. II):

*“Efforts should be made to create added value polyvalent jobs to cater for environment protection, meteorological surveillance, fire fighting, the conservation of fish, birds and other animals, food protection, energy alternatives, leisure activities, training on the job, agricultural development, social activities, human rights, protection of historical sites, land allocations, engineering works, etc. Note: employees who show interest in these particular fields shall be given facilities to learn and to perform additional duties in the above relevant fields...”*

Furthermore, training in handicraft (coconut shells, fibre...), Home Economics, Leadership (formation of formators) and in all other fields aimed at boosting up the progress of the persons and the community, would be of the utmost importance and restore the dignity and confidence of the Agaleans.

10.3.5 To facilitate visits to both Islands, training in basic Hospitality Management would be an important contribution to the host families and to the island. This will facilitate local visits from one island to another for those who have no family or relatives on the visited island and will provide great support to visitors and officers on official visits to Agalega. At present, the Resident Manager caters for all visiting officials during the hectic time when the ship is in Port. In March /April 2011, the Resident Manager had to cater for some 40 visitors, and provide board and lodging for them, as there is no hotel or hostel on both Islands.

10.3.6 Training in Hospitality Management is a prelude to *Table d'hôte, Bed and Breakfast Hostels, Restaurants on a small scale basis.* (Ref.10.9.3)

An in-depth study must be carried out before introducing Tourism on a large scale, because of the sensitive ecosystem of the islands. A fishing stopover station is preferable. Consultation with the inhabitants, prior to any project, is fundamental.

10.3.7 In relation to 10.3.4, Organisations such as EWF, NEF, CSR, Women Entrepreneurs, etc. should be tapped. OIIC should be fully involved. The OIIC, the Island Council, 'Les Amis d'Agaléga' and the 'Comité Diocésain, 1<sup>er</sup> février' and all stakeholders, should work together for its implementation and monitoring, pending a Master Plan.

10.3.8 History of Agalega should be taught from Primary level onwards. The book of Father Dussercle *Agaléga Petite Île* is an excellent manual for secondary students.

10.3.9 A museum, with what is left of the ancient establishment and families, will be a living memory of traditions and culture, and an open book of history.

(Ex. ‘marmite quinze’, measures and scales for weekly food ration, ‘la cloche l’appel’, Radio “Sailor”, anchors of ancient ships wrecked on the coast of Agalega, Blackmith tools etc.).

Ancient buildings should also be repaired and furniture refurbished.

Photo 32 Ancient Teacher’s house	Photo 33 Ancient Administration building.
	

In the near future, Education and Training should introduce a Village Council in each village, elected by the residents for the residents.

#### 10.4. Health

- 10.4.1 Modernity is not exempt from difficulties. Not long ago, daily work performed in the coconut fields, as at home, was enough to replace physical exercise. The population was kept healthy. Today, with modern trends, physical exercises is necessary in all lifestyles.
- 10.4.2 The sophisticated apparatus for physical exercise, in the Tsunami Centre (‘Arche de Noé’. Ref picture 8.2.6) is under-utilised. No qualified physical instructor is available on both Islands. An Officer of the Police/ SMF/Coast Guard and or any outstanding staff with a good knowledge in the concerned fields, can certainly help, pending the arrival of an official instructor. It is important to train two Agaleans in this field and later, they can become Physical Instructors at schools during school hours and attend to others in the afternoon, on a roster basis.
- 10.4.3 Medical care is an important issue in Agalega and much has been said thereon. It is true that the population on the islands amount to some 300 persons only. Investment in human resources should not be exaggerated. However, where life is concerned, in order to preserve it, all facilities should available, regardless of money. The question of maternity is a complex one (Ref statement of Mr. Gino Alfred & Co. on 18/08/10. NO.189) An in-depth study is imperative to see to it. An incentive to increase the birth-rate in Agalega is recommended in the Collective Agreement of November 2009 (Doc. II 4.7.4/5) (Ref. 8.3.9).
- 10.4.4 Support from the ‘Society for Aid to Children Inoperable in Mauritius’ (SACIM) could be sought for the three handicapped children (Ref. 8.3.9).
- 10.4.5 Water tanks, to collect rainwater, have been installed, especially for kitchen purposes. Pigeons soil the roofs of the houses and are sources of streptococci. They should be eradicated, especially where they flocked in the South. In case of drought, water pumped from wells is utilised. Poultry-keeping on large scale should be kept away from this source of water.

Both islands are infested with mosquitoes and rats (Appendix V 8.4.3). With the help of the Medical Staff, a proper sustainable campaign to keep the environment clean is urgently required. There is a close interaction between Health and the environment.

## 10.5 Agriculture

10.5.1 Vegetables must be selected very carefully in Agalega, because of the poor sandy soil and climatic conditions prevailing. Actually, pests have spread all over the islands, and chemicals should not be used because of the fragility of the eco-system.

However, pumpkin, greens, lettuces, creepers etc. can be grown in particular conditions. An Agricultural Officer of *AREU* is setting up a Food Program in Agalega

An intensive training program, adapted to the island conditions, and starting at school level, could be launched. Very often, experts learn through the experience of local people. The contribution and advice of elders, with their experience of Agalega, should thus be sought, and plots of land, on a symbolic rental basis, could be allocated to interested families, for gardening and/or farming.

Photo 34 Plant covered with pests

10.5.2 *Bassin Capucin*, the only pool in the North, can be exploited for farming, especially the breeding of ducks. A place in the South called *tranche*, can also be exploited. Training in this connection is needed.

Photo 35 *Bassin Capucin* in the North (also Appendix NO. I; 3)

10.5.3 Seychelles expertise could be sought in farming. Sharing between Agaleans and Seychellois in different fields would be beneficial.

#### 10.6 Environment

People are usually moody, living with a dull environment, whereas a good environment makes the inhabitants cheerful and enthusiastic. With intense cleaning and planning, Agalega could become a natural garden.

10.6.1 Empty bottles, plastic, rusting iron sheets, old vehicles and thick bushes where mosquitoes and rodents nest can be seen here and there, on both islands, in spite of the goodwill of the administration (Appendix XII A).

A proper campaign to preserve the environment is imperative.

A cleaning campaign for a better Agalega may bring the inhabitants together and arouse their sense of civics duty and patriotism.

10.6.2 An 'Agalega Day/Week' involving all Departments on the islands, can be organised to clean up Agalega, as a form of social activity. It can culminate with Independence Day and end with a Sports day and a Public performance by local artists.

10.6.3 There are different coconut fields with different names. Their delimitation, with their proper names, will be a practical exercise in pedagogy to teach the History of Agalega to all the population, particularly young students. Names of streets and avenues should also be marked. This measure will reinstate the dignity of the people: from *Camp Noir* to *Avenue*, from *hut* to *bungalow*.

Photo 36 A bungalow in the South

10.6.4 Motor cycles, vehicles and the supply of power on the islands are sources of pollution. To reduce the high consumption of FUEL and thus emission of CO<sub>2</sub>, wind-powered energy and photovoltaic would help. Coconut oil, as FUEL, helps to reduce the importation of petrol in Agalega, but further studies should be done on how to control pollution.

Photo 37 Photovoltaic system at Civil Aviation, Metereological Station and Telecom

!0.6.5 Relatively speaking, Agalega should have the same privileges, in relevant fields, as Mauritius and Rodrigues (Ref. Gino Alfred Statement on 18/08/2010 N0.108 to 115; and Soopramanien No.310 - 313). This is why Gino Alfred in his hearing of 18/08/2011, claimed to name Mauritius as an Archipelago (Ref. Gino Statement on 18/08/2010 N0.697 to 703).

## 10.7 Security

- 10.7.1 A Refugee Centre has been constructed in the North. Another in South island will be constructed soon. The population should be briefed from time to time, on how Management will proceed and what is expected from them, in the event of a tsunami, a cyclone or other calamities. The contribution of the Police and Coast Guard should be guaranteed well in advance.
- 10.7.2 Jetty at Port St. James is important. A study should be undertaken to devise safety measures for disembarking and embarking passengers. It is a blood-curdling manoeuvre for new visitors, especially when sea is rough. There must be an alternative disembarking point somewhere in the South, in case of an emergency. Consultation with the locals is essential.
- 10.7.3 As there are no traffic signs on the island, all drivers, including motorcyclists, should follow a Code of Conduct. Police should take its role seriously to prevent accidents. With the increasing number of motorcycles, the establishment of this Code of Conduct in the absence of road signs, is very important. All owners of motorcycles should be obliged to follow these instructions.

## 10.8 Sport and Culture

- 10.8.1 (Ref. 10.3.1-2) Sport is one of the best means to fight anti-social habits. Drinking is on the rise. Boys and girls are prone to early sexuality. Idleness and lack of education are the main causes of this.
- 10.8.2 All facilities should be given to outdoor and indoor activities. The Ministry of Sport and Culture should extend its activities on Agalega, a territory of Mauritius. Agaleans could represent Mauritius in some athletic fields and in swimming, if given proper training.
- 10.8.3 With the help of the Coast Guard and the elders, regatta should be introduced. This will allow youngsters to develop their skills in canoeing, sailing, rowing, as their elders did. This practice will also help to develop skill in case of shortage of fuel or any breakdown or shortages on the island.
- 10.8.4 There are many talented artists in Agalega. Like diamond, they need polishing. Training in all fields is needed.
- 10.8.5 Musical and sound system instruments are available in the Refugee Centre. Training to operate and maintain these instruments is needed.
- 10.8.6 Singing, Slam, sketches, Drama, Theatre are new avenues to exploit. This will contribute to fight against social ills and boost up the personalities and discipline of many young people.
- 10.8.7 Police Officers could provide important help in the field of indoor and outdoor games. The fitness apparatus in the Tsunami Centre could be then best utilised under their guidance.

## 10.9. Services

- 10.9.1 During the dry season, bush fire is frequent in Agalega. The local male workers used to control fires in an archaic method, which is dangerous and time-consuming. With the increased storage of gas and fuel on the islands for different services, especially Jet Fuel for Civil Aviation and petrol and gas for Meteorological Station, and the local Management, security measures should be reinforced.

It is highly recommended that qualified Fire Officers from Mauritius should train young volunteers on Agalega. Discipline, drill and maintenance of equipment, sanctioned by a test, should be included. Successful candidates could wear uniforms. This would not give them

the right to neglect or abandon their employment with the OI DC. A roster system and a work arrangement should be established between the OI DC and those concerned (Doc. II 3.9).

- 10.9.2 At present, in Agalega, there is only one qualified skipper, trained in Mauritius. With the development of the Islands and the promotion of the self-esteem of the workers, more skilled boatmen/skippers are needed, especially to work on the embarkation and disembarkation exercises. Training is given at Naval School of Mauritius. Interested candidates could be sent there for training. Working arrangements, as indicated above, could be negotiated with Management.
- 10.9.3 Facilities should be available, in Polytechnic School, *Ecole hôtelière* etc., to follow courses in fields likely to help Agalega.
- 10.9.4 More and more visitors from Mauritius are keen to visit this remote Mauritian territory. No hotel, restaurant or *Table d'Hôte* exist because this was thought to be of no avail. With modern communication and access facilities, a system of restaurants or Bed and Breakfast will soon become necessary. This will also be useful for residents on visits to another island or to Officers on duty. Training courses should be made available to interested parties (Ref.10.3.4).

## 10.10 Religion and social

- 10.10.1 Religion is not only a question of spirituality, but it also helps in the promotion of Integral Human Development.
- 10.10.2 Since the very beginning of the development of Agalega, the Catholic Church was present, and it has helped to introduce religious and moral values to the people (Soopramanien statement of 18/08/2010 N0,579 to 603). The remoteness of the island did not allow the Diocese to send a permanent priest, but Missionaries were sent, as and when possible.

In 1972, the two schools on Agalega were set upon a permanent basis by the Roman Catholic Education Authority, with the help of the Mauritian Government. The couple of teachers, who were sent, and their successors also catered for upgrading the social life, sporting and cultural activities. Today, the presence of two nuns is vital to family counseling and house-keeping.

- 10.10.3 As 100% of the Agaleans are Christians the presence of the Church should play an important roll in the development of the population. As it has a long experience in the field of training and in Human Development, facilities should be given to the Church to assist in the development of the islanders and their islands. On application, the Bishop of Port-Louis can send couples or qualified trainers for a certain period, in agreement with the OI DC to conduct training courses on Leadership and Community Development. All projects should be done in consultation with the residents. The PRO of the OI DC has a prominent role to play in the field of diffusing information about, and in the monitoring of projects.

## 10.11 Discipline

- 10.11.1 The implementation of a good Code of Conduct is a sign of good Management. A whole detailed chapter (Doc II; N0.5 P. 20-24), referring to Disciplinary Procedures, is inserted in the Collective Agreement signed on 24 November 2009 between the OI DC and the Employees of the OI DC residing at Agalega. But still, the inhabitants would like to have a visiting Magistrate occasionally on Agalega to hear Police Cases, instead of transferring the presumed accused to Mauritius for trial (TJC hearing; Soopramanien No. 354 - 376).

## 10.12 Economy

- 10.12.1 With the sudden and unexpected rise in salaries, due to a long struggle since February 1981 (Ref. *Pétition des habitants d'Agaléga*, Appendix XV), some families have entered into a

spiral of uncontrolled consumption. As employees of the Corporation, they are now entitled to obtain loans from the Mutual Aid. Motorcycles, TV and Video sets, Refrigerators, Washing Machines and other domestic appliances, are bought on hire purchase at any cost. Some families have even their own generators, in case of power cuts. A Counselor in Consumer's Protection is needed, to advise the population properly.

- 10.12.2 In the event of producing handicrafts with local materials, and other by-products derived from coconut trees, and/or sea shells, a Cooperative Craft Industry could be opened and articles sent to Mauritius for sale. The O IDC can open a shop for Agalega craft products. SMIDO can sustain such projects. A O IDC Public Relations Officer, together with the Purchasing and Marketing Officer, should be put to work.
- 10.12.3 Selling cakes, sandwiches and drinks are sold here and there on both islands. The setting up of small businesses is of interest to some families. The shops, run by the O IDC, can later become a cooperative shop run by Agaleans. Training of the whole population in a Credit Union Society is very important.
- 10.12.4 Now that currency is present on the island and that modern trends are not a secret through TV, hairdressing, dressmaking, shoemaking courses could be run by resource persons found on the islands. Those interested can also follow courses in Mauritius (Doc. II 3.9; 4.4.7). These issues are important for the construction of a stable society.
- 10.12.5 Those coming events will certainly bring more students to Mauritius. The O IDC should continue to make provision for them and for those who come on medical grounds. The PRO will have much to do.
- 10.12.6 It is the dream of some Agaleans to find, one day, one of theirs occupying a permanent posts in the Office of the O IDC in Port Louis. With proper training and qualifications, it is obvious that this dream will, eventually, become reality. The Collective Agreement of 2009 stipulates:

*"The Corporation shall set down an employment application list. Any resident interested to work for the O IDC shall submit his application accordingly. This registration unit will serve the purpose of an employment bureau. Recruitment on the O IDC establishment shall be made from that list. Otherwise the names of the applicants may be communicated to other employers" (Doc. II; 2.2.5).*

The term 'any resident' should be extended to 'any Agaleans or Agalean descendants'.

## CONCLUSION

Agalega has a bright future ahead. The residents may hold the key to their own success, but alone, they will never succeed. All stakeholders, including the elected Members of Constituency No. 3, Ministry of Local Government and Outer Islands, the OIIC/OIDB, the Island Council, 'L'Association Les Amis d'Agaléga', the Church ('Mouvement Diocésain 1<sup>er</sup> février'), and all other groups or individuals who have an interest in Agalega, should join together to work towards a Master Plan for a modern Agalega (Ref,10.1.2).

The award, taking effect from 1 July 2008, has brought a new impetus to the working population. A material change has occurred in the life of every family. It is now an excellent opportunity to start a new style of living with moral values, work discipline, focus on training and Education for the promotion of each and every individual, the family and the community. It is therefore imperative that training be given at all levels and that all avenues in Mauritius be explored. It is possible to achieve great progress in consultation with the residents. All developments and projects on both islands should be made known to the population, and their participation encouraged, wherever possible, in order to avoid any doubt or confusion and even retaliation. The time will come when the residents will take in hand the development of their own islands through a Village Council System. Until then, support from stakeholders is necessary.

To preserve the memory of a community, it would be appreciated if a Museum could be initiated on the island, showing the ancient ways of living in Agalega, including, old tools, cooking utensils, fishing implements, ancient means of transport etc. and archival documents pertaining to establishments, and others aspects, since settlement. Genealogical research is also highly recommended.

It should be remembered that a Report on OIIC in January 1996 stipulated that:

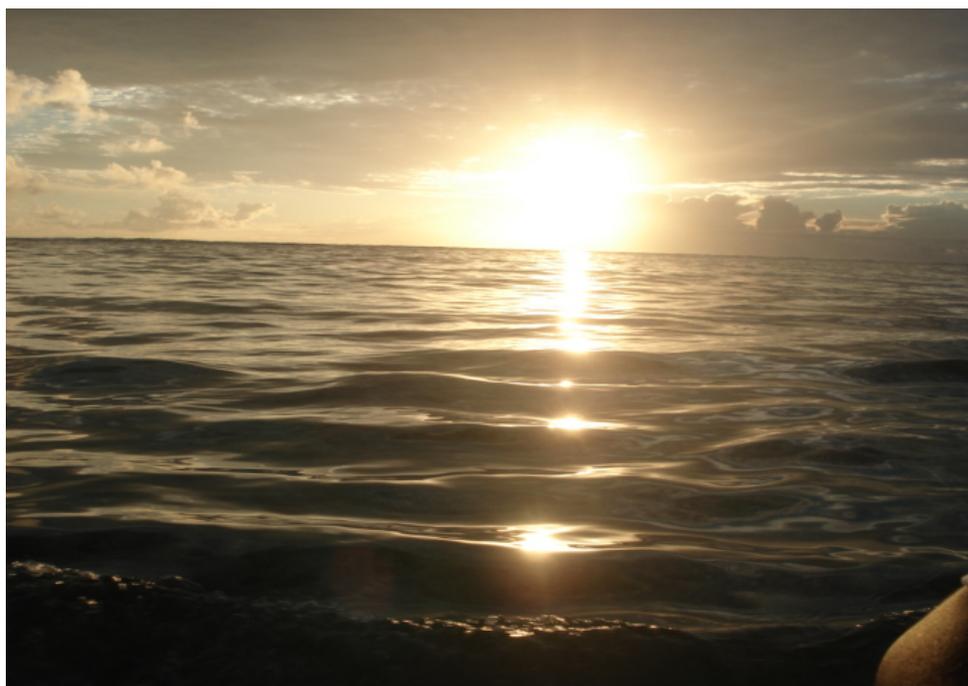

*"Agalega has a fragile eco-system that requires a balanced development that would not bear undue stress on the environment. Development should, therefore, be strictly controlled, the more so that in the long term, the two islands would be at risk because of the universal effect of global warming resulting from the depletion of the ozone layer.*

*The island should be envisaged as an outpost, with activities limited to agriculture, forestry, livestock and fishing. There is, however, some scope for a minimum level of tourism on the islands."*

## ACKNOWLEDGEMENTS

Where Agalega is concerned, those who are in possession of important information/documents or have helped in some ways or other, and have never visited this Mauritian territory, are more curious to know what life is like on a coconut Island with sand, sun and sea. So, in return, they ask for more information than they give. They have already been thanked in person. We recommend to them the book “Agaléga Petite Île” written by Father Roger Dussercle C.S.SP.

However, we would like to put on record some persons and Organizations who have given their time, help and knowledge to help us complete this Report which is, by no means, exhaustive. Mr. P.L.S.Dwarka Davay, General Manager OI DC and his staff; Mr. Dev Ramano for documents and valuable advice; Mrs. Sharon Jacquin-Ng for documents and research work; Mr. Christian Carver, Resident Manager, and Mr. Emmanuel Jasmin for their hospitality in Agalega; Messrs. Lewis and Steeve Clarisse for their oral memories, especially for the names given to coconut fields associated with Ancient Administrators, and names given to dogs related to specific social situations; Mr. Gino Alfred for sharing information; Mr. Robert Agatine for his support; the inhabitants of Agalega who did not spare their time to share information with us on their Islands. The list is not exhaustive, but we should like to put on record the help and motivation given to us by the staff of Truth and Justice Commission.

## Remerciements

Je tiens à remercier:

Le Pr Alex BORAINÉ, Président, et tous les commissaires de la *Truth and Justice Commission*, de m'avoir confié cette mission.

Le Dr Vijaya TEELock, Vice-Présidente, et Colette LE CHARTIER, Directrice de Recherche à la Commission, pour leur confiance, leur soutien moral et les conseils avisés qu'elles m'ont prodigués en toutes circonstances.

Toutes les personnes interviewées dans les institutions visitées, qui n'ont guère ménagé leur temps ni leurs efforts : leurs réponses constituent la substance même de ce rapport.

Corinne FOREST, Patrick DRACK, Satyendra PEERTHUM et Burty FRANÇOIS, également missionnés par la Commission, pour leur aide attentionnée et l'agrément toujours vif de nos discussions.

Dominique BELLIER, Stéphanie FOIRET et Sonia VILBRUN du *Mauricien*, pour leur sympathique accueil aux archives du journal, tellement fécondes.

Mes professeurs d'archivistique à l'École nationale des Chartes, Robert-Henri BAUTIER (1922-2010) pour le Moyen-Âge, Bernard BARBICHE pour la France d'Ancien-Régime et Bruno DELMAS pour la période contemporaine.

Et tous les miens, amis et parents où qu'ils se trouvent, pour leur confiance et leur soutien inaltérables.

## 1 MISSION DE LA TRUTH AND JUSTICE COMMISSION

### 1.1 Question posée

---

La mission qui nous a été confiée par le Pr Alex BORAINÉ, Président de la Truth and Justice Commission, le 17/2/2011<sup>1</sup> portait les attendus suivants:

1. *To undertake a survey of the state of conservation of documents at selected institutions as per ANNEX 1<sup>2</sup> and make proposals for conservation and digitalization of documents in appropriate building.*
2. *To submit a report on the nature and type of documents involved, the dangers facing the documents and the long term and short term preventive measures to be considered.*
3. *From the above assessment, to devise the functions of a future Conservation Institute.*

### 1.2 Compréhension de la mission

#### 1.2.1 Approche globale

##### 1.2.1.1 Objets concernés

Notre lettre de mission ne précise ni à quels types, ni à quelle période chronologique de documents elle s'applique. Il s'agit donc, selon notre compréhension, d'une enquête archivistique globale s'appliquant aux documents conservés par les administrations et organismes apparentés, les entreprises privées ou les particuliers du pays.

#### A - Qu'est-ce qu'un «document»?

La définition du «document» dans la norme internationale ISAD(G),<sup>3</sup> référence en matière d'archivistique, est très large et oriente vers la gestion de l'information plutôt que vers celle du support qui la contient:

*Information portée sur un support, indépendamment de la nature de celui-ci.*

La définition du «document d'archives», qui complète la précédente dans la norme, fait intervenir une personne morale ou physique dans l'exercice de son activité:

*Information portée sur un support, indépendamment de la nature de celui-ci, et créée ou reçue par une personne physique ou morale dans l'exercice de son activité.*

Cette norme, édictée notamment pour prendre en compte les documents électroniques, d'apparition récente et par essence dématérialisés,<sup>4</sup> s'applique aux archives privées (on ne précise pas de quel type de «personne» il s'agit ni du cadre dans lequel elle émet et reçoit le document). Elle se place, au terme d'une longue évolution, en rupture avec l'archivistique traditionnelle, telle qu'elle affleure encore dans les législations nationales dont KETELAAR a fait l'inventaire:<sup>5</sup> cet auteur recommandait alors de se dégager des définitions reposant sur la valeur de témoignage historique, sur la forme adoptée par les documents d'archives et sur leur support.

Si l'on pousse cette définition à son terme logique, tout objet finit par devenir archive, y compris les objets du quotidien appartenant à des particuliers.<sup>6</sup> Ce cadre conceptuel serait évidemment trop large pour la mission de trois mois qui nous était assignée, d'autant qu'il convient également d'y ajouter:

- les imprimés (livres, périodiques,<sup>7</sup> etc.)

- et les documents sonores et audiovisuels conservés dans les bibliothèques.<sup>8</sup>

Par ailleurs, il s'agissait de travailler en complémentarité avec Corinne FOREST, dont la mission pour la *Truth and Justice Commission* concerne les musées de Maurice et les artefacts qu'ils conservent.

Nous proposons donc de prendre en compte pour notre mission:

- les documents écrits ou figurés, sur un support papier ou électronique;
- les documents sonores ou audiovisuels.

Cette approche large des documents nous amène à parler de «patrimoine documentaire» plutôt que de «patrimoine écrit» que nous jugeons trop restrictif.

#### B - Bornes chronologiques

L'histoire documentaire de Maurice commence avec l'arrivée des colonisateurs européens et sa date de «démarrage» est aisément déterminée.

Comment définir le terme de notre étude sur les documents «anciens»?

- Les règles bibliographiques internationales recommandent de parler de «livres anciens» pour un pays jusqu'à l'apparition de sa première bibliographie nationale; pour la France, par exemple, on retient la date de 1811.

La première bibliographie mauricienne de qualité scientifique est celle de TOUSSAINT,<sup>9</sup> éditée en 1956, et qui couvre la période 1502-1954.

- Par ailleurs, la loi sur les archives à Maurice<sup>10</sup> prévoit un délai de communication au public, unique de 30 ans.

La mise en corrélation de ces deux dates nous oriente vers une approche «large» des bornes chronologiques à adopter:

- Pour les archives, le début du 18<sup>e</sup> s. avec les premiers documents coloniaux censément conservés aux Archives nationales; le début des années 1980 pour les archives contemporaines communicables au public.
- Pour les livres et imprimés, des tous débuts de l'imprimerie mauricienne en 1767<sup>11</sup> à la date butoir de 1954.

#### 1.2.1.2 Élargir le cercle des institutions visitées

##### A - Visites prévues

Munis de ce nouvel encadrement conceptuel, il fallait en arriver à la pratique et en tester la validité sur les institutions de conservation mauriciennes.

À l'issue de discussions avec Mmes Vijaya TEELock (Vice-Présidente de la *Truth and Justice Commission*) et Colette LE CHARTIER (Directrice de la Recherche de la *Truth and Justice Commission*), nous avons demandé à étendre le cadre général de la mission, en augmentant le nombre d'institutions visitées. Cela nous fut accordé: les institutions visitées se montant désormais à quatorze, pour chacune desquelles des lettres de créance nominatives nous furent confiées, à remettre en mains propres au responsable(s) désigné(s) du Service de conservation:<sup>12</sup>

- Visites effectuées
  - Archives nationales (Coromandel);
  - Bibliothèque Carnegie (Curepipe);
  - Bibliothèque nationale (Port-Louis);
  - Cour Suprême de la République de Maurice (Port-Louis);
  - Évêché de Port-Louis (Port-Louis);
  - Hôpital psychiatrique Brown-Séguard (Beau-Bassin);
  - *Mahatma Gandhi Institute* - MGI (Moka);
  - *Mauritius Museums Council* (Port-Louis);
  - MSIRI (Réduit);
  - Musée de la Photographie (Port-Louis);
  - *Registrar General* (Port-Louis);
  - *Registrar of Civil Status* (Port-Louis).
- Carences constatées
  - Chambre d'Agriculture (*Port-Louis*);
  - *Mauritius Commercial Bank* - MCB (Port-Louis).

## B - Visites omises

Il avait été également évoqué avec la *Truth and Justice Commission* d'effectuer une visite aux archives du *Prime Minister's Office*. En dépit de l'intercession de M. Alain GORDON-GENTIL, Conseiller culturel auprès du Premier Ministre, il ne nous fut pas possible d'obtenir satisfaction.<sup>13</sup>

Il aurait également pu être intéressant de visiter, si nous en avons eu le temps:

- ⤴ la Bibliothèque municipale de Port-Louis, qui détenait, à la fin des années 1960, un riche fonds<sup>14</sup> de partitions musicales et de programmes de théâtre et de concerts anciens.
- ⤴ Des fonds d'érudits mauriciens qui sont en danger de dispersion, vu l'âge de leurs détenteurs : Mmes LY TIO FANE, M. Rivaltz QUENETTE, M. Guy ROUILLARD (SHIM), etc.
- ⤴ Des bibliothèques privées connues dans l'île pour leur richesse: Mme Lorraine LAGESSE, M. Roger LINCOLN, M. Raymond D'UNIENVILLE, etc.

### 1.2.1.3 Sauver ce qui peut l'être

Dès nos premières visites et prises de contact avec les responsables de Services de conservation, il nous est apparu que la mission initialement prévue ne cadrerait pas exactement aux réalités et attentes rencontrées des visités:

- les questions de conservation préventive et d'analyse des risques étaient, certes, cruciales mais notre compétence et le temps qui nous était alloué (trois mois) ne nous permettaient guère d'approche ni d'inventaire exhaustifs.
- Plus urgents nous sont apparus:
  - ⤴ les défauts de versement aux Archives nationales pour la période britannique et post-Indépendance,
  - ⤴ le désintérêt pour les archives intermédiaires, même anciennes, constatation confirmée par la visite de deux dépôts d'archives en particulièrement mauvais état de conservation,<sup>15</sup>
  - ⤴ les approximations constatées dans l'application du *National Archive Act 2000*.
  - ⤴ Les «pertes» et disparitions de livres et de documents dans les bibliothèques patrimoniales.

Dans ces conditions, en plein accord avec l'équipe scientifique de la *Truth and Justice Commission*, nous avons pris le parti d'aborder la question de la préservation des documents anciens de façon plus large que celle axée uniquement sur la conservation préventive ou curative, en nous posant les questions suivantes:

- l'utilité sociale de la conservation des documents, notamment des points de vue de la bonne gouvernance et de l'accès du Citoyen mauricien à l'information.
- La reconstitution du patrimoine national dilapidé, par deux voies conjointes: les récupérations auprès de leurs propriétaires actuels, une fois retracés; les compléments apportés aux fonds existants grâce à la collaboration internationale.

## 1.2.2 Sources et méthode

### 1.2.2.1 Choix d'un questionnaire semi-ouvert

Il nous est apparu, dès nos premières visites, qu'il était temps de procéder à une évaluation globale et homogène du mode de gestion, des aspirations et des objectifs des directeurs de lieux de conservation de documents anciens, fonds d'archives et livres imprimés confondus.<sup>16</sup>

Cette approche avait les objectifs suivants:

- Établir un *arrêté à date* de l'état des fonds, des méthodes de conservation et d'indexation, du degré de compétence des personnels, des moyens mis en œuvre par les services.
- Évaluer les besoins, exprimés ou latents.
- Comprendre les attentes des dirigeants des services.

La technique du questionnaire semi-ouvert, déjà employée avec succès dans l'étude des politiques culturelles à Maurice,<sup>17</sup> pouvait être ici utilisée avec profit:

- période de temps resserrée,
- unicité de l'enquêteur.

Après validation de la forme et de la teneur du questionnaire<sup>18</sup> par l'équipe scientifique de la *Truth and Justice Commission*, nous l'avons diffusé par courriel aux directeurs de services auxquels nous avons transmis nos lettres de créance nominatives.

Nous recommandions, qu'une fois choisis, le ou les interlocuteurs de référence (qui n'étaient pas toujours le Directeur ou la Directrice de l'institution visitée), nous puissions présenter le questionnaire en personne. Cela garantissait une bonne compréhension des enjeux et du vocabulaire, souvent assez techniques et la meilleure homogénéité des questions posées dans le temps et entre interviewés.

### 1.2.2.2 Étendre les sources d'information à la presse mauricienne

Nous avons été surpris de l'importance accordée par la presse mauricienne à tout ce qui touche à la gestion du patrimoine documentaire (en comparaison, le patrimoine bâti et les musées y semblent bien moins traités).

Cela tient sans doute aux «grandes manœuvres» qui eurent lieu dans le domaine du patrimoine documentaire lors de la création de la Bibliothèque nationale à la fin des années 1990 et aux abondants relais médiatiques dont put alors bénéficier (et bénéficie toujours) Yves CHAN KAM LON, son directeur.

Nous avons donc dépouillé un échantillon significatif de la presse mauricienne sur le sujet depuis les années 1990 jusqu'à aujourd'hui.<sup>19</sup> Une fois les références complétées avec les textes intégraux, trouvés sur Internet (disponibles depuis 2000 seulement) et dans diverses publications,<sup>20</sup> nous disposons de séries significatives pour les journaux: *Le Mauricien*, *Weekend*, *L'Express* et *L'Express du Dimanche*.

### 1.2.2.3 Constituer une base de connaissances à jour

Les recherches complémentaires effectuées pour cette mission ont mis en relief l'abondance de la littérature disponible et la vivacité des débats sur les questions de conservation, de numérisation, d'archives et de documents d'archives.

Il faudrait, selon nous, revoir assez profondément la Législation mauricienne en la matière et constituer sans tarder un corps d'archivistes et de bibliothécaires mauriciens rompus aux nouvelles technologies de la conservation: il nous a donc paru indispensable de créer une bibliothèque numé-

rique accessible à tous gracieusement sur le Web,<sup>21</sup> dont tous les éléments seront librement réutilisables, et dans laquelle on trouvera:

- les textes juridiques et réglementaires mauriciens,
- les textes réglementaires et normatifs des principaux pays étrangers et des institutions de conservation internationales,
- les articles et essais qui nous paraissent importants en matière de conservation, d'archives, de numérisation, d'informatique documentaire, etc. classés de façon thématique, par pays et par institutions,
- une base de données des principales institutions mauriciennes et internationales (avec leurs coordonnées complètes et l'adresse URL de leur site Web) en matière d'archives, de conservation, de normes, d'aide au développement et de politiques de préservation du patrimoine,
- une base de données libre de droits contenant les notices bibliographiques citées dans le présent rapport et dont nous autorisons la libre réutilisation.

Cette base de données pourrait servir de noyau et point de départ à la documentation du cursus de conservation dont la création est prévue dans le cadre de notre mission.

### 1.3 Déroulement de la mission

#### 1.3.1 Réception

Nous avons reçu un accueil très positif et courtois de nos interlocuteurs, qui se sont volontiers soumis au questionnaire, rempli avec notre aide en leur compagnie. La bibliothécaire du MSIRI, Mme Rosemay NG KEE KWONG, très occupée, a préféré compléter le questionnaire par ses propres moyens, puis nous l'adresser par courriel en requérant l'anonymat de ses réponses, ce qui était prévu.

Quant aux questions auxquelles notre première rencontre n'avait pu permettre de répondre, elles nous ont été transmises ultérieurement. Le taux de réponse à ces questions complémentaires a été cependant nettement moins bon.<sup>22</sup>

#### 1.3.2 Visite ne figurant pas dans ce rapport

Une visite ne nous paraît pas cadrer avec les objectifs de notre mission et a donc été omise.

##### 1.3.2.1 Mauritius Museums Council

Le *Mauritius Museums Council* est un organisme para-public créé en 2000<sup>23</sup> afin de développer les musées mauriciens et concevoir une politique muséale nationale.

C'est sans doute la présence du *Mauritius Museums Council* dans les locaux du *Mauritius Institute*<sup>24</sup> à Port-Louis qui a incité la *Truth and Justice Commission* à placer cette institution muséale dans la liste de nos affectations; en effet, le *Mauritius Institute* fut le lieu d'une bibliothèque publique dont la presque totalité des fonds anciens fut transférée à la Bibliothèque nationale lors de son installation,<sup>25</sup> ce qui entraîna, après quelques hésitations,<sup>26</sup> sa fermeture définitive au public.

Les livres demeurés au *Mauritius Institute* sont d'un médiocre intérêt pour notre étude:

- un fond de bibliothèque *de prêt* comprenant des romans, des essais, des ouvrages encyclopédiques, etc. qui n'ont pas été considérés comme *Mauritiana* et n'ont donc pas été transférés à la Bibliothèque nationale. Selon Yves CHAN KAM LON, ces livres devraient prochainement être versés à diverses bibliothèques scolaires de l'île.
- Un fonds relatif aux sciences naturelles, d'usage courant pour la recherche et la gestion des collections de sciences naturelles du *National History Museum* de Port-Louis.
- Un fonds - que nous jugeons obsolète - d'ouvrages encyclopédiques d'histoire de l'art (dictionnaires, «beaux-livres», etc.) d'usage courant pour quelques conservateurs des musées d'art et d'histoire de l'île.

Nous ne prendrons donc en considération le *Mauritius Institute* que pour les années précédant 2000, à propos de son ancienne collection de *Mauritiana* - et tout particulièrement des vols qui l'affectèrent massivement.<sup>27</sup>

### 1.3.3 Deux carences constatées

#### 1.3.3.1 Chambre d'Agriculture

L'importance des fonds de la Chambre d'Agriculture, association de droit privé créée en 1853, est à l'image exacte de la prééminence de la culture sucrière pour l'économie de l'île Maurice durant la seconde moitié du 19<sup>e</sup> s. et tout le 20<sup>e</sup> s. Il s'agit, pour ce que nous avons pu en apprendre, de documents d'administration (conseils d'administration, publications internes), d'ouvrages de botanique, de courriers avec des sociétés savantes outre-mer, de photographies, etc.

Les circonstances dans lesquelles les instances de la Chambre d'Agriculture ont refusé de nous recevoir paraissent conjoncturelles. Ayant pris contact avec M. Jocelyn KWOK, Secrétaire Général de la Chambre, le 26/02/2011, alors même qu'il allait s'absenter de l'île pour une mission, nous n'avons pu, à son retour, obtenir de rendez-vous avec lui ni avec le Président de la Chambre d'Agriculture, M. Thierry MERVEN, malgré plusieurs appels téléphoniques et deux visites en personne auprès de son secrétariat.

La raison invoquée de ces retards répétés, aboutissant au refus, était que l'archiviste de la Chambre d'Agriculture était absente en congé-maladie. La Chambre d'Agriculture n'a pas donné suite à notre demande et nous avons dû adresser un constat de carence à M. KWOK, le 18/04/2011.<sup>28</sup>

#### 1.3.3.2 *Mauritius Commercial Bank* (MCB)

Les archives de la MCB, principale banque de la République de Maurice et protagoniste majeur de l'économie régionale, sont de deux ordres:

- des archives de gestion courante ou intermédiaires, dont nous avons appris qu'elles n'étaient conservées que pour le temps strictement prévu par la loi mauricienne<sup>29</sup> puis détruites - et cela depuis la fondation de la banque, en 1836.
- des archives historiques, constituées principalement par M. Jean-Marie HURON, puis, dans une moindre mesure, par son successeur et actuel conservateur du Musée du Blue Penny, M. Emmanuel RICHON.

Leur richesse paraît importante mais reste inconnue, vu que les visites se font au compte-goutte, au bon vouloir du Conservateur.

Il semblerait que certaines d'entre elles sont exposées au Musée du Blue Penny, d'autres dans les couloirs et salles de réception de la banque (notamment la Salle du Conseil), d'autres enfin dans un dépôt d'archives situé au Caudan de Port-Louis (dont les équipements et les conditions de conservation nous restent également inconnus).

Nous avons appris, au second semestre de 2010, l'achat par la MCB d'archives privées: le fonds LE-CLÉZIO;<sup>30</sup> nous souhaitons obtenir des précisions de la banque sur ses modalités d'acquisition, de conservation, de dépouillement, d'indexation et sur les motivations de son démembrement, survenu à l'occasion de cette acquisition.

Sur la recommandation de la *Truth and Justice Commission*, dûment doté de lettres de créance nominatives, nous avons pris contact avec M. Philippe FORGET, Vice-Président de la MCB, le 26/2/2011<sup>31</sup> et lui avons alors adressé notre questionnaire. Sur le point de s'absenter de l'île Maurice, M. Philippe FORGET nous a fait savoir oralement qu'il recommandait, en son absence, de prendre contact avec M. Emmanuel RICHON, conservateur du *Blue Penny Museum* et archiviste des fonds anciens de la banque. Nous avons donc fait suivre notre questionnaire à ce dernier le 03/03/2011.<sup>32</sup>

Notre prise de contact téléphonique (environ vingt minutes, le 04/03/2011) avec M. Emmanuel RICHON aboutit à un refus clair et net de recevoir toute visite de notre part.

Dans ce contexte, nous avons préféré, en accord collégial avec nos supérieurs hiérarchiques de la *Truth and Justice Commission*, attendre le retour de M. Philippe FORGET. Nous avons, auparavant rédigé un compte-rendu de notre conversation avec M. Emmanuel RICHON<sup>33</sup> que nous lui avons adressé, avec mise en copie à M. Philippe FORGET.

Notre rencontre avec M. Philippe FORGET le 05/04/2011, brève mais courtoise, fut l'occasion de lui présenter notre mission et de lui remettre, comme prévu avec notre hiérarchie, les lettres de créance de la *Truth and Justice Commission*; cette visite ne fut malheureusement pas suivie d'effet et nous nous vîmes donc contraints de lui adresser un constat de carence, le 18/04/2011.<sup>34</sup>

### Approche historique

Sans minimiser l'importance des facteurs de détérioration externes<sup>35</sup> (climat, facteurs biologiques, etc.), nous souhaitons avant tout préciser les facteurs *fonctionnels* et *humains* expliquant l'état actuel des documents anciens dans l'île.

## 2 ÉPOQUE COLONIALE

L'enquête menée dans les principales institutions de conservation de documents anciens de la République de Maurice, ainsi que nos lectures sur l'histoire et la conservation des documents mauriciens, mettent en relief le caractère précaire, car constamment menacé, du patrimoine documentaire mauricien, et ce dès ses origines.

### 2.1 Archives: éclipses à répétition

Auguste TOUSSAINT,<sup>36</sup> l'archiviste infatigable de l'île Maurice entre 1941 et 1971, a retracé les vicissitudes des archives publiques de la colonie de façon aussi précise que possible, vu les dispersions auxquelles elles ont été soumises.

La synthèse que nous pouvons tirer de son ouvrage,<sup>37</sup> qui a le grand mérite d'associer les archives à leurs institutions d'origine,<sup>38</sup> est la suivante.

#### 2.1.1 Période française

##### 2.1.1.1 Compagnie des Indes

Des archives de la Seconde Compagnie des Indes Orientales (1719-1763), il ne reste quasiment rien et ce qui subsiste se trouve dans les archives françaises: les administrateurs repartaient souvent en Métropole avec des documents afin d'aider à leur avancement et de plaider leur action. L'archivage des documents d'administration locale ne faisait pas l'objet d'une fonction bien définie, étant assuré par le Greffier du Conseil Provincial (1734 - devient Conseil Supérieur en 1734, déplacé à l'île de France en 1735).

##### 2.1.1.2 Rétablissement de l'autorité du Roi de France

Une fois l'autorité du Roi de France établie après la dissolution de la Seconde Compagnie des Indes Orientales, l'île de France acquiert plus d'importance comme siège du pouvoir colonial dans les Mascareignes et au-delà (1775 - Administration des Comptoirs de l'Inde durant la Guerre d'Indépendance américaine; 1785 - Chef-lieu de tous les établissements français au delà du Cap de Bonne Espérance, ce qu'elle demeure jusqu'en 1810).

Parallèlement, par une Ordonnance sur le Gouvernement civil des Mascareignes de septembre 1766, son administration est partagée entre un Gouverneur, à la tête de l'administration militaire et un Intendant à la tête de l'administration civile et de la justice. Le principe de gestion constant des archives publiques est alors celui de la conservation dans les greffes de leurs administrations respectives.

Une administration locale se développe également à l'île de France (1753 - La Commune, embryon d'administration locale; 1762 - Syndics de quartiers).

Le création à Versailles (France) du Dépôt des Chartes des colonies<sup>39</sup> auprès du bureau des Archives de la Marine et des Colonies (édit royal de juin 1766) modifie quelque peu la gestion et la conservation des actes officiels : l'administration locale a désormais l'obligation d'y faire déposer les actes civils et administratifs principaux (état-civil, arrêts et jugements des tribunaux coloniaux, actes notariés, hypothèques, etc.). Le Dépôt des Chartes des Colonies délivre des copies d'actes aux intéressés, sur présentation de justificatifs.

##### 2.1.1.3 Révolution et Empire

La période de la Révolution et de l'Empire fait entrer les archives publiques de l'île dans une défaillance dont elles ne sortiront réellement qu'à la fin du 19<sup>e</sup> s. Les facteurs de dissociation sont les suivants:

- L'établissement de l'Assemblée Coloniale aboutit à la nomination d'un Secrétaire-archiviste en son sein (avril 1790) : dorénavant, les archives publiques sont éclatées entre: le Secrétaire-archiviste (administration intérieure), l'Intendance (administration extérieure) et les greffes des cours de justice (archives judiciaires et d'état-civil).

- Le Consulat rétablit peu ou prou la situation antérieure et abolit les institutions républicaines (1803). Un Gouverneur est en charge de l'administration militaire, un Préfet colonial de l'administration intérieure et un Commissaire de Justice de la justice. Toutes les archives de l'Assemblée Coloniale sont versées en vrac dans les bureaux du Préfet colonial qui hérite également d'archives administratives disparates.
- Au moment de la prise de l'île par les Britanniques, la division des fonds est à son comble: archives administratives et des assemblées auprès du Préfet colonial; archives judiciaires aux Greffes des cours; archives administratives locales auprès des Commissaires civils (qui ont succédé aux Municipalités).

Cette dissociation administrative, les transferts répétés de fonds d'archives entre services très souvent refondus, les difficultés de la navigation maritime (Blocus britannique) qui empêchent de fait la copie des actes en double et, donc, leur conservation en Métropole, les priorités du moment (la guerre contre les Britanniques) occasionnent de grands dommages.

### 2.1.2 Période britannique

La transition de l'administration française à celle du vainqueur britannique fut également dommageable aux archives publiques:

- Lors de son départ de la colonie (1810), le Gouverneur français DECAEN avait extrait de nombreux documents des archives administratives pour pouvoir rendre des comptes à son administration de tutelle, la Marine. Ils sont désormais conservés dans un fonds privé de la Bibliothèque de Caen (France).<sup>40</sup>
- DECAEN confie le reste des archives de son administration à un Commissaire à la Marine, M. MARROU, qui les entrepose sur sa propriété agricole de l'île Maurice. Cette situation dérogatoire dure près de cinq ans puisque les Britanniques ne nomment le Baron d'UNIENVILLE comme Archiviste colonial, qu'en mai 1815. Ce dernier n'a aucune compétence particulière en matière d'archives et sa fonction principale est de compiler les statistiques de la colonie.<sup>41</sup> Sa charge est abolie en 1833.
- À son départ, en 1817, le Gouverneur britannique FARQUHAR démembre les archives de la colonie à des fins personnelles (défense de son action à Maurice) et géopolitiques (renseignements sur Madagascar de nature à faciliter sa conquête par les Britanniques). Ces fonds sont depuis conservés à la British Library (Londres).<sup>42</sup>
- Auguste TOUSSAINT insiste sur la continuité administrative entre Français et Britanniques, notamment du point de vue des hommes en place et de la langue; on assiste pourtant, selon lui, à partir de 1833, à un véritable désastre archivistique: il faudra attendre 1893 et la restauration de la charge d'Archiviste colonial pour que la tendance s'inverse quelque peu.

Des déprédations irrémédiables ont alors été commises: la Commission des archives (établie en 1880) a procédé à de nombreuses épurations dans les fonds de l'époque française; ce qui en subsistait a été agrégé en collections arbitraires,<sup>43</sup> moyennant de nouvelles épurations, puis dissocié de tout contexte et relié en volumes par les condamnés des Prisons de Port-Louis.

À dater de la loi de 1893, les Archives recréées héritent de fonctions et de fonds supplémentaires, notamment, en 1893, du Dépôt légal des livres.<sup>44</sup>

### 2.1.3 Œuvre d'Auguste TOUSSAINT (1941-1971)

Le plus important travail d'inventaire sur les fonds des archives et des bibliothèques<sup>45</sup> de l'île Maurice a été accompli par Auguste TOUSSAINT (1911-1987), infatigable Directeur de la Bibliothèque Carnegie (1932-1941), puis des Archives nationales de Maurice de (1941-1971). Il en est de même de l'armature érudite ou scientifique en matière historique dans la région des Mascareignes (fondation de l'Association Historique Internationale de l'Océan Indien - AHIOI en 1960) et de son travail sur les routes maritimes à l'époque française.

Nous sommes, pourtant, bien en peine de trouver sa biographie et le détail de l'œuvre qu'il a accomplie. Tentons donc, hors de sa bibliographie,<sup>46</sup> une évaluation de son rôle pour le patrimoine documentaire mauricien.

Ce qui est clair, c'est qu'il envisagea toujours la protection du patrimoine documentaire comme un tout indissociable, ce qui était fonctionnellement conforme à sa charge: les Archives nationales étaient dépositaires du dépôt légal des livres depuis 1893 (donc de la plupart des *Mauritiana*), recevaient des dons privés, conservaient de nombreux journaux anciens, etc. Dans un rapport<sup>47</sup> rédigé en 1959 avec trois autres bibliothécaires, Auguste TOUSSAINT appelait à la création d'une Bibliothèque nationale à partir des fonds du *Mauritius Institute*, à l'établissement d'un organisme national supervisant toutes les bibliothèques et au développement conjoint d'une association professionnelle assurant la formation de ses membres. Ce rapport resta lettre morte.<sup>48</sup>

S'agissant des archives, voici le travail visionnaire dont nous pouvons créditer Auguste TOUSSAINT:

- 1942 - Dépôt des archives des Greffes des cours de justice.
- 1952 - Ordonnance sur les Archives nationales<sup>49</sup> - Extension du dépôt légal aux périodiques.
- 1954 - En accord avec Yves PÉROTIN, alors Directeur des Archives Départementales de La Réunion, projet d'inventaires parallèles, selon un découpage chronologique synchrone.
- 1955 - Dépôt des fonds notariaux (minutes notariales et répertoires).
- c. 1960 - Versement des premiers registres paroissiaux provenant de l'état-civil (*Civil Status Office*).
- c. 1960 - Microfilmage, avec l'aide de la France, des fonds de la période française.<sup>50</sup> Photocopies et photostats.
- c. 1965 - Abandon du projet d'inventaires parallèles avec les Archives départementales de La Réunion, faute de crédits et de personnel;<sup>51</sup> déliassage fastidieux des volumes constitués au cours du 19<sup>e</sup> s. par les prisonniers et tentative de reconstitution des fonds selon leur administration émettrice.

Le travail d'Auguste TOUSSAINT est toujours présent, bien qu'à l'état dégradé, dans l'organisation actuelle des Archives nationales de Maurice, en particulier dans le lettrage des séries (qui diffère du système de classification français en deux lettres) et dans la mise en valeur de la continuité entre les deux administrations coloniales française et britannique (alors qu'à La Réunion les inventaires sont différenciés selon le pouvoir colonial en exercice).

Les critiques que l'on peut apporter à l'œuvre d'Auguste TOUSSAINT sont de plusieurs ordres:

1. Une orientation idéologique, sensible dans certains de ses livres publiés à Maurice,<sup>52</sup> au début de sa carrière du moins.
2. La constitution d'un *Musée des archives* par extraction de certaines archives de l'époque française (ce qui, somme toute, n'est pas trop critiquable étant donné le caractère déjà démembré des fonds depuis le 19<sup>e</sup> s.).
3. Surtout, étant donné la polarisation de ses intérêts d'historien pour la période française de l'île Maurice, un certain désintérêt pour les archives de la colonie à l'époque britannique, conservées depuis son mandat dans un dépôt humide à Vacoas.

## 2.2 Livres : Bibliothèques d'érudits locaux

### 2.2.1 Une colonie de lettrés et d'érudits

L'importance du patrimoine imprimé mauricien a été beaucoup et précocement vantée.<sup>53</sup> l'île est équipée dès 1767 d'une imprimerie autonome<sup>54</sup> et dotée dès la période française d'une presse périodique jugée exemplaire par sa précocité puis par sa liberté de ton à l'époque britannique.<sup>55</sup> Elle est aussi le siège d'une certaine activité littéraire dès la fin de la période française, en Français puis en Créole.<sup>56</sup> Les loisirs dont jouissent les élites francophones, une tradition frondeuse de sociétés savantes ou littéraires et leur ardent militantisme politico-linguistique<sup>57</sup> expliquent l'importance des bibliothèques privées et des cabinets de lecture dans l'île.

Nous avons pu étudier,<sup>58</sup> grâce aux registres de comptes conservés dans les archives privées de l'habitation Labourdonnais, quelques achats de livres reliés à une librairie française (1858). Malgré le caractère très partiel de cette commande du maître de céans, Christian William WIEHE, on est frappé par la variété de ses intérêts, par l'actualité de ses lectures et surtout par l'abondance des ouvrages commandés - et encore ne s'agit-il que de l'une des deux langues parlées par Christian WIEHE.<sup>59</sup>

En droite ligne de l'érudition historique européenne, on assiste à la constitution de recueils de textes historiques relatifs aux Mascareignes par des érudits locaux,<sup>60</sup> qui profitent de leurs voyages pour compiler des documents se trouvant dans les archives et bibliothèques des Métropoles. Un mouvement d'érudits bibliographes est également constaté au tournant du 20<sup>e</sup> s.

## 2.2.2 Bibliothèques patrimoniales issues de fonds privés

### 2.2.2.1 Mauritius Institute (Port-Louis)

Le *Mauritius Institute*, dont l'histoire est d'abord celle d'un Muséum d'Histoire Naturelle<sup>61</sup> créé par quelques membres fondateurs de la Société des Arts et Sciences, Charles TELFAIR, Louis BOUTON et Julien DESJARDINS, reçut en héritage plusieurs collections et bibliothèques, dont celle d'Adrien D'EPINAY. Initialement ouverts au Collège Royal et uniquement réservés aux membres de la Société Royale des Arts et Sciences, le musée et sa bibliothèque vivaient faute de moyens avant que le Gouverneur Sir Arthur PAYRE n'accède à une demande de la Société Royale (1878) d'étendre les objectifs du Musée et d'en faire une institution librement accessible au public. Une Ordonnance (1880) établit l'institution, le terrain est promptement réquisitionné à Port-Louis, le bâtiment inauguré (décembre 1884) et les ouvrages de la bibliothèque transférés en janvier 1885. La bibliothèque n'ouvrit cependant au public qu'en 1901, après avoir reçu en don les 9,000 ouvrages de la bibliothèque de l'avocat et politicien mauricien Sir Virgil NAZ.

Anthony CHEKE<sup>62</sup> raconte la triste décadence du *Mauritius Institute* à la fin du 20<sup>e</sup> s.: la cause principale en fut que le Gouvernement Colonial déposséda<sup>63</sup> le Conseil d'administration du *Mauritius Institute*, jusque-là indépendant, de la capacité de nommer le Directeur, le Bibliothécaire et le Conservateur de l'institution.

### 2.2.2.2 Bibliothèque Carnegie (Curepipe)

La Bibliothèque Carnegie<sup>64</sup> de Curepipe, second véritable exemple de bibliothèque publique conservant un riche patrimoine documentaire créé dans l'île,<sup>65</sup> est le résultat d'un don de la Fondation Andrew Carnegie.<sup>66</sup>

Les conditions statutaires mises au développement d'une Bibliothèque Carnegie étaient que la Municipalité démontre son utilité, fournisse gracieusement le site, procure annuellement au moins 10% du coût de sa construction pour en assurer l'entretien et assure un service gratuit à tous ses lecteurs. Une pétition, initiative d'un simple citoyen, Ross BAIN, rallia 117 habitants de Curepipe, donnant lieu à un versement de 1,800 £ (soit \$ 9,000 US) de la part de la Fondation Carnegie et au vote, par le Conseil Municipal de Curepipe, d'une dotation annuelle de 2,000 Rs; la première pierre fut posée en juin 1917 et la bibliothèque, bâtie selon un cahier des charges strictement codifié par la Fondation, fut inaugurée en janvier 1920.

Curepipe, ville nouvelle peuplée de la population fortunée ayant fui Port-Louis après l'épidémie de malaria de 1867<sup>67</sup> recelait plusieurs gisements de bibliophilie et d'érudition. Les donations<sup>68</sup> affluèrent, quelques achats furent accomplis<sup>69</sup>, base du fonds de *Mauritiana* de la Bibliothèque Carnegie (lui octroyant une spécialisation sur l'histoire de l'esclavage, de Maurice et de Madagascar).

Malgré quelques hésitations sur le mode de catalogage des ouvrages et les ravages d'un cyclone<sup>70</sup> qui affectèrent le fonctionnement de la bibliothèque, l'essayiste et historien de la littérature Camille de RAUVILLE<sup>71</sup> (en charge entre 1964 et 1974) lui donna une ampleur nouvelle, adopta la classification décimale Dewey et étendit les espaces de stockage disponibles.

### 3 APRES L'INDEPENDANCE (1968-)

L'insularité de Maurice et la fierté d'avoir surmonté bien des obstacles dans l'histoire récente donnent lieu à un discours auto-louangeur: la liberté d'une presse périodique vantée pour son impartialité, le niveau d'éducation, la qualité de l'accueil, la prospérité du pays sont souvent mis en avant. Maurice est ainsi «le bon élève de l'Afrique».

En est-il de même pour la conservation de son patrimoine documentaire?

Penchons-nous sur quelques exemples significatifs d'atteintes au patrimoine depuis l'Indépendance du pays.

#### 3.1 Archives privées démantelées

Nous traiterons, dans un prochain chapitre,<sup>72</sup> du cas des Archives nationales, que nous avons visitées. Évoquons maintenant les mouvements qui affectent les archives en mains privées.

Les archives privées de Maurice sont dans une situation critique: la polarisation de la plupart des «historiens»<sup>73</sup> locaux pour la généalogie de leurs ancêtres d'origine française explique que, faute de véritable intérêt, des pans entiers de l'historiographie ne puissent dorénavant plus être étudiés à Maurice, une fois anéantis les fonds d'archives requis pour leur étude: registres d'esclaves ou d'engagés, archives industrielles, archives des compagnies sucrières et des banques, archives photographiques, etc.

La propension actuelle des familles mauriciennes à démembrer leurs fonds familiaux est, à ce titre, alarmante : ces derniers recèlent souvent des documents publics ou des exemplaires uniques de documents d'intérêt national.<sup>74</sup>

Cette dilapidation est, semble-t-il, coutumière et a connu des précédents, notamment dans le domaine des archives photographiques, détruites en abondance dans les années 1980-2000.<sup>75</sup>

##### 3.1.1 Démembrement du Fonds LECLÉZIO (2010)

Le cas tout récent (second semestre 2010) de la dispersion des archives LECLÉZIO nous paraît un exemple de ce qui devra être dorénavant évité.

Plusieurs membres de la famille LECLÉZIO (notamment Mme Clotilde BAISSAC DE BOUCHERVILLE,<sup>76</sup> née LECLÉZIO), contactèrent Mme Nelly ARDILL, Présidente en exercice de SOS Patrimoine en Péril<sup>77</sup>, pour qu'elle les aide à vendre les archives de sa famille, dont elle était dépositaire.

Les cinq boîtes, constituant un fonds d'archives cohérent et construit sur plusieurs générations, contenaient des documents de valeur historique et patrimoniale majeure, notamment sur la prise de l'île par les Britanniques en 1810: ce fonds incluait les papiers du Procureur Général Nicolas FOISY, personnage ayant joué un rôle de premier plan dans la reddition de 1810.<sup>78</sup>

Nous connaissons le contenu de la boîte acquise par M. Didier MERLE, qui nous en a aimablement communiqué l'inventaire.<sup>79</sup> Tel que nous pouvons le reconstituer, le fonds d'archives complet comprenait:

- les papiers du Procureur Général Nicolas FOISY : papiers personnels, histoire de l'île de France (manuscrit inédit);
- la série, qui semble complète pour la fin du 18<sup>e</sup> s., des *Annonces des îles*;<sup>80</sup>
- d'autres séries de périodiques rares de la période française;
- les papiers de Sir Eugène LECLÉZIO, Chef-Juge;
- les archives assez complètes de la sucrerie de Mapou avec notamment plusieurs registres d'engagisme, c. 1848;
- des livres de tenue de compte relatifs au commerce maritime c. 1820;
- des actes officiels de la Colonie sous la Révolution française.

Ce fonds d'archives ne fut pas préalablement proposé aux Archives nationales de Maurice,<sup>81</sup> ni soumis aux services du Ministère des Arts et de la Culture qui auraient sans doute pu prendre des mesures conservatoires<sup>82</sup> si des moyens financiers avaient été débloqués pour cela.

Mme Nelly ARDILL, Présidente de SOS Patrimoine en Pêril, procéda aux médiations nécessaires et exposa ces archives à la vente à l'occasion d'au moins une «foire aux vieux papiers»: la MCB se montra intéressée et acquit quatre boîtes d'archives sur les cinq.

Cette opération nous paraît singulièrement critiquable d'un double point de vue archivistique et patrimonial :

- la règle essentielle de la conservation de l'unité du fonds d'archives<sup>83</sup> ne fut pas respectée puisque les cinq boîtes, qui constituaient initialement un fonds homogène, furent démembrées (quatre à la MCB, une à M. Didier MERLE, divers documents extraits à d'autres acquéreurs institutionnels, dont l'*Aapravasi Ghat Trust Fund*);<sup>84</sup> à notre connaissance, aucun inventaire global ne semble non plus avoir été réalisé, ni aucune numérisation de sauvetage, même partielle ;
- la politique de la MCB en matière d'archives étant inconnue, rien ne s'oppose à ce que la part du fonds LECLÉZIO qu'elle a acquise soit à son tour revendue, en tout ou partie, donc de nouveau démembrée;
- M. Didier MERLE, a acquis la cinquième boîte et l'a partagée avec un co-acquéreur, M. Damien MAMET, selon un processus parfaitement aléatoire (de type «distribution de cartes à jouer»), aboutissant à la division de séries de périodiques anciens jusque-là cohérentes (d'où une nouvelle déperdition de la valeur historique et documentaire du fonds);
- c'est Mme Nelly ARDILL, Présidente d'une association de défense du patrimoine mauricien qui s'est prêtée à l'opération, en tant qu'intermédiaire; cela dénote, *a minima*, de l'incompréhension quant aux enjeux essentiels de la protection du patrimoine.

### 3.1.2 Dispersion d'une série de Vèle KADRESSEN<sup>85</sup> (2011)

Un brocanteur français installé en 2010 à l'île Maurice, M. Jean-Baptiste URBINI,<sup>86</sup> nous a contactés en janvier 2011; lors de notre prise de contact, il nous a déclaré avoir acheté une série complète et constituant un fonds cohérent (négatifs et tirages), au photographe de presse mauricien Vèle KADRESSEN<sup>87</sup> (né en 1932).

Il s'agissait de plusieurs séries de clichés «couvrant» les émeutes raciales survenues à Maurice en 1968<sup>88</sup> avec notamment: l'intervention des troupes britanniques (hélicoptère, troupes, armes saisies aux manifestants), la présence de figures historiques de Maurice (Gaëtan DUVAL), les barricades, les manifestants, etc.

M. URBINI nous a déclaré avoir cédé à un particulier britannique la plus grande partie du fonds et avoir gardé pour lui un certain nombre de clichés intéressants «pour leur valeur esthétique». Il semble avoir fait réaliser un tirage complet de la série, que nous avons vu exposé récemment (mars 2011) chez un antiquaire de Curepipe.

Il s'agit également d'un cas de démembrement de fonds d'intérêt historique national, ces événements restant méconnus et n'ayant reçu que fort peu d'échos dans la presse mauricienne, moins encore internationale.

M. KADRESSEN déclarait, dans son interview au *Matinal* de 2007, détenir encore plus de 100,000 négatifs. Il serait essentiel d'envisager leur conservation et leur indexation en compagnie de leur auteur en dégageant un financement suffisant pour ce faire.

## 3.2 Bibliothèques : désastres et sauvetages

---

Des bibliothèques privées évoquées ci-dessus, il ne reste aujourd'hui que des lambeaux épars: les détériorations du climat, de l'humidité et des insectes certes l'expliquent, mais plus encore le jeu des partages successoraux et le manque d'intérêt constant de leurs propriétaires, qu'il s'agisse de particuliers ou d'institutions.

### 3.2.1 Mauritius Institute

#### 3.2.1.1 Désastre patrimonial annoncé

Depuis la veille de l'Indépendance, la situation institutionnelle du *Mauritius Institute* était devenue intenable, le Gouvernement ayant retiré à la Société Royale des Arts et Sciences la nomination du Directeur et de ses deux Conservateurs spécialisés (musée et bibliothèque). Malgré les appels au secours du Directeur, le Botaniste sri-lankais, Deva D. TIRVENGADUM,<sup>89</sup> avant son départ vers le Muséum d'Histoire Naturelle de Paris, le *board* ne sut lui trouver de successeur.

#### 3.2.1.2 Transferts de sauvetage au MSIRI

En 1982, constatant l'incurie des responsables de la bibliothèque et les vols qui y étaient perpétrés, la Société Royale des Arts et Sciences décida de retirer de la garde du *Mauritius Institute* la totalité des ouvrages de sa collection pour les verser dans le fonds de la bibliothèque du MSIRI,<sup>90</sup> à Réduit, dans de meilleures conditions de conservation.

On y trouve notamment les papiers Doyen :<sup>91</sup> ce fonds est issu de recherches dans les archives locales avant leur «réorganisation» en volumes arbitraires, ce qui en fait un témoignage archivistique crucial. Dans les dernières années, la Société Royale des Arts et Sciences, sous l'impulsion de Jean-Alain LALOUETTE et de la bibliothécaire du MSIRI, Rosemay NG KEE KWONG, a achevé sa numérisation intégrale et a engagé sa retranscription.

### 3.2.2 Vols à Carnegie

Dans un article<sup>92</sup> retentissant paru dans le journal *Week-end* en avril 2006, la romancière et journaliste Shenaz PATEL «mettait les pieds dans le plat» en dénonçant, comme principal obstacle à la défense du patrimoine des livres à Maurice, l'incurie du Gouvernement mauricien lui-même.

Elle développait particulièrement le cas de la Bibliothèque Carnegie, dont les fonds anciens attiraient toujours les convoitises:

*«De nombreux collectionneurs peuvent en attester: on peut trouver, à l'étranger, des livres mauriciens que des collectionneurs de livres anciens s'arrachent à prix d'or. Des mines d'informations sur le passé et la vie de notre île, dont nous sommes, nous Mauriciens, privés.»*

*Des personnes travaillant pour des collectionneurs attestent par exemple avoir pu voir récemment, dans une bibliothèque publique à La Réunion, des ouvrages uniques portant encore le sceau de la bibliothèque Carnegie de Curepipe.»*

La presse s'empara de l'affaire et mena son enquête<sup>93</sup> avec l'aide bienveillante de Belinda RAMNAUTH, la bibliothécaire de Carnegie.<sup>94</sup> En 1972, trois ouvrages disparus étaient de grande valeur historique et bibliophile.<sup>95</sup> Nous n'avons pas trouvé, dans la presse mauricienne, trace ultérieure de récupération de ces trois ouvrages.

### 3.2.3 *Mauritiana* d'Outre-Mer

La presse locale se fait souvent l'écho - bien piètre consolation à l'incurie régnant dans les organismes de conservation - de Mauriciens ou d'étrangers attentifs, outre-mer, à la sauvegarde du patrimoine national mauricien.

#### 3.2.3.1 Exil des *Mauritiana* d'André de CHAPUISET LE MERLE

Cas extrême de «sauvetage» puisqu'elle fut entièrement exportée hors de Maurice, la bibliothèque d'André de CHAPUISET LE MERLE (1898-1966) fut cédée à la *National Library of Australia* (NLA) en 1968,<sup>96</sup> où elle est maintenant conservée dans des conditions optimales, cataloguée<sup>97</sup> et en voie de numérisation.

Cette collection de 4,500 items environ fut constituée au cours de sa vie par cet érudit mauricien<sup>98</sup> et comprend des documents variés (livres, cartes, timbres, numismatique, etc.), des éditions rares (notamment des poètes Robert-Édward HART et Malcolm de CHAZAL) et quelques manuscrits té-

moins des débuts de la littérature francophone dans l'Océan Indien (Barthélemy HUET DE FROBERVILLE). Le désir de ce collectionneur était que ce fonds lui survive en étant correctement conservé et même étendu; et, s'il devait être vendu, qu'il le soit de préférence à un membre de sa famille également bibliophile, aux Archives nationales de Maurice (alors dirigées par Auguste TOUSSAINT) ou à la Société Royale des Arts et Sciences (dont les collections alors déposées au *Mauritius Institute* contenaient des fonds érudits).

Après sa mort, le fonds fut proposé à l'Université de Maurice alors naissante qui ne donna pas suite. C'est le marchand de livres anciens d'Oxford (Grande-Bretagne) EM LAWSON and Company<sup>99</sup> qui se chargea de la transaction de vente à la NLA, à un moment où l'immigration mauricienne vers l'Australie était importante.<sup>100</sup>

### 3.2.3.2 Larry BOWMAN

Un universitaire états-unien à la retraite, Larry BOWMAN,<sup>101</sup> ancien Directeur du Département d'Études africaines contemporaines à l'Université du Connecticut, avait acquis, au cours de sa carrière, une belle bibliothèque sur la région de l'Océan Indien et particulièrement sur Maurice (1,300 titres).

Désireux de vendre sa collection, il l'avait inventoriée et présentée sur son propre site Web. L'université de New-York (NYU), acquit la totalité de la collection, moins 300 livres en doublon.

Il était initialement dans l'intention de Larry BOWMAN de céder toute, ou partie, de sa bibliothèque à des institutions de conservation mauriciennes; mais des questions de logistique, la crainte de complications lors de la transaction et celle de voir ces ouvrages moins bien conservés l'en dissuadèrent.<sup>102</sup>

### 3.2.3.3 Richard LESAGE

Un bibliothécaire d'origine mauricienne travaillant à la *Widener Library* (Université de Harvard), Richard LESAGE,<sup>103</sup> est particulièrement chargé de la numérisation des fonds de son établissement. Son espoir est de pouvoir numériser un jour les documents relatifs à Maurice (50 ouvrages de la collection de sa bibliothèque l'ont déjà été par Google) mais surtout la totalité des archives du pays - ce qui serait impraticable sans l'aide d'organisations ou de grandes firmes internationales.<sup>104</sup>

## 4 VISITES

Commençons par résumer les résultats de notre enquête pour chaque établissement visité, tentons en une première synthèse et décrivons leur évolution récente.

### 4.1 Archives nationales (Coromandel)

Date(s) et lieu(x) de visite	01/03/2011, Bâtiment des Archives nationales (Zone industrielle de Coromandel)
Personnes rencontrées	<ul style="list-style-type: none"> <li>• M. Roland CHUNG SAM WAN, <i>Officer in charge</i></li> <li>• Mme Razeeah DOOKHAN, Conservatrice</li> <li>• Mme Diana BABLEE, Responsable de la numérisation</li> <li>• Mme Lata TEKA, <i>Records Officer</i> chargée de la numérisation</li> </ul>
Questionnaire rempli?	Oui mais refus de le signer: à ce jour, le questionnaire, pourtant rempli collégialement et dans le respect des débats, n'est revêtu de la signature d'aucune des personnes interrogées.
Documents complémentaires confiés?	Non
Questions complémentaires posées - Réponses apportées	<ul style="list-style-type: none"> <li>• Oui : <ul style="list-style-type: none"> <li>◦ Lois sur les Archives (1893 et 1999);</li> <li>◦ Contrat de numérisation avec l'entreprise privée DCDM; documents techniques sur la numérisation; détail du matériel informatique;</li> <li>◦ Budgets, fréquentation du public;</li> <li>◦ Détail de la qualification du personnel;</li> </ul> </li> <li>• Non: Aucune réponse malgré relances.</li> </ul>

#### 4.1.1 Compte-rendu de visite

Nous avons été reçu par le Directeur intérimaire, M. CHUNG SAM WAN, et le personnel d'encadrement des Archives nationales au complet et avons pu constater combien il était soucieux d'offrir, avec son équipe, un discours cohérent et sans aspérités à ses visiteurs.

Malgré nos demandes, les personnes rencontrées n'ont pas désiré signer le questionnaire, comme cela est pourtant prévu; nous avons accepté de le leur photocopier, une fois rempli.<sup>105</sup> Nous n'avons pas non plus reçu de réponse à nos demandes de renseignements complémentaires, malgré deux relances et un appel direct à Mme Diana BABLEE, qui nous a conseillé de nous en référer exclusivement à M. CHUNG SAM WAN.

##### 4.1.1.1 Encadrement des Archives nationales - Qualifications

Le corps de direction des Archives nationales est constitué d'un 'Deputy Director' intérimaire,<sup>106</sup> et de trois cadres dont les postes correspondent à des secteurs différents:

- Une conservatrice (depuis 2007), est en charge des fonds anciens;
- Records Management, des fonds contemporains et des documents électroniques ;
- Une archiviste en charge de la numérisation.

##### 4.1.1.2 Lieux de conservation

Le bâtiment principal des Archives nationales, une ancienne usine, se trouve dans la zone industrielle de Coromandel, en retrait d'une route très fréquentée, polluée et bruyante. Il est immédiatement environné:

- d'une boîte de nuit (qui fait des essais de sonorisation en pleine journée et qui a déjà pris feu);
- d'un entrepôt de matériaux de construction où sont conservés des produits inflammables (solvants, matériaux de revêtement, etc.);
- d'une usine de peinture et, plus généralement, d'industries très polluantes,<sup>107</sup> en sus de la pollution automobile ;
- Récemment encore, des *pétards* et des *feux d'artifice* étaient entreposés à l'étage supérieur de celui des Archives nationales.

Les deux niveaux occupés par les Archives nationales, très hauts de plafond, ne sont pas climatisés, mais simplement ventilés par des claustras qui laissent passer la pollution, la poussière et une part de la lumière et de la chaleur extérieures. Les magasins, situés principalement au premier étage (la salle de lecture et les ateliers techniques se trouvent au rez-de-chaussée), sont donc en prise directe avec les agressions extérieures; y sont conservés: 150,000 documents sur 3 km linéaires en 2010, soit une situation de saturation puisque 98% des réserves sont occupés. Il est question que les Archives nationales louent le 2<sup>e</sup> étage du bâtiment, actuellement inoccupé.

Les documents sont entreposés sur des rayonnages métalliques à claire-voie qui paraissent solides. Ils sont le plus souvent conditionnés dans des chemises ou des boîtes qui semblent en bon état. Les minutes notariales ont conservé, pour une part, leur emballage d'origine.

Les experts étrangers successifs, notamment Claire DEKLE<sup>108</sup> (États-Unis, octobre 2010) et Hervé CHÉRADAME<sup>109</sup> (France, janvier 2011), ont mis en relief la progression des agents biologiques menaçant les documents des Archives nationales.

Or, selon le 'Deputy Director', par interim, 1% seulement des documents est actuellement touché, notamment au Minutier des notaires, l'état de conservation des autres documents allant de «très bon» (timbres, monnaies, actes notariés du 20<sup>e</sup> s.) à «moyen» (la plus grande partie des fonds), en passant par «bon» (manuscrits, papiers désacidifiés).

Les Archives nationales disposent également d'un autre magasin de plus petite taille à Port-Louis, rue Bissoondoyal; y sont conservés, sous la responsabilité particulière de Mme TEKA, les *records* contemporains, soit: 20,000 pièces et 1 km linéaire évoluant annuellement à raison de 5,000 pièces et 100 m. linéaires. La plus grande partie de ces *records* a été transférée d'un dépôt situé dans le périmètre de la *Military Special Force* à Vacoas dans lequel les conditions de conservation étaient déplorables, du fait de l'humidité notamment.

#### 4.1.1.3 Variété des documents conservés

L'étendue des documents conservés aux Archives nationales est vaste. La diversité de ces types documentaires donne une complexité particulière à la mission des Archives nationales :

- documents administratifs des époques coloniales française et britannique (18<sup>e</sup> - 20<sup>e</sup> s.),
- documents administratifs contemporains, notamment des *records* sous forme de *listings* et de supports informatiques,
- minutes et registres notariaux,
- ouvrages imprimés entrés par dépôt légal, après 1999,<sup>110</sup>
- cartes en plans (dépôt légal),
- archives privées déposées à temps ou données,
- documents figurés (estampes, photographies, etc.), sceaux et numismatique (timbres, billets de banque, pièces de monnaies),
- documents audiovisuels (dépôt légal): films, enregistrements sonores.
- Les Archives nationales ont également reçu pour mission de collecter et conserver la mémoire orale mauricienne et de la diffuser, sous la forme de documentaires notamment, (atelier de réalisation documentaire intégré dirigé, jusque récemment, par M.KOREEMUN).

#### 4.1.1.4 Missions prévues au National Archive Act 2000

Le *National Archives Act 2000* prévoit pour les Archives nationales un certain nombre de missions, notamment :

- La collecte et la conservation<sup>111</sup> des archives publiques auprès des Ministères, services administratifs et corps para-étatiques: cette mission, assignée à Mme Lata TEKA, est ardue car certains grands corps de l'État mauricien ne se sentent nullement contraints par cet article de la loi.

Les archives publiques qui ont pu être collectées sont évaluées par un *Appraisal Committee*<sup>112</sup> chargé de donner ses directives d'épuration pour chaque fonds. Il est constitué de représentants des archives, d'historiens professionnels ou d'amateurs.

- La communication des archives au public:<sup>113</sup> selon la législation en vigueur, un délai de communication uniforme de 30 ans<sup>114</sup> est d'emblée appliqué aux archives publiques, même celles qui mettent en jeu la vie privée des citoyens.<sup>115</sup> Vu les difficultés à collecter les archives contemporaines, la question ne se pose, à dire vrai, même pas.<sup>116</sup> Un pouvoir discrétionnaire permet au responsable des Archives nationales de décider de ne pas communiquer des documents à un citoyen en faisant la demande, s'il les juge trop sensibles (*sensitive*).<sup>117</sup>
- L'inventaire<sup>118</sup> général des documents conservés à des fins de communication au public : il existe, selon le Directeur intérimaire, des inventaires manuscrits, imprimés ou dactylographiés depuis 1815. Ils ne sont consultables que dans la salle de lecture et pas encore informatisés (ni numérisés).

Certains inventaires spécialisés sont également tenus à jour : cartes et plans, *Special Materials* ;<sup>119</sup> des index provenant des services versants peuvent également aider aux recherches: lois et règlements, *Blue Books* (sous l'administration coloniale britannique), etc.

- le dépôt légal des livres et périodiques,<sup>120</sup> en un seul exemplaire depuis 1999 puisque la Bibliothèque nationale a récupéré le plus clair de cette prérogative et a obtenu le transfert dans ses fonds de la totalité des livres et périodiques jusque-là conservés aux Archives nationales au titre du dépôt légal: la collection conservée aux Archives nationales est donc complète depuis 1999 seulement.

#### 4.1.1.5 Restauration

La préservation<sup>121</sup> des documents conservés est une mission importante des Archives nationales : une *Conservation Unit* est prévue par la loi,<sup>122</sup> supervisée par Mme DOOKHAN et chargée de la « conservation préventive, de la restauration et de la conservation des contenus»; elle est établie au rez-de-chaussée des Archives nationales avec trois employés.<sup>123</sup> Elle dispose d'un matériel moderne que nous avons vu en état de marche:

- deux appareils de lamination par film plastique en grande largeur (la plus récente est un don de la République de Chine qui a également formé le personnel à cette technique de février à mai 2001) ;<sup>124</sup>
- une machine de comblage par repulpage (bain de cellulose permettant de reconstituer les lacunes du papier manquant) et ses claies de séchage ;
- des bancs de reliure et le matériel associé (massicot, etc.).

La lamination des documents anciens à chaud, que nous avons vu réaliser lors de notre visite est décrite dans la littérature spécialisée<sup>125</sup> et rejetée dans les établissements de conservation d'Occident depuis plus de *quinze ans* : il est donc surprenant qu'une technique de restauration non réversible et le plus souvent destructrice soit toujours employée aux Archives nationales de Maurice.

Il ne semble pas exister de procédure et les documents choisis sont ceux qui ont été signalés par le public, des institutions, etc.

#### 4.1.1.6 Microfilmage

La reproduction mécanique des documents, à laquelle un local est dédié au rez-de-chaussée du bâtiment (*Reprographic Unit*), fut entreprise dès l'époque d'Auguste TOUSSAINT (*photostats* dont la conservation est devenue précaire, clichés photographiques).

Le microfilmage, pour lequel un service particulier fut établi au début des années 1970, a notamment donné lieu aux actions suivantes:

- Dans les années 1960, première collaboration avec la France dans le microfilmage des fonds de la période coloniale. On ignore à Maurice où se trouvent les doubles offerts par la France.
- En 1972, la société ONE (Organisation Normale des Entreprises, directeur: M. Joseph Lucien MAUJEAN) fut chargée du microfilmage des actes d'état-civil de l'époque française.<sup>126</sup>
- Dans les années 1980, l'Église de Jésus-Christ des Saints des Derniers Jours (Mormons) a obtenu de pouvoir microfilmer les registres paroissiaux.
- En 1996, la France aide au microfilmage des documents de l'époque française;<sup>127</sup> ils sont conservés au CAOM d'Aix-en-Provence et seront disponibles en ligne au premier semestre 2012. On a perdu trace des doubles offerts à Maurice.
- En 2001, le rapport de l'Audit<sup>128</sup> pointait que, faute d'entretien et de local adéquat, le matériel de microfilmage était inopérant.

Il en était alors de même avec le matériel de reprographie.

Nous n'avons pu visiter le local de microfilmage ni constater l'état de fonctionnement des matériels.

#### 4.1.1.7 Numérisation - Conservation des documents numériques

##### A - Historique des numérisations

L'historique de la numérisation aux Archives nationales s'établit ainsi:

- Dès 2002, quelques essais de numérisation sont entrepris sur des cartes géographiques aux Archives nationales, provoquant l'intérêt de la presse locale<sup>129</sup> qui s'en fait largement l'écho.
- En 2008, à l'initiative d'un amateur mauricien de France féru de généalogie, Gérard-Yves HEERAMAN,<sup>130</sup> une formation est dispensée, par ses soins, à ses frais et sur son matériel, au personnel des Archives nationales. A son départ, il fait également don de son banc de numérisation étalonné mais peine à trouver des successeurs bénévoles sur place: son action reste donc lettre morte et seule une petite partie de l'état-civil est numérisée par M.HEERAMAN, dans une qualité photographique insuffisante, semble-t-il.
- En 2009, un service de numérisation a été établi aux Archives nationales, puis placé sous la responsabilité de Diana BABLEE.
- En 2011, grâce à l'intercession d'Alain GORDON-GENTIL, Conseiller auprès du Premier Ministre, une association privée de généalogistes mauriciens, le Centre de Généalogie Maurice-Rodrigues (CGMR), obtient le droit de procéder à des numérisations aux Archives nationales.<sup>131</sup>

##### B - Renseignements lacunaires

Nous n'avons pu obtenir des Archives nationales, malgré nos demandes :

- ni les spécifications techniques des opérations de numérisation en cours ; nous avons brièvement parlé avec l'opérateur de la Société TNT Document Services : la numérisation est effectuée sur un banc professionnel avec une définition de 300 DPI et donne lieu à des documents enregistrés au format JPEG.
- Ni les spécifications techniques du logiciel de gestion des documents une fois numérisés. Nous avons appris qu'il s'agit d'une base de données spécifique, construite autour du logiciel bureautique Microsoft Access par la Société de services informatiques DCDM et qu'elle comprend, pour chaque item numérisé : la cote du document et trois champs alphanumériques d'indexation libres et sans vocabulaire contrôlé.

- Ni le détail du contrat passé avec les deux prestataires de services en charge de la numérisation (DCDM et TNT Document Services), après appel d'offres, semble-t-il.

#### C - Spécifications insuffisantes

Nous sommes surpris de ces spécifications :

- la définition de la prise de vue est inférieure d'un quart à ce qui est généralement recommandé.<sup>132</sup>
- L'indexation de la notice est pauvre et l'absence de vocabulaire contrôlé pour les mots-clés constitue une lacune; il existe pourtant pléthore de documentations sur le sujet, notamment sur la norme de description des documents d'archives EAD,<sup>133</sup> plébiscitée par les services d'archives dans le monde et devenue le standard en la matière.
- L'existence de logiciels *Open Source* et librement disponibles<sup>134</sup> aurait dû dispenser les Archives nationales de faire réaliser un logiciel spécifique, dont le coût (développement - déploiement - maintenance) est prohibitif.
- La notion d'interopérabilité des catalogues a paru inconnue de nos interlocuteurs; en l'état, les indexations de documents numérisés ne pourront être échangées avec d'autres services d'archives qu'au prix de transformations *manuelles* fastidieuses. Il en va de même de leur publication croisée sur les catalogues en ligne, ce qui compromet leur utilité à court terme.

Nous avons évoqué auprès de nos interlocuteurs la conservation des archives numériques, que le projet d'*e-administration* (déployé et mis en place fin 2011) risque de faire affluer aux Archives nationales; ils ne semblent pas être conscients des enjeux techniques de cette situation inédite.

#### D - L'audit national de 2011

Le rapport de l'Audit national de la République de Maurice pour 2011<sup>135</sup> nous donne plusieurs précisions :

- sur le montant de l'opération (près de 18 Millions de Rs. dont près de 10 Millions étaient déjà engagés en décembre 2010 alors que le travail mis en regard est très insuffisant);
- sur les irrégularités de livraison et les lacunes dans le suivi du projet de la part des responsables des Archives nationales (notamment à propos du logiciel, livré avec 32 semaines de retard);
- et sur le retard considérable de la numérisation elle-même qui aurait dû être achevée en mai 2012 et ne le sera de toute évidence pas: 26% seulement des pages ont été numérisées.

Le rapport d'audit incite le Gouvernement à une action judiciaire contre la société attributaire du contrat et qui a, selon lui, failli à ses devoirs. La réponse du Ministre de la Culture semble aller dans le même sens.

#### 4.1.2 Quelques remarques

##### 4.1.2.1 Dégradation durable

L'état actuel des Archives nationales est le résultat d'une évolution inexorable et les voix n'ont pas manqué, dès les années 1980, pour appeler à un meilleur traitement de la mémoire du pays dans la presse, chez les intellectuels ou à la tribune de l'Assemblée nationale.<sup>136</sup>

#### A - L'audit national de 2001

En 2001, le National Audit Office émettait un rapport<sup>137</sup> cinglant sur les Archives nationales : il pointait les nombreux manquements à leur mission,<sup>138</sup> aux normes de conservation<sup>139</sup> et les retards mis à appliquer les règlements en vigueur.<sup>140</sup>

L'Audit décrivait lui aussi une situation préoccupante d'hémorragie du personnel, menaçant de rendre le service inefficace :

*13 posts, representing more than one-third of the establishment for the year 2000-01, were vacant as of December 2001. This could affect the smooth running of the NA.*

Depuis la dépossession d'une grande partie de leurs fonds (tous les imprimés et périodiques du dépôt légal) par la Bibliothèque nationale, en 1999-2000, les Archives nationales avaient, en effet, perdu beaucoup du prestige dont elles jouissaient sous Auguste TOUSSAINT, même si ce dernier estimait déjà, dans les années 50 ne pouvoir vraiment mener son action faute de crédits suffisants.<sup>141</sup>

## B - Suites en politique

Le rapport d'audit provoqua une prise de conscience nationale, avec un pic en 2001-2002 : dans une lettre-ouverte<sup>142</sup> abondamment relayée par la presse,<sup>143</sup> Lindsey COLLEN (membre du parti d'extrême-gauche Lalit) s'adressait à Motee RAMDASS (Ministre de la Culture) et dénonçait l'évolution déplorable de l'état des fonds du 18<sup>e</sup> s. aux Archives nationales (notamment celles de l'esclavage) et l'impossibilité de pouvoir écrire l'histoire politique, sociale et syndicale du pays au 20<sup>e</sup> s. faute de versements des administrations aux Archives nationales.

L'archiviste d'alors, M. Gheendut SUNECHUR, qui avait engagé dans la presse, dès sa nomination, une démarche pédagogique de longue haleine,<sup>144</sup> entreprenait alors d'expliquer son action à la tête du service, mettait en avant ses avancées technologiques ; il rassurait ainsi la presse<sup>145</sup> et le public.

### 4.1.2.2 Itinérance

L'histoire contemporaine des Archives nationales est marquée par l'itinérance, situation nocive pour tous les documents et signe, selon nous, d'un désintérêt persistant des autorités politiques.

- Depuis le 19<sup>e</sup> s., les Archives nationales se trouvaient au *Registrar Building* (emplacement actuel de l'*Emmanuel Anquetil Building*) ;
- Années 1970 : après la destruction de l'ancien *Registrar Building*, les Archives nationales sont éclatées en plusieurs localisations distinctes et leurs fonds dispersés selon leur date et leur origine : dans un bâtiment proche du *Cinéma Vénus*, dans un autre proche de *Neetoo Industries* (Coromandel), à l'*Hôtel Sunray* (Coromandel).

Les archives de la Cour Suprême sont, pour leur part, déposées aux Prisons de Port-Louis et les archives contemporaines dans le bâtiment de Vacoas déjà évoqué.

- 1983: déménagement dans le bâtiment actuel de Coromandel, ancienne usine qui appartient à la *Development Bank of Mauritius* (DBM).
- 1993: le Ministre de la Culture, Mookhesswar CHOONEE, annonce le déménagement imminent des archives dans les locaux désaffectés de l'ancienne prison pour délinquants juvéniles de Borstal;
- 1999: le Ministre Joseph TSANG MAN KIN évoque leur déménagement prochain à Réduit, dans le même bâtiment (à construire) que la Bibliothèque nationale: c'est le lancement du grand projet de *Culture House*, inscrit au budget du Gouvernement pendant vingt ans, mais jamais commencé.<sup>146</sup>
- 2010: le Ministre de l'Éducation nationale, Vasant BUNWAREE, annonce<sup>147</sup> que ses services ont trouvé un nouveau point de chute pour les Archives nationales, à Chebel (ancien bâtiment industriel de *BeachWear* propriété de la *State Investment Corporation*). Le déménagement serait imminent car le bail des locaux actuels de Coromandel arrive à expiration en avril 2010.
- 2011: le Directeur intérimaire des Archives nationales évoque devant nous l'extension probable de son service au 3<sup>e</sup> étage du bâtiment actuel.

- 2011: Yves CHAN KAM LON, ancien Directeur de la Bibliothèque nationale, croit, quant à lui, à un déménagement prochain des Archives nationales et de la Bibliothèque nationale dans des locaux uniques, ceux de la *Culture House*, à construire à Moka, selon ses propres plans.

#### 4.1.2.3 Lacunes

Une fois pointés la constance de ces mauvais traitements depuis quarante ans, nous restons aussi préoccupé de l'inexorable dégradation des compétences du personnel des Archives nationales : le savoir d'Auguste TOUSSAINT n'a guère fait souche dans son service et les Archives nationales, exaltées sous son mandat, sont ensuite passées au second plan derrière la Bibliothèque nationale (qui, beaucoup mieux médiatisée, attire les éléments les plus prometteurs et a constitué autour d'elle tout un «écosystème» de formations et d'organismes professionnels valorisants).

Or, l'effritement des compétences compromet l'efficacité du travail et la capacité de l'encadrement à anticiper les évolutions à venir, particulièrement pour les nouvelles technologies.

L'inadéquation du *National Archive Act* et la situation d'intérim prolongée à la tête des Archives nationales alimentent l'impuissance de ce grand service à s'imposer face aux politiques afin de leur réclamer, comme cela est stipulé dans la loi, le versement des fonds de leurs administrations.

Durable paraît donc la faiblesse de cette institution régaliennne, pourtant garante du droit des citoyens mauriciens à connaître leur passé et à mieux maîtriser la gestion de leur présent.

#### Bibliothèque Carnegie (Curepipe)

Date(s) et lieu(x) de visite	14/03/2011, Bibliothèque Carnegie (Curepipe): salle de lecture, bâtiments de la conservation, nouveau dépôt
Personnes rencontrées	Mme Belinda RAMNAUTH, Directrice et Conservatrice en chef
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Oui: Budget de la bibliothèque Livret sur l'histoire des bibliothèques municipales à Maurice (1969)
Questions complémentaires posées - Réponses apportées	Aucune

#### 4.1.3 Compte-rendu de visite

##### 4.1.3.1 Efficace gestion des fonds contemporains

La conservatrice de la Bibliothèque Carnegie de Curepipe, Mme Belinda RAMNAUTH, nous a très bien reçu et sa compétence en matière de bibliothéconomie,<sup>148</sup> la ténacité qu'elle démontre à la tête de son établissement depuis 1991, malgré bien des vicissitudes,<sup>149</sup> son humilité et son désir d'apprendre forcent le respect.

De fait, sous sa direction, la Bibliothèque Carnegie a complété ses collections (50,000 items), consolidé son excellente fréquentation,<sup>150</sup> obtenu l'appui des autorités locales (construction d'un dépôt additionnel à l'arrière du bâtiment, qui hébergera également les Archives municipales de Curepipe) et consolidé ses crédits à la hausse.

Une politique de coédition permet de valoriser les fonds historiques de la bibliothèque, ainsi que des expositions périodiques<sup>151</sup> ou diverses manifestations de «sports cérébraux» (quiz, concours d'élocution, etc.). De nouvelles sections ont été ouvertes: *American Corner* financé par l'Ambassade des États-Unis, Internet café, section Jeunes particulièrement bien fournie en ouvrages.

L'informatisation (logiciel australien AMLIB<sup>152</sup> depuis 2008, pas encore accessible aux lecteurs, ni sur Internet) et la numérisation (à partir de fin 2011, programme gouvernemental) paraissent en bonne voie. La sécurité des documents les plus précieux est assurée par des règlements internes<sup>153</sup> bien appliqués et des dérogations accordées sur avis de la Directrice, par la Municipalité uniquement.

#### 4.1.3.2 Difficultés pour les fonds anciens

La gestion des fonds anciens de la Bibliothèque Carnegie<sup>154</sup> semble occasionner plus de difficultés: Mme RAMNAUTH se sent moins bien outillée en cette matière,<sup>155</sup> évoque des conditions de conservation médiocres (manque d'espace, climatisation insuffisante, pas de service de restauration formé, humidité dans la salle de lecture) et appelle de ses vœux une institution centrale dispensatrice de compétences à Maurice («hôpital pour livres abîmés»).

De fait, nous avons pu constater lors de notre visite:

- que l'inventaire des collections patrimoniales de la bibliothèque n'a pas encore été informatisé, alors qu'il existe sous forme de fiches d'époque et de registres d'entrée (*Accession Book*).
- Que les conditions de conservation des livres anciens sont inadéquates:
  - ⤴ beaucoup d'ouvrages anciens de grande valeur<sup>156</sup> sont conservés à plat dans les armoires vitrées poussiéreuses de la coursive de la salle de lecture, sans climatisation ni dés-humidification.
  - ⤴ La collection des ouvrages concernant Madagascar a dû être déplacée pour permettre l'installation de l'*American Corner*: ils se trouvent maintenant en plein passage, dans la section enfantine de la bibliothèque.
- Que la hiérarchie de valeurs entre documents anciens de valeur et documents plus récents semble inadaptée :
  - ⤴ Des ouvrages tardifs, des transcriptions ou des compilations d'intérêt inégal (notamment les manuscrits de Saint-Elme LE DUC) sont conservés en sécurité dans le bureau de la Directrice, alors que d'autres devraient y figurer de préférence.
  - ⤴ Des reproductions de photographies anciennes sont confondues avec des originaux.
- Que la nouvelle aile offre des conditions de conservation inadéquates pour les archives anciennes de la Municipalité :
  - ⤴ Trop forte luminosité.
  - ⤴ Inondation quand la pluie est forte (c'était le cas lors de notre visite).
  - ⤴ Espace trop étroit pour contenir les archives tout entières, avec une organisation de l'espace très biscornue.

#### 4.1.4 Quelques remarques

Il est dommage de voir les capacités professionnelles et l'énergie de Mme RAMNAUTH achopper sur les points, somme toute techniques, de la préservation du patrimoine ancien de son établissement.

Elle pourra s'y consacrer, une fois accomplis les efforts nécessaires<sup>157</sup> pour sauver ce qui doit l'être et rétablir la Bibliothèque Carnegie à son ancien rôle de bibliothèque patrimoniale, puisque le fonctionnement courant de la bibliothèque est désormais bien rôdé.

### 4.2.1 Compte-rendu de visites

Nous avons rencontré le Directeur de la Bibliothèque nationale, à trois reprises (25 février 2011; 7 et 21 mars 2011): il nous a reçu avec la plus grande courtoisie, sans ménager son temps ni ses efforts.<sup>158</sup> Nous avons rencontré quelques membres du personnel de la Bibliothèque nationale de façon épisodique seulement.

Partie-prenante du projet de Bibliothèque nationale dès ses prémices,<sup>159</sup> œuvrant à sa naissance, il n'est nommé au poste de Directeur qu'en avril 1999, six mois à peine avant l'ouverture. Il fait alors preuve d'une intense activité afin que l'installation des locaux, l'acquisition des fonds (notamment les *Mauritiana* issus du Mauritius Institute et des Archives nationales), le recrutement des personnels soient prêts dans les temps.<sup>160</sup>

La mission du Directeur ne s'arrête pas à la mise en place de la Bibliothèque nationale, à sa dotation en ouvrages, à la publication de la bibliographie nationale mauricienne (en 2002, grâce à un réseau de bibliothèques interconnectées), à la lecture pour tous<sup>161</sup> et à l'organisation optimale du fonctionnement de son établissement: soucieux de pérenniser son action, il contribue à mettre en place :

- Des cursus de formation en bibliothéconomie à l'UoM<sup>162</sup> qui ont porté leurs fruits puisque plusieurs doctorants y sont actuellement inscrits. La tentative d'y associer les archivistes a malheureusement échoué pour des raisons de rivalités professionnelles, semble-t-il.
- La LIA, association des bibliothécaires mauriciens,<sup>163</sup> qu'il préside plusieurs années de suite; elle vise notamment à rationaliser la profession, à la doter de statuts et d'une grille salariale cohérents.

#### 4.2.1.1 Politique d'accession

Malgré la faiblesse chronique des crédits alloués à la Bibliothèque nationale, la tâche fut de constituer de toutes pièces sa collection puis de l'enrichir.

### A - *Mauritiana* et dépôt légal

Selon les directives de l'UNESCO, une des fonctions primordiales de toute bibliothèque nationale est de réaliser la bibliographie courante du pays<sup>164</sup> et de conserver la production complète des ouvrages paraissant dans le pays et, secondairement, sur le pays.

Cette tâche fut rapidement menée à la Bibliothèque nationale puisque, dès 2000, les fonds du dépôt légal mauricien jusque-là conservés aux Archives nationales et les *Mauritiana* du *Mauritius Institute* y étaient transférés.<sup>165</sup> Une fois le dépôt légal reçu (400 entrées par an), la série complète des *Mauritiana* publiés à Maurice (ouvrages et périodiques) est dorénavant conservée à la Bibliothèque nationale. Il n'en va probablement pas de même avec les ouvrages publiés sur Maurice à l'étranger, faute de crédits d'acquisition suffisants.

Grâce à la constitution d'un catalogue collectif des bibliothèques mauriciennes et l'aide de grands établissements d'Occident (Bibliothèque Nationale de France et *British Library* en Grande-Bretagne), la bibliographie courante mauricienne fut promptement achevée (tâche accomplie en 2002 sous forme imprimée ;<sup>166</sup> en 2005 pour la mise en ligne du catalogue collectif - OPAC).<sup>167</sup>

### B - Collections privées

La seconde voie d'accès privilégiée fut celle des donations par des particuliers: Yves CHAN KAM LON a évoqué auprès de nous les réseaux auxquels il appartient et ses relations dans toutes les communautés du pays comme une source importante d'enrichissement des collections de la Bibliothèque nationale.

Cette politique, appuyée par des appels du Ministre de la Culture d'alors, Joseph TSANG MAN KIN,<sup>168</sup> porta rapidement ses fruits puisque l'année suivant l'ouverture de la Bibliothèque nationale, l'accèsion de ces collections<sup>169</sup> était déjà réalisée ou prévue:

- Acquisés
  - Sir Harilal VAGHJEE, ancien Speaker de la Chambre, par l'entremise de Rivaltz QUENETTE;
  - Harold WALTER, ancien Ministre du Travail;
  - Abhimanyu UNNUTH, romancier;
  - Somduth BUCKORY, politicien;
  - Sir Satcam BOOLELL, député et ancien Ministre de l'Agriculture.
- Intentions fermes
  - Mgr. Amédée NAGAPEN, Vicaire général;
  - Guy ROUILLARD, alors Président de la SHIM.

Auxquelles vinrent s'ajouter :

- le fonds du propriétaire du label musical Neptune, M. FOO FAT<sup>170</sup> (disques 33 tours de 1979 et magnétophone utilisé pour enregistrer le ségadier TIFRÈRE).
- Les écrits d'auteurs mauriciens : l'auteure, éditorialiste et plasticienne Jeanne GERVALL-AROUFF.
- Les archives de la *Society of Financial Analysts of Mauritius*.<sup>171</sup>
- Des fonds de politiciens et de diplomates: James BURTY-DAVID; Dhunvir SADASING; le Ministre et poète Joseph TSANG MAN KIN ; le diplomate et écrivain Raymond CHASLE.
- en 2007, le fonds de l'entomologiste d'origine mauricienne, Alfred ORIAN<sup>172</sup> (500 ouvrages spécialisés et de nombreux spécimens d'insectes en cours de restauration et de consolidation à l'UoM).

Cette politique d'acquisitions s'appliqua également aux périodiques:

- la bibliothèque de la Municipalité de Port-Louis donna tous ses journaux anciens;
- le *Mahatma Gandhi Institute* donna les périodiques conservés depuis 1975;
- le journal *l'Express* donna la totalité de ses numéros anciens.

Les documents audiovisuels, prévus au dépôt légal (trois exemplaires sont conservés dans un local spécial, sous clé et atmosphère contrôlée) ont également fait l'objet de donations : le Centre

Charles Baudelaire (maintenant Centre Culturel Français) a ainsi déposé la totalité de sa collection de films sur cassettes VHS, ainsi que le magnétoscope adéquat pour les lire, puisque cette technologie est obsolète.

La salle de lecture de la Bibliothèque nationale où sont conservés tous les usuels se ressent de cette origine disparate: par exemple, les ouvrages d'histoire y vont du meilleur (courte série de la revue *Annales* en 1960) à des ouvrages vulgarisateurs et dépassés ; l'historiographie la plus récente est absente, effet probable du manque de crédits.

#### C - Institutions internationales

Le fonds de la Bibliothèque nationale est complété par des collections d'institutions internationales ou de pays donateurs: CEE, ONU, Banque mondiale, République populaire de Chine, FMI, etc.

Ces collections, accessibles en usuels dans la salle de lecture, présentent un intérêt variable: par exemple, les ouvrages originaires de Chine sont en chinois mandarin, langue peu courante dans le lectorat Mauricien.

##### 4.2.1.2 «Knowledge Hub»

La seconde mission de la Bibliothèque nationale, abondamment mise en relief lors de son inauguration, était de servir de *Knowledge Hub* (carrefour des connaissances) dont Maurice avait grand besoin pour affirmer son rôle de *Tigre de l'Océan Indien*.

La Bibliothèque nationale devenait ainsi un maillon essentiel de la croissance du pays, en cours de reconversion dans les nouvelles technologies de la connaissance et un complément essentiel de l'élévation du niveau d'enseignement de la population.

#### A - Travailler en réseaux

La première étape passait par une mise en réseau des bibliothèques et centres de documentation du pays sous la tutelle de la Bibliothèque nationale: dès 2000, fut établi un répertoire de ces établissements qui préfigurait un *Union Catalogue*,<sup>173</sup> grâce auquel tout document disponible dans l'un des services pourrait être prêté dans un autre (système de prêt inter-bibliothèques). De cette façon, la Bibliothèque nationale s'affirmait pôle de compétences<sup>174</sup> dans le domaine documentaire et pouvait également offrir son aide technique aux grands services de l'État.

#### B - Dossiers thématiques

Le rôle de centre national de documentation développé alors est encore assuré quotidiennement : des dossiers thématiques sont constitués de coupures extraites de la presse mauricienne uniquement, photocopiées puis assemblées manuellement, ce qui est, selon nous, trop limitatif. Ces dossiers de presse jouissent d'une bonne consultation par les lecteurs.

#### C - Informatisation du catalogue

L'informatisation du catalogue de la Bibliothèque nationale suivit de peu et allait dans le sens d'une dissémination du savoir, puisque ses notices furent rapidement accessibles sur l'Internet.

Le logiciel états-unien *Unicorn Library Management System / SIRSI 2003*,<sup>175</sup> acquis en 2004,<sup>176</sup> déployé en 2005, est accessible dans la salle de lecture en Intranet puis sur le Web. En 2004, la Bibliothèque nationale remporta l'*ICT Award* (catégorie: *Parastatal Bodies*).

Ce logiciel de catalogage ne semble pas avoir connu de mises à jour depuis lors, malgré un contrat de maintenance annuel important.<sup>177</sup>

L'équipement informatique actuel du service est bon: 25 postes dont 18 reliés en réseau; en 2010, la République populaire de Chine a doté la salle de lecture d'une quinzaine d'ordinateurs de bureau performants fonctionnant en réseau local (système d'exploitation Linux Ubuntu).

#### D - Formation du personnel - Certification

L'évolution conjointe de ces différents systèmes et la complexité qui en résulte nécessitent une formation continue du personnel, assurée en France, en Inde et en Afrique du Sud. La Bibliothèque nationale a également incité à engager une démarche de qualité: la certification ISO 9001 a été obtenue en 2004<sup>178</sup> pour la gestion de la satisfaction des usagers.

### E - Lecture pour tous

En amont, dès 2003, le directeur a promu le livre dans des manifestations organisées à Maurice et à Rodrigues et où il présente des ouvrages éducatifs ou de loisir (*Festival du Livre*). Ces manifestations remportent un grand succès populaire, contribuent à apporter la culture et la lecture aux plus démunis et aux populations isolées (Rodrigues).

#### 4.2.1.3 Conservation

### A - Déménagement toujours ajourné

Il n'y a toujours pas de bâtiment digne des collections et des résultats acquis : malgré les promesses, la *Culture House*, n'a jamais vu le jour.

Le temporaire est donc devenu définitif et il était question, lors de notre entrevue, de louer également le 4<sup>e</sup> étage du bâtiment occupé à Port-Louis afin de donner un peu d'espace à des dépôts combles.

### B - Densité critique

Les livres et périodiques sont dans une situation de conservation critique, selon les termes du Directeur, confirmés par plusieurs experts et par nos soins:

- la climatisation des dépôts est insuffisante, vu l'entassement des ouvrages qui ne facilite pas la circulation d'air; la certification ISO implique le contrôle de l'hygrométrie, de la luminosité et de la température mais paraît inopérante, devant l'encombrement des magasins.
- Les périodiques, même récents, conservés dans une salle spéciale attenante à la salle de lecture, sont dans un état déplorable : la climatisation ne paraît pas suffisante; le manque de tablettes intermédiaires provoque le cisaillement des reliures par le milieu, puis la dispersion du papier-journal; les reliures désagrégées ne sont pas restaurées; certains volumes, pourtant interdits de communication, sont malgré tout transmis aux lecteurs.<sup>179</sup>
- Les conditions de travail du personnel sont difficiles: l'espace entre les travées est trop faible et le dégagement insuffisant pour tirer les reliures des rayonnages sans les endommager.
- Le bâtiment lui-même n'est pas sûr (il s'agit d'un immeuble de bureaux avec des commerces de plain-pied sur la rue): par exemple, une pizzeria au rez-de-chaussée constitue un risque sérieux d'incendie.

### C - Atelier de restauration et de reliure

Un atelier de reliure avec trois restaurateurs diplômés a été installé en 2000. Il est doté d'équipements assez rudimentaires (pas de machine à repulper ou de traitement par dés-acidification, par exemple). Des experts étrangers en résidence<sup>180</sup> dispensent des cours de formation aux restaurateurs du pays tout entier en se servant des facilités octroyées par la Bibliothèque nationale.

### D - Microfilmage

Afin de moins solliciter les documents originaux, la Bibliothèque nationale a entrepris depuis 2002 de microfilmer les périodiques anciens ;<sup>181</sup> les microfilms (60 rouleaux, soit environ 37,000 pages microfilmées) sont correctement conservés dans le local abritant les documents audiovisuels; le personnel qui en est chargé paraît compétent et déclare cliquer jusqu'à 2,000 pages par jour.

Nous n'avons pu vérifier si ces microfilms étaient consultables (ni comment); nous en déduisons que ce sont des originaux, jamais dupliqués et que le Directeur est bien avisé de ne pas les laisser accessibles aux usagers de la bibliothèque.

### E - Numérisation?

Yves CHAN KAM LON, Directeur de la Bibliothèque nationale trouve la numérisation moins fiable et pérenne que le microfilmage:

«Q. Il a été question d'une aide de l'Organisation Internationale de la Francophonie ?

*R. C'est un projet présenté l'année dernière, pour numériser les journaux en français des pays francophones. [...] Attention, c'est de la numérisation, ce n'est pas le microfilmage. La différence, c'est que le microfilmage c'est pour la préservation. Cela se fait dans toutes les BN du monde et ce support peut durer plus de cent ans. Alors que la numérisation ne dure pas dans le temps. Ce n'est pas la solution pour la préservation mais pour la dissémination de l'information. Cela signifie aussi que l'utilisateur n'a plus besoin de manipuler le journal papier et l'abîmer davantage.»<sup>182</sup>*

Cette opinion, peut-être sujette à caution depuis la généralisation des dépôts numériques dans les grandes bibliothèques d'Occident, n'est pas contradictoire avec la poursuite du microfilmage: une opération aisée et relativement peu coûteuse peut faire passer d'un support à l'autre.

#### 4.2.2 Quelques remarques

##### 4.2.2.1 À livre ouvert

L'étude du cas de la Bibliothèque nationale est facilitée car:

- il s'agit d'un organisme de création récente (1996, acte de fondation ;<sup>183</sup> 1999, inauguration dans des locaux temporaires) et la problématique, trop souvent invoquée à Maurice, de «l'héritage» ne s'y applique donc pas ;<sup>184</sup>
- la Bibliothèque nationale n'a connu qu'un seul directeur depuis son installation, personnalité médiatique, qui a littéralement porté le projet de sa conception jusqu'à sa naissance;
- la gestion rigoureuse appliquée à la Bibliothèque nationale, le contrôle méthodique de ses opérations, l'abondance d'une documentation de qualité font que nous n'avons rencontré aucune difficulté à connaître son mode de fonctionnement, ses attentes et les facteurs externes qui restreignent son développement.

##### 4.2.2.2 Bibliothécaires organisés

Tous les experts mauriciens<sup>185</sup> ou administrateurs britanniques<sup>186</sup> appelés à se pencher, depuis la fin des années 1950, sur la situation des bibliothèques mauriciennes arrivaient aux mêmes conclusions:<sup>187</sup>

- Il était indispensable de fonder un grand organisme chargé de la bibliographie nationale mauricienne, de la préservation des fonds anciens et de la tutelle de toutes les bibliothèques de l'île;
- Cet organisme devait être adossé à une puissante association professionnelle nationale de bibliothécaires.

##### 4.2.2.3 Aspects critiquables

Néanmoins, certains aspects apparaissent préoccupants.

#### A - Saisies dans le catalogue informatisé

Un simple sondage dans le catalogue informatisé nous révèle des errements qu'il conviendra de corriger:

- La saisie des notices bibliographiques dans le catalogue est très souvent fautive ; elle varie considérablement suivant le lieu de sa saisie (échanges de notices entre bibliothèques).<sup>188</sup>
- même chose pour la liste des auteurs;
- même chose pour l'indexation des notices par mots-clés, qui paraît très en deçà du nombre de livres effectivement entrés.
- Les notices n'indiquent pas l'état de conservation des ouvrages, information pourtant cruciale s'agissant de leur communicabilité ou de la planification de leur restauration.

## B - Où sont les documents les plus anciens ?

Nous avons demandé à Yves CHAN KAM LON de nous présenter les documents les plus anciens en sa détention (des périodiques de la fin du 18<sup>e</sup> s.) car nous avons constaté que les exemplaires figurant en rayonnage étaient, en réalité, des photocopies reliées.

Cela n'a pas été possible et l'original qui nous fut apporté n'était pas celui que nous avons demandé. Nous avons ensuite pris connaissance de l'armoire où sont entreposés les documents les plus anciens : quatre petits cartons seulement, quasiment vides.

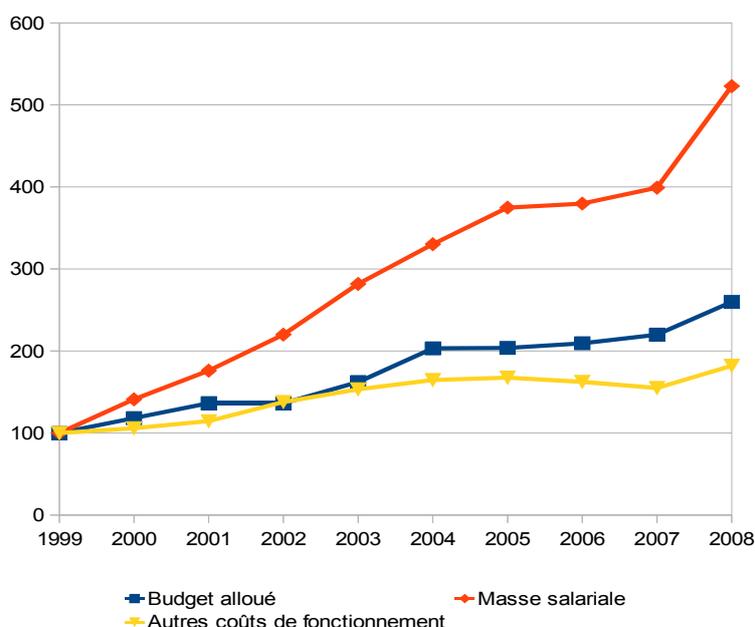

Il nous paraît souhaitable d'approfondir cet aspect des choses et de procéder à un recensement des documents les plus anciens (et donc les plus précieux).

## C - Gestion des priorités - Risques de dérive

Nous sommes enfin fondé à nous interroger sur quelques priorités de la Bibliothèque nationale:

- la revue de presse est bien tenue et assez consultée; en revanche, l'indexation des ouvrages laisse beaucoup à désirer alors que les journaux mauriciens (et internationaux), accessibles sur le Web, peuvent désormais faire l'objet de recherches et de synthèses automatiques.
- les rayonnages de la salle des périodiques devraient être améliorés de toute urgence (pour un coût assez modique) ; en revanche, l'Ambassade de Chine offre une quinzaine d'ordinateurs flambants-neufs qui sont sous-employés (nous ne leur avons jamais vu plus de trois utilisateurs au cours de nos visites).
- La Bibliothèque nationale a obtenu une certification ISO 9001 pour la qualité de son service aux usagers (qui est prévenant et rapide) ; en revanche, livres et périodiques sont entassés dans les dépôts et il n'y a jamais assez d'argent pour acheter des ouvrages de référence à jour.
- La masse salariale de la Bibliothèque nationale représentait 33% de son budget en 2000; elle se montait à 66% en 2008 ; en revanche, les frais de fonctionnement (par exemple, les crédits d'acquisition), ont, quant à eux, végété durant toute la période.<sup>189</sup>

Illustration 1 BN: Budget total - Salaires - Fonctionnement (Base 100 en 1999)

Notre sentiment est que la Bibliothèque nationale, parée à ses débuts de toutes les vertus rénovatrices mais trop chichement dotée par le Gouvernement, n'a sans doute pas su proportionner ses ambitions à ses moyens. Toute l'information scientifique et technique est désormais accessible en

ligne sur Internet, constamment à jour et accessible aux entreprises ou aux institutions; c'est maintenant la base privilégiée de tout «*Knowledge Hub*» et cela rend inutiles les efforts en ce sens de la Bibliothèque nationale, jamais probants, faute de moyens.

La Bibliothèque nationale semble avoir eu du mal à choisir entre ses deux missions initiales, tellement antithétiques en période de pénurie: celle de centre de conservation patrimoniale et celle de centre de veille technologique. Il nous paraîtrait souhaitable, au point où nous nous trouvons, de clarifier cette ambiguïté et d'élaguer ce qui doit l'être en faveur d'une approche plus strictement patrimoniale.

### 4.3 Cour Suprême de la République de Maurice (Port-Louis)

Date(s) et lieu(x) de visite	07/04/2011 <ul style="list-style-type: none"> <li>• Dépôt intermédiaire des archives (arrière-cour de la Cour Suprême)</li> <li>• Bureaux du Greffe de la Cour Suprême</li> <li>• Dépôt des archives rue Lislet-Geoffroy (dernier étage)</li> <li>• Cave de la rue Lislet-Geoffroy</li> </ul>
Personnes rencontrées	M. Abdool Majeed JEENATHALLY, <i>Chief Court Officer</i>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Aucun
Questions complémentaires posées - Réponses apportées	Aucune

#### 4.3.1 Compte-rendu de visite

##### 4.3.1.1 Gestion efficace du Greffe

Nous avons constaté grâce à l'aide efficace et compétente de M. Abdool Majeed JEENATHALLY, *Chief Court Officer*, que la gestion du Greffe était satisfaisante, vu les moyens disponibles.

Les archives de la Cour Suprême, Tribunal de Grande Instance, sont constituées de deux types principaux de documents:

- des dossiers d'affaires, classés en séries,<sup>190</sup> contenant une grande variété de documents et d'artefacts : pièces de procédure, dépositions, preuves matérielles (objets divers issus des enquêtes de police), etc.
- Des registres annuels par série dans lesquels sont consignées des informations succinctes sur les audiences (date, nom des parties, numéro d'identification).

Depuis 1995, la gestion des dossiers est informatisée (avec une interruption en 2002, une panne du système informatique ayant rendu inexploitable le fichier pour toute cette année): chaque dossier est indexé par un numéro séquentiel, un numéro composite et le nom des parties. Depuis 1990, environ (époque de conservation des archives « vivantes » les plus anciennes), 60,000 dossiers d'affaires sont stockés à portée et accessibles, auxquels s'ajoutent chaque année, 3,000 dossiers nouveaux (60 m linéaires).

La garantie de la vie privée est assez bien assurée: le Greffe est établi dans des bureaux exigus où toute visite est, de fait, contrôlée: ce sont surtout des avocats, des avoués ou des clerks qui les hantent, en parfaite connaissance du personnel administratif de la Cour. La consultation de pièces dans une affaire obéit, par ailleurs, à une procédure assez stricte de demande d'autorisation au *Chief Court Officer*.

La bibliothèque de la Cour Suprême, réservée aux Juges, conserve les séries reliées des arrêts de la Cour et quelques documents précieux, dont un *Code Noir*.<sup>191</sup>

##### 4.3.1.2 Quatre dépôts déficients

Nous avons pu visiter quatre dépôts où sont conservés les dossiers d'affaires:

- Bureaux du Greffe de la Cour Suprême: les registres de l'année en cours et un certain nombre de dossiers «vivants» sont présents au Greffe, dans des conditions de conservation moyennes car les lieux sont exigus.
- Dépôt intermédiaire des archives (arrière-cour de la Cour Suprême) : prolongement des bureaux du Greffe, ce dépôt est assez sommaire et regroupe les affaires courantes, notamment les divorces. Son accès paraît peu contrôlé et nous avons constaté que les parties s'y rendent assez librement pour consulter les pièces qui les concernent.

- Dépôt des archives, rue Lislet-Geoffroy:<sup>192</sup> le «nouveau dépôt» des archives, au dernier étage d'un bâtiment administratif, a permis de délester le dépôt intermédiaire; les conditions de conservation sont loin d'être optimales : le toit a fui récemment détrempant la moquette du sol, la climatisation n'est pas active sauf quand les personnels s'y trouvent, les travées sont trop étroites, et il reste, en vrac dans de grands sacs, un grand nombre d'archives à disposer dans les travées qui sont déjà presque pleines. Par ailleurs, la protection du dépôt est bonne (portes grillagées).
- La cave de la rue Lislet-Geoffroy est, quant à elle, un vrai pourrissoir d'archives:<sup>193</sup> les documents les plus anciens (registres du 19<sup>e</sup> s.) sont jetés à même le sol dans un désordre indescriptible, entassés pêle-mêle avec des débris divers (par exemple une cuvette de WC), attaqués de plus par la vermine.

#### 4.3.2 Quelques remarques

L'histoire sociale, notamment celle des classes populaires,<sup>194</sup> a été nourrie dans les cinquante dernières années de la mine d'informations qu'on trouve aux archives et plus précisément dans les dossiers d'affaires judiciaires: ils nous renseignent sur des faits minuscules<sup>195</sup> et nous laissent parfois entrevoir des réalités quotidiennes, qui auraient, sinon, sombré dans l'oubli.

Lors de notre première conversation téléphonique (12/03/2011), M. le Juge Prithviraj FEKNA, *Master and Registrar* des Archives de la Cour Suprême, nous indiquait que les *pièces* des dossiers des affaires jugées étaient détruites après 40 ans, les seuls *attendus* des jugements étant consignés dans des recueils imprimés et reliés, puis informatisés.

Ce processus d'épuration des archives, parfaitement codifié par ailleurs, constitue selon nous une perte pour l'histoire du pays et devrait, dans l'intérêt des générations futures, être promptement amendé.

#### 4.4 Évêché de Port-Louis (Port-Louis)

Date(s) et lieu(x) de visite	22/03/2011, Évêché et bâtiment annexe où sont conservés les archives et les livres
Personnes rencontrées	<ul style="list-style-type: none"> <li>• Sheila BRELU-BRELU, Secrétaire-Archiviste</li> <li>• Dominique RAULT, Secrétaire-Documentaliste</li> </ul>
Questionnaire rempli ?	Oui
Documents complémentaires confiés?	Oui : Inventaire sommaire des documents conservés à l'Évêché de Port-Louis
Questions complémentaires posées - Réponses apportées	Aucune

##### 4.4.1 Compte-rendu de visite

Nous avons reçu un excellent accueil de la part des deux personnes chargées, à l'Évêché de Port-Louis, des fonds écrits patrimoniaux:

- Une archiviste à mi-temps chargée de répondre aux demandes de généalogie qui lui sont adressées (transcriptions d'actes après 1822),
- Une Secrétaire-Documentaliste qui est à la tête de la bibliothèque à laquelle on peut accéder sur simple demande.

L'influence de Mgr Amédée NAGAPEN, Vicaire général et historien de la Chrétienté à Maurice, s'est fait sentir depuis les années 1990 : un tour plus patrimonial a alors été donné aux documents anciens conservés, des colloques et des expositions<sup>196</sup> ont été organisés.

##### 4.4.1.1 Archives

Les archives sont conservées à l'étage de l'annexe de l'Évêché, dans une salle réservée à cet effet, qui paraît assez saine.

Ces documents sont très disparates:

- registres de chrétienté (naissances, mariages, décès) depuis 1822, avec quelques épaves datant du 18<sup>e</sup> s.,
- manuscrits : recueils de correspondances des évêques des 19<sup>e</sup> et 20<sup>e</sup> s. par exemple;
- cartes, plans et documents figurés (architecture religieuse, propriétés du clergé),
- livres anciens : livres de piété, etc.
- journaux religieux publiés à Maurice jusqu'à l'époque contemporaine;
- dossiers documentaires sur l'Église de Maurice;
- archives administratives de l'Évêché.

Leur état de conservation laisse à désirer: la plupart de ces documents ont été extraits d'une cave humide dans les années 1990 et nous avons pu constater la gravité des attaques dues aux insectes. Depuis, ces documents sont régulièrement fumigés, dépoussiérés, mais le personnel, insuffisant en nombre, n'a pas assez de temps à consacrer aux archives et n'a pas reçu la formation nécessaire. La climatisation n'est pas allumée de façon permanente, seulement quand les employés sont présents.

##### 4.4.1.2 Bibliothèque

La bibliothèque, installée dans le palais épiscopal, jouit d'excellentes conditions de conservation et d'accueil pour les lecteurs (peu nombreux). Il s'agit d'un fonds contemporain de taille réduite (100 m linéaires avec seulement quelques documents patrimoniaux) doublé d'un centre de documentation sur l'action de l'Église à Maurice (présence d'un documentaliste à mi-temps qui complète la base de données informatiques).

#### 4.4.2 Quelques remarques

Le service des archives de l'Évêché de Port-Louis fonctionne, puisque c'est un fonds privé, selon un mode d'accès restreint: le public est seulement invité à demander communication de transcriptions d'actes généalogiques.

Un inventaire complet du fonds est nécessaire (nombreux documents empilés en vrac et encore inexploités), la numérisation des registres de chrétienté apporterait un meilleur confort de travail à Sheila BRELU-BRELU et solliciterait moins les documents dont l'état de conservation est médiocre mais stationnaire.

#### 4.5 Hôpital psychiatrique Brown-Séguard (Beau-Bassin)

Date(s) et lieu(x) de visite	28/03/2011 <ul style="list-style-type: none"> <li>Nouvel Hôpital Brown-Séguard (BBRH), bureaux puis salle des archives vivantes et intermédiaires</li> <li>Ward 24 de l'ancien Hôpital (BBRH) où sont conservées les archives anciennes</li> </ul>
Personnes rencontrées	<ul style="list-style-type: none"> <li>M. GOOLY, Administrateur</li> <li>M. Anand Kumar SEERUTHUN, <i>senior Health Record Officer</i></li> </ul>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Oui : <ul style="list-style-type: none"> <li>Historique de l'Hôpital Brown-Séguard</li> <li>Exemple de formulaire d'épuration d'une sous-série d'archives</li> </ul>
Questions complémentaires posées - Réponses apportées	Aucune

##### 4.5.1 Compte-rendu de visite

La visite des archives de l'Hôpital Brown-Séguard était l'occasion d'évaluer les procédures de conservation des archives intermédiaires, dans un contexte de nécessaire protection de la vie privée.<sup>197</sup>

##### A - Gestion efficace des entrées quotidiennes

Nous avons principalement rencontré M. Anand Kumar SEERUTHUN, gestionnaire très attentif et compétent de:

- la base de données informatisée des patients (75,000 entrées), qui s'accroît à raison d'environ 5,000 entrées par an (patients internes et externes) ; cette base de données contient le numéro de référence du dossier médical de chaque patient ainsi que ses coordonnées.
- Des archives proches de son bureau qui regroupent, dans un espace de 150 m<sup>2</sup> environ, la totalité des 75,000 dossiers médicaux correspondants aux entrées « vivantes » de la base de données. Eu égard à la démographie des patients, ces dossiers remontent, jusqu'à la fin des années 1970.

L'état de conservation de ces documents est bon, malgré l'absence de climatisation ; leur classement (par numéro de dossier) est convenable. La sécurité des données paraît bien assurée : il faut faire état de son appartenance au corps médical ou administratif pour entrer dans le local d'archives. Les procédures d'épuration sont très bien définies (au niveau du Ministère de la Santé) et promptement appliquées.

La numérisation des dossiers vivants va être entreprise à la fin 2011, pour aboutir à leur dématérialisation.

##### B - Désastre patrimonial

En revanche, nous avons été choqués de l'état de conservation des « archives anciennes » (avant 1970, dont M. SEERUTHUN n'a pas la charge) et que nous avons visitées dans l'aile ancienne de l'hôpital (Ward 24).<sup>198</sup>

Ces archives de provenances très diverses (Hôpital Brown-Séguard, autres hôpitaux du Nord du pays, Ministère de la Santé) sont conservées dans un triste état, en attente d'être épurées. Selon leur origine, elles ont subi un sort plus ou moins critique : si celles de l'Hôpital Brown-Séguard sont placées sur des rayonnages, celles des autres administrations sont déversées à terre, pêle-mêle, ce qui nous a même empêché de pénétrer dans le dépôt.

Ces archives nous paraissent représenter un sérieux risque sanitaire pour les malades tout proches (le Ward 24 se trouve au milieu des autres pavillons) : une telle accumulation de cellulose attire la

vermine et constitue un risque d'incendie. Enfin, la confidentialité des données n'est nullement préservée.

#### 4.5.2 Quelques remarques

Nous avons été convaincu du professionnalisme avec lequel les entrées médicales sont saisies à l'Hôpital Brown-Séguard ; la gestion des dossiers médicaux, pourtant « rustique », ne laisse guère non plus à désirer, même du point de vue de la protection de la vie privée. En revanche, il est urgent d'intervenir pour sauver ce qui peut l'être des archives entassées au *Ward 24* - mais peut-être est-il déjà trop tard car les séries, versées en vrac, ont été éclatées et les documents irrémédiablement détériorés.

L'hôpital Brown-Séguard, qui date de plus d'un siècle,<sup>199</sup> nous paraît une bonne illustration du mélange des genres qui occasionne tant de dommages aux documents anciens à Maurice : procédures saines de gestion courante, aucune sensibilité ni formation du personnel aux questions patrimoniales.

#### 4.6 Mahatma Gandhi Institute - MGI (Moka)

Date(s) et lieu(x) de visite	10/03/2011, Bureaux et bibliothèque du MGI à Moka
Personnes rencontrées	<ul style="list-style-type: none"> <li>• Mme Nagamah GOPAULOO, <i>Head of School of Mauritian and Area Studies</i></li> <li>• M. Suryadan CAHOOLESSAR, <i>Head of Library and Archives</i></li> <li>• M. Vishawanaden GOVINDEN, Chargé de Cours et responsable des archives de l'Engagisme au MGI</li> </ul>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Non
Questions complémentaires posées - Réponses apportées	<ul style="list-style-type: none"> <li>⤴ Oui: Budgets et fréquentation des archives; règlement intérieur applicable aux archives de l'Engagisme ; détail du matériel informatique.</li> <li>⤴ Non: aucune réponse malgré relance.</li> </ul>

##### 4.6.1 Compte-rendu de visite

Nous avons été reçu par plusieurs responsables du *Mahatma Gandhi Institute (MGI)*:<sup>200</sup> la présidente de la séance, une universitaire (Mme GOPAULOO), était accompagnée du responsable de la bibliothèque et des archives de l'institut (M. CAHOOLESSAR) et du responsable du fonds des archives et du musée de l'engagisme indien (M. GOVINDEN).

Le MGI est un institut à vocation essentiellement éducative (5 établissements d'enseignement, principalement primaire et secondaire), puis culturelle (galerie d'exposition, auditorium) fondé en 1970 à Maurice et financé conjointement par le Gouvernement mauricien et la République d'Inde.

##### 4.6.1.1 Bibliothèque de l'institut

Le MGI est doté d'une importante bibliothèque (105,000 volumes alors qu'elle avait été prévue pour 40,000, 1 km linéaire environ ; avec un accroissement annuel modéré de 10 m linéaires), en cours de rénovation, et dont les fonds sont riches dans les domaines de la spiritualité et des religions.

Cette bibliothèque n'a pas spécialement vocation patrimoniale et ne conserve pas d'ouvrages anciens ni précieux. La saisie informatique de son catalogue est en cours, à partir du registre d'accès tenu à jour et des fiches accessibles au public. Quelques collections font l'objet d'une cotation spéciale et de catalogues particuliers : Gandhi, Tagore, Nehru, *Mauritiana*, etc.

##### 4.6.1.2 Archives de l'engagisme indien

Selon M. GOVINDEN, c'est l'état de conservation alarmant des registres d'arrivée des ouvriers engagés « échoués » aux Archives nationales,<sup>201</sup> qui a justifié leur transfert au MGI en 1975-76.<sup>202</sup>

C'est le Dr. Huguette LY TIO FANE, archiviste des Archives nationales détachée au MGI comme *Research Assistant* qui se chargea de leur restauration, le Dr. SOOBRAYEN du MGI continuant l'inventaire amorcé avant leur transfert.

Il s'agit d'un fonds de taille moyenne (2,000 registres, 50 m linéaires), conservant des documents de différents types étagés de 1834 à 1920:

- Registres d'arrivées (1834 - 1910): 2,000 registres ;
- Certificats de mariage (1850 - 1920);
- Contrats et répartition des ouvriers engagés entre leurs employeurs (1842 - 1859) ;
- Correspondance administrative (1868 - 1920);
- Photographies d'identité des engagés (1868 - 1914): 200,000 photographies.

Ce fonds concerne:

- les engagés indiens ;
- les *Liberated Africans*, esclaves libérés des bateaux négriers arraisonnés par la Navy et alloués comme apprentis, puis comme engagés, à des propriétaires proches du pouvoir britannique à Maurice (par exemple Charles TELFAIR, propriétaire de Bel-Ombre).

Ce fonds, de par sa nature même, n'enregistre plus d'accession nouvelle. Ces documents jouissent d'un statut particulier; mis en dépôt par les Archives nationales,<sup>203</sup> ils sont:

- Préservés: fumigation tous les 4 ans, contrôle de la température et de l'hygrométrie.
- Communiqués au public selon un règlement intérieur<sup>204</sup> très restrictif et qui donne lieu à critiques, notamment de la part des universitaires: durant la restauration actuelle du musée, deux places de chercheurs seulement sont disponibles (dont une réservée à la TJC et à l'Apravasi Ghat); quatre en période normale.

C'est M. CAHOOLESSAR qui donne les autorisations, sur justificatif de recherche et de niveau d'études (supérieur au BA/Licence).

Les consultations sont très strictement supervisées par M. GOVINDEN, d'où des frictions avec certains lecteurs et institutions et des tentatives de soustraction d'informations, notamment vis-à-vis de la TJC<sup>205</sup> qui semblent heureusement résolues.<sup>206</sup>

- Indexés : base de données conçue dans les années 1980 par des experts d'Inde, réalisée sur Oracle, déployée en 1999 par SIL (*State Informatics Ltd*) et pouvant contenir, pour 100,000 immigrants à ce jour, pléthore d'informations.<sup>207</sup>

Les réticences de M. GOVINDEN à communiquer directement les documents au public, même expérimenté, se justifient par la mission mémorielle dont il se sent investi et par le risque que des consultations trop fréquentes font, selon lui, courir aux documents ; le mode normal de communication est le suivant :

1. demande écrite de consultation pour une recherche d'origines, sur communication du numéro d'engagé;
2. extrait par le MGI de la fiche de l'engagé; ce document à valeur légale, à l'instar d'un extrait d'état-civil;
3. autorisation de prendre une photographie numérique du cliché d'identité de l'engagé ou de la faire prendre par un photographe rémunéré;
4. en cas de contestation, autorisation de consulter le registre; ces contestations sont courantes, notamment dans les cas suivants:
  - sur le nom de l'engagé qui n'est pas orthographié comme celui de ses ascendants indiens ou de ses descendants mauriciens;
  - sur la caste à laquelle il disait appartenir;
  - sur sa religion originelle.

Ces archives, qui sont prévues pour une inscription au *Memory of the World* de l'UNESCO,<sup>208</sup> sont destinées à revenir prochainement dans le giron de l'État mauricien, aux Archives nationales.

#### 4.6.2 Quelques remarques

De prime abord, les archives de l'engagisme au MGI constituent un service d'état-civil destiné aux descendants des engagés indiens, c'est-à-dire la majorité de la population mauricienne: comme au *Registrar of Civil Status*, le public n'est pas admis à consulter directement les registres et se voit remettre, sur demande et justificatifs préalables, des informations juridiquement valides.

Étant donné le bon état de conservation de ce fonds,<sup>209</sup> on est tenté de penser que l'intermède durant lequel il aura été confié au MGI, organisme para-public (*parastatal body*), ne lui aura pas été nocif, bien au contraire. La comparaison avec les fonds dont nous avons constaté la dégradation au *Registrar of Civil Status*<sup>210</sup> et avec ceux des Archives nationales nous conforte dans cette opinion.

## 4.7 Musée de la Photographie (Port-Louis)

Date(s) et lieu(x) de visite	15/03/2011
Personnes rencontrées	Les propriétaires du musée (de statut privé): <ul style="list-style-type: none"> <li>▲ Mme Marie-Noëlle BRÉVILLE</li> <li>▲ M. Tristan BRÉVILLE</li> </ul>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Non
Questions complémentaires posées - Réponses apportées	<ul style="list-style-type: none"> <li>• Oui : Budgets, fréquentation du public.</li> <li>• Oui, réponses satisfaisantes.</li> </ul>

## 4.7.1 Compte-rendu de la visite

Nous rencontrons les deux propriétaires du musée (statut de musée privé), Mme et M. BRÉVILLE dans ses locaux, une «longère» ancienne et bien restaurée de la Rue du Vieux Conseil à Port-Louis.

## 4.7.1.1 Réserves préalables

M. BRÉVILLE se refuse, dans un premier temps, à répondre à notre questionnaire car il s'inscrit selon lui dans une longue série de telles entrevues menées par l'État mauricien et qui n'ont mené à aucun résultat tangible, tout au contraire; il fait également état du caractère nocif, selon lui, du *Mauritius Museums Council* pour la culture à Maurice. Nous le convainquons de nous répondre et il se prête alors de très bonne grâce et avec pertinence à l'exercice.

## 4.7.1.2 Expérience acquise

M. BRÉVILLE dispose d'une longue expérience de photographe et de cinéaste professionnel : diplômé de l'IDHEC en France, il a également suivi les cours de l'INA (France), a longtemps exercé le métier de «photographe pédagogue» et de metteur en image auprès du Ministère de l'Éducation de Maurice.

## 4.7.1.3 Histoire et financement

Le Musée de la photographie, collection personnelle de deux passionnés établie dans leurs deux logements successifs de Rose Hill (1966), puis de Quatre Bornes (1972), trouve sa consécration lors de son ouverture officielle en 1992 à Port-Louis dans les locaux actuels, qui appartiennent à la Municipalité.

Les difficultés n'ont pas manqué, notamment la quasi destruction du musée par deux accidents de chantier successifs (janvier et février 2008) survenus dans le bâtiment en surplomb alors en construction et pour lesquels les assurances se sont montrées, semble-t-il, peu généreuses.<sup>211</sup>

La question du financement du musée par l'État mauricien est cruciale car les visiteurs ne sont pas très nombreux (4,000 visiteurs par an en moyenne) et ne constituent d'ailleurs pas, selon M. BRÉVILLE, un réel critère de succès.<sup>212</sup>

Actuellement, le musée reçoit les dotations suivantes:

- en nature: prêt du bâtiment par la Municipalité de Port-Louis,
- Municipalité: 300,000 Rs. annuellement depuis 2006;<sup>213</sup> cette somme est jugée insuffisante par M. BRÉVILLE et devrait être au minimum de 1,2 Millions de Rs. Annuels,<sup>214</sup> sinon de 4 Millions de Rs. comme il nous le déclare lors de l'entrevue.
- État mauricien : dotation exceptionnelle de 2 Millions de Rs., prévue au budget de 2009,<sup>215</sup> mais dont nous ignorons si elle a été versée ou non.

Pour le reste, le musée vit de la revente de droits photographiques (réputés très élevés; montant inconnu) et, dans une bien moindre mesure, de sa billetterie.

#### 4.7.1.4 Collection

##### A - Politique d'acquisition

La politique d'acquisition est importante et n'a pas cessé depuis les débuts de la collection (actuellement: 1,000 items par an) :

- récupération de fonds photographiques ou cinématographiques tombés en déshérence, ou purement et simplement jetés par leurs propriétaires;
- acquisition auprès d'héritiers de fonds d'ateliers de photographes mauriciens (fonds GRANCOURT, Antoine D'ARIFAT, Joseph-Gabriel GENTIL); ces acquisitions se font plus difficiles car la concurrence des brocanteurs est vive (exemple de Jean-Baptiste URBINI à propos du fonds Vèle KADRESSEN) ;<sup>216</sup>
- dépôts par des particuliers.

##### B - Contenu

La collection est variée puisqu'elle comprend:

- des photographies sous toutes leurs formes et supports : daguerréotypes, négatifs, tirages anciens (divers procédés), tirages contemporains, reproductions de presse, etc.
- des documents de toutes sortes : livres, périodiques, affiches, timbres-postes, etc.
- de nombreux appareillages techniques liés à la photographie, à la cartographie ou au cinéma.
- Des films dont la conservation est ardue (acétates très inflammables), comprennent quelques pièces rares (documentaires d'avant-guerre du peintre de marine MÉNARDEAU).

Il est difficile à M. BRÉVILLE de nous préciser la taille de sa collection, faute d'inventaire ni même de dépouillement sommaire des fonds du musée: son évaluation oscille, au cours de l'entretien, de 1,000 m à 300 m linéaires, soit plus d'un million de documents (originaux et copies/reproductions confondus).

##### C - Conservation

Les lieux de conservation de cette collection sont multiples:

- sur place, au musée (arrière-salle correctement ventilée mais au contact de matériels électriques et dans un certain entassement),
- au domicile des BRÉVILLE à Quatre Bornes (pas visité);
- ultérieurement, une fois réunis les fonds nécessaires, dans une «chambre froide sèche» que M. BRÉVILLE prévoit de faire construire à Saint-Hubert près de Mahébourg, au plein milieu de marais sauvages (ce qui ne nous paraît pas de nature à assurer une conservation adéquate ni à faciliter son contrôle hygrométrique).

#### 4.7.1.5 Grands projets

M. BRÉVILLE évoque son projet de «Répertoire Culturel Mauricien» (RCM), débuté en 1993, dont il nous montre le fonctionnement sur l'ordinateur du musée. Il s'agit d'une base de données non relationnelle associant:

- les noms de collectionneurs mauriciens ou étrangers,
- avec les œuvres qu'ils possèdent (notice très sommaire et image photographique ou scan),
- et avec les noms et biographies très succinctes des artistes qui les ont créées.

## 4.7.2 Quelques remarques

### 4.7.2.1 Authenticité hasardeuse

L'authenticité des photos semble poser un problème, par conséquent, pour la revente de certains documents et photographies, présentés comme étant de tirages anciens.

### 4.7.2.2 Questions de définition

#### A - Musée?

Selon l'ICOM, organisme international de référence sur les musées dans le monde, la définition d'un musée est:

*«Un musée est une institution permanente sans but lucratif, au service de la société et de son développement, ouverte au public, qui acquiert, conserve, étudie, expose et transmet le patrimoine matériel et immatériel de l'humanité et de son environnement à des fins d'études, d'éducation et de délectation.»<sup>217</sup>*

Le Musée de la Photographie de Port-Louis ne nous paraît pas répondre à ces prérequis:

- il s'agit d'une « affaire familiale », de nature commerciale, dont les ressources proviennent principalement des subventions étatiques, de la revente de droits photographiques et, dans une bien moindre mesure, des entrées; M.BRÉVILLE, d'ailleurs, ne cache pas son désir de vendre sa collection et la céderait bien volontiers si l'occasion se présentait à lui et si le prix offert lui convenait;
- la conservation et l'étude des documents et artefacts conservés nous paraissent impraticables vu l'absence d'inventaire, aussi sommaire soit-il : cette lacune ne permet à personne de vraiment connaître la teneur des fonds conservés, même à ses propriétaires, nous semble-t-il.

#### B - Bibliothèque patrimoniale ?

Pour autant, s'agit-il d'une bibliothèque patrimoniale spécialisée dans le domaine photographique? Pas d'avantage puisqu'ici encore l'absence d'inventaire ou de politique de conservation et de restauration sont des lacunes rendant cette définition inadéquate.

### 4.7.2.3 Répertoire Culturel Mauricien

Le projet de Répertoire Culturel Mauricien ne nous paraît pas à la hauteur de ses ambitions:

- la réflexion préalable sur l'étendue de l'inventaire des œuvres et du répertoire d'artistes<sup>218</sup> y est indigente;
- la solution technique adoptée est sous-dimensionnée, assez mal maîtrisée (tableur Micro-soft Excel) et ne respecte pas les normes de description en vigueur;
- les œuvres collectées sont disparates et d'un intérêt souvent médiocre (exemple de la collection privée de M.TANG WAY).

Ses contours approximatifs et mouvants expliquent sans doute que ce projet, prévu pour décembre 2009 et évalué à 20 Millions de roupies,<sup>219</sup> puis déclaré par son propriétaire «cadeau à mon pays» en mai de la même année,<sup>220</sup> soit toujours inachevé en avril 2011.

### 4.7.2.4 Conclusion provisoire

La bonne volonté, l'abnégation, la passion du couple BRÉVILLE ne font pas de doute et on leur doit la sauvegarde d'une partie du patrimoine photographique mauricien.

Pour autant, beaucoup reste à faire et l'approche adoptée au Musée de la Photographie nous paraît empreinte d'un certain amateurisme (absence d'inventaire, manque de rigueur dans les techniques de conservation, stockage en vrac potentiellement dangereux pour les documents et artefacts), qui trouve son justificatif dans le sentiment d'urgence et la nécessité de faire vite afin de collecter ce patrimoine en péril, avant de le voir disparaître pour de bon.

Les autorités mauriciennes seraient avisées d'aider dorénavant le Musée de la Photographie à améliorer ses méthodes de conservation et de gestion, de l'aider à réaliser son catalogue, en contrepartie de leur financement, fort généreux depuis 2006.

#### 4.8 Registrar General (Port-Louis)

Date(s) et lieu(x) de visite	22/03/2011, après trois rendez-vous repoussés <i>in-extremis</i> <ul style="list-style-type: none"> <li>Étage de l'<i>Emmanuel Anquetil Building</i> où se trouve le <i>Registrar General</i></li> </ul>
Personnes rencontrées	M. Rajandrah GOORAYAH, <i>Deputy Registrar</i>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Non
Questions complémentaires posées - Réponses apportées	<ul style="list-style-type: none"> <li>Oui : Budgets, historique du service et textes réglementaires régissant son fonctionnement interne, <i>Registrar General Act</i>, rapports annuels.</li> <li>Non : Aucune réponse malgré relance.</li> </ul>

##### 4.8.1 Compte-rendu de visite

Nous avons été reçu par M. Rajandrah GOORAYAH, *Deputy Registrar* dont la compétence et le dynamisme nous ont convaincu.

###### 4.8.1.1 Administration riche et puissante

Le *Registrar General* est une puissante administration, bien dotée en personnel (160 employés avec de bonnes qualifications), dont le rôle est crucial dans la vie sociale, juridique et patrimoniale de Maurice; il conserve en effet, sur deux étages du bâtiment Emmanuel Anquetil de Port-Louis (4<sup>e</sup> et 6<sup>e</sup> ainsi qu'une réserve de documents anciens au *MPF Building*):

- les transcriptions des actes notariés enregistrés (depuis 1804),
- les inscriptions d'hypothèques,
- diverses perceptions en faveur de l'État (par exemple, ventes et achats de véhicules),
- des actes sous seing privé : actes enregistrés, procédures en Cour, engagements et dépôts en garantie (*bonds*), testaments.

L'informatique de recherche en matière patrimoniale est performante : la base de données Oracle répertorie la localisation dans les registres de tous les actes notariés et hypothèques depuis l'origine. Il y a 50 postes de consultation pour les usagers, autant pour les employés.

La numérisation des documents pour le projet LAVIMS<sup>221</sup> va débuter prochainement.

###### 4.8.1.2 Conservation du patrimoine déficiente

Faute de sensibilisation et de formation adéquates, la conservation des documents anciens laisse en revanche beaucoup à désirer.

- L'accès direct aux actes enregistrés dans le dépôt, même les plus anciens, est libre pour tous moyennant une redevance minime;<sup>222</sup> nous avons constaté à quel point les usagers (notamment les clercs de notaires) maltraitaient les registres en les maniant sans ménagement. Le risque de vol de registres ou de pages dans les registres nous paraît également important.
- Le service de reliure et de restauration, établi de longue date, est très compétent pour le tout-venant des documents administratifs mais pas du tout au fait des techniques de restauration. Outre la plastification à chaud (*laminating*), le service utilise de la bande adhésive (*Scotch*) dont l'effet sur les documents anciens est nocif.

La plastification des index et répertoires est presque achevée; une fois plastifiés, les index seront scannés. Celle des registres va bientôt commencer en partant de 1804; or, il s'agit d'une procédure non réversible donc inadéquate du point de vue de la conservation : elle doit donc être immédiatement interrompue.

- La climatisation du dépôt était éteinte durant notre visite.

#### 4.8.2 Quelques remarques

Avec le *Registrar General* nous sommes en présence d'une administration efficace, riche, moderne et bien gérée, notamment du point de vue informatique. Pour autant, elle se concentre principalement sur la gestion de ses archives contemporaines et laisse au second plan les trésors patrimoniaux qu'elle conserve, risquant par des démarches inappropriées de les compromettre gravement.

Il nous paraît important que le Ministère de tutelle du *Registrar General*, les Finances, octroie une dotation modeste mais suffisante pour numériser en priorité ses documents les plus anciens et mette les originaux à l'abri de la manipulation des lecteurs et des atteintes de restaurations trop radicales.

#### 4.9 Registrar of Civil Status (Port-Louis)

Date(s) et lieu(x) de visite	21/03/2011, après plusieurs atterroissements ^ Étage de l' <i>Emmanuel Anquetil Building</i> où se trouve le <i>Registrar of Civil Status</i>
Personnes rencontrées	M. André LAU YU KAM, <i>Deputy Registrar</i>
Questionnaire rempli?	Oui
Documents complémentaires confiés?	Non
Questions complémentaires posées - Réponses apportées	<ul style="list-style-type: none"> <li>• Oui : Budgets, volumétrie des documents conservés, <i>Civil Status Act</i>.</li> <li>• Non : Aucune réponse malgré relance.</li> </ul>

##### 4.9.1 Compte-rendu de visite

Nous avons eu du mal à obtenir un rendez-vous avec les responsables de ce service : la foule des touristes étrangers venus à Maurice submerge ses capacités (79 employés, budget annuel d'environ 30 Millions de Rs.) et celles de l'officier d'état-civil principal, son *Deputy Registrar*, M. André LAU YU KAM.

###### 4.9.1.1 Documents conservés

Au nombre de ses attributions, le service détient l'état-civil mauricien et conserve deux types de documents:

- les originaux des registres, qui sont souvent présents dans les bureaux régionaux de l'état-civil (un par district) ; dans ces registres (naissances, mariages, décès), les entrées sont classés par ordre chronologique;
- les originaux des index ou répertoires donnant accès (alphabétique des noms) aux entrées des registres (numéro de registre et *folio*). Ces index sont également accessibles, jusqu'à 1861, aux Archives nationales.

L'accès aux dépôts est exclusivement réservé aux employés du service et strictement interdit au public.

###### 4.9.1.2 Système informatique

Le système informatique nominatif est à jour pour les actes postérieurs à novembre 2001, dont les copies papier sont également conservées (accroissement annuel d'environ 400 registres sous forme de listings). Sa mise à jour pour les actes des années antérieures se fait au gré des demandes par les particuliers (généalogistes ou citoyens procédant à des démarches administratives); la qualité des saisies va en diminuant à mesure que ces actes remontent dans le temps (erreurs de lecture et de retranscription).

###### 4.9.1.3 Local des registres

Le local des registres paraît sain: l'espace est vaste, le mobilier métallique de bonne qualité et adapté à la taille des registres contemporains, les documents paraissent rangés (ordre chronologique puis géographique).

On doit néanmoins signaler que la climatisation ne fonctionne que durant la journée, aux heures de bureau, et que certains employés se permettent de fumer dans le local en actionnant un ventilateur pour disperser la fumée, ce qui représente un risque critique d'incendie pour le bâtiment tout entier.

La situation est alarmante en revanche pour les registres les plus anciens (1811-1860), souvent des exemplaires uniques: placés à l'horizontale dans les travées inférieures des rayonnages (ils n'entrent pas verticalement), trop serrés, ils laissent échapper de leurs reliures démantibulées des feuilles volantes qui, par négligence, sont parfois intercalées dans d'autres registres ou traînent à même le sol.

#### 4.9.1.4 Local des index

La salle des index se trouve dans une aile différente de celle du local des registres, près de l'atelier de reliure et des guichets destinés au public, ce qui présente beaucoup d'inconvénients pour les employés du *Registrar*, contraints à de fastidieux aller-retours. Cette salle est exiguë, exposée en pleine lumière; les index, fréquemment utilisés, s'y trouvent à l'étroit, jetés pêle-mêle ou placés tête-bêche dans des meubles inadaptés (reliures anciennes démembrées). Les index abîmés continuent d'être utilisés, même quand leurs feuilles se détachent. Lors de l'une de nos visites, ils avaient été détremés par une fuite d'eau provenant du plafond: aucune mesure de protection n'avait alors été prise par le personnel.

#### 4.9.2 Quelques remarques

##### 4.9.2.1 Expérience vécue

Nous avons été récemment amenés à rechercher des pièces généalogiques pour une famille franco-mauricienne dont les souches ascendantes ont été par ailleurs bien étudiées par les érudits locaux (on dispose des arbres généalogiques de tous les ascendants de cette famille). L'objectif de cette mission était de retrouver puis de faire authentifier les actes de naissance, de mariage et de décès de tous les ascendants de la famille et des familles alliées (quatre en tout) afin de pouvoir établir une filiation continue jusqu'au primo-arrivant français.

Les 35 demandes d'actes, étagés entre les 18<sup>e</sup> et 20<sup>e</sup> s. ont donné lieu aux résultats suivants, après deux mois de recherche dans les index par des employés du *Registrar* (le public n'est pas autorisé à procéder aux recherches lui-même):

	Total
Oubliés dans la recherche	3%
Cote déclarée introuvable dans les index	54%
Cote trouvée dans les index	43%

Ce qui signifie que plus de la moitié des entrées des index ne put alors être trouvées compromettant donc la possibilité d'atteindre aisément les actes dans les registres correspondants.

Une fois les actes recherchés dans les registres par les employés de l'état-civil et complétés par nos soins aux Archives nationales, les résultats s'établirent finalement ainsi:

	Total
Oubliés dans la recherche	3%
Cote déclarée introuvable dans les index	26%
Document déclaré introuvable dans les registres	22%
Document trouvé dans les registres et transcrit	49%

Une recherche d'actes d'état-civil simple et couvrant une période récente (18<sup>e</sup>-20<sup>e</sup> s.) aboutit donc aux résultats suivants:

- la totalité des actes avant 1790 sont demeurés introuvables aux Archives nationales, faute d'index avant cette date;
- les index conservés à l'état-civil sont dans un tel état qu'ils laissent un bon tiers des actes sans cote et donc introuvables dans les registres;
- même quand la cote des actes est trouvée dans les index, l'état de conservation ou la perte des registres correspondants laisse un bon tiers des documents introuvables;
- en définitive, la moitié seulement des actes a pu être trouvée et retranscrite.

#### 4.9.2.2 Questions

- Que penser d'une administration d'importance nationale dont les résultats sont probants à 50%?
- Quelles conséquences peut avoir une occultation de la moitié (en moyenne) des ascendants de chaque citoyen mauricien? Quels en sont les effets, à moyen et long terme, sur la conscience nationale mauricienne?
- Ne peut-on surtout trouver des solutions (simples au demeurant) à cette situation nocive et qui s'aggrave de jour en jour?

#### 4.10 MSIRI (Réduit) : réponse par courriel

---

##### 4.10.1 Confidentialité requise

Mme Rosemay NG a stipulé, dans la réponse au questionnaire qu'elle nous a faite par courriel, de son souhait que les renseignements qu'elle nous adressait restent anonymes.

Nous ne pouvons donc en faire état dans cette section mais les intégrons néanmoins, en les mêlant aux autres résultats statistiques globaux de notre enquête: ils ne peuvent plus ainsi être retracés.

## 5 FACTEURS EXPLICATIFS

### 5.1 Budgets en berne

Depuis l'Indépendance, le budget du pays alloué à la culture,<sup>223</sup> que ce soit sous la tutelle du Ministère des Arts et de la Culture (créé en 1982, subit ensuite de nombreuses vicissitudes) ou de tel autre, est resté insuffisant même s'il dépasse la courbe ascensionnelle générale du budget de l'État mauricien.

Essayons de confirmer ou d'infirmer ce fait pour les organismes de conservation du patrimoine documentaire, par l'étude des budgets que nous pouvons trouver dans les sources disponibles en ligne.<sup>224</sup>

#### 5.1.1 Étude des budgets culturels

##### 5.1.1.1 Disparité des sources

Plusieurs facteurs expliquent la difficulté à établir des séries budgétaires continues et cohérentes, donc comparables.

- Les différences de statuts entre organismes, qui aboutissent à des différences de décompte dans le budget de l'État mauricien.<sup>225</sup>
- Le changement intervenu dans la période budgétaire 2009-2010: le passage d'une période de décompte [1<sup>er</sup> juillet-30 juin] à une période [1<sup>er</sup> janvier-31 décembre] a occasionné un décompte sur une demi-année en 2009.
- Le passage en 2009 à une gestion des budgets par projets (PBB - Programme-Based Budgeting) sur base triennale a fait perdre, dans le budget, leur individualité à certains services d'État.<sup>226</sup>
- La globalisation de certaines données selon des postes de regroupement évolutifs, est préjudiciable dès qu'on souhaite comparer le budget des services avec celui de postes nationaux.<sup>227</sup>
- L'absence, sur le site Internet du Budget, de certaines données dont les pièces justificatives manquent.<sup>228</sup>

##### 5.1.1.2 Méthodologie

Nous avons conçu et renseigné une base de données des données budgétaires de la culture à Maurice, accessible en ligne, qui constitue une référence aisée et permet des comparaisons entre données réelles.

En particulier, nous avons veillé:

- à y distinguer les *évaluations des valeurs effectivement constatées*.
- À toujours y mentionner la *source* de l'information et *l'institution ou le poste* à laquelle elle s'applique.
- À y enregistrer des données *synchrones*.

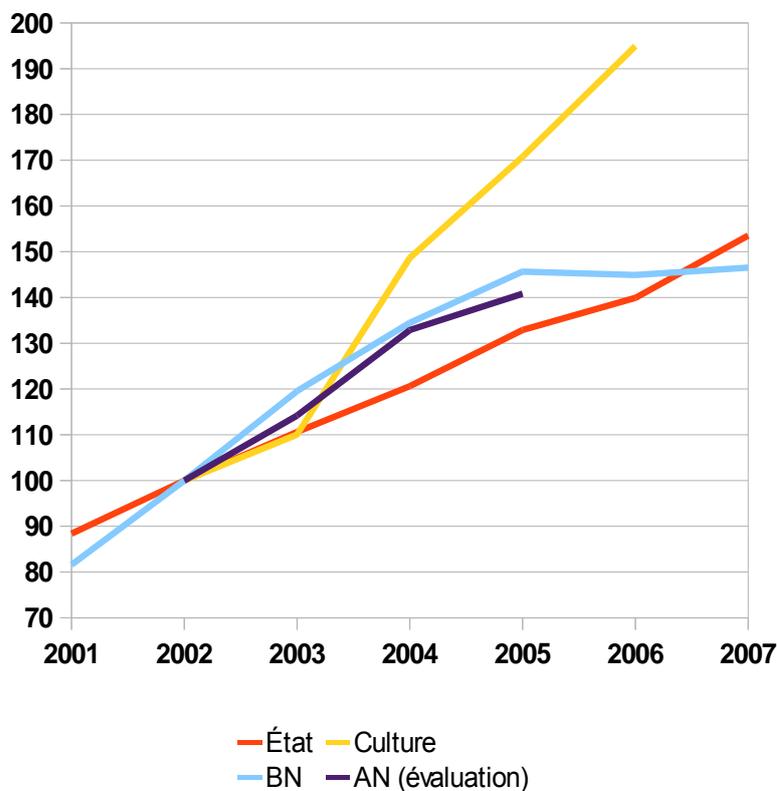

#### 5.1.2 Synthèse des résultats

##### 5.1.2.1 Augmentation générale des budgets de fonctionnement

Dans le graphique ci-dessous, on constate la hausse importante du budget du Ministère des Arts et de la Culture (qui double entre 2002 et 2006 alors que le budget de fonctionnement de l'État augmente de 40%); cet optimisme doit, cependant, être tempéré puisque l'évolution des deux orga-

nismes culturels que nous étudions (Archives nationales et Bibliothèque nationale) est loin d'être aussi prononcée (voir *infra*).

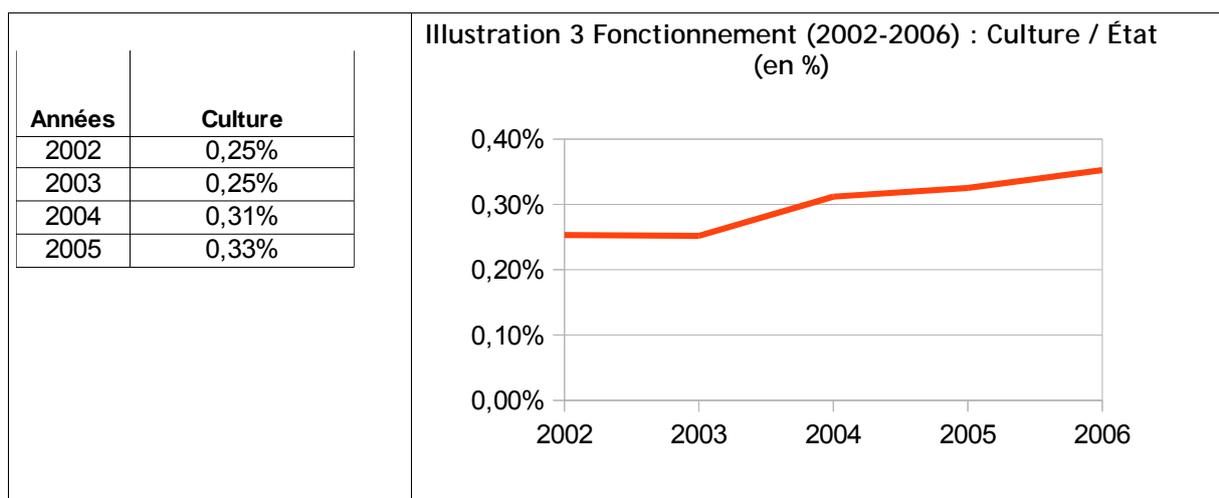

Illustration 2 Budgets de fonctionnement (Base 100 en 2002)

#### 5.1.2.2 Accroissement du budget du Ministère des Arts et de la Culture

Quand on compare les coûts de fonctionnement (dépenses de personnel + dépenses de fonctionnement) du Ministère des Arts et de la Culture avec les coûts de fonctionnement de l'État mauricien,<sup>229</sup> on constate:

- que le budget de la culture est en forte hausse,
- que cette hausse doit être mise en perspective avec la modicité des chiffres en valeur absolue: au mieux, le budget de fonctionnement du Ministère des Arts et de la Culture représente 0,35% du budget de fonctionnement de l'État - en encore, l'action du Ministère ne se limite-t-elle pas seulement aux activités culturelles ou patrimoniales, mais aussi aux cultes.

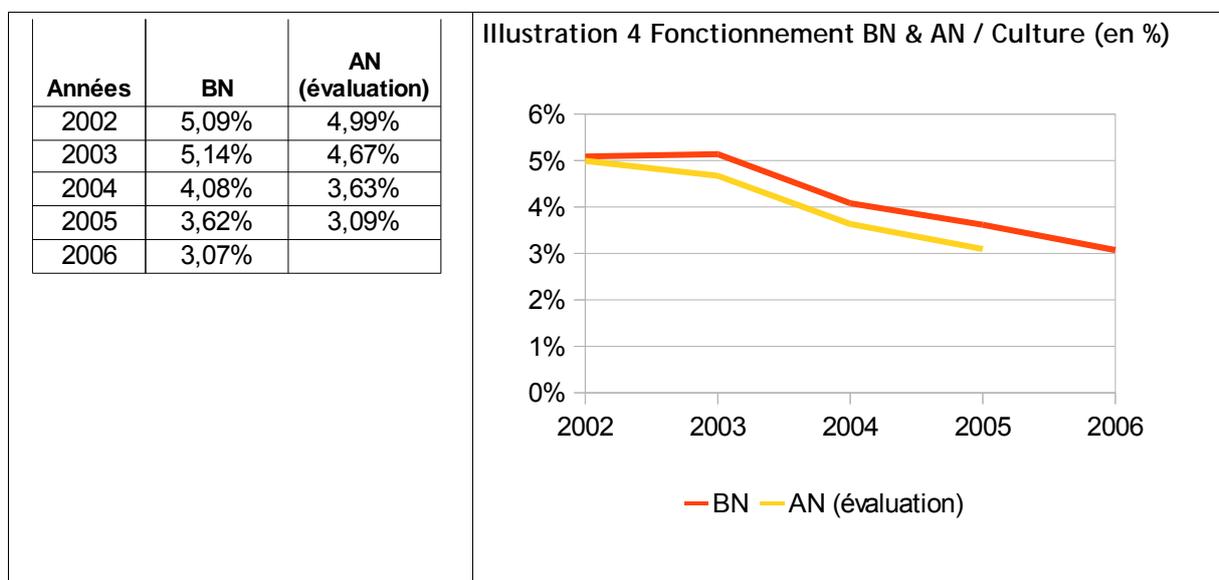

Le mandat du Ministre, Joseph TSANG MANG KIN (1995-2000), est significatif de cette faiblesse durable malgré de vastes ambitions dans le domaine du patrimoine documentaire, matérialisées par une intense activité réglementaire (notamment: la création de la Bibliothèque nationale,<sup>230</sup> la révision de la loi sur les Archives).<sup>231</sup> Mais les limites à ces réalisations sont que le projet de *Culture House*<sup>232</sup> qui devait regrouper les Archives nationales et la Bibliothèque nationale à Rose Hill, puis Moka n'a toujours pas vu le jour et est devenu depuis lors l'un des sujets favoris de la presse mauricienne.

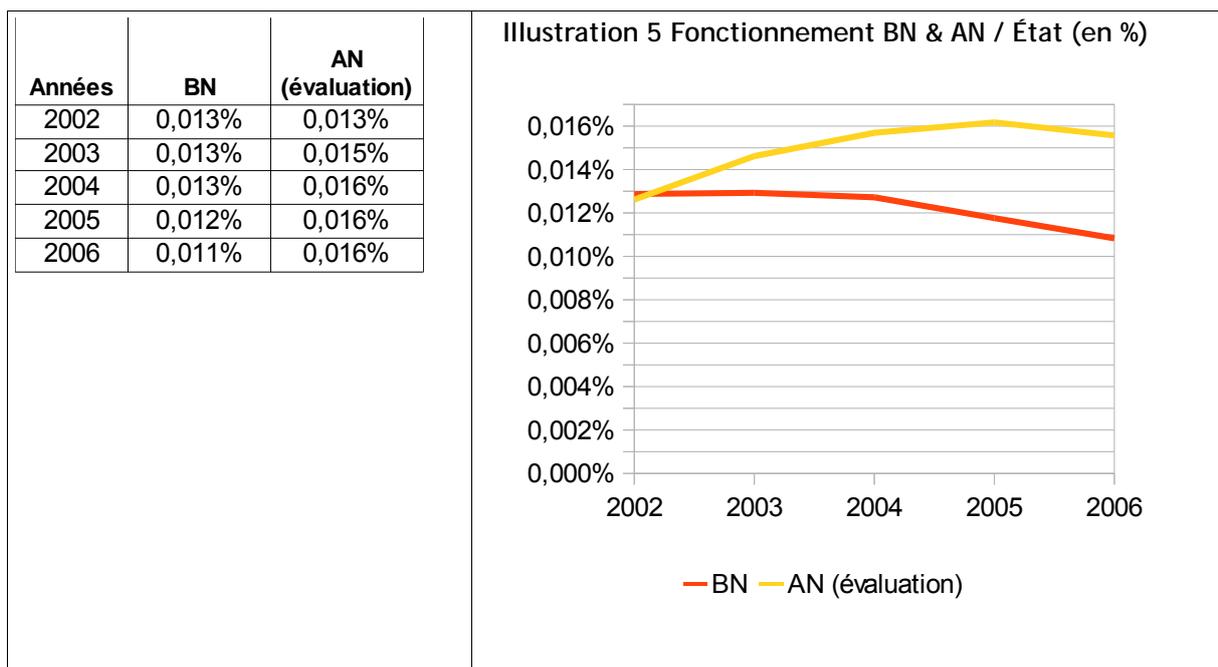

#### 5.1.2.3 Baisse relative des budgets des AN et de la BN

Quand on prend en considération les budgets de fonctionnement des Archives nationales<sup>233</sup> et de la Bibliothèque nationale,<sup>234</sup> on aboutit aux constatations suivantes:

- la part de ces budgets est infime, une fois mise en rapport à celle de l'État mauricien.
- La comparaison de ces budgets avec ceux du Ministère des Arts et de la Culture, force à constater qu'ils subissent une baisse relative importante.

Cette baisse est également notable, quand on compare ces budgets à ceux de l'État mauricien tout entier :

## 5.2 Mélange de genres

### 5.2.1 Le «fardeau» des documents anciens

Plusieurs facteurs administratifs nous paraissent de nature à mettre en péril des fonds patrimoniaux dans leur entier:

- La mixité entretenue, au sein de services purement gestionnaires (par exemple le *Registrar of Civil Status* ou le *Registrar General*), de documents à l'intérêt historique ou généalogique fondamental et de *records* contemporains;
- l'efficacité recherchée dans la gestion quotidienne des archives par les administrateurs, que viennent gêner «tous ces vieux papiers»;
- le manque de formation, de sensibilisation patrimoniale et même de motivation du personnel.

### 5.2.2 Délégations «communalistes»

La dispersion qui menace le patrimoine documentaire découle également du caractère assez communautariste («communaliste» selon le terme mauricien) de l'organisation sociale et politique du pays: des pans du patrimoine archivistique<sup>235</sup> ont été ainsi temporairement soustraits à la tutelle publique, de laquelle ils ressortissent, pourtant, selon le *National Archives Act* et la règle de l'inaliénabilité des fonds d'archives.

De telles excisions sont communes à toutes les communautés dotées de moyens financiers ou de pouvoirs sociaux-politiques - et généralement exercées à titre privé par des particuliers, des personnalités morales lucratives ou bénévoles.

Nous l'avons constaté pour le *Mahatma Gandhi Institute* (lié aux groupes de pression indo-mauriciens, qui refusent la divulgation des informations castéistes ou religieuses se trouvant dans les archives de l'engagisme).

Nous l'avons également perçu pour la *Mauritius Commercial Bank*, qui semble pour certains membres de la communauté franco-mauricienne la meilleure alternative face aux Archives nationales.

Leur justification part souvent de constatations alarmistes, selon l'enchaînement suivant:

1. les instances de conservation publiques sont réputées inefficaces;

2. les fonds relatifs à la communauté considérée n'y sont pas correctement traités ou même maltraités par suite de biais communautaires;
3. l'urgence impose des mesures qui aboutissent à cette privatisation de fait, même temporaire.

Si ces fonds d'archives sont correctement traités, une fois excisés - parfois mieux que dans les services de conservation publics - de pressantes questions pour l'intégrité du patrimoine national sont posées:

- qui contrôle ces fonds et l'usage qu'on en fait?
- Selon quelles règles sont-ils communiqués au public?
- Leur inaliénabilité ultérieure est-elle garantie?
- Leur statut juridique est-il précisément défini?
- Y a-t-il un terme à cette délégation et quand se fera leur retour dans leur cadre de conservation naturel, celui de la gestion publique?

### 5.3 Lacunes

#### 5.3.1 Expertises volatiles

Le passage éclair périodique de quelques spécialistes étrangers ne change d'ailleurs rien à l'affaire: cette coutume bien mauricienne, que moquait autrefois Yvan LAGESSE,<sup>236</sup> est en matière de gestion du patrimoine documentaire une sorte de rituel abondamment médiatisé,<sup>237</sup> pour un résultat souvent décevant - ce type d'intervention étant rarement inscrit dans la durée<sup>238</sup> et ne donnant jamais lieu à aucun suivi ultérieur sur place, condition pourtant indispensable du succès.

Que ce soit en matière de microfilmage<sup>239</sup> ou de numérisation, de conservation ou de restauration des documents anciens, la liste des visites sans lendemain est longue (ici partielle et classée en ordre chronologique inverse) :

Date	Nom de l'expert	Nationalité, institution	Compétence	Commanditaire
2011.01	Pr. Hervé CHERADAME	France Université d'Évry CICL (Arles) <sup>240</sup>	Conservation du papier Dés-acidification	Particuliers : Mme Michèle MALIVEL, M. Thierry LAGESSE et la Société d'Histoire de l'Île Maurice
2010.10	Claire DEKLE	États-Unis, Washington, DC Bibliothèque du Congrès	Bibliothéconomie Conservation	Ambassade des États-Unis
2010	Pr. Sophie WHITE	États-Unis, Indiana University of Notre Dame	Archivistique	Voyage à titre privé (mauricienne)
2009.07	Melody CHEN	États-Unis, New-York Buffalo State College (étudiante)	Bonnes pratiques de conservation et de consultation	Bibliothèque nationale
2008.07	Pr. Zawiyah BABA	Malaisie Bibliothèque nationale	Bibliothéconomie	Bibliothèque nationale
2008.07	Gérard-Yves HEERAMAN	France Généalogiste à titre privé	Numérisation	CGMR (membre fondateur)
2001.02	Équipe d'experts chinois	République de Chine	Restauration du papier (repulpage et lamination)	Archives nationales
1997.07	Julien DURUP	Seychelles	Restauration des do-	Ministère des Arts et de la

			cuments	Culture
1989	M. POPE	United States Information Service	Organisation des bibliothèques	Ambassade des États-Unis
1978	K. C. HARRISON	UNESCO	Organisation des bibliothèques	Gouvernement de Maurice
1966	Sydney HOCKEY	Administration britannique des bibliothèques pour l'Afrique	Organisation des bibliothèques	Ministère de l'Éducation

### 5.3.2 Sensibilité culturelle ou pédagogique

Nous avons, lors de notre enquête, perçu divers indices qui peuvent faire craindre une dérive technicienne ou même technocratique de l'encadrement de conservation au détriment des aspects culturels attachés au patrimoine documentaire.

Ce manque de «sensibilité culturelle» a des conséquences durables: à l'exception peut-être des deux responsables de la Bibliothèque nationale et de la Bibliothèque Carnegie et, dans une moindre mesure, de ceux des Archives nationales, aucun des dirigeants rencontrés n'a de véritable perception de ses fonds patrimoniaux comme une richesse nationale. Les services administratifs qui conservent, marginalement, des fonds anciens les considèrent même comme des obstacles à la rationalisation de leurs méthodes de gestion.

Comme leurs responsables n'en font pas ou peu état auprès du public (peu d'expositions ou de journées portes-ouvertes, un éclairage médiatique insuffisant), les chiffres de fréquentation végètent et dissuadent les politiques d'augmenter les crédits alloués.<sup>241</sup>

Il en va de même pour la perception de la valeur pédagogique de ces fonds : alors que l'histoire de Maurice commence seulement d'être enseignée dans les enseignements primaire et secondaire, il est surprenant que rien ne soit prévu pour les scolaires : un jeune mauricien ne saurait donc avoir l'idée de ce qu'est un document ancien. Ici encore, l'exemple des succès à l'étranger devrait inciter à plus de volontarisme.<sup>242</sup>

### 5.3.3 Conflits larvés

Maintenant que la multiplication par division des services de conservation s'est assagie, que leurs périmètres et prérogatives respectifs ont été définis par des lois-cadres, les discordes se sont atténuées ou plutôt déplacées sur d'autres terrains (par exemple celui des archives de l'engagisme déposées au MGI).

Il n'en a pas toujours été ainsi et l'installation de la Bibliothèque nationale en 1999 (accompagnée d'une soustraction de fonds aux Archives nationales et de la disparition pure et simple du *Mauritius Institute* comme bibliothèque) a été et reste toujours un sujet sensible. L'opposition entre la Bibliothèque nationale et les Archives a donné lieu à des passes d'armes sur les terrains judiciaire<sup>243</sup> et surtout médiatique.

Cette guerre de tranchées, dont on ressent encore les échos en questionnant les responsables, est un luxe dont se passeraient sans doute les institutions de conservation du pays, dans leur infinie précarité.

### 5.3.4 Formation insuffisante

Des cursus complets en bibliothéconomie ou en archivistique existent à l'UoM; avec l'avènement d'Internet, la documentation est à portée de mains, que ce soit en matière de conservation en climat tropical ou de normes.<sup>244</sup>

Par ailleurs, les institutions mauriciennes de conservation du patrimoine sont affiliées à une dizaine d'institutions internationales (ce que les dirigeants interrogés ont généralement omis de nous préciser), pour un budget annuel de 200,000 Rs. Environ.<sup>245</sup>

Vu la pléthore de documentations, de formations et de voyages d'études prodigués par ces organismes, on reste assez surpris de constater la persistance de tels retards à Maurice : on continue à y appliquer routinièrement des recettes abandonnées partout ailleurs, à ne pas accorder assez d'attention à ces questions pour les envisager comme évolutives ni surtout sujettes à actions concertées entre services de conservation de nature différente (archives et bibliothèques, par exemple).

Selon nous, les cursus de formation en bibliothéconomie à l'UoM, trop pauvres en matière patrimoniale, ne mettent pas assez en avant *l'unité* fondamentale des questions relatives au patrimoine documentaire ancien ou contemporain ni les problématiques de conservation, également partagées.

## RECOMMANDATIONS

Sans éducation historique ou patrimoniale dispensée aux futurs citoyens mauriciens, l'intérêt pour les documents anciens végétera longtemps dans la population. Les efforts pour sortir Maurice de son isolement académique et l'intégrer dans les circuits internationaux constitueront aussi, pour leur part, une puissante motivation à mieux traiter le patrimoine historique. Or, ces actions en amont, génératrices à terme d'une demande culturelle, n'ont pas encore vraiment trouvé leur rythme de croisière : il ne faut donc pas en attendre de résultats immédiats.

Pourtant, s'agissant du patrimoine documentaire, il est indispensable de chercher des solutions à court terme, sous peine de le voir définitivement compromis.

Notre mission doit déboucher sur des solutions faciles à déployer avec les moyens locaux, relativement peu coûteuses et donnant sans tarder des résultats tangibles. L'essentiel est donc de trouver l'enchaînement d'actions le plus logique - et ainsi le plus efficace - afin que budgets et efforts ne soient pas engagés en vain.

## 6 PRIORITES

Nos visites dans les services de conservation mauriciens et la lecture de textes d'experts missionnés pour aider les pays en développement à mener une politique patrimoniale et archivistique efficace nous incitent à recommander de porter maintenant tous les efforts sur le sauvetage des archives et de quelques fonds patrimoniaux de bibliothèques ; dans le même temps, afin d'octroyer une réelle autonomie aux responsables de la conservation, il convient de les former selon des standards internationaux.

### 6.1 Sauver les archives

Le système national des bibliothèques, bien tardivement mis en place sous le coup de rapports d'experts internationaux de plus en plus alarmistes, a acquis une vitesse de croisière et fonctionne correctement, pour sa gestion courante du moins ; grevé par des objectifs qui, selon nous, doivent passer au second plan (notamment la gestion de la connaissance, mieux assurée aujourd'hui en ligne que dans les bibliothèques publiques, surtout quand elles sont désargentées), il est assez outillé pour s'atteler à la préservation du patrimoine dont il a la charge.

#### 6.1.1 Cercles vicieux

##### 6.1.1.1 Archives d'Afrique

Les archives, en revanche, se trouvent dans une situation critique, finalement très semblable à celle que décrivaient avec tant de pénétration Karoly KECSKEMETI<sup>246</sup> expert de l'UNESCO auprès des pays du Tiers Monde ou Saliou MBAYE,<sup>247</sup> longtemps Directeur des Archives nationales du Sénégal.

Les archives des pays ex-coloniaux ont généralement rencontré les mêmes écueils:

1. Elles ont été créées par les métropoles selon le modèle qui prévalait au 19<sup>e</sup> s., celui d'archives historiques et culturelles « nobles » puis, très secondairement, comme d'efficaces gestionnaires de documents administratifs ; une fois mises en confrontation avec les nécessités pressantes du développement, leurs activités sont perçues comme peu rentables.
2. Les services d'archives constituent, donc, aux yeux de la population et de leurs gestionnaires eux-mêmes, dans leur « inutilité » immédiate, une sorte de caricature de la bureaucratie locale, dont la justification ultime consiste précisément à « noircir du papier ».
3. Enfin, prises dans le cercle vicieux de leur non-rentabilité immédiate, de leur réputation et de crédits en berne, les archives sont laissées à leur triste sort: moins efficaces, elles rendent moins de services et sont toujours plus dévalorisées aux yeux des dirigeants et de la population.

##### 6.1.1.2 Archives et *Records Management*

Encore s'agit-il ici de mieux préciser ce que l'on entend par « archives », car le terme prête à confusion, depuis l'explosion des documents administratifs dans les démocraties occidentales au début du 20<sup>e</sup> s.; on distingue en effet deux traditions archivistiques assez antagonistes:<sup>248</sup>

- la tradition continentale européenne (française ou germanique), qui accorde la primauté aux aspects historiques et culturels des archives;
- la tradition du « *records management* », apparue au début du 20<sup>e</sup> s. sur le continent nord américain, qui distingue les *archives* intéressant l'histoire, des *records* purement administratifs, dont la gestion revient en amont aux administrations émettrices<sup>249</sup> et qui fait partie intégrante de leur processus fonctionnel.

Cette seconde conception, constituée dans les années 1930, fut la mieux outillée dans les années 1980 pour faire face à l'afflux nouveau des documents électroniques, dont la gestion et la conservation posaient des problèmes inédits, notamment de masse et de péremption. Elle a donc récemment acquis, dans le domaine archivistique, un surcroît de légitimité technique et théorique.

### 6.1.2 Un outil essentiel pour l'État et la nation

Il s'agit également dans les suites recommandées à cette mission de modifier l'image rétrograde et routinière des archives, fonction essentielle pour l'État et la vie citoyenne.

#### 6.1.2.1 À quoi servent les archives?

##### A - Droit des États

Les archives des principaux royaumes européens furent constituées au Moyen-Âge et généralisées à tous les royaumes du continent au cours du 16<sup>e</sup> s. Leur objet était de conserver l'information secrète nécessaire au gouvernement et aux relations diplomatiques entre États<sup>250</sup> et surtout d'attester de leurs droits : sur les territoires (traités, titres de propriétés), sur les sources de revenus (liste de personnes assujetties à redevances), sur les prérogatives et privilèges (droits divers sur les dépendants et serviteurs).

Avec l'extension du pouvoir de l'État, cet objet initial s'est progressivement étendu à la population tout entière, sous la tutelle d'administrations spécialement établies à cet effet : l'état-civil garantit la filiation et donc la validité des successions; le cadastre, la possession des terres ; les minutes notariales et l'enregistrement de la validité des actes.

La moindre atteinte portée à l'une ou l'autre de ces garanties a des conséquences importantes sur l'organisation sociale ou politique toute entière: les archivistes sont les garants de la continuité, de l'authenticité, de l'inaliénabilité<sup>251</sup> et de l'imprescriptibilité<sup>252</sup> des archives dont ils ont la garde.<sup>253</sup>

##### B - Efficacité administrative

L'exercice de la souveraineté des États modernes est notamment garantie par l'efficacité de leurs administrations : la parfaite connaissance des dossiers, la continuité décisionnelle, la capacité à construire des projets sur le long terme et sans perte d'informations sont essentielles.

Des archives en bon état sont garantes de la pérennité de l'action gouvernementale: que dire d'un État qui referait les mêmes études et commanderait plusieurs fois les mêmes rapports parce qu'il n'a pas conservé les précédents ? Cette déperdition d'information serait-elle aussi acceptée par les tiers sollicités pour le financement de tels projets à long terme?

##### C - Mission historique

Les archives ont une mission culturelle éminente: aider les historiens à établir sur des bases incontestables, écrire, puis transmettre l'histoire de l'État, de la nation et de la société dont elles sont l'une des productions immédiates et multiformes, selon des perspectives et des problématiques toujours renouvelées.

Le cadre national, qui s'est imposé à tous les pays après les indépendances est celui dans lequel les archives culturelles et historiques sont conservées : l'histoire est donc généralement écrite dans ce cadre. Les services d'archives des pays ex-coloniaux sont néanmoins confrontés à des questions spécifiques:

- tout ou partie de leurs fonds a été transféré dans la métropole au moment des indépendances; ce qui était un souci pour les historiens d'autrefois pourrait s'être transformé en une aubaine car, y ayant été correctement classés, conservés et souvent numérisés, ces fonds sont maintenant aisément transférables aux pays autrefois sous tutelle;
- les métropoles ont souvent joué des uns contre les autres dans leurs colonies (*Divide and Rule*) : divisions entre peuples, entre religions ou entre communautés comme ce fut le cas à Maurice.

Les archives s'en ressentent et accordent souvent plus d'importance à telle ou telle composante de la société, ce qui risque de leur faire perdre une partie de leur *aura* de neutralité et de donner un biais aux sources et donc aux travaux historiques.

## D - Bonne gouvernance

Un article de synthèse<sup>254</sup> doté d'une bibliographie à jour, établit l'importance cruciale de la bonne gestion des archives étatiques (*Records and Information Management*) dans la bonne gouvernance - et donc notamment dans la capacité des pays en voie de développement à répondre aux normes que leur imposent leurs bailleurs de fonds.<sup>255</sup>

La bonne gouvernance est définie par le respect de critères désormais universellement acceptés.<sup>256</sup>

- l'obligation des États de rendre compte de leurs actions à leurs citoyens (*accountability*),
- la transparence (*transparency*),
- la confiance des citoyens dans les capacités de l'État à répondre à leurs attentes en faisant primer le droit (*public confidence and trust*).

Les archives sont en première ligne<sup>257</sup> de cette aspiration à la bonne gouvernance puisqu'elles :

1. assurent la documentation de l'action des gouvernements;
2. permettent aux administrations de rendre des comptes aux citoyens;
3. favorisent le respect de la loi;
4. protègent les droits des citoyens, la propriété et l'intégrité du territoire national;
5. permettent aux gouvernants de planifier les actions à venir;
6. protègent le patrimoine culturel de la nation pour les générations futures.

Certaines associations de Droits de l'Homme<sup>258</sup> considèrent ainsi la qualité de gestion des archives d'un pays comme un indice de sa bonne gouvernance.

Ces critères ont d'ailleurs donné lieu dans la plupart des pays développés, au tournant du 21<sup>e</sup> s., à une révision des lois sur les archives,<sup>259</sup> dans un sens concordant:

- la règle commune est la communicabilité immédiate et de plein droit des archives publiques aux citoyens, qui peuvent en commander copie à prix coûtant;
- les dérogations à cette communicabilité de plein droit sont strictement codifiées (et ne dépendent donc plus de l'arbitraire administratif s'abritant derrière le secret ou la raison d'État), les délais généralement réduits par rapport à la situation antérieure.<sup>260</sup>

### 6.1.2.2 Synthèse : les archives de Maurice

#### A - Calcul d'impact

Voici une synthèse des critères précédemment abordés sur lesquels la gestion des archives de Maurice n'est pas satisfaisante.

Nous indiquons dans ce tableau:

- Le nom du critère.
- Sa gravité avec un code à trois degrés:
  - 1: médiocre: jaune paille
  - 2: grave: rouge
  - 3: critique: brun

	Droits De l'État	Droits du citoyen	Efficacité administrative	Filiations Généalogie Histoire personnelle	Sciences humaines	Préservation du patrimoine	Indice de gravité
Non-versement des archives contemporaines	Orange	Orange	Orange	Orange	Orange	Orange	Orange
Excisions de fonds (MGI)	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : archives coloniales anglaises	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : archives de l'état-civil	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : archives juridiques	Orange	Orange	Orange	Orange	Orange	Orange	
Opacité des fonds détenus en mains privées (contenu, gestion)	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : archives coloniales françaises	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : archives médicales	Orange	Orange	Orange	Orange	Orange	Orange	
Communicabilité déficiente des archives aux citoyens	Orange	Orange	Orange	Orange	Orange	Orange	
Conservation : périodiques à la BN	Orange	Orange	Orange	Orange	Orange	Orange	
<b>Indice de gravité</b>	Orange	Orange	Orange	Orange	Orange	Orange	Orange

Nous calculons ainsi deux indices de gravité:

- pour chaque critère, un indice (somme de la ligne) qui permet de déterminer les manquements ayant le plus grand impact;
- pour chaque critère de gestion des archives, un indice (somme de la colonne) qui permet de voir où les manquements ont le plus de conséquences.

## B - Sauver le patrimoine des archives

Ce tableau nous permet un pilotage en finesse des priorités puisqu'il aboutit aux résultats suivants:

- Le patrimoine des archives<sup>261</sup> est sévèrement menacé et récolte l'indice de gravité le plus élevé (54); les sciences humaines (histoire, sociologie, anthropologie, etc.) sont concernées au premier chef, elles qui représentent le critère le plus chargé (22).
- à terme, c'est le non-versement des archives contemporaines (soit qu'elles soient retenues dans leurs services versants, soit qu'elles soient détruites) qui constitue la plus grande menace, équitablement partagée entre la bonne gouvernance et le patrimoine.
- Viennent ensuite les fonds contemporains dont l'état de conservation est préoccupant; les fonds de l'époque française arrivent seulement ensuite car leur mauvais état de conservation n'impacte que marginalement les droits du citoyen mauricien actuel.
- L'excision de fonds, notamment au MGI, et l'opacité de la gestion des fonds en main privées (MCB) est préoccupante, surtout du point de vue des sciences humaines.
- Les droits du citoyen et la difficulté à établir sa filiation sont également préoccupants (14).

### 6.1.3 Qui supervisera?

La restauration du patrimoine documentaire de Maurice, qui est, nous l'avons vu, une priorité impérieuse, représente une tâche de longue haleine qui ne saurait s'accommoder d'opérations effectuées dans le désordre, ni de financements épisodiques.

#### 6.1.3.1 Mécénat privé mauricien

##### A - Le mécénat du patrimoine bâti

Après les intenses destructions du patrimoine bâti public et privé à Maurice dans les dernières années du 20<sup>e</sup> s. - accompli par toutes les communautés de l'île - face auxquelles les instances tardivement mises en place<sup>262</sup> se sont toujours révélées impuissantes, un début de prise conscience nationale semble se faire jour.

Une poignée d'associations<sup>263</sup> ou de fondations<sup>264</sup> souhaitent recourir aux lois récentes sur le mécénat (CSR, *Corporate Social Responsibility*)<sup>265</sup> qui prévoient que ces dernières peuvent allouer 2% de leurs profits à des activités de bienfaisance menées par des associations dûment contrôlées. Cet apport financier semble pourtant orienté vers les actions sociales, environnementales ou éducatives (dont, en effet, des pans entiers de la population mauricienne ont grand besoin), plutôt que vers le patrimoine.

Le risque est fort, en matière culturelle comme en d'autres, de voir l'État mauricien se désengager par anticipation de ses missions, selon un accord implicite avec le secteur privé: à ce dernier, par l'entremise des fondations porteuses de projets, la charge de la restauration du bâti ancien en contrepartie des bienfaits attendus de cette rénovation.

Mais ce modèle de protection du patrimoine bâti, utilisé avec succès dans certains pays anglo-saxons, serait-il applicable au patrimoine documentaire ?

#### B - Expérience isolée

À notre connaissance, une seule action a été entreprise à ce jour: la venue en janvier 2011 d'un spécialiste français de la conservation du papier, le Pr. Hervé CHERADAME, dont le voyage de trois jours a été financé par M. Thierry LAGESSE, un des acteurs du secteur privé à Maurice.

Les conclusions<sup>266</sup> du spécialiste (qui se plaignait dans la même interview de la faible durée de sa mission) indiquent que faute de construction d'un dépôt d'archives adéquat, toute restauration lui paraît-elle vouée à l'échec:

*«En effet, une fois qu'un document a été désinfecté et désacidifié, il n'est pas vacciné, bien au contraire : il est encore plus sensible aux mauvaises conditions de stockage qu'avant et il faut donc le stocker dans un endroit sous atmosphère contrôlée. Il nous arrive de déconseiller la désinfection si les archivistes ne sont pas en mesure ensuite de les stocker convenablement. Mais si ces conditions sont remplies, vous partez pour plusieurs siècles sans nuages.»*

.

#### C - Inadéquation plausible

Le secteur privé mauricien est-il à même de prendre à sa charge les dépenses de rénovation du patrimoine documentaire (relogement, indexation, restauration)? Est-il habilité à le faire, en tant qu'acteur économique (et donc potentiellement sujet à conflits d'intérêts, s'agissant d'archives publiques contemporaines) ? Comment et par qui ses actions seront-elles supervisées puis contrôlées?

Un tel recours nous semble difficilement praticable, pour un faisceau de raisons concordantes:

- ⤴ avant tout, le coût élevé de l'opération, qui excéderait de beaucoup les possibilités du secteur privé;
- ⤴ le «retour sur investissement» moindre que pour le bâti ancien (qui acquiert de la valeur marchande une fois restauré, alors que les archives sont difficilement valorisables);
- ⤴ l'effet d'image médiocre pour les mécènes car ces «vieux papiers», souvent connotés négativement dans la population, n'intéressent guère ni ne sont de nature à donner du travail à quiconque.

#### 6.1.3.2 Aide internationale

Comme en matière de bibliothèques jusqu'à la fin des années 1990, c'est le retard pris par Maurice dans l'adoption de normes de gestion adéquates pour ses archives qui surprend.

#### A - UNESCO

Pourtant, ce ne sont pas la formation ni les aides qui manquaient pour ce faire: depuis 1949, l'UNESCO a été un agent essentiel de la réforme des archives auprès de ses États membres,<sup>267</sup> par exemple en créant en 1954 une unité de microfilmage opérant partout dans le monde. Plus récemment, le programme RAMP (Programme pour la Gestion des Documents et des Archives, lancé en mai 1979) s'est fixé pour objectifs de:

*«Favoriser, en y contribuant, la prise de conscience et la compréhension totales de la valeur et de l'utilité des documents et des archives en tant que ressources d'information de base, pour ce qui est, notamment, de la planification et du développement national et conjointement avec d'autres ressources d'information.  
Aider les États membres, sur leur demande, à organiser et à développer les systèmes et services de gestion des documents et des archives nécessaires à l'utilisation pleine et efficace de ces ressources d'information de base.»*

Ce programme donna lieu à de nombreuses publications, désormais accessibles sur Internet,<sup>268</sup> et dont l'ensemble constitue une somme inestimable de connaissances sur les questions d'organisation des services d'archives, de restauration des documents anciens,<sup>269</sup> de législation archivistique (communicabilité,<sup>270</sup> archives privées, bonnes pratiques),<sup>271</sup> et de formation (notamment par la constitution de corpus de textes archivistiques).<sup>272</sup>

Cet ensemble qui s'achève en 1986, est, c'est naturel, obsolète en matière de documents électroniques.

Parallèlement, depuis 1980, des programmes pilotes et des formations ont aidé les nations émergentes à mieux exploiter leurs archives :

- archives administratives: Indonésie, Philippines, Pérou, Soudan, etc.
- Restauration du patrimoine ancien.
- Bourses d'études et aide à la constitution d'écoles régionales ou nationales en matière d'archives.

À aucun moment, nous n'avons trouvé mention d'une quelconque demande de formation ou d'assistance technique de la part de l'administration des Archives nationales de Maurice ; pourtant, des états insulaires comparables (comme les îles Fidji) en ont tiré un excellent parti.

L'UNESCO maintient sa politique d'aide en matière d'archives grâce à son portail Web<sup>273</sup> et à l'attribution de bourses d'études. Son intérêt pour les aspects culturels liés aux archives est intact (*Memory of the World*).

## B - Banque Mondiale

La Banque mondiale entretient une antenne à Maurice<sup>274</sup> et y supervise un programme de développement pluriannuel<sup>275</sup> visant notamment à améliorer la compétitivité des entreprises locales, la liberté de commercer et les indicateurs de la pauvreté.

La Banque Mondiale favorise par ailleurs le développement des bonnes pratiques en matière d'archives gouvernementales, notamment pour les documents électroniques, dont la conservation, souvent hasardeuse dans les pays émergents, est une menace pour leur bonne gouvernance.<sup>276</sup> La Banque mondiale, elle-même dotée d'archives considérables, a adopté pour leur gestion la norme internationale ISAD (G) et en favorise la dissémination dans les pays où elle intervient, par des ateliers de formation ou des cours en ligne.

Nous n'avons trouvé aucune trace d'une telle demande d'assistance technique dans le plan d'aide de 2006, dont l'un des objets est pourtant la bonne gouvernance à Maurice.

### 6.1.3.3 État mauricien: le seul interlocuteur naturel

Nous l'avons vu, le secteur privé mauricien trouvera difficilement les ressources et l'intérêt nécessaires pour financer la sauvegarde des archives anciennes du pays.

Les financements accessibles auprès des organisations internationales sont, quant à eux, plutôt destinés au *Records Management* comme support des bonnes pratiques de gouvernement.

L'État mauricien nous paraît donc seul habilité à se consacrer à la sauvegarde du patrimoine documentaire ancien, partie inaliénable des fonds des Archives nationales. Cette mission, qui concerne les archives coloniales de la période française et de la période britannique, ainsi que les années qui suivent l'Indépendance de 1968, a plusieurs aspects dont il conviendra de fixer le meilleur ordonnancement possible.

## 6.2 Former au patrimoine documentaire

---

Nous avons constaté chez plusieurs de nos interlocuteurs le désir d'apprendre à mieux gérer le patrimoine documentaire dont leurs établissements ont la garde; cet indice encourageant ne doit cependant pas faire oublier les cours qu'ils avaient suivis en de multiples occasions.

Il est tout aussi difficile, en effet, de former un conservateur du patrimoine documentaire en un stage de quelques jours à l'étranger que de prétendre le faire pour un conservateur de musée en quelques semaines: notre enquête nous amène à penser que l'apprentissage de notions comme l'*authenticité* ou l'*ancienneté* peut résulter d'une acculturation personnelle tout autant que d'un cursus académique.

Le manque d'exposition au patrimoine, le rejet des temps anciens dans leur dureté sociale et l'attirance pour les effets d'une modernité «à l'occidentale» entretiennent sans doute à Maurice une certaine distance à l'égard du passé et de ses vestiges.

Dans ces conditions, la formation des professionnels à la gestion patrimoniale de l'écrit devrait, selon nous, prendre d'autres formes que celles adoptées jusqu'à ce jour et qui n'ont guère démontré leur efficacité: cours dispensés outre-mer, ou passages-éclairés de spécialistes étrangers.

Nous recommandons donc l'approche suivante:

- établir à Maurice un cursus pluriannuel et diplômant de conservateur du patrimoine documentaire (et le cas échéant aussi: artistique); le doter de moyens qui lui permettront de s'affirmer comme une référence régionale en la matière;
- y faire venir des professeurs, réputés dans leur domaine, en résidence de plusieurs semaines et durant lesquelles; ils dispenseront leur enseignement, corrigeront les mémoires et examens, interviendront à titre d'experts opérationnels là où cela leur est demandé (notamment dans les lieux de conservation du pays);
- leur faire dispenser leurs cours, pour une part dans l'institut de formation, pour une autre dans les établissements concernés par leur enseignement (par exemple, les Archives nationales pour un spécialiste des papiers anciens) ; de cette façon, l'enseignement de l'institut aura un aspect pratique qui le rendra plus efficace pédagogiquement;
- établir une base de données bibliographique et une bibliothèque numérique à jour sur les domaines concernés ; les rendre accessibles à tous sur Internet;
- multiplier les échanges internationaux et régionaux (notamment avec La Réunion) et tenter de faire venir des étudiants étrangers afin de créer, pour plus tard, de solides réseaux d'amitié et de connaissances professionnelles;
- faire amplement connaître la mission de l'institut aux jeunes Mauriciens, favoriser ainsi des vocations.

## 7 ENCHAINEMENTS

### 7.1 Fil d'Ariane

Il est important, dans la conduite d'un tel projet, de rechercher les enchaînements les plus efficaces, en tenant compte de l'urgence des tâches à accomplir, des relations de dépendance des unes vis à vis des autres, de leur durée de réalisation probable et de la facilité avec laquelle elles peuvent être engagées (obtention de crédits, autorisations, ressources disponibles, etc.).

#### 7.1.1 Priorités et dépendances

Après notre enquête, nous avons inventorié plusieurs tâches à accomplir; les voici représentées *comme si elles ne dépendaient pas les unes des autres*, que leurs conditions préalables étaient acquises et qu'elles pouvaient débuter sans tarder:

Tâche	Début plausible (ans)	Dépendances
Numérisation des fonds anciens (archives et bibliothèques)	1	Normes adéquates Ressources en personnel
Restauration des documents anciens aux Archives nationales (tous les fonds anciens) et à la Bibliothèque nationale (périodiques),	1	Financements Déménagement Formation du personnel
Sauvegarde des fonds de la colonisation britannique et de l'Indépendance	1	Volonté politique Ressources en personnel Espace de stockage
Révision de la loi sur les Archives nationales permettant: <ul style="list-style-type: none"> <li>▲ le versement effectif des archives publiques aux Archives nationales</li> <li>▲ le meilleur accès des citoyens aux archives publiques</li> </ul>	2	Volonté politique Formation du personnel
Formation en conservation des documents anciens	3	Accord des instances académiques Partenariats internationaux Recrutement des élèves
Déménagement des Archives nationales et de la Bibliothèque nationale dans des locaux adéquats (espace de conservation élargi, conditionnement de l'atmosphère, meilleur accueil des lecteurs),	4 <sup>277</sup>	Volonté politique Financements Inventaire préalable

Malheureusement, ces actions sont toutes assorties de conditions loin d'être remplies, notamment celles de la volonté politique et du financement.

Surtout, le déménagement des Archives et de la Bibliothèque nationale dans des locaux dotés d'assez d'espace et de conditions de conservation et de consultation adéquates ne peuvent, en l'état, être aisément planifiés: la difficulté supplémentaire est que ce déménagement constitue, selon certains experts,<sup>278</sup> un point de passage obligé pour que la restauration des fonds anciens ait la moindre efficacité et ne soit pas accomplie en pure perte.

Seule, la numérisation des fonds anciens aurait une chance de réussir sans retard, mais sa réussite dépend de la définition préalable de normes adéquates (qui ne sont pas acquises à ce jour) et de priorités au plan national.

Les actions envisagées ne paraissent donc pas prêtes d'être accomplies de sitôt et toute action entreprise sans planification concertée serait contre-productive.

#### 7.1.2 Gérer les manques

Nous avons été frappé de l'opacité qui entoure le patrimoine documentaire mauricien:

- les pertes et vols ayant longtemps affecté les collections;

- l'inadéquation ou le manque d'outils de recherche aux Archives nationales;
- un certain manque de fiabilité (Bibliothèque nationale) ou l'absence (Bibliothèque Carnegie) d'inventaires du patrimoine ancien des bibliothèques;
- la fermeture des collections et fonds privés.

Par ailleurs, les actions envisagées plus haut nécessitent toutes, pour être efficaces:

- une évaluation précise des fonds auxquelles elles s'appliquent : un déménagement, par exemple, ne saurait être engagé sans liste préalable des fonds concernés qui permette d'attester ensuite que rien n'a été perdu ou endommagé.
- Une approche *intégrée* au plan national, afin de coordonner les ressources (limitées) et de fixer des priorités globales (restauration, par exemple).

### 7.1.3 Récolement général du patrimoine documentaire

Nous recommandons donc d'effectuer, avant toute autre démarche, un récolement général des documents anciens à Maurice, selon une démarche que nous détaillons ci-dessous. Un récolement est:

*Vérification systématique, dans un service d'archives ou une bibliothèque de ses fonds et collections consistant à dresser dans l'ordre des magasins et des rayonnages la liste des articles qui y sont conservés ou qui manquent par rapport aux instruments de recherche existants.*

Ce récolement permettra d'avoir une évaluation fiable :

- des fonds actuellement conservés dans les archives publiques, les collections (publiques et privées) et les bibliothèques publiques du pays;
- des pertes subies par le patrimoine mauricien;
- des urgences de restauration ou de numérisation.

Ce récolement aura plusieurs effets positifs:

- asseoir la gestion du patrimoine documentaire sur des bases enfin assainies et servir de pierre de touche à une gestion dorénavant rigoureuse car contrôlée,
- récupérer une partie des fonds disparus,
- publier un inventaire fiable et actualisé des fonds pour les chercheurs mauriciens ou étrangers;
- permettre de piloter la numérisation et la restauration des fonds anciens sur la base d'un arbitrage national intégré;
- former une équipe de spécialistes dont les compétences, une fois qu'ils auront achevé leur mission de récolement, seront ensuite utiles aux services existants.

## 7.2 Approche intégrée

---

### 7.2.1 Actions

Nous avons établi ci-dessous la liste des actions à entreprendre; pour chacune d'entre elles, nous portons également:

- l'urgence [Urg.] de l'entreprendre (1 = urgent, 4 = peut attendre),
- la faisabilité [Fais.] de l'entreprise (1 = facile, 4 = difficile),
- les actions qui doivent la précéder afin de lui donner les meilleures chances de réussite,
- le domaine auquel cette action est rattachée.

Nous détaillons ces actions dans le prochain chapitre et suivantes.

Action	Urg. (1-4)	Fais. (1-4)	Précurseurs	Domaine
Institut de formation du patrimoine documentaire (et artistique)	1	2	-	Arc Bib (Mus)
Récolement national du patrimoine documentaire	1	2	-	Arc Bib
Trouver des financements	1	3	-	Arc Bib
Trouver un nouveau lieu pour les AN	1	4	Trouver des financements	Arc
Trouver un nouveau lieu pour la BN	1	4	Trouver des financements	Bib
Amender la loi sur les archives	2	1	-	Arc
Arbitrage national (Comité) : numérisation et restauration	2	1	Récolement Amender la loi sur les archives	Arc Bib
Restauration des périodiques à la BN	2	2	Déménagement de la BN Arbitrage national (Comité)	Bib
Définition de normes nationales de numérisation	2	2	Arbitrage national (Comité)	Arc Bib
Réécrire la loi sur les archives dans le sens de droits étendus pour les citoyens	2	3	-	Arc
Établir une politique nationale de Records Management	2	3	Créer des « missions archives » auprès des administrations	Arc
Restauration des documents anciens aux AN	2	3	Déménagement des AN Arbitrage national (Comité)	Arc
Déménagement des Archives nationales (AN)	2	3	Récolement Trouver un nouveau lieu	Arc
Déménagement de la Bibliothèque nationale (BN)	2	3	Récolement Trouver un nouveau lieu	Bib
Créer des « missions archives » auprès des administrations	2	3	Amender la loi sur les archives	Arc
Sauver le patrimoine des archives aux 19 <sup>e</sup> et 20 <sup>e</sup> s.	2	4	Amender la loi sur les archives Créer des « missions archives » auprès des administrations	Arc
Meilleure gestion du patrimoine à Carnegie	3	2	Récolement	Bib
Numérisations à la BN	3	2	Récolement Arbitrage national (Comité) Définition de normes nationales	Bib
Renforcer le contrôle sur les archives privées	3	3	Amender la loi sur les archives	Arc
Numérisations aux AN	3	3	Récolement Arbitrage national (Comité) Définition de normes nationales	Arc
Microfilmage à la BN	4	1	Arbitrage national (Comité)	Bib

### 7.2.2 Gestion de projet

Nous avons choisi d'adopter, pour la description du plan d'action à engager, une approche de type «gestion de projet» qui nous semble la mieux appropriée pour le mener à son terme et qui cadre avec les nouvelles directives budgétaires aux administrations publiques (PBB).<sup>279</sup>

Cela consiste notamment:

- à diviser les opérations en *modules*, *sous-modules* et *actions* afin de mieux les décrire (intervenants requis, ressources nécessaires, commentaires), les dater (date de début, date de fin prévue) et les quantifier (durée, coût estimatif).

NB. Nous avons arbitrairement fait débiter les projets au 1er janvier 2012.

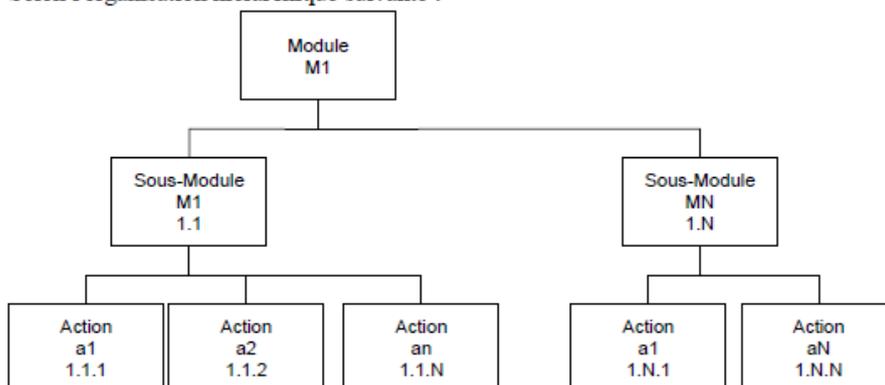

- À sélectionner pour ce faire un outil de gestion de projet très répandu, gratuit et libre de droits : GanttProject,<sup>280</sup> logiciel Open Source, gratuit et multi-plateformes (Windows, Linux et MacOS), qui de surcroît permet:
  - des échanges de fichiers avec les logiciels standard du marché (notamment Microsoft Project, les tableurs [format csv] et les navigateurs Internet [format xml]);
  - une publication immédiate sur le Web [format html] de toutes les données saisies.
- À prévoir d'emblée une gestion collaborative du travail : dans la perspective d'une équipe travaillant à des projets complexes et dont la réalisation doit être promptement achevée, il est crucial de pouvoir suivre l'état d'avancement des travaux, détecter les goulots d'étranglement et réaffecter dynamiquement les ressources là où elles sont le plus utiles.

### 7.2.3 Conventions adoptées

Dans la suite de ce rapport, nous avons adopté les conventions suivantes:

<b>M</b>	Module
<b>m</b>	Sous-module
<b>a</b>	Action

Selon l'organisation hiérarchique suivante :

*Dessin 1: Organisation hiérarchique du projet*

Nous avons choisi de subdiviser le projet en **aires distinctes**, afin de procéder à des regroupements de types variés, notamment budgétaires :

<b>ADM</b>	Décision administrative ou politique
<b>ARC</b>	Archives
<b>BIB</b>	Bibliothèques
<b>FOR</b>	Formation
<b>INV</b>	Inventaire ou Récolement
<b>IT</b>	Informatique
<b>NUM</b>	Numérisation
<b>STF</b>	Recrutements (Staff)

Les colonnes des tableaux de tâches insérées dans le corps du présent rapport sont les suivantes :

<b>1</b>	Titre du module, du sous-module ou de l'action
<b>2</b>	Notes, commentaires (colonne présente si renseignés seulement)
<b>3</b>	Aire d'activité
<b>4</b>	Date de début planifiée
<b>5</b>	Date de fin planifiée
<b>6</b>	Durée planifiée en jours

Nous avons choisi de subdiviser le projet en aires distinctes, afin de procéder à des regroupements de types variés, notamment budgétaires:

Les colonnes des tableaux de tâches insérées dans le corps du présent rapport sont les suivantes:

## 8 PLAN D'ACTION

### M-1. Mener un récolement national

---

Le récolement national du patrimoine documentaire,<sup>281</sup> dont les objectifs ont été décrits plus haut,<sup>282</sup> a vocation à être mené périodiquement (selon un calendrier fixé à l'avance ou à l'occasion d'une évolution extérieure),<sup>283</sup> sous une forme générale (celle que nous recommandons) ou partielle.

Il s'agit donc de concevoir et d'établir un cadre durable d'intervention, applicable sur demande, même quand l'équipe chargée de sa première itération aura été dispersée.

#### m-1.1. Préparer le récolement

La réalisation du récolement nécessite une préparation minutieuse du point de vue réglementaire et administratif (budgets, cadre légal), conceptuel (bornes chronologiques, fonds concernés) et des sources nécessaires à l'établissement de l'inventaire «théorique» préalable.

Cette phase fera l'objet d'une mission préparatoire attribuée à une seule personne, le chef de projet. Elle sera faite une seule fois (pour le premier récolement national) et donnera lieu à la rédaction d'un manuel de procédures et d'un recueil des sources disponibles. Ces documents serviront de base aux récolements ultérieurs et pourront, le cas échéant, être amendés en fonction des circonstances. Les normes choisies, les méthodes recommandées et l'outil informatique sélectionné lors de cette phase préparatoire garantiront la pérennité du travail accompli à l'occasion de ce premier récolement et sa reproductibilité ultérieure.

Mission préparatoire au récolement			02/01/12	10/03/12	50
<b>Organiser la mission de préfiguration</b>			02/01/12	27/01/12	19
Assurer un budget		POL	02/01/12	14/01/12	10

<b>Établir le cadre technique du récolement</b>			21/02/12	03/03/12	9
Définir les prérequis du logiciel d'inventaire (normes)		INV	21/02/12	28/02/12	5
Rechercher les logiciels adéquats	On favorisera : les logiciels fonctionnant selon les normes internationales (EAD), Open Source et Libres.	IT	21/02/12	24/02/12	3
Rechercher sur place les prestataires techniques pour l'hébergement / déploiement		IT	28/02/12	03/03/12	4

#### a-1.1.1. Assurer les conditions de la mission préparatoire

Il convient d'assurer, pour la phase préparatoire au récolement :

- ✦ un budget adéquat,
- ✦ le recrutement du chef de projet en charge, seul employé dans un premier temps,
- ✦ le cadre d'intervention du chef de projet,
- ✦ le cadre d'intervention de l'équipe qui le rejoindra ultérieurement.

#### a-1.1.2. Concevoir le cadre conceptuel du récolement

L'organisation du récolement demande une étape préalable de réflexion et d'arbitrages sur :

- le périmètre même du récolement : partiel ou national?
- L'étendue chronologique des documents concernés, qui pourrait être moins large que celle adoptée pour le présent rapport (18<sup>e</sup> s. - fin du 20<sup>e</sup> s.);
- les types de documents concernés (évident pour les archives et les bibliothèques, moins pour les documents audiovisuels, par exemple);
- les lieux de conservation et les détenteurs de documents concernés à Maurice: services publics de conservation, services administratifs versants (qui souvent n'ont pas versé depuis longtemps), corps para-étatiques (*idem*), mais aussi détenteurs privés.

Ce travail de réflexion préalable sera l'occasion de réaliser un tout premier relevé national des fonds anciens en se fondant sur diverses sources anciennes.<sup>284</sup>

- Là où les normes employées pour le classement et l'indexation des archives et des bibliothèques en fonction de plusieurs critères : adéquation, adaptabilité à Maurice, diffusion internationale, documentation et formations aisément disponibles, interopérabilité<sup>285</sup> avec les récolements et inventaires réalisés par ailleurs.

#### a-1.1.3. Assurer le cadre réglementaire du récolement

Le récolement s'appliquera, en premier lieu, aux établissements de conservation publics. Il devra donc être un projet national doté de tous les appuis et autorisations nécessaires (sauf-conduits).

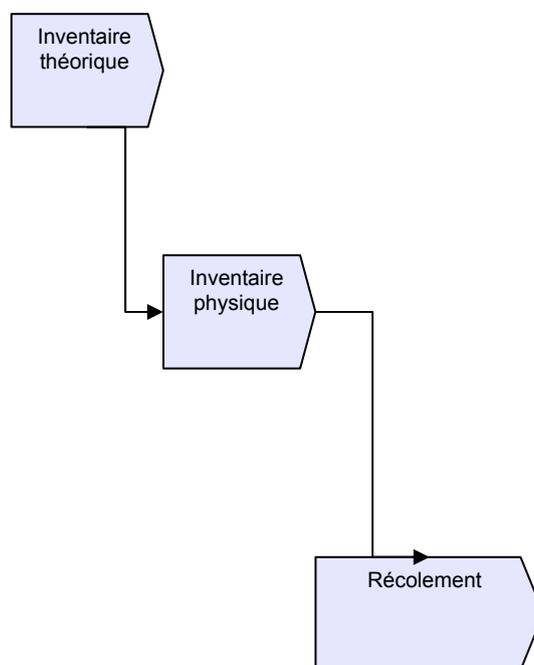

Nous conseillons d'établir un Comité de réflexion sur le patrimoine documentaire ancien qui ferait des recommandations et renforcerait le support étatique en matière de fonds privés<sup>286</sup> (amendement au *National Archives Act 2000*):

- Obligation pour tous les détenteurs de fonds privés de les déclarer au Comité et de déposer l'inventaire sommaire ou détaillé de leur fonds.
- Possibilité pour le Comité de demander l'accès à un fonds privé puis de procéder à son classement comme «trésor national», avec contraintes de détention ou de cession pour son détenteur.
- Comme préalable à une vente (aux enchères ou privée), obligation pour les détenteurs de fonds privés d'en présenter le détail (montant, inventaire des documents concernés, acquéreur potentiel) au Comité ; délai raisonnable accordé au Comité pour préempter le fonds, l'inventorier et le numériser en tout ou partie, etc.
- Obligation pour les détenteurs de fonds privés de laisser plein accès à l'équipe de récolement, sur demande préalable et dans des délais raisonnables prescrits par la loi.

#### a-1.1.4. Rechercher et valider les sources du futur inventaire «théorique»

##### Enchaînements

La réalisation d'un «inventaire théorique» des fonds concernés, dans leur localisation et leurs bornes chronologiques), précède «l'inventaire physique» des fonds et lui sert ensuite de pierre de touche pour constituer, une fois comparés, le récolement proprement dit.

De cette façon:

- ⤴ on pourra comparer ce qui existait (de façon cumulative, à des dates variables, selon les sources employées)<sup>287</sup> à ce qui subsiste maintenant dans les lieux de conservation locaux.
- ⤴ On s'attachera à rechercher les causes des déficits constatés; si ces causes sont corrigibles (vols, oublis de restitution, etc.), on tentera de leur apporter des solutions graduées auxquelles on donnera la publicité nécessaire: approche amiable du dernier détenteur et demande de restitution - déclaration de vol aux autorités locales - signalement de vol aux autorités internationales compétentes.<sup>288</sup>

##### Nécessaire intervention manuelle

Il sera nécessaire de procéder de façon manuelle à cette inventaire théorique, pour les raisons suivantes:

- ⤴ Lacunes: un tel inventaire général manque aux Archives nationales sous une forme aisément récupérable (informatisée); ce sera donc l'occasion de saisir pour la première fois cet inventaire sous forme informatique (base de données).
- ⤴ Saisie déficiente: la saisie du catalogue général de la Bibliothèque nationale<sup>289</sup> est déficiente.

Nous favorisons donc une recherche dans les catalogues en ligne des grandes bibliothèques d'Occident et le téléchargement puis le basculement<sup>290</sup> de leurs notices dans le logiciel d'inventaire choisi, plutôt que la récupération de celles qui figurent au catalogue de la Bibliothèque nationale.

##### Documents uniquement conservés à l'étranger

Quelles sont les limites géographiques de cet inventaire «théorique»? En particulier, les lieux de conservation à l'étranger doivent-ils y être inclus, ce qui accroîtra le travail nécessaire?

En effet, cela sous-entend que l'inventaire concerne des ouvrages et périodiques également les documents conservés *sur* Maurice à l'étranger. Telle fut l'approche d'Auguste TOUSSAINT dans sa *Bi-*

*bliographie* de 1956. Elle se justifie selon nous *a fortiori* aujourd'hui puisque depuis de nombreux documents ont disparu à Maurice et ne sont désormais plus conservés qu'à l'étranger, soit à titre d'exemplaires (cas des livres<sup>291</sup> et périodiques), soit à titre de doubles (cas des archives : microfilms<sup>292</sup> et numérisations).<sup>293</sup>

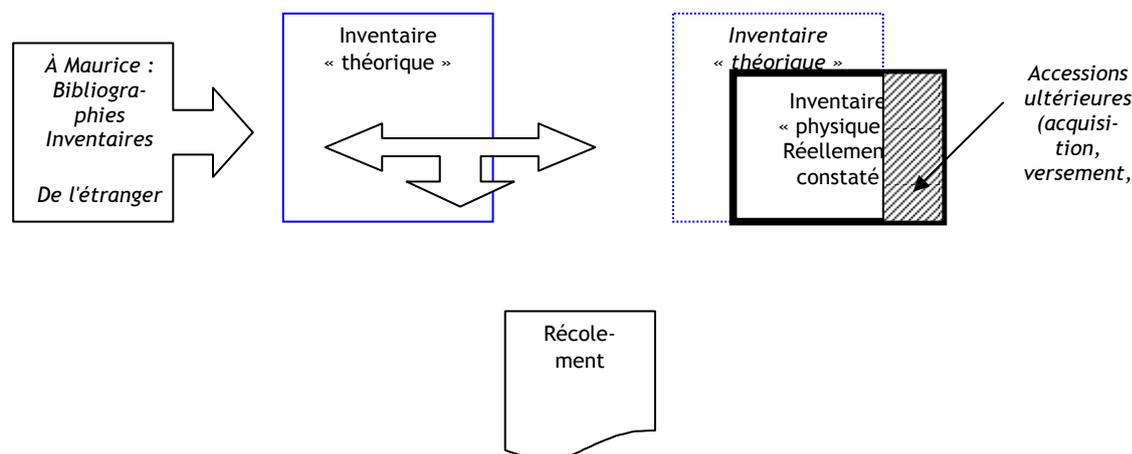

Voici les trois phases du processus de récolement, avec leurs caractéristiques:

Type	À Maurice	À l'étranger
Inventaire théorique	<ul style="list-style-type: none"> <li>⤴ Inventaires disponibles dans les services de conservation</li> <li>⤴ Bibliographies (voir pError! Bookmark not defined.)</li> </ul>	<ul style="list-style-type: none"> <li>⤴ Inventaires informatisés ou manuscrits faisant mention d'exemplaires conservés (livres)</li> <li>⤴ Doubles (microfilms ou numérisations)</li> </ul>
Inventaire réel	<ul style="list-style-type: none"> <li>⤴ Services de conservation publics (Services versants publics et parapublics)</li> <li>⤴ (Fonds privés)</li> </ul>	<i>On part du principe que les inventaires sont exacts et que les documents qui y figurent sont correctement conservés.</i>
Récolement	<ul style="list-style-type: none"> <li>⤴ Indication et localisation des documents présents et de leur état de conservation</li> <li>⤴ Mention des déficits, recherche de leur cause</li> </ul>	<ul style="list-style-type: none"> <li>⤴ Mention de tous les documents numérisés accessibles (en déficit ou non à Maurice)</li> <li>⤴ Mention des déficits à Maurice accessibles à l'étranger</li> </ul>

D'où les conséquences suivantes sur la masse de travail à accomplir; on saisira dans cet inventaire «théorique»:

- ⤴ des documents qui n'ont jamais figuré à Maurice (ce que nous saurons d'emblée grâce à la Bibliographie d'Auguste TOUSSAINT) mais qui y figurent peut-être maintenant (peu probable sauf à la Bibliothèque nationale : acquisitions, donations, etc.);
- ⤴ des documents qui figuraient autrefois dans les centres de conservation mauriciens mais qui en ont disparu.

Ainsi, comme l'inventaire «théorique» précède l'inventaire «physique», il n'est pas possible, lors de ce *premier* récolement national, de préjuger de la présence ou du déficit d'un document à Maurice, d'où le surcroît de travail.

Les cas suivants sont possibles:

Types	Rapport avec Maurice	Conservation à Maurice	Conservation à l'étranger (institution ou particulier)	Inventaire théorique ?
Livres et périodiques	Publiés à Maurice Concernant Maurice	Conservé ou perdu	Numérisé	Télécharger Répertoire
			Non numérisé	Demander copie Répertoire
Document d'archives microfilmé, pas numérisé	Émis à Maurice Relatifs à Maurice (administrations coloniales)		Double conservé (microfilm)	Demander copie et autorisation de numériser Numériser
Document d'archives numérisé			Double conservé (microfilm + numérisation)	Télécharger Répertoire

On ne visera pas forcément à l'exhaustivité des exemplaires conservés à l'étranger: on ne citera que l'exemplaire le plus accessible ou le plus commode du point de vue de son exploitation ; on favorisera ainsi:<sup>294</sup>

Type d'exemplaire conservé à l'étranger	Supports							
	Numériques							Non numériques
	PDF + texte intégré	Autre format e-book <sup>295</sup>	PDF seul <sup>296</sup>	En ligne + recherche <sup>297</sup>	Image seule <sup>298</sup>	En ligne sans recherche	Notice téléchargeable <sup>299</sup>	
Électronique numérisé téléchargeable	1	2	3		4			
Électronique non téléchargeable				5		6		
Microfilm non encore numérisé								7
Exemplaire papier non encore numérisé							8	

#### Base de données des sources de l'inventaire «théorique»

On établira une base de données des sources utiles à l'inventaire «théorique» (une fois: trouvées, hiérarchisées et évaluées) avec les informations suivantes, ce qui permettra de préparer leur exploitation ultérieure:

Information	Complément d'information	Commentaires, Exemples
Identification de la source		Notice bibliographique, nom libre
Référence interne		Référence unique arbitraire attribuée par le chef de projet
Localisation		Information permettant de retrouver la source sans ambiguïté (cote, référence, URL, etc.)
Support		Papier Microfilm Informatique
Mode d'enregistrement		<i>Par facilité de traitement croissante :</i> Manuscrit Exemplaire dactylographié Exemplaire imprimé Scan image (OCR <sup>300</sup> impossible) Scan image (OCR possible) Texte informatique brut Texte informatique exploitable après traitements (document Microsoft Word, page Web) Texte informatique balisé (XML), retraitement possible Base de données consultable en ligne seulement (par exemple catalogue de bibliothèque)

		Base de données téléchargeable ou à disposition (données immédiatement disponibles)
Détenteur		Nom de l'institution Droits d'exploitation de la source, coût d'acquisition
Accessibilité		<i>Par accessibilité décroissante</i> Source détenue (numérique, original, photocopie, etc.) Source accessible Source difficilement accessible (opérations nécessaires)
Informations contenues dans la source	Description libre	
	Unités d'information présentes	Par exemple : cote du fonds, emplacement, volume, descriptif physique, état de conservation, pedigree, etc.
	Fonds concernés	Par exemple : nom de l'institution de conservation, cote, etc.
	Qualité	Estimation de la fiabilité de chaque unité
Traitements nécessaires avant son exploitation	Procédure détaillée	Détail des opérations nécessaires avant de pouvoir intégrer les informations de la source dans le logiciel de récolement. Par exemple : scanning, ressaisie manuelle, OCR, nettoyage de fichier, etc.
	Force de travail nécessaire	Évaluation du temps et du nombre de personnes nécessaires à l'exploitation optimale de la source.
	Coût estimatif	Déduit de l'item précédent.

#### a-1.1.5. Établir l'environnement informatique du récolement

Une fois le cadre du récolement choisi (voir a-1.1.2), on disposera d'une première grille pour la sélection du logiciel nécessaire.

On procédera :

1. à une présélection de tous les logiciels disponibles, répondant à ces normes,
2. à une étude approfondie de leur fonctionnalités, de leurs coûts directs ou induits (prix, coût de maintenance), de leurs références installées,
3. à des tests sur les versions de démonstration demandées à leurs éditeurs.

On favorisera les logiciels Open Source (souvent libres et gratuits de surcroît), multi-plateformes, développés ou soutenus par des institutions académiques ou des ONG. On établira une liste de préchoix avec le détail des raisons invoquées pour cette sélection.

Par ailleurs on établira un cahier des charges d'installation pour aborder des prestataires locaux, afin d'obtenir une évaluation du coût du déploiement, de l'hébergement éventuel et de la maintenance du logiciel.

On décrira enfin l'environnement technique nécessaire au fonctionnement du logiciel et on en demandera une cotation à plusieurs prestataires informatiques locaux.

#### m-1.2. Mettre en place le récolement

Une fois la mission de préparation achevée et ses recommandations et procédures édictées, on passera à la phase de mise en place du récolement.

Mise en place technique et administrative du récolement		12/03/12	22/02/13	249
<b>Personnel et budget</b>		12/03/12	25/05/12	54
Valider le budget défini par la mission préparatoire	ADM	12/03/12	31/03/12	15
Choisir puis recruter un chef de projet	STF	02/04/12	14/04/12	10
Définir le nombre de personnes nécessaires	STF	16/04/12	18/04/12	2
Définir le profil des postes	STF	18/04/12	25/04/12	5
Valider et assurer le budget des salaires	STF	25/04/12	23/05/12	20
Possibilité de recruter une équipe	STF	23/05/12	25/05/12	2
<b>Choisir puis déployer le logiciel de récolement</b>		16/04/12	17/07/12	66
Choisir le logiciel de gestion	IT	16/04/12	28/04/12	10
Désigner le prestataire de services informatiques	IT	30/04/12	26/05/12	20
Déployer le logiciel d'inventaire		28/05/12	17/07/12	36
Installation technique	IT	28/05/12	23/06/12	20
Paramétrage	IT	25/06/12	07/07/12	10
Tests d'utilisation et de charge	IT	09/07/12	14/07/12	5
Recette du logiciel	IT	16/07/12	17/07/12	1
<b>Recruter l'équipe de récolement et la former</b>		25/05/12	21/02/13	194
Recrutement de l'équipe		25/05/12	02/02/13	181
Procéder aux recrutements	STF	25/05/12	01/02/13	180
Équipe de récolement recrutée	STF	01/02/13	02/02/13	1
Installer l'équipe		25/05/12	21/02/13	194
Trouver des locaux	ADM	25/05/12	22/06/12	20
Doter l'équipe de son équipement de bureau	ADM	22/06/12	20/07/12	20
Doter l'équipe de son équipement informatique	ADM	22/06/12	17/08/12	40
Équipe installée	INV	04/02/13	05/02/13	1
Former l'équipe aux méthodes d'inventaire et au maniement des outils informatiques	FOR	05/02/13	21/02/13	12
S'assurer un correspondant et un bureau dans chaque institution de conservation à MUR	INV	25/05/12	06/07/12	30

#### a-1.2.1. Valider le projet prévu

La première phase aura permis de définir un budget prévisionnel pour les recrutements et les investissements nécessaires au récolement (notamment le coût des logiciels et matériels informatiques).

Le chef de projet de la phase préparatoire s'assurera, avant de quitter ses fonctions:

- ✦ de l'étendue du récolement : notamment s'il s'agit d'un récolement national ou partiel, avec la liste des services et institutions à visiter;
- ✦ de la possibilité d'obtenir les budgets prévus de la part des autorités.

La seconde phase donnera lieu à une mission de chef de projet, recruté à cet effet (qui sera de préférence celui de la phase 1).

#### a-1.2.2. Acquérir et déployer les outils informatiques

Grâce au cahier des charges réalisé lors de la première phase, on procédera:

- ✦ à l'acquisition du logiciel de récolement et de l'environnement technique nécessaire (serveur, système d'exploitation, sauvegarde, imprimantes, etc.).
- ✦ À l'installation du logiciel sur son environnement d'exploitation.
- ✦ Au paramétrage du logiciel et aux tests requis (tests de charge notamment).
- ✦ À la recette du logiciel choisi et de son environnement d'exploitation.
- ✦ À l'acquisition puis à la recette des matériels informatiques nécessaires pour l'équipe de récolement: postes de saisie (matériel, système d'exploitation, logiciels bureautiques, etc.), imprimantes, réseau local, etc.

#### a-1.2.3. Recruter l'équipe de récolement

Une fois le chef de projet en place, il procédera au recrutement des *Research Assistants* au récolement qui seront de préférence:

- ✦ anciens étudiants en bibliothéconomie ou en histoire de l'UoM (niveau Licence), secondairement, en langues, parlant et écrivant bien le français, l'anglais et le Kreol.
- ✦ Bien outillés en informatique (bureautique, maniement des logiciels de catalogage et notions de base de données).

#### a-1.2.4. Assurer la formation des membres de l'équipe

La première phase aura donné lieu à la rédaction d'un descriptif précis des opérations de récolement et de leurs sources. L'acquisition du logiciel de récolement donnera lieu à une collecte de

documentation qui sera synthétisée par le chef de projet en un manuel de prise en mains du logiciel.

Le chef de projet formera alors, sur des cas pratiques, les membres de l'équipe, entre-temps embauchés:

- Objectifs de la mission.
- Procédure et moyens mis en place. Phases du projet.
- Utilisation du logiciel de récolement.
- Méthode d'inventaire «théorique» à partir des sources sélectionnées à la Phase 1.
- Méthode d'inventaire physique.
- Établissement du récolement.

Une fois l'équipe formée, on s'assurera par ailleurs, dans chaque service de conservation à visiter:

- ✧ d'un correspondant durable et disponible selon un calendrier convenu,
- ✧ d'un bureau disponible à demeure, doté d'un accès Internet haut-débit.

Récolement proprement dit		22/02/13	28/12/13	221		
<b>Saisir l'inventaire théorique : Intégrer les sources collectées dans le logiciel</b>						
Sources papier collectées			22/02/13	16/05/13	59	
Numériser les sources papier			22/02/13	29/03/13	25	
Les transférer (OCR ou manuellement) dans le logiciel d'inventaire		INV	22/02/13	29/03/13	25	
Notices numériques			01/03/13	29/03/13	20	
Transférer les notices numériques dans le logiciel d'inventaire, les y vérifier			29/03/13	16/05/13	34	
Transférer les notices numériques dans le logiciel d'inventaire		BIB	29/03/13	02/05/13	24	
Inventaire théorique achevé		ARC	02/05/13	16/05/13	10	
Procéder au récolement : demander communication de chaque cote figurant à l'inventaire			02/05/13	03/05/13	1	
Dépôts d'archives			16/05/13	31/10/13	120	
Procéder au récolement : Dépôts publics			16/05/13	31/10/13	120	
Archives nationales		SI PRÉSENTE Indiquer sur la notice du document : - sa cote effective dans le dépôt en question - son état de conservation apparent Coller sur le document une étiquette à codes-barres infalsifiable		16/05/13	31/10/13	120

Mission achevée, dispersion de l'équipe				01/11/13	27/12/13	40
				27/12/13	28/12/13	1

### m-1.3. Procéder au récolement

Voici les opérations préalables au récolement:

#### a-1.3.1. Saisir l'inventaire «théorique»

Toute l'équipe de récolement est d'abord affectée à la collecte physique et à la saisie dans le logiciel des sources de l'inventaire «théorique» relevées à la Phase 1.

Voici les actions à entreprendre:

1. Sélectionner et hiérarchiser les sources adéquates au périmètre de la mission définie au point
2. Répartir les traitements entre membres de l'équipe.
3. Procéder à la saisie ou au transfert des informations dans le logiciel de récolement.

- ⤴ Pour les livres et périodiques des bibliothèques, basculer de préférence les notices depuis les catalogues de bibliothèques en ligne; ne reporter depuis les inventaires locaux que la cote de chacun des exemplaires de l'ouvrage ou du périodique à indexer.
  - ⤴ Pour les documents d'archives, reporter les indications de contenu provenant de recueils de sources ou d'inventaires, mauriciens ou étrangers (si des doubles ont été réalisés ailleurs et dépouillés). Indiquer leur cote dans le dépôt de Maurice.
4. Faire très régulièrement vérifier par un tiers la qualité de la saisie des notices.
  5. Évaluer le degré d'avancement de la saisie de l'inventaire «théorique» pour chaque fonds et en établir des états périodiques.
  6. Engager les opérations de récolement au fur et à mesure que chaque fonds est intégralement inventorié (à définir car on peut, pour les besoins de l'organisation, affecter les ressources successivement à l'inventaire «théorique» puis seulement à l'inventaire physique).

#### Voici les opérations préalables au récolement de chaque service de conservation

##### **a-1.3.2.** Planifier le récolement avec le responsable de chaque service

Afin de ne pas empêcher les activités normales de chaque service concerné (l'inventaire physique interdira temporairement, pour chaque local, la communication des documents), on établira un calendrier prévisionnel d'intervention, en pleine concertation avec les responsables de la conservation.

##### **a-1.3.3.** Décrire précisément chaque local et ses composants

On visitera au préalable chaque local où se trouvent les documents et on y effectuera les actions suivantes:

1. Établissement d'un plan à l'échelle avec: le détail du local et des rangements qui le composent.
2. Numérotation du local (dépôt - local);<sup>301</sup> de ses emplacements (épis<sup>302</sup> - travées<sup>303</sup> - tablettes);<sup>304</sup> on fixera des étiquettes à codes barres indéchirables et indécollables à chacun de ces éléments. C'est ce codage en 5 blocs numériques qui permettra une localisation précise lors de l'inventaire physique.
3. Mesure du métrage linéaire et report sur le plan du local.
4. Relevé des conditions de conservation du local: climatisation, température, hygrométrie, risques d'incendie et protections, etc.

#### Voici les opérations lors du récolement proprement dit

Le ou les opérateurs (un binôme est recommandé) se munissent d'un ordinateur sur lequel se trouve le logiciel de récolement et « peignent » les documents de la totalité des travées de chaque local, qui aura été préalablement interdit de communication.

##### **a-1.3.4.** [Archives] Traiter les articles conservés en séquences homogènes

- ⤴ L'opérateur de saisie commence par subdiviser les épis en séquences homogènes<sup>305</sup> qui constituent une unité de saisie (pouvant donc comprendre plusieurs cartons ou registres).
- ⤴ Il renseigne les cotes extrêmes constatées dans la séquence.
- ⤴ Il renseigne:
  - l'état de conservation des conditionnements,
  - l'état de conservation des documents,
  - l'état du classement de ces documents (qui peuvent ne pas avoir été classés),
  - un commentaire libre.

##### **a-1.3.5.** [Bibliothèques] Traiter les articles par unité documentaire

- ⤴ L'opérateur de saisie indique la cote portée sur l'ouvrage physiquement présent: le logiciel la recherche dans l'inventaire «théorique» pré-saisi et doit normalement l'y trouver; si ce n'est pas le cas, l'opérateur crée la fiche de l'ouvrage dans le logiciel.
- ⤴ Il renseigne la localisation précise de l'ouvrage.

- ⤴ Il renseigne:
  - la nature de l'ouvrage: original ou copie,
  - l'état de conservation de l'ouvrage, les atteintes détectables (papier endommagé, encre corrosive, insectes, champignons, etc.),
  - un commentaire libre.

#### a-1.3.6. Consigner chaque déficit constaté

Les déficits sont détectés par comparaison de l'inventaire physique avec l'inventaire «théorique»: une seconde visite est alors planifiée, en compagnie du responsable du dépôt, pour partir en quête de chaque item manquant:

- ⤴ dans une bibliothèque, recherche des «fantômes»<sup>306</sup> ou des mentions dans le registre d'emprunts indiquant un livre prêté. L'emprunteur est alors consigné dans le logiciel pour réclamation ultérieure.
- ⤴ Détection des items mal cotés.
- ⤴ Recherche à proximité (livre déclassé, tombé du rayonnage, etc.).
- ⤴ Recherche dans un autre local (préférable une fois que tous les locaux de l'institution auront été récochés).

#### a-1.3.7. Rédiger un procès-verbal de récolement

Le rapport de synthèse du local visité comprendra:

1. Une description générale des locaux de conservation (avec plan joint) comprenant également une note sur les mesures de sécurité et de conservation constatées.
2. Un descriptif *global* du taux d'occupation du local, de l'état de classement des fonds, des déficits constatés.
3. Une description analytique des fonds dans l'ordre topographique au sein du local.

#### Voici les opérations ultérieures

#### a-1.3.8. Rédiger des recommandations

Le récolement aura établi la plupart des informations utiles à la meilleure conservation préventive des documents:

- ⤴ taux de remplissage du local;
- ⤴ déficits constatés, justifiés ou non ;
- ⤴ état de conservation des conditionnements [archives];
- ⤴ état de conservation des documents;
- ⤴ présence d'agents de destruction.

Ces indicateurs donneront lieu à un rapport pour chaque local et à des recommandations d'urgence décroissante quant à:

- ⤴ l'amélioration de ces conditions générales de sécurité et de conservation;
- ⤴ les traitements préventifs à opérer : désinsectisation, remplacement des conditionnements, etc.; on pourra, selon la méthodologie intégrée recommandée par l'*Open Planets Foundation*,<sup>307</sup> pratiquer conjointement l'évaluation des risques et la planification des opérations de conservation à mener;
- ⤴ les campagnes de restauration ou de numérisation à effectuer.

#### a-1.3.9. Dissémination de l'expérience acquise

Une fois toutes les recommandations édictées et le dossier général de récolement rédigé et soumis, l'équipe de récolement pourra être dissoute.

Nous recommandons, cependant, que l'expérience acquise ne soit pas perdue en prenant les mesures suivantes:

- ⤴ consolider le corpus de connaissances, de références et de procédures acquises lors du récolement en le rendant accessible sur Internet.
- ⤴ Établir une périodicité aux récolements partiels ou généraux.

- ⤴ Disséminer les membres de l'équipe de récolement dans les différents services de conservation, ministères ou administrations centrales mauriciens, qui bénéficieront ainsi de l'expérience acquise.

Cette dissémination du savoir archivistique concorde avec nos recommandations sur la numérisation et sur la rénovation des Archives nationales (création de «missions» auprès des administrations centrales, besoin de personnes compétentes).

## M-2. Numériser à bon escient

Nous avons pu constater que la numérisation des documents anciens se faisait (ou non) en ordre dispersé, sans que des normes aient été établies, ni l'interopérabilité des données garantie.

Cela nous engage à recommander:<sup>308</sup>

- ⤴ la création d'un Comité national de pilotage de la numérisation regroupant les responsables des services concernés, des assistants mauriciens et des spécialistes mauriciens ou étrangers de la question, missionnés à cet effet.
- ⤴ Une synergie entre l'équipe de récolement et les personnes chargées de la numérisation dans chacun des services.

### m-2.1. Établir de bonnes pratiques en numérisation

#### a-2.1.1. Définir les normes applicables à la numérisation

Il existe une très abondante littérature accessible par le Web sur les bonnes pratiques de numérisation des documents:<sup>309</sup> la certitude est désormais acquise que le stockage numérique constitue une solution pérenne, économique et sûre pour les documents patrimoniaux<sup>310</sup> et électroniques<sup>311</sup> à l'instar du microfilmage, technologie qu'elle est en passe de supplanter. Plusieurs sites dédiés aident les institutions de conservation à faire ce saut technologique et fournissent des méthodologies éprouvées.<sup>312</sup> Les solutions techniques maintenant rentabilisées paraissent peu coûteuses: le coût unitaire du stockage informatique en ligne, par exemple, a considérablement baissé.

L'unification en amont de la plupart des catalogues informatiques de biens culturels, autour de la norme de description EAD est également un puissant facteur de normalisation pour la numérisation car l'interopérabilité des catalogues des notices rend aussi nécessaire celle des documents numérisés qui leur sont liés.

Il ne devrait donc pas être trop difficile de consolider les connaissances existantes et de les appliquer à Maurice: l'expertise est maintenant abordable et aisément accessible.

#### a-2.1.2. Établir un Comité de pilotage national de numérisation

À Maurice, la numérisation est pratiquée par plusieurs instances ou personnes dispersées:

- ⤴ des unités spécialisées au sein de quelques institutions publiques (par exemple les Archives nationales), internationales (par exemple l'Agence Universitaire de la Francophonie) ou privées (par exemple le MSIRI avec la numérisation des Papiers Doyen);
- ⤴ dans le domaine généalogique surtout, de «bonnes volontés» individuelles regroupées en associations<sup>313</sup> aux contours assez changeants, quelquefois minées par des querelles personnelles, peu outillées et assez inexpérimentées;
- ⤴ les équipes du projet d'*e-governance* qui se met en place à la fin 2011.<sup>314</sup>

Les écueils d'une telle dispersion sont les suivants:

- ⤴ le cloisonnement des connaissances et des expériences, alors qu'il conviendrait d'adopter une démarche intégrée : les normes techniques ne sont ni connues, ni appliquées, le statut juridique des documents numérisés est ambigu, etc.
- ⤴ La numérisation répétée et inutile des mêmes ouvrages, généralement disponibles dans les fonds des grandes bibliothèques en ligne.

La création d'un Comité de pilotage national de la numérisation, consultatif et doté de pouvoirs incitatifs (par exemple: en accordant des crédits d'équipement, en autorisant ou non l'accès aux fonds à numériser,<sup>315</sup> en édictant des normes et en vérifiant leur application, etc.), permettrait de rationaliser ces opérations qui progressent actuellement en ordre dispersé.

## m-2.2. Piloter la numérisation au plan national

Pilotage de la numérisation au plan national			03/05/13	01/01/14	173
Former l'équipe de récolement à la numérisation			03/05/13	11/05/13	6
Former l'équipe d'inventaire à la numérisation et à l'indexation		FOR	03/05/13	10/05/13	5
Équipe de numérisation opérationnelle		NUM	10/05/13	11/05/13	1
Inventorier les sources reproduites ou numérisées			31/07/13	20/11/13	80
Inventorier les microfilms accessibles, en obtenir l'accès puis les numériser			31/07/13	20/11/13	80
Maurice			04/09/13	25/09/13	15
Inventorier les microfilms disponibles à MUR		ARC	04/09/13	25/09/13	15
Inventorier les microfilms disponibles à MUR		BIB	19/09/13	25/09/13	4
Étranger			31/07/13	25/09/13	40
Inventorier les microfilms disponibles à l'étranger (institutions)		ARC	28/08/13	25/09/13	20
Inventorier les microfilms disponibles à l'étranger (autres institutions)		ARC	31/07/13	25/09/13	40
Reporter en numérique les microfilms disponibles, après autorisation des détenteurs		NUM	25/09/13	20/11/13	40
Inventorier des sources de documents déjà numérisés, en obtenir l'accès			04/09/13	30/10/13	40
Dans les institutions de conservation à l'étranger			04/09/13	30/10/13	40
Inventorier les ouvrages ou périodiques numérisés disponibles en ligne		BIB	04/09/13	20/09/13	12
Inventorier les documents d'archives numérisés disponibles en ligne		ARC	04/09/13	30/10/13	40
Chez les particuliers détenant des actes numérisés et acceptant de les transmettre			04/09/13	30/10/13	40
Inventorier les documents d'archives numérisés disponibles chez des particuliers		ARC	04/09/13	30/10/13	40
			Pour chaque lot de documents : - Évaluer la qualité technique de la numérisation - Évaluer la qualité de la cotation (la compléter au besoin)		
Traiter les documents numérisés préalablement collectés et numérisés			20/11/13	01/01/14	30
Regrouper les documents déjà numérisés à MUR		NUM	20/11/13	04/12/13	10
Rattacher les documents numérisés aux notices de l'inventaire théorique**		INV	04/12/13	01/01/14	20
Arbitrer sur les numérisations de sauvetage			11/12/13	01/01/14	15

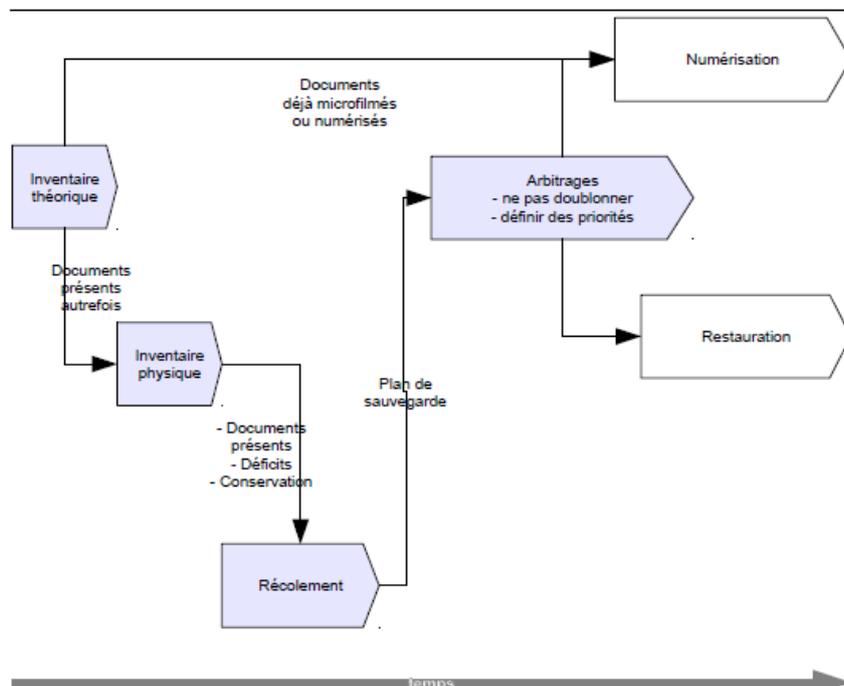

## a-2.2.1. Inscription des documents numérisés dans les inventaires de récolement

La constitution d'une base de données des sources numériques sur Maurice<sup>316</sup> aura permis une première évaluation des besoins en numérisation (en montrant ce qui manque).

L'équipe de récolement travaillera ensuite à l'inventaire «théorique»<sup>317</sup> et renseignera une base de données des documents numérisés; elle procédera à un regroupement de ces derniers dans un répertoire central (*repository*), après négociations avec leurs détenteurs: documents mauriciens numérisés (institutions mauriciennes, étrangères et provenant de particuliers), documents sur Maurice. La qualité de chaque document numérisé sera évaluée (définition, qualité de la prise de vue, précision du contexte, etc.)

Cette base de données sera ensuite mise en concordance avec l'inventaire «théorique», lui-même ultérieurement confronté à l'inventaire physique lors du récolement.

## M-3. Éviter de faire le travail en double

Dessin 2: Enchaînement des opérations (en bleu : interventions de l'équipe de récolement)

On disposera, à l'issue des opérations de récolement:

- ✧ si le récolement est total: d'un état précis et exhaustif de tous les documents conservés à Maurice (ou en déficit) déjà numérisés;
- ✧ si le récolement est partiel: d'un état précis, pour chaque établissement de conservation visité, des documents présents ou en déficit déjà numérisés.
- ✧ Dans les deux cas, le récolement aboutira à un état des documents dont la conservation est compromise.

Ces informations, une fois recoupées, permettront:

- ✧ de numériser en priorité les documents dont la conservation est compromise;
- ✧ de ne pas numériser deux fois le même document, ce qui aura également pour bénéfice d'économiser les efforts et de ménager les documents.

#### M-4. Enseigner la conservation du patrimoine

##### Une institution de plus?

La présente mission de la *Truth and Justice Commission* prévoit la création d'un Institut de Conservation.

Or, nous avons été frappé de constater au cours de notre enquête la déficience de certains services, notamment dans le domaine muséal. Nous avouons donc quelques réticences à recommander la création d'un nouvel organisme national de conservation du patrimoine documentaire - que nous jugeons pourtant indispensable à terme : le risque serait grand en effet de le voir aller au-devant des mêmes écueils que ses prédécesseurs, alors qu'un succès rapide sera décisif pour la survie même du patrimoine documentaire mauricien.

Il nous paraît plus efficace de créer à l'*University of Mauritius* (UoM) un Master professionnel en conservation du patrimoine documentaire,<sup>318</sup> quitte à créer l'Institut de Conservation dans un deuxième temps.

##### Avantages attendus d'un rattachement à l'UoM

Le rattachement à l'UoM aurait, selon nous, les avantages suivants:

- ✧ se couler dans une organisation administrative fonctionnelle éprouvée;
- ✧ pouvoir se connecter avec les deux cursus existants de bibliothéconomie-archivistique et de gestion du patrimoine;
- ✧ pouvoir donner une professionnalisation utile aux étudiants en Histoire qui n'ont actuellement guère de débouchés faute d'enseignement généralisé de cette discipline aux enfants du pays;
- ✧ bénéficier des compétences et des équipements scientifiques disponibles sur le campus (chimie, mycologie, entomologie, etc.) ou à proximité (MSIRI à Réduit).

#### m-4.1. Préfigurer le cursus de formation

##### a-4.1.1. Organiser l'armature institutionnelle du cursus

Il convient d'abord de convaincre l'UoM de la validité d'un tel cursus, ce qui pourrait prendre plusieurs années: un projet préliminaire (*project proposal*) sera rédigé et soumis aux instances de l'Université afin d'obtenir son accord de principe. Il contiendra:

- ⤴ une présentation de ses motifs, du degré d'étude préalable requis et du grade obtenu à l'issue de ce cursus,
- ⤴ un descriptif préliminaire des enseignements (contenu, durée générale, matière enseignée et durée annuelle de chaque cours),
- ⤴ le type des étudiants attendus; élèves de l'UoM mais aussi: professionnels du patrimoine actuellement en poste et désireux de se perfectionner; auditeurs libres (accès payant),
- ⤴ les avantages attendus pour les étudiants à suivre un tel cursus (notamment leurs débouchés professionnels),
- ⤴ les collaborations académiques internationales prévues,
- ⤴ les collaborations locales prévues: par exemple, travaux pratiques et visites dans les centres de conservation mauriciens.

##### a-4.1.2. S'assurer de collaborations internationales

Une fois l'accord de principe de l'UoM obtenu, on recherchera les collaborations académiques susceptibles de lui apporter les compétences nécessaires ; nous envisageons des *master-classes* avec des professeurs étrangers en résidence pour des sessions de cours de quelques semaines afin de compléter l'enseignement des professeurs et maîtres assistants recrutés localement. Ces professeurs étrangers dispenseraient leur enseignement et procéderaient à la correction des examens dont ils auraient établi le programme.

Voici quelques pistes de recrutements, qui pourraient de surcroît bénéficier de financements internationaux ou au titre de la coopération entre états:

Enseignement	Recrutement du corps professoral
<ul style="list-style-type: none"> <li>⤴ Archivistique (Ancien Régime et époque contemporaine)</li> <li>⤴ Diplomatique (Ancien Régime et époque contemporaine)</li> <li>⤴ Histoire du livre</li> <li>⤴ Histoire des bibliothèques</li> </ul>	Professeurs issus des établissements d'enseignement spécialisés : l'École nationale des Chartes (France), par exemple
<ul style="list-style-type: none"> <li>⤴ Histoire des institutions coloniales</li> <li>⤴ Histoire culturelle des colonies</li> </ul>	<ul style="list-style-type: none"> <li>⤴ Historiens, Historiens de la Culture</li> <li>⤴ Archivistes en charge des fonds spécialisés des Métropoles (CAOM, PRO)</li> <li>⤴ Conservateurs en charge des fonds d'archives des pays post-coloniaux (La Réunion)</li> </ul>
<ul style="list-style-type: none"> <li>⤴ Conservation des archives et des bibliothèques</li> <li>⤴ Méthodes de restauration des documents</li> <li>⤴ Menaces contre les documents anciens</li> </ul>	Spécialistes : <ul style="list-style-type: none"> <li>⤴ chercheurs des instituts spécialisés,</li> <li>⤴ techniciens des ateliers de restauration dans les institutions de conservation,</li> <li>⤴ scientifiques : entomologistes, botanistes, etc.</li> <li>⤴ architectes spécialisés.</li> </ul>
Cours de gestion et de conservation spécialisés : <ul style="list-style-type: none"> <li>⤴ Photographie ancienne</li> <li>⤴ Supports audio</li> <li>⤴ Images animées</li> <li>⤴ Patrimoine immatériel</li> </ul>	Spécialistes du domaine recrutés dans les institutions de conservation ou les centres de recherches académiques.
<ul style="list-style-type: none"> <li>⤴ Déploiement de projets informatiques patrimoniaux (catalogues de fonds, sites Web culturels, etc.)</li> <li>⤴ Interopérabilité des collections numériques</li> </ul>	<ul style="list-style-type: none"> <li>⤴ Chefs de projets informatiques des institutions de conservation</li> <li>⤴ Réalisateurs multimédia dans le domaine</li> </ul>
Gestion des documents d'archives numériques	Conservateurs des fonds contemporains
Application de l'informatique aux recherches en sciences humaines	Enseignants spécialisés

#### a-4.1.3. Établir un programme pédagogique

Une fois les accords de principe obtenus des institutions et des professeurs pressentis, on procédera, par un jeu d'allers-retours, à l'harmonisation de leurs enseignements respectifs.

On arrivera ainsi à la définition d'un cadre pédagogique:

- ⤴ conditions d'intervention des enseignants: rémunération et logement, matériel nécessaire, visites souhaitées (par exemple, dans les institutions de conservation locales);
- ⤴ durée générale du cursus,
- ⤴ détail de chaque enseignement: professeur, durée du cours, programme sommaire.

#### m-4.2. Recruter les enseignants résidents

On aura quelques difficultés à recruter des enseignants locaux<sup>319</sup> dans les premières années du cursus du moins; notre espoir est que cela devienne plus facile au fur et à mesure de l'élévation du niveau des compétences, sous l'effet du cursus précisément.

On pourra cependant recruter d'emblée:

- des scientifiques spécialistes dans l'étude des agents de destruction: entomologistes et botanistes,
- des maîtres assistants en Sciences humaines chargés d'assurer les cours d'histoire locale ou coloniale.

### m-4.3. Ouvrir le cursus

La phase de préparation du cursus étant achevée, un dossier récapitulatif sera soumis à l'UoM pour approbation.<sup>320</sup>

Une fois celle-ci obtenue, il s'agira:

- ⤴ d'aider l'UoM à préparer les dossiers de recrutement et de définition du contenu du cursus,
- ⤴ de préparer un dossier de présentation pour les étudiants et les professionnels du secteur désireux de parfaire leur expérience professionnelle,
- ⤴ de prendre contact avec les institutions et le corps professoral étrangers afin de leur confirmer leur enseignement et de fixer avec eux les conditions de leur venue,
- ⤴ de mettre en place la documentation en ligne sur le cursus (site Web de l'UoM),
- ⤴ de recruter les étudiants.

### M-5. Rénover la loi sur les Archives

---

Nous recommandons une révision de la loi sur les archives (*National Archives Act 2000*); cette opération, dont nous ignorons à ce stade le cheminement institutionnel, pourrait se faire en trois temps:

1. lors de la phase préparatoire au récolement, amendements réglementaires au *National Archives Act* dans le sens du renforcement des contrôles sur les archives en mains privées (voir p769);
2. lors de la réorganisation de la numérisation au plan national, établissement d'un Comité de pilotage national de la numérisation; selon qu'il s'agira d'une extension des prérogatives du *National Archives Advisory Committee* ou de la création d'une institution nouvelle, les implications seront différentes du point de vue du travail législatif.
3. Enfin, une réforme de plus grande ampleur, qui nécessitera l'intervention du législateur.

Cette dernière réforme devrait s'attacher, selon nous:

- ⤴ à faire de la communication de plein droit des archives publiques aux citoyens mauriciens la règle de base en précisant les types de documents sujets à délais de communication;
- ⤴ à réduire, par conséquent, les prérogatives des dirigeants des Archives nationales en matière de communication au public et notamment les interdictions, souvent non motivées;
- ⤴ à augmenter le budget alloué aux Archives nationales et à le sécuriser sur le moyen terme;
- ⤴ à établir dans les ministères et les administrations centrales des «missions d'archives» dont les responsables seraient dotés de suffisamment de pouvoirs et offriraient assez de garanties pour les inciter à effectivement verser les documents qu'ils retiennent;
- ⤴ à renforcer le pouvoir des Archives nationales en matière de contrôle des fonds d'archives privées;
- ⤴ à ramener dans le giron des Archives nationales les fonds actuellement excisés (MGI).

## 9 CONCLUSION

Les insectes, les champignons, les moisissures, l'acidité du papier, les encres corrosives, l'humidité ambiante, la chaleur excessive, les cyclones sont depuis longtemps désignés comme les ennemis du patrimoine documentaire de l'île Maurice. Leur nocivité, sournoise ou catastrophique, mais toujours menaçante, est inévitablement associée, dans le discours de la plupart des interlocuteurs mauriciens, à une accusation implicite de maltraitance contre «nos archives» ou «notre histoire» - autant dire les archives de la communauté à laquelle ils appartiennent.

Telles ne sont pourtant pas les constatations de notre enquête: le patrimoine écrit mauricien est fort compromis mais nous n'avons jamais décelé d'action concertée malfaisante à son encontre; bien au contraire, des efforts louables se font jour. Les conditions de conservation des documents sont souvent inadéquates et favorisent les agents de destruction biologiques ou climatiques; mais, ici encore, point d'intentionnalité décelable.

Nous sommes, quant à nous, convaincus de la primauté des causes humaines dans cette évolution: manque de formation et de motivation des gestionnaires, réticences des services versants, budgets rétrécis et carences déontologiques des détenteurs privés sont, selon nous, les raisons primordiales de cet état de fait, malgré quelques bonnes volontés.

Or, il semble qu'une nouvelle approche culturelle fleurisse dans le pays: la valorisation touristique des monuments, des musées et des sites, l'histoire de la nation qui commence à être enseignée aux enfants mauriciens, sont les signes encourageants d'une autonomie culturelle revendiquée.

Le temps paraît donc advenu d'une sauvegarde coordonnée du patrimoine documentaire: puissent les solutions ici recommandées, sensées et rapidement applicables, ainsi que la constitution d'un corps de conservateurs instruits aux normes internationales, trouver une application rapide et durable.

- 5 Voir les différentes conceptions nationales dans: Ketelaar, *Législation et réglementation en matière d'archives et de gestion des documents: une étude RAMP accompagnée de principes directeurs*, 1-9.
- 6 Michel Melot, "Axe théorique: L'archive et ses fonctions" (présenté à the Archives et Transdisciplinarité, quelles relations au bénéfice de la construction des savoirs?, IUFM de Paris: Pôle National de Ressources Patrimoine-Archives, 2004), 4-6.
- «Les archives [...] peuvent être à la fois matérielles et virtuelles. Elles sont fortement corrélées aux individus car elles sont le prolongement de l'activité de chacun d'entre nous. Elles leur sont également extérieures car elles s'inscrivent sur un support. La position des archives par rapport au patrimoine équivaut à celle de la langue. Celle-ci fait partie de chacun d'entre nous mais son intérêt est de nous permettre de nous comprendre. L'archive n'est pas un produit fini. Elle a une vertu performative : elle peut obliger le comportement social. [...] Les archives connaissent également une extension conceptuelle. Il convient de travailler à définir ce qui peut faire archive : tout peut être archive mais il est impossible de tout conserver. Par le passé, c'est l'écrit qui faisait autorité pour constituer les archives. Aujourd'hui, elles intègrent l'audiovisuel et l'électronique. Elles deviennent insaisissables. L'état civil, le cadastre et les minutes notariales constituent les trois piliers des archives. De nombreux autres éléments sont cependant également conservés. Cela peut être le cas d'objets de la vie quotidienne. Les archives ne doivent pas être réservées aux administrations ou aux entreprises.»
- 7 Selon la norme AFNOR:
- «Un périodique est une publication en série, dotée d'un titre unique, dont les livraisons généralement composées de plusieurs articles répertoriés dans un sommaire, se succèdent chronologiquement, à des intervalles en principe réguliers.»
- 8 L'histoire de l'écrit à Maurice commençant avec l'arrivée des colonisateurs européens, nous sommes dispensés de traiter de supports autres que ceux qu'ils utilisèrent (pensons à l'épigraphie et aux supports variés que l'on trouve dans les musées d'archéologie). Il ne reste, à Maurice, aucune trace écrite ni archéologique du passage de navigateurs avant celui des navigateurs hollandais: la mention (très hypothétique) de l'île figure seulement dans des ouvrages de géographie et de navigation arabes du Moyen-Âge. Ses découvreurs hollandais firent état de tablettes de cire, dont ils reproduisirent maladroitement quelques exemples - mais il n'en reste plus aucune trace tangible. - 65 Il existait un fonds de *Mauritiana* à la Bibliothèque Municipale de Port-Louis, ouverte au public en 1858, mais il s'agissait d'ouvrages contemporains. Voir: Commission des Bibliothécaires municipaux de l'île Maurice, *Bulletin des Bibliothèques municipales de l'île Maurice*, (Océan Indien), 1:6-7.
- 66 Robert M. Lester, *A thirty year catalog of grants, showing recipients and totals of grants made by Carnegie Corporation of New York during the period November 10, 1911 to September 30, 1941* (New York: Carnegie Corp. of New York, 1942). Andrew Carnegie, magnat de l'acier états-unien d'origine écossaise, avait fait fortune en reconditionnant les armes abandonnées de la Guerre de Sécession américaine en un usage civil, au sein de son entreprise *Carnegie Steel Company*. Prenant sa retraite en 1901, il se consacra exclusivement à l'action philanthropique déjà engagée en faveur de l'éducation, de la paix, de la science et de la diffusion de la langue et de la culture anglaises. La première bibliothèque Carnegie fut fondée dans sa ville natale de Dunfermline en Écosse (1881); aux États-Unis, à partir de 1889 (Braddock, PA), le nombre des bibliothèques Carnegie se multiplia (jusqu'à atteindre le nombre de 1,689, soit plus de la moitié des bibliothèques du pays) avec l'appui des clubs féministes, soutiens indéfectibles de l'éducation des femmes.
- 67 Auguste Toussaint, *Port-Louis, deux siècles d'histoire (1735-1935)* (Port Louis: La Typographie moderne, 1936).
- 68 Donations : Edouard ROUILLARD, le Dr. MÉNAGÉ, George ANTELME, Gabriel REGNARD; puis, après la Seconde Guerre mondiale : Camille de RAUVILLE (bibliothécaire de 1964 à 1974), Pierre de SORNAY, Philippe de KERVERN, le Consulat de France, Hector PATURAU, le Collège Labourdonnais, etc.
- 69 Notamment l'achat de la collection du sculpteur Prosper D'ÉPINAY, décédé en 1914, qui constitua le cœur des collections patrimoniales de la Bibliothèque Carnegie.

- 81 Ce qui était, au demeurant, le droit des propriétaires. Le *National Archive Act* ne prévoit la présentation de fonds d'intérêt national aux Archives nationales que lorsqu'il y a vente aux enchères: Republic of Mauritius, The National Archives Act 2000, Revised Laws of Mauritius, 2000, Part II - 11.
- 82 Republic of Mauritius, The National Archives Act 2000, pt. II, 42, 2-(h).
- 83 Duchein, "Le respect des fonds en archivistique. Principes théoriques et problèmes pratiques."  
Voici la façon dont cet auteur édicte la règle:  
«Le respect des fonds [...] consiste à laisser groupées, sans les mélanger à d'autres, les archives (documents de toute nature) provenant d'une administration, d'un établissement ou d'une personne physique ou, morale donnée : ce qu'on appelle le fonds des archives de cette administration, de cet établissement ou de cette personne.[...] Aujourd'hui, on peut dire que - avec des nuances non négligeables - le principe du respect des fonds, ou principe de provenance, est admis universellement comme la base de l'archivistique théorique et pratique. Les critiques auxquelles il donne lieu de temps à autre ne portent, en fait, que sur telle ou telle de ses applications et non sur le principe même. On peut à bon droit considérer qu'il ne sera jamais plus remis fondamentalement en cause et qu'il constitue un acquis définitif de l'archivistique.»
- 84 Le registre d'inventaire acquis par l'AGTF a été scanné et son cliché est disponible en ligne sur le site Web de «l'inventaire» de SOS Patrimoine en Péril à l'adresse suivante: "SOS Patrimoine En Péril - Base de données", n.d., <http://www.patrimoineenperil.mu/inventaire/item.php?itemId=128>
- 85 De son vrai nom Vadivelloo KADARASEN.

- 108 Pamela de Saint Antoine, "Preserving Mauritian history: U.S. Library of Congress offers tips on saving historic library collections in Mauritius," *Week-end* (Port Louis, June 12, 2011).  
Cet article est paru dans *Week-end* en juin 2011, huit mois après la visite de Mme Claire DEKLE, en octobre 2010.
- 109 Dominique Bellier, "INTERVIEW - Pr. Hervé Cheradame, chimiste spécialiste des papiers anciens : « Il faut commencer par trouver un vrai bâtiment d'archives »,» *Le Mauricien* (Port Louis, February 19, 2011).  
Cette visite a même donné lieu à une intervention du leader de l'opposition parlementaire mauricienne, M Paul BÉRENGER : "Affaire MedPoint: Bérenger invite Ramgoolam à suivre l'exemple indien," *Week-end* (Port Louis, February 27, 2011).  
Voici sa déclaration :  
«Paul Bérenger explique que, « depuis des années », il s'efforce de faire comprendre que les locaux « infestés de rats et de pigeons » qui abritent jusqu'ici les Archives dans la zone industrielle de Coromandel sont « inappropriés ». Un constat qui, dit-il, vient d'être confirmé par l'expert français, le Professeur Hervé Chéradame, chimiste spécialiste des papiers anciens et président du Centre de Conservation du Livre de Arles, France, pour qui les locaux actuels des Archives nationales « favorisent la destruction des documents ».
- 110 Le dépôt légal était autrefois dévolu aux Archives nationales ; depuis la loi de 1999, c'est la Bibliothèque nationale qui en est principalement chargée, un exemplaire revenant tout de même aux Archives nationales ; la création de la Bibliothèque nationale s'est accompagnée de la soustraction de tous les fonds du dépôt légal des Archives nationales.
- 111 Republic of Mauritius, The National Archives Act 2000, pt. II - 5 (a) et (c).
- 112 Ibid., pt. III - Public Records Appraisal Committee.
- 113 Republic of Mauritius, The National Archives Act 2000, pt. II - 5 (b), (e), (g) et (m).
- 114 Seule exception, implicite : les archives notariales dont les minutes sont versées aux Archives nationales après 60 ans, soit un délai de communication cumulé de 90 ans.
- 115 Nous revenons ci-dessous sur la nécessité, selon nous, de réviser cet aspect de la Loi.
- 116 En revanche, nous notons une certaine confusion dans la façon dont le Mauritius National Archives envisage le décompte des années avant communication des documents au public puisque le Deputy Director p.i évoque en notre présence « trente années à partir de la date de dépôt » ; or, c'est inexact et il faut comprendre « trente années à partir de la date d'émission du document ou de la clôture du dossier d'affaire par son administration émettrice ».
- 117 Voici le texte de la loi :  
“(2) The Director may refuse access to any member of the public to any public archives, which he considers -  
(a) may cause -  
(i) prejudice to any other member of the public; or  
(ii) social unrest in the country; or  
(b) it is not in the public interest to permit.”
- 118 Republic of Mauritius, The National Archives Act 2000, pt. II - 5 (f).  
“The Director shall -  
(f) arrange the archives according to established principles of archival administration and prepare all the reference instruments.”
- 119 Il s'agit d'une collection de pièces dignes d'intérêt (actes, sceaux, timbres) isolées des fonds par Auguste TOUSSAINT en un « Musée des Archives ».
- 120 Republic of Mauritius, The National Archives Act 2000, pt. II - 7 (1) (a), (b), (c), (e), (g).
- 121 Ibid., pt. II - 5 (e).
- 122 Ibid., pt. II - 12.
- 123 Sans plus de précision car nous n'avons pas reçu des Archives nationales, malgré nos demandes réitérées, la liste du personnel ni de ses qualifications.
- 124 Office of the Director of Audit of the Republic of Mauritius, *Report of the Director of Audit for the year ended 30 June 2001 - Volume 1*: Financial Audit - Account of Ministries and other Offices - Ministry of Arts & Culture - 11.4 National Archives, Audit National (Port Louis: National Audit Office, 2001).
- 125 Teygeler, *Preservation of Archives in Tropical Climates. An annotated bibliography*, pp.18-19.  
“Experience shows that lamination can no longer be considered a viable preservation option for papers of enduring value (Department of Archives and History, 1997).”
- 126 Ce travail fut réalisé en grande partie mais, semble-t-il, jamais achevé, ni payé ; on a complètement perdu trace à Maurice de ces microfilms ; un entretien avec M Gérard MAUJEAN nous apprend qu'ils furent malencontreusement anéantis par un planton lors du déménagement de la société ONE.
- 127 *L'Express* Dimanche (Port Louis, August 11, 1996).

- 148 Mme RAMNAUTH a fait des études de Géographie puis une Maîtrise de Bibliothéconomie ; a reçu une formation à la Bibliothèque nationale ; elle dispense maintenant des cours à l'UoM.
- 149 Mme RAMNAUTH évoque notamment, aux tout-débuts de son mandat :
- le sans-gêne de certains lecteurs de Curepipe, qui « se servaient » dans les réserves et ne tenaient aucun compte du règlement intérieur ;
  - les vols commis par le personnel politique municipal (voir ci-dessus) ou par les employés de la bibliothèque ;
  - le manque de crédits.
- 150 Voici les chiffres de fréquentation (recrutement sociologique très varié, surtout constitué de scolaires et d'étudiants) de la bibliothèque :
- 5,000 abonnés actifs,
  - 3,000 abonnés « dormants »,
  - 300 lecteurs par jour pour une salle de lecture de 90 places.
- 151 Par exemple sur « Malcolm de Chazal », « L'Abolition de l'esclavage » ou à l'occasion du lancement d'un livre.

- #1 .....WZ 969.82  
..... Histoire de Maurice  
..... Hitié, Evenor  
1 copy available at Mahatma Gandhi Institute in MAURIT
- #2 .....WZ 969.8202  
..... Histoire de Maurice (ancienne île de France)  
..... Hitié, Evenor

1 copy available at Mahatma Gandhi Institute in MAURIT

#3 .....969.82 HIT 1897  
 .....Histoire de Maurice - (Ancienne île De France) Tome Premier  
 .....Hitie, Evenor

1 copy available at Simone de Beauvoir Public Library in STACKS

189 Source : Rapports annuels de la Bibliothèque nationale.

190 Ce sont :

- 1 : plaintes en dommages et intérêts dépassant 500,000 Rs.
- 2 : Divorces.
- 3 : Appels criminels des cours de 1<sup>e</sup> et 2<sup>e</sup> instance.
- 4 : Appels au civil.
- 5A : Motions en Cour et actes de procédure.
- 5C : Appels contre les décisions du juge en chambre (concernent la fiscalité, les corps para-étatiques, etc.)
- 5E : Référés par le juge en chambre, pétitions électorales.
- 6A : Appels criminels contre les jugements de la Cour Suprême.
- 6B : Appels contre les décisions de la Cour civile de la Cour Suprême.

191 Ensemble de textes réglant la vie des esclaves noirs dans les îles françaises sous l'Ancien-Régime. Il existe deux versions du *Code noir* : la première version a été élaborée par le ministre Jean-Baptiste Colbert (1616-1683) et fut promulguée en mars 1685 par Louis XIV ; la seconde version fut promulguée par Louis XV au mois de mars 1724.

192 Voir nos clichés ci-dessous.

193 Voir nos clichés ci-dessous.

194 Arlette Farge, *La Vie fragile* : Violence, pouvoirs et solidarités à Paris au XVIII<sup>e</sup> siècle, Points Histoire (Paris: Le Seuil - Points, 2007).

195 Arlette Farge, *Le Bracelet de parchemin* : L'Écrit sur soi, XVIII<sup>e</sup> siècle, Le rayon des curiosités (Bayard Centurion, 2003).

196 Ainsi celle pour le 80<sup>e</sup> anniversaire du journal *La Vie Catholique*.

197 Rappelons qu'en France, par exemple, les archives médicales sont protégées par un délai de communication de 120 ans à dater de la naissance ou 25 ans à dater de la mort de la personne concernée, si ce délai est inférieur (loi du 15 juillet 2008).

198 Voir nos clichés ci-dessous.

199 Un historique succinct dans: Republic of Mauritius - Ministry of Health, "Brown-Séguard Hospital Centenary (1879-1979)" (Brown-Séguard Hospital, December 11, 1979).

200 Nous adjoignons aux résultats de cette visite la déposition de Mme Saloni DEERPALSINGH, ancienne Directrice du MGI, devant la *Truth and Justice Commission*, le 17/06/2011.

201 Ces archives provenaient des bureaux de l'Immigration et furent ensuite transférées à la Sécurité Sociale où elles servaient de référence administrative.

202 Aapravasi Ghat Trust Fund and Ministère des Arts et de la Culture, Proposition d'inscription d'Aapravasi Ghat sur la liste du patrimoine mondial (Port Louis, February 2005).

203 Selon un accord dont nous n'avons trouvé nulle trace écrite.

204 Dont nous n'avons pu obtenir communication et qui, contrairement aux déclarations de Mme DEERPALSINGH et de M GO-VINDEN, diffère fortement du *National Archive Act* tel qu'il est appliqué aux Archives nationales.

205 Éric Chan Wah Hak, "Auditions de la Commission concernant les archives d'immigration au MGI," interview by Vijaya Teelock et al., June 17, 2011.

206 Thierry Laurent, "Le Mahatma Gandhi Institute ouvrira ses archives à la Commission Justice et Vérité," *L'Express* (Port Louis, June 23, 2011).

207 Saloni Deerpalsigh, "Auditions de la Commission concernant les archives d'immigration au MGI," interview by Vijaya Teelock et al., June 17, 2011.

Il s'agit d'informations d'identité (numéro d'immigrant, nom, prénom, origine, caste), généalogiques (mariage, enfants), judiciaires (peines encourues) ; des liens sont ménagés vers d'autres bases de données de personnes : *Nelson Mandela Centre for African History*, Aapravasi Ghat, *Central Statistical Office*.

208 Liste des projets: "Memory of the World Projects - Communication and Information Sector's Photobank", n.d., <http://www.unesco-ci.org/photos/showgallery.php/cat/557>

209 Que nous n'avons pu constater *de visu*, M GOVINDEN n'ayant pas donné suite à notre demande de visite du dépôt. Cet état de conservation prête cependant à controverse : quelques chercheurs estiment que l'encre des registres a pâli avec le temps, sans doute du fait des fumigations avec des agents chimiques trop corrosifs.

210 Voir ci-dessous.

211 "Musée de la photographie. Réouverture du musée: le patrimoine photographique rendu accessible," *Week-end* (Port Louis, March 8, 2009);

"Vendredi après-midi: Nouvel accident sur le site de Garden Tower," *Week-end* (Port Louis, February 10, 2008).

212 Tristan Bréville to Stéphane Sinclair, "Re: Remerciements", March 17, 2011.

213 "Joyeux Anniversaire : Le Musée de la Photo légitimé pour ses 40 ans," *Week-end* (Port Louis, December 17, 2006).

214 Selon le calcul suivant : quatre personnes travaillent à temps plein sur le musée (le couple BRÉVILLE et leurs deux enfants), ce qui devrait donner, au minimum, lieu à un salaire mensuel global de 100,000 Rs. Bréville to Sinclair, "Re: Remerciements."

215 "RS. 2 M pour le musée de la photographie : 'Un pan du patrimoine mauricien préservé'," *Week-end* (Port Louis, May 24, 2009).

216 Voir ci-dessous.

217 Statuts de l'ICOM, adoptés lors de la 21<sup>e</sup> Conférence générale à Vienne (Autriche) en 2007.

218 La notion même d'artiste ne donne lieu à aucun effort d'approfondissement, malgré l'abondante littérature sur la question ; une première approche : Nathalie Heinich, Être artiste, 50 Questions (Klincksieck, 2005).

219 "RS 2 M pour le musée de la photographie : 'Un pan du patrimoine mauricien préservé'." Tristan Bréville évoque parmi ses projets, Le Répertoire Culturel Mauricien, sur support DVD. Un projet qui sera prêt d'ici décembre 2009, au coût estimé de RS 20M. Si l'État et le secteur privé contribuent à ce projet, le patrimoine culturel sera enrichi.

- 220 "Répertoire Culturel Mauricien: Tristan Bréville: 'un cadeau à mon pays'," *Week-end* (Port Louis, May 31, 2009).
- 221 *Land Administration Valuation and Integrated Mauritius Services*. Cadastre informatisé de l'île Maurice.
- 222 Au coup par coup pour les particuliers, annuelle et forfaitaire pour les études juridiques et leur personnel.
- 223 Mise au point dans: Peghini, "Les impasses du multiculturalisme. Politiques, industries et tourisimes culturels à l'île Maurice," 299, sq.
- 224 "National Budget", n.d., <http://www.gov.mu/portal/site/MOFSite/menuitem.5b1d751c6156d7f4e0aad110a7b521ca/>
- 225 Certains sont des administrations étatiques dépendant directement d'un Ministère (par exemple les Archives nationales, qui dépendent du Ministère de la Culture puis du Ministère de l'Éducation, de la Culture et des Ressources humaines) donc assujettis à des comptes détaillés tant pour leurs dépenses d'investissement (*capital*) que pour leurs coûts de fonctionnement (*recurrent* = dépenses de personnel + dépenses de fonctionnement). D'autres sont des organismes parapublics (*parastatal bodies*) dont le financement par l'État prend la forme de dotations (*Grants, Subsidies and Contributions*) : par exemple, la Bibliothèque nationale. Il convient, pour avoir plus de détail, de rechercher l'information dans les documents internes à ces organismes, leurs rapports annuels par exemple.
- 226 Par exemple, les Archives nationales sont maintenant intégrées au *HRKAD Fund (Human Resource, Knowledge and Arts Development Fund)* placé sous l'égide du Ministère de l'Éducation. Or, faute d'avoir obtenu des Archives nationales un budget détaillé, nous sommes dans l'incapacité d'en savoir plus pour 2010 et 2011.
- 227 Ainsi, s'agissant du budget de la Culture (notre point de comparaison essentiel), qui n'est nullement réductible :
- au budget du Ministère de la Culture, qui s'occupe également des cultes ;
  - au budget du Ministère de l'Éducation, de la Culture et des Ressources humaines, de plus grande ampleur.
  - Au budget de la fonction « *Recreational, cultural & religious services* », qui résulte de l'agrégat de postes variés appartenant à plusieurs ministères : par exemple, le Ministère de l'Éducation et celui des Sports.
- 228 Par exemple, les détails pour le Ministère de la Culture et les Archives nationales pour 2004-2005.
- 229 Entre 2002 et 2006, seules années pour lesquelles nous disposons de séries continues.
- 230 Republic of Mauritius, *The National Library Act 1996*.
- 231 Republic of Mauritius, *The National Archives Act 2000*.
- 232 Peghini, "Les impasses du multiculturalisme. Politiques, industries et tourisimes culturels à l'île Maurice," 303-304.
- 233 Évaluation extraite du Budget de Maurice en l'absence de réponse à nos questions de la part des Archives nationales.
- 234 Valeurs extraites de ses rapports annuels.
- 235 Par exemple : les archives d'arrivée des travailleurs engagés indiens et africains au MGI.
- 236 Yvan Lagesse, *Comment vivre à l'île Maurice en 25 leçons* (Cassis, île Maurice: Editions I.P.C., 1981).
- 237 Avec pour séquence invariable :
1. L'arrivée de l'expert qui réside dans l'un des hôtels du bord de mer puis est cordialement reçu dans la « meilleure société ».
  2. L'expert constate l'étendue des dégâts et fait preuve de courtoisie pour ne pas froisser ses hôtes. Il communique néanmoins ses premières impressions (sombres) et recommandations (alarmistes) au cours d'interviews ménagées dans la presse locale.
  3. L'affliction des Mauriciens devant les tristes révélations (déjà connues au demeurant) de l'expert, par l'entremise de leur presse ravie de l'aubaine de ce « marronnier ».
  4. Les formations dispensées par l'expert à la plus grande part des responsables de conservation du pays - pour peu qu'il reste plus de cinq jours - et qui occasionnent une certaine désorganisation des services concernés.
  5. Le départ de l'expert.
  6. L'oubli général, brièvement interrompu par la réception du rapport dudit expert, après quelques semaines ou quelques mois (il a d'autres engagements). Le retour à la routine, jusqu'au prochain voyage d'expert.
- 238 Ce que déclarait le Pr Hervé CHERADAME dans une interview récente : Bellier, "INTERVIEW - Pr Hervé Cheradame, chimiste spécialiste des papiers anciens : « Il faut commencer par trouver un vrai bâtiment d'archives »."
- «Pour faire une évaluation complète et sérieuse, il aurait fallu que je passe bien plus que trois jours sur place, disons trois semaines.»
- 239 Les Archives nationales ou le Ministère des Arts et de la Culture semblent avoir perdu trace de la *totalité* des microfilms réalisés avec la collaboration d'équipes étrangères.
- 240 Le Centre Inter-régional de Conservation du Livre d'Arles (France) est une entreprise privée spécialisée dans la restauration et la conservation des documents anciens ; elle a pour clients des institutions d'État, des entreprises et des particuliers.
- 241 Au contraire de ce qui se passe en France, par exemple, où les Archives départementales sont l'un des services les plus prisés du public local, avec des chiffres de fréquentation enviables, ce qui dénote une grande vivacité de l'histoire locale ou des familles. Voir l'excellente enquête menée aux Archives départementales par Lucien MIRONER : Lucien Mironer, ed., "Les publics des Archives départementales et communales. Profil et pratiques. Présentation de l'enquête et analyse des résultats," *Développement culturel* 137 (October 2001): 15; Lucien Mironer, "Les publics des Archives départementales et communales. Profil et pratiques. Présentation de l'enquête et analyse des résultats - Annexes": Florilège des entretiens de l'enquête qualitative," *Direction de l'administration générale / Département des études et de la prospective* (2003): 161; Lucien Mironer, "Les publics des Archives départementales et communales. Profil et pratiques. Présentation de l'enquête et analyse des résultats - Annexes": Tableaux détaillés des résultats et relevé des réponses aux questions ouvertes de l'enquête par sondage," *Direction de l'administration générale / Département des études et de la prospective* (2003): 143.
- 242 Morrad Benxayer, *L'action éducative et culturelle des archives; Enquête sur les services éducatifs*, Enquête (Direction des archives de France / Département des publics, 2004); Caroline Piketty, "Concevoir les archives comme porteuses de valeurs citoyennes" (présenté à *the Concevoir les archives comme porteuses de valeurs citoyennes*, IUFM de Paris-Molitor, CHAN: Pôle National de Ressources Patrimoine-Archives, 2005), 22-24.
- 243 Il a fallu une décision en Cour pour que les Archives nationales acceptent de livrer leurs fonds imprimés issus du dépôt légal.
- 244 Voir la *Bibliographie* p194 et suivantes, dont la plupart des items figurent sur Internet.
- 245 Ce sont, inscrits au Budget 2010-2011 :
- *African World Heritage Fund*,

- Association Internationale des Archives Francophones,
  - Association of Commonwealth Archivists and Record Managers,
  - Convention for Intangible Cultural Heritage (UNESCO),
  - International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM),

- 277 Nous ne sommes, en l'occurrence, assuré d'aucune des conditions préalables et ce délai est donc donné à titre indicatif :
- la construction de la *Culture House* est planifiée au Budget de l'État depuis 1999, de manière purement théorique ;
  - le financement et le terrain du projet ne sont pas encore acquis;
  - on ignore si les Archives nationale et la Bibliothèque nationale partageraient volontiers le même bâtiment : voir la déclaration du Directeur de la Bibliothèque nationale.
- 278 Bellier, “INTERVIEW - Pr Hervé Cheradame, chimiste spécialiste des papiers anciens: «Il faut commencer par trouver un vrai bâtiment d'archives».”
- 279 Republic of Mauritius - Ministry of Finance and Economic Empowerment - Budget Strategy and Management Directorate, “2010 Manual for Program-Based Budgeting (PBB)”, August 22, 2009.
- 280 Téléchargeable sur : <http://www.ganttproject.biz/>  
Nous mettrons à libre disposition tous les fichiers de gestion de projet réalisés sur GanttProject dans la base de données de référence.
- 281 Voir son planning prévisionnel, ci-dessous.
- 282 Voir ci-dessous.
- 283 Par exemple le changement à la tête d'une administration de conservation.
- 284 Toussaint, *Bibliography of Mauritius (1502-1954), Covering the Printed Record, Manuscripts, Archivalia and Cartographic Material*. Un tel relevé est de réalisation assez complexe :
- pour les archives publiques des 19<sup>e</sup> et 20<sup>e</sup> s. en raison de leur versement déficient
  - et pour les fonds privés, souvent dispersés au gré des successions.
- 285 Voici la définition du terme par MILLER en 2000 :
- To be interoperable, one should actively be engaged in the ongoing process of ensuring that the systems, procedures and culture of an organization are managed in such a way as to maximize opportunities for exchange and re-use of information, whether internally or externally.*
- 286 Selon Eric Ketelaar, *Législation et réglementation en matière d'archives et de gestion des documents* : une étude RAMP accompagnée de principes directeurs, RAMP Studies (Paris: Unesco - General Information Programme and UNISIST, 1985), pp.15, sq. l'auteur détaille les mesures de contrôle des archives privées relevées dans les législations nationales.
- 287 Sauf pour la période contemporaine, il est peu probable que les accessions nouvelles soient très abondantes, ce qui justifie le recours à ces inventaires souvent anciens.
- 288 Maurice est signataire depuis le 27/02/1978 de la convention de l'UNESCO (1970) en matière de trafic illicite des biens culturels.  
Unesco, Convention concernant les mesures à prendre pour interdire et empêcher l'importation, l'exportation et le transfert de propriété illicites des biens culturels 1970, Actes de la Conférence générale, 1970.
- 289 Voir ci-dessus.
- 290 Selon les formats BibTex, MODS, etc. ou directement, comme cela se fait avec le logiciel Zotero ([www.zotero.org](http://www.zotero.org)).
- 291 La plupart des ouvrages des 18<sup>e</sup> et 19<sup>e</sup> s. évoquant Maurice sont accessibles sous forme numérisée. Voir la Bibliothèque Numérique Mauricienne : [www.indicos.org](http://www.indicos.org).
- 292 Par exemple aux Archives nationales de France, au CAOM, à la British Library ou dans la réserve généalogique des Mormons.
- 293 Par exemple au CAOM avec les actes d'état-civil de la période française qui seront mis en ligne au premier semestre 2012. Ou avec les documents généalogiques numérisés et détenus par des particuliers.
- 294 Les chiffres du tableau indiquent le degré de préférence, par ordre décroissant.
- 295 La plupart des formats d'e-books sont librement convertibles au format PDF avec texte indexé.
- 296 En mode image seulement, donc pas de recherche en texte libre possible. Exemple : certains textes sur Gallica.
- 297 Par exemple les périodiques australiens indexés par la NLA ; “Newspaper Home”, n.d., <http://trove.nla.gov.au/newspaper>
- 298 Certains textes sur Gallica ou sur la bibliothèque numérique de l'*Anti Slavery Society* (“Anti-Slavery - Resources”, n.d., <http://www.antislavery.org/english/resources/default.aspx>).
- 299 De préférence das un format intégrable directement dans un logiciel de gestion bibliographique, par exemple Zotero : [www.zotero.org](http://www.zotero.org)
- 300 *Optical Character Recognition* = Reconnaissance Optique de Caractères.
- 301 *Local* : « Salle de stockage des archives ».
- 302 *Épi* : « Ensemble de travées de rayonnage juxtaposées ».
- 303 *Travée* : « Ensemble de tablettes superposées comprises entre deux montants verticaux ».

## 1. EXECUTIVE SUMMARY

The report on *“Memory representations of slavery and indenture in Mauritius: towards the recognition of silent heritage”* proposed to study how slavery and indenture are depicted as historical references for almost 90% of today’s population. Representations in museums and historic sites, as symbols of slavery and indenture, were studied to appreciate the process through which expressions of memory took place and how they contribute to national recognition and the unity of the nation.

Representations are expressions of the past generated by an act of memory. As such, representations of slavery and indenture were considered within the memory process that led to the construction of a national vision of the past. In Mauritius, the memorial framework was inherited from the colonial elite who established western references in the colony. Our research first analysed the concept of heritage as understood by the Royal Society of Arts and Sciences (RSAS) and by the Historical Records Committee (HRC) in the second half of the nineteenth century. These two entities were instrumental in the creation of a memorial framework at national level.

Excluded from the Elite’s consideration, representations of slavery and indenture did not form part of the memorial process before the years 2000. These years mark a shift in the memorial process: memory expanded to include the experiences of the formerly dominated population. Our research in museums specifically showed the development of representations during this period. As part of its reorganisation in 2000, the *National History Museum* in Mahébourg presents indenture as an experience leading to a positive evolution in the society. However, representations of slavery imply that ex-slaves were victims of an inhuman system and consequently, were not given the opportunity to become actors in the society. At *L’Aventure du Sucre* created in 2003 by a consortium of sugar companies, the museum discourse provides positive accounts of local history in the perspective of international context. This provides an account of the “negative” events beyond the local context and helps to conciliate a national vision of the past. In addition, it also states that the descendants of the former Elite generate a vision of the past that accepts the colonial undertakings which affected the population. In this sense, the acceptance of the past acts towards the evolution of the memorial process in museums and serves the contemporary dynamics of nation building. Ultimately, this process of conciliation leads to remember why the Mauritian society took shape and evolved to form a nation. It was interesting to compare *L’Aventure du Sucre*, a private museum, with the *Musée du Peuplement* created by the State in 2010. The *Musée du Peuplement* interprets the past to remember the positive accounts: its dynamics are very similar to those of *Aventure du Sucre* activating the positive memory to establish a new approach to the past. This approach results in the recognition of a common heritage: it is the first instance in which the heritage deriving from the population’s interactions is represented. Although we may question the quality of the display, the *Musée du peuplement* is marking a major shift in the memory process: it formulates the existence of a common heritage shaped by the various groups in action.

In the same manner, the inscription of two sites on the World Heritage List in 2006 and 2008 certainly marks a significant step in the evolution of the memorial framework. It established a formal recognition of slavery and indenture and also initiated the formulation of common national memory. In the Mauritian context, the example of the two World Heritage Sites shows how common references can be established in a multicultural society where the various segments of the population may refer to different appreciations of the past. In the instance of Le Morne and Aapravasi Ghat generally subject to ethnic considerations, the external recognition allows the establishment of commonly recognised values as they are considered beyond the national dynamics. The local values are re-interpreted beyond potential contestations or misleading considerations. As such, it encourages their general acceptance as heritage of the nation.

Our research showed that the memorial process is now taking place through new actors who are descendants of the former colonial society. The memorial framework undertakes a complete redefinition. The portrayal of National History now intends to include the memory of the majority of the population and not just a small segment of the Mauritian population. In this undertaking, the representations of slavery and indenture hold a major place as the experiences of more than 90% of the current day population.

In this respect, the Government has undertaken action to recognize the silent past of the nation. Heritage projects initiated in recent years are an interesting indicator to appreciate how the shift in the memorial process has operated. This shift may be explained by the need to preserve the past disappearing with the fast growing development but also, raises the concern to situate Mauritian culture facing globalization. Mauritius as many other countries expresses its concern to retain its cultural roots and specificity.

In this undertaking, heritage and MUSEUM MANAGEMENT play a significant role in the preservation and promotion of heritage. This report ends with considerations on MUSEUM MANAGEMENT to propose recommendations to improve management and ensure the sustainability of Mauritian heritage. The elaboration of policies for museums and heritage would be beneficial to the development of heritage in a sustainable manner and support the appropriation of heritage by the Mauritian population. The consultation with the population was identified as a main objective. It would foster an appropriate restitution of the past for the population and sustain nation building.

## 2. INTRODUCTION

The recent years were marked by an unprecedented development of heritage projects in Mauritius. We may want to believe that the emerging concern for the past is related to the fast-growing urban development bringing significant changes to the society. The consequence of globalization ultimately leads to question. “Where the nation is heading?” and “on what fundamentals can we built our future?”

The projection of the nation in the future raises a number of questions relevant to our knowledge of what really defines the nation and what constitutes its identity so that it may evolve in a sustainable manner. In this instance, the statement of Melville Herskovits that *“a people without past is a people that nothing anchors in the present”*<sup>1</sup> can probably explain why for the last thirty years, research in Mauritian history has developed and also led to a focus on heritage to establish national symbols representing the roots of the nation.

The focus on heritage is particularly significant since the inscription of two Mauritian sites on UNESCO World Heritage List. This can only bring to our attention the shift in the way heritage was considered prior to the 2000s. Heritage was mostly the legacy of the Colonial Administration and heritage was mostly focusing on the history of the former *colons*. However, the heritage process turned to an under-researched part of Mauritian history, with the project of recognition of Le Morne and Aapravasi Ghat both referring to two traditionally silent episodes of Mauritian history: slavery and indenture.

These two episodes of Mauritian history are not only a subject of concern established by the Truth and Justice Commission Act of 2008, but they are also two historical facts that led to the migration of the ancestors of more than 90% of the present-day Mauritian population on the island. Through coerced migrations, these immigrants suffered inhuman treatments, annihilation of their identity and also, all were unrooted to settle in a new land where their cultural referential were not present. Encouraged by the colonial policy aiming at securing available workforce Mauritian society slowly took shape to become one of the most dynamic nation of the African continent. At the turn of the 21<sup>th</sup> century, it is thus not surprising to see Mauritian society engaging to question its past when most of the past evocative of the population has almost never been the subject of recognition and is now facing disappearance, for the benefit of modernity.

In this respect, research on heritage seemed a legitimate concern as part of the undertakings of the Truth and Justice Commission. Heritage is established through a process of memory: as the legacy of the past, it stands for symbols and values chosen by the nation. It thus represents what the nation believes to be part of its identity. Our focus on heritage ultimately aims at exploring the memory process in Mauritius in order to better appreciate according to what references and fundamentals the Mauritian nation defines itself. Our research focused on representations as expressions of memory in contemporary society and explored, in particular, expressions of slavery and indenture as the founding experience of almost the totality of the population.

Representations of the past are fundamental elements for the constitution of the nation (Anderson, 1996): they tell us how the society views its past and how slavery and indenture are perceived. The representations thus provide us with an understanding of how the past was assimilated and disseminated on a national scale. It also tells us how the various segments of the population are viewed and how their own experience are transcribed in the public space. One chief aim was to evaluate if the vision of the Other was fair and in line with factual experience, or if the representations led to a distorted image that could cause prejudices to our evolution in the society.

Ultimately, the representations of the past - transcribing a social experience - forms part of the heritage process establishing a common referential for the society that sustains its evolution. On the contrary, distorted images of the past may also constitute an obstacle. We therefore explored this question to formulate recommendations supporting a fair transcription of the memory of the past to encourage the production of images that will help a common recognition of various segments of the population and support national unity. This how this report proposes to address the consequences of slavery and indenture in Mauritius today.

---

### RESEARCH OBJECTIVES

---

As part of our assignment, it seemed important to explore the evolution of the heritage process to understand better what constitutes the common values of the Mauritian nation. Heritage appears as a main area of focus since it is a collective expression of how the society views itself. The notion of heritage symbolises how the nation has built a social attachment with places invested with values and symbols that respond to the society's identity and memory. It did not seem possible to focus on our assignment dealing with the study of the representations of slavery and indenture, without an overall understanding of the context in which these representations were elaborated.

In this respect, the present report proposes to address the research results of the project of "Memory and Representations of Slavery and Indenture in Mauritius," based on the revised project proposal submitted on 27 June 2010. The objective of this project was to focus on the expressions of memory in the public space to assess how slavery and indenture are depicted. Through the analysis of representations, the objective was to describe how slavery and indenture are portrayed as common references for the nation. This approach assumed that representations in public space express what is considered to be a commonly-accepted vision of the past and how at an institutional level, the past is portrayed as being the commonly-accepted version of the society's experience. Museums were of particular interest since they provide a transcription of the past seen by authorities as the society's fundamentals. In museums, the past is reflected as being the official version of what constituted the society. Our objective was to establish through which process expressions of memory arose and how these memories are expressed and represented. More specifically, how do they contribute to national recognition and the unity of the nation?

The ultimate goal was to propose recommendations that would speak to the expectations of the society and propose actions encouraging fair representations of slavery and indenture. The definition of "fair representation" needs to be expressed to explain our approach. Fair representations were defined as views of the past that respond to historic veracity but also, that speak to the experiences of slaves and indentured labourers in Mauritius as generally accepted by descendants. To a certain extent, it was also essential to take into consideration the memory representations of slavery and indenture by descendants. In this respect, our research focused on expressions in the public space so that the recommendations proposed could be considered within the governmental scope of action.

---

## RESEARCH PERSPECTIVES AND LIMITATIONS

---

### the position of the researcher

As part of the research perspectives and limitations of the project, it seems essential to define my position as Researcher to better appreciate the point of view or interpretations expressed in this report.

The heritage topic is my main interest. I enrolled at University to study Museology, Anthropology and Archaeology and obtained qualifications<sup>2</sup> in these subjects.

I arrived in Mauritius in 2003. A year later, I had the chance to join the Aapravasi Ghat Trust Fund entrusted to preserve, manage and promote the Aapravasi Ghat World Heritage Site. The institution also conducts research projects to document the history of indenture. Our daily undertakings at AGTF lead us to discuss problematic related to heritage and public perception of the past. The institution is one of its kind. Created in 2001, it is led by AGTF Board who has, throughout the years, invested in building capacity in the heritage field among the technical staff of the institution. From its early days to now, the staff has continuously gained significant experience by being involved in the various stages leading to the inscription of the Site on the World Heritage List and also, in the challenges aiming at retaining this status.

This experience showed that hardly any legislation exists to preserve, enhance or promote the heritage in Mauritius. This led to the constitution of various tools - legal and managerial - to enable the preservation of the World Heritage Site, AGTF, and also, its development. This experience also stressed the need for the development of competence in heritage management including all fields of specialisation, an emerging discipline in Mauritius, often not known as a professional field of competence. It also showed that the population and the authorities show a significant growing

interest in heritage and are becoming aware of the challenges to overcome to better manage heritage in Mauritius.

This seems important to underline this problematic resulting from experience at AGTF as the subject of this report directly relates to this professional field. This experience significantly helped to appreciate our research interest and propose recommendations. In this respect, this report is perceived as an opportunity to share this experience for interaction and for dialogue on heritage in Mauritius.

It was also for me, the chance to focus on a topic directly related to the problematic encountered in the course of my professional life. The study of the representations of slavery and indenture are currently a main subject of concern. The AGTF has engaged in the setting up of an Interpretation Centre aiming at presenting the history of the World Heritage Site and also, the experience of indenture. This subject thus directly addresses the problematic encountered at AGTF so as to fairly transcribe the historical experience to reconstruct the past and produce a vision with which the Mauritian population identifies.

#### towards the representations

This report first proposed to explore the representations of slavery and indenture in museums. In the course of our research, this objective seemed difficult to achieve in a satisfactory manner, if representations were considered as isolated items. It therefore seemed essential to consider the representations within a wider context, allowing the exploration of the dynamics that led to the creation of these representations. Our research thus expanded to focus on the overall framework within which museums were created and also, are currently functioning. The outcome of our research revealed many limitations in the way museums are managed and we felt that this aspect was a fundamental element to be reported as the improvement of MUSEUM MANAGEMENT and the establishment of a defined framework would provide a better restitution of the past in the museum space.

This also included heritage sites where much development is noted these last few years and, in particular, at Aapravasi Ghat World Heritage Site inscribed in 2006 and also directly referring to the history of indenture. The analysis of its recognition process showed an evolution in the representation of indenture that deserved specific focus and that also speak to the change in the way the past is perceived after the inscription of the Site on the World Heritage List.

#### studying the expressions in the public space

Museums and historic sites were the two main areas of focus, since it seemed essential to address the question of representations in the public space. This would allow for possible actions proposed through the recommendations after the completion of the Commission. In this respect, museums were particularly important as a place contributing to the national memory process, by establishing official and non-official representations of national history and take part, as public institutions, in the national construction of the past. To orientate our research towards the study of museums, our focus was on internationally recognized notion of museum as defined by the International Council of Museums (ICOM):

*"a non-profit making, permanent institution in the service of society and of its development, and open to the public, which acquires, conserves, researches, communicates and exhibits, for purposes of study, education and enjoyment, material evidence of people and their environment."*<sup>3</sup>

Our research could not include all representations of slavery and indenture in museums. Fieldwork focused on a selection comprising of the Mauritius Institute in Port Louis, the National History Museum and the *"musée du peuplement"* located in Mahébourg, and *l'Aventure du sucre* in Beau Plan. The selection of museums relied on the fact that they do portray slavery and indenture as a constitutional element of Mauritian society. If the Mauritius Institute does not directly address memories of slavery and indenture, it seemed to be of interest as it is the oldest museum on the island and helped us understanding how museums first took shape and how the concept of museum was elaborated to better appreciate its evolution within the Mauritian context.

As such, the Museum of National History was particularly interesting since it was the first attempt to depict the National History of Mauritius, seen by a governmental agency, while the *musée du peuplement* is the most recent expression of the vision of Mauritian history by the same authorities. Similarly, the other museums seemed an essential area of study as they are the result of private initiatives. This allowed the confrontation with the museums of the public sector and led to an interesting conclusion on the perception of the past by a segment of the local community and by the governmental agencies. In our analysis, the Code of Ethics of ICOM was the reference document to assess the performance of museums and also to evaluate how they responded to the international standards.

#### methodological considerations

To approach our research topic, the methodology relied on detailed descriptions of representations of slavery and indenture in museums. This led to their analysis supported by background information on the context of museums' creation. Research in the archives and secondary sources were essential to appreciate the context of evolution of the cultural institutions and also to understand the dynamics leading to the formulation of the representations of slavery and indenture in the various museums. This report therefore proposes to address the dynamics of memory representations of slavery and indenture in their context of appearance.

This part was followed by a broader analysis of heritage dynamics to better appreciate the context in which the recognition of slavery and indenture took place. The objective is to better appreciate in which instances the restitution of the past seemed to address contemporary concern in a successful manner. This part relies on a survey polling 50 people and on the study of official documents. This also includes an analysis of MUSEUM MANAGEMENT at the Mauritius Museums Council to consider how MUSEUM MANAGEMENT and conservation could be improved to create a sustainable environment for heritage and ensure the restitution of the national past in favourable conditions.

This part led to the identification of key elements supporting the recognition of heritage related to slavery and indenture and the sustainable development of heritage. It supported the formulation of recommendations proposed for the improvement of heritage recognition and sustainability in Mauritius.

Our area of study was thus delimited to better appreciate the expressions of memory in their context of production. It was essential to limit our scope to allow fine definitions of representations and thus allowing their analysis requiring their consideration within their context of occurrence and general perspectives on museum and memory dynamics. It would have been a difficult enterprise to only focus on representations as such as they would not have led to an overall understanding of what they meant for the population or how they were generally perceived. Considering representations in their context of production was thus our approach to better analyse their meaning and also, better identify their shortcomings.

To initiate this report, the definition of two key concepts seemed essential to set a base for our research and analysis. These two key concepts were *memory* as a process required to allow the occurrence of representations of the past; and *heritage* as the general framework within which the process of memory generates expressions.

### 3. KEY CONCEPTS: MEMORY AND HERITAGE

It seemed essential to consider the concept of heritage in the light of the recent academic research focusing on the process of heritage formation and consider why an object, tangible or intangible becomes a heritage. Heritage necessarily implies that there is a common recognition which ultimately leads to local, national or international status, formal or informal.

This recognition is the result of a process that necessarily implies an act of memory. An object becomes heritage because it is remembered, thus initiating the memorial process leading to the recognition. The transformation of an object into an object of heritage is the result of - what Jean Davallon calls- the process of *memoration*. Jean Davallon refers to this expression to convey the idea that an object of heritage necessarily refers to memory. The object of heritage was invested with symbols and values that has a direct relevance to the memory shaped by the nation. Heritage is commonly recognized specifically because it makes sense for a specific entity. Indeed, an object considered by an external group would not be considered as such since one may not share the same cultural references<sup>4</sup>. This aspect is particularly interesting in Mauritius where the population is formed by groups with various cultural backgrounds. This raises the question of how to grant the status of heritage to an object when it necessarily implies that external references must be recognized to form a national entity. This aspect may also explain why we notice the absence of recognition of major historical events in the case of slavery and indenture, hardly ever considered before the years 2000 as far as heritage is concerned.

Precisely, the study of the evolution of the notion of heritage is essential if we are to understand through which process common values were elaborated and also bring to light the overall framework that activated expressions of memory representations. We therefore assumed that representations of slavery and indenture could not be isolated from an overall process that led to the construction of a national perception of the past. Especially in the case of museum, representations as museums *"must allow to give to the communities concerned the keys to understand the local history and environment (and not only focus on national history). The museum must enable us to define the image of oneself that one wishes to communicate to others"*<sup>5</sup>. In this respect, museums seemed the right place to appreciate a common vision of the past and the expressions of shared values.

To ensure an objective appreciation, the study of representations includes an understanding of the context in which representations were generated as perceptions of the past. Indeed, they are part of a process that relies on dynamics of transmission through time. This is the reason why we consider that heritage is an evolving notion: it carries social values expressing concerns of a particular period and conveys expressions of an attachment to the past serving current challenges. Representations were formulated at a given time and with time, they may no more respond to the current concerns of the society. In this respect, we may want to assume that fair representations are those recreating a link between the past and the present with which the society identifies.

In this respect, the context in which a museum is created dictates its content. Museums can be described a social space created by authorities or private entities to present a representation of the past evocative of a given period. The museum thus opens a window on an "institutional past" or on a social past which presents the commonly accepted (or not accepted) vision of the society/cultural group's past at a precise moment in time. Consequently, the representations generated earlier in time may no more address the contemporary concerns and set out a vision that fails to respond to the present expectations.

This discrepancy between visions generated in the past and current appreciations shows that the memorial process is evolving. In this section, the objective is to appreciate how the memorial process took shape to identify heritage. It seemed important to include such considerations as it allows us to understand how the memorial process evolved until today and also, consider why parts of the national history remained silent until recently.

To this end, it was interesting to analyse the concept of heritage as understood by the *Royal Society of Arts and Sciences* (RSAS) created in 1847<sup>6</sup> and by the *Historical Records Committee* (HRC) taking shape in 1883. These two entities were instrumental in the creation of a memorial framework at national level. Their actions later led to the creation of heritage institutions that

inherited their understanding of heritage. This had a direct incidence on the formulation of representations of slavery and indenture. The representations of the past were actually driven by the colonial Elite. The account on the RSAS and the HRC can help us appreciate why it is only in the recent years that public expressions of slavery or indenture were included in museums.

#### the royal society of arts and sciences (rsas)

The emergence of the notion of heritage in the colony is associated to the development of Science and Agriculture. The *Société des Sciences et des Arts de l'Isle de France*, first created in 1846, is elaborated upon the European model. The Society gathers members from the Scientific community. This Society and the Société d'Emulation created in 1805<sup>7</sup> both aim at developing science, agriculture and, to a certain extent, trade in Mauritius<sup>8</sup>. The scientific research and the promotion of the Arts progressively developed with the creation of the Société d'Histoire Naturelle<sup>9</sup> by George Cuvier, Charles Telfair and Julien Desjardins in 1828 (SRAS, 1883:42). When Queen Victoria granted the authorization to use the word "Royal" in 1847, the Société recognized as being of public utility is renamed *Society of Arts and Sciences* or *Société Royale des Sciences et des Arts*, an appellation used in both French and English until today. The Société largely contributes to the development of scientific research and to the emergence of a historical consciousness.<sup>10</sup>

The Société benefits from its international reputation, considering the composition of its members<sup>11</sup> all recognized for their confirmed scientific aptitudes. A strong collaboration is established with other societies in the world including those in European metropolis<sup>12</sup>. The activities of the society focus on natural History, Ornithology, Zoology, Biology and Botanic, and largely contributes to the development of sugar cane which has become the main economic driver as from the 1840s (Ly-Tio-Fane, 1972; Allen, 1999). One of the first reports on the activities of the society indicates that the society's purpose is to «*encourager le développement de l'agriculture dans notre colonie en général, et particulièrement, à notre seule ressource et à sa production ingénieuse*»<sup>13</sup> (SRAS, 1850:5). As such, the Society advises the agriculture sector and the colonial authorities on scientific matters (Sornay, 1950:470).

As part of its activities, the Société organised agricultural exhibitions aiming at supporting the improvement of agriculture and the industry from the end of the 1840s (SRAS, 1849). The annual exhibitions presented the best sugars, the latest inventions related to techniques used by the sugar industry, natural history specimens and products of the local and regional agriculture. These annual exhibitions are the opportunity to also present works of art made by local Artists (SRAS, 1881:111).

In 1847, the *Comité des Beaux Arts* of the Société organised an important artistic exhibition. The report of July 1848 indicates that 1,500 people visited the exhibition which lasted four days. More than 350 works of art were exhibited: paintings from Masters, oil paintings of local Artists, watercolours, drawings, daguerreotypes, engravings, busts and medals. The master paintings and those of foreign Artists represented 59% of the artistic exhibition, as against 17% of paintings of «*Créoles ou artistes résidents*» and 24% by amateurs (RSAS, 1848:103). The exhibition required important investment that did not allow the Société to renew the event the following year but the société proposed to set up a new exhibition in the years to come to allow the local Artists to produce works of art specifically for the event. The société wished to "to encourage the development and improvement of Talent among artists and of taste in the community at large" (RSAS, 1848:106).

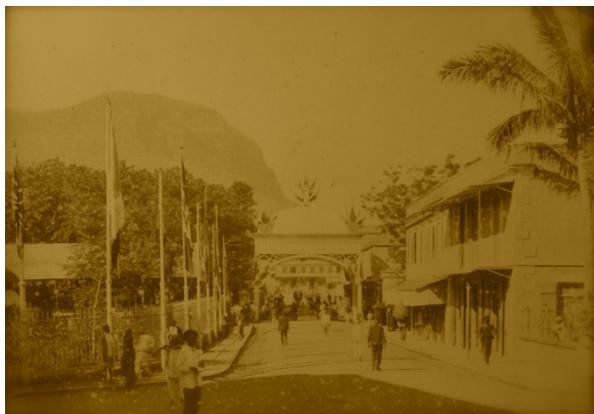

Through these exhibitions, the organisers expressed the ambition to present works of art in line with European aestheticism and corresponding to the liking of the elite. The presentation of works of art by Albert Cruyp, Jordaens, Paul Véronèse, Brueghel de Velours, Frank Hals, Canaletto or Jacques-Louis David showed the intention to promote the European aestheticism and cultural values of Western societies (RSAS, 1848:104). During this first artistic exhibition of this kind, the Société wished to encourage local artists to improve their art. The objective was to reach an ideal aestheticism based on the fundamentals of Classical art promoting the beauty and the technical feat. The ambition was to emulate local talent and act in favour of the training of novice artists as in European Academies. These artistic references appealed to the elite composed of literates and intellectuals. The elite thus took part in the cultural life of the country by promoting a Western

vision of the arts. As such, the elite also acted in favour of its prestige and positioned itself in the undertaking of the great European artistic enterprises which were references for the colonial power in place.

However, the Société could not continue these expensive initiatives. The artistic exhibitions were later incorporated in those dedicated to Science. The first one took place in 1881: an artistic exhibition was organised by the Société as part of the Inter-Colonial Exhibition taking place at the Government House, the seat of the Colonial Government. Each year, the exhibition regrouped industrial products and natural resources of Mauritius and other colonies of whose sugar *«surpassent en beauté ceux des années précédentes»* (SRAS, 1881:112). The artistic exhibition presented *«objets rares, curieux ou historiques existant à Maurice [...], quelques belles toiles de la Réunion et de Maurice, ainsi que des aquarelles»* (SRAS, 1881:112).

The exhibition focused on Mauritian objects and Artists. The Société now turned to the presentation of regional arts and promoted the local contribution. This trend became stronger as from the 1880s which were also the years seeing the emergence of a new elite among the *gens de couleur libres*. The Société then started to recognize the symbols of the local elite and, in particular, its founding figures. In its undertaking, the Société responded to the need to promote their original culture through the presentation of works of art and endorsed the role of an artistic academy to train local Artists to promote European culture as a reference for the emerging nation. In this context, their action was in line with a colonial strategy aimed at transposing the Metropolis hegemony in the Colony.

### the emergence of a local memory in the recognition of first settlers and figures of the colonial power

In the 1880s, the Société started to recognize the symbols of the local elite, marking the memorial process that led to the emergence of a local heritage. This undertaking was initiated by the intention of the Société to promote local history. Although the promotion of human sciences is not the primary mission of the Société, its participation in the cultural life of the colony was very active. As early as 1858, the members of the Société Royale expressed their intention to encourage historical research financially and intellectually. They argued that the richness of events that took place in Mauritius deserved to be researched for transmission to future generations (RSAS, 1860:217). This ambition led to the creation of a section on History and Literature within the Société on 22 June 1859 (SRAS, 1870:8). This committee proposed to recompense the members that would produce a contribution on the history of Mauritius, or scientific or literary publications (RSAS, 1860:334).

The Historical Committee of the Société met to talk about the significant events that marked the history of Mauritius and, in particular, those contributing to the development of Science. During the monthly sessions, members recalled the contributions of Scientists to local knowledge and proposed to undertake actions to recognize the importance of their work and pay homage to their memory. In the course of 1859, the Société financed the erection of two commemorative monuments and indicated its intention to pay homage to the local Scientists.

The first proposal was submitted by Mr. Liénard in a letter<sup>14</sup> sent to the President of the Société: it was to create *«un monument en forme de pyramide ayant pour but d'honorer la mémoire d'un nombre assez considérable de personnes qui ont concouru à son bien-être, en y faisant progresser l'agriculture, ou en l'enrichissant de plantes et d'animaux utiles et intéressants»* (SRAS, 1860:330). He further provided criteria that would justify the inscription of names of the monument: *« [une colonne]où l'on y inscrit que les noms de ceux qui ne sont plus, les vivants devant être expressément exclus quels que soient leurs droits à y prendre place»*. Mr. de Robillard recalls that in 1885, Liénard *«a voulu que les personnes de Maurice, qui se distingueraient dans les sciences, les arts, l'étude de l'histoire naturelle, et qui rendraient au pays des services réels, eussent après leur mort, leurs noms inscrits sur cette colonne afin que le temps et l'oubli ne vinsent pas déployer un voile sur leur mémoire»* (SRAS, 1885:25).

In his letter, François Liénard requested that the President of the Société should constitute a committee of which the *«mission serait de rechercher les noms de tous les hommes utiles qui doivent figurer sur ce monument destiné à éterniser parmi nous leur souvenir»* (SRAS, 1860:330). Liénard naturally proposed that the column be erected in the Botanical Garden in Pamplemousses, a highly symbolical place for the Société as the Botanical Garden was created in 1770 by Pierre Poivre, one of the founding figures of Natural Science in Mauritius. On the monument erected in 1861 appear the names of the famous Scientists which were, for the most, former members of the Société (Sornay, 1950:487).

The Société took action to commemorate the pioneers of Scientific Research in Mauritius through another initiative, by paying homage to Philibert de Commerson, a member of Bougainville expedition and also, one of the first Scientists who introduced Natural Science in the island. This historic character is also an emblematic figure for the Société. He expressed the intention, during his stay between 1768 and 1773, to create an Academy devoted to the study of Nature, agriculture and tropical diseases (Ly-Tio-Fane, 2003:102). Louis Bouton, Secretary and Botanist, proposed to erect a monument in memory of Commerson in 1859.<sup>15</sup> In this undertaking, the Société considered this as the best homage to his work, since the entity regrouped the necessary competence needed to appreciate the importance of his contribution:

*«This homage to the memory of a man of science, the greater part of whose labours were achieved in Mauritius, is an act of justice which can be but highly honorable to the Society, better placed than any other, to appreciate the merit and value of such labours»* (RSAS, 1860, part 2, vol. 1: 346).

The later initiatives of the Société responded to the same concern of commemorating the memory of those who contributed to the advancement of the colony. The Société, therefore, approved the erection of commemorative monuments and the creation of funeral monuments for its former members<sup>16</sup> or for those who undertook actions leading to its creation. The Société also paid homage to famous figures<sup>17</sup> and to the founding father<sup>18</sup> of the island in Pierre Poivre or Mahé de Labourdonnais whose statue was erected on the Place du Quai, in front of the Government House, on 30 August 1859 (Sornay, 1950:521). The Société later expanded its scope for action to “*de promouvoir le progrès de la science, de l'art, de l'histoire et de la littérature à Maurice*” (SRAS, 1883: 42).

Throughout the nineteenth century, the Société acted to perpetuate the memory of Scientists who worked in the colony. Monuments were erected as symbols of perpetuity of the Société but also of the scientific knowledge that it promoted. The Société thus delimited a space of memorial expression that paid homage to progress and, in particular, to the evolution of Science which was necessary for the development of the sugar industry, the major economic activity of the island. The Société ultimately created local historical references based on the recognition of the various contributions and, indirectly, highlighted the contribution of the metropolis in the island. The Société, thus, showed through its commemorative actions its concern to establish strong links between the metropolis, and positioned its actions in the continuity of the scientific activities conducted in Europe at the same period.

The Société thus created a referential background to support the elite and developed references to metropolitan models that valorised and legitimated the place of the elite in the colony. The recognition of the founding figures of the Société and of the colony set a basis for the emergence of heritage in a young society and showed that the notion of heritage was still not defined. The elite engaged in a *travail de mémoire* that focused on the extraordinary personalities who inspired intellectual admiration. However, the elite showed no interest in the ethnological heritage, referring to inferior ‘foreign’ classes -as it was the case in Europe in the same period. Nor was it interested in the built heritage already granted as a symbol of the elite, thus not requiring appropriation to legitimize their position.

The concern for legitimacy seemed omnipresent, when we note that the Société erected symbols through the construction of monuments that represented outstanding characters, historic figures or representatives of authority<sup>19</sup>. These three categories showed the need to anchor the position of the nineteenth-century elite and convey a concern for the past that focused on local realisations with reference to European markers. The memory process of the elite operated on the strength of Western references to identify local symbols. The elite developed a memory that negotiated its contribution to local history and affirmed its cultural belonging. Through this process, the elite created and instituted a local anchorage on the colonial territory.

Throughout this process, the elite selected precise memorial representations based on its experience and reduced the scope of historical events to the memory of personalities. This led to the creation of a public space of recognition where the elite signified the close relationship of political authorities with the economic power of the colony. The elite thus created a social representation of memory that was exclusively extracted from its own colonial circle of experience. The elite inscribed itself on a social project that claimed its intellectual and political predominance by codifying references to the past supported by the authorities. This led to the creation of an institutional memory prevailing over the rest of the population.

---

#### the institution of a local memorial framework: the alliance of the colonial powers

---

The Société was supported by the Colonial Government which allocated funds to support its subsistence. The Société understood that the colonial support was instrumental to its existence and its influence. In the same manner, the colonial power saw in its affiliation to the Société, the opportunity to share the same interests, thus getting closer to the white elite controlling the economic sector of the colony. The alliance of power can be attested in the memorial process that

privileged the Western symbols present in the recent past of the country; and also, in the recognition of historical events that showed the close relationship existing between the Colonial Authorities and the white elite.

The representative of Colonial Power also held a significant role in the Société: the Governor was the President of the Société throughout its years of existence during the colonial period. This marked deeply the conciliation existing between the two parties and ultimately, the close relationship among the elite. Together, they contributed to the development of Western culture in the memorial process. This process would lead to the recognition of an heritage defined on Western grounds. This would be the fundamental element leading to the recognition of local heritage. This would survive colonial times and last until recent years.

In this process, the Colonial Government signified its adhesion to the elite and created the image of a strong central power, allying the economic and political power. The example of the Historical Records Committee is also particularly significant in the elaboration of this memorial process. It is also important since it was created as an institutional body. Almost thirty years after its creation, it would become the *Ancient Monuments Board* and later lead to the creation of the actual National Heritage Fund.

#### the historical records committee (hrc)

The Historical Records Committee was created by Governor Pope Hennessy in 1883 as a Commission<sup>20</sup> which later became an instituted committee through Proclamation No. 146 of 1889.<sup>21</sup> This initiative shows that the notion of heritage first appeared through a colonial initiative, and that heritage was thus recognized at its base in terms of its modalities and definition.

The creation of the Historical Records Committee took place a year after the promulgation of the *Ancient Monuments Act* in Great Britain, aimed at identifying ancient monuments through an inventory and protecting the monuments from accidental or voluntary destruction (Delafons, 1997:12). In Mauritius, the Committee was "*chargé de la conservation et de l'entretien de tous les monuments et emplacements considérés comme historiques*" (Sornay, 1950:494). According to Pierre de Sornay, it was precisely the intention to preserve "*historical memory*" that motivated the Governor Pope Hennessy to create the HRC. It seems that the idea of the Committee took shape, when the Governor took cognizance of the destruction of the place where the terms of the capitulation were discussed in 1810 (Sornay, 1950:494).

The main focus of the HRC was to recognize the memory of personalities who had contributed to the constitution of Mauritius as a nation in colonial times. It is interesting to note that heritage was not so much dealing with tangible heritage then, but rather dealt with the setting up of monuments or commemoration plaques. Hence, heritage was not perceived as what we understand today by it, namely "*anything that has been transmitted from the past or handed down by tradition,*" or as "*the evidence of the past, such as historical sites, buildings, and the unspoilt natural environment, considered collectively as the inheritance of present-day society,*" but was indeed the recognition of memory and any tangible expressions of this memory.

The main focus was on historical events featuring the British and the French. The action of the Committee focused on events marking the foundation of the colony. An example was the setting up of a monument commemorating the death of soldiers during the Battle of Grand Port won by the French, who four months later, were defeated by the British. This event marked the point of origin of the British presence in Mauritius and also, the supremacy of the British over the French. The Committee commemorated this by a plaque posted on the *façade* of la Maison de Robillard; this fact recalled that the French and British Commanders were both injured during the battle and received care in the same room (Sornay, 1950). The *entente* between the British Authorities and the French elite was honoured through this commemorative action.

Considering this historical background, it is essential to consider that heritage is not so much a notion related to the recognition of a place, but rather the achievement of a personality or of a community through its experience in Mauritius. As such, it is relevant to consider that what we understand by "heritage" in Mauritius from its first expressions, is not linked to the experience of

the population at large, but rather it deals with the recognition of first *colons'* achievements on the island. It serves the position of the colony as an Oligarchy.

The pressing need to preserve heritage and a national framework is expressed through an initiative of the Historical Records Committee, to press for the elaboration of a legal framework.<sup>22</sup> The motion of M. Clément Charoux to invite the *“Government to vote an Ordinance with a view to preserve the historic buildings of the island or those recognized as such by the committee”* was unanimously accepted during the Committee meeting held on 28 September 1928.<sup>23</sup> The objective was to list identified heritage and give a legal status to 'historic buildings'.<sup>24</sup>

The Historical Records Committee had the mandate to advise the Colonial Government by recommending the recognition of objects of heritage<sup>25</sup>. The proposed Bill would later stipulate that the HRC has the mandate to *“advise generally on the maintenance of ancient monument in the Colony”*<sup>26</sup>. At this stage, the notion of heritage specifically dealt with *“the most interesting ancient monuments of the island: old forts, the coastal batteries, the ruins of Grand Port, the public buildings, the family houses nearly centenary etc. Several testimonies of our glorious past are in state of dereliction that predicts their forthcoming disappearance. To fix its memory through photography and printing before it is too late, seems to be a beneficial undertaking for the country as a whole, as part of our historic heritage would thus be preserved from oblivion”*. The letter further indicated that the objective of subscriptions was to regroup the *“most venerable souvenirs of our great ancestors”*.<sup>27</sup>

It is, indeed, a fact that most heritage preserved by the Historical Records Committee refers to tombs in memory of colonial ancestors. The list of tombs provided in Archival Records for the 1930s<sup>28</sup> refers to British or French personalities, including Governors.<sup>29</sup> The list of 'historical monuments', as described in a letter dated 17 February 1937, in fact referred to a list of 122 names. It seems that as early as 1892,<sup>30</sup> the Historical Records Committee was allocated a budget referred to as *“tombs of Governors”*.

The need to preserve the memory of French ancestors and heritage was further underlined by a letter to solicit funds from the Compagnies sucrières de Maurice dated 5 May 1933, stating that *“the Committee, by addressing the Sugar Companies of Mauritius, thought that all had attachment to the past as most date back to the French occupation period and that their Directors would not remain indifferent to these two movements which refer to historic remembrance.”*<sup>31</sup>

Although the mandate of the HRC was the result of a Government Proclamation, the Historical Records Committee denounced the lack of support from the Government which showed a *“lack of cooperation and refuses any kind of support to the committee members”* and most importantly, it underlined that *“in this country, very little interest exists for historic objects as they are abandon to dereliction”*<sup>32</sup>. This is the reason put forward by the Committee in the proceedings dated 1930 to prepare a *“list of various buildings that could be listed as historic.”*<sup>33</sup>

During the same session, the HRC indicated that the listing did not imply specific measures nor impacted on the owners as the listing consisted in posting a plaque on the building *“recalling the history of the building, of the Church or the place”* and that the Government *“would not take at its charge the maintenance of all the buildings or monuments that could be listed as historical”*. The objective was thus to indicate the historical importance to the public for the purpose of remembrance and raise consciousness. It was, therefore, an act of memory and did not aim at integrating a wider heritage framework that would serve the aim to restore or preserve the heritage for the nation, as per today's conception. The HRC undertakings focused on the commemoration of people and events.

The same proceedings dated 1930 provide with a first list of monuments identified by HRC:<sup>34</sup>

1. Hôtel du Gouvernement
2. L'ancienne Chapelle Sainte Anne
3. Le Château Mon Plaisir Pamplémousses

4. Le Château de Rivière la Chaux
5. La Cheminée et la maison de Grande Rosalie
6. La fontaine monumentale de la Place de l'Eglise
7. La fontaine Place de l'Artillerie
8. Le Tombeau Malartic
9. Les deux pierres cylindriques sur la Place de l'Eglise
10. Le Corps de Garde de Trou Fanfaron
11. L'ancien hôpital de la Grande Rivière Nord Ouest
12. Les ruines de l'ancienne Batterie du Vieux Grand Port
13. La Tour dite "hollandaise" au Vieux Grand Port
14. La Loge de la Triple Espérance
15. Les Tours Martello à la Rivière Noire
16. Les ruines de l'Ancien Arsenal
17. La Tour du moulin à poudre
18. La Chaussée Trommelin
19. Le Réduit
20. Les fortins de l'île de la Passe
21. Les ruines de la Batterie Dumas
22. L'abreuvoir de la rue Moka (formant partie de l'ancienne Boulangerie du Roy)
23. Les tombes ou monuments commémoratifs:
  1. Du Gouverneur Smith à Port-Louis
  2. Le Cenotaphe à la mémoire du Colonel Joseph Yates, Port-Louis
  3. De Commerson
  4. Du Prince Candien
  5. Du Colonel Draper à Rivière Noire
  6. De Stadamaïa Petite Rivière
  7. De Monseigneur Buenavita aux Pamplemousses
  8. Du Gouverneur Magon de Saint Piliier aux Pamplemousses
  9. De Papeneuse à Eau Coulée Curepipe

If we examine this list, 36% of the proposed listed heritage refers to commemorative monuments. The comparison with the figures for 1944 also shows a large proportion of heritage devoted to commemorative purpose which reaches 42% in total.<sup>35</sup>

1944	-	26%	13%	6%	9%	21%	21%	3%	3%

Sources:  
MNA: X18/1 - List of Historic Monuments identified by the Historical Records Committee, 1829;  
Ordinance no. 8 of 1944 entitled the Ancient Monuments Ordinance, 1944.

This table shows the predominance of the identification of heritage as a commemorative object. The memory process is activated by the white elite and instituted by the Colonial Authorities. It is also directly related to places and sites referring to their experience in Mauritius. Concurrently, the references to slavery and indenture are totally discarded from recognition, as the memorial process is activated by the higher class of the society. However, it is precisely, at this period, that the working classes started to be represented in the political life of the country, but their action does not enter memory problematics but rather their social recognition.

The memorial process leads, in the 1930s, to the creation of a legal framework expressing the intention to include heritage in the General Policy of the Government. The Legislative allow us to explore further the place devoted to heritage by the authorities as a means to recognize sections of the society and also understand the continuity in the perception of the heritage object, at a time when the representations of the past took shape in dedicated institutions such as museums.

## 4. THE INSTITUTIONALIZATION OF HERITAGE: THE ESTABLISHMENT OF A NATIONAL MEMORY FRAMEWORK

The institutionalisation of heritage marks the ratification of the actions of the Historical Records Committee and also, the national establishment of the memorial framework developed by the elite. It is precisely the HRC that acted towards the creation of an appropriate Legislation for heritage. The discussions to elaborate a legal framework took place at the heart of the HRC. In 1937, the President of the Historical Records Committee (HRC) wrote to the Colonial Secretary to comment on a proposed draft Ordinance entitled *"Bill to provide for the protection and preservation of ancient monuments"*. This would materialize in the Proclamation of the Ordinance No. 19 of 1938, entitled the *Ancient Monuments Preservation Ordinance*. The notion of *National Monument* is at an embryo stage. The Bill defines the concept of *Ancient Monument* and expresses for the first time the recognition of a common heritage for the colonial nation.

The Ordinance established the process of listing monuments in the schedule that were

*"any structure or erection, monument, or part or remains of a monument, or any object the preservation of which is a matter of public interest by reason of the historic, architectural, traditional, artistic, or archaeological interest attaching thereto, and the site of any such monument or of any remains thereof, and any part of the adjoining land which may be required for the purpose of fencing, covering in, or otherwise preserving the monument from injury, and also includes the means of access thereto."*

This shows that the local process is highly inspired by the European example and makes provision for a local recognition because it constitutes European references in the colony. The legislation will be elaborated further with the Ordinance no 8 of 1944 *"to provide for the preservation of ancient monuments and places or areas of historical or other interest"*. As far as our undertaking is concerned, this historical overview of the development of the notion of heritage in Mauritius does not only tell us how heritage was defined and considered; it also tells us how heritage was managed at the level of Government. The Historical Records Committee was operating under the colonial government and as far the archival records testified, it seems that not much funds were allocated hence it reduced the actions of the committee composed of educated members forming part of the Elite. The focus was on the preservation of heritage that related to the historical background and origins of this segment of the population. This shows that the framework dynamics were not inclined to consider the lower classes which had no representatives nor mediators transmitting their potential intentions. Mauritius was ruled by an Oligarchy generating the heritage process to their benefits. The Elite responded to a colonial strategy aiming at establishing an extension of Europe in the colony.

The study of the notion of heritage provided with an overall picture of the memorial framework established in Mauritius. The analysis of the proceedings of the RSAS and the Historical Records Committee gave us a full insight on the perception of heritage by the Oligarchy. We can better appreciate who formulated the representations of the past and also why they took shape or on the contrary, why they never materialised. In the same manner, we would not be in a position to appreciate the absence or the scarcity of representations of slavery and indenture today if we did not try to understand in what circumstances the first museum was created on the island.

### The Mauritius Institute

*"Le musée est un des lieux qui donnent la plus haute idée de l'homme."* André Malraux

The creation of the Mauritius Institute is the result of the heritage process led by the Elite. The museum came into existence through the initiative of the *Royal Society of Arts and Sciences*. It shows how the *Société* has implanted a Natural History Museum in the colony according to the same heritage dynamics attested in Europe in the same period. The account on the Mauritius Institute help us appreciating how heritage was inherited from the colonial Elite and later in the report, we

will consider what is the impact today on the appropriation of heritage by the former dominated population.

### establishing the european hegemony

The project of Mauritius Institute originated in 1826, when Charles Telfair launched the idea of a colonial museum and invited the Zoologist Julien Desjardins and the Botanist Louis Bouton to donate their collections to the State. At this point in time, the Colonial Authorities did not show any interest in this proposal. Finally in 1842, Julien Desjardins established a museum in one of the wings of the Royal College of Port Louis, a symbolic place of excellence for the white elite (Cheke, 2003:198).

At the end of the 1870s, the Royal Society proposed to gather the library and the Natural History collections in one place. This project of an Institute was finally supported by the Colonial Authorities whose representative, Governor Sir George Bowen, laid the first stone on 23 November 1880. The Mauritius Institute came into existence through the Proclamation of the Ordinance No. 19 of 1880 to promote the Arts, Sciences, Literature and Philosophy, in order to educate and entertain the public. The Mauritius Institute opened its doors during the Colonial Exhibition in 1884 (Cheke, 2003: 199). Its objective was to regroup the Collection of the Desjardins Museum established in 1842 in the Royal College in Port Louis and other National History Collections and the library in one location. As the minutes of proceedings of the Royal Society of Arts and Science state:

*The new building to be set up "doit contenir le Muséum Desjardin, la bibliothèque publique et donner aussi asile aux différentes sociétés de la colonie qui adhèrent au règlement qui sera préparé bientôt afin de les rassembler pour certaines questions, en une fédération qui aura le titre de 'Mauritius Institute'" (SRAS, 1884:95).*

The exhibition of December 1884 marked the inauguration of the Mauritius Institute (SRAS, 1886:192). The minutes of proceedings report that it was the first time that an exhibition was held for eight days and that it attracted more than 20,000 visitors, including 4,045 children for which entrance was free. The entrance fees were brought down to a low price in order to « *permettre à toutes les classes de la société de bénéficier d'une solennité aussi instructive* » (SRAS, 1886:196).

The Mauritius Institute regrouped the collections of Julien Desjardins, a Botanist who collected a number of National History specimens from Mauritius, two paintings representing "Raphael and the Fornarina" by Van Der Burhne and "Passage of Que" by Washington, given by Edgar de Rochecouste. The objective, with the acquisition of this paintings, was to develop a compete gallery of portraits similar to European Museums, to "*développer le goût des arts dans notre petit pays*" (SRAS, 1885: Vol.17:73).

The creation of the Mauritius Institute was a national project conveying the ambitions of the Scientists, the cultural elite and the Colonial Authorities to gather in one location all the expressions of 'knowledge' as per European standards, with a view to sharing this knowledge. This is very clear in the statement of Julien Desjardins regarding the Constitution of what was to become the Mauritius Institute:

*"A des distances infinies. il faut don de compléter le titre, il faut arriver à faire connaître à nos compatriotes qui ne peuvent aller admirer au foyer même des lumières, les merveilles qui y sont accumulées. Pour cela, il faut mettre à exécution mon idée, faire les démarches nécessaires auprès des autorités pour y arriver, et l'on dira peut-être plus tard: que si le père a doté son pays d'un riche Muséum, le fils y a fait germer et fleurir, après bien de vaines tentatives, le goût et la culture de la peinture". (SRAS, 1883, vol. 12:75)*

This statement of Julien Desjardins underscores the ambition to establish a European concept of culture as a fundamental reference for the country. We could also understand indirectly that the project was initiated by the Franco-Mauritian elite, thus claiming their position of pioneers on the island, in opposition to the British newcomers. However, both shared the same objective, to establish the European model as a fundamental reference. In these words, the colony was to

become an extension of the European metropolis, as expressed through the statement of Governor Pope Hennessy, Chairman of the SRAS:

*“A notre époque, dans toutes les villes d'Europe qui ont une certaine importance, aussi bien que dans l'Inde et dans toutes les colonies anglaises, on a établi des Muséums dont quelques-uns sont très beaux, entre autres ceux de Melbourne et de Sydney. M. Daruty, qui les a visités, les a beaucoup admirés. Celui de Sydney, pour son administration, son entretien et son accroissement, dépense annuellement £13,000. L'histoire naturelle de nos jours est enseignée dans les collèges en Europe ; les directeurs ont formé, pour cet objet, des Museums Scholars. Il est bon et utile que la jeunesse apprenne à connaître toutes les beautés et les richesses que le Créateur a réunies sur le globe où il nous a placés. La Faune marine de Maurice est très riche et pourrait, à elle seule, fournir bien des éléments pour enrichir le Muséum et le rendre plus intéressant, surtout pour les étrangers qui le visitent” (SRAS, 1885, vol. 17: 73).*

Pope Hennessy's ambitions was to provide Mauritius with cultural opportunities corresponding to the Imperial enterprises, already established in other colonies. The cultural policy responded to a European archetype of knowledge, is considered as another expression of British Imperialism.

The intention was to recreate the European model in Mauritius and seemed very clear:

*“There is in Europe no town containing a considerable population, which does not possess a Library, and often, a Museum. Why should Mauritius, now so important by her commerce, her agriculture, her wealth and her population represented by men of great intelligence and governed by an enlightened chief, not do what her position and the condition in which she is placed imperiously demand?”<sup>36</sup> (RSAS, 1860:347)*

The institution is the archetype of Natural History Museums developed outside Europe in the nineteenth century (Gob et Drouguet, 2004). The dissemination of the European concept of Culture and its application in various colonies can refer to what Richard Grove calls 'green imperialism'.<sup>37</sup>

Its establishment followed the same process: a scientific society donates its collections to the authorities which ensure in exchange that free access is given to the largest audience to promote the Sciences and Education for the public. However, museums are mostly visited by the Elite. It is similarly the case in Mauritius where during its first five years of existence, the Museum Desjardins received only slightly more than 4,000 visitors or 2.5% of the total population at the time. Probably, 45% of the 10,000 visitors formed part of the 'General Population' including the white and Creole elite who were the only ones to have access to the Royal College (Toussaint, 1972; Cheke, 2003:198).

About forty years later, the Colonial Authorities stated their intention to open the new Institute to all. In a letter sent to the President of the Royal Society, Governor Bowen mentioned that the role of the Royal Society and of the Government was to encourage the creation of places of knowledge aiming at educating “toutes les classes de notre population mixte» and supported the Royal Society in its actions that would allow to « élever la morale et la capacité intellectuelle de toutes les composantes de la population»<sup>38</sup> (SRAS, 1883:44). His support was motivated by the conviction that nothing could be accomplished without education: “Sans morale et sans culture intellectuelle, la vie locale est incertaine, et les meilleures intentions des institutions politiques fonctionneront sans résultat »<sup>39</sup> (SRAS, 1883:44). The Governor ended his letter by inviting the Royal Society to support the Colonial Authorities in the project of increasing the number of reading places and libraries offering access to all.

The Mauritius Institute was established according to the European model of Natural History Museum: the Institute adopted the same functioning system by assembling the local scientific competences, the same categories of classifications and the European conservation norms and presents Natural History Collections from the local fauna and flora, from Madagascar, from the South of Africa and the neighbouring islands (Cheke, 2003). This Corpus of collections indicated the intention to document the local and regional environment and to make of the Museum, a place of exception. This national project absorbed the resources of the Royal Society of Arts and Sciences

which worked towards the enrichment of collections of the only museum in the colony until 1900. At this date, a Committee of Directors, composed mainly of scientists among which a representative of the Royal Society, was created. This Committee was set up under the aegis of the Colonial Secretary, thus marking the shift to the colonial control and a change of status for the Institute (Cheke, 2003:200).

#### symbol of cohesion among the elite

The Institute received increasing financial assistance from the Colonial Power whose measures in favour of the promotion and the conservation of Heritage became more and more important. The colonial support granted to the institution gave the opportunity to reinforce the alliance with the Franco-Mauritian elite on various aspects: it allowed the dissemination of European culture as a sign of adhesion to the economic elite. Together, they undertake a common national project to establish an image of cohesion among the elite.

Evidence in support of this statement can be found in the Colonial Authorities' action in favour of the recognition of one of the founders of the Royal Society. The Colonial Power, through the Historical Records Committee, recognized officially the local contribution to the national project by inscribing the name of Julien Desjardins at the entrance of the building. This gesture aimed, at first glance, to pay homage to the action of one of the founders of the Society. However, Julien Desjardins was mainly a figure representing the sugar elite who opposed the abolition of slavery. Like most Planters, Desjardins was not in favour of ending slavery. As early as the 1820s, the Colonial Power attempted to implement laws to improve the living conditions of the slaves. These laws condemned all forms of bad treatment reported to the Protector of Slaves (Allen, 2001). Desjardins was accused. A report stated the following facts:

*"Notorious for harsh and cruel treatment of his slaves either by himself or his brother, the overseer. The complaints against them are more numerous than any other planter on the island and they are also notorious for opposing the slave laws with impudent effrontery and grossly insulting those charged with their execution."*<sup>40</sup>(Teelock, 1998:117)

The overwhelming influence of the Planters over the judicial and economical powers and on the District councils did not allow the Protector of Slaves, in charge of implementing the laws, to conduct his work successfully. The complaints only rarely reached the end of the judicial process, as the Lawyers acted in favour of the Planters and only supported "*just and founded*" cases reported by Slaves (Teelock, 1998:117). Through the same process, the condemnation of Desjardins was discarded in 1831.

This aspect of the life of Desjardins does not seem to have dissuaded the colonial authorities to pay homage to his actions in favour of the recognition of natural science and the promotion of knowledge. The colonial authorities retained the positive contribution of Desjardins and discarded the tensions that threatened the relations between the colonial and Planters' Elite. In this undertaking, the colonial power satisfies the need to mark the end of tensions with the sugar Elite after the abolition of slavery.

#### towards the consolidation of the elite omnipresence through the constitution of a local history

The motivation behind the creation of the Mauritius Institute was to establish a *place of exception* marking the European hegemony in the colony. It also signifies that the Elite wanted to create cultural institutions similar to the European model and was culturally rooted in western Empires ruling indisputably over the colony. This is also perceptible through the commemorative dynamics. In early years, the memory process operates to acknowledge the actions of the Elite in favour of the progress of the colony and creates a sense of belonging for them on the island. The memorial process primarily confirms the implantation of the colonial Elite and transposes the European references in the colony. These dynamics serves the legitimation - and affirmation - of their position. This process is soon consolidated by the expansion of the memory scope to signify the

Elite's omnipresence in the constitution of the island: the Elite naturally inscribe its contribution in a depiction of the National History.

This is also perceptible through the commemorative dynamics aimed at recognizing the local contribution of the elite. This is instrumental in the legitimating - and affirming - their position in the society. If there was a concern to consolidate a link with their homeland or country of origin, the memorial process seemed primarily intended to serve the implantation of the elite in the colony. In early years, the memory process operated to acknowledge the actions of the elite in favour of the progress of the colony and created a sense of belonging to the island. This process was soon consolidated by the expansion of the memory scope to signify the omnipresence of the elite in the constitution of the island: the elite wanted to inscribe its contribution through a depiction of the National History.

## 5. REPRESENTING NATIONAL HISTORY IN THE PUBLIC SPACE: THE NATIONAL HISTORY MUSEUM - MAHÉBOURG

By the second half of the twentieth century, the setting up of the naval museum and later, the National History museum shows a specific object of concern: there is a need to portray the national history at national and international level. The establishment of the Mahébourg museum appears as an outcome of the memorial process taking shape with the SRAS and HRC. The memorial process is evolving to organise isolated events into a national representation of the past. As such, it confirms primarily the omnipresence of the Elite in the colony. Ultimately, it shows how the colonial State visualizes its past.

The museum takes shape as the combination of a major place of heritage where a depiction of the life of the colons is presented. The Elite create a link with the past by the evocation of its own experience. The museum institutes a national vision of history seen by western eyes. Only recently, the museography evolved to integrate more information on slavery and indenture and enabled an analysis of how the Museums Council perceives the experience of the former “dominated” population.

The study of Mahébourg museum offers an interesting insight as the first museum depicting the National History. Considering this, our purpose was to explore how the representations of slavery and indenture were integrated and how they were portrayed. In this undertaking, it seemed important to initiate our research by a short evolution of the museum to better appreciate the current vision of the National History elaborated upon the legacy of the colonial perception of the past.

### Historical background

#### the implantation of the museum in a historic building: the legacy of the colonial way of life

The choice of the building where a museum is set up is never meaningless. Representations of the past in most instances are presented in a meaningful location which stands as a reference for a nation or a group. The *Maison de Robillard* or *Château de Rivière La Chaux* was probably constructed by Granière de Kerlavant Family in 1770.<sup>41</sup> The house was donated to Gertrude de Robillard in the second half of the eighteenth century. The building was one of the finest places where balls and receptions were held for the Elite re-creating the social atmosphere of the European countries. The house belonged to the Commandant of the District of Grand Port, Jean de Robillard. For many years, the *Château de Rivière-La-Chaux* was the residence of Commanders.

Besides the *mundane* life of the elite, the house was also the location of an historical event during Ile de la Passe Battle of 1810, when the French defeated the British just before their formal capitulation of the island. The British Commander, Nesbit Josiah Willoughby, and his French alter-ego, Guy Victor Duperré, were both transported to the Château de Rivière La Chaux to receive medical care. This event was commemorated in 1896 by the Historical Records Committee which placed a plaque on the façade of the building.

The *Maison de Robillard* was part of the overall military and organisational system as the place of residence for the District Commanders.<sup>42</sup> It was also a place where the former rulers and the new-established British elite had the opportunity to develop courteous relations through formal events. In the event of Ile-de-la-Passe Battle, the residence became a symbol of the *entente cordiale* between the French and the British - thus echoing the situation in the new British colony, where the former *colons* of Isle de France retained the economic power, while the British ruled politically. In these circumstances, the white elite required British support to develop the colony in a favourable manner.

The event of Ile-de-la-Passe battle encouraged the Historical Records Committee to recognize the *Château de Rivière La Chaux* as a place of heritage by including it in the first list of Ancient

Monument in 1929<sup>43</sup> submitted to the Government in the context of the preparation of the Ancient Monument Bill of 1938. However, the *Chateau* is not included in the schedule of the National Heritage of Mauritius of the 2003 National Heritage Act. It is thus not listed despite the recommendation of the Historical Records committee dated early 1930 when the owner, the Belgian Naturalist Nemours Gheude, encountered difficulties to maintain the place and tried to raise funds by opening the place to the public. The Chateau was finally announced on auction in the press in 1936. However, the auction was not successful and despite its proposed status of Ancient Monument, the house did not receive specific attention until the end of the Second World War when the Government finally acquired it in 1950 to convert it into a Naval Museum.

The Museum was named "*Musée des Souvenirs Historiques et Navals*". The display consisted in the presentation of the remaining parts of the sail ships involved in the Battle of Grand Port and other items found in the waters of Mahébourg, when M. Austen, Port Engineer, conducted works to remove all vestiges of the battle in the mid-1930s.<sup>44</sup> The Museum also presented the furniture and objects of the room where the two enemy Commanders received care. Later, the bedroom of Mahé de Labourdonnais was recreated and a collection of porcelain from the East India Company were displayed. Most collections evoked the naval past of Mauritius and the way the colons lived.<sup>45</sup>

### The establishment of social time through representations of history

It is interesting to note that the *Musée des Souvenirs Historiques et Navals*, established in 1950,<sup>46</sup> refers to *Historical Souvenirs* stressing the need to remember the past. This is based on the principle that the museum exists principally to its display. The objective was to evoke the memory of the past through the presence of objects, but it seems that not much effort went into analyzing or documenting better the collections.

The Museum became the *National History Museum* in 2000, following a Cabinet decision of 17 March 2000 to present to the National Assembly the *Mauritius Museums Council Bill* to "*provide for the establishment of a Mauritius Museums Council for the formulation of policies pertaining to national or specialised museums; development, promotion and maintenance of national or specialised museums; and organisation of activities in the field of museology.*"

The Museum of National History was inaugurated on 2<sup>nd</sup> August 2000. It currently presents a chronological evolution of the history of Mauritius from the Dutch period to the end of the British rule.

PART 3: French period: naval events

PART 1: Dutch period

PART 2: French period: way of life (evocation of slavery)
---

Sketch of the display on the ground floor

PART 5: British period up to (Displays on slavery and indenture)

PART 4: Temporary exhibition space
------------------------------------

Sketch of the display on the first floor

The representation of National History is based on the evocation of the colonial experience through the collections. The social time - that we define as the recognition in the public sphere of the articulation of the national history - focuses on the life of the *colons* in the colony and related events. Other segments of the population are hardly represented. A rough estimation shows that 75% of the displays - excluding the temporary exhibition space- deal with the white elite's experience in Mauritius, while 25% present information concerns the former dominated population's past.

The main reason for this unbalanced representation probably lies in the fact that the Museum evolved as a result of the desire to present events that marked the lives of the *colons* on the island. The Museum was instigated by the white elite wishing to present, in a symbolic location, most objects saved from destruction by Mr. Austen. The Museum thus became a place devoted to the actions of the white elite which led the colony: their position of power enabled them to set up a public institution that transcribed their vision of the history of the island. The Museum is therefore a continuation of the concept of museum initiated with the Mauritius Institute, where the European vision supersedes.

The Museum of National History responds to the objective of a traditional museum of history highlighting the main battles and events induced by the ruling segment of the population. It is thus a good example of how the people in power engaged in the creation of museums and indirectly, legitimated their position at the head of the State. It is only after the year 2000 that the display was reviewed to integrate representations of slavery and indenture to allow a better appreciation of the Mauritian history.

### Representations of slavery and indenture

The first evocation of slavery appears in Part 1 where the focus is on the first navigators and the Dutch settlement, with a focus on the East India Company. The display also presents the Dodo as an extinct bird. This section is devoted to the Dutch experience and most the display explains the discovery of Mauritius, the settlement of the Dutch and their way of life on the island.

### A hierarchy of figures

#### RULING FIGURES

More interesting is Part 2 where the objective is to present the French period and the way of life of the French *Colons*. The overall presentation respects a chronological organisation that starts with the Act of "prise de possession" of the island in 1715, marking the settlement of the French. The room depicts the role of the main French figures, especially Labourdonnais, the first French Governor, Abbé de la Caille, Pierre Poivre, Lapérouse, the Amiral Pierre André de Suffren and Malartic, to name a few.

### Dominated figures

Besides the portrayal of personalities, the first implantation of people of Indian origin and of slavery are also presented through various exhibits. A *palanquin* is exhibited to recall how the conditions of transport were rudimentary and also, to show the role of slaves and a workforce recruited on contract in the early days of the colony. This also suggests how they were integrated into the society. The exhibit evokes the role of the *Rangan* who was a palanquin carrier and among the first labourers under contract brought to Mauritius. The text specifies that most of the indentured Tamil labourers were employed as Masons or Carpenters; and that people of Indian origin also engaged in other professions, such as Blacksmith, workers, *Coolies* (meaning *homme de peine*) and *Lascars* defined as Sailors.

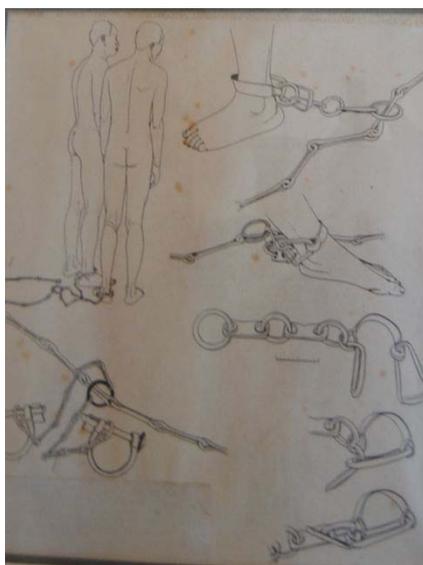

The presentation of the various sections of the population is striking; on one side are the personalities and leading figures of the island, while the other segments of the population under French rule are presented from a professional point of view. The parallel between the functions of each shows how the colony was organised and how the society had to function towards the development of the island, especially through the use of contracts to recruit people from India and through slavery. This underlines the position of the people as being dominated by the French *colons* described through well-known accounts.

Illustration 6 Les Fers for Slaves

Source: C. Forest, TJC

But who is a slave?

The presentation of slavery is based on information from a scientific point of view, providing key dates and within the framework of the overall context of slavery in French colonies. This point of view offers a good historical understanding of how slavery evolved through time in Mauritius. It also allows visitors to grasp slavery chronologically within the history of Mauritius. The display presents:

- the first aborted abolition
- the *Code Noir*
- the *Camp des Noirs*
- 

Information provides an overview of slavery in Mauritius, starting with the first abolition of slavery during the French Revolution. However, it was not a success as the Colonial Assembly refused to abolish slavery in Mauritius, and it was legally re-established by Napoléon I. The presentation of the overall framework of slavery continues with information on the *Code Noir*, used in all French colonies to regulate slavery. The overall presentation of slavery ends with a depiction of where the slaves were living and in what kind of lodgings.

Following this presentation, the visitor has an understanding of how slavery functioned. However, it is to be noted that most representations of slavery mainly focus on the inhuman treatment that slaves received, thus underlining their legal position. When drawing a parallel with indenture or the first engagements, it is striking to see that it is the system of slavery that is referred to, rather than the experiences of the slaves as such. If little information is available in the archives, the positions that slaves held or how they took part in the functioning of the society are not expressed, although the active part that indentured labourers took in the society at that period is described. The episode of slavery is hardly individualised and does not transcribe the people's experience and thus, the Museum discourse makes a clear difference between slavery, where the focus is on the binding system, and indenture, depicted as an active contribution.

#### THE DEEP TRAUMA OF SLAVERY

The study of the discourse on slavery in the second room underlines the focus on the system of slavery, rather than on the experiences of the slaves. The part on slavery is in line with a general scientific discourse but does not transcribe the individual experiences of slaves in the Mauritian context: The presentation of slavery deals with:

- The punishment given to slaves (Noirs)
- The torment of the collar
- The whip
- Transport on the ships
- The slave trade

The institution of slavery is explained and we are provided with a clear description of the harsh treatment slaves had to endure. There is no individualisation of the slave as there is for the indentured workers, for which the cultural practice of *marche sur le feu* or a description of the jobs which they did are depicted in detail. Slavery is treated in a very different manner by referring to its modalities and by showing its trauma. This vision lacks the perspectives of the life of the slaves and how the conditions of slaves evolved in Mauritius. The possibility of being emancipated or a positive experience of a slave do not form part of the display which distorts the discourse describing slavery and indenture.

Indenture, or *engagement*, in the 18<sup>th</sup> century is largely referred to when in fact, the portion of people coming as indentured, mainly from India, did not constitute the majority of the "dominated" population and were in much smaller number than slaves.

no future for slaves and ex-slaves

a negative past annihilating individuals

Further traumas imposed on slaves are depicted in Room 5, where the following elements are presented:

- A showcase provides details on the chains of the slaves;
- A showcase presents ankle fetters.

The discourse on slavery focuses on the traumas experienced by the slaves. The two showcases presented above, in room 5, do not directly address the storyline of the display dealing with British Mauritius. In this section of the Museum, the showcases are part of an overall presentation of the population of Mauritius, but does not present the slaves: the showcases only present the traumas which they went through.

Emancipation is also presented as a negative event in history and as only benefitting the rich and powerful: *“the abolition, proclaimed in 1835 in all the British colonies, eventually proved to be more beneficial to the masters than to the slaves, since the period of apprenticeship that followed was strangely identical to slavery, as the fundamental human rights were still being flouted.”*

According to the Museum discourse, slaves had no chance to escape their fate. The discourse focuses on the characteristics of slavery and fails to present - although it is done for others- who were the slaves and what they engaged in, after the abolition of slavery.

#### **Slaves are victims and not actors in the society**

A neighbouring showcase is devoted to the “Ancient trades” and presents how the “Indians” could engage in other economic and professional activities at the end of their contracts. Thus, many of them started new businesses or remained on sugar estates to work. They also became carters, hawkers, farmers, barbers, green grocers etc.

The parallel between the showcases on slavery and the experiences of the ex-indentured is unavoidable, considering their physical location. One statement is striking: The ex-indentured labourers evolved to access higher economic positions in society, while the slaves remained apprentices, thus ex-slaves, with no possible future, according to the Museum discourse.

In this part of the display that aims at presenting the early British period, an anachronistic parallel is drawn between the situation of emancipated slaves - the presentation is limited to the period of apprenticeship (1835-1839) - and the evolution of the ex-indentured labourers who started to settle and be independent through the acquisition of land mainly, in the 1860s-70s (indenture ended in 1910).

Not only is the parallel chronologically not justified, but the situation of the slaves after apprenticeship is not even referred to, while information on the evolution of indentured labourers provides clear indications of the activity they engaged in.<sup>47</sup>

#### **Slavery and indenture, the unavoidable comparison**

Considering this part of the display, one may wonder why placing slavery and indenture side by side: the general impression is that the experience of slavery was negative and indenture, positive. This display ultimately suggests that the portion of the population that suffered slavery never recovered from its traumas as they were bound - whatever liberty they were offered - to remain slaves. No evolution or progression of their status is possible according to the museum discourse.

This is particularly striking, especially when displayed next to a showcase presenting the lives of the indentured labourers after the end of their contract. The discourse is precise and shows how they managed to evolve in the society by engaging in other activities.

### The ex-indentured worker, a Heroic Figure

The presentation on slavery stops with emancipation that did not offer many opportunities to slaves. However, the discourse related to the experiences of indentured labourers continues further to conclude with the portrait of Duraisamy Vandayar (1862-1905), who is presented as one of the *"finest masterpiece of Mauritian heritage"*.

Duraisamy Vandayar was a trader and a "wealthy man" who succeeded in his professional life. He is presented as heroic figure, painted according to the principles followed by the traditional portraits of eminent personalities, before the advent of photography. The presentation of this heroic figure implicitly refers to the experience of indenture, since it serves as a conclusion to the line of discourse relating to the "Indians". The portrait is given the same consideration as the portraits of the Governors presented in the same room. The display implicitly suggests that the ascension of the ex-indentured in society led to dominant positions at the head of the State.

On the contrary, the experience of slavery and post-slavery stops with emancipation which did not offer many opportunities: according to the Museum discourse, it seems that the slaves population only experienced trauma. While the discourse on the evolution of people of Indian origin presents a favourable outcome, by showing the portrait of Mr. Vandayar, no such equivalent heroic figure is represented to convey the possible evolution of ex-slaves as individuals during the post-slavery period. This is even more striking when the portrait of Duraisamy Vandayar is displayed in a prime location, suggesting that his success reached the highest rank of the society as a wealthy merchant.

The experiences of the ex-slaves are ultimately depicted as unproductive for the society, since the evolution of the ex-slaves in society is not referred to. The experience of slavery is represented as a non-evolutional process, where the ex-slaves remained trapped in a fixed status, and where they were not empowered to evolve positively. The Museum discourse also fails to portray a positive experience of an individual - although it does for indenture- thus reducing the experience of slavery to a trauma, with no possible evolution for the ex-slaves.

Such portrayal may not be voluntary. However, it certainly conveys a general perception or, even, a stereotype. Further attention could have been given to the fact that slavery was not a straightforward experience for all and that ex-slaves also evolved to achieve a different social status and engaged in other activities. This representation of slavery has the effect of underlining how the experience of indentured labourers was positive and resulted in the "heroisation" of indentured labourers who managed to evolve positively, while the slaves had no future.

This leads to the conclusion that there was no outcome of slavery nor any future for the ex-slaves. The conditions of slaves are thus portrayed as one of no accomplishment and an inability to progress in the society. Only the traumas of the bad treatment remains the subject of focus, thus failing to show other aspects of slavery and how slaves later evolved to lead different in new lives.

### Perceptions and limitations of Mauritian history representations

#### The rule of representativity

The figure of the indentured labourer is represented as an active contributor to the sugar industry and the cultural life in a section on British Mauritius that also includes the presentation of people from other cultural backgrounds. The portrait of Log Choisanne (1706-1874), the initiator of the Chinese presence in Mauritius, is integrated into the display to represent the Chinese segment of the population, while information is also provided on Muslim merchants and other aspects of the Muslim community.

The Museum responds to the general policy of representativity, aiming to devote an equivalent space to the various cultural groups in order to establish an "ethnic" and "religious" balance. We may question this point of view in the context of the Museum's representations, since it ultimately

implies an unfair comparison between the various segments of the population who did not go through the same experiences in Mauritius. Each immigrated either through coerced or voluntary migrations, at different periods and lived in various contexts of life and had a diverse status. The experience of the past is thus not unanimous and cannot be drawn up as a straight line which would lead to the representations of stereotypes, thus failing to convey the idea that the experiences of all Mauritians towards the past are not equivalent.

#### **Personalisation of history: history through the prism of the individual accomplishment**

Such focus on the achievements of individuals (also portrayed through the presentation of busts of former Governors) or of a community, reduces the scope for understanding by visitors who cannot contextualise the representations within a broader context. For foreigners, this may lead to the visualisation of a small window on Mauritian History, as they do not have the knowledge of a local context to interpret what they see. From this point of view, the Museum does not actually transcribe an overall vision of Mauritian History. On the contrary, a Mauritian visitor may have the opportunity to relate to the objects in a broader perspective, but representations only lead to a focus on individuals or items serving the purpose of community's representation, when the presentation of their experiences in Mauritius could have provided a better appreciation of Mauritian specificity.

We may thus question the opportunities provided to visitors to help their interpretation of museum objects. In this instance, the general perception is that only "patches" of history are presented through personal accomplishments of figures complemented by views of Mauritius in the nineteenth century and by photographs of heritage buildings and few illustrations of the sugar industry. The general perception is that the display does not provide a coherent approach linking museum objects together. This results in creating a distance between the objects and visitors. The distance between the museum object and the visitors is a core element since in museums; the display ultimately addresses ways to reduce this distance by proposing elements allowing the visitors to understand by himself what he is given to see. On the second floor, we may want to question the core theme around which the display was organised and for which purpose. This question is fundamental since the original organisation of the display was maintained conveying specific messages while new elements were added to provide an additional layer of information that does not relate to the original display orientation. This may have deserved an overall re-organisation to better convey messages to visitors. A reorganisation would question what would be the best tools to allow a clear interpretation of history by visitors and avoid a scattered view.

#### **Nurturing stereotypes**

The presentation of the 'various types of Mauritius', drawn by Alfred Richard that depict the nineteenth-century vision of the Mauritian population is a good example. The drawings depict a set of 8 framed lithographs presenting examples of professions in British Mauritius:

- The vagrant (ex-slave);
- The wife of the small owner (of African origin);
- The Indian labourer;
- The Constable;
- The Chinese *Marchand*;
- "Marmite" or the Malagasy drover;
- The small owner (goods in a cart - African type);
- The Parsi trader.

Illustration 7 Wife of small owner

Source: Alfred Richard

Illustration 8 Small Owner

The fact that the lithographs of Richard are presented next to information on slavery and indenture is misleading. In this respect, the two sets of information - Richard's lithographs and showcases on slavery and indenture - do not address the same objective. Richard's lithographs refer to the way Europeans perceived the Mauritian population, while the showcases present a historical account of slavery and indenture. The two exhibits, therefore, relate to two different visions that would require a better organisation to be fully appreciated. Throughout this section of the Museum, we may want to consider what message is to be conveyed and for whom? Such questioning would assist in the elaboration of a better-constructed Museum discourse to convey clear messages.

The current perception, when one visits the second floor, is the absence of a line of evolution - not so much for the representation of the "Indian" experience - but for the other segments of the population. Therefore, the representation, presented in the absence of context of evolution, provides us with a scattered view of the Mauritian people, creating a segmentation of the different "types" of Mauritians. Therefore, the display fails to present a vision of the nation that was formed on the basis of common motives to settle in Mauritius.

We may also argue that the depiction of the various "types" conveys the idea of diversity. However, the display encourages a comparative perspective between individuals in the colonial context, thus failing to show the evolution of the society as a whole. We may want to consider the creation of a display that would express this intention to focus on diversity to better transcribe the rich cultural heritage of Mauritians and also provide hints of the ways in which unity led to the creation of an independent nation.

#### **The museum discourse and the notion of National History in Mahébourg museum**

The visit of the Museum ends with the section on the events relating to the Battle of Grand Port and other naval historical facts during the British and the French periods. This section provides an insight to transition between the French and the British periods in the colonial context, following the second part on the French period.

The configuration of the building does not allow the presentation of a linear history of Mauritius. However, when visitors enter this section, there is a clear understanding of the period referred to, thanks to the organisation of the display that presents the context leading to the establishment of a British colony in Mauritius.

At the end of the visit, visitors leave the Museum with a vision of colonial Mauritius. In this respect, this also leads to the question of what is the notion of National History in the Museum of Mahébourg?

The display is devoted to the presentation of the colonial history of Mauritius seen through the eyes of the white elite. The Museum of National History represents how the colonial elite evolved and lived in colonial Mauritius before the emergence of a ruling elite among the formerly dominated population. The notion of National History at Mahébourg refers to the genesis of the Mauritian nation from its beginnings to the early nineteenth century.

The Museum of National History thus addresses a fundamental part of Mauritian history that certainly deserves preservation and recognition. Nowadays, the notion of National History would deserve further attention, and should include the history of Mauritius from the early nineteenth century to the present day. However, we may want to discard the idea of including this recent part of Mauritian history in the present National History Museum which has its own overall theme.

## 5. EXPRESSING SLAVERY AND INDENTURE

The Mahébourg Museum was reorganised in the early 2000s and was certainly the Museum where the first representations of slavery and indenture were portrayed. Our research showed that it is precisely at this period that a concern for the representation of slavery and indenture started to emerge. The initiative of the National History Museum is commendable, in that it tries to recognize two silent episodes of Mauritian history but it was mostly directed in museums by the vision of the White elite. However, it is interesting to note that the need to raise consciousness of slavery and indenture was not only a Governmental concern. It was also supported by private initiatives during the same period. The chief example was the creation of "*L'Aventure du sucre*" which today is the most frequently visited Museum in Mauritius.

### From the National History Museum to *Aventure du sucre*: the formulation of the untold background of *aventure du sucre*

Inaugurated on 28 October 2002, *L'Aventure du Sucre* is the second private initiative that aimed at setting up a museum<sup>48</sup> and is considered as the first project of its kind in Mauritius by its instigators (Gufflet, 2003:4). The Museum is the result of the collaboration of Constance and La Gaité Sugar Estate Company Ltd., Deep River Beau Champ Ltd. and the Beau Plan Sugar Estate Company Ltd. The three sugar industry Companies joined forces to create *L'Aventure du Sucre*, presenting the history of the sugar industry in Mauritius and the evolution of its technologies. The idea emerged from the intention to convert Beau Plan Sugar Factory, closed on 22 July 1999 as a result of the centralisation of sugar production, into a museum, an initiative of Mr. Aldo Vallet, Chairman of the Company Sugar World Ltd.

The main purpose of the Museum is to evoke the history of Mauritius through the evolution of the sugar industry. For the instigators of the project, the history of Mauritius developed around the sugar industry (Fauque, 2002:6). This central theme is, thus, the opportunity to present an overview of how the country evolved. This shift marks a significant evolution in the way the history of Mauritius is approached. In museums created at an earlier date, the vision was focused on the lives of the former *colons* and not on a common binding dynamism leading to the creation of today's Mauritian society. The creation of *L'Aventure du Sucre* thus marks the emergence of a different vision of the past, especially when this vision was initiated by the descendants of the first inhabitants of the island and also, its former rulers.

According to literature, the concept was to create mainly a cultural and leisure place where the visitor can learn and entertained. The objective was also to preserve the memory of the sugar industry that largely contributed to the shaping of Mauritian identity. For Sugarworld Ltd., this states the need to promote History among Mauritians and tourists (Gufflet, 2003:5). The main motivation is also to develop Cultural Tourism and Eco-Tourism and provide new offerings to tourists, as the Tourism Industry is mainly centered on Mauritius as a place for beach and sea. Their aim is thus to convey that the country has a rich culture and to promote a "new image of Mauritius" as a cultural destination (Gufflet, 2003:8). Not only would *L'Aventure du Sucre* be a place of history, but it is also ideally located to attract a large number of visitors, since the converted factory is near the Pamplemousses Gardens that receive more than 220 000 visitors in 2002 (*Week-End*, 2002).

The project thus supports a new conception of the Museum in Mauritius by associating economic concerns with the need to promote Mauritian history in a wider perspective. The overall approach is presented as a philanthropic undertaking by the former sugar barons who wish to share a common heritage:

*"Trois groupes sucriers se sont réunis pour recréer l'Aventure du sucre [...] fruit de l'investissement de promoteurs privés issus du monde sucrier qui l'ont voulue et imaginée au service de tous, l'Aventure du sucre met en valeur l'âme mauricienne derrière le terme apparemment tout simple de "sucre". (Fauque, 2002:6)*

However, Sugarworld Ltd. does not deny that there are economic challenges, considering that the project involved an investment of 75 millions (l'express, 2002). *L'Aventure du Sucre* marks a major development for the notion of Museum in Mauritius. It is the result of concerted efforts from investors from the sugar industry who involved various competences, including Researchers, Historians, Architects, Interior Designers etc., to create a major cultural space devoted to the history of Mauritius. To achieve this goal, the creators remind us that they wished to achieve high standards in order to "fill in a gap"<sup>49</sup> in Mauritius, where no structure was devoted to the history of the sugar industry.

### The benefits of rupture

The concept of *L'Aventure du Sucre* is very much inspired by the project of *Stella Matutina*, initiated by Bernard Bachman, Museologist, which was a former sugar factory closed in 1978. The factory of Stella was converted into a Museum in 1991, with the support of the President of Reunion region (Vaxelaire, 2006). The concept of *L'Aventure du Sucre* is therefore not new, but inspired by similar enterprise aimed at converting former flourishing industrial sites into a tourist orientated places where the memory of the former economic forces is kept alive and where education becomes one of the main objectives.

In Reunion Island, *Stella Matutina* was one of the first initiatives to preserve the memory of the local industry and thus, a cultural place was defined as a Museum aimed at promoting and preserving the local past for the public. It is interesting to note that the word 'Museum' was deliberately banned from the marketing and promotional strategies of *L'Aventure du Sucre*. The Management of *L'Aventure du Sucre* explains that the notion of 'Museum' is not positive in Mauritius, as it is perceived as a static environment reserved for the elite. According to *Aventure du Sucre* Management Team, the notion of 'Museum' itself is an 'obstacle' to encouraging visits by Mauritians who are not actively exposed to cultural offers (Gufflet, 2003:11).

This viewpoint is open to debate as, on the contrary, foreign tourists may have difficulties identifying the nature of the place and questioning motivation to visit. Besides, Mauritians are not given the opportunity to associate the place with the concept of Museum. They, therefore, cannot appreciate in what ways modern Museums now address visitors in a totally new approach. *L'Aventure du Sucre* can be described as a profit-making *Museum* according to the definition of ICOM.<sup>50</sup> It is interesting to note that its founders chose to change its appellation to prevent any affiliation with local or international Museums - thus discarding any continuity between the traditional Museums and *L'Aventure du Sucre* which is promoted as a more *democratic* place devoted to education for all.

*L'Aventure du Sucre* also creates a rupture with the past of the White Elite visible at Mahébourg or at the Mauritius Institute for example. The *Aventure du Sucre* detaches itself from any association with the former white Elite who established the first cultural institutions in Mauritius. The creators of *L'Aventure du Sucre* are the direct descendants of the white Elite and represent the former oligarchy of planters. However, they mark a rupture with their past: it is the first time that the descendants of Planters take the initiative to talk about slavery and indenture. The establishment of a rupture conveys the intention to reconstruct an objective vision of the past and ultimately, contribute to the national interest. The opening of the museum created a rupture in many ways: it offered a new vision of history based on academic justifications, involved substantive investments in culture and set out a new concept of *cultural place* devoted to local history.

### The museum experience: an overwhelming amount of information available

The visit of the museum is divided in eight main parts:

Part 1. Mysterious entrance;

Part 2. For a sugar taste ("Pour un goût sucré");

Part 3. "A l'ombre de la cheminée: le pavillon de l'histoire" [Eng: In the shade of the chimney: the History Pavillon];

Part 4. From cane to juice ("De la canne au jus");

Part 5. "Le pavillon des technologies" [Eng: The History Pavillon];

Part 6. From juice to sugar;

Part 7. Different types of soils;

Part 8. Sugar routes.

The Museum's storyline covers the entire scope of Mauritian History. It starts with the presentation of the geological formation of the island of Mauritius followed by first settlements. The first section ends with a chronology of events that marked the last four centuries on the island. The section on 'origins' is followed by an account of the importance of the sugar market considering that sugar was a refined good in Europe since 15<sup>th</sup> century, when Mauritius was not yet a sugar producer. This section stresses the shift from a scarce and refined good, reserved for the elite, to its consumption spreading among the population at large. This section only presents an overview of the use of sugar in Europe and describes as such, the main market destination of the sugar produced in Mauritius. It also presents sugar as a product from a European perspective. This section tends to valorise the contribution of Mauritius in the production of sugar, by stressing that sugar was a prestigious product that Mauritius was trusted to produce for the high European aristocracy.

The history section is presented after these two introductory parts and is followed by sections referring to the various technologies illustrated by machines preserved from Beau Plan factory. The final display focuses on the specificities of sugar cane. The Museum collections end with an account of the sugar routes throughout the world and its exportation from Mauritius until a recent date.

The Museum thus covers a wide scope of information, all related to the sugar industry. The concept of the Museum involved the development of a display containing an impressive amount of information available in the large space available in the former factory. This makes the Museum experience intense and demands a high degree of concentration from visitors. This is evident in the duration of the visit which exceeds an hour and a half, also the average rate of visitor concentration. The display thus passes visitors' expectations and also makes us overwhelmed by information.

The ambition to cover such a wide scope may not be the best strategy to enhance the visitors' experience. Indeed, the information deals with such a wide perspective that the core focus of conveying the essence of the Sugar Industry History may be lost. The random survey effected at *l'Aventure du Sucre* reveals that most visitors enjoyed the setting, but found that too much information was available and that it was difficult to take in a clear understanding of Mauritian History. This impression is also expressed on online forums:

*"Inconvénients: . . . dans un musée un peu trop foisonnant.*

*Les explications sont nombreuses. L'on a aménagé là un véritable musée de l'île Maurice, avec de longs textes bilingues (français/anglais) consacrés à l'histoire de l'île comme à celle du sucre, à la traite négrière comme à l'immigration indienne, à la botanique comme à l'agriculture.*

*Il y a là matière à s'instruire, le visiteur apprend par exemple que l'île qui comptait 60,000 habitants à l'arrivée des britanniques en 1810 reçut 450,000 indiens après l'abolition de l'esclavage, un apport massif de coolies qui explique que la communauté indo-mauricienne soit largement majoritaire de nos jours !*

*Mais l'abondance est excessive, il y a trop de textes, sur trop de choses, et l'on sature un peu, d'autant plus que nombre des explications données ici recourent celles*

*disponibles dans d'autres musées mauriciens (par exemple le Musée Historique de Mahébourg), ou ce que l'on aura pu découvrir de ses propres yeux au gré de ses visites.*

*Le touriste expressus aurait donc là de quoi combler entre deux séances de plages ses lacunes, en ayant une vision assez complète de l'île Maurice, mais je doute qu'il consacre alors le temps nécessaire à une visite exhaustive du musée, le touriste culturel trouvera en revanche nombre de redondances avec ce qu'il sait par ailleurs, et cette accumulation de textes n'est pas trop réussie, comme si l'on avait cherché à meubler l'espace plutôt qu'à monter un projet muséal cohérent.*

*Sans doute aurait-il mieux valu limiter le projet, et se restreindre plus au sucre, plutôt que de diluer le concept dans des digressions diverses [...]"<sup>51</sup>*

*L'Aventure du Sucre* display may have been better if it had chosen to focus on its central theme so as not to lose visitors through excessive information. This trend is also noticed in the History Section of the Museum. It has an impact on representations of slavery and indenture, since information displayed reveals the same ambition to cover the full range of information dealing with slavery and indenture. Thus, it sometimes fails to directly address the Mauritian experience and the close relation between slavery and indenture and the local context.

#### sugar industry: the federative element of society

The History Section called "A l'ombre de la cheminée" is introduced by a statement indicating that sugar, as a product and exported good, is a fundamental theme to explain the History of Mauritius. According to *L'Aventure du Sucre*, the exploitation of sugar is central to the formation of the Mauritian society:

*"C'est à l'ombre de la cheminée que s'est développée la vie historique et sociale de l'île". A chimney was "l'assurance d'un foyer de travail, d'une protection, d'un lieu d'échanges et de sécurité, de la vie de dizaine de petits métiers autour de la sucrerie. La cheminée c'était l'équivalent du clocher du village".<sup>52</sup>*

This text presents a sweetened vision of the conditions of life on sugar plantations in Mauritius. This also sets aside the coerced or "free" immigration waves to Mauritius. This statement waters down the conditions and experiences of slaves and indentured labourers in Mauritius. The vision presented here does not refer to the negative aspect of coerced recruitment and places the sugar industry as a major element contributing to the constitution of the society.

By underlining the predominant position of the Sugar Industry, it legitimates the initiative of constituting a Museum focusing on the Sugar Industry and sets aside the negative implications of slavery and indenture. The historical events and context, that brought the slaves or indentured labourers to Mauritius, are set aside to retain the 'positive contribution' of the Sugar Industry. This positive view helps to position the Museum within the Mauritian social context as a federative cultural place.

In this section, the role of the sugar aristocracy is also implicitly referred to as a binding element for the society. The plantocracy is referred to as a group wishing to offer protection. This vision discards the main objectives of the planters to recruit cheap labour to respond to industrial requirements. The discourse here focuses on an ideal interpretation of history where the sugar industry is central to the constitution of the nation. According to this vision, it has thus contributed to federate the different components of the society to constitute a nation. This introduction thus highlights the intention of the museum to retain positive accounts of the past: the main one being that the sugar industry was a federative element in the constitution of Mauritian society.

Slavery and indenture are referred to in the last part of the introduction entitled "À l'ombre de la cheminée" or "In the shade of the chimney". The shade may indirectly refer to the difficulties encountered by the dominated population throughout the History of the Sugar Industry.

## SLAVERY: A SCIENTIFIC SUBJECT

The representations of slavery and indenture are presented in the History section - Part 3 - entitled "*À l'ombre de la cheminée: le pavillon de l'histoire*". Slavery and indenture are presented within the large scope of Mauritian History, stretching from the Dutch settlement to nowadays. Representations of slavery and indenture account for 1.6% of the Museum and 10.5% of the section on the History of Mauritius.

The discourse is chronological: slavery is first referred to in the section presenting the first development of the island. The status of slaves is explained through the presentation of the *Code Noir* and '*Patent Letters*'. This is the introduction to a small section devoted to the History of Slavery in Mauritius, illustrated by texts and two screens showing a film on slavery in Mauritius elaborated by Claude Fauque, Museologist, in collaboration with the Nelson Mandela Centre for African Culture, the University of Mauritius and UNESCO Slavery Route Project.

The story-line refers to:

1. the chasing of slaves in their countries of origin;
2. the acquisition of slaves on the African Coast;
3. the transportation of slaves;
4. the selling of slaves;
5. the health obligations of the masters towards the slaves;
6. slavery in Mauritius as forming part of a global economic system;
7. the institutional texts for slavery - *Code Noir* of Louis XV for Caribbean and *Patent Letters* of 1723 for Isle de France;
8. *Marronnage* in Isle de France;
9. the abolition of slavery and the setting up of the Slave Route project by UNESCO to construct the base of a common future.

In the film, the History of Slavery is presented from Antiquity to the 19<sup>th</sup> century. This chronological approach supports a clear understanding of the nature of slavery and also of its presence in Mauritius, as this section is well documented and illustrated in respect of academic expectations. Slavery is presented as a global phenomenon and the Mauritian experience is considered from an international perspective. This discourse helps to understand the global phenomenon of slavery and ensures the quality of discourse; justifications are given for presenting in such details, the experience of slavery.

This display provides a scientific account of slavery that addresses facts versus memory. By resorting to a scientific discourse, the Museum responds favourably to the need to refer to slavery as a historical fact and serves a clear educational purpose. The scientific approach creates a clear link between the past and the present. This scientific discourse objectively supports the formulation of a traumatic experience. This is particularly important as the discourse on slavery refers to the inhuman conditions of the slaves and may give raise to emotional considerations, leading to contemporary demands. The scientific discourse is thus instrumental in formulating slavery as a historical fact. This stand discards personal misleading appreciations of slavery. In this respect, the scientific discourse recreates a clear link with the past. It helps to consider slavery with objectivity and sets a basis for the process of acceptation of slavery as a historical fact and as forming part of the nation's past. The trauma would need to be formulated to offer the opportunity to contemporary generations to accept and appropriate in a positive manner this part of their History.

### The local insight: a positive account on slavery

Slavery also appears in other sections which evoke indirectly the relationship between the slaves and their masters. A panel located in the section devoted to the advent of the Sugar Industry cites the example of Charles Telfair as an 'exemplary entrepreneur'. The introduction of the plough by Telfair in the sugar cane fields is presented as a major improvement in cane cultivation: *"Two years after, he [Charles Telfair] had already 120 arpents of sugar canes cultivated with the plough that his delighted slaves picturesquely called 'pioche b ef."*

The text indicates that to create an emulation among slaves, he [Charles Telfair] instituted plough competition in which the winners were *"largely celebrated by all"* dixit Telfair.

The example of Telfair highlights his actions in favour of slaves. These initiatives are depicted with emphasis on his intentions to ease the work of slaves during cultivation. Telfair is an emblematic character in the sense that he allowed his slaves to learn to read and write *"so as to enable them to read the Bible and write"*. *"Mr. Telfair is the only person in the Colony who permits elementary instruction to be given to his slaves"* (*Anti-Slavery Reporter*, No. 87, August 20, 1831). The conditions on Telfair's sugar estate are described as an 'exception' in the same report of 1831, in which the case of 220 complaints of slaves against their Masters are reported. Indeed, the action of Charles Telfair, Secretary to the former Governor Farquhar, is confirmed by Vicars who states that he *"has instituted schools for the children, and encouraged the pious exertions of different missionaries on his estates"* (*Vicars*, 1830:13).<sup>53</sup> Telfair also wrote *'Some Account of the State of Slavery at Mauritius since the British Occupation in 1810; in refutation of anonymous charges promulgated against Government and that colony'* in 1830, in response to the reports of the *Anti-slavery Monthly Reporter* that reported the death of 65,000 *"Black human beings have been put to death by a hundred holders of sugar estates in six years"* and *"the sheets of the Reporter containing accusations against Mauritius and Myself [Telfair]"* (Telfair, 1830:i).

Telfair refutes the accusations of the *Anti-Slavery Monthly Reporter* and presents himself as a fervent proponent of the improvement of the conditions of the Slaves:

*"Had the author given one redeeming fact, one observation, one argument, calculated to benefit the Slave, or to accelerate his physical, moral, or religious improvement, I should have been disposed patiently to meet the obloquy lavished on me; because something would have been done towards the completion of my favourite object, through a long period of life - the bettering of the condition of the Slave"* (Telfair, 1830:v).

He also advocated that his purpose was to contribute to the amelioration of slaves' conditions for the benefit of all - Slaves and Planters - considering the forthcoming abolition of Slavery:

*"I cannot longer remain in obscurity and silence. I am already at the bar of the public; and from them I expect a verdict that will cover my accusers with shame; and perhaps, will hasten the annihilation of that fraternity of which they appear to be convenient members. Lucky would be such a result for the cause they ostensibly advocate - happy for the Slave, who would thus be relieved from one great obstacle to his moral and religious melioration, which must precede his right to freedom- happy for the Master, who would feel security among men instructed in the truths of morality and religion, instead of beings immersed in brutal ignorance. Then, I should scarcely regret being exposed to the attack; because I should have a return for my labours."* (Telfair, 1830: vi)

According to Telfair, his actions have been largely criticised because they did not seem to be in line with the tradition by which Slaves were treated. His contribution was seen as a threat, rather than a positive undertaking:

*"My situation, indeed, is singular. The only reproach I have experienced in this Colony, was - that the measures I put in practise, for the improvement of my Slaves, were calculated to produce a rapid, hazardous, and fearful revolution. Some of the Planters*

*complained that I was adding the irresistible power of intellect to the preponderating physical force of the Negroes, and sad consequences were predicted; while, on the contrary, my anonymous assailant in London, contends, that my efforts have tended to brutalize and to destroy the slave population.” (Telfair, 1830: viii, ix)*

He further argues that *“the Slave has been raised, in many respects, to the rank of a European labourer; and he often possesses greater comforts, while his irksome toil has been changed into an easy task; indeed, nine-tenths of human labour have been replaced by eighty steam engines and sugar mills, by implements of agriculture of all kinds, and by beasts of burden, of which not less than 30,000 have been imported within five years, and nearly 11,000 since January 1829. the religious, moral and physical condition of the Slave has also advanced more rapidly, and already has attained a greater elevation than in any other colony during an equal time.” (Telfair, 1830:xi)*

The account presented in *L’Aventure du Sucre* support the actions of Telfair who asserts that:

*“It will be seen that my Slaves had, and have, better food and more abundantly supplied, better clothing and less occasion for it, better cottages, better bedding, better furniture, more recreations, and more money, than the home labourer.” (Telfair, 1830:xiii)*

This representation of slavery through the actions of Telfair present not only a positive account of the experience of slavery, but also illustrates how the *Masters* could contribute to the improvement of the conditions of Slaves. This representation highlights a positive relation between the ‘dominated’ and the ‘dominant’. This is in line with the position of the Museum founders to show the positive contributions, besides the historical facts based on accounts of the indisputable inhuman experiences endured by the Slaves. It thus serves the general discourse, underlining the positive contribution of the Sugar Industry in binding all segments of the population to form a nation.

**indenture: a process derived from the abolition of slavery and the need of the sugar industry**

The discourse on indenture is inspired by the same vein: the display provides us with a scientific account leading from the abolition of slavery to the establishment of a new system of recruitment called *indenture*. Mahébourg National History Museum’s representations failed to portray a clear evolutive process. At *L’Aventure du Sucre*, the process of evolution is clearly transcribed to help an overall understanding of the Mauritian experience. What we identified as Section 12, clearly states the mutation experienced by the society after the abolition of slavery. The discourse is organised as follows:

#### 12. A new organisation

- Abolition of slavery;
- A society in mutation;
- The question of compensation;
- The devotion towards Père Laval;
- The social problems;
- New immigrants.

This part introduces a film on indenture to which a space equivalent to the section on slavery is dedicated. The film on indenture provides us with the experience of indentured immigrants from a scientific point of view. The discourse carefully transcribes historical facts supported by archival evidence. The film is complemented by the following panels introduced by the title *Indenture*:

- Panel 1: Recruitment and immigrant tickets – pre-indenture;
- Panel 2: Suspension of immigration between 1838-1842;
- Panel 3: As from 2 November 1834, transport India – Mauritius;

- Panel 4: About families;
- Panel 5: Arrival and recruitment by the sirdars and planters;
- Panel 6: Definition of the contract;
- Panel 7: End of indenture: emergence of villages and “petits planteurs”;
- Panel 8: The sugar estates;
- Panel 9: Work in sugar cane fields.

The panels -as in the case of slavery - provide an additional layer of information fully detailed. It also stresses the contribution of the Planters in these terms:

*“Les anciens propriétaires sucriers ont non seulement permis la construction des temples et des autels près des sucreries, mais ils y contribueront en y apportant une aide matérielle.”*

The few experiences of Planters allowing the setting up of temples on sugar estates become here a general statement. The display recalls only the positive element and once more - as it did for slavery- stressing not only the positive contribution of Planters, but also the existence of a *close* relationship between the Planters and the indentured labourers, even though the Planters are portrayed as the ruling *Aristocracy*, thanks to whom slaves or indentured labourers could evolve favourably. Planters are, in this sense, those opening a window on a better life for the dominated segments of the population.

#### A positivist discourse

We may argue that this provides a positivist account of the slave and indentured experience, but we should also underline the hidden intention to create a vision of the past that does not divide, but rather intends to unite. Through the display of *Aventure du Sucre*, the process of *memoration* is interesting as it provides with a scientific approach thus annihilating all misinterpretation and indirectly implies an acceptance of the drifts of the sugar industry, ex-recruiters of slaves and indentured labourers. The scientific account largely contributes to the creation of a link between the past and the present that provides an objective insight of the experiences of the current population. It sustains the contribution of each in the formation of the Mauritian society.

This is further supported by the intention to situate the Mauritian experience within international historical context. It certainly helps a better appreciation of the local history within the broader 18<sup>th</sup> and 19<sup>th</sup> century context and ultimately places the Mauritian experience as a consequence of worldwide phenomenon. This helps to minimize the focus on the “negative” past that could lead to social divisions and offers a perspective to better appreciate the local past. This process is particularly important since the recognition of a “negative” past is instrumental in allowing the evolution of mentalities and serves the development of a national history that can ultimately receive general acceptance.

There is in the undertaking of *L’Aventure du Sucre* a process of recognition that never took place before. The *Aventure du Sucre* is the first museum to devote a full space to the experience of slavery and indenture in the perspective of the evolution of Mauritian society. This helps to provide references for the *memoration* process by expressing the untold and accepting the “dark side” of the sugar industry. In this respect, the museum is a place of reference serving a vision of unity. This is attested by the conclusion part of the section on history entitled “*Et tous forment un peuple*”.

#### Appropriation and reconciliation: constructing a common vision of the past

The example of *L’Aventure du Sucre* shows how the descendants of the former oligarchy choose to formulate the past. Their stand is to provide positive accounts of local history in the perspective of international context. This provides an account of the “negative” events outside the local context that helps to conciliate a national vision of the past. Ultimately, this process of conciliation leads to remember why the Mauritian society took shape and evolved to form a nation.

This example also shows how the memorial process inherited from the colonial authorities has developed. The memorial process recognizes other segments of the population and remembers how

their experiences have contributed to shape the nation. The memory process is no more excluding the contributions of the population as a whole but expresses a vision in which all segments interacted and shows how experiences were interlinked in the making of a society. In addition, it also states that the descendants of the former Elite generate a vision of the past that accepts the colonial undertakings which affected the population. In this sense, the acceptance of the past acted towards the evolution of the memorial process in museums and led to serve the contemporary dynamics of nation building.

### Le musée du peuplement

Similarly, it was interesting to consider how the descendants of the former dominated population appropriated the past to shape a memorial framework. Our research showed the emergence of a new conception of the past in the 2000s with the creation or reorganisation of museums. It is precisely in these years that the Mahébourg Museum was renamed *National History Museum* and that *L'Aventure du Sucre* was created.

To this analysis, it seemed important to add the contribution of the *Musée du Peuplement*. The museum is located in Mahébourg, at Pointe Canon. It is the most recent expression of a vision of National History. It was set up as part of the celebration of the bicentenary of the battle of Grand Port in 2010. The museum was open as part of the celebration activities and generated a significant number of visitors making this undertaking a real success.

The museum is composed of two parts: a building houses a permanent exhibition presenting the history of Mauritius from the Dutch period to nowadays. This section is complemented by an outdoor section called "*village historique*" composed of reconstitutions featuring human figures providing several *tableaux* of past Mauritian life.

The organisation of the display in the permanent exhibition is problematic on various accounts. The presentation of Mauritian history is elaborated upon the combination of several panels prepared for former temporary exhibitions. It also includes exhibits acquired from *Mauritian Heritage*, a private exhibition space formerly located in La Gaulette that no longer exists. In addition to this, large paintings depicting sceneries are displayed to create cohesion between the exhibition panels and exhibits. The panels, exhibits and large paintings are combined and displayed in the various sections composing the museum. The main impression when entering the exhibition is an overwhelming availability of information not necessarily related to one another.

The relation between the exhibits is problematic: they were all initially conceived to address the core line of specific temporary exhibitions. All the display elements were assembled to form the *Musée du peuplement*. The current presentation relies on elements not originally elaborated to address the purpose of the museum and consequently, fails to respect an overall coherence. The reorganisation of exhibits from three different exhibitions assembled together impacts on the quality. It results in the perception of a scattered presentation of national history where a core line of discourse would have ensured coherence and conveyed clear messages.

Slavery and indenture are illustrated through the evocation of Le Morne Cultural Landscape and Aapravasi Ghat World Heritage Sites. The presentation highlights positive contributions: it shows how the slaves resisted their condition and how indentured labourers engaged in plantation work to later evolve in society. These representations are associated to general information on slavery and indenture formerly presented in *Mauritian Heritage*. It provides a general account on slavery and indenture systems. However, each event is presented in dedicated sections which are not related to one another by a transition. Each section thus provides an insight on a specific aspect of Mauritian history. The flow of information is therefore not elaborated according to a core line of evolution but rather offers insights on the experiences of the various cultural groups. The lack of transitions between each part is detrimental to an overall understanding of how the various groups interacted to shape the Mauritian nation.

The "ethnic" segmentation in the display questions the notion of national history. Traditionally, the Mauritian society is divided in segments. This was the policy of the colonial authorities who

differentiated the various cultural segments in distinct categories. This supported the policy of representativeness which is still in force today. However, we may wonder if this approach serves favourably a national vision of Mauritius; especially in this instance where the display focuses specifically on national history seen through the representations of each segment of the population.

National history is represented through panels and contemporary paintings that do not present an authentic account of Mauritian history. The various large size paintings depict various sceneries portraying a contemporary vision of the past but are not actually productions of the past: they are as such an interpretation and not an objective account of the past. This questions the notion of authenticity as the permanent exhibition area is a contemporary creation. The information provided on panels is counterbalanced by the various interpretations of the past. In this respect, it is subject to subjective appreciations of what the past may have been. It is further complemented by the *village historique* sceneries which are an interpretation of how the slaves or indentured labourers may have lived. In this sense, it may be misleading as it does not rely on authentic evidence of the past but rather on a subjective interpretation. This is the reason why we may want to call the *Musée du peuplement*, a cultural park, as it is not in line with the traditional definition of *museum*:

*"a non-profit making, permanent institution in the service of society and of its development, and open to the public, which acquires, conserves, researches, communicates and exhibits, for purposes of study, education and enjoyment, material evidence of people and their environment."*<sup>54</sup>

The *Musée du peuplement* provides with interpretations of the past produced in 2010. The institution is not as such a museum as museum collections are not conserved nor exhibited. We may want to consider that it is a space devoted to interpretation. In this respect, it is particularly interesting to appreciate how the past is perceived. In this instance, slavery and indenture are referred to as difficult experiences but the outcome is positive: the ex-slaves and indentured labourers have managed to engage in new lives.

The *Musée du peuplement* interprets the past to remember the positive accounts: its dynamics are very similar to those of *Aventure du Sucre* activating the positive memory to establish a new approach to the past. This approach results in the recognition of a common heritage: it is the first instance in which the heritage deriving from the population's interactions is represented. Although we may question the authenticity of the display, the *Musée du peuplement* is marking a major shift in the memory process: it formulates the existence of a common heritage shaped by the various groups in action. The *Boutique Chinoise* or *séga* become the emblem of Mauritian identity because they are identified as elements forming part of Mauritian culture. *Séga* is presented in a reconstitution of the *Village historique* and shows a silent aspect of the slaves' lives in museums.

The *Boutique Chinoise* is reconstituted besides the life on sugar estates. It is the element retained to symbolize the major role of the Chinese descent population in the economic and social development of society. Both representations are relevant examples of how retracing the origin of heritage brings to light the cultural inputs brought by the slave population, retailers and small traders and how they contributed to the creation of a national heritage ultimately leading to the shaping of Mauritian culture.

### The need for a national history: the emergence of a new memorial framework representative of the majority

Through tangible representations of the past, the *Musée du peuplement* establishes roots for Mauritian culture: in the *Village historique*, representations identify a clear legacy, from the origins of heritage to its contemporary expressions. This link allows the population to relate to the past and activate a process leading to the legitimization of their past experiences. This process probably explains the significant success of the *Musée du peuplement* as part of the celebration of the battle of Grand Port: the audience was provided with tools empowering the appropriation of the past. This marks a shift in the memorial process and shows that the appropriation of national history is in process.

The memorial framework in museums was inherited from the colonial Elite thus discarded the former dominated population and did not speak to the majority's aspirations. The memorial process is now taking place through new actors who are descendants of the lower classes of the society. The memorial framework undertakes a complete redefinition. The portrayal of National History now intends to include the memory of the majority of the population and not just a small segment of the Mauritian population. In this undertaking, the representations of slavery and indenture hold a major place as the experiences of more than 90% of the current day population.

### Towards the national and international recognition of slavery and indenture

This shift in the memorial process is particularly noticeable since the years 2000. The account of the Government programme delivered on 3<sup>rd</sup> October 2000 confirms the intention of the Government to "*foster cultural values of the Mauritian community*". In the programme, the section dealing with the cultural policy announces the creation of a Mauritian Cultural Centre "*with the aim of promoting and cementing National Unity*".

The promotion of culture is presented as a main priority and the Government takes initiatives aiming at fostering the image of a national unity. This objective materialises through the renaming of Mahébourg Museum as the *National History Museum*. This marks the appropriation and the recognition of colonial history together with the intention to establish cultural references for all. The shift in the memorial process is in action. It is marked by significant initiatives such as declaring 1st February as a public holiday "*to commemorate the abolition of slavery*" and 2nd November as "*the termination of indentured labour*"<sup>55</sup>. The President further mentions that "*a programme of activities will be elaborated to highlight the maximised through the promotion of local folklore, traditions and theatrical performances*".

In the address of the President of the Republic on Friday 29 July 2005, the Government programme reaffirms the intention to head towards the creation of a common cultural entity:

*"In order to face oncoming challenges, to reverse the current socio-economic decline and to deliver on Government's commitment to economic efficiency, equity and social justice, the very first and crucial step will be to rally all Mauritians around a national project to garner all our willpower and energy to shape a prosperous national where our unique cultural mix is a source of pride and inspiration rather than a platform for compartmentalizing the nation".*

The actions proposed to achieve this goal in the culture sector are as follows:

*"Our historical heritage is of great value and is in need of greater understanding, promotion and dissemination. In this context a Genealogy Institute and an Immigration Museum will be set up. Government will also regroup the National Archives, the National Art Gallery and the National Library under one roof. In order to address issues pertaining to historical grievances, government will set up a Truth and Justice Commission to establish the facts regarding slavery and indentured labourers and to make recommendations with respect to reparations for the descendants of slaves and indentured labourers".*

The Government programme clearly states the need for the recognition of a common past to support the concept of National Unity. The establishment of the Truth and Justice Commission is in this respect a measure showing the concern to think about the Society and its past. The Commission conveys that the Government feels the need to establish a clear link to the past and institute a common cultural framework that serves the reflection around a core question: who are we as Mauritians ? It forms part of overall considerations aiming at establishing the roots of the nation to face future challenges and ensure the sustainable development of the Mauritian nation.

### **Aapravasi Ghat and Le Morne : a change in perspective**

The Government has taken action to recognize the silent past of the nation. Heritage projects initiated in recent years are an interesting indicator to appreciate how the shift in the memorial process has operated. This shift may be explained by the need to preserve the past disappearing with the fast growing development but also, raises the concern to situate Mauritian culture facing globalization. Mauritius as many other countries expresses its concern to retain its cultural roots and specificity. In part, it results in turning to the documentation of under researched aspects of Mauritian history to better appreciate Mauritian culture.

In this undertaking, slavery and indenture were a major focus. The government engaged in proposing the nomination of the Le Morne and Aapravasi Ghat on UNESCO World Heritage List. The Aapravasi Ghat is a former Immigration Depot where almost 70% of the ancestors of the current day population arrived as indentured labourers. Mauritius is the place where the British chose to evaluate a new system of recruitment called *indenture* after the abolition of slavery in 1833. On international scale, the outstanding experience of Mauritius as the test case to evaluate the viability of the indenture labour system makes of Aapravasi Ghat, the international symbol of indentured labour in the 19<sup>th</sup> century. As such, the site was inscribed on the World Heritage List in 2006.

Le Morne Cultural Landscape is the symbol of resistance against slavery. Naturally difficult to access, it provided a place of shelter for the maroon slaves escaping the colonial oppressors during the 18<sup>th</sup> and 19<sup>th</sup> centuries. Le Morne has become an international symbol of resistance against slavery. Indeed, large numbers of slaves were brought to Mauritius which was an important stopover in the Eastern slave trade. In 2008, Le Morne cultural landscape was internationally recognized as a World Heritage Site.

With the inscription of the two sites on the World Heritage List, Mauritius changed the vision of the past inherited from the colonial Elite. The past is no more the prerogative of a small portion of the population. The memorial process now works towards the appropriation of the history of the majority of the population and institutes fundamental references relating to their identity and origins. This process shows the importance of establishing roots in a land of migrations where most of the ancestors of the population came through coerced migrations. As immigrants - slaves or indentured labourers - references to their homeland or cultural background were absent in the colony. Both slaves and indentured labourers had to recreate a cultural environment serving their well-being through the affirmation of their position in society.

The experiences of slavery and indenture were particularly traumatic. It involved the annihilation of the individual's identity in the case of slavery and for indentured labourers, the involvement in harsh working conditions to survive. The collective memory remembers slavery and indenture as a negative experience. Both parties engaged in these experiences were ever hardly considered nor recognized by the colonial authorities in the memory process: there was no place for them in the colonial contribution bringing western knowledge and education. Memory was dictated at institutional level by the Elite who systematically ignored the positive contribution of ex-slaves or ex-indentured labourers and failed to recognize their cultural identity.

Today, the memorial shift retains positive accounts of slaves and indentured labourers. Through the recognition of Aapravasi Ghat and Le Morne, the memory process operated through historical justifications enabling the appreciation of the scope of slavery and indenture as historical facts not only related to the local context, but also inscribing itself in an international perspective. This certainly encourages the memorial process to focus on positive contributions. Locally, Aapravasi

Ghat can be identified as a place of origin for indentured labourers as they first landed at the Immigration Depot to enter Mauritius. Similarly, Le Morne is considered as a place of refuge for Maroon slaves and in the contemporary context, became a symbol of resistance. Both World Heritage Sites reconstruct the idea that both sections of the population were forgotten but not silent, and have in fact largely contributed to the formation of a pacific and dynamic society.

In this case, slavery and indenture take a tangible shape through the symbols of Le Morne and Apravasi Ghat. Each experience has a dedicated memorial space where both experiences can be formulated and recognized for the first time at national and international level. The status of World Heritage Site allowed an equal recognition. This status requires factual justifications for inscription which leads the memorial process to rely on facts and objectivity. This may not discard passionate debates on the state of slavery or indenture but ultimately leads to unequivocal recognition at institutional level.

We may also argue that both sites can be perceived as an “ethnic” heritage: slavery is associated with the Creole segment of the population while indenture refers to the Mauritians of Indian origin. Opting for World Heritage Status allows recognition by an external apparatus and supports the legitimation of this national heritage outside the national boundaries. The recognition generated by an international body thus reinforces the importance of this heritage and ultimately encourages the adhesion of the entire population. The presence of two World Heritage Sites on the national territory establishes an emblem of what constitutes the Mauritian history and identity. Their authenticity or meaning may be contested but still their status as emblem of Mauritian society is not challenged.<sup>56</sup>

The inscription of the two sites is certainly marking a significant step in the constitution of Mauritian memory. It established a formal recognition of slavery and indenture and also initiated the formulation of common national memory. In the Mauritian context, the example of the two World Heritage Sites shows how common references to the past can be established in a multicultural society where the various segments of the population may refer to different appreciations of the past. In the instance of Le Morne and Apravasi Ghat generally subject to ethnic considerations, the external recognition allows the establishment of values beyond the national dynamics. The local values generated by the two sites in the Mauritian context are modified when they are considered by an external regard. The local values are re-interpreted beyond potential contestations or misleading considerations. As such, it encourages their general acceptance.

This also shows that the values invested in the two sites were not established. It is their recognition as World Heritage Sites that anchored their meaning in the Mauritian context. In a multicultural society, the ethnic considerations arise. The international recognition thus allows the negotiation of the values attributed to sites and prepares for a common acceptance of the proposed heritage because it has international values that transcend the Mauritian context.

## 6. GENERAL RECOMMENDATIONS ON REPRESENTATIONS OF SLAVERY AND INDENTURE

### Establishing common references in a multicultural society : key questions

Our research on representations of slavery and indenture in museums and at historic sites showed that common values were elaborated in the current Mauritian context. However, the memorial process leads to the establishment of values that may be challenged. Indeed, the multicultural society regroups an *ensemble* of people from various cultural background that lived different experiences in Mauritius. It is precisely this experience that gives meaning to their presence. This experience thus requires legitimacy and acceptance from the other components of the society. These dynamics trigger a reflection on how best to represent and recognize the contribution of the Other and establish a fair balance?

Since the 2000s, the Government has promoted a policy of representativity of the various cultural groups by, for instance, the creation of cultural centres. In the wide literature referring to multiculturalism, the Government’s undertaking is challenged on one main account: the policy of

promoting specific cultural groups to recognize their contribution also leads to acknowledge a division in the society. Various authors argue that reinforcing the differences may ultimately lead to division rather than to unity. However, we may want to believe that there cannot be national unity without recognition of the Mauritian diversity. This seems to constitute the backbone of the nation as the Mauritian nation would have never existed, if the various waves of migration had not reached the island. It is the richness brought by immigrants that gave raise to the constitution of a nation.

### The elaboration of a national policy for culture and heritage

The Aapravasi Ghat stands for a symbol of immigration to Mauritius: the immigration depot received indentured labourers mainly arriving from India. The site can be considered as point of origin for the descendants of indentured labourers. In the same manner, Le Morne is a reference for descendants of slaves who were brought to Mauritius from the Dutch period until the abolition of slavery in the colony in 1835. Both refer to two major waves of immigration to the island and establish references to explain the origins Mauritian society. The World Heritage Sites anchor references that are essential to establish continuity from arrival of immigrants to their descendants today. The link to the past helps considering that both segments of the population were actually instrumental in the shaping of the society and legitimates their presence.

Although they may be perceived as “ethnic” symbols, the example of the World Heritage Sites shows how it is possible to formulate common values within the local context. Had there not been an international framework of recognition, the values attributed to the World Heritage Sites may not have been fixed and understood as a common reference for the nation. To some extent, the local interpretation includes the tendency to reduce heritage, the intangible in particular, to ethnic representativeness and in these instances, this perception closes the door for the appropriation of heritage by the overall population. If an object of heritage is only perceived as an ethnic recognition, it fails to address the cultural significance of heritage and prevents legitimation. In this respect, the local dynamics would benefit from the elaboration of a framework for culture and heritage that would establish commonly accepted values. It would include a vision for National Heritage helping to recreate a link between the population and its heritage. A policy on heritage and culture seems essential to assist the population in the appropriation of the past which ultimately contributes to national unity. The Government programme 2005-2010<sup>57</sup> specifically addresses this problematic:

*“Our cultural pluralism has always been a source of great pride. Government will focus on reinforcing our multiculturalism, on celebrating our cultural and linguistic diversity as well as our multiple identities. Government will not follow the past practice of compartmentalising and fragmenting our social fabric, and will instead implement policies aimed at promoting national unity”.*

### Public consultation: a key to sustainable development of heritage

In the course of our research, we attempted to find answers in a document stating a general policy for culture and heritage. The outcome was not successful. Intentions and objectives are formulated but are not inscribed in an overall policy ensuring an integrated approach to heritage. Considering that the memorial process was always established by the colonial Elite until recently, we believe that the Mauritians themselves hold the answers to what they believe are the common values of the Mauritian society. Our survey revealed that the perception of heritage does not necessarily meet the nature of heritage in place. Indeed, the highest rates defined Mauritian heritage as *séga* music (20%) and Mauritian cuisine (16%). Archaeological and World Heritage Sites come in third position and museums, next to last. Considering this, we may want to think that the Mauritian population still feels that their heritage - mainly intangible- is not represented in museums or in cultural spaces. For 42% of the people polled, Mauritian history was not well represented in museums. This tells us that the past reconstructed in museums may not meet the expectations of Mauritians and thus discards appropriation.

However, we noted that there is an interest in Mauritian heritage for the majority of the people polled. Eight six percent also thinks that heritage contributes to the valorisation of the Mauritian

culture. An unanimous thought was that heritage does contribute to national unity for 100% of the interviewees. This survey shows that heritage does have a role to play in the constitution of common references for the nation according to Mauritians. Our research raises a number of problematic to achieve this goal among which the need for the population to appropriate its heritage. The survey revealed that there is a discrepancy between what the population identifies as a prime heritage and what is recognized as such. The survey reveals that the population identifies as heritage, objects symbolizing the cultural interactions of the various cultural groups. It is precisely representations of cultural syncretisation that are hardly ever present in museums when the audience would identify with such representations.

In this instance, a cultural and heritage policy responding to the population's aspirations seems essential to insert heritage in social dynamics. In this respect, the consultation with the population is a condition to ensure a sustainable approach to heritage appropriation and development.

### Considerations on national history in museums

Our research revealed that the appropriation of the past by the population is in process. However, this process takes place if the population is provided with tools allowing their appropriation of the past. The appropriation of the population cannot be considered as an isolated process but as a mechanism forming part of a memory process activated by actions of the State or private entities.

In this respect, it was essential to focus on museums to appreciate the opportunities given to the audience for the appropriation and recognition of its past. In museums, we noticed that scientific legitimization played a major role in understanding slavery and indenture: it helps the formulation of the population's experiences and legitimates the presence of each segment in the society. For these reasons, the scientific discourse in museums seems to best serve the purpose of common acceptance. The scientific objectivity allows the institution of a strong link between the past and present that is the condition for appropriation. The process of appropriation is necessary to shape an overall memorial framework. We may question the selection of past representations in some instances but our research showed that the choices were made to transcribe positive contributions that will serve the advancement of the society. This shows the intention to discard uncomfortable debates questioning the presence of other cultural groups. It rather promotes the legitimization of their presence to constitute a national entity.

We also noticed that there is a national history of Mauritius but it is immersed in other display objectives. This is detrimental to the quality of the past reconstructed. Messages are superimposed and do not focus on a deep reflection on how to best reconstruct a national history. The National History museum in Mahébourg is the remnant part of the colonial past and as such, presents the contribution of the colonial Elite to the national history. *Le Musée du peuplement* is an interesting initiative as it produces contemporary depictions of the past that leads to the recognition of intangible heritage. However, it fails to represent the interactions that led to the formation of a unified society. *L'Aventure du Sucre* was also presented an interesting account of national history but it was merged with the history of sugar as a central theme and largely expanded the scope of national history to details creating a confusing environment for non-experimanted visitors.

These initiatives clearly showed that there was a need for National History in which the representations of slavery and indenture play a central role as the evocation of the majority of the population's past. Throughout our research, we noted that representations of slavery and indenture only represent a small portion of the total of public space available in Mauritian Museums. The list of museums visited and considered within this report is as follows:

- The 'Postal Museum';
- The 'Blue Penny Museum';
- *L'Aventure du Sucre*;
- The 'Mauritius Institute';
- The 'National History Museum';

- The 'Folk Museum of Indian Immigration' (closed - visited in 2005 and 2006);
- The *Musée du peuplement*.

This selection was chosen in view of the potential presence of representations of slavery and indenture. In most institutions, the representations are part of an overall display guided by core themes that are not directly addressing the experiences of slavery and indenture:

- The Postal Museum presents the development of the postal services from the Dutch period to the British period and refers to the experience of slavery through the evocation of the Black Postmen or Slaves delivering mail to the inhabitants.
- *L'Aventure du Sucre* is devoted to the History of the Sugar Industry in Mauritius;
- The 'National History Museum' refers to the experience of the *colons* on the island;
- The 'Blue Penny Museum' focused on philately and on the Mauritius Commercial Bank collection masterpieces;
- The 'Mauritius Institute' is the oldest museum on the island and refers to Natural History in Mauritius and in the Indian Ocean Region;
- The 'Folk Museum of Indian Immigration' focuses on the migration of Mauritians of Indian origins;
- the *Musée du peuplement* is a contemporary account of the various migrations.

Our research shows that slavery does not have a dedicated space for expression, when indenture is largely considered. We may want to consider that 70% of the Mauritian population are descendants of indentured labourers, while above 30% are related to the experience of slavery. In this perspective, the voice of the majority can explain the presence of a museum namely the *Folk Museum*, devoted to the history of the Indian origin segment of the population. The *Folk Museum* was set up to depict the immigration of the ancestors of people of - Indian origin to Mauritius. The Folk Museum is part of the Mahatma Gandhi Institute founded in 1970, two years after Independence, by the Government of Mauritius in collaboration the Indian Government. The aims of the Institute is to "*provide the academic and cultural basis for the promotion, consolidation and dissemination of the Indian traditions*" and "*contribute to a developing Mauritian culture by creating an awareness of the richness of the Mauritian heritage*"<sup>58</sup>. The general concept behind the creation of the MGI is to promote the Indian culture. However, it is not the only area of focus. Mauritian Studies are also part of its programme and promote the need for interaction between various cultural heritages.

However, we may question the place of the other cultural groups: the experience of slavery or even commercial merchants who migrated to Mauritius are hardly referred to. In fact, we come to a statement that only the former elite or the current group leading the country have managed to set up spaces representing their history and their experience on the island. Considering the multicultural background of Mauritius, it is interesting to envisage a museum that would restore, on factual ground, the experiences of all the components of society. The Government proposed, on several instances, the creation of a Museum of Immigration. This concept would deserve further attention so as to define how the experiences of all could be depicted?

The interaction existing between the various cultural backgrounds of Mauritius would be an instrumental element in showing the cohesion of society. What is more, the presentation of common cultural references, such as Mauritian cuisine or *séga* dancing, seem essential to establish the fact that there are not only differences and diversity - there is also a unity. The elaboration of such a museum would require an integrated approach to define the key concepts of the museum and also, ensure that the past restored speaks to Mauritians.

### The creation of a museum of immigration

Indeed, immigration is the common experience of all segments of the population. The creation of a museum of immigration - proposed in the 2005 Government programme - would offer the

opportunity to retrace the experiences of all Mauritians and most important, would address how each wave of migration has settled and interacted with other segments of the population. This would provide an account on how the society was formed and evolved - as a whole - to form the nation. The proposal for a museum of immigration also lies on the opportunity to show how the diversity has operated to create specific social and cultural expressions - such as *séga*- which are hallmarks of Mauritian culture.

The intention would be to rely on scientific discourse to recreate a firm link with the past that can bring an understanding of the current day Mauritian society. We may also want to retain in this initiative the benefits of presenting elements in a wider perspective to underscore the Mauritian experience and establish clear references to the past. Indeed, the perspective brought by the international context offers a vision outside the compound of local dynamics and helps in the establishment of an overall understanding of the local experience. The local experience is appreciated within a larger framework already established and recognized. In this respect, it helps to highlight the essence of local experiences and the existence of national values.

What is more, we firmly believe that such undertaking also requires effective management and maintenance resulting from the establishment of a cultural and heritage policy. Indeed the restitution of the past to society also supposes optimal managerial framework to ensure sustainability. This is also instrumental in the preservation of collections constituting a major part of Mauritian heritage. This is the reason why this report also includes MUSEUM MANAGEMENT considerations. The improvement of MUSEUM MANAGEMENT would certainly be an answer to the appropriate formulation of National History.

## **Museum management: a key to optimal restitution of the past**

### **The Mauritius Institute: an overview**

This part of the report focuses on the Mauritius Museums Council management to better appreciate how museums are managed and how collections are conserved. Several audit reports and recommendations of experts were formulated in the past to improve the functioning of museums. The Mauritius Museums Council (MMC) was established in 2000 to replace the Mauritius Institute Advisory Council (1985). The institution was founded in 1880 as the Mauritius Institute and its objectives were

*“to establish and incorporate a public institute, a public museum, and a public library for the purpose of promoting the general study and cultivation of the various branches and departments of arts, sciences, literature and philosophy. The Mauritius Institute functioned as a national scientific and cultural institution mainly dedicated to carrying out research and disseminating knowledge. Several learned societies were incorporated within the Mauritius Institute in the past.”<sup>59</sup>*

Nowadays, the Mauritius Institute has developed to be responsible for the management and the development of the Mauritius Museums Council, an institution created to coordinate and oversee the activities in the National and Specialised Museums. The public library section is not referred to in the new objectives formulated in 2000 and the mission was redefined as

*“to collect, preserve and use in a sustainable manner the Mauritian cultural heritage for the purpose of developing interest and pride in; increasing knowledge and understanding of; and promoting appreciation and respect for the heritage throughout the republic of mauritius and internationally”.*

The MMC was created to focus on Museum Management. To respond favourably to this mandate, the MMC works to fulfil the following objectives:

1. lead and encourage the formulation of policies in the field of Museology;
2. develop, maintain and promote national and specialised museums;

3. conduct and control the affairs of national or specialised museums and coordinate their activities and the services which they provide;
4. develop and maintain a National Collection, as well as keep and maintain a National Register of objects and specimens in the National Collection;
5. promote the continuous flow of information to the public regarding the professional activities, programmes and projects of the Council and National or Specialised Museums;
6. promote the use of the resources available at National and Specialised Museums for educational purposes and for research.

These objectives were guided by the vision of the MMC *“to be a centre of excellence in the quest for and dissemination of knowledge on the collective memory and in the preservation of the cultural and natural heritages of the people of the Republic of Mauritius and to be a source of inspiration for posterity”*.

The MMC's Board has the mandate to oversee:

1. National Museums, namely the Natural History Museum in Port Louis and the National History Museum in Mahébourg;
2. Specialised Museums namely:
  - Sir SSR Memorial Centre for Culture, Port Louis;
  - Robert Edward-Hart Memorial Museum, Souillac;
  - Sookdeo Bissoondoyal Memorial Museum, Tyack;
  - Frederik Hendrik Museum, Vieux Grand Port;
  - Postal Museum, Port Louis;
  - Museum of Indian Immigration, Moka.
3. The MMC is also responsible for the maintenance of the Millennium Monument at Wootun.

The vision and objectives of the MMC were indicators to evaluate how museums and their collections are managed in the current context and consequently, to propose recommendations for the improvement of MUSEUM MANAGEMENT. Indeed, although the MMC was established eleven years ago, it seems that the heritage it was entrusted to manage is currently at threat on various accounts.

### The threats to national heritage

The Mauritius Museums Council was a topic of concern on several occasions. The minutes of proceedings of the National Assembly in 1996 notify that:

*“On a constaté que le taux de décomposition des documents originaux, des spécimens zoologiques et des objets en métal était important.”*<sup>60</sup>

The Audit Report for the year 2001<sup>61</sup> also draws attention to the fact that:

1. *“The Board of the Mauritius Museums Council was constituted only in March 2001. Section 23 (2) of the Act stipulates that the Council shall, within one year of the date of coming into force of the Act, offer the officers serving the Department, the opportunity of being transferred to the Council. However, no such offer has been made.*
2. *There is no clearly defined policy for the acquisition of exhibits. I was informed, by the Ministry, that the Council is presently working on a collection policy, which will include acquisition.*
3. *Recording of collections was not satisfactory. It was difficult to ensure completeness.*
4. *Museum collections were not properly conserved, protected and maintained. The MI is not equipped with a conservation laboratory/workshop.*

5. *The MI has a collection of some 90 paintings. In 1987, the paintings were examined by an expert from the Victoria and Albert Museum of London, who reported that the paintings were "still salvageable and well worth conserving". The paintings were not adequately protected and they were instead exposed to light, humidity, dust and even at times rainwater. Also, there are no adequate facilities for displaying, storing and conserving these paintings.*
6. *Under a 'convention de financement' signed with the French Government, 33 paintings belonging to the Institute were restored by a French Restorer during the period July 1995 to August 2000. At the time of audit, some 60 paintings were still awaiting restoration, of which 35 required major restoration works.*
7. *During an inventory carried out by the MI in 1993, 11 paintings were found missing. In November 2001, the Ministry informed me that three of them have been located and searches are still going on for the remaining ones".*

Following these statements, a visit took place on 31<sup>st</sup> March 2011 at the Mauritius Institute to assess how the Mauritius Museums Council had progressed to offer a better management and conservation of its collections and also, appreciate the resources at hand to allow improvement.

### Cataloguing of museum collections

Good MUSEUM MANAGEMENT requires the instauration of basic managerial tools. The main tool is the cataloguing of collections which includes measures to operate the legal entry of collections in the museum, the documentation of objects and ensures their appropriate conservation by referring to recommendations for conservation and to the documentation on collections' restoration.

Our first objective was to evaluate the cataloguing system in place at MMC as it is the base of MUSEUM MANAGEMENT. In 2000, an inventory of all the museums' collections (under the purview of MMC) was established on paper sheets. One copy of the inventory is kept at the Mauritius Institute and a second copy in the museum concerned. The inventory consists of individual record sheets per object which are kept in a library specifically devoted to collections management.

The A4 catalogue sheet regroups the following index:

Date

Inventory records Sr. No. ....

1. Object Description
  1. Object category/species
  2. object name
  3. local name/title
  4. material
  5. dimensions
  6. condition
2. Object Management
  1. Museum Department
  2. current accession No.
  3. acquisition method
  4. acquisition date
  5. acquisition source
  6. permanent location
3. History of the object
  1. producer
  2. place and date of production
  3. locality of collecting
  4. collection/expedition
  5. collection field No.
4. Documentation

1. related accession No.
2. catalogue No.
3. conservation/restoration file
4. loan
5. image
6. others

This sheet regroups the main data constituting a professional collection inventory. However, it is problematic on several accounts:

- the Museum does not possess an Entry Book consigning all entries of Museum Collections;
- the quality of the description is poor and does not allow to retrace the object in the collections;
- the description does not include a photograph of the object instrumental in providing evidence of its presence and allow its identification; this is particularly important in case of loss or theft as it allows judicial enquiry;
- the inventory sheets are not secured and kept as isolated sheets in a file referring to specific museums;
- the quality of information available would require further study and details as most of the inventory sheets are not complete and only contain few information;
- such inventory renders cross-checking difficult; matching the sheets with objects may be problematic considering the quality of information;
- the denomination of the objects are confusing and would deserve the elaboration of a proper arborescence establishing proper denominations. This would ensure that an item is always designated in the same manner and not by several different names;
- in general, the information provided is very basic and no other references to further documentation is available;
- there is no computerisation of the inventory that would tremendously help Collections Management.

Overall, the documentation systems fail to address the basic requirements of Collections Management. There is, nowadays, a standard documentation system agreed by Museum Professionals throughout the world. At the MMC, the objects or group of objects are not catalogued in an Entry Book. This is particularly problematic as the archaeological collections kept at MMC are only catalogued by Archaeologists and do not officially enter collections through the Entry Book.

The Entry Book marks the entry of an object in the Museum Collections. Whether it is a gift, purchase, loan or enquiry, the object is recorded on a numbered Entry Form which is completed in the presence of the donor or vendor who then signs to certify that it is a correct record and thus signifies that the object was not acquired illegally. The purpose of the Entry Form is both to acknowledge receipt of the object and to ensure that information from the donor is not lost before a full record is made.

It seems that there is confusion between the role of the entry book and the accession register when both registers have a different function. The accession ledger at MMC seemed to be a combination of Entry book and accessioning data when each should be separated registers. The ledger does not provide with a description of the object which can be problematic to identify objects in collections. In the context of the MMC entrusted to manage several museums, the creation of an entry book and accession register per museum would certainly encourage the improvement of collections management.

The action of accessioning marks the formal acceptance of all acquisitions (including gift, purchase, or bequest) into the museum collection. Each object or group of objects, to be kept by the museum

is entered in the accession register: it is the most important part of the documentation system. It has three main functions:

- It assigns a unique number to each object;
- It describes each object;
- It gives the history and provenance of each object.

The register constitutes the original document consigning accession. A copy of the accession register must be created and kept in another place so that information is duplicated to reduce the risk of disappearing. In this process, an ICOM number or accession number is attributed to the object and inscribed in black ink on the object. However, it seemed that not all objects had the accession number inscribed.

This accession process is complemented by the creation of a permanent label attached to each object bearing the permanent identity number. To ensure an optimal collections management, the accession number is also entered in the Entry Book so that correspondence can be made and the object can be retraced. The cataloguing is completed by a card catalogue assigned to each object. The card catalogue consists of individual cards kept in catalogue number order in a metal card-drawer or on a computer program.

At MMC, the Curator informed that the elaboration of cards is currently in process. The cards presented to us contained the required the generally agreed index information but again, we filled in with little or vague information. It should contain seven elements:

- the name of the Museum;
- the identity number;
- the name of object-classification;
- the entry method (donation, find, purchase or lender);
- the source of entry (donor, vendor or lender);
- the date of entry;
- the history of object.

During our visit, it was only possible to assess the quality of the card catalogue based on few examples as the exercise was in process. However, we noted that the card catalogue was also elaborated on separate sheets and kept in files. This is particularly problematic when it involves collections management as this implies that there is at present no reference catalogue in place. Indeed, the inventory sheets do not provide accurate information to ensure appropriate management and the card catalogue is not yet completed.

This is particularly problematic on one main account: the basic tool for collections management is not established. This does not provide the MMC the capacity to ensure optimal management of collections and also, does not consign firmly the existence of the objects in the museum's collections. This means that if any object is lost, stolen or destroyed, the MMC would be in a difficult position to state that loss, theft or destruction actually took place. This does neither empower the MMC to establish a system that would prevent such thing to happen.

This supports the statement of the audit report - published ten years ago- stating that "*Recording of collections was not satisfactory. It was difficult to ensure completeness*". The analysis of the collections management clearly showed that the system in place does not respond to the basic requirements established worldwide for MUSEUM MANAGEMENT.

This is problematic when the MMC is entrusted to keep a total of 37,000 objects in its storage areas and 3,000 on display. The personnel deplore the absence of a computerised system that would help them in the daily management of collections. Indeed, the management of collections presented in various locations would require the establishment of a catalogue for all museums placed under the

responsibility of the MMC. The absence of a computerised system makes the tasks of the personnel very difficult especially when the staff is not specialised in this field.

The interview of the staff revealed that the technical staff had no training in collection management. The Curator and the Conservation have a scientific background respectively in biology and chemistry. Considering that museology is a specialised professional field, it is difficult to expect that the staff be empowered to achieve the completion of the cataloguing. Cataloguing is the basic element allowing an optimal management of museum collections and requires a specific training by experienced professionals.

In this respect, this also raises the need to have resources specifically trained in museology. The staff at MMC informed that they received a training in preventive conservation when the priority - also underlined by the audit report of 2001 - is to ensure that the personnel be trained in collection management. At present, the staff is not in a position to address the shortcomings related to collections management as they were not trained to receive the basic knowledge of MUSEUM MANAGEMENT.

The recommendations for improving the collections management would be:

- to create an entry book starting with new collections entering the museums, mainly to avoid confusion and the consignment of approximate information leading to confusion;
  - to maintain the accession register and improve its content by adding a description of the objects;
  - to create an arborescence of terms to designate objects in a systematic manner by the appropriate terms and ensure that identical objects are referred to by using the same terms; such arborescence is available in museum collections management softwares and are also available on the internet through ICOM or AFRICOM's websites;
  - to acquire a software for collections management that will allow the combination of information contained in the inventory sheets and in the card catalogue as it is the case in most museums today. Indeed, the software automatically generates individual cards for collections objects;
  - to ensure that all objects are photographed; the photographs would thus be included in the software;
  - to train the staff in collections management as a main priority;
  - to enlist the services of professional Museologist / Curator to ensure capacity building and sustainable collections management;
- to empower technical and scientific staff trained in collections management with sufficient executive power to ensure the progress of work.

### The collections policy

The issue of collections management is also raised when examining the collections policy. The collections policy is the indispensable document addressing the museum policy in terms of collections management. The collections policy can be defined as follows:

*"Statement of the subject matter of a collection, its temporal and geographical range and limits and any criteria as to material, conditions, size, quality, relevance or other factors for inclusion in the collection, together with terms, procedures and forms under which acquisition (gift, loan, bequest, purchase) or deaccessioning may occur, conditions of ownership, ethical commitments and uses of the collection". (Lord and Lord, 2002:498)*

The collections policy of the MMC is a six page document that only provides with an overview of:

- the types of collections;
- accessioning process;
- inventory sheet and card index;
- de-accessioning.

The MMC collections policy cannot be considered as a professionally elaborated document. The first page provides with a broad introduction. Generally, the collections policy states the purposes of the collections policy for the museum and also, its mission statement.

This is generally followed by a description of the collections available in the museum(s). The paragraph on "types" is referring to the nature of the collections that the Mauritius Museums Council - including all the museums under its purview-is entrusted to preserve and manage. The purpose of this part is to state the number of objects, in total or per museums, falling under its responsibility. It also fails to describe precisely the nature of the collections kept by the MMC.

The standard collections policy generally presents as its first part all the elements related to the acquisition of collections. In MMC's collections policy, we note general considerations on questions to be addressed when considering acquiring an object but the collections policy fails to:

- address whether the MMC accepts acquisition by donation, bequest, purchase or transfer;
- define who is the authority giving the right to acquire collections or objects;
- establish criteria for evaluating the acquisition of objects in each museums;

This is problematic as the person or committee responsible for acquisition does not have the basic elements required to evaluate whether an object is worth acquiring. This would include, in general instances, a chronological range, geographical delimitations, criteria for discarding objects, materials, size (if relevant) and quality of the objects, and the relevance to the existing collections. This is generally part of the collections policy to ensure coherence in the collections and also, the consolidation of the significance of the existing collections. The criteria also ensure that the objects are not acquired illegally.

- Establish the existence of an Entry Book.

In the second part, standard collection policy provides with guidelines for accession into the permanent collection. In MMC's collections policy, this part only refers to the accession number and states that the objects will be examined by the Conservator before being catalogued by the Curator. It does not mention:

- that accession is the means by which objects are to be kept permanently unless deaccessioning or disposal process (to be included in the collections policy) take place;
- that the eligibility relies on a set of criteria;
- who is the authority allowing accessioning;
- the nature of the catalogue records;
- that each object should be documented.

The documentation part is indispensable. It states in which documents the information about the objects should be consigned and also, indicates that written records should provide a summary of why the object was acquired and accessioned. The collections policy should also mention that the records will document the decision process including how the acquisition criteria were applied. The MMC's collections policy only mentions the inventory sheet and the card index. It ends by two

paragraphs on de-accessioning. This section only provides a definition of de-accession and a general principle. However, it would need to address the following issues:

- authority for de-accession;
- the guidelines for de-accession of purchase, gifts and bequests;
- de-accession procedure;
- conditions for de-accession by destruction;
- the procedure following disposal.

The six page document of MMC does not take into consideration the loans and deposits of objects from other museums, public institutions or private collectors. This section should be added to the present collections policy to address:

- the process for incoming loans and deposits;
- the guidelines for outgoing loans meaning the objects that could possibly be lent to other institutions;
- the authority regulating loans and deposits.

What is more, the MMC's collections policy fails to address major elements regarding the collecting guidelines, the collections care, the access to collections and ethics. Therefore, it would be recommended to consider the following elements to produce a professional collections policy for MMC:

- general rules for collecting;
- collecting procedures;
- collecting area;
- collections care including:
  - conservation rules and policy;
  - object condition reports;
  - restoration guidelines, criteria for approval of restorations and documentation of restorations;
- access to collections;
- ethics.

In conclusion, the collections policy does not provide the necessary framework for an optimal management of collections. This confirms why the core process for collections management is not in place. This is problematic regarding the points mentioned earlier but also, raises another major issue: the collections policy does not include a conservation policy for collections. This ultimately questions one of the core missions of MMC to conserve the collections when in fact, the collections policy does not address how collections should be conserved and does not either provide a conservation policy for national collections.

### Conservation issues at the Mauritius Institute

The conservation issues at the Mauritius Institute require specific attention. During our visit, we noted the absence of a conservation policy instrumental in ensuring that national collections are kept according to best standards. This situation requires urgent attention especially when the deterioration of collections was already noted in official documents in 1996 and 2001: this was more than ten years ago<sup>62</sup>. Considering this, our main concern was to evaluate whether an improvement could be noted.

In the permanent exhibition area, we noted that the basic rules of conservation are not in place. This includes guidelines for conservation of collections and the establishment of indicators. The indicators for conservation are the monitoring of temperature and relative humidity which indicate whether the conservation environment is stable. The variations in temperature (T) and relative humidity (RH) are the main factors of damage and decay. This is the reason why a thermo-hygrometer - measuring both T and RH rate - is generally placed where collections are present.

At the Mauritius Institute, the museum galleries are equipped with thermo-hygrometers. However, the RH and T are not measured in the storage area. This is problematic since it does not allow the monitoring of the collections' environment although natural history collections are fragile and require specific care. Indeed, the natural history collections are particularly vulnerable when they are exposed to UV, high temperature and high relative humidity. The general guidelines for their conservation recommend that:

- filters or curtains be installed to block natural light;
- natural history collections should not be exposed to lights producing more than 50 lux;
- soft ventilation be available in showcase;
- showcases and collections be cleaned regularly to avoid dust deposits leading to the development of micro-organisms and moistures;
- national history collections should be kept in environment with low temperature and controlled Relative Humidity.

These basic norms could not be identified in the permanent exhibition area. What is more, the figures for RH and T provided by MMC were also a major subject of concern. The average rates are 52.5% of relative humidity and 28°C. To ensure optimal conservation, the temperature should not exceed 30°C in the galleries. Considering that the figures indicate the average rate per year, we can imagine that the temperature can easily reach higher figures in the summer. Tropical countries like Mauritius, 22-28°C would be the appropriate temperature which should not exceed 30°C.

Regarding the RH, the same remark applies when the norm recommends a percentage below 55%. The norms recommend that the relative humidity does not exceed 60% especially concerning natural history specimens considered as very fragile objects. Unfortunately, we could not appreciate the extent of variations which would have indicated the maximum rates. Considering these two elements, the recommendations for conservation in the galleries would be to:

- install air conditioning system with filters preventing the intrusion of city pollution;
- ensure that UV are filtered;
- ban the use of bulbs producing more than 50 lux; an alternative would be to monitor closely the exposition of natural history specimens to light through the respect of the commonly recognized calculation system for the emanation of lux<sup>63</sup>. Natural history specimens are considered to be very sensitive objects. The norm is 150.000 lux.hours and it should not go beyond 200 000 lux.hours/ year;
- the display of objects should take into consideration their fragility and individual requirements for conservation.

Another shortcoming was the conservation of objects in the storage areas. The MI has three storage areas. The objects are kept according to their nature in three different places:

- Natural History Collections 40 m<sup>2</sup>;
- Paintings- 30 m<sup>2</sup>;
- Section for the Wet Collection - 50 m<sup>2</sup>.

We noticed that the basic rules of conservation were not in place:

1. no air conditioning to monitor high temperatures;
2. no thermo-hygrometer measures the rate of relative humidity or temperature in every storage space when these are the two basic indicators of conservation;
3. the storage area is not protected by a false ceiling to close the space;
4. the preventive conservation norms establishing the measures to better preserve objects in storage areas are not in place;
5. objects are often accumulated and not properly maintained by devoting enough space;
6. The organisation of the storage area does not consider the separation of fragile objects from those requiring less attention;
7. fragile objects are exposed to daylight producing high rates of ultra violet thus impacting negatively on the preservation of their original colours and on their internal organic structure;
8. there is no guidelines establishing access to collections nor space devoted to the study or conservation of collections.

What is more, the storage area is located in random places where the space was made available. There is no clear policy for the storage area. The general statement is that a conservation policy is required urgently to ensure the preservation of the most important museum collection in Mauritius now facing threats.

## CONCLUSION

The issue of Heritage Management is a main object of concern. The management of heritage is instrumental to ensure its preservation and also, the restitution of the past to the population. In this section on general recommendations, it seems essential to recommend the setting up a national policy for heritage and museums. This is the core document addressing the vision, the goals and the proposed orientations for the future. A policy document stands for the starting point to the elaboration and implementation of an integrated management for museums and heritage. The present management certainly requires improvement and also, the support of expertise in the field. Indeed, heritage and MUSEUM MANAGEMENT are two specialised field of competence and should rely on appropriate professional resources to ensure the sustainability of heritage.

The elaboration of a policy document would also be the opportunity to consult the population on its vision of heritage. The integration of consultation results would also activate the process of appropriation by the population. The heritage and representations of the past should indeed meet the adhesion of the population to contribute to nation building. The same process could apply to museums. A reflection on the nature and content of museums could also be initiated as our research showed that most museums were inherited from the colonial initiative and recent museums demonstrated that there is an ambition to depict national history but core questions are not necessarily addressed. One main question would be how to represent national history? And for whom?

In recent years, Mauritian nation has shown a growing interest for heritage. It materialized through the development of heritage projects and the constitution of various entities promoting the preservation of heritage. This concern shows that the nation is in demand for the preservation of its past and for the recognition of national past. In the present configuration, heritage could offer keys to the population to promote their identity in a context of globalisation and reinforce the national identity.

## SUMMARY OF RECOMMENDATIONS

As part of this report, we attempted to raise a number of issues related to museums and heritage in general to produce recommendations. The following section summarizes the points raised in this report and formulates recommendations aiming at proposing elements for the recognition and the sustainability of heritage and museums in Mauritius.

## RECOMMENDATIONS FOR HERITAGE IN GENERAL

### The need for national policies

- The creation of a policy for heritage - cultural and natural- tangible and intangible- would set the base for the development of an integrated management of heritage in Mauritius;
- The population should be consulted to consider their vision of heritage considering Mauritian diversity. The creation of a green paper fostering consultations with all segments of the population would be an initiative enabling to gather views on values invested in heritage by all Mauritians;
- The policy for heritage would support the reinforcement of the legislation for the protection and promotion of museum collections and heritage - this to allow an optimal management and also the integration of existing policies for tourism, environmental or cultural policies.
- 

### The need for trained resources and professional management

- The current management of museums and heritage sites showed the necessity to consolidate, if not create, a strong technical pool empowered to preserve, manage and promote heritage;
- Training of all staff and capacity building to create a national technical pool of technicians in heritage field and MUSEUM MANAGEMENT and conservation;
- The administrative management of heritage institutions should be complemented by strong technical competence to optimize the functioning of the institutions; it would also ensure the sustainability of heritage institutions and an optimal preservation of national heritage;
- Heritage and museums need to be managed by a scientific and technical personal having clear knowledge and experience in this field. Such institutions would benefit from a better development and organisation by empowering the technical and scientific staff to become managers of such institutions instead of the traditional administrative line of authority not versed in such specialised fields;
- Revalorization of the heritage field by providing better conditions to employers: there should be a valorisation of technical and scientific staff as they are the appropriate resources to manage heritage places or museums and thus leading to an optimal management of resources and a better management of heritage sites and museums;
- To consolidate an integrated management system for heritage led by a pool of technicians centralizing all heritage data and ensuring the coherence of projects undertaken for effective results and optimize resource management.

### The need for research and the promotion of history

- Privilege a scientific approach for the documentation of heritage and museum collections in order to recreate a link to the past; the scientific approach supports the appropriation of the past by the population at large;
- Promote history and other disciplines involved in heritage documentation and research to provide the nation with scientific vision of the past thus allowing the dissemination of knowledge.

## RECOMMENDATIONS FOR MUSEUMS

### GENERAL RECOMMENDATIONS

- A national policy for museums is strongly felt to set out objectives and guidelines for MUSEUM MANAGEMENT;
- To create a national inventory of all heritage collections and sites accessible to all by using latest software technologies adapted to heritage and museum environment;
- Proper research schemes should be established for the study and documentation of museum collections; full documentation on museum collections should be established to help their interpretation, their presentation to the public in the perspective of their historical context and allow to retrace their provenance for better monitoring and management;
- Consolidate the existing structures for museum and heritage management by providing professional training leading to certifications in the field of heritage management and museology rather than creating new institutions;
- Establish a communication policy to respond to public expectations: regular audience surveys, publications of the catalogue of collections, publication on the museums and their main masterpieces, creation of website.
- Establish a communication strategy for all museums to better promote their collection and also, disseminate knowledge as stated in ICOM definition of museum as a fundamental role for museums as they are established with public funds and present national collections, therefore, they should serve the public interest by having a dynamic public programme and educational activities attracting visitors from all walks of life.
- The creation of a National Museum of Immigration is proposed to anchor the origins of the Mauritian nation and provide a nationwide sense of belonging;
- Engage a reflection on the notion of national history. This could lead to consider the establishment of the following exhibition spaces to support the restitution of the national past to the population:
  - Museum focusing on anthropology including intangible heritage;
  - Interpretation centre on indenture at Aapravasi Ghat WHS;
  - Interpretation centre on slavery at Le Morne.

### RECOMMENDATIONS FOR THE IMPROVEMENT OF THE MAURITIUS MUSEUMS COUNCIL

The following recommendations could be made regarding MUSEUM MANAGEMENT at the Mauritius Museums Council:

- Elaboration of a collections policy;

- Elaboration of a conservation policy including restoration policy;
- Setting up a professional collections management system responding to international norms;
- Computerize catalogues and use a museum collection management software;
- Training of the staff in collection management in priority;
- Organisation of workshops and trainings in Mauritius with other professionals to foster capacity building;
- Establish a national professional network helping the development of capacity building;
- Establish a detailed documentation on collections including detailed documentation of their acquisition, descriptions and photographs.
- Conduct systematic research on collections to expand existing documentation;
- Publication of a catalogue of collections also available on website.

- <sup>1</sup> *L'Héritage du noir. Mythe et réalité*, Présence africaine: Paris; 1966:212.
- <sup>2</sup> After an A-level in literature and philosophy, I engaged in studies in heritage. I enrolled at *Ecole du Louvre* in Paris where the main subjects of study were history of arts, archaeology, and museology including heritage management and conservation. Concurrently, I was a Student at University where I obtained a degree and an MA in archaeology (specialised in ethno-archaeology). I had the opportunity to conciliate my two fields of interest by enrolling in a DEA at the National History Museum in Paris offering a course in anthropology aiming at interpreting, documenting and managing museum collections from oral societies in Africa, America and Oceania.
- <sup>3</sup> ICOM Code of Ethics, 1989, article 2.
- <sup>4</sup> "Aucun élément patrimonial n'a de sens en dehors de l'attachement des sociétés intéressées"; André Chastel, 1994.
- <sup>5</sup> Le musée "doit aussi permettre de donner aux communautés concernées des clefs de lectures de l'histoire et de l'environnement locaux (ne pas seulement s'attacher à l'Histoire nationale). Le musée doit permettre de définir l'image de soi que l'on veut communiquer vers l'extérieur". (Bouttiaux et Centrale, 2007)
- <sup>6</sup> The *Royal Society of Arts and Sciences* aimed at promoting sciences, agriculture and Arts (Sornay, 1950:470).
- <sup>7</sup> The activities of the Société de l'Emulation did not last very long. The Société mainly focused on the promotion of Science and Agriculture under the impulsion of Governor Farquhar, also a member until his departure in 1823 (Sornay, 1950:469).
- <sup>8</sup> (Sornay 1950, 469)
- <sup>9</sup> The Société d'Histoire Naturelle is founded in August 1820 and established in Collège Royal (SRAS, 1886:33-34).
- <sup>10</sup> (Sornay 1950, 470)
- <sup>11</sup> The members were: Charles Telfair, Botanist; Julien Desjardins and François Liénard, Zoologists; H. Bousquet, Meteorologist, Wenceslas Bojer, Botanist; Edward Newton, Ornithologist, among others (Sornay, 1950; Cheke, 2003:198).
- <sup>12</sup> The Société has regular correspondence with the *Conseil de l'Association pour l'avancement des sciences*, the Royal Society of New South Galle, Smithsonian Society of Washington, the British Museum (SRAS, 1883) among others associations and other similar organisations. The Société also sends representatives in various international events: in 1878, three members visit the Universal Exhibition in Paris (SRAS, 1883:14). The Société has numerous collaborators and correspondences confirm its international network.
- <sup>13</sup> Traduction de « *Promote improvement in our colonial cultivation generally but more particularly in that of our only staple and its intelligent manufacture* »; *Transactions of the Royal Society of Arts and Sciences*, volume 2, Part 1, 1850, page 5.
- <sup>14</sup> The letter is dated 11 March 1859.
- <sup>15</sup> Proposal was made during the session held on 1<sup>st</sup> December 1859.
- <sup>16</sup> During the session held on 8 April 1880, members were informed that the funeral monuments created in memory of Louis Bouton, Botanist and former member of the Société, would be « *achevé le mois prochain* » (SRAS, 1884, vol. 14: 8). The monument was built in the Cemetery in Pamplemousses and financed by the Société (SRAS, 1883:55).
- <sup>17</sup> In 1878, a member of the Société, Mr. Coriolis, proposed that a monument be erected in memory of Bernardin de Saint Pierre (SRAS, 1883:27).
- <sup>18</sup> The name of Pierre Poivre appears on the column of Liénard but no monument commemorating his memory was erected before 1993. As early as 1878, Mr. Daruty expressed his surprise concerning the absence of a bust of Pierre Poivre at the Botanical Garden (SRAS, 1883:32).
- <sup>19</sup> Statues of Queen Victoria and Governor Sir William Stevenson were erected in the premises of Government House in 1897 et 1867 respectively (Sornay, 1950:522).

- <sup>38</sup> Extrait de la lettre du Gouverneur Bower adressée à Virgil Naz, Président de la Société des Sciences et des Arts:
- « It should be the object of all of us to encourage the formation in Mauritius of Mechanics' Institutes, reading rooms, public libraries for the instruction of all classes of our mixed population. The interest which I take in the institutions of this kind is founded on the conviction that without moral and mental culture, the fabric of domestic life is unsecure, and the apparently finest guarantees of political institutions are of little avail. The most formidable impediments of civilization and national progress are ignorance and the evil which ignorance induces. I trust that I shall have your support and aid in my efforts to establish gradually in this as in the Australian colonies popular libraries and reading rooms, calculated to raise the moral and intellectual tone of all sections of the people, and to breath a right spirit into them. This would be a patriotic work well worthy of the Royal Society of Mauritius. »* (*Transactions of the Royal Society of Arts and Sciences*, Volume 13, 1883, page 44).
